AGENDA
SHAWNEE MUNICIPAL AUTHORITY
August 15, 2022 AT 6:00 P.M.
COMMISSION CHAMBERS AT CITY HALL
16 WEST 9TH STREET
SHAWNEE, OKLAHOMA

Official action can only be taken on items which appear on the agenda. The public body may adopt, approve, ratify, deny, defer, recommend, amend, strike, or continue any agenda item. When more information is needed to act on an item, the public body may refer the matter to Staff or back to Committee or the recommending body. Under certain circumstances, items are deferred to a future date or stricken from the agenda entirely.

CALL TO ORDER

DECLARATION OF A QUORUM

1. Consider approval of Consent Agenda:

   a. Minutes from the August 1, 2022 regular meeting and the August 8, 2022 special call meeting.

2. Consider an executive session for discussion and possible action regarding potential claims, litigation, or other options as authorized by 25 O.S. §307(B)(4) on the recommendation of counsel that public discussion would impair the ability of the City Attorney to adequately defend the City.

3. Consider matters discussed in executive session regarding potential claims, litigation, or other options as authorized by 25 O.S. §307(B)(4) on the recommendation of counsel that public discussion would impair the ability of the City Attorney to adequately defend the City.

4. Reconsider and take action with respect to a resolution of the Shawnee Municipal Authority (the “Authority”) approving and authorizing a Clean Water SRF loan from the Oklahoma Water Resources Board in the total aggregate principal amount of $65,635,000.00; approving the issuance of a promissory note in the total aggregate principal amount of $65,635,000.00, secured by a pledge of revenues and authorizing its execution; approving and authorizing the execution of a loan agreement for Clean Water SRF loan; designating a local trustee and approving and authorizing the execution of a trust agreement; approving and authorizing the execution of a security agreement; ratifying and confirming a lease agreement and operation and maintenance contract, as amended; approving various covenants; approving and authorizing payment of fees and expenses; and containing other provisions relating thereto.

5. Confirm action taken by the City Commission on Agenda Item No. 23 with respect to an ordinance amending portions of the Shawnee Municipal Code, Chapter 26 “Utilities”, by adding and adopting a utility improvement fee; and providing for repeal; providing for severability; and providing for codification.

6. Confirm action taken by the City Commission on Agenda Item No. 24 with respect to a resolution updating the City Fee Schedule by setting the monthly rate of the utility improvement fee pursuant to Chapter 26, Article II, Section 26-30, of the City Code; and providing for the re-adoption of the City Fee Schedule in whole.

7. Consider Bids:

   a. Wastewater System Improvements (Award)

8. New Business

   (Any matter not known or which could not have been reasonably foreseen prior to the posting of the agenda)

9. Adjournment

Respectfully submitted,

Lisa Lasyone, CMC, City Clerk

The City of Shawnee encourages participation from its citizens in public meetings. If participation is not possible due to a disability, notify the City Clerk, in writing, at least forty-eight hours prior to the scheduled meeting and necessary accommodations will be made. (ADA 28 CFR/36)

Special Call Minutes

THE TRUSTEES OF THE SHAWNEE MUNICIPAL AUTHORITY OF THE CITY OF SHAWNEE, COUNTY OF POTTAWATOMIE, STATE OF OKLAHOMA, MET IN REGULAR SCHEDULED SESSION, MONDAY, AUGUST 1, 2022, DURING THE BOARD OF CITY COMMISSIONER MEETING AT 6:00 P.M., PURSUANT TO NOTICE DULY POSTED AS PRESCRIBED BY LAW AT 11:49 A.M. ON JULY 28, 2022. UPON ROLL CALL, A QUORUM WAS DECLARED WITH THE FOLLOWING MEMBERS IN ATTENDANCE:

PRESENT: Engles, Bolt, Rutherford, Sehorn, Salter
ABSENT: Matthews, Flood

Call to Order
Declaration of a Quorum

AGENDA ITEM NO. 1: Consider approval of Consent Agenda:

a. Minutes from the July 18, 2022 regular meeting.

A motion was made by Trustee Engles, seconded by Trustee Rutherford, to approve Consent Agenda Item No. 1(a). Motion carried 5-0.

AYE: Engles, Rutherford, Sehorn, Salter, Bolt
NAY: None

AGENDA ITEM NO. 2: Consideration of a budget amendment for Fiscal Year 2022-2023 Fund 501 Shawnee Municipal Authority Fund to appropriate public safety fee revenue to be transferred to the General Fund for additional public safety costs.

Mr. Jacob Bussell, Assistant Finance Director, provided a Staff report.

A motion was made by Trustee Engles, seconded by Trustee Sehorn, to approve the budget amendment for Fiscal Year 2022 – 2023 Fund 501 Shawnee Municipal Authority Fund to appropriate public safety fee revenue to be transferred to the General Fund for additional public safety costs. Motion carried 5-0.

AYE: Engles, Sehorn, Salter, Bolt, Rutherford
NAY: None

AGENDA ITEM NO. 3 Consider Bids

a. Wastewater System Improvements (Open)

BIDDER	**AMOUNT**
Downey Contracting, L.L.C. Oklahoma City, OK	$103,558,735.00

DRAFT

Thalle Construction Company Oklahoma City, OK	$123,820,490.00
Wynn Construction Co., Inc Oklahoma City, OK	$103,748,752.29

Mr. Brad Schmidt, Public Works Director, read three (3) bids into the record. Mr. Schmidt advised there would be a Special Call Meeting on Monday, August 8, 2022 to discuss funding opportunities. Mr. Schmidt requested the bid award be deferred to a future meeting.

A motion was made by Trustee Rutherford, seconded by Trustee Sehorn, to defer the bid award to a future City Commission meeting. Motion carried 5-0.

AYE: Rutherford, Sehorn, Salter, Engles, Bolt
NAY: None

AGENDA ITEM NO. 4: New Business (Any matter not known, or which could not have been reasonably foreseen prior to the posting of the agenda)

There was no New Business.

AGENDA ITEM NO. 5: Adjournment

There being no further business to be considered, the meeting was adjourned by power of the Chair. (7:07 p.m.)

SHAWNEE MUNICIPAL AUTHORITY
CITY OF SHAWNEE
SPECIAL CALLED SESSION
AUGUST 8, 2022

The Trustees of the Shawnee Municipal Authority of the City of Shawnee met in Special Called Session at the Shawnee Commission Chambers, 16 West 9th Street, Shawnee, Oklahoma Monday, August 8, 2022 at 6:00 p.m., pursuant to notice duly posted as prescribed by law. Mayor Bolt presided and called the meeting to order. The following members were in attendance and a quorum was declared.

Ed Bolt
Mayor/Chairman

Daniel Matthews Commissioner Ward 1/Trustee	Cami Engles Commissioner Ward 2/Trustee
Travis Flood Commissioner Ward 3/Trustee	Darren Rutherford Commissioner Ward 4-Vice Mayor/Trustee
Absent Commissioner Ward 5/Trustee	Ben Salter Commissioner Ward 6/Trustee

Absent: Mark Sehorn

The Call for said meeting was entered upon the records by the City Clerk, said Call being as follows:

DRAFT

NOTICE OF A CALLED SPECIAL SESSION OF SHAWNEE MUNICIPAL AUTHORITY OF THE CITY OF SHAWNEE, OKLAHOMA

TO THE SHAWNEE MUNICIPAL AUTHORITY OF THE CITY OF SHAWNEE, OKLAHOMA:
You and each of you are hereby notified that by virtue of a call issued by me on this 4th day of August, 2022, a Special Called Session will be held of the Shawnee Municipal Authority of the City of Shawnee, Oklahoma at the City Hall Commission Chambers, 16 West 9th Street, Shawnee, Oklahoma at 6:00 p.m. on the 8th day of August, 2022, and you are hereby notified to be present at said meeting.

The purpose of said meeting is for consideration of a Clean Water SRF loan from the Oklahoma Water Resources Board and consideration of a utility improvement fee.

Witness my hand this 4th day of August, 2022.

DECLARATION OF A QUORUM
INVOCATION — Trustee Travis Flood
FLAG SALUTE

AGENDA ITEM NO. 1: Consider and take action with respect to a resolution of the Shawnee Municipal Authority (the "Authority") approving and authorizing a Clean Water SRF loan from the Oklahoma Water Resources Board in the total aggregate principal amount of $65,635,000.00; approving the issuance of a promissory note in the total aggregate principal amount of $65,635,000.00, secured by a pledge of revenues and authorizing its execution; approving and authorizing the execution of a loan agreement for Clean Water SRF loan; designating a local trustee and approving and authorizing the execution of a trust agreement; approving and authorizing the execution of a security agreement; ratifying and confirming a lease agreement and operation and maintenance contract, as amended; approving various covenants; approving and authorizing payment of fees and expenses; and containing other provisions relating thereto.

Ms. Andrea Weckmueller-Behringer, City Manager, gave a presentation on the Wastewater Treatment Plant Project. She spoke on the following topics:

- Current Operations and Capacities
- Upgrade Options and Pros/Cons
- Project Cost
- Financial Options

DRAFT

Ms. Weckmueller-Behringer, Mr. Allan Brooks with The Public Finance Law Group, LLC, Mr. Chris Gander with Bank of Oklahoma Financial Securities, Mr. Brandon Wall with Wall Engineering, and Ms. Billie Joe Sing, Shawnee Municipal Authority Plants Manager answered questions from the Trustees.

A motion was made by Chairman Bolt to approve the resolution of the Shawnee Municipal Authority (the "Authority") approving and authorizing a Clean Water SRF loan from the Oklahoma Water Resources Board in the total aggregate principal amount of $65,635,000.00; approving the issuance of a promissory note in the total aggregate principal amount of $65,635,000.00, secured by a pledge of revenues and authorizing its execution; approving and authorizing the execution of a loan agreement for Clean Water SRF loan; designating a local trustee and approving and authorizing the execution of a trust agreement; approving and authorizing the execution of a security agreement; ratifying and confirming a lease agreement and operation and maintenance contract, as amended; approving various covenants; approving and authorizing payment of fees and expenses; and containing other provisions relating thereto. A second was not given and Trustee Bolt withdrew the motion.

RECESS BY POWER OF THE CHAIR at 7:45 P.M.

RECONVENE BY POWER OF THE CHAIR AT 7:58 P.M.

Ms. Weckmueller-Behringer, Mr. Allan Brooks with The Public Finance Law Group, LLC, Mr. Chris Gander with Bank of Oklahoma Financial Securities, Mr. Brandon Wall with Wall Engineering, Public Works Director Brad Schmidt, and City Engineer Seth Barkhimer answered questions from the Trustees.

A motion was made by Chairman Bolt, seconded by Trustee Engles, to approve the resolution of the Shawnee Municipal Authority (the "Authority") approving and authorizing a Clean Water SRF loan from the Oklahoma Water Resources Board in the total aggregate principal amount of $65,635,000.00; approving the issuance of a promissory note in the total aggregate principal amount of $65,635,000.00, secured by a pledge of revenues and authorizing its execution; approving and authorizing the execution of a loan agreement for Clean Water SRF loan; designating a local trustee and approving and authorizing the execution of a trust agreement; approving and authorizing the execution of a security agreement; ratifying and confirming a lease agreement and operation and maintenance contract, as amended; approving various covenants; approving and authorizing payment of fees and expenses; and containing other provisions relating thereto.

Resolution was introduced.

A RESOLUTION OF THE SHAWNEE MUNICIPAL AUTHORITY (THE "AUTHORITY") APPROVING AND AUTHORIZING A CLEAN WATER SRF LOAN FROM THE OKLAHOMA WATER RESOURCES BOARD IN THE TOTAL AGGREGATE PRINCIPAL AMOUNT OF $65,635,000.00; APPROVING THE ISSUANCE OF A PROMISSORY NOTE IN THE TOTAL AGGREGATE PRINCIPAL AMOUNT OF $65,635,000.00, SECURED BY A PLEDGE OF REVENUES AND AUTHORIZING ITS EXECUTION; APPROVING AND AUTHORIZING THE EXECUTION OF A LOAN AGREEMENT FOR CLEAN WATER SRF LOAN; DESIGNATING A

DRAFT

LOCAL TRUSTEE AND APPROVING AND AUTHORIZING THE EXECUTION OF A TRUST AGREEMENT; APPROVING AND AUTHORIZING THE EXECUTION OF A SECURITY AGREEMENT; RATIFYING AND CONFIRMING A LEASE AGREEMENT AND OPERATION AND MAINTENANCE CONTRACT, AS AMENDED; APPROVING VARIOUS COVENANTS; APPROVING AND AUTHORIZING PAYMENT OF FEES AND EXPENSES; AND CONTAINING OTHER PROVISIONS RELATING THERETO.

Motion failed 4-2.

AYE: Bolt, Engles, Flood, Matthews
NAY: Rutherford, Salter

AGENDA ITEM NO. 2: Confirm action taken by the City Commission on Agenda Item No. 2 with respect to an ordinance amending portions of the Shawnee Municipal Code, Chapter 26 "Utilities", by adding and adopting a utility improvement fee; and providing for repeal; providing for severability; and providing for codification; and declaring an emergency.

Ms. Andrea Weckmueller-Behringer, City Manager, advised that no action was needed.

No action taken.

AGENDA ITEM NO. 3: Confirm action taken by the City Commission on Agenda Item No. 3 with respect to a resolution updating the City Fee Schedule by setting the monthly rate of the utility improvement fee pursuant to Chapter 26, Article II, Section 26-30, of the City Code; and providing for the re-adoption of the City Fee Schedule in whole.

No action taken.

AGENDA ITEM NO. 4: Adjournment

There being no further business to be considered, the meeting was adjourned by power of the Chair at 8:41 p.m.

Resolution

City Manager's Office
16 W. 9th St.
Shawnee, OK 74801
ShawneeOK.org

Date: August 11, 2022

To: City Commission

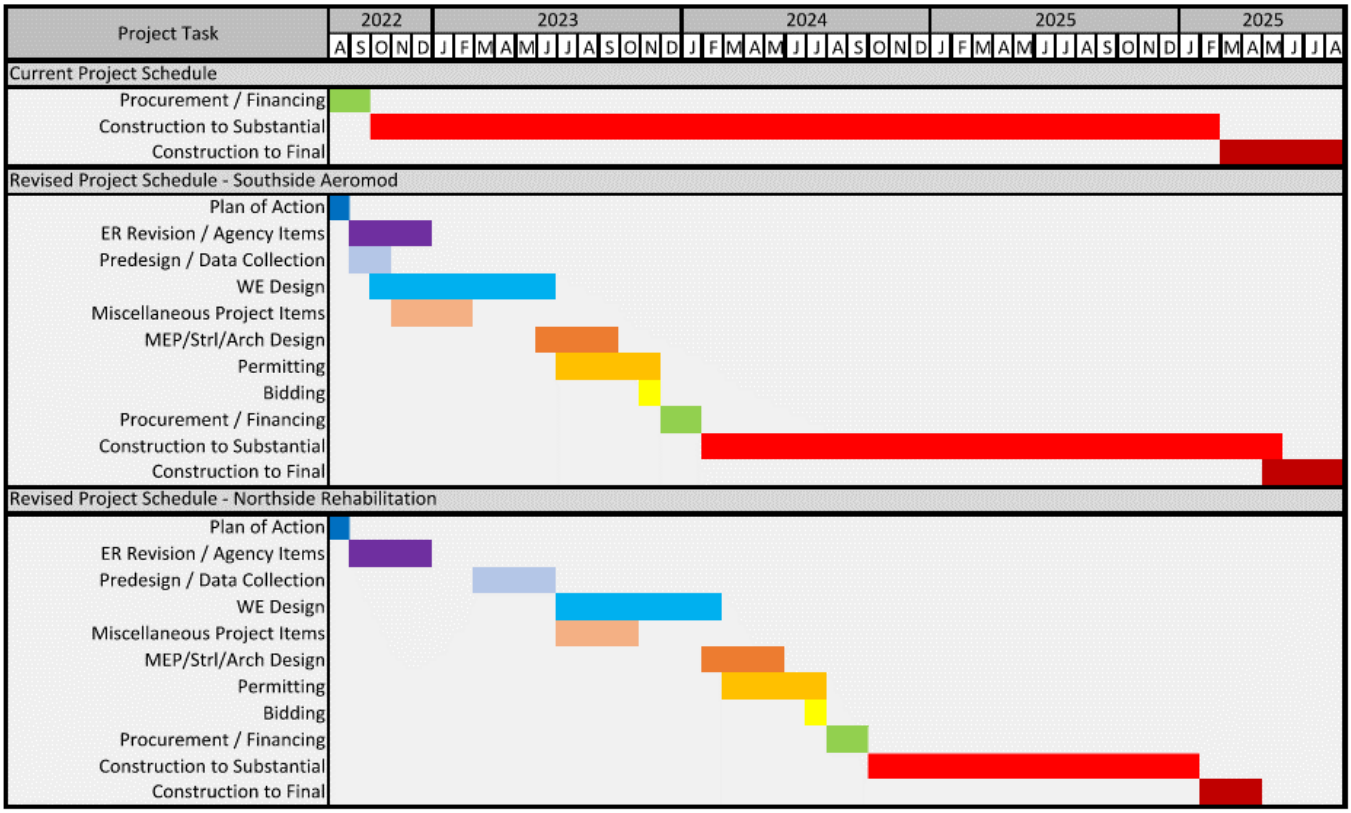
From: Andrea Weckmueller-Behringer, City Manager
Brad Schmidt, Public Works Director
Seth Barkhimer, Director of Engineering

Subject: Wastewater Treatment Plant Discussion

Background: The City currently operates two wastewater treatment plants. The northside plant is an activated sludge process, whereas the southside plant has a trickle filter process. The City of Shawnee is one of an estimated five remaining municipalities within the State of Oklahoma to operate a trickle filter facility; associated replacement parts are very limited and, in some cases, have to be custom-built. Operations at the southside plant require extra care due to its environmentally sensitive location near the South Canadian River. Therefore, in 2019, the City considered two options for upgrades to the wastewater treatment operations:

- Option 1 included the construction of an aero-mod plant at the southside location and limited upgrades to the northside plant. In early 2020, the southside project and the modifications at the northside plant's conceptual cost was estimated to be around $33.5 million.
  - Pros:
    - Addresses issues at southside plant.
    - Costs less than Option 2.
  - Cons:
    - Southside plant operations remain almost entirely below the 100-yr flood elevation.
    - Updates do not provide long-term growth capacity at northside plant where most of the City's growth is located.
    - Two separate plants cost approximately $475,000 more per year to operate.

  It is estimated that with current component and labor pricing, the cost of Option 1 would be just under $78 million.



- Option 2 included the conversion of the southside plant into a large lift station, the construction of a cross-town force-main, and the reconstruction of the northside plant to a system that offered the capacity for phased growth. In early 2020, the conceptual cost for the Option 2 upgrades was estimated to be $40.3 million.

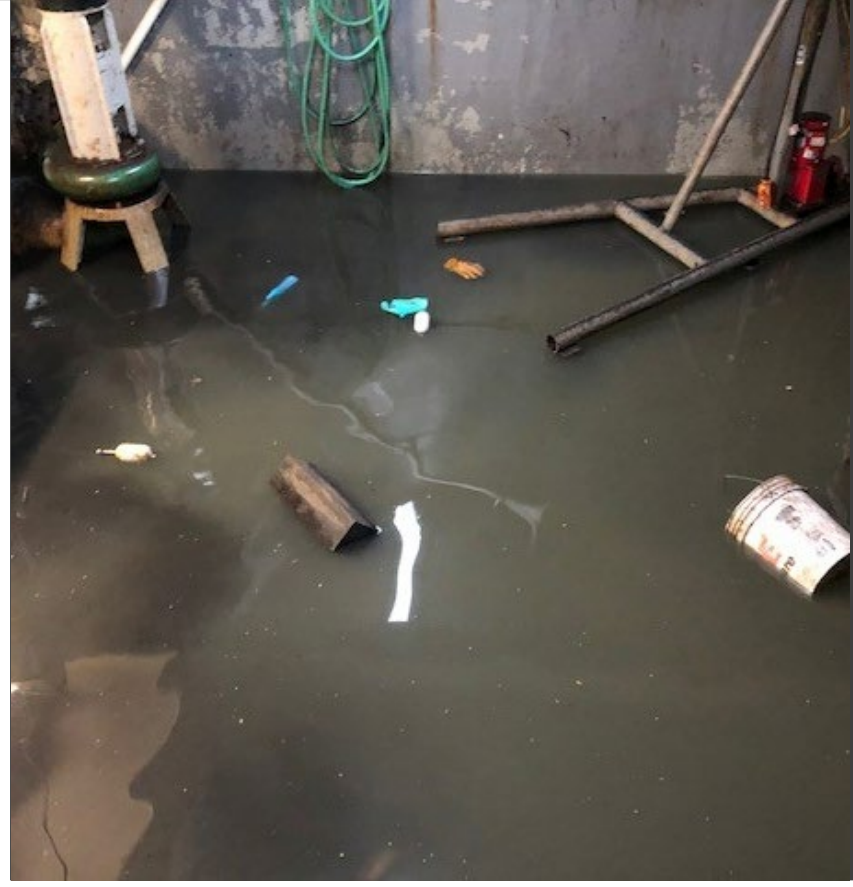
- Pros:
  - Nets savings of $475,000 per year in operations cost.
  - Provides for long-term growth capacity of the City.
  - Removes current southside wastewater treatment operations from an environmentally sensitive area.
- Cons:
  - Costs more than Option 1.

In 2020, the preliminary construction estimate for Option 2 was around $40.3 million. At a difference of about $7 million between Options 1 and 2, and in consideration of ongoing maintenance and operations cost, the City elected to move forward with Option 2, for which the City secured $51.4 million funding from the Oklahoma Water Resources Board.

Since early 2020, unprecedented events occurred, which have resulted in significant cost increases for the proposed wastewater treatment plant project. The recent August 1 bid opening resulted in a low bid of $103,558,735 for the necessary improvements. With the inclusion of professional services and contingencies, the overall project would be approaching 116 million dollars. This magnitude of cost increase is unfortunately not unheard of; when City staff checked with peer cities, who are currently undertaking projects of similar size and nature, the percentage cost increase over the original engineer's estimate was on average 91 percent higher than anticipated.

In an effort to provide all the necessary information to make an informed decision, City staff has also looked into how the project schedule might be impacted, if the City now decided to return to Option 1:

Given Option 2's lengthy construction schedule, there is not a significant change to the timing of when improvements would be operational at the two wastewater treatment plants. The second, and perhaps more important question, is the unknown financial impact if the City were to delay the implementation of the wastewater treatment plant upgrades. In light of the significant surges in cost and the increasing competition for contractors due to an influx of American Rescue Plan Act (ARPA) and Bipartisan Infrastructure Law (BIL) funding, further cost escalation is highly probable.



Financial Impact: An additional Clean Water State Revolving Fund (CWSRF) promissory note in the amount of $65,635,000.00 from the Oklahoma Water Resources Board is needed; the loan would be backed by a Utility Improvement Fee, which would be assessed to each water and/or wastewater account and gradually increased over the course of four years.

Attachment: Resolutions.

Staff Recommendation: For informational purposes.

Wastewater Treatment Plant Project

Presentation Contents

- **Current Operations & Capacities**
- **Upgrade Options & Pros/Cons**
- **Project Cost**
- **Financial Options**
- **Questions & Answers**

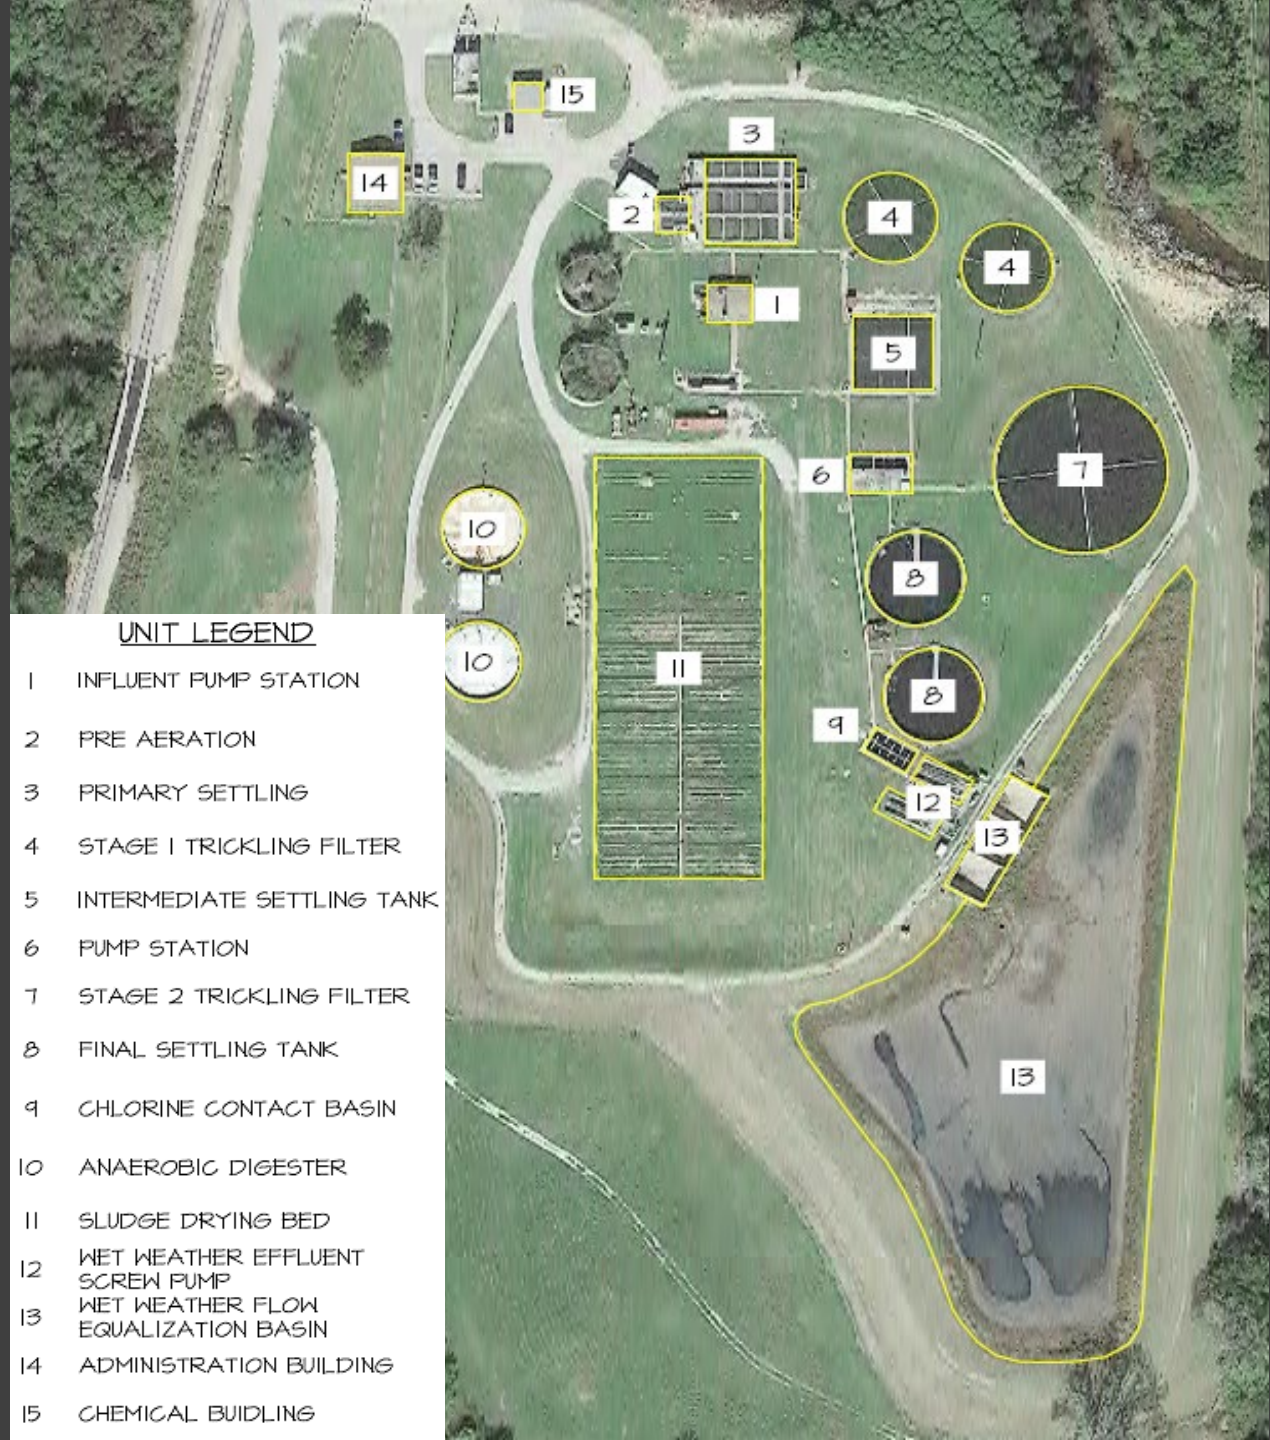
Southside WWTP

1952 Construction - Trickle Filter

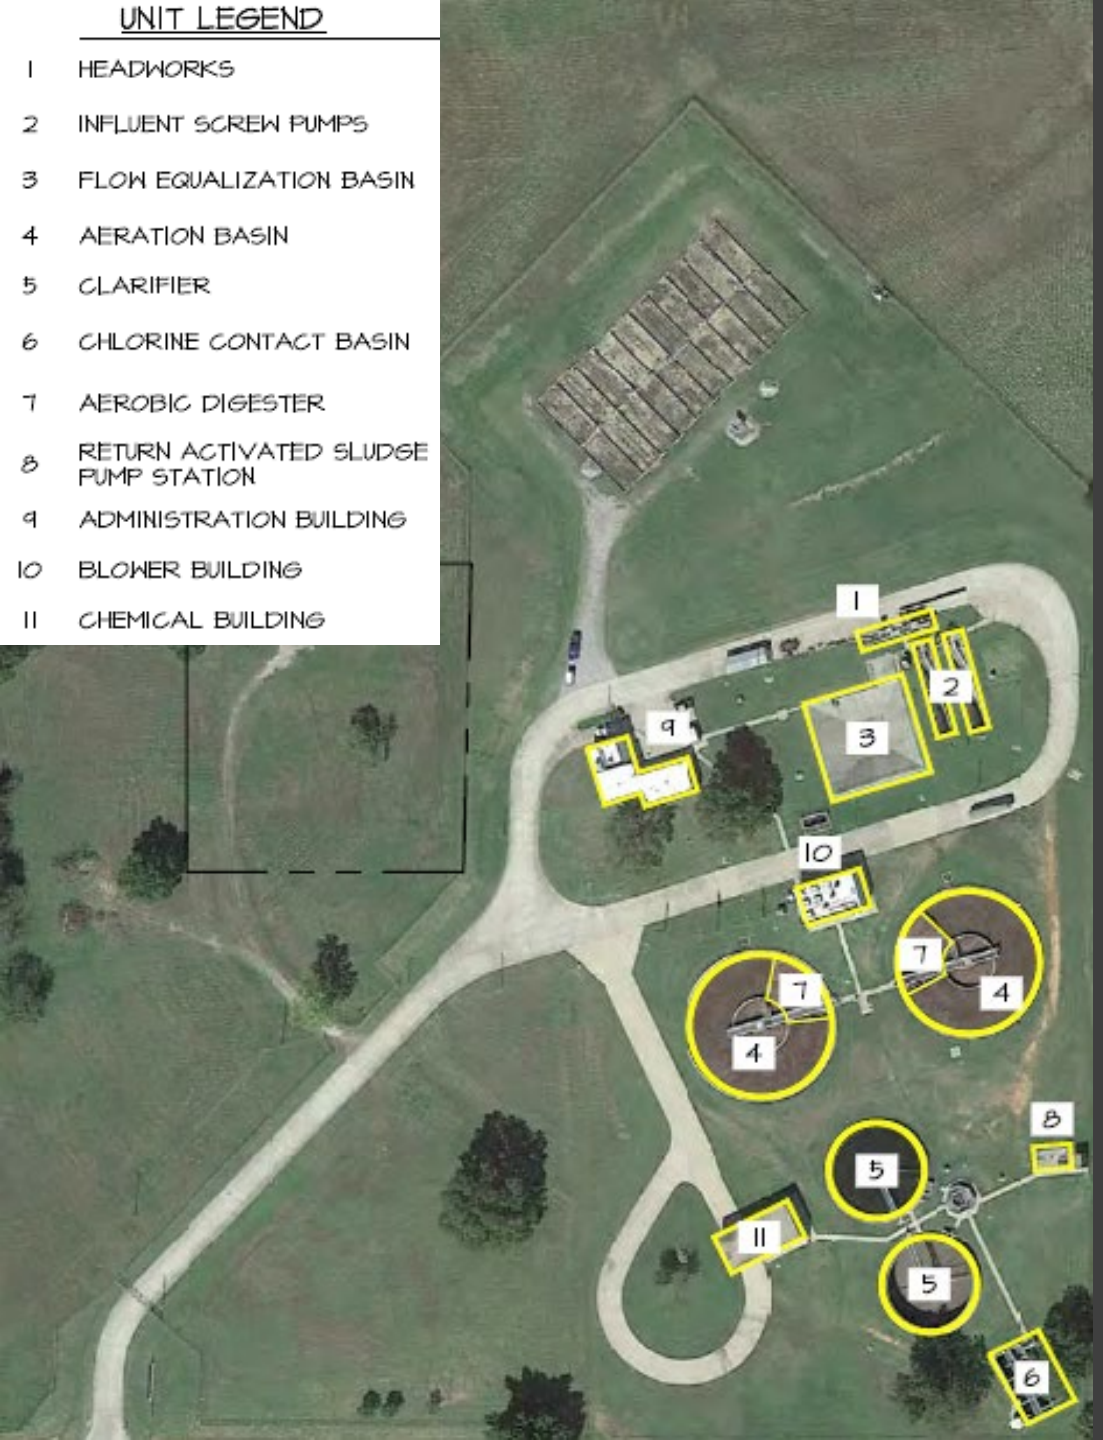
- Control building with raw pumps, grit chamber, pre-aeration tank, settling tanks, 1st stage trickling filters, digester, drying beds

1960

- Intermediate settling tanks, 2nd digester



1971



- Secondary pump station, 2nd stage trickling filter, clarifier, drying beds, berm

1980 and 1989

- Gas chlorination building, new sewage pump, added settling tanks and clarifier, new trickling filter, new admin building, excess storage pond

Design Capacity 3 MGD
1.5 MGD Average & 2.5 Peak Factor

Northside WWTP

1982 Construction - Activated Sludge

Primarily for industrial flow

- Admin building, laboratory, shop, chemical feed building, influent pumps, bar screen, aerated grit chamber, small equalization basin, circular treatment units, drying beds

1996

For commercial/industrial and residential

- New headworks with additional screw pump, manual and mechanical bar rack, vortex grit separator, new clarifiers with splitter box, aerobic digesters, activated sludge pump station, chlorine contact basin

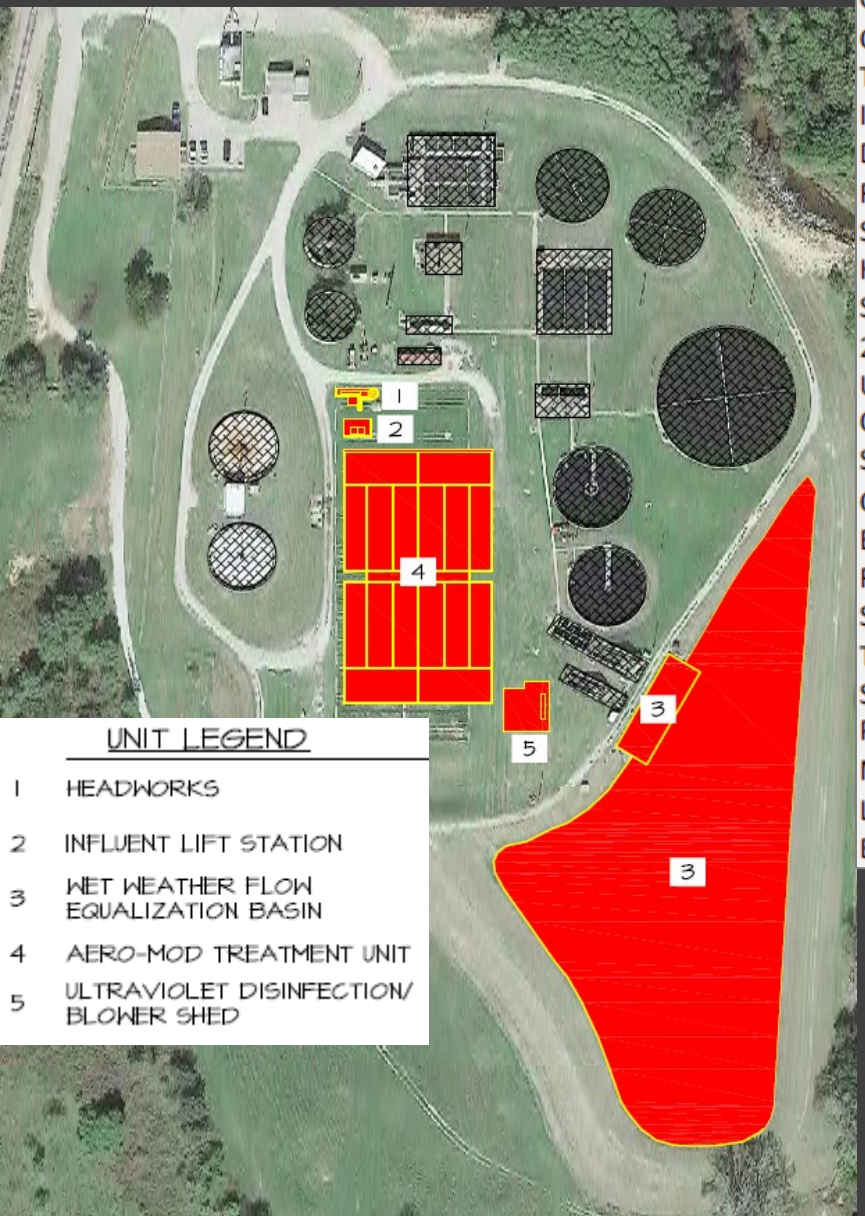
Design Capacity 3.2 MGD
1.6 MGD Average & 2.4 Peak Factor

Upgrade Options

A "Do Nothing" Alternative is NOT an Option

Option 1 – Northside Updates & **New** Southside Aeromod Plant

- **Pros** – New southside plant; less costly (in 2020)
- **Cons** – Protected by berm, but area is below 100-yr flood elevation; assumes low growth (0.4%/yr) without capability for more growth; operational cost doubled



Option 2 – Southside Lift Station & **New** Northside SBR Plant

- **Pros** – Almost $0.5 million in operational savings per year; new northside plant with SBR set-up allows for future growth; limits southside flood vulnerability to new lift station
- **Cons** – More costly in 2020 (and today)

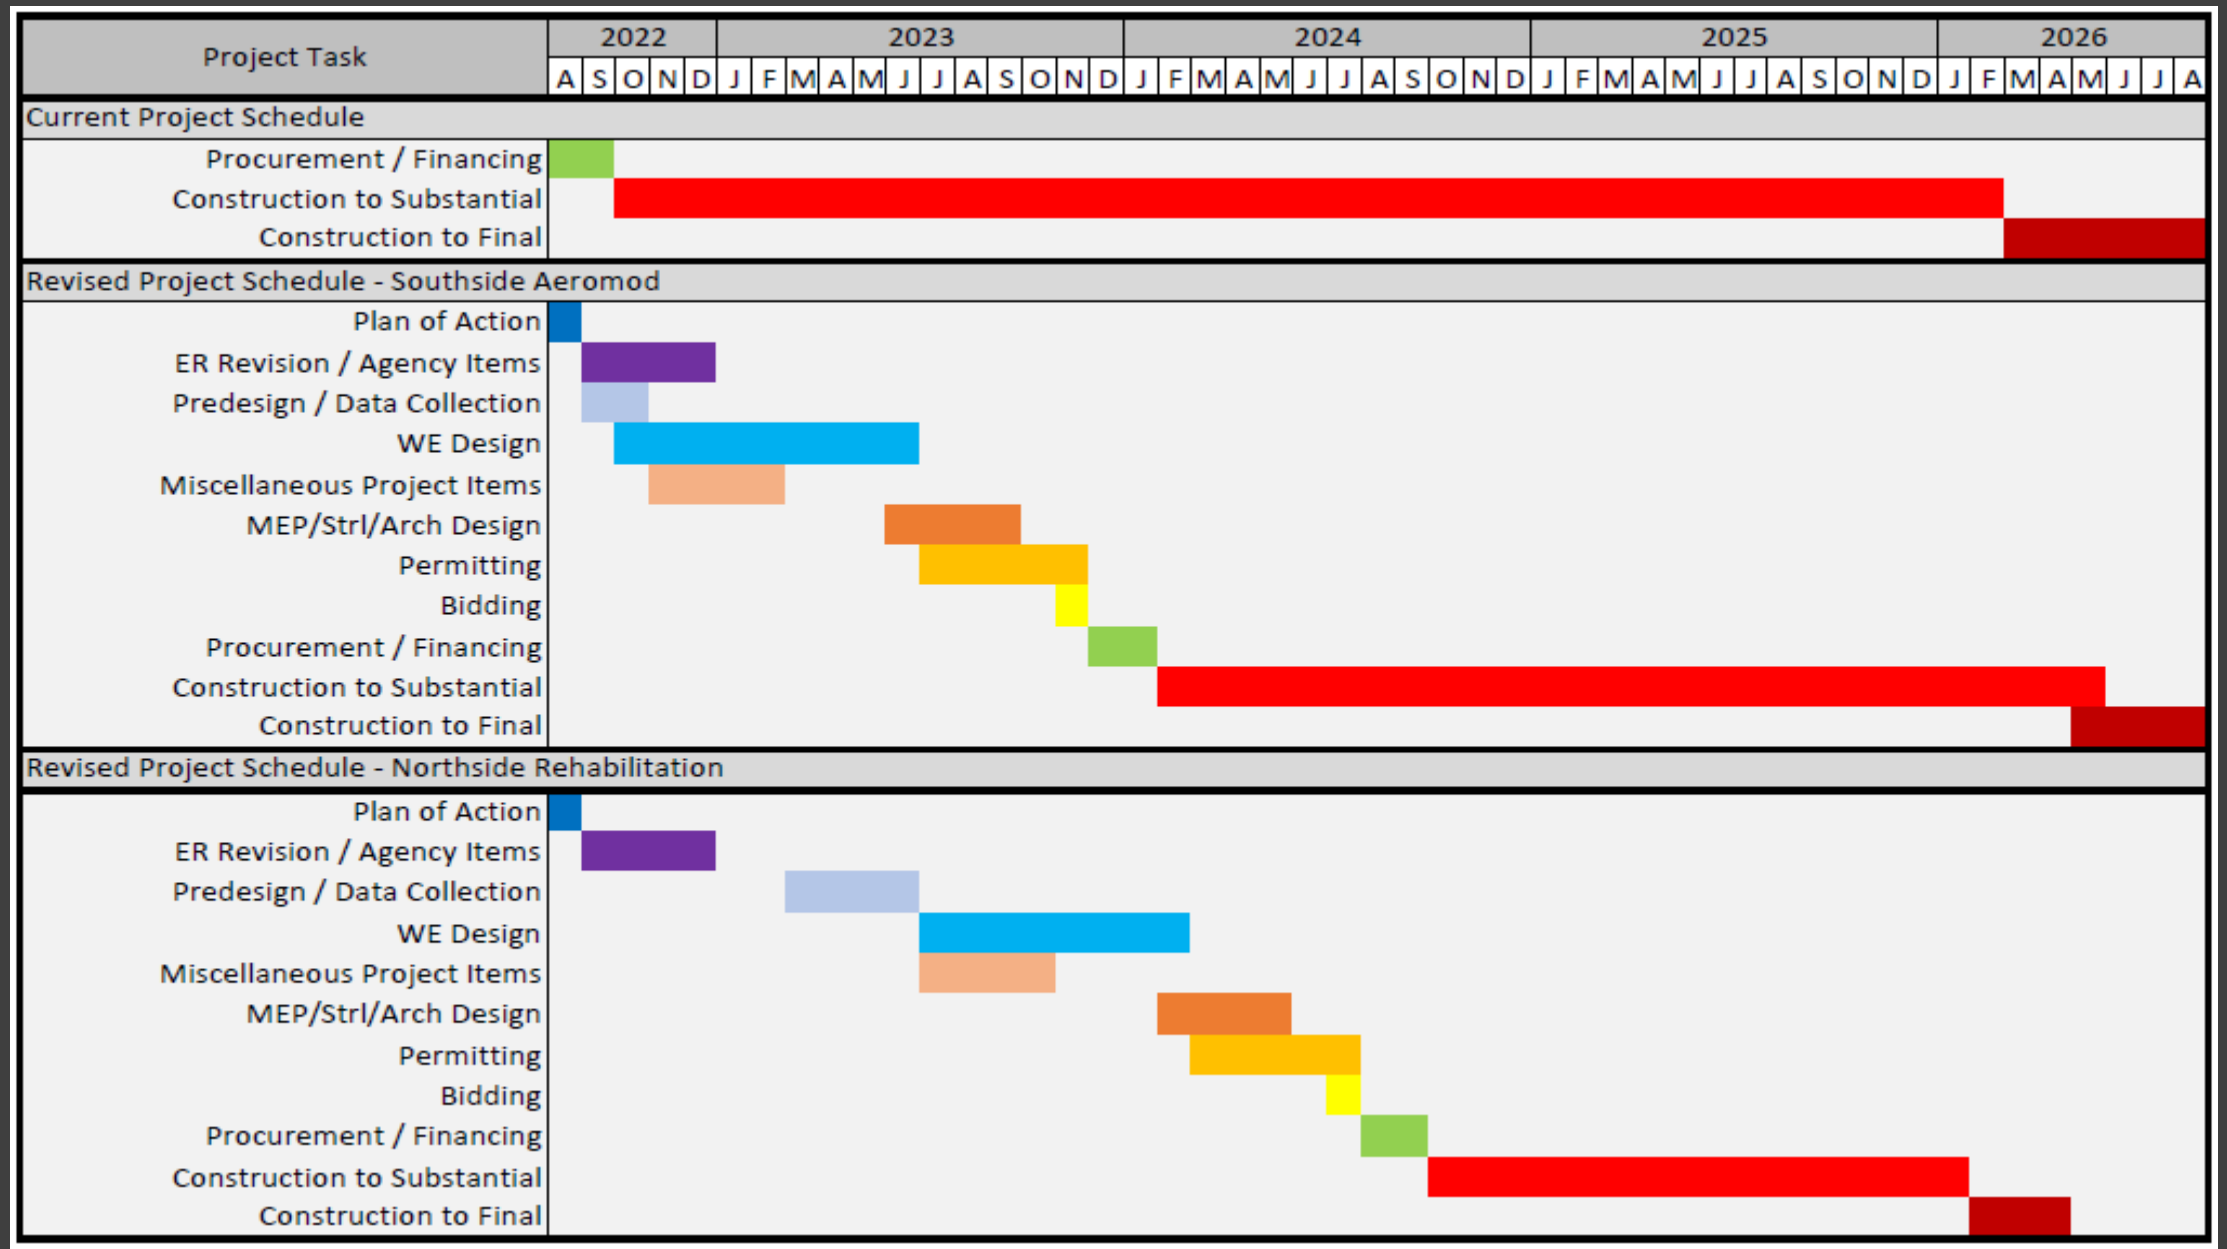
Project Cost



Option 1

- In 2020 – $33.5 to $39.7 million
- In 2022 – $65 to $77.9 million (96% more)
- In 2023 and 2024 – **$$??** *after* final design and permitting

Option 2

- In 2020 – $40.3 million
- In 2022 – Bid-in-hand is $103.6 million

Project Cost (cont.)

Financial Options

- Oklahoma Water Resources Board (OWRB) loan secured for $51.4 million (2019/2021)
- Option 2 needs an additional $65.6 million
- OWRB indicated that Clean Water State Revolving Fund (CWSRF) would be available but requires additional revenues to pay loan

Financial Options (cont.)

Graduated Utility Fee

- Agenda includes **modified 5/5** proposal, adding $5.00 the first year and $4.75 over 4 years, starting March 1, 2023
- Other graduated fee schedules could be considered, i.e.
  - **6/4** – $6.00 each year over 4 yrs.
  - **5/5** – $5.00 each year over 5 yrs.
  - **Different start** – up to June 2023

Half-Cent Sales Tax

- If sent to a vote of the citizens on January 10, 2023 AND IF APPROVED a **half-cent sales tax** would provide the necessary revenue to supplant the graduated utility fee.

City Commission
Q & A

City of Shawnee
OKLAHOMA

THE BOARD OF TRUSTEES OF THE SHAWNEE MUNICIPAL AUTHORITY, SHAWNEE, OKLAHOMA, MET IN REGULAR SESSION IN THE CITY COMMISSION CHAMBERS AT CITY HALL IN SHAWNEE, OKLAHOMA, ON THE 15TH DAY OF AUGUST, 2022, AT 6:00 O'CLOCK P. M.

PRESENT:

ABSENT:

Thereupon, the Chairman introduced a Resolution which was read by the City Attorney. Trustee _____, moved that the Resolution be adopted and Trustee _____, seconded the motion. The motion carrying with it the adoption of the Resolution prevailed by the following vote:

AYE:

NAY:

The Resolution as adopted is as follows:

RESOLUTION NO. SMA 2022-____

A RESOLUTION OF THE SHAWNEE MUNICIPAL AUTHORITY (THE "AUTHORITY") APPROVING AND AUTHORIZING A CLEAN WATER SRF LOAN FROM THE OKLAHOMA WATER RESOURCES BOARD IN THE TOTAL AGGREGATE PRINCIPAL AMOUNT OF $65,635,000.00; APPROVING THE ISSUANCE OF A PROMISSORY NOTE IN THE TOTAL AGGREGATE PRINCIPAL AMOUNT OF $65,635,000.00, SECURED BY A PLEDGE OF REVENUES AND AUTHORIZING ITS EXECUTION; APPROVING AND AUTHORIZING THE EXECUTION OF A LOAN AGREEMENT FOR CLEAN WATER SRF LOAN; DESIGNATING A LOCAL TRUSTEE AND APPROVING AND AUTHORIZING THE EXECUTION OF A TRUST AGREEMENT; APPROVING AND AUTHORIZING THE EXECUTION OF A SECURITY AGREEMENT; RATIFYING AND CONFIRMING A LEASE AGREEMENT AND OPERATION AND MAINTENANCE CONTRACT, AS AMENDED; APPROVING VARIOUS COVENANTS; APPROVING AND AUTHORIZING PAYMENT OF FEES AND EXPENSES; AND CONTAINING OTHER PROVISIONS RELATING THERETO.

WHEREAS, the Shawnee Municipal Authority, Pottawatomie County, Oklahoma (the "Borrower"), was organized under Title 60, Oklahoma Statutes 2011, Sections 176-180.4, as amended, for the purpose of furthering the public functions of the City of Shawnee, Oklahoma (the "City"); and

WHEREAS, the Borrower is authorized and has determined to construct improvements to the Borrower's wastewater treatment systems and all related appurtenances (collectively, the "Project") in order to better serve the customers of said Borrower and in payment of part of the cost thereof, to seek money in the form of a Clean Water SRF Loan from the Oklahoma Water Resources Board (the "Board") in the amount of not to exceed $65,635,000.00; and

WHEREAS, the Board has under consideration a loan application of the Borrower and the Borrower has determined to borrow money from the Board to accomplish the Project and to evidence such loan by the issuance of the Borrower's Series 2022 Clean Water SRF Promissory Note to Oklahoma Water Resources Board in the original principal amount of not to exceed $65,635,000.00 (the "Note"), said Note being secured by a pledge of revenue derived from Borrower's water and sanitary sewer systems (hereinafter collectively, the "System") provided, said pledge and lien shall be on a parity in all respects with the Borrower's (i) Series 2010A Drinking Water SRF Promissory Note to Oklahoma Water Resources Board dated October 14, 2010, issued in the original principal amount of $1,485,000; (ii) Series 2013 Promissory Note to Oklahoma Water Resources Board dated April 24, 2013, issued in the original principal amount of $12,070,000; (iii) Utility System Revenue Note, Series 2016 dated June 8, 2016, issued in the original principal amount of $5,410,000; (iv) Series 2019 Clean Water SRF Promissory Note to Oklahoma Water Resources Board dated May 28, 2019, issued in the original principal amount of $5,380,000; (v) Series 2019A Clean Water SRF Promissory Note to Oklahoma Water Resources Board dated September 19, 2019, issued in the original principal amount of $37,920,000; (vi) Series 2021A Drinking Water SRF Promissory Note to Oklahoma Water Resources Board dated May 28, 2021, issued in the original principal amount of $17,460,000, and (vii) Series 2021 Clean Water SRF Promissory Note to Oklahoma Water Resources Board dated June 24, 2021, issued in the original principal amount of $13,500,000 (collectively, the "Existing Indebtedness"); and

WHEREAS, it is the desire of the Borrower to authorize the execution and delivery of any and all documents necessary or attendant to the issuance of the Note.

NOW, THEREFORE, BE IT RESOLVED BY THE TRUSTEES OF THE SHAWNEE MUNICIPAL AUTHORITY, POTTAWATOMIE COUNTY, OKLAHOMA:

Section 1. Issuance of Note. The Borrower is hereby authorized to accept said loan and issue its Note payable to the Board and secured by a pledge of revenue derived from the operation of the System. The officers of the Borrower are hereby authorized and directed to execute said Note and to do any and all lawful things to effect said loan and secure said loan from the Board, provided that the principal amount of the Note shall be an amount not to exceed $65,635,000.00, and the rate of interest on the Note shall be a fixed rate of interest of not to exceed three and one half percent (3.50%) per annum inclusive of administrative fees of one half of one percent (1/2%) with said principal amount and rate to be determined pursuant to a Certificate of Determination to be executed by the Chairman or Vice Chairman of the Borrower.

Section 2. Execution of Loan Agreement for Clean Water SRF Loan. The Loan Agreement for Clean Water SRF Loan by and between the Borrower and the Board (the "Loan Agreement") is hereby approved and the Chairman or Vice Chairman and Secretary or Assistant Secretary of the Borrower are hereby authorized to execute same for and on behalf of the Borrower, and to do all other lawful things to carry out the terms and conditions of said Loan Agreement.

Section 3. Designation of Local Trustee and Execution of Trust Agreement. The Borrower hereby designates BancFirst, Oklahoma City, Oklahoma, to serve as local trustee (the "Local Trustee") of certain funds in relation to the Note. The Trust Agreement by and between the Borrower and the Local Trustee, pertaining to the Note (the "Trust Agreement") is hereby approved and the Chairman or Vice Chairman and Secretary or Assistant Secretary are hereby authorized to execute same for and on behalf of the Borrower, and to do all other lawful things to carry out the terms and conditions of said Trust Agreement.

Section 4. Execution of Security Agreement. The Security Agreement by the Borrower in favor of the Board (the "Security Agreement"), whereby the Borrower gives a lien on the revenues of the System to the Board to secure payment of the Note is hereby approved and the Chairman or Vice Chairman and Secretary or Assistant Secretary are hereby authorized to execute same for and on behalf of the Borrower, and do all other lawful things to carry out the terms and conditions of said Security Agreement.

Section 5. Lease Agreement and Operation and Maintenance Contract. The Lease Agreement and Operation and Maintenance Contract dated as of January 12, 1971, as amended by an Amendment to Lease Agreement dated as of July 1, 1990, between the City and the Borrower (collectively, the "Lease Agreement"), whereby the City leased to the Borrower its presently existing and hereafter acquired water and sanitary sewer systems, is hereby ratified and confirmed and the term of said Lease Agreement shall extend until the Note is paid.

Section 6. Covenants of Borrower Until payment in full of the Note and performance of all obligations owing to the Board under the Loan Agreement and the instruments executed pursuant hereto, unless the Board shall otherwise consent in writing, the Borrower hereby represents its intent to abide by and carry out the covenants contained in the Loan Agreement, which covenants are incorporated herein in their entirety.

Section 7. Project Costs Disbursement Account; Fees and Expenses. The Borrower is authorized to establish an account or accounts as necessary to serve as the Project Costs Disbursement Account described in the Loan Agreement. Upon closing of the referenced loan, the officers of the Borrower are hereby authorized to disburse (from loan proceeds or other available funds of the Borrower) those fees and expenses set forth on Exhibit "A" hereto, together with such other fees and expenses as will be set forth on the Borrower's Closing Order to be executed in connection with the closing of the financing referenced herein.

Section 8. Necessary Action. The Chairman or Vice Chairman and Secretary or Assistant Secretary of the Borrower are hereby further authorized on behalf of the Borrower to accept, receive, execute, attest, seal and deliver the above mentioned documents and all additional documentation, certifications and instruments and to take such further actions as may be required in connection with the transactions contemplated hereby, and are further authorized to approve and make any changes to the documents approved by this Resolution, for and on behalf of the Borrower, the execution and delivery of such documents being conclusive as to the approval of any terms contained therein.

Ordinance

ORDINANCE NO. _____

AN ORDINANCE AMENDING PORTIONS OF THE SHAWNEE MUNICIPAL CODE, CHAPTER 26 "UTILITIES," BY ADDING AND ADOPTING A UTILITY IMPROVEMENT FEE; AND PROVIDING FOR REPEAL; PROVIDING FOR CODIFICATION.; AND PROVIDING FOR SEVERABILITY.

WHEREAS, a proposal has been presented to the City Commission of the City of Shawnee, Oklahoma to amend Chapter 26 of the Shawnee Municipal Code of Ordinances of the City of Shawnee, Oklahoma so as to create, implement, and impose a utility improvement fee upon utility customers;

WHEREAS, the City Commission has determined that such modification and amendment is necessary and in the best interest of the citizens of the City of Shawnee to provide more efficient administration of city departments; and

WHEREAS, the Mayor and City Commissioners wish to implement those changes:

NOW THEREFORE BE IT ORDAINED BY THE MAYOR AND CITY COMMISSIONERS OF THE CITY OF SHAWNEE, OKLAHOMA THAT CHAPTER 26 OF THE SHAWNEE MUNICIPAL CODE BE AMENDED AS FOLLOWS:

Section 1. [*adoption of Utility Improvement Fee*] Amends City Code Chapter 26 "Utilities", Article II "Water and Sewer Rates and Fees", by creating Section 26-30 [formerly "Reserved"], which shall impose and set a monthly fee for Utility Improvements through the adoption of the following language:

Section 26-30 – *Utility Improvement Fee***.**

Each account shall be charged a monthly fee relating to Utility Improvements for the purpose of funding capital improvements and for the payment of any debt service associated with said improvements. The amount to be charged for the Utility Improvement Fee shall be in an amount as described in the City Fee Schedule adopted and updated from time to time by resolution of the City Commission. The monies collected from the Utility Improvement Fee shall be maintained in a Utility Improvement Fund.

Section 2: Repealer. All sections, subsections, clauses, and sentences of existing law in conflict with this ordinance are repealed.

Section 3: Codification and Fee Schedule Update. This Ordinance, and its Appendix, shall be codified in the Shawnee Municipal Code, and update the City Fee Schedule, and the codifier is authorized to set out the ordinance as appropriate.

Section 4: Severability. The provisions of this ordinance are severable and, if any sentence, provision, or other part of this Ordinance shall be held invalid, the decision of the court so holding shall not affect or impair any of the remaining parts or provisions of this ordinance.

Resolution

Exhibit A

Exhibit B

RESOLUTION NO. ____

A RESOLUTION UPDATING THE CITY FEE SCHEDULE BY SETTING THE MONTHLY RATE OF THE UTILITY IMPROVEMENT FEE PURSUANT TO CHAPTER 26, ARTICLE II, SECTION 26-30, OF THE CITY CODE; AND PROVIDING FOR THE RE-ADOPTION OF THE CITY FEE SCHEDULE IN WHOLE.

WHEREAS, The City, through the passage of Ordinance No. 2599NS, has adopted a City Fee Schedule as a part of the Code of the City of Shawnee, Oklahoma that contains the description of various fees administered by the City;

WHEREAS, pursuant to Ordinance No. 2599NS, Subsequent versions, adoptions, and updates of the City Fee Schedule shall be accomplished by resolution of the City Commission;

WHEREAS, Chapter 26, Article II, Section 26-30 provides for the setting and updating of monthly charges for the Utility Improvement Fee, adopted and updated by resolution of the City Commission, and that such rates shall be described in the City Fee Schedule;

WHEREAS, the City Commission wishes to update the City Fee Schedule in a manner described below so as to set the monthly rate for the Utility Improvement Fee pursuant to Section 26-30;

NOW THEREFORE, BE IT RESOLVED BY THE MAYOR AND CITY COMMISSIONERS OF THE CITY OF SHAWNEE, OKLAHOMA:

Section 1. The monthly Utility Improvement Fee charged to each account shall gradually increase as follows:

Effective March 1, 2023:	$5.00 per month, per account.
Effective March 1, 2024:	$9.75 per month, per account.
Effective March 1, 2025:	$14.50 per month, per account.
Effective March 1, 2026:	$19.25 per month, per account.
Effective March 1, 2027:	$24.00 per month, per account.

After March 1, 2027 the rate shall remain at $24.00 per month, per account, until modified by resolution of the City Commission.

Section 2. **Adoption and Update of City Fee Schedule.** That attached hereto is the updated portion of the City Fee Schedule as created above (Exhibit 'A') and the updated City Fee Schedule in whole (Exhibit 'B'). This Resolution updates and changes City Fee Schedule only to the extent as described above. All other existing fees, fines, bonds, and insurance amounts described in the City Fee Schedule, not expressly updated herein, shall remain the same, and are otherwise re-adopted, for full force and effect, in the Code of the City of Shawnee.

Section 3. **Effective Date.** The effective date of the fee changes in this Resolution is March 1, 2023.

PASSED AND APPROVED this _____ day of August, 2022.

ADVERTISEMENT FOR BIDS

SHAWNEE WASTEWATER SYSTEM IMPROVEMENTS

Shawnee Municipal Authority (Owner) is requesting Bids for the construction of the following Project:

Wastewater System Improvements

Bids for the construction of the Project will be received at the **City of Shawnee** located at **Office of the City Clerk, City of Shawnee, 16 West 9th Street, Shawnee, OK 74801-6812** until **August 1st, 2022 at 4:00pm** local time. Bids received will be publicly opened and read along at the Owner's public meeting on August 1st at 6:30pm local time. Bids received more than ninety-six (96) hours prior to the Bid Opening will be returned. All bids received at said time will be opened and evaluated for completeness and correctness. All work shall be performed and all construction and materials used and furnished shall be in accordance with the Contract Documents prepared by Wall Engineering, LLC.

Only contactors previously selected as prequalified by the City of Shawnee will be allowed to bid this project.

The contract is to be awarded to the lowest, responsive, responsible bidder. The Owner reserves the right to correct any non-material clerical errors in the bidding as allowed under Oklahoma Law. The Owner reserves the right to reject any and all bids in accordance with the Oklahoma Public Competitive Bidding Act of 1974. Conditional bids shall not be accepted.

The Project includes the following Work:

> **New 4.5 MGD SBR Wastewater Treatment Plant & Related Equipment/Units, New Southside Wastewater Lift Station & Screening System, 24" HDPE Forcemain between New WWTP and New Lift Station, & 30" HDPE Discharge Forcemain to Discharge Location.**

Funding for this project is provided through the Oklahoma Water Resources Board's Clean Water State Revolving Fund (CWSRF) program. As such, compliance with the Davis Bacon Act, American Iron and Steel, and Labor Standards Contract Provisions is mandatory.

Each bidder shall accompany his original bid, filed with the Shawnee Municipal Authority, with a certified or Cashier's Check on a solvent bank located in Oklahoma, or a Bidder's Bond, in the amount of five (5) percent of the amount bid, as a guarantee of his ability to perform the contract bid upon, and that he will enter into a written contract with the Owner to perform said work and/or furnish said materials in accordance with said Plans and Specifications, and furnish the required bonds according to the Public Competitive Bidding Act of 1974.

The Owner will retain the deposit for liquidated damages in case the successful bidder fails to enter in said contract and furnish the required bonds provided for in the specifications within the time required. Deposit of the unsuccessful bidders will be returned upon the execution of the Contract and required bonds.

Each bidder shall accompany his bid with a sworn statement in writing that the bidder has not directly or indirectly entered into an agreement, expressed or implied, with any other bidder concerning the price or amount of such bid or any bids, the limiting of the bids or bidders, the paying to anyone any money for promotion expenses, the parceling or farming out to any bidder or bidders or other persons of any part of the contract or any part of the subject matter of the bid or of the profits thereof.

Construction, Maintenance and Statutory Payment Bonds in the amount of 100% of the contract price are required for this project. These bonds must be obtained from a Corporate Surety licensed in Oklahoma,

and approved by the Owner and Consulting Engineer. The bidder shall state in the proposal the name and address of the Surety or Sureties who will sign this bond in case the contract is awarded. The Maintenance Bond required will guarantee the repair of all damage due to improper materials or workmanship for a period of one (1) year after the acceptance of the work by the Owner.

This project is to be financed by a CWSRF loan from the Oklahoma Water Resources Board (OWRB) and shall be referred to as Project No. ORF20-0018-CW. The following requirements and regulations must be complied with:

Equal Opportunity in Employment: All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, age or physical handicap. Bidders on this work will be required to comply with the President's Executive Order No. 11246, as amended.

Each bidder must fully comply with the requirements, terms and conditions of the Environmental Protection Agency's Disadvantaged Business Enterprise Requirements including employing the six (6) good faith efforts and soliciting disadvantaged business enterprises during the performance of this contract. The bidder commits itself to following the good faith efforts to solicit disadvantaged business enterprises contained herein and all other requirements, terms and conditions of these bid conditions by submitting a properly signed bid. Requirements are contained in OWRB's Guidance and Procedures, ORF-267.

Davis Bacon Act wage rules shall apply. All laborers and mechanics employed by contractors and sub-contractors on projects funded directly by or assisted in whole or in part by and through the Federal Government shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of Chapter 31 of Title 40, United States Code and 29 CFR parts 1,3, and 5. The Department of Labor provides all pertinent information related to compliance with labor standards, including prevailing wage rates and instructions for reporting. For more information please refer to Oklahoma Water Resources Board Supplemental Conditions, ORF-185 as well as http://www.beta.sam.gov/."

American Iron and Steel provisions also apply to projects funded directly by or assisted in whole or in part by and through the Federal Government pursuant to P.L. 113-76, Consolidated Appropriations Act, 2014, Sec. 436 requires that "None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j-12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." For more information, please refer to Oklahoma Water Resources Board Supplemental Conditions ORF-185.

System for Award Management (SAM) registration is required for all SRF programs (CWSRF and DWSRF) applicants and Awardees (Entities, Prime Contractors, Subcontractors, Vendors) in order to be awarded contracts by the SRF Programs. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions. Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

Note: In order to register in SAM, a Data Universal Number System (DUNS) number will be required. DUNS number is a unique, non-indicative 9-digit identifier issued and maintained by Dun & Bradstreet (D&B) that verifies the existence of a business entity globally. D&B assigns DUNS numbers for each physical

location of a business. All entities doing business with the U.S Government can receive a DUNS number FREE of charge and, under normal circumstances, within 1-2 business days when using D&B web form process at http://fedgov.dnb.com/webform.

Information and Bidding Documents for the Project can be found at the following Designated Bidding Website:

www.civcastusa.com

Bidding Documents may be downloaded from the Designated Bidding Website. Prospective Bidders are required to register with the Designated Bidding Website as a plan holder, even if Bidding Documents are obtained from a plan room or source other than the Designated Website in either electronic or paper format. The Designated Bidding Website will be updated periodically with addenda, lists of registered plan holders, reports, and other information relevant to submitting a Bid for the Project. All official notifications, addenda, and other Bidding Documents will be offered only through the Designated Bidding Website. Neither Owner nor Engineer will be responsible for Bidding Documents, including addenda, if any, obtained from sources other than the Designated Bidding Website.

Printed copies of the Bidding Documents may be obtained from the Designated Bidding Website for an additional fee. See Designated Bidding Website for information.

A **mandatory pre-bid conference** for the Project will be held on **July 14th, 2022 at 10:00am at Shawnee City Hall, 16 West 9th Street, Shawnee, OK.** Bids will not be accepted from Bidders that do not attend the mandatory pre-bid conference.

For all further requirements regarding bid submittal, qualifications, procedures, and contract award, refer to the Instructions to Bidders that are included in the Bidding Documents.

Bids must remain in effect for 60 days after the bid opening date. Within 60 days from the bid date, the Owner may award the contract to the lowest responsive, responsible bidder or reject any or all bids for the project.

The Owner reserves the right to reject any or all bids, to waive irregularities in the bids and bidding deemed to be in the best interests of the Owner, and to reject nonconforming, nonresponsive, or conditional bids. In case of ambiguity or lack of clearness in stating the price in the bids, the Owner reserves the right to consider the most advantageous construction thereof, or to reject the bid. Unreasonable or unbalanced unit prices will be considered sufficient cause of rejection of any bid or bids.

Prequalified Contractors

The following contractors have been prequalified by the City of Shawnee for this project:

A. Wastewater System Improvements, General Contractors
    a. Crossland Heavy Contractors, Edmond, OK
    b. Downey Contracting, LLC, Oklahoma City, OK
    c. MWH Constructors, Inc, Broomfield, CO
    d. Oscar Renda Contracting, Inc, Grapevine, TX
    e. Thalle Construction Co, Inc, Hillsborough, NC
    f. Wynn Construction Co, Inc, Oklahoma City, OK

B. HDPE Sewermain, Subcontractors
    a. Prequalified General Contractors (Self-Perform all associated work without subcontractors)
    b. McGuire Brothers Construction, Tulsa, OK
    c. Belt Construction, Texarkana, AR
    d. Krapff Reynolds, Oklahoma City, OK
    e. Orr Construction, Davenport, OK
    f. TIMCO Blasting & Coatings, Inc, Bristow, OK
    g. Marsau Enterprises, Enid, OK

REQUIREMENTS FOR BIDDERS

In accordance with State Law and project requirements, the following documents **must** be included in each Bid Proposal packet submitted for consideration. Failure to submit all of the items called for may render the bid proposals incomplete, thus eliminating the bidder from further consideration. They include:

1. 00_41_13 Bid Form
2. 00_43_13 Bid Security Form
3. 00_45_19 Noncollusion Affidavit
4. 00_45_20 Business Relationship Affidavit
5. 00_46_47.19 DBE Guidance
6. 00_46_47.23 DBE Subcontractor Participation Form
7. 00_46_47.26 DBE Subcontractor Performance Form
8. 00_46_47.29 DBE Subcontractor Utilization Form
9. 00_46_47.33 American Iron & Steel Certification
10. 00_46_47.36 Bidder Statements

In addition, the required documents must be completely filled out and executed in accordance with the requirements of the Contract Documents to be considered responsive. Some of these items include, but are not limited to:

1. Bid Form has been signed by an authorized signatory of the Contractor
2. All addenda issued by the Engineer or Owner have been acknowledged on the Bid Form.

ADVERTISEMENT FOR BIDS

SHAWNEE WASTEWATER SYSTEM IMPROVEMENTS

Shawnee Municipal Authority (Owner) is requesting Bids for the construction of the following Project:

Wastewater System Improvements

Bids for the construction of the Project will be received at the **City of Shawnee** located at **Office of the City Clerk, City of Shawnee, 16 West 9th Street, Shawnee, OK 74801-6812** until **August 1st, 2022 at 4:00pm** local time. Bids received will be publicly opened and read along at the Owner's public meeting on August 1st at 6:30pm local time. Bids received more than ninety-six (96) hours prior to the Bid Opening will be returned. All bids received at said time will be opened and evaluated for completeness and correctness. All work shall be performed and all construction and materials used and furnished shall be in accordance with the Contract Documents prepared by Wall Engineering, LLC.

Only contactors previously selected as prequalified by the City of Shawnee will be allowed to bid this project.

The contract is to be awarded to the lowest, responsive, responsible bidder. The Owner reserves the right to correct any non-material clerical errors in the bidding as allowed under Oklahoma Law. The Owner reserves the right to reject any and all bids in accordance with the Oklahoma Public Competitive Bidding Act of 1974. Conditional bids shall not be accepted.

The Project includes the following Work:

> **New 4.5 MGD SBR Wastewater Treatment Plant & Related Equipment/Units, New Southside Wastewater Lift Station & Screening System, 24" HDPE Forcemain between New WWTP and New Lift Station, & 30" HDPE Discharge Forcemain to Discharge Location.**

Funding for this project is provided through the Oklahoma Water Resources Board's Clean Water State Revolving Fund (CWSRF) program. As such, compliance with the Davis Bacon Act, American Iron and Steel, and Labor Standards Contract Provisions is mandatory.

Each bidder shall accompany his original bid, filed with the Shawnee Municipal Authority, with a certified or Cashier's Check on a solvent bank located in Oklahoma, or a Bidder's Bond, in the amount of five (5) percent of the amount bid, as a guarantee of his ability to perform the contract bid upon, and that he will enter into a written contract with the Owner to perform said work and/or furnish said materials in accordance with said Plans and Specifications, and furnish the required bonds according to the Public Competitive Bidding Act of 1974.

The Owner will retain the deposit for liquidated damages in case the successful bidder fails to enter in said contract and furnish the required bonds provided for in the specifications within the time required. Deposit of the unsuccessful bidders will be returned upon the execution of the Contract and required bonds.

Each bidder shall accompany his bid with a sworn statement in writing that the bidder has not directly or indirectly entered into an agreement, expressed or implied, with any other bidder concerning the price or amount of such bid or any bids, the limiting of the bids or bidders, the paying to anyone any money for promotion expenses, the parceling or farming out to any bidder or bidders or other persons of any part of the contract or any part of the subject matter of the bid or of the profits thereof.

Construction, Maintenance and Statutory Payment Bonds in the amount of 100% of the contract price are required for this project. These bonds must be obtained from a Corporate Surety licensed in Oklahoma,

and approved by the Owner and Consulting Engineer. The bidder shall state in the proposal the name and address of the Surety or Sureties who will sign this bond in case the contract is awarded. The Maintenance Bond required will guarantee the repair of all damage due to improper materials or workmanship for a period of one (1) year after the acceptance of the work by the Owner.

This project is to be financed by a CWSRF loan from the Oklahoma Water Resources Board (OWRB) and shall be referred to as Project No. ORF20-0018-CW. The following requirements and regulations must be complied with:

Equal Opportunity in Employment: All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, age or physical handicap. Bidders on this work will be required to comply with the President's Executive Order No. 11246, as amended.

Each bidder must fully comply with the requirements, terms and conditions of the Environmental Protection Agency's Disadvantaged Business Enterprise Requirements including employing the six (6) good faith efforts and soliciting disadvantaged business enterprises during the performance of this contract. The bidder commits itself to following the good faith efforts to solicit disadvantaged business enterprises contained herein and all other requirements, terms and conditions of these bid conditions by submitting a properly signed bid. Requirements are contained in OWRB's Guidance and Procedures, ORF-267.

Davis Bacon Act wage rules shall apply. All laborers and mechanics employed by contractors and sub-contractors on projects funded directly by or assisted in whole or in part by and through the Federal Government shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of Chapter 31 of Title 40, United States Code and 29 CFR parts 1,3, and 5. The Department of Labor provides all pertinent information related to compliance with labor standards, including prevailing wage rates and instructions for reporting. For more information please refer to Oklahoma Water Resources Board Supplemental Conditions, ORF-185 as well as http://www.beta.sam.gov/."

American Iron and Steel provisions also apply to projects funded directly by or assisted in whole or in part by and through the Federal Government pursuant to P.L. 113-76, Consolidated Appropriations Act, 2014, Sec. 436 requires that "None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j-12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." For more information, please refer to Oklahoma Water Resources Board Supplemental Conditions ORF-185.

System for Award Management (SAM) registration is required for all SRF programs (CWSRF and DWSRF) applicants and Awardees (Entities, Prime Contractors, Subcontractors, Vendors) in order to be awarded contracts by the SRF Programs. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions. Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

Note: In order to register in SAM, a Data Universal Number System (DUNS) number will be required. DUNS number is a unique, non-indicative 9-digit identifier issued and maintained by Dun & Bradstreet (D&B) that verifies the existence of a business entity globally. D&B assigns DUNS numbers for each physical

location of a business. All entities doing business with the U.S Government can receive a DUNS number FREE of charge and, under normal circumstances, within 1-2 business days when using D&B web form process at http://fedgov.dnb.com/webform.

Information and Bidding Documents for the Project can be found at the following Designated Bidding Website:

www.civcastusa.com

Bidding Documents may be downloaded from the Designated Bidding Website. Prospective Bidders are required to register with the Designated Bidding Website as a plan holder, even if Bidding Documents are obtained from a plan room or source other than the Designated Website in either electronic or paper format. The Designated Bidding Website will be updated periodically with addenda, lists of registered plan holders, reports, and other information relevant to submitting a Bid for the Project. All official notifications, addenda, and other Bidding Documents will be offered only through the Designated Bidding Website. Neither Owner nor Engineer will be responsible for Bidding Documents, including addenda, if any, obtained from sources other than the Designated Bidding Website.

Printed copies of the Bidding Documents may be obtained from the Designated Bidding Website for an additional fee. See Designated Bidding Website for information.

A **mandatory pre-bid conference** for the Project will be held on **July 14th, 2022 at 10:00am at Shawnee City Hall, 16 West 9th Street, Shawnee, OK.** Bids will not be accepted from Bidders that do not attend the mandatory pre-bid conference.

For all further requirements regarding bid submittal, qualifications, procedures, and contract award, refer to the Instructions to Bidders that are included in the Bidding Documents.

Bids must remain in effect for 60 days after the bid opening date. Within 60 days from the bid date, the Owner may award the contract to the lowest responsive, responsible bidder or reject any or all bids for the project.

The Owner reserves the right to reject any or all bids, to waive irregularities in the bids and bidding deemed to be in the best interests of the Owner, and to reject nonconforming, nonresponsive, or conditional bids. In case of ambiguity or lack of clearness in stating the price in the bids, the Owner reserves the right to consider the most advantageous construction thereof, or to reject the bid. Unreasonable or unbalanced unit prices will be considered sufficient cause of rejection of any bid or bids.

ARTICLE 1—DEFINED TERMS

1.1 Terms used in these Instructions to Bidders have the meanings indicated in the General Conditions and Supplementary Conditions. Additional terms used in these Instructions to Bidders have the meanings indicated below:

1. Designated Website - The website specifically defined as www.civcastusa.com from which the Contract Documents and project information are issued/distributed and with which all plan holders are required to be registered.

ARTICLE 2—BIDDING DOCUMENTS

2.01 Bidder shall obtain a complete set of Bidding Requirements and proposed Contract Documents (together, the Bidding Documents). See the Agreement for a list of the Contract Documents. It is Bidder's responsibility to determine that it is using a complete set of documents in the preparation of a Bid. Bidder assumes sole responsibility for errors or misinterpretations resulting from the use of incomplete documents, by Bidder itself or by its prospective Subcontractors and Suppliers.

2.02 Bidding Documents are made available for the sole purpose of obtaining Bids for completion of the Project and permission to download or distribution of the Bidding Documents does not confer a license or grant permission or authorization for any other use. Authorization to download documents, or other distribution, includes the right for plan holders to print documents solely for their use, and the use of their prospective Subcontractors and Suppliers, provided the plan holder pays all costs associated with printing or reproduction. Printed documents may not be re-sold under any circumstances.

2.03 Owner has established a Bidding Documents Website as indicated in the Advertisement or invitation to bid. Owner recommends that Bidder register as a plan holder with the Issuing Office at such website, and obtain a complete set of the Bidding Documents from such website. Bidders may rely that sets of Bidding Documents obtained from the Bidding Documents Website are complete, unless an omission is blatant. Registered plan holders will receive Addenda issued by Owner.

2.04 Plan rooms (including construction information subscription services, and electronic and virtual plan rooms) may distribute the Bidding Documents, or make them available for examination. Those prospective bidders that obtain an electronic (digital) copy of the Bidding Documents from a plan room are **REQUIRED** to register as plan holders from the Designated Website. Owner is not responsible for omissions in Bidding Documents or other documents obtained from plan rooms, or for a Bidder's failure to obtain Addenda from a plan room.

2.05 *Electronic Documents*

A. When the Bidding Requirements indicate that electronic (digital) copies of the Bidding Documents are available, such documents will be made available to the Bidders as Electronic Documents in the manner specified.

1. Bidding Documents will be provided in Adobe PDF (Portable Document Format) (.pdf) that is readable by Adobe Acrobat Reader, latest version. It is the intent of the Engineer and Owner that such Electronic Documents are to be exactly representative of the paper copies of the documents. However, because the Owner and Engineer cannot totally

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

control the transmission and receipt of Electronic Documents nor the Contractor's means of reproduction of such documents, the Owner and Engineer cannot and do not guarantee that Electronic Documents and reproductions prepared from those versions are identical in every manner to the paper copies.

B. Unless otherwise stated in the Bidding Documents, the Bidder may use and rely upon complete sets of Electronic Documents of the Bidding Documents, described in Paragraph 2.06.A above. However, Bidder assumes all risks associated with differences arising from transmission/receipt of Electronic Documents versions of Bidding Documents and reproductions prepared from those versions and, further, assumes all risks, costs, and responsibility associated with use of the Electronic Documents versions to derive information that is not explicitly contained in printed paper versions of the documents, and for Bidder's reliance upon such derived information.

ARTICLE 3—QUALIFICATIONS OF BIDDERS

3.01 Potential Bidders have been pre-qualified prior to bid date by a formal prequalification process. Prequalified bidders are as follows:

A. Prime Contractors

1. Crossland Heavy Contractors, Edmond, OK
2. Downey Contracting, LLC, Oklahoma City, OK
3. MWH Constructors, Inc, Broomfield, CO
4. Oscar Renda Contracting, Inc, Grapevine, TX
5. Thalle Construction Co, Inc, Hillsborough, NC
6. Wynn Construction Co, Inc, Oklahoma City, OK

B. HDPE Subcontractors

1. Prequalified General Contractors (Self-Perform all associated work without subcontractors)
2. McGuire Brothers Construction, Tulsa, OK
3. Belt Construction, Texarkana, AR
4. Krapff Reynolds, Oklahoma City, OK
5. Orr Construction, Davenport, OK
6. TIMCO Blasting & Coatings, Inc, Bristow, OK
7. Marsau Enterprises, Enid, OK

3.02 The Successful bidder shall perform work amounting to the percentage (%) limits stated in SC 7.07A., using its own equipment and personnel. No portion of the Contract shall be sublet, assigned, or otherwise disposed of except with the expressed written consent of the Owner. If the Successful bidder fails to demonstrate to the Owner that it has the ability to perform the specified percentage of the Contract work with its own equipment and personnel, its Bid may be considered non-responsive.

3.03 ~~Bidder is to submit the following information with its Bid to demonstrate Bidder's qualifications to perform the Work:~~

~~A. Written evidence establishing its qualifications such as financial data, previous experience, and present commitments as required in Section 00_45_13.~~

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

~~B. A written statement that Bidder is authorized to do business in the state where the Project is located, or a written certification that Bidder will obtain such authority prior to the Effective Date of the Contract.~~

~~C. Bidder's state or other contractor license number, if applicable.~~

~~D. Subcontractor and Supplier qualification information, if applicable.~~

~~E. Other required information regarding qualifications.~~

~~F. Statement of Qualifications as outlined in Section 00_45_13 Bidder's Qualifications~~

3.04 ~~A Bidder's failure to submit required qualification information within the times indicated may disqualify Bidder from receiving an award of the Contract.~~

3.05 No requirement in this Article 3 to submit information will prejudice the right of Owner to seek additional pertinent information regarding Bidder's qualifications.

ARTICLE 4—PRE-BID CONFERENCE

4.01 A mandatory pre-bid conference will be held at the time and location indicated in the Advertisement to bid. Representatives of Owner and Engineer will be present to discuss the Project. Proposals will not be accepted from Bidders who do not attend the conference. It is each Bidder's responsibility to sign in at the pre-bid conference to verify its participation. Bidders must sign in using the name of the organization that will be submitting a Bid. A list of qualified Bidders that attended the pre-bid conference and are eligible to submit a Bid for this Project will be issued in an Addendum.

ARTICLE 5—SITE AND OTHER AREAS; EXISTING SITE CONDITIONS; EXAMINATION OF SITE; OWNER'S SAFETY PROGRAM; OTHER WORK AT THE SITE

5.01 *Site and Other Areas*

A. The Site is identified in the Bidding Documents. By definition, the Site includes rights-of-way, easements, and other lands furnished by Owner for the use of the Contractor. Any additional lands required for temporary construction facilities, construction equipment, or storage of materials and equipment, and any access needed for such additional lands, are to be obtained and paid for by Contractor.

5.02 *Existing Site Conditions*

A. *Subsurface and Physical Conditions; Hazardous Environmental Conditions*

1. The Supplementary Conditions identify the following regarding existing conditions at or adjacent to the Site:

a. Those reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data.

b. Those drawings known to Owner of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

c. Reports and drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site.

d. Technical Data contained in such reports and drawings.

2. Owner will make copies of reports and drawings referenced above available to any Bidder on request. These reports and drawings are not part of the Contract Documents, but the Technical Data contained therein upon whose accuracy Bidder is entitled to rely, as provided in the General Conditions, has been identified and established in the Supplementary Conditions. Bidder is responsible for any interpretation or conclusion Bidder draws from any Technical Data or any other data, interpretations, opinions, or information contained in such reports or shown or indicated in such drawings.

3. If the Supplementary Conditions do not identify Technical Data, the default definition of Technical Data set forth in Article 1 of the General Conditions will apply.

B. *Underground Facilities:* Underground Facilities are shown or indicated on the Drawings, pursuant to Paragraph 5.05 of the General Conditions, and not in the drawings referred to in Paragraph 5.02.A of these Instructions to Bidders. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data.

5.03 *Other Site-related Documents*

A. In addition to the documents regarding existing Site conditions referred to in Paragraph 5.02.A, the following other documents relating to conditions at or adjacent to the Site are known to Owner and made available to Bidders for reference:

1. **None.**

Owner will make copies of these other Site-related documents available to any Bidder on request.

B. Owner has not verified the contents of these other Site-related documents, and Bidder may not rely on the accuracy of any data or information in such documents. Bidder is responsible for any interpretation or conclusion Bidder draws from the other Site-related documents.

C. The other Site-related documents are not part of the Contract Documents.

D. Bidders are encouraged to review the other Site-related documents, but Bidders will not be held accountable for any data or information in such documents. The requirement to review and take responsibility for documentary Site information is limited to information in (1) the Contract Documents and (2) the Technical Data.

E. No other Site-related documents are available.

5.04 *Site Visit and Testing by Bidders*

A. Bidder is required to visit the Site and conduct a thorough visual examination of the Site and adjacent areas. During the visit the Bidder must not disturb any ongoing operations at the Site.

B. Bidders visiting the Site are required to arrange their own transportation to the Site.

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. All access to the Site other than during a regularly scheduled Site visit must be coordinated through the following Owner or Engineer contact for visiting the Site. Bidder must conduct the required Site visit during normal working hours.

D. Bidder is not required to conduct any subsurface testing, or exhaustive investigations of Site conditions.

E. On request, and to the extent Owner has control over the Site, and schedule permitting, the Owner will provide Bidder general access to the Site to conduct such additional examinations, investigations, explorations, tests, and studies as Bidder deems necessary for preparing and submitting a successful Bid. Owner will not have any obligation to grant such access if doing so is not practical because of existing operations, security or safety concerns, or restraints on Owner's authority regarding the Site. Bidder is responsible for establishing access needed to reach specific selected test sites.

F. Bidder must comply with all applicable Laws and Regulations regarding excavation and location of utilities, obtain all permits, and comply with all terms and conditions established by Owner or by property owners or other entities controlling the Site with respect to schedule, access, existing operations, security, liability insurance, and applicable safety programs.

G. Bidder must fill all holes and clean up and restore the Site to its former condition upon completion of such explorations, investigations, tests, and studies.

5.05 *Owner's Safety Program*

A. Site visits and work at the Site may be governed by an Owner safety program. If an Owner safety program exists, it will be noted in the Supplementary Conditions.

5.06 *Other Work at the Site*

A. Reference is made to Article 8 of the Supplementary Conditions for the identification of the general nature of other work of which Owner is aware (if any) that is to be performed at the Site by Owner or others (such as utilities and other prime contractors) and relates to the Work contemplated by these Bidding Documents. If Owner is party to a written contract for such other work, then on request, Owner will provide to each Bidder access to examine such contracts (other than portions thereof related to price and other confidential matters), if any.

ARTICLE 6—BIDDER'S REPRESENTATIONS AND CERTIFICATIONS

6.01 *Express Representations and Certifications in Bid Form, Agreement*

A. The Bid Form that each Bidder will submit contains express representations regarding the Bidder's examination of Project documentation, Site visit, and preparation of the Bid, and certifications regarding lack of collusion or fraud in connection with the Bid. Bidder should review these representations and certifications, and assure that Bidder can make the representations and certifications in good faith, before executing and submitting its Bid.

B. If Bidder is awarded the Contract, Bidder (as Contractor) will make similar express representations and certifications when it executes the Agreement.

EJCDC® C-200, Instructions to Bidders for Construction Contract.

ARTICLE 7—INTERPRETATIONS AND ADDENDA

7.01 Owner on its own initiative may issue Addenda to clarify, correct, supplement, or change the Bidding Documents.

7.02 Bidder shall submit all questions about the meaning or intent of the Bidding Documents to Engineer in writing **via Designated Website**. Contact information and submittal procedures for such questions are as follows:

A. **Submitted via Designated Website at www.civcastusa.com.**

7.03 Interpretations or clarifications considered necessary by Engineer in response to such questions will be issued by Addenda delivered to all registered plan holders **and/or posted on Designated Website.** Questions received less than seven days prior to the date for opening of Bids may not be answered.

7.04 Only responses set forth in an Addendum **or posted on Designated Website** will be binding. Oral and other interpretations or clarifications will be without legal effect. Responses to questions are not part of the Contract Documents unless set forth in an Addendum or **posted on Designated Website** that expressly modifies or supplements the Contract Documents.

ARTICLE 8—BID SECURITY

8.01 A Bid must be accompanied by Bid security made payable to Owner in an amount of **5% percent of Bidder's maximum Bid price (determined by adding the base bid and all alternates)** and in the form of a Bid bond issued by a surety meeting the requirements of Paragraph 6.01 of the General Conditions. Such Bid bond will be issued in the form included in the Bidding Documents. **Bid security must be at least 5% of the Bidder's maximum Bid price.**

8.02 The Bid security of the apparent Successful Bidder will be retained until Owner awards the contract to such Bidder, and such Bidder has executed the Contract, furnished the required Contract security, and met the other conditions of the Notice of Award, whereupon the Bid security will be released. If the Successful Bidder fails to execute and deliver the Contract and furnish the required Contract security within 15 days after the Notice of Award, Owner may consider Bidder to be in default, annul the Notice of Award, and the Bid security of that Bidder will be forfeited, in whole in the case of a penal sum bid bond, and to the extent of Owner's damages in the case of a damages-form bond. Such forfeiture will be Owner's exclusive remedy if Bidder defaults.

8.03 The Bid security of other Bidders that Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of 7 days after the Effective Date of the

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contract or 61 days after the Bid opening, whereupon Bid security furnished by such Bidders will be released.

8.04 Bid security of other Bidders that Owner believes do not have a reasonable chance of receiving the award will be released within 7 days after the Bid opening.

ARTICLE 9—CONTRACT TIMES

9.01 The number of days within which, or the dates by which, the Work is to be (a) substantially completed and (b) ready for final payment, and (c) Milestones (if any) are to be achieved, are set forth in the Agreement.

9.02 Provisions for liquidated damages, if any, for failure to timely attain a Milestone, Substantial Completion, or completion of the Work in readiness for final payment, are set forth in the Agreement.

ARTICLE 10—SUBSTITUTE AND "OR EQUAL" ITEMS

10.01 The Contract for the Work, as awarded, will be on the basis of materials and equipment specified or described in the Bidding Documents, and those "or-equal" or substitute or materials and equipment subsequently approved by Engineer prior to the submittal of Bids and identified by Addendum. No item of material or equipment will be considered by Engineer as an "or-equal" or substitute unless written request for approval has been submitted by Bidder and has been received by Engineer within 10 days of the issuance of the Advertisement for Bids or invitation to Bidders. Each such request must comply with the requirements of Paragraphs 7.05 and 7.06 of the General Conditions, and the review of the request will be governed by the principles in those paragraphs. The burden of proof of the merit of the proposed item is upon Bidder. Engineer's decision of approval or disapproval of a proposed item will be final. If Engineer approves any such proposed item, such approval will be set forth in an Addendum issued to all registered Bidders. Bidders cannot rely upon approvals made in any other manner.

10.02 All prices that Bidder sets forth in its Bid will be based on the presumption that the Contractor will furnish the materials and equipment specified or described in the Bidding Documents, as supplemented by Addenda. Any assumptions regarding the possibility of post-Bid approvals of "or-equal" or substitution requests are made at Bidder's sole risk.

10.03 If "or-equal" or "equivalent" or similar verbiage is not included in the Specification Section governing the item it should be assumed that the Owner has specifically selected the named item and substitutions or equivalents will not be accepted or considered.

ARTICLE 11—SUBCONTRACTORS, SUPPLIERS, AND OTHERS

11.01 The apparent Successful Bidder, and any other Bidder so requested, shall within 24 hours after Bid opening, submit Section 00 41 16, List of Manufacturers and Section 00 41 19, List of Proposed Subcontractors, for approval of the Owner.

11.02 If requested by Owner, before executing any subcontract, and within three (3) days after bid opening, the apparent Successful Bidder, and any other Bidder so requested, shall submit an experience statement with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier, or other individual or entity. If Owner or Engineer, after due investigation, has reasonable objection to any proposed Subcontractor,

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Supplier, individual, or entity, Owner may, before the Notice of Award is given, request apparent Successful Bidder to submit an acceptable substitute, in which case apparent Successful Bidder shall submit a substitute, Bidder's Bid price will be increased (or decreased) by the difference in cost occasioned by such substitution, and Owner may consider such price adjustment in evaluating Bids and making the Contract award. Declining to make requested substitutions will not constitute grounds for forfeiture of the Bid security of any Bidder.

11.03 If apparent Successful Bidder declines to make any such substitution, Owner may award the Contract to the next lowest Bidder that proposes to use acceptable Subcontractors and Suppliers. Declining to make requested substitutions will constitute grounds for forfeiture of the Bid security of any Bidder. Any Subcontractor or Supplier, so listed and against which Owner or Engineer makes no written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner and Engineer subject to subsequent revocation of such acceptance as provided in Paragraph 7.07 of the General Conditions.

11.04 The quantities of work or material stated in unit price items of the Bid are supplied only to give an indication of the general scope of the Work; the Owner does not expressly or by implication agree that the actual amount of work or material will correspond therewith.

11.05 The Contractor shall not award work to Subcontractor(s) in excess of the limits stated in SC 7.07A.

ARTICLE 12—PREPARATION OF BID

12.01 The Bid Form is included with the Bidding Documents.

A. All blanks on the Bid Form must be completed in ink and the Bid Form signed in ink. Erasures or alterations must be initialed in ink by the person signing the Bid Form. A Bid price must be indicated for each section, Bid item, alternate, adjustment unit price item, and unit price item listed therein.

B. If the Bid Form expressly indicates that submitting pricing on a specific alternate item is optional, and Bidder elects to not furnish pricing for such optional alternate item, then Bidder may enter the words "No Bid" or "Not Applicable."

C. A conditional bid will not be considered.

12.02 If Bidder has obtained the Bidding Documents as Electronic Documents, then Bidder shall prepare its Bid on a paper copy of the Bid Form printed from the Electronic Documents version of the Bidding Documents. The printed copy of the Bid Form must be clearly legible, printed on 8½ inch by 11-inch paper and as closely identical in appearance to the Electronic Document version of the Bid Form as may be practical. The Owner reserves the right to accept Bid Forms which nominally vary in appearance from the original paper version of the Bid Form, providing that all required information and submittals are included with the Bid.

12.03 A Bid by a corporation must be executed in the corporate name by a corporate officer (whose title must appear under the signature), accompanied by evidence of authority to sign. The corporate address and state of incorporation must be shown.

12.04 A Bid by a partnership must be executed in the partnership name and signed by a partner (whose title must appear under the signature), accompanied by evidence of authority to sign. The official address of the partnership must be shown.

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

12.05 A Bid by a limited liability company must be executed in the name of the firm by a member or other authorized person and accompanied by evidence of authority to sign. The state of formation of the firm and the official address of the firm must be shown.

12.06 A Bid by an individual must show the Bidder's name and official address.

12.07 A Bid by a joint venture must be executed by an authorized representative of each joint venturer in the manner indicated on the Bid Form. The joint venture must have been formally established prior to submittal of a Bid, and the official address of the joint venture must be shown.

12.08 All names must be printed in ink below the signatures.

12.09 The Bid must contain an acknowledgment of receipt of all Addenda, the numbers of which must be filled in on the Bid Form.

12.10 Postal and e-mail addresses and telephone number for communications regarding the Bid must be shown.

12.11 The Bid must contain evidence of Bidder's authority to do business in the state where the Project is located, or Bidder must certify in writing that it will obtain such authority within the time for acceptance of Bids and attach such certification to the Bid.

12.12 If Bidder is required to be licensed to submit a Bid or perform the Work in the state where the Project is located, the Bid must contain evidence of Bidder's licensure, or Bidder must certify in writing that it will obtain such licensure within the time for acceptance of Bids and attach such certification to the Bid. Bidder's state contractor license number, if any, must also be shown on the Bid Form.

12.13 All bids must be made on the required bid form, where all blank spaces for bid prices must be filled in, in ink or typewritten. The bid form must be fully completed and executed when submitted. Only one copy of the bid form is required. The Owner may waive any informalities or minor defects, or reject any and all bids as allowed under Oklahoma Law. Any bid may be withdrawn prior to the above scheduled time for bid opening, or authorized postponement thereof. Bids received more than ninety-six (96) hours before the time specified, or those received after the time set for bid opening will not be considered and will be returned unopened. Should there be reasons why the contract cannot be awarded within the specified period, the time may be extended by mutual agreement between the Owner and the bidders.

12.14 Bidders must satisfy themselves of the accuracy of estimated quantities in the bid proposal by review of the Plans and Specifications, including any existing addenda, and by examination of the project site. Once a bid is submitted, the bidder shall not assert that there was a misunderstanding concerning the quantities or the nature of work to be performed. The failure or omission of any bidder to do any of the foregoing shall in no way relieve any bidder from any obligation in respect to its bid.

12.15 Prior to bidding, the Owner shall provide to the bidders all pertinent information that delineates and describes the land owned and rights-of-way acquired or to be acquired.

12.16 The Contract Documents contain the provisions required for the construction of the product. Information obtained from an officer, agent, or employee of the Owner or any other person

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

shall not affect the risks or obligations assumed by the contractor, or relieve the contractor from fulfilling any of the conditions of the contract.

12.17 Each bid exceeding $100,000 must be accompanied by a Bid Bond for five percent of the total amount of the bid and payable to the Owner. A certified check may be used in lieu of the Bid Bond. As soon as the bid prices have been compared, the Owner will return the bonds of all except the three lowest responsive, responsible bidders. The bid securities of the successful bidder and the two remaining unsuccessful bidders will be returned upon Owner's approval of the successful bidder's executed certificate of insurance and construction bonds.

12.18 Construction bonds (Performance, Statutory, and Maintenance) in the amount of 100 percent with a corporate surety approved by the Owner will be required for the faithful performance of the contract. Attorneys-in-fact who sign bid and construction bonds must file with each bond a certified and effective dated copy of their Power-of-Attorney.

12.19 The Owner shall award a contract to the lowest, responsive, responsible bidder or bidders within thirty (30) calendar days after bid opening. The Owner may extend the award period not to exceed fifteen (15) calendar days by formal recorded action and for good cause. The time may be extended further by mutual agreement between the Owner and the bidder per O.S. Title 61 Section 111, Public Competitive Bidding Act of 1974 (PCBA).

12.20 The Notice of Award shall be accompanied by the necessary contract, bonds, and insurance. In the event of failure of the bidder to execute the contract, the Owner may consider the bidder in default, in which case the Bid Bond accompanying the proposal shall become the property of the Owner.

12.21 The party to whom the contract is awarded will be required to execute the contract and obtain the construction bonds (Performance, Statutory and Maintenance) and certificate of insurance within 15 calendar days (not to exceed 60 days) from the date when the Notice of Award is delivered to the bidder. The time may be extended further by mutual agreement between the Owner and the bidder per O.S. Title 61 Section 113 (PCBA).

12.22 With an acceptable contract, bonds and certificate of insurance signed by the party to whom the Contract was awarded, the Owner shall sign the contract and return to such party an executed duplicate. Should the Owner not execute the contract within the agreed upon period, the bidder may by written notice withdraw the signed contract. Such notice of withdrawal shall be effective upon its receipt by the Owner.

12.23 The Owner shall issue the Notice to Proceed after the execution of the contract, approval of bonds and certificate of insurance. If the Notice to Proceed has not been issued within the agreed upon period, the contractor may terminate the contract without further liability on the part of either party.

12.24 The Owner may make such investigations as deemed necessary to determine the ability of the bidder to perform the work, and the bidder shall furnish to the Owner all such information and data for this purpose as the Owner may request. The Owner reserves the right to reject any bid if the evidence submitted by, or investigation of, such bidders fails to satisfy the Owner that

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

such bidder is properly qualified to carry out the obligations of the contract and to complete the work contemplated therein.

12.25 A conditional or qualified bid will not be accepted. Tied bids are non-restrictive, and in order for a tied bid to be accepted it must be lower than the sum of low separate bids.

12.26 All applicable laws, ordinances, rules and regulations of all authorities having jurisdiction over construction of the project shall apply to the contract throughout. The successful bidder will be required to meet all requirements of the Underground Facilities Damage Prevention Act when engaged in work within public rights-of-way.

12.27 When using alternate bids, they will be listed in numerical order, with the highest priority being number one, the second highest priority being number two, etc. The lowest bidder will be determined by comparing all bids that contain the selected alternates and computing the total value of the base bid plus the alternates.

12.28 All bidders and owners shall comply with the Oklahoma PCBA of 1974.

12.29 The awarded bidder shall supply the names and addresses of all subcontractors and material suppliers when required to do so by the Owner.

12.30 To avoid bypassing of raw sewage during construction, the contractor shall use the methods and/or schedule(s) described these Specifications.

12.31 The Contractor will be required to begin work within 10 calendar days of the date shown on the Notice to Proceed.

12.32 In the event of a conflict between the Specifications and the SRF Supplemental Conditions (ORF-185), the latter will govern. In the event of a conflict between the Plans and the Specifications, the Specifications will govern.

12.33 The following items, included in this Bid Packet, shall be submitted along with the bid: Bid Proposal, Bid Bond, Non-Collusion Affidavit, Business Relationship Affidavit, Contractor's Statement about Equal Opportunity (ORF-211), Contractor's Certificate of Non-Segregated Facilities (ORF-212), Bidder's/Supplier's List (ORF-249), Subcontractor Performance form (ORF-6100-3), Subcontractor Utilization form (ORF-6100-4) and DBE documentation (if applicable).

12.34 The consulting engineer is Wall Engineering, LLC. The consulting engineer's contact person for this project is Brandon Wall, P.E. with phone number (580) 924-1800.

ARTICLE 13—BASIS OF BID

13.01 *Lump Sum*

A. Bidders must submit a Bid on a lump sum basis as set forth in the Bid Form for any items listed as Lump Sum (or "LS") or where no unit price is required to be inputted on the bid Bid Form.

13.02 *Unit Price*

A. Bidders must submit a Bid on a unit price basis for each item of Work listed with a unit price on the Bid Form.

B. The "Bid Price" (sometimes referred to as the extended price) for each unit price Bid item will be the product of the "Estimated Quantity", which Owner or its representative has set forth in the Bid Form, for the item and the corresponding "Bid Unit Price" offered by the

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Bidder. The total of all unit price Bid items will be the sum of these "Bid Prices"; such total will be used by Owner for Bid comparison purposes. The final quantities and Contract Price will be determined in accordance with Paragraph 13.03 of the General Conditions.

C. Discrepancies between the multiplication of units of Work and unit prices will be resolved in favor of the unit prices. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

13.03 *Allowances*

A. For cash allowances the Bid price must include such amounts as the Bidder deems proper for Contractor's overhead, costs, profit, and other expenses on account of cash allowances, if any, named in the Contract Documents, in accordance with Paragraph 13.02.B of the General Conditions.

ARTICLE 14—SUBMITTAL OF BID

14.01 A Bid must be received no later than the date and time prescribed and at the place indicated in the Advertisement or invitation to bid and must be enclosed in a plainly marked package with the Project title, and, if applicable, the designated portion of the Project for which the Bid is submitted, the name and address of Bidder, and must be accompanied by the Bid security and other required documents. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid must be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED." A mailed Bid must be addressed to the location designated in the Advertisement.

14.02 Bids received after the date and time prescribed for the opening of bids, or not submitted at the correct location or in the designated manner, will not be accepted and will be returned to the Bidder unopened.

ARTICLE 15—MODIFICATION AND WITHDRAWAL OF BID

15.01 An unopened Bid may be withdrawn by an appropriate document duly executed in the same manner that a Bid must be executed and delivered to the place where Bids are to be submitted prior to the date and time for the opening of Bids. Upon receipt of such notice, the unopened Bid will be returned to the Bidder.

15.02 If a Bidder wishes to modify its Bid prior to Bid opening, Bidder must withdraw its initial Bid in the manner specified in Paragraph 15.01 and submit a new Bid prior to the date and time for the opening of Bids.

15.03 If within 24 hours after Bids are opened any Bidder files a duly signed written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a material and substantial mistake in the preparation of its Bid, the Bidder may withdraw its Bid, and the Bid security will be returned. Thereafter, if the Work is rebid, the Bidder will be disqualified from further bidding on the Work.

ARTICLE 16—OPENING OF BIDS

16.01 Bids will be opened at the time and place indicated in the advertisement or invitation to bid and, unless obviously non-responsive, read aloud publicly. An abstract of the amounts of the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

base Bids and major alternates, if any, will be made available to Bidders after the opening of Bids.

ARTICLE 17—BIDS TO REMAIN SUBJECT TO ACCEPTANCE

17.01 All Bids will remain subject to acceptance for the period of time stated in the Bid Form, but Owner may, in its sole discretion, release any Bid and return the Bid security prior to the end of this period.

ARTICLE 18—EVALUATION OF BIDS AND AWARD OF CONTRACT

18.01 Owner reserves the right to reject any or all Bids, including without limitation, nonconforming, nonresponsive, unbalanced, or conditional Bids. Owner also reserves the right to waive all minor Bid informalities not involving price, time, or changes in the Work.

18.02 Owner will reject the Bid of any Bidder that Owner finds, after reasonable inquiry and evaluation, to not be responsible.

18.03 If Bidder purports to add terms or conditions to its Bid, takes exception to any provision of the Bidding Documents, or attempts to alter the contents of the Contract Documents for purposes of the Bid, whether in the Bid itself or in a separate communication to Owner or Engineer, then Owner will reject the Bid as nonresponsive.

18.04 If Owner awards the contract for the Work, such award will be to the responsible Bidder submitting the lowest responsive Bid.

18.05 *Evaluation of Bids*

A. In evaluating Bids, Owner will consider whether the Bids comply with the prescribed requirements, and such alternates, unit prices, and other data, as may be requested in the Bid Form or prior to the Notice of Award.

B. In the comparison of Bids, alternates will be applied in the same order of priority as listed in the Bid Form. To determine the Bid prices for purposes of comparison, Owner will announce to all bidders a "Base Bid plus alternates" budget after receiving all Bids, but prior to opening them. For comparison purposes alternates will be accepted, following the order of priority established in the Bid Form, until doing so would cause the budget to be exceeded. After determination of the Successful Bidder based on this comparative process and on the responsiveness, responsibility, and other factors set forth in these Instructions, the award may be made to said Successful Bidder on its base Bid and any combination of its additive alternate Bids for which Owner determines funds will be available at the time of award.

C. For determination of the apparent low Bidder(s) when sectional bids are submitted, Bids will be compared on the basis of the aggregate of the Bids for separate sections and the Bids for combined sections that result in the lowest total amount for all of the Work.

D. For the determination of the apparent low Bidder when unit price bids are submitted, Bids will be compared on the basis of the total of the products of the estimated quantity of each item and unit price Bid for that item, together with any lump sum items.

18.06 In evaluating whether a Bidder is responsible, Owner will consider the qualifications of the Bidder and may consider the qualifications and experience of Subcontractors and Suppliers

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

proposed for those portions of the Work for which the identity of Subcontractors and Suppliers must be submitted as provided in the Bidding Documents.

18.07 Owner may conduct such investigations as Owner deems necessary to establish the responsibility, qualifications, and financial ability of Bidders and any proposed Subcontractors or Suppliers.

ARTICLE 19—SIGNING OF AGREEMENT

19.01 When Owner issues a Notice of Award to the Successful Bidder, it will be accompanied by the unexecuted counterparts of the Agreement along with the other Contract Documents as identified in the Agreement. Within 15 days thereafter, Successful Bidder must execute and deliver the required number of counterparts of the Agreement and any bonds and insurance documentation required to be delivered by the Contract Documents to Owner. Within 30 days thereafter, Owner will deliver one fully executed counterpart of the Agreement to Successful Bidder, together with printed and electronic copies of the Contract Documents as stated in Paragraph 2.02 of the General Conditions.

ARTICLE 20—SALES AND USE TAXES

20.01 Owner is not exempt from Oklahoma state sales and use taxes on materials and equipment to be incorporated in the Work. Said taxes must be included in the Bid.

ARTICLE 21—WAGE RATE REQUIREMENTS & OTHER PROVISIONS

21.01 This project is to be financed by a CWSRF loan from the Oklahoma Water Resources Board (OWRB) and shall be referred to as Project No. ORF-20-0018-CWA. The following requirements and regulations must be complied with:

A. "Equal Opportunity in Employment: All qualified applicants will receive considerations for employment without regard to race, color, religion, sex, national origin, age or physical handicap. Bidders on this work will be required to comply with the President's Executive Order No. 11246, as amended."

B. "Each bidder must fully comply with the requirements, terms and conditions of the Environmental Protection Agency’s Disadvantaged Business Enterprise Requirements including employing the six (6) good faith efforts and soliciting disadvantaged business enterprises during the performance of this contract. The bidder commits itself to following the good faith efforts to solicit disadvantaged business enterprises contained herein and all other requirements, terms and conditions of these bid conditions by submitting a properly signed bid. Requirements are contained in OWRB’s Guidance and Procedures, ORF-267."

C. Davis Bacon Act prevailing wage rate requirements shall apply. All laborers and mechanics employed by contractors and sub contractors on projects funded directly by or assisted in whole or in part by and through the Federal Government shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of Chapter 31 of Title 40, United States Code. The Department of Labor provides all pertinent information related to compliance with labor standards, including prevailing wage rates and instructions for reporting. For more information please refer to http://www.wdol.gov/.

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. American Iron and Steel provisions (Buy American Requirements) also apply to projects funded directly by or assisted in whole or in part by and through the Federal Government pursuant to P.L. 113-76, Consolidated Appropriations Act, 2014, Sec. 436 requires that "None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j-12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." For more information please refer to Oklahoma Water Resources Board Supplemental Conditions ORF- 185.

E. System for Award Management (SAM) registration is required for all SRF programs (CWSRF and DWSRF) applicants and Awardees (Entities, Prime Contractors, Subcontractors, Vendors) in order to be awarded contracts by the SRF Programs. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions. Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

Note: In order to register in SAM, a Data Universal Number System (DUNS) number will be required. DUNS number is a unique, non-indicative 9-digit identifier issued and maintained by Dun & Bradstreet (D&B) that verifies the existence of a business entity globally. D&B assigns DUNS numbers for each physical location of a business. All entities doing business with the U.S Government can receive a DUNS number FREE of charge and, under normal circumstances, within 1-2 business days when using D&B web form process at http://fedgov.dnb.com/webform.

21.02 In the event of a conflict between the specifications and the SRF Supplemental Conditions, the later shall govern.

21.03 In the event of a conflict between the plans and specifications, the specs will govern.

21.04 The following items **MUST** be submitted with the bid to be considered responsive:

~~A. Qualifications Statement~~

B. Bid Form

C. Bid Proposal

D. Bid Bond

E. Business Relationships Affidavit

F. Noncollusion Affidavit

G. Payroll Affadavit

H. EPA DBE Form 6100-2

I. EPA DBE Form 6100-3

J. EPA DBE Form 6100-4

EJCDC® C-200, Instructions to Bidders for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

K. American Iron & Steel Certification

L. Equal Opportunity Certification

M. Non-Segregated Certification

N. Debarment Certification

21.05 All applicable laws, ordinances, and the rules and regulations of all authorities having jurisdiction over construction of the project shall apply to the contract throughout.

21.06 Each Bidder is responsible for inspecting the site and for reading and being thoroughly familiar with the Contract Documents. The failure or omission of any Bidder to do any of the foregoing shall in no way relieve any Bidder from any obligation in respect to its Bid.

21.07 The successful bidder will be required to meet all requirements of the Underground Facilities Damage Prevention Act when engaged in work within public rights-of-way.

21.08 When alternate Bids are taken, they will be listed in numerical order with the highest priority being number one, the second number two, etc.

21.09 When alternates are used, the low Bidders will be selected by the lowest and best Bid considering all Bids which include the selected alternate Bids.

21.10 The alternates will be listed in consecutive priority order to remain within the funds available for the project.

21.11 The low Bidder shall supply the names and addresses of major material suppliers

21.12 The Contractor shall avoid the bypassing of raw sewage during construction

EJCDC® C-200, Instructions to Bidders for Construction Contract.

BID FORM

The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

ARTICLE 1—OWNER AND BIDDER

1.01 This Bid is submitted to: **Shawnee Municipal Authority**

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Owner in the form included in the Bidding Documents to perform all Work as specified or indicated in the Bidding Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bidding Documents.

ARTICLE 2—BIDDER'S ACKNOWLEDGEMENTS

2.01 Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for 60 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

2.02 Davis Bacon Act prevailing wage rate requirements shall apply. All laborers and mechanics employed by contractors and sub contractors on projects funded directly by or assisted in whole or in part by and through the Federal Government shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of Chapter 31 of Title 40, United States Code. The Department of Labor provides all pertinent information related to compliance with labor standards, including prevailing wage rates and instructions for reporting. For more information please refer to http://www.wdol.gov/.

2.03 American Iron and Steel provisions (Buy American Requirements) also apply to projects funded directly by or assisted in whole or in part by and through the Federal Government pursuant to P.L. 113-76, Consolidated Appropriations Act, 2014, Sec. 436 requires that "None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j-12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." For more information please refer to Oklahoma Water Resources Board Supplemental Conditions ORF- 185.

2.04 System for Award Management (SAM) registration is required for all SRF programs (CWSRF and DWSRF) applicants and Awardees (Entities, Prime Contractors, Subcontractors, Vendors) in order to be awarded contracts by the SRF Programs. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions.

EJCDC® C-410, Bid Form for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

2.05 Note: In order to register in SAM, a Data Universal Number System (DUNS) number will be required. DUNS number is a unique, non-indicative 9-digit identifier issued and maintained by Dun & Bradstreet (D&B) that verifies the existence of a business entity globally. D&B assigns DUNS numbers for each physical location of a business. All entities doing business with the U.S Government can receive a DUNS number FREE of charge and, under normal circumstances, within 1-2 business days when using D&B web form process at http://fedgov.dnb.com/webform.

ARTICLE 3—ATTACHMENTS TO THIS BID

3.01 The following documents are submitted with and made a condition of this Bid:

A. Required Bid security;

~~B. List of Proposed Subcontractors;~~

C. Attachment "A" – Bid Summary Sheet

D. List of Proposed Subcontractors (submitted by apparent low bidder within 24 hours);

E. List of Proposed Manufactures (submitted by apparent low bidder within 24 hours);

~~F. Evidence of authority to do business in the state of the Project; or a written covenant to obtain such authority within the time for acceptance of Bids (if required by State);~~

~~G. Contractor's license number as evidence of Bidder's State Contractor's License or a covenant by Bidder to obtain said license within the time for acceptance of Bids (if required by State);~~

~~H. Required Bidder Qualification Statement with supporting data;~~

I. Non-Collusion Affidavit

J. Business Relationship Affidavit

K. Bidder's Statements

L. American Iron & Steel Certification

M. EPA 6100-3

N. EPA 6100-4

ARTICLE 4—BASIS OF BID

4.01 *Lump Sum Bids*

A. Bidder will complete the Work in accordance with the Contract Documents for the following lump sum (stipulated) price(s), together with any Unit Prices in accordance with "Attachment A – Bid Summary Sheet:"

B. Bidder acknowledges that:

1. Each Bid Unit Price includes an amount considered by Bidder to be adequate to cover Contractor's overhead and profit for each separately identified item, and

EJCDC® C-410, Bid Form for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. Estimated quantities are not guaranteed, and are solely for the purpose of comparison of Bids, and final payment for all Unit Price Work will be based on actual quantities, determined as provided in the Contract Documents.

ARTICLE 5—TIME OF COMPLETION

5.01 Bidder agrees that the Work will be substantially complete and will be completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions on or before the dates or within the number of calendar days indicated in the Agreement.

5.02 Bidder accepts the provisions of the Agreement as to liquidated damages.

ARTICLE 6—BIDDER'S ACKNOWLEDGEMENTS: ACCEPTANCE PERIOD, INSTRUCTIONS, AND RECEIPT OF ADDENDA

6.01 *Bid Acceptance Period*

A. This Bid will remain subject to acceptance for 60 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

6.02 *Instructions to Bidders*

A. Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security.

6.03 *Receipt of Addenda*

A. Bidder hereby acknowledges receipt of the following Addenda: **[Add rows as needed or attach separate pages.]**

Addendum Number	Addendum Date

ARTICLE 7—BIDDER'S REPRESENTATIONS AND CERTIFICATIONS

7.01 *Bidder's Representations*

A. In submitting this Bid, Bidder represents the following:

1. Bidder has examined and carefully studied the Bidding Documents, including Addenda.

2. Bidder has visited the Site, conducted a thorough visual examination of the Site and adjacent areas, and become familiar with the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

3. Bidder is familiar with all Laws and Regulations that may affect cost, progress, and performance of the Work, including all American Iron and Steel requirements.

EJCDC® C-410, Bid Form for Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. Bidder has carefully studied the reports of explorations and tests of subsurface conditions at or adjacent to the Site and the drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, with respect to the Technical Data in such reports and drawings.

5. Bidder has carefully studied the reports and drawings relating to Hazardous Environmental Conditions, if any, at or adjacent to the Site that have been identified in the Supplementary Conditions, with respect to Technical Data in such reports and drawings.

6. Bidder has considered the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Technical Data identified in the Supplementary Conditions or by definition, with respect to the effect of such information, observations, and Technical Data on (a) the cost, progress, and performance of the Work; (b) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder, if selected as Contractor; and (c) Bidder's (Contractor's) safety precautions and programs.

7. Based on the information and observations referred to in the preceding paragraph, Bidder agrees that no further examinations, investigations, explorations, tests, studies, or data are necessary for the performance of the Work at the Contract Price, within the Contract Times, and in accordance with the other terms and conditions of the Contract.

8. Bidder is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents.

9. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bidding Documents, and of discrepancies between Site conditions and the Contract Documents, and the written resolution thereof by Engineer is acceptable to Contractor.

10. The Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

11. The submission of this Bid constitutes an incontrovertible representation by Bidder that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

7.02 *Bidder's Certifications*

A. The Bidder certifies the following:

1. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation.

2. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid.

3. Bidder has not solicited or induced any individual or entity to refrain from bidding.

4. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Contract. For the purposes of this Paragraph 8.02.A:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

a. Corrupt practice means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process.

b. Fraudulent practice means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Owner, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition.

c. Collusive practice means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish bid prices at artificial, non-competitive levels.

d. Coercive practice means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

SPECIAL MATERIALS COST INCREASES

If it is anticipated that any special non-standard materials cost increases will occur during the project or after the bid is submitted, the Contractor shall submit below a detailed listing of potential impacted vendors. Contractor shall additionally submit for each vendor listed a detailed accounting of price bid and statement from vendor outlining the reason(s) it wasn't possible to lock in pricing on the items for the project duration at the time of bid. Any items not listed will constitute certification by the contractor that firm and fixed pricing has been established for any/all items not specifically listed.

An items listed by the apparent low bidder as potentially being subject to price increases that is not listed by second / subsequent bidders may be cause for the Owner to award to a second / subsequent bidder as the "best" bid.

1. Bidder and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to pay to Owner upon default of Bidder the penal sum set forth on the face of this Bond. Payment of the penal sum is the extent of Bidder's and Surety's liability. Recovery of such penal sum under the terms of this Bond will be Owner's sole and exclusive remedy upon default of Bidder.
2. Default of Bidder occurs upon the failure of Bidder to deliver within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents.
3. This obligation will be null and void if:
   3.1. Owner accepts Bidder's Bid and Bidder delivers within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents, or
   3.2. All Bids are rejected by Owner, or
   3.3. Owner fails to issue a Notice of Award to Bidder within the time specified in the Bidding Documents (or any extension thereof agreed to in writing by Bidder and, if applicable, consented to by Surety when required by Paragraph 5 hereof).
4. Payment under this Bond will be due and payable upon default of Bidder and within 30 calendar days after receipt by Bidder and Surety of written notice of default from Owner, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.
5. Surety waives notice of any and all defenses based on or arising out of any time extension to issue Notice of Award agreed to in writing by Owner and Bidder, provided that the total time for issuing Notice of Award including extensions does not in the aggregate exceed 120 days from the Bid due date without Surety's written consent.
6. No suit or action will be commenced under this Bond prior to 30 calendar days after the notice of default required in Paragraph 4 above is received by Bidder and Surety, and in no case later than one year after the Bid due date.
7. Any suit or action under this Bond will be commenced only in a court of competent jurisdiction located in the state in which the Project is located.
8. Notices required hereunder must be in writing and sent to Bidder and Surety at their respective addresses shown on the face of this Bond. Such notices may be sent by personal delivery, commercial courier, or by United States Postal Service registered or certified mail, return receipt requested, postage pre-paid, and will be deemed to be effective upon receipt by the party concerned.
9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent, or representative who executed this Bond on behalf of Surety to execute, seal, and deliver such Bond and bind the Surety thereby.
10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond will be deemed to be included herein as if set forth at length. If any provision of this Bond conflicts with any applicable statute, then the provision of said statute governs and the remainder of this Bond that is not in conflict therewith continues in full force and effect.
11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

ORF-074 (rev. 4/30/20)

CERTIFICATE OF LABOR STANDARDS COMPLIANCE

I certify that all the Davis Bacon Act and Labor Standards Contract Provisions of the specifications have been complied with during construction of the below-referenced project funded through the Clean Water State Revolving Fund Project Number ORF-20-0018-CWA.

Project Description:

Signature of Authorized Representative

Date

Disadvantaged Business Enterprise Program (DBE) Guidance

Important note: All OWRB and EPA forms can be found at www.owrb.ok.gov/forms

The Oklahoma CWSRF receives a portion of their funding from the U.S. Environmental Protection Agency (EPA). The federal funds are used to supplement low interest rate loans to finance wastewater and water quality projects. As a condition of federal grant awards, EPA regulations require that loan recipients and sub-recipients (i.e., prime contractors and subcontractors) make a good-faith effort to award a fair share of work to DBE's who are small business enterprises (SBE's), minority business enterprises (MBE's) and women's business enterprises (WBE's). Additionally, EPA's DBE rule requires loan recipients and sub-recipients adhere to the terms and conditions on Appendix A attached hereto.

To ensure compliance with EPA's DBE requirements, both **Loan Recipients (Project Owners)** and **Prime Contractors must** undertake the good faith efforts to provide opportunities for DBE firms to participate in contracts. EPA regulations require evidence of the demonstration of the six good faith efforts in trying to achieve the DBE participation goals. Oklahoma's negotiated DBE participation goals with EPA can be found on the OWRB Financial Assistance website. The goals are not a quota. The Oklahoma Department of Transportation has developed a DBE Directory of Certified Firms. This database can be found at this website: https://okdot.gob2g.com/Default.asp

Good Faith Efforts: The following good faith efforts apply to the procurement categories involving CWSRF financial assistance funds (See Appendix B: EPA Good Faith Efforts):

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For state and local government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.

2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.

3. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For state and local government recipients, this will include dividing total requirements, when economically feasible, into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.

4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.

5. Use the services and assistance of the Small Business Administration (SBA) and the Minority Business Development Agency of the Department of Commerce.

6. If the prime contractor awards subcontracts, require the prime contractor to take the above steps.

Please submit all information to:
Financial Assistance Division, OWRB
3800 North Classen Blvd, Oklahoma City, OK 73118
Phone: 405.530.8800, FAX: 405.530.8900
http://www.owrb.ok.gov

Demonstration of the Six Good Faith Efforts. See **Appendices A & B** for additional bidding instructions and contract administrative provisions.

A: Project Owners are required to create and maintain a bidders list in accordance with Subpart E of Part 33 of EPA's Disadvantaged Business Enterprise Program rule, (§ 33.501(b)). The list must include all firms that bid or quote on prime contracts, or bid or quote subcontracts, on competitively bid CWSRF funded projects. The bidders list must only be kept until the project period for the identified loan has ended. The following information must be obtained from all prime and subcontractors and can be provided on **Bidders List (ORF-249)**:

1. Entity's name with point of contact
2. Entity's mailing address, telephone number, and e-mail address
3. The procurement on which the entity bid or quoted, and when; and
4. Entity's status as an MBE/WBE or non-MBE/WBE

B: Project Owners are required to undertake good faith efforts. Steps 1 through 5 can be utilized during the project planning, design and/or pre-bidding phase, to assure that qualified DBE firms have procurement opportunities in construction, equipment, services, and supplies.

To provide procurement opportunities to DBE Firms, the Project Owner should undertake the following:

- Conduct pre-bid meetings to inform potential bidders/contractors about DBE requirements and provide guidance in undertaking the required good faith efforts.

- Use listings of certified DBEs from the U.S. Small Business Administration (SBA), Oklahoma Department of Transportation (ODOT), etc, to solicit DBE firms as prime contractors whenever they are potential candidates. Project Owners should advertise in minority, local and regional newspapers and in the Dodge report.
- Invite DBE firms, where appropriate, to meetings, conferences etc., to inform them of procurement opportunities and develop, where possible, reasonable contract and delivery schedules that encourage and facilitate participation by DBE's. This includes, whenever possible, a minimum of 30 calendar days for bids or request for proposals.
- Determine if a project can be broken down into smaller components/contracts to allow opportunity for DBE firms to bid both as prime-contractors and as sub-contractors.
- For projects broken down into smaller components (e.g., painting, roofing, excavation, pipe laying, etc.,) ensure that the delivery schedules are reasonable.
- Encourage DBE firms, where appropriate, to apply as a consortium of DBE's, when a contract is too large for one of these firms to handle individually.
- **Require prime contractor** to complete **ORF Form 6100-3** & **ORF Form 6100-4** and submit with bid proposal to Project Owner.

C: Project Owners must require the prime contractor to undertake steps 1 through 5 of the Good Faith Efforts in providing DBE firms opportunity for sub-contracts.

Project Owner must provide the **DBE Guidance (ORF-267)** and associated forms to Prime Contractors for utilization of DBE's in the bidding documents.

APPENDIX A: Project Owner, Prime Contractor and Sub-Contractor Responsibilities

EPA's Disadvantaged Business Enterprise Program rule applies to contract procurement actions funded in part by EPA assistance agreements awarded after May 27, 2008. The rule is found at Federal regulation Title 40, Part 33. Specific responsibilities are highlighted below.

Project Owner Responsibilities:

- Include OWRB's DBE guidance (ORF-267) in each contract with a primary contractor.

- Employ the six Good Faith Efforts during prime contractor procurement (§33.301).

- Require prime contractor to comply with the following prime contractor requirements of Title 40 Part 33:

    a) To employ the six Good Faith Efforts steps in paragraphs (a) through (e) of § 33.301 if the prime contractor awards subcontracts (§ 33.301(f)).

    b) To provide **ORF form 6100-2** – *DBE Subcontractor Participation Form* **to all DBE subcontractors** (Optional submittal by subcontractors) (§ 33.302(e)).

    c) To submit **ORF form 6100-3** – *DBE Program Subcontractor Performance Form* and **ORF form 6100-4** – *DBE Program Subcontractor Utilization Form* **with bid package or proposal**. (§ 33.302 (f) and (g)).

    d) To pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the recipient (§ 33.302(a)).

    e) To notify recipient in writing by its prime contractor prior to any termination of a DBE subcontractor for convenience by the prime contractor (§ 33.302(b)).

    f) To employ the six good faith efforts described in § 33.301 if soliciting a replacement subcontractor after a DBE subcontractor fails to complete work under the subcontract for any reason. (§ 33.302(c)).

    g) To employ the six good faith efforts described in § 33.301 even if the prime contractor has achieved its fair share objectives under subpart D of Part 33. (§33.302(d)).

h) Provide Project Owner DBE participation achievements with bid proposal – this includes all information necessary for the Owner to complete the **Bidders List (ORF-249)**. The Owner may allow the prime contractor to complete the **Bidders List (ORF-249)**; however, the **Owner is responsible for review and submittal**.

- Maintain records documenting compliance with the requirements of Title 40 Part 33, including **Bidders List (ORF-249)** and documentation of the good faith efforts (§ 33.301(a)) by the Project Owner and prime contractor.

Prime Contractor Responsibilities:

- Employ the six Good Faith Efforts steps in paragraphs (a) through (e) of § 33.301 if the prime contractor awards subcontracts (§ 33.301(f)).

- Provide **ORF form 6100-2** – *DBE Program Subcontractor Participation Form* and **ORF form 6100-3** – *DBE Program Subcontractor Performance Form* to each DBE subcontractor as part of the bid conference and prior to opening of the contractor's bid or proposal (§ 33.302(e) and (f)). Complete **ORF form 6100-4** – *DBE Program Subcontractor Utilization Form* (§ 33.302(g))

- Submit to recipient with bid package or proposal the completed **ORF form 6100-4**, plus an **ORF form 6100-3** for each DBE subcontractor used in the contractor's bid or proposal (§ 33.302(f) and (g)).

- Pay subcontractors for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the Project Owner (§ 33.302(a)).

- Notify the recipient in writing prior to prime contractor termination of a DBE subcontractor for convenience (§ 33.302(b)).

- Employ the six good faith efforts described in (§ 33.301) if soliciting a replacement subcontractor after a DBE subcontractor fails to complete work under the subcontract for any reason. (§ 33.302(c)).

- Employ the six good faith efforts described in (§ 33.301) even if the prime contractor has achieved its fair share objectives under subpart D of Part 33. (§33.302(d)).

- Provide Project Owner DBE participation achievements with bid proposal. This includes information necessary for Owner's completion of the **Bidders List (ORF-249)**.

- Maintain records documenting its compliance with the requirements of Title 40 Part 33, including **Bidders List (ORF-249)** and documentation of the good faith efforts (§ 33.301(a)) by the Project Owner and prime contractor.

Subcontractor Responsibilities:

- May submit **ORF form 6100-2** – *DBE Subcontractor Participation Form* to Debra Bradford, EPA Region 6 DBE Coordinator (§ 33.302(e)). Submitted if concerns with EPA funded project (e.g. termination, late payment, etc.)

- Must complete **ORF form 6100-3** – *DBE Program Subcontractor Performance Form*, and submit it to the prime contractor soliciting services from the subcontractor prior to the opening of bids for the prime contract.

Summary of ORF Forms

ORF Form	Requirement	Provided By	Completed By	Submitted To
6100-2: DBE Subcontractor Participation Form	Project Owners required to have prime contractors provide form to Subcontractors	Prime Contractors to DBE Subcontractors	DBE Subcontractors if concerns with EPA funded project (e.g. termination, late payment, etc)	EPA Region 6 DBE Coordinator, Debora Bradford
6100-3: DBE Subcontractor Performance Form	Project Owners required to have prime contractors provide form to Subcontractors	Prime Contractors to DBE Subcontractors	DBE Subcontractors with Prime Contractor's Signature. Completed when bidding on a job.	Project Owners as part of a bid or proposal package
6100-4: DBE Subcontractor Utilization Form	Project Owners required to have prime contractors complete the form	Project Owners to Prime Contractors	Prime Contractors to indicate the utilization of a DBE.	Project Owners as part of bid or proposal

APPENDIX B: TITLE 40 PART 33 SUBPART C—GOOD FAITH EFFORTS

§ 33.102 When do the requirements of this part apply?

The requirements of this part apply to procurement under CWSRF financial assistance agreements performed entirely within the United States, whether by a Project Owner or its prime contractor, for construction, equipment, services, and supplies.

§ 33.106 What assurances must CWSRF financial assistance recipients obtain from their contractors?

The recipient must ensure that each procurement contract it awards contains the term and condition specified in Appendix A to this part concerning compliance with the requirements of this part.

§ 33.206 Is there a list of certified MBEs and WBEs?

The Oklahoma Department of Transportation has developed a DBE Directory of Certified Firms. This database can be found at this website: https://okdot.gob2g.com/Default.asp. There may be other DBEs outside of this database.

§ 33.301 What does this subpart require?

A recipient, including one exempted from applying the fair share objective requirements by §33.411, is required to make the following good faith efforts whenever procuring construction, equipment, services and supplies under an CWSRF financial assistance agreement, even if it has achieved its fair share objectives under subpart D of this part:

a) Ensure DBE's are made aware of contracting opportunities fully practicable through outreach and recruitment activities. For State and Local and Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.
b) Make information on forthcoming opportunities available to DBE's, arrange periods for contracts, and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBE's in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.

c) Consider in the contracting process whether firms competing for large contracts could subcontract with DBE's. For state and local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.
d) Encourage contracting with a consortium of DBE's when a contract is too large for one of these firms to handle individually.
e) Use the services and assistance of the SBA and the Minority Business Development Agency of the Department of Commerce.
f) If the prime contractor awards subcontracts, require the prime contractor to take the steps in paragraphs (a) through (e) of this section.

§ 33.302 Are there any additional contract administration requirements?

a) Project Owners must require its prime contractor to pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the recipient.
b) Its prime contractor must notify Project Owner in writing prior to any termination of a DBE subcontractor for convenience by the prime contractor.
c) If a DBE subcontractor fails to complete work under the subcontract for any reason, the recipient must require the prime contractor to employ the six good faith efforts described in § 33.301 if soliciting a replacement subcontractor.
d) A Project Owner must require its prime contractor to employ the six good faith efforts described in §33.301 even if the prime contractor has achieved its fair share objectives under §33.301 subpart D above.
e) A recipient must require its prime contractor to provide **ORF Form 6100–2**—DBE Program Subcontractor Participation Form to all of its DBE subcontractors. **ORF Form 6100–2** gives a DBE subcontractor the opportunity to describe the work the DBE subcontractor received from the prime contractor, how much the DBE subcontractor was paid and any other concerns the DBE subcontractor might have, for example reasons why the DBE subcontractor believes it was terminated by the prime contractor. DBE subcontractors may send completed copies of **ORF Form 6100–2** directly to the appropriate EPA DBE Coordinator.
f) A recipient must require its prime contractor to have its DBE subcontractors complete **ORF Form 6100–3**—DBE Program Subcontractor Performance Form. A recipient must then require its prime contractor to include all completed forms as part of the prime contractor's bid or proposal package.
g) A recipient must require its prime contractor to complete and submit **ORF Form 6100–4**—DBE Program Subcontractor Utilization Form as part of the prime contractor's bid or proposal package.

h) Copies of **ORF Form 6100–2**—DBE Program Subcontractor Participation Form, **ORF Form 6100–3**—DBE Program Subcontractor Performance Form and **ORF Form 6100–4**—DBE Program Subcontractor Utilization Form may be obtained from EPA OSDBU's Home Page on the Internet or directly from EPA OSDBU.

i) A recipient must ensure that each procurement contract it awards contains the term and condition specified in the Appendix A concerning compliance with the requirements of this part. A recipient must also ensure that this term and condition is included in each procurement contract awarded by an entity receiving an identified loan under a financial assistance agreement to capitalize a revolving loan fund.

§ 33.410 Can a recipient be penalized for failing to meet its fair share objectives?

A recipient cannot be penalized, or treated by EPA as being in noncompliance with this subpart, solely because it's MBE or WBE participation does not meet its applicable fair share objective. However, EPA may take remedial action under § 33.105 for a recipient's failure to comply with other provisions of this part, including, but not limited to, the good faith efforts requirements described in subpart C of this part.

Disadvantaged Business Enterprise (DBE) Program
DBE Subcontractor Participation Form

OWRB Financial Assistance Agreement recipients must require prime contractors to provide this form to their DBE[1] subcontractors[2]. This form gives a DBE subcontractor the opportunity to describe work received and/or report any concerns regarding the project.

Subcontractor Name	Project Name Shawnee Wastewater System Improvements
Bid Proposal #	Point of Contact
Address	
Phone	e-mail
Prime Contractor Name	Funding Entity Oklahoma Water Resources Board

Contract Item Number	Description of Work Received from the Prime Contractor Involving Construction, Services, Equipment or Supplies	Amount Received from Prime Contractor

1 A DBE is a Disadvantaged, Minority, or Woman Business Enterprise that has been certified by an entity from which EPA accepts certifications as described in 40 CFR 33.204-33.205 or certified by EPA. EPA accepts certifications from entities that meet or exceed EPA certification standards as described in 40 CFR 33.202.

2 Subcontractor is defined as a company, firm, joint venture, or individual who enters into an agreement with a contractor to provide services pursuant to an EPA award of financial assistance.

Please use the space below to report any concerns regarding the above OWRB-funded project:

BIDDER'S AMERICAN IRON AND STEEL CERTIFICATION

I, the Bidder, _____, authorized representative of
Contractor's Authorized Representative
_____, hereby certify that I am aware of the requirement per Section
Contractor
436(a)-(f) of the Consolidated Appropriations Act of 2014, as amended, by which all applicable products made primarily out of iron and steel used in this project must be manufactured in the United States, and that the bid prepared for Shawnee Wastewater System Improvements has been prepared accordingly, as it is funded through the Clean Water State Revolving Fund (loan number ORF-20-0018-CWA). I, the Bidder, am aware that none of the funds appropriated or otherwise made available by the Consolidated Appropriation Act of 2014 (Appropriations Act) shall be used for the construction, alteration, maintenance, or repair of a treatment works unless all of the iron and steel products used in the project are produced in the United States. I, the Bidder, furthermore certify the following:
Project

1. The bidder understands the term "iron and steel products" applies to the following materials made primarily of iron or steel, and used for the construction, alteration, maintenance, or repair of publicly owned treatment works; lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and other construction materials as defined by the U.S. Environmental Protection Agency (EPA). For additional guidance, visit http://water.epa.gov/grants_funding/aisrequirement.cfm

2. The bidder further states that this requirement applies to all portions of the project that are subcontracted.

3. This "Bidder's American Iron and Steel Certification" is to be submitted by the bidder as part of its bid.

4. Iron and steel of unknown origin are considered to have been produced or manufactured outside the United States.

5. Consistent with the terms of the Owner's bid solicitation and the provisions of Use of American Iron and Steel Section 436, the bidder certifies that this bid reflects the bidder's best, good faith effort to identify domestic sources of iron and steel goods in the bid solicitation where such American-made goods are available on the schedule and consistent with the deadlines prescribed in or required by the bid solicitation.

6. The bidder certifies that all iron and steel products contained in the bid solicitation that are American-made have been so identified, and if this bid is accepted, the bidder agrees that it will provide reasonable, sufficient, and timely verification to the Owner of the U.S. production of each component so identified.

7. The bidder certifies that for any iron and steel products that are not American-made and are so identified in this bid, the bidder has included in or attached to this bid one or both of the following, as applicable:

    a. Identification of and citation to a categorical waiver published by EPA in the Federal Register that is applicable to such component or components, and an analysis that supports its applicability to the component or components; If the Administrator of EPA receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Website of EPA.

    b. Verifiable documentation sufficient to the Owner, as required in the bid solicitation or otherwise, that the bidder has sought to secure American-produced goods but has determined that such goods are not available on the schedule and consistent with the deadlines prescribed in the bid solicitation, with assurance adequate for the bidder under the applicable conditions stated in the bid solicitation or otherwise.

8. The bidder certifies that for any such product or products that are not so available, the bidder has also provided in or attached to this bid certification, including but not limited to the verifiable documentation and a full description of the bidder's efforts to secure any such American-produced iron and steel goods, that the bidder believes are sufficient to provide and as far as possible constitute the detailed justification required for a waiver under Use of American Iron and Steel with respect to such product or products.

9. If use of a non-compliant iron and/or steel product is permanently incorporated into a project, one or more of the following can occur:

    a. Request a waiver where appropriate.
    b. Require the removal of the non-domestic item.
    c. Payment withholding of all or part of the project.

10. The bidder further agrees that, if this bid is accepted, it will assist the Owner in amending, supplementing, or further supporting such information as required by the Owner to request and, as applicable, implement the terms of a waiver with respect to any such product or products. The EPA strongly recommends the use of a step certification, similar to the one used by the Federal Highway Administration. The final manufacturer can also certify that the manufacturing process occurred in the United States.

_____ __/__/_____
Contractor's Authorized Representative Signature Date

Bidder's Statement about: **Equal Opportunity Clause (ORF-211)**

Mark **one**:

☐ I have participated in previous contract(s) or subcontract(s) subject to the equal opportunity clause under Executive Orders 11246 and 11375 or preceding Executive Orders 10925 and 11114. I have filed all reports due under the requirements contained in 40 CFR, Part C, 8.11.

☐ I have not participated in previous contract(s) subject to the equal opportunity clause under Executive Orders 11246 and 11375 or preceding Executive Orders 10925 and 11114.

☐ I will obtain a similar statement from any proposed subcontractor(s), when appropriate.

Bidder's Statement about: **Non-Segregated Facilities (ORF-212)**

☐ I hereby certify that I do not and will not maintain any facilities provided for my employees in a segregated manner, or permit my employees to perform their services at any location under my control where segregated facilities are maintained; and that I will obtain a similar certification prior to the award of any subcontract exceeding $10,000 which is not exempted from the equal opportunity clause.

Bidder's Statement about: **Bonds**

☐ I hereby certify that I will obtain and provide a Bid Bond along with my Bid.

☐ I hereby certify that, in the event of being awarded a Contract, I will provide a Performance Bond for 100% of the contract amount.

☐ I hereby certify that, in the event of being awarded a Contract, I will provide a Statutory/Payment Bond for 100% of the contract amount.

☐ I hereby certify that, in the event of being awarded a Contract, I will provide a Maintenance Bond for at least 1 year after construction completion, and 100% of the contract amount

Bidder's Statement about: **Sam.gov registration**

Mark **one**:

☐ I have registered in SAM.gov and my status is "active".

☐ I am not currently registered in SAM.gov, but I will be registered and holding an "active" status prior to the beginning of any construction.

☐ I certify that I will actively review the SAM.gov status of all of the subcontractors in this work to verify they are registered and their status is "active".

Bidder's Statement about: **Davis Bacon Act and American Iron and Steel**

☐ I hereby certify that all of my employees will be paid according to the Davis Bacon Act.

☐ I hereby certify that I will comply with the American Iron and Steel requirement.

"General Decision Number: OK20220071 06/17/2022

Superseded General Decision Number: OK20210071

State: Oklahoma

Construction Type: Building
Building Construction -does not include residential construction consisting of single family homes and apartments up to and including 4 stories. (Including building projects on treatment plants)

Counties: Coal, Garvin, Haskell, Hughes, Latimer, Marshall, McCurtain, Pittsburg, Pontotoc, Pottawatomie, Pushmataha and Seminole Counties in Oklahoma.

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	. Executive Order 14026 generally applies to the contract. . The contractor must pay all covered workers at least $15.00 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2022.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	. Executive Order 13658 generally applies to the contract. . The contractor must pay all covered workers at least $11.25 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all

	hours spent performing on that contract in 2022.

The applicable Executive Order minimum wage rate will be adjusted annually. If this contract is covered by one of the Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at https://www.dol.gov/agencies/whd/government-contracts.

==========

** Workers in this classification may be entitled to a higher minimum wage under Executive Order 14026 ($15.00) or 13658 ($11.25). Please see the Note at the top of the wage determination for more information.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular

rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010

08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour National Office because National Office has responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor

200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

END OF GENERAL DECISIO"

NOTICE OF AWARD

Owner: Shawnee Municipal Authority
Engineer: Wall Engineering, LLC
Contractor:
Project: Wastewater System Improvements
Project No.: SHN-20-01
Date Issued:
Effective Date:

You are notified that Owner has accepted your Bid dated **[date]** for the above Contract, and that you are the Successful Bidder and are awarded a Contract for:

New 4.5 MGD SBR Wastewater Treatment Plant & Related Equipment/Units, New Southside Wastewater Lift Station & Screening System, 24" HDPE Forcemain between New WWTP and New Lift Station, & 30" HDPE Discharge Forcemain to Discharge Location.

The Contract Price of the awarded Contract is $**[Contract Price]**. Contract Price is subject to adjustment based on the provisions of the Contract, including but not limited to those governing changes and Unit Price Work as applicable.

An unexecuted copy of the Agreement along with a copy of the Contract Documents accompany this Notice of Award and have been transmitted or made available to Bidder electronically. Drawings will be delivered separately from the other Contract Documents as will sections not applicable to Award.

You must comply with the following conditions precedent within 15 days of the date of receipt of this Notice of Award:

1. Deliver to Owner (**6**) counterparts of the Agreement, signed by Bidder (as Contractor).
2. Deliver with the signed Agreement(s) the Contract security (such as required performance and payment bonds) and insurance documentation, as specified in the Instructions to Bidders and in the General Conditions, Articles 2 and 6.
3. Other conditions precedent (if any): **[Describe other conditions that require Successful Bidder's compliance]**

Failure to comply with these conditions within the time specified will entitle Owner to consider you in default, annul this Notice of Award, and declare your Bid security forfeited.

Within 10 days after you comply with the above conditions, Owner will return to you one fully signed counterpart of the Agreement, together with any additional copies as indicated in General Conditions.

Owner: **Shawnee Municipal Authority**

AGREEMENT BETWEEN OWNER AND CONTRACTOR FOR CONSTRUCTION CONTRACT (STIPULATED PRICE)

This Agreement is by and between **Shawnee Municipal Authority** ("Owner") and **[name of contracting entity]** ("Contractor").

Terms used in this Agreement have the meanings stated in the General Conditions and the Supplementary Conditions.

Owner and Contractor hereby agree as follows:

ARTICLE 1—WORK

1.01 Contractor shall complete all Work as specified or indicated in the Contract Documents. The Work is generally described as follows: **Wastewater System Improvements**

ARTICLE 2—THE PROJECT

2.01 The Project, of which the Work under the Contract Documents is a part, is generally described as follows: **Wastewater System Improvements**

ARTICLE 3—ENGINEER

3.01 The Owner has retained **Wall Engineering, LLC** ("Engineer") to act as Owner's representative, assume all duties and responsibilities of Engineer, and have the rights and authority assigned to Engineer in the Contract.

3.02 The part of the Project that pertains to the Work has been designed by **Engineer.**

ARTICLE 4—CONTRACT TIMES

4.01 *Time is of the Essence*

A. All time limits for Milestones, if any, Substantial Completion, and completion and readiness for final payment as stated in the Contract Documents are of the essence of the Contract.

4.03 *Contract Times: Days*

A. The Work will be substantially complete within **730** days after the date when the Contract Times commence to run as provided in Paragraph 4.01 of the General Conditions, and completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions within **850** days after the date when the Contract Times commence to run.

4.05 *Liquidated Damages*

A. Contractor and Owner recognize that time is of the essence as stated in Paragraph 4.01 above and that Owner will suffer financial and other losses if the Work is not completed and Milestones not achieved within the Contract Times, as duly modified. The parties also

**EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.**

recognize the delays, expense, and difficulties involved in proving, in a legal or arbitration proceeding, the actual loss suffered by Owner if the Work is not completed on time. Accordingly, instead of requiring any such proof, Owner and Contractor agree that as liquidated damages for delay (but not as a penalty):

1. *Substantial Completion:* Contractor shall pay Owner **$2,500** for each day that expires after the time (as duly adjusted pursuant to the Contract) specified above for Substantial Completion, until the Work is substantially complete.

2. *Completion of Remaining Work:* After Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Times (as duly adjusted pursuant to the Contract) for completion and readiness for final payment, Contractor shall pay Owner **$2,500** for each day that expires after such time until the Work is completed and ready for final payment.

4. Liquidated damages for failing to timely attain Milestones, Substantial Completion, and final completion are not additive, and will not be imposed concurrently.

B. If Owner recovers liquidated damages for a delay in completion by Contractor, then such liquidated damages are Owner's sole and exclusive remedy for such delay, and Owner is precluded from recovering any other damages, whether actual, direct, excess, or consequential, for such delay, except for special damages (if any) specified in this Agreement.

4.06 *Special Damages*

A. Contractor shall reimburse Owner (1) for any fines or penalties imposed on Owner as a direct result of the Contractor's failure to attain Substantial Completion according to the Contract Times, and (2) for the actual costs reasonably incurred by Owner for engineering, construction observation, inspection, and administrative services needed after the time specified in Paragraph 4.02 for Substantial Completion (as duly adjusted pursuant to the Contract), until the Work is substantially complete.

B. After Contractor achieves Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Times, Contractor shall reimburse Owner for the actual costs reasonably incurred by Owner for engineering, construction observation, inspection, and administrative services needed after the time specified in Paragraph 4.02 for Work to be completed and ready for final payment (as duly adjusted pursuant to the Contract), until the Work is completed and ready for final payment.

C. The special damages imposed in this paragraph are supplemental to any liquidated damages for delayed completion established in this Agreement.

ARTICLE 5—CONTRACT PRICE

5.01 Owner shall pay Contractor for completion of the Work in accordance with the Contract Documents, the amounts that follow, subject to adjustment under the Contract:

A. Total of Lump Sum Amount and Unit Price Work (subject to final Unit Price adjustment) $**[number]**.

**EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.**

B. For all Work, at the prices stated in Contractor's Bid, attached hereto as an exhibit.

ARTICLE 6—PAYMENT PROCEDURES

6.01 *Submittal and Processing of Payments*

A. Contractor shall submit Applications for Payment in accordance with Article 15 of the General Conditions. Applications for Payment will be processed by Engineer as provided in the General Conditions.

6.02 *Progress Payments; Retainage*

A. Owner shall make progress payments on the basis of Contractor's Applications for Payment as outlined in the General & Supplemental Conditions during performance of the Work as provided in Paragraph 6.02.A.1 below, provided that such Applications for Payment have been submitted in a timely manner and otherwise meet the requirements of the Contract. All such payments will be measured by the Schedule of Values established as provided in the General Conditions (and in the case of Unit Price Work based on the number of units completed) or, in the event there is no Schedule of Values, as provided elsewhere in the Contract.

1. Prior to Substantial Completion, progress payments will be made in an amount equal to the percentage indicated below but, in each case, less the aggregate of payments previously made and less such amounts as Owner may withhold, including but not limited to liquidated damages, in accordance with the Contract.

a. **95** percent of the value of the Work completed (with the balance being retainage).

b. **95** percent of cost of materials and equipment not incorporated in the Work (with the balance being retainage).

B. Upon Substantial Completion **of the entire construction to be provided under the construction Contract Documents**, Owner shall pay an amount sufficient to increase total payments to Contractor to **95%** percent of the Work completed, less such amounts set off by Owner pursuant to Paragraph 15.01.E of the General Conditions, and less **125%** percent of Engineer's estimate **(if greater than 5% of work completed)** of the value of Work to be completed or corrected as shown on the punch list of items to be completed or corrected prior to final payment.

6.03 *Final Payment*

A. Upon final completion and acceptance of the Work, Owner shall pay the remainder of the Contract Price in accordance with Paragraph 15.06 of the General Conditions.

6.04 *Consent of Surety*

A. Owner will not make final payment, or return or release retainage at Substantial Completion or any other time, unless Contractor submits written consent of the surety to such payment, return, or release.

ARTICLE 7—CONTRACT DOCUMENTS

7.01 Contents

A. The Contract Documents consist of all of the following:

1. Executed Agreement
2. Addenda (if any)
3. Advertisement for Bids
4. Instructions to Bidders
5. Bid Form/Proposal
6. ~~Statement of Bidders Qualifications~~
7. List of Manufacturers
8. List of Proposed Subcontractors
9. General Conditions
10. Supplementary Conditions
11. OWRB Supplemental Contract Conditions
12. OWRB / Funding Agency Requirements as outlined in 00_01_10 Table of Contents
13. Division 01 General Requirements
14. Technical Specifications as listed in the Table of Contents
15. Drawings
16. Performance Bond
17. Payment Bond
18. Maintenance Bond
19. Certificates of Insurance
20. Exhibits to this Agreement (enumerated as follows):
    a. Contractor's Bid – Bid Form "Attachment "A"
21. The following which may be delivered or issued on or after the Effective Date of the Contract and are not attached hereto:
    a. Notice to Proceed.
    b. Work Change Directives
    c. Change Order
    d. Field Orders

**EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.**

B. The documents listed in Paragraph 7.01.A are attached to this Agreement (except as expressly noted otherwise above).

C. There are no Contract Documents other than those listed above in this Article 7.

D. The Contract Documents may only be amended, modified, or supplemented as provided in the General Conditions.

7.01 *Contents*

A. The Contract Documents consist of all of the following:

1. Executed Agreement.
2. Bonds:
    a. Performance bond (together with power of attorney).
    b. Payment bond (together with power of attorney).
3. General Conditions.
4. Supplementary Conditions.
5. Specifications as listed in the table of contents of the project manual (copy of list
6. Drawings (not attached but incorporated by reference) consisting of **[number]** sheets with each sheet bearing the following general title: **Wastewater System Improvements**.
7. Drawings listed on the attached sheet index.
8. Addenda (numbers **[number]** to **[number]**, inclusive).
9. Exhibits to this Agreement (enumerated as follows):
    a. **Attachment "A" – Bid Summary Sheet.**
10. The following which may be delivered or issued on or after the Effective Date of the Contract and are not attached hereto:
    a. Notice to Proceed.
    b. Work Change Directives.
    c. Change Orders.
    d. Field Orders.
    e. Warranty Bond

B. The Contract Documents listed in Paragraph 7.01.A are attached to this Agreement (except as expressly noted otherwise above).

C. OWRB / Funding Agency Special Requirements as outlined in 00_01_10 Table of Contents

D. There are no Contract Documents other than those listed above in this Article 7.

EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. The Contract Documents may only be amended, modified, or supplemented as provided in the Contract.

ARTICLE 8—REPRESENTATIONS, CERTIFICATIONS, AND STIPULATIONS

8.01 *Contractor's Representations*

A. In order to induce Owner to enter into this Contract, Contractor makes the following representations:

1. Contractor has examined and carefully studied the Contract Documents, including Addenda.

2. Contractor has visited the Site, conducted a thorough visual examination of the Site and adjacent areas, and become familiar with the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

3. Contractor is familiar with all Laws and Regulations that may affect cost, progress, and performance of the Work.

4. Contractor has carefully studied the reports of explorations and tests of subsurface conditions at or adjacent to the Site and the drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, with respect to the Technical Data in such reports and drawings.

5. Contractor has carefully studied the reports and drawings relating to Hazardous Environmental Conditions, if any, at or adjacent to the Site that have been identified in the Supplementary Conditions, with respect to Technical Data in such reports and drawings.

6. Contractor has considered the information known to Contractor itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Contract Documents; and the Technical Data identified in the Supplementary Conditions or by definition, with respect to the effect of such information, observations, and Technical Data on (a) the cost, progress, and performance of the Work; (b) the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor; and (c) Contractor's safety precautions and programs.

7. Based on the information and observations referred to in the preceding paragraph, Contractor agrees that no further examinations, investigations, explorations, tests, studies, or data are necessary for the performance of the Work at the Contract Price, within the Contract Times, and in accordance with the other terms and conditions of the Contract.

8. Contractor is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Contract Documents.

**EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.**

9. Contractor has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Contractor has discovered in the Contract Documents, and of discrepancies between Site conditions and the Contract Documents, and the written resolution thereof by Engineer is acceptable to Contractor.

10. The Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

11. Contractor's entry into this Contract constitutes an incontrovertible representation by Contractor that without exception all prices in the Agreement are premised upon performing and furnishing the Work required by the Contract Documents.

8.02 *Contractor's Certifications*

A. Contractor certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Contract. For the purposes of this Paragraph 8.02:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process or in the Contract execution;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Contract to the detriment of Owner, (b) to establish Bid or Contract prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish Bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

8.03 *Standard General Conditions*

A. Owner stipulates that if the General Conditions that are made a part of this Contract are EJCDC® C-700, Standard General Conditions for the Construction Contract (2018), published by the Engineers Joint Contract Documents Committee, and if Owner is the party that has furnished said General Conditions, then Owner has plainly shown all modifications to the standard wording of such published document to the Contractor in the Supplementary Conditions.

8.04 Other Provisions

A. Owner stipulates that if the General Conditions that are made a part of this Contract are based on EJCDC® C-700, Standard General Conditions for the Construction Contract, published by the Engineers Joint Contract Documents Committee®, and if Owner is the party that has furnished said General Conditions, then Owner has plainly shown all modifications to the standard wording of such published document to the Contractor, through a process

**EJCDC® C-520, Agreement between Owner and Contractor for Construction Contract (Stipulated Price).
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.**

such as highlighting or "track changes" (redline/strikeout), or in the Supplementary Conditions.

B. The Contractor hereby represents and warrants to and for the benefit of the Owner that:

1. The Contractor has reviewed the grant conditions and all the other conditions in the Supplemental Conditions ORF-185.

2. The Contractor has reviewed and understands the Davis Bacon Act and prevailing wage rate requirements and will provide any further verified information, certification or assurance of compliance as may be required by the Owner.

3. The Contractor acknowledges to and for the benefit of the City of Choctaw ("Purchaser") and the State of Oklahoma (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund and such law contains provisions commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement.

4. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State.

5. The Contractor has registered for the System for Award Management (SAM) that is required for all SRF program projects. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions. Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

6. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-

1. The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

2. If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Paragraph 3.

3. If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond will arise after:

    3.1. The Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice may indicate whether the Owner is requesting a conference among the Owner, Contractor, and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Paragraph 3.1 will be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor, and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement does not waive the Owner's right, if any, subsequently to declare a Contractor Default;

    3.2. The Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

    3.3. The Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

4. Failure on the part of the Owner to comply with the notice requirement in Paragraph 3.1 does not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

5. When the Owner has satisfied the conditions of Paragraph 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

    5.1. Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

    5.2. Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

    5.3. Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owners concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Paragraph 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

5.4. Waive its right to perform and complete, arrange for completion, or obtain a new contractor, and with reasonable promptness under the circumstances:

5.4.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

5.4.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

6. If the Surety does not proceed as provided in Paragraph 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Paragraph 5.4, and the Owner refuses the payment, or the Surety has denied liability, in whole or in part, without further notice, the Owner shall be entitled to enforce any remedy available to the Owner.

7. If the Surety elects to act under Paragraph 5.1, 5.2, or 5.3, then the responsibilities of the Surety to the Owner will not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety will not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication for:

7.1. the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

7.2. additional legal, design professional, and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Paragraph 5; and

7.3. liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

8. If the Surety elects to act under Paragraph 5.1, 5.3, or 5.4, the Surety's liability is limited to the amount of this Bond.

9. The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price will not be reduced or set off on account of any such unrelated obligations. No right of action will accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors, and assigns.

10. The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders, and other obligations.

11. Any proceeding, legal or equitable, under this Bond must be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and must be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this paragraph are void or prohibited by law, the minimum periods of limitations available to sureties as a defense in the jurisdiction of the suit will be applicable.

12. Notice to the Surety, the Owner, or the Contractor must be mailed or delivered to the address shown on the page on which their signature appears.

13. When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said

EJCDC® C-610, Performance Bond.

statutory or legal requirement will be deemed deleted therefrom and provisions conforming to such statutory or other legal requirement will be deemed incorporated herein. When so furnished, the intent is that this Bond will be construed as a statutory bond and not as a common law bond.

14. Definitions

    14.1. *Balance of the Contract Price*—The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made including allowance for the Contractor for any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

    14.2. *Construction Contract*—The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

    14.3. *Contractor Default*—Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

    14.4. *Owner Default*—Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

    14.5. *Contract Documents*—All the documents that comprise the agreement between the Owner and Contractor.

15. If this Bond is issued for an agreement between a contractor and subcontractor, the term Contractor in this Bond will be deemed to be Subcontractor and the term Owner will be deemed to be Contractor.

16. Modifications to this Bond are as follows: **[Describe modification or enter "None"]**

EJCDC® C-615, Payment Bond.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Owner to pay for labor, materials, and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference, subject to the following terms.
2. If the Contractor promptly makes payment of all sums due to Claimants, and defends, indemnifies, and holds harmless the Owner from claims, demands, liens, or suits by any person or entity seeking payment for labor, materials, or equipment furnished for use in the performance of the Construction Contract, then the Surety and the Contractor shall have no obligation under this Bond.
3. If there is no Owner Default under the Construction Contract, the Surety's obligation to the Owner under this Bond will arise after the Owner has promptly notified the Contractor and the Surety (at the address described in Paragraph 13) of claims, demands, liens, or suits against the Owner or the Owner's property by any person or entity seeking payment for labor, materials, or equipment furnished for use in the performance of the Construction Contract, and tendered defense of such claims, demands, liens, or suits to the Contractor and the Surety.
4. When the Owner has satisfied the conditions in Paragraph 3, the Surety shall promptly and at the Surety's expense defend, indemnify, and hold harmless the Owner against a duly tendered claim, demand, lien, or suit.
5. The Surety's obligations to a Claimant under this Bond will arise after the following:
    5.1. Claimants who do not have a direct contract with the Contractor
        5.1.1. have furnished a written notice of non-payment to the Contractor, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and
        5.1.2. have sent a Claim to the Surety (at the address described in Paragraph 13).
    5.2. Claimants who are employed by or have a direct contract with the Contractor have sent a Claim to the Surety (at the address described in Paragraph 13).
6. If a notice of non-payment required by Paragraph 5.1.1 is given by the Owner to the Contractor, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Paragraph 5.1.1.
7. When a Claimant has satisfied the conditions of Paragraph 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:
    7.1. Send an answer to the Claimant, with a copy to the Owner, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and
    7.2. Pay or arrange for payment of any undisputed amounts.
    7.3. The Surety's failure to discharge its obligations under Paragraph 7.1 or 7.2 will not be deemed to constitute a waiver of defenses the Surety or Contractor may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Paragraph 7.1 or 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8. The Surety's total obligation will not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Paragraph 7.3, and the amount of this Bond will be credited for any payments made in good faith by the Surety.

9. Amounts owed by the Owner to the Contractor under the Construction Contract will be used for the performance of the Construction Contract and to satisfy claims, if any, under any construction performance bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfying obligations of the Contractor and Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

10. The Surety shall not be liable to the Owner, Claimants, or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to or give notice on behalf of Claimants, or otherwise have any obligations to Claimants under this Bond.

11. The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders, and other obligations.

12. No suit or action will be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the project that is the subject of the Construction Contract is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Paragraph 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit will be applicable.

13. Notice and Claims to the Surety, the Owner, or the Contractor must be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, will be sufficient compliance as of the date received.

14. When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement will be deemed deleted here from and provisions conforming to such statutory or other legal requirement will be deemed incorporated herein. When so furnished, the intent is that this Bond will be construed as a statutory bond and not as a common law bond.

15. Upon requests by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor and Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

16. Definitions

    16.1. *Claim*—A written statement by the Claimant including at a minimum:

        16.1.1. The name of the Claimant;

        16.1.2. The name of the person for whom the labor was done, or materials or equipment furnished;

        16.1.3. A copy of the agreement or purchase order pursuant to which labor, materials, or equipment was furnished for use in the performance of the Construction Contract;

        16.1.4. A brief description of the labor, materials, or equipment furnished;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

16.1.5. The date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Construction Contract;

16.1.6. The total amount earned by the Claimant for labor, materials, or equipment furnished as of the date of the Claim;

16.1.7. The total amount of previous payments received by the Claimant; and

16.1.8. The total amount due and unpaid to the Claimant for labor, materials, or equipment furnished as of the date of the Claim.

16.2. *Claimant*—An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials, or equipment for use in the performance of the Construction Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Project is located. The intent of this Bond is to include without limitation in the terms of "labor, materials, or equipment" that part of the water, gas, power, light, heat, oil, gasoline, telephone service, or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials, or equipment were furnished.

16.3. *Construction Contract*—The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and all changes made to the agreement and the Contract Documents.

16.4. *Owner Default*—Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

16.5. *Contract Documents*—All the documents that comprise the agreement between the Owner and Contractor.

17. If this Bond is issued for an agreement between a contractor and subcontractor, the term Contractor in this Bond will be deemed to be Subcontractor and the term Owner will be deemed to be Contractor.

18. Modifications to this Bond are as follows: **[Describe modification or enter "None"]**

MAINTENANCE BOND

KNOW ALL MEN BY THESE PRESENTS, that we, _____, hereinafter called the Principal, and the _____ of, _____, a corporation duly organized under the laws of the State of _____, hereinafter called the Surety, as Surety, are held and firmly bound unto _____ _____, hereinafter call the Obligee, in the sum of _____ Dollars ($_____), for the payment of which sum well and truly to be made, the said Principal and the said Surety, bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal entered into a written Contract with said Obligee dated _____, _____, for _____ _____, all in compliance with the plans and specifications therefor, made a part of said Contract and on file in the office of _____.

WHEREAS, this bond is given in compliance with Title 61, Oklahoma Statutes 2001, Section 113(B)(3).

NOW THEREFORE, if said Principal shall pay or cause to be paid to Obligee all damage, loss, and expense which may result by reason of defective materials and/or workmanship in connection with said work, occurring within a period of one (1) year after acceptance of said project by Obligee; and if Principal shall pay or cause to be paid all labor and materials, including the prime contractor and all subcontractors; and if Principal shall save and hold Obligee harmless from all damages, loss, and expense occasioned by, or resulting from, any failure whatsoever of said Principal, then this obligation shall be null and void, otherwise to be and remain in full force and effect.

It is further expressly agreed and understood by the parties hereto that no changes or alternations in said Contract and no deviations from the plan or mode of procedure herein fixed shall have the effect of releasing the sureties, or any of them, from the obligations of this Bond.

IN WITNESS WHEREOF, this instrument is executed in _____ counterparts, each of which shall be deemed an original, this _____ day of _____, _____.

GUIDELINES FOR THE INTENDED USE OF EJCDC C-620, APPLICATION FOR PAYMENT

1.0 PURPOSE AND INTENDED USE OF THE DOCUMENT

The Application for Payment is used to facilitate periodic progress payments to the Contractor for Work completed and for stored materials and equipment (referred to in this document as "Stored Materials").

For additional information regarding the Application for Payment, see EJCDC® C–700, Standard General Conditions of the Construction Contract (2018), Paragraph 15.01, and EJCDC® C–001, Commentary on the 2018 EJCDC Construction Documents (2018).

2.0 APPLICATION FOR PAYMENT OVERVIEW

This document was prepared in Microsoft Excel due to the number of calculations involved in the preparation of the Application for Payment. The application consists of a Summary worksheet, and 3 supporting worksheets: Lump Sum worksheet, Unit Price worksheet, and Stored Materials worksheet.

2.1 *Summary Worksheet* — calculates the amount to be paid to the Contractor at the end of each Application for Payment period. This calculation imports numbers from the supporting worksheets to determine the value of the Work completed and Stored Materials, calculate retainage, and deduct amounts previously paid to determine the amount the Contractor should be paid for the current application period. Application periods are typically one month; however these periods may be extended when Contractor's efforts do not result in the billable completion of Work or storage of materials and equipment during the payment period.

2.2 *Lump Sum Worksheet* — calculates the total value for completed Work for which compensation is paid on a Lump Sum basis. The schedule of values included in this worksheet reflects a breakdown of lump sum Work items to which Contractor and Engineer have agreed, pursuant to Article 2 of the General Conditions. Costs for Stored Materials associated with lump sum items are included on this worksheet to calculate the total value for completed lump sum Work and associated Stored Materials. This total is exported to the Summary worksheet. Separate totals for Work Completed and for materials currently stored are also exported to the Summary worksheet for use in calculating the amount of retainage to be held for each.

2.3 *Unit Price Worksheet* — calculates the total value for completed Work for which compensation is paid on a Unit Price basis. The schedule of values included in this spreadsheet is typically a tabulation of Unit Price items from the Agreement. Costs for Stored Materials associated with unit price items are included in this worksheet to calculate the total value for completed Unit Price Work and associated Stored Materials. This total is exported to the Summary worksheet. Separate totals for Work Completed and for Materials Currently Stored are also exported to the Summary worksheet for use in calculating the amount of retainage to be held for each.

2.4 *Stored Materials Worksheet* — calculates the total value for materials and equipment that have been purchased and are being stored until they are incorporated into the Work. This worksheet adds materials and equipment to the worksheet as they are brought to the site and stored; such Stored Materials are then deducted from the Stored Materials worksheet total as they are incorporated into the Work, providing a running net value for the materials and equipment remaining in storage. The values of Stored Materials must be manually added to the Lump Sum or Unit Price line items. These do not automatically update when changes are made. The amount of materials remaining in storage is eligible for payment but must be tracked separately from Work completed since different retainage rates may apply to Work completed and Stored Materials.

3.0 Instructions for filling out the Payment Application form

3.1 Project-specific information is to be entered in the top portion (header) of the Summary worksheet. This same information will automatically be copied to the other worksheets to complete the headers on all other worksheets.

3.2 Outside of the header, data can be entered in non-shaded cells when the sheet is protected. Cells shaded light blue contain equations that will automatically transfer data from other cells or make calculations to complete the worksheet. Altering any of these cells can result in errors in the Application for Payment. It is recommended that the worksheets be protected at all times unless alterations are deliberately being made to the Application for Payment form other than to enter data. See Paragraph 4.0 below for information on Protection of Worksheets.

3.3 Enter information regarding each item in the Lump Sum and/or Unit Price worksheets. For Lump Sum projects, each item should represent an item in the schedule of values prepared by the Contractor and approved by the Engineer/Owner, breaking down the Lump Sum amount into measurable components. For Unit Price contracts, use numbers from the Agreement as the schedule of values. Specific information on the data to be entered into each column may be seen by clicking on the header description for that column. Similar comments may be seen for cells in the "Totals" row that indicates how the number is calculated and where this number is exported to another part of the spreadsheet. See the Commentary for additional information.

3.4 The equations in the Summary worksheet use numbers imported from both the Lump Sum and Unit Price worksheets. Projects will typically either use the Lump Sum or the Unit Price worksheet, but some projects may use both. If one of the worksheets is not used, it should be hidden and not deleted. If it is deleted, Users will need to correct the equations in the Summary worksheet by unprotecting the worksheet and editing the equations. To hide a worksheet, right click on the worksheet tab at the bottom of the worksheet and select "Hide." To unhide a worksheet, right click on any worksheet tab and select "Unhide," and then select the worksheet to unhide and click "Okay." This same process may be used to hide these Guidelines for Use.

3.5 EJCDC C-620 contains calculation functions that are provided solely for the convenience of the user. EJCDC and its Sponsoring Organizations do not warrant or guarantee the accuracy or completeness of any information generated by the calculator.

4.0 Protection of Worksheets

4.1 The cells in this Workbook that create the forms or contain equations have been coded to "lock" the cells that should not be altered. It is recommended that the Workbook be Protected (cells locked) at all times unless it is necessary to add or delete rows. Directions for adding and deleting rows are provided in the next section. Passwords can be used to lock the Protect / Unprotect settings on spreadsheets, however the worksheets in this workbook do not require a password.

4.2 To unprotect a worksheet, click on the "Review" menu tab at the top of Excel, then click "Unprotect Sheet." To protect a worksheet, click on the "Review" menu tab at the top of Excel, then click "Protect Sheet." This will open a dialog box in which the User is allowed to select protection options. It is recommended that only the top two checkboxes for "Select Locked Cells" and "Select Unlocked Cells" be checked. This will reset the protection for the Worksheet.

5.0 Adding and Deleting Rows

5.1 A limited number of blank rows are provided in the Lump Sum, Unit Price, and Stored Material worksheets. Additional rows may be added to these worksheets by the User. The first step in this process is to unprotect the worksheet as previously discussed. After the sheet is unprotected, move with caution to prevent inadvertently deleting any cells that contain equations. To insert a row, right click in the row heading at the left of the spreadsheet and select "Insert." A new row will be inserted at the location where the cursor was placed in the row heading. If more than one new row is desired, left click and drag the cursor to include the desired number of rows, right click in the selected row headings and then select "Insert." It is important that the line immediately above the "Totals" row not be included in the rows selected. Doing so will require that equations in the "Totals" row be adjusted. When rows are inserted, Excel automatically adjusts the equations to include the new rows, unless the row directly above the "Totals" row is also selected.

5.2 After new rows are inserted, it is important to copy a line from one of the original rows so correct formatting and equations are copied into each new row. To do this, select the row to be copied by clicking the cell in Column A and dragging the cursor to the last column in the table. Then select "Copy" from the menu or type CTRL+C to copy the cells. Excel will show that this row has been copied by showing a moving dashed line around the cells that are to be copied. Then select the new rows into which the information is to be copied as before and select Paste from the menu or type CTRL+V.

5.3 To delete an unused row, right click in the row heading on the left of the spreadsheet for the row to be deleted and select "Delete." The selected row will be deleted. If more than one row is to be deleted, left click and drag the cursor to the desired number of rows to be deleted and then right click to open the menu and select "Delete." Unlike the admonition on adding new rows, it is okay to delete the row just above the "Totals" row.

5.4 After rows have been added or deleted, it is important reset the worksheet protection.

6.0 Saving Files

This file is provided as a Microsoft ® Excel Open XML workbook template (.xltx) to prevent this file from being inadvertently changed. When an application for payment is created for a specific project it should be saved as an Excel workbook (.xlxs) file. To do this, select Save As (F12), type in a new file name and select Excel Workbook (.xlxs) from the drop down Save As Type menu.

7.0 License Agreement

This document is subject to the terms and conditions of the License Agreement, 2018 EJCDC® Construction Series Documents. A copy of the License Agreement was furnished at the time of purchase of this document, and is available for review at www.ejcdc.org and the websites of EJCDC's sponsoring organizations.

Contractor's Certification

The undersigned Contractor certifies, to the best of its knowledge, the following:
(1) All previous progress payments received from Owner on account of Work done under the Contract have been applied on account to discharge Contractor's legitimate obligations incurred in connection with the Work covered by prior Applications for Payment;
(2) Title to all Work, materials and equipment incorporated in said Work, or otherwise listed in or covered by this Application for Payment, will pass to Owner at time of payment free and clear of all liens, security interests, and encumbrances (except such as are covered by a bond acceptable to Owner indemnifying Owner against any such liens, security interest, or encumbrances); and
(3) All the Work covered by this Application for Payment is in accordance with the Contract Documents and is not defective.

CERTIFICATE OF APPROVAL OF CONTRACTS AND BONDS BY LOCAL ATTORNEY

I, the undersigned _____,

the duly authorized and acting legal representative of the _____,

after careful examination of the Contract between this Entity and

_____, and the surety bonds given by the contractor in

connection with the performance of said contract, do hereby certify that:

1. Each of the aforesaid agreements has been duly executed by the proper parties thereto, acting through their duly authorized representatives.

2. Said representatives have full power and authority to execute said agreements on behalf of the respective parties named therein.

3. The foregoing contract and surety bonds, as applicable, constitute valid and legally binding obligations upon the parties executing the same in accordance with the terms, conditions, and provisions thereof.

Dated this ___ day of _____, 20___.

CERTIFICATE OF SUBSTANTIAL COMPLETION

Owner: Shawnee Municipal Authority
Engineer: Wall Engineering, LLC
Contractor:
Project: Wastewater System Improvements
Date Issued:
This ☐ Preliminary ☐ Final Certificate of Substantial Completion applies to:

☐ All Work ☐ The following specified portions of the Work:

[Describe the portion of the work for which Certificate of Substantial Completion is issued]

Date of Substantial Completion: **[Enter date, as determined by Engineer]**

The Work to which this Certificate applies has been inspected by authorized representatives of Owner, Contractor, and Engineer, and found to be substantially complete. The Date of Substantial Completion of the Work or portion thereof designated above is hereby established, subject to the provisions of the Contract pertaining to Substantial Completion. The date of Substantial Completion in the final Certificate of Substantial Completion marks the commencement of the contractual correction period and applicable warranties required by the Contract.

A punch list of items to be completed or corrected is attached to this Certificate. This list may not be all-inclusive, and the failure to include any items on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

Amendments of contractual responsibilities recorded in this Certificate should be the product of mutual agreement of Owner and Contractor; see Paragraph 15.03.D of the General Conditions.

The responsibilities between Owner and Contractor for security, operation, safety, maintenance, heat, utilities, insurance, and warranties upon Owner's use or occupancy of the Work must be as provided in the Contract, except as amended as follows:

Amendments to Owner's Responsibilities: ☐ None ☐ As follows:

[List amendments to Owner's Responsibilities]

Amendments to Contractor's Responsibilities: ☐ None ☐ As follows:

[List amendments to Contractor's Responsibilities]

The following documents are attached to and made a part of this Certificate:

[List attachments such as punch list; other documents]

This Certificate does not constitute an acceptance of Work not in accordance with the Contract Documents, nor is it a release of Contractor's obligation to complete the Work in accordance with the Contract Documents.

NOTICE OF ACCEPTABILITY OF WORK

Owner: Shawnee Municipal Authority
Engineer: Wall Engineering, LLC
Contractor:
Project: Wastewater System Improvements
Project No.: SHN-20-01
Date Issued:

The Engineer hereby gives notice to the Owner and Contractor that Engineer recommends final payment to Contractor, and that the Work furnished and performed by Contractor under the Construction Contract is acceptable, expressly subject to the provisions of the Construction Contract's Contract Documents ("Contract Documents") and of the Agreement between Owner and Engineer for Professional Services dated **[date of professional services agreement]** ("Owner-Engineer Agreement"). This Notice of Acceptability of Work (Notice) is made expressly subject to the following terms and conditions to which all who receive and rely on said Notice agree:

1. This Notice has been prepared with the skill and care ordinarily used by members of the engineering profession practicing under similar conditions at the same time and in the same locality.
2. This Notice reflects and is an expression of the Engineer's professional opinion.
3. This Notice has been prepared to the best of Engineer's knowledge, information, and belief as of the Notice Date.
4. This Notice is based entirely on and expressly limited by the scope of services Engineer has been employed by Owner to perform or furnish during construction of the Project (including observation of the Contractor's Work) under the Owner-Engineer Agreement, and applies only to facts that are within Engineer's knowledge or could reasonably have been ascertained by Engineer as a result of carrying out the responsibilities specifically assigned to Engineer under such Owner-Engineer Agreement.
5. This Notice is not a guarantee or warranty of Contractor's performance under the Construction Contract, an acceptance of Work that is not in accordance with the Contract Documents, including but not limited to defective Work discovered after final inspection, nor an assumption of responsibility for any failure of Contractor to furnish and perform the Work thereunder in accordance with the Contract Documents, or to otherwise comply with the Contract Documents or the terms of any special guarantees specified therein.
6. This Notice does not relieve Contractor of any surviving obligations under the Construction Contract, and is subject to Owner's reservations of rights with respect to completion and final payment.

RELEASE OF CLAIMANTS

Date: ____/____/_____

Project Name: Shawnee Municipal Authority - Wastewater System Improvements

To Whom it May Concern,

I hereby acknowledge receipt of _____

Dollars ($_____) in full payment of my contracted date ____/____/_____, for improvement work which I did for you and which is described in my contract.

I Certify that I have paid in full for all materials purchased and all labor employed in the performance of this contract and that there are no claims against me as an employer under this contract on account of injuries sustained by workmen employed by me thereunder. I hereby release you from any claims arising by virtue of this contract.

WARNING

The making of any false statement or misrepresentation herein may be a crime punishable under Title 18 U.S.C. Section 1001 which provides in part: "Whoever, in any matter within the jurisdiction of any department or agency of the United States knowingly and willfully...makes false representation, or makes or uses any false writing or document knowing the same to contain any false fictitious or fraudulent statement or entry, shall be fined not more than $10,000.00 or imprisoned not more than five years, or both."

Sincerely,

_____

STANDARD GENERAL CONDITIONS OF THE CONSTRUCTION CONTRACT

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents, a term printed with initial capital letters, including the term's singular and plural forms, will have the meaning indicated in the definitions below. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument, executed by Owner and Contractor, that sets forth the Contract Price and Contract Times, identifies the parties and the Engineer, and designates the specific items that are Contract Documents.

3. *Application for Payment*—The document prepared by Contractor, in a form acceptable to Engineer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Bid*—The offer of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

5. *Bidder*—An individual or entity that submits a Bid to Owner.

6. *Bidding Documents*—The Bidding Requirements, the proposed Contract Documents, and all Addenda.

7. *Bidding Requirements*—The Advertisement or invitation to bid, Instructions to Bidders, Bid Bond or other Bid security, if any, the Bid Form, and the Bid with any attachments.

8. *Change Order*—A document which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, or other revision to the Contract, issued on or after the Effective Date of the Contract.

9. *Change Proposal*—A written request by Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment in Contract Price or Contract Times; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; challenging a set-off against payments due; or seeking other relief with respect to the terms of the Contract.

10. *Claim*

a. A demand or assertion by Owner directly to Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment of Contract Price or Contract Times; contesting an initial decision by Engineer concerning the

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

requirements of the Contract Documents or the acceptability of Work under the Contract Documents; contesting Engineer's decision regarding a Change Proposal; seeking resolution of a contractual issue that Engineer has declined to address; or seeking other relief with respect to the terms of the Contract.

b. A demand or assertion by Contractor directly to Owner, duly submitted in compliance with the procedural requirements set forth herein, contesting Engineer's decision regarding a Change Proposal, or seeking resolution of a contractual issue that Engineer has declined to address.

c. A demand or assertion by Owner or Contractor, duly submitted in compliance with the procedural requirements set forth herein, made pursuant to Paragraph 12.01.A.4, concerning disputes arising after Engineer has issued a recommendation of final payment.

d. A demand for money or services by a third party is not a Claim.

11. *Constituent of Concern*—Asbestos, petroleum, radioactive materials, polychlorinated biphenyls (PCBs), lead-based paint (as defined by the HUD/EPA standard), hazardous waste, and any substance, product, waste, or other material of any nature whatsoever that is or becomes listed, regulated, or addressed pursuant to Laws and Regulations regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

12. *Contract*—The entire and integrated written contract between Owner and Contractor concerning the Work.

13. *Contract Documents*—Those items so designated in the Agreement, and which together comprise the Contract.

14. *Contract Price*—The money that Owner has agreed to pay Contractor for completion of the Work in accordance with the Contract Documents.

15. *Contract Times*—The number of days or the dates by which Contractor shall: (a) achieve Milestones, if any; (b) achieve Substantial Completion; and (c) complete the Work.

16. *Contractor*—The individual or entity with which Owner has contracted for performance of the Work.

17. *Cost of the Work*—See Paragraph 13.01 for definition.

18. *Drawings*—The part of the Contract that graphically shows the scope, extent, and character of the Work to be performed by Contractor.

19. *Effective Date of the Contract*—The date, indicated in the Agreement, on which the Contract becomes effective.

20. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

21. *Electronic Means*—Electronic mail (email), upload/download from a secure Project website, or other communications methods that allow: (a) the transmission or communication of Electronic Documents; (b) the documentation of transmissions, including sending and receipt; (c) printing of the transmitted Electronic Document by the

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

recipient; (d) the storage and archiving of the Electronic Document by sender and recipient; and (e) the use by recipient of the Electronic Document for purposes permitted by this Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.

22. *Engineer*—The individual or entity named as such in the Agreement.

23. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but does not change the Contract Price or the Contract Times.

24. *Hazardous Environmental Condition*—The presence at the Site of Constituents of Concern in such quantities or circumstances that may present a danger to persons or property exposed thereto.

    a. The presence at the Site of materials that are necessary for the execution of the Work, or that are to be incorporated into the Work, and that are controlled and contained pursuant to industry practices, Laws and Regulations, and the requirements of the Contract, is not a Hazardous Environmental Condition.

    b. The presence of Constituents of Concern that are to be removed or remediated as part of the Work is not a Hazardous Environmental Condition.

    c. The presence of Constituents of Concern as part of the routine, anticipated, and obvious working conditions at the Site, is not a Hazardous Environmental Condition.

25. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

26. *Liens*—Charges, security interests, or encumbrances upon Contract-related funds, real property, or personal property.

27. *Milestone*—A principal event in the performance of the Work that the Contract requires Contractor to achieve by an intermediate completion date, or by a time prior to Substantial Completion of all the Work.

28. *Notice of Award*—The written notice by Owner to a Bidder of Owner's acceptance of the Bid.

29. *Notice to Proceed*—A written notice by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work.

30. *Owner*—The individual or entity with which Contractor has contracted regarding the Work, and which has agreed to pay Contractor for the performance of the Work, pursuant to the terms of the Contract.

31. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising Contractor's plan to accomplish the Work within the Contract Times.

32. *Project*—The total undertaking to be accomplished for Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Work to be performed under the Contract Documents is a part.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

33. *Resident Project Representative*—The authorized representative of Engineer assigned to assist Engineer at the Site. As used herein, the term Resident Project Representative (RPR) includes any assistants or field staff of Resident Project Representative.

34. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and that establish the standards by which such portion of the Work will be judged.

35. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements for Engineer's review of the submittals.

36. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

37. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information that are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work. Shop Drawings, whether approved or not, are not Drawings and are not Contract Documents.

38. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements, and such other lands or areas furnished by Owner which are designated for the use of Contractor.

39. *Specifications*—The part of the Contract that consists of written requirements for materials, equipment, systems, standards, and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable to the Work.

40. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work.

41. *Submittal*—A written or graphic document, prepared by or for Contractor, which the Contract Documents require Contractor to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals may include Shop Drawings and Samples; schedules; product data; Owner-delegated designs; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or Site quality-control testing and inspections; warranties and certifications; Suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; Project photographic documentation; record documents; and other such documents required by the Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Contract Documents. Change Proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

42. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion of such Work.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

43. *Successful Bidder*—The Bidder to which the Owner makes an award of contract.

44. *Supplementary Conditions*—The part of the Contract that amends or supplements these General Conditions.

45. *Supplier*—A manufacturer, fabricator, supplier, distributor, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or a Subcontractor.

46. *Technical Data*

    a. Those items expressly identified as Technical Data in the Supplementary Conditions, with respect to either (1) existing subsurface conditions at or adjacent to the Site, or existing physical conditions at or adjacent to the Site including existing surface or subsurface structures (except Underground Facilities) or (2) Hazardous Environmental Conditions at the Site.

    b. If no such express identifications of Technical Data have been made with respect to conditions at the Site, then Technical Data is defined, with respect to conditions at the Site under Paragraphs 5.03, 5.04, and 5.06, as the data contained in boring logs, recorded measurements of subsurface water levels, assessments of the condition of subsurface facilities, laboratory test results, and other factual, objective information regarding conditions at the Site that are set forth in any geotechnical, environmental, or other Site or facilities conditions report prepared for the Project and made available to Contractor.

    c. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data, and instead Underground Facilities are shown or indicated on the Drawings.

47. *Underground Facilities*—All active or not-in-service underground lines, pipelines, conduits, ducts, encasements, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or systems at the Site, including but not limited to those facilities or systems that produce, transmit, distribute, or convey telephone or other communications, cable television, fiber optic transmissions, power, electricity, light, heat, gases, oil, crude oil products, liquid petroleum products, water, steam, waste, wastewater, storm water, other liquids or chemicals, or traffic or other control systems. An abandoned facility or system is not an Underground Facility.

48. *Unit Price Work*—Work to be paid for on the basis of unit prices.

49. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction; furnishing, installing, and incorporating all materials and equipment into such construction; and may include related services such as testing, start-up, and commissioning, all as required by the Contract Documents.

50. *Work Change Directive*—A written directive to Contractor issued on or after the Effective Date of the Contract, signed by Owner and recommended by Engineer, ordering an addition, deletion, or revision in the Work.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1.02 *Terminology*

A. The words and terms discussed in Paragraphs 1.02.B, C, D, and E are not defined terms that require initial capital letters, but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives*: The Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Article 10 or any other provision of the Contract Documents.

C. *Day*: The word "day" means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective*: The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it:

1. does not conform to the Contract Documents;

2. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

3. has been damaged prior to Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 15.03 or Paragraph 15.04).

E. *Furnish, Install, Perform, Provide*

1. The word "furnish," when used in connection with services, materials, or equipment, means to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, means to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, means to furnish and install said services, materials, or equipment complete and ready for intended use.

4. If the Contract Documents establish an obligation of Contractor with respect to specific services, materials, or equipment, but do not expressly use any of the four words "furnish," "install," "perform," or "provide," then Contractor shall furnish and install said services, materials, or equipment complete and ready for intended use.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. *Contract Price or Contract Times*: References to a change in "Contract Price or Contract Times" or "Contract Times or Contract Price" or similar, indicate that such change applies to (1) Contract Price, (2) Contract Times, or (3) both Contract Price and Contract Times, as warranted, even if the term "or both" is not expressed.

G. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Performance and Payment Bonds; Evidence of Insurance*

A. *Performance and Payment Bonds*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner the performance bond and payment bond (if the Contract requires Contractor to furnish such bonds).

B. *Evidence of Contractor's Insurance*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner, with copies to each additional insured (as identified in the Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Contractor in accordance with Article 6, except to the extent the Supplementary Conditions expressly establish other dates for delivery of specific insurance policies.

C. *Evidence of Owner's Insurance*: After receipt of the signed counterparts of the Agreement and all required bonds and insurance documentation, Owner shall promptly deliver to Contractor, with copies to each additional insured (as identified in the Contract), the certificates and other evidence of insurance required to be provided by Owner under Article 6.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor four printed copies of the Contract (including one fully signed counterpart of the Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

B. Owner shall maintain and safeguard at least one original printed record version of the Contract, including Drawings and Specifications signed and sealed by Engineer and other design professionals. Owner shall make such original printed record version of the Contract available to Contractor for review. Owner may delegate the responsibilities under this provision to Engineer.

2.03 *Before Starting Construction*

A. *Preliminary Schedules*: Within 10 days after the Effective Date of the Contract (or as otherwise required by the Contract Documents), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.04 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work, and to discuss the schedules referred to in Paragraph 2.03.A, procedures for handling Shop Drawings, Samples, and other Submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit and receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.05 *Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference, attended by Contractor, Engineer, and others as appropriate, will be held to review the schedules submitted in accordance with Paragraph 2.03.A. No progress payment will be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to the component parts of the Work.

4. If a schedule is not acceptable, Contractor will have an additional 10 days to revise and resubmit the schedule.

2.06 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Contract, the Owner, Engineer, and Contractor may send, and shall accept, Electronic Documents transmitted by Electronic Means.

B. If the Contract does not establish protocols for Electronic Means, then Owner, Engineer, and Contractor shall jointly develop such protocols.

C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—CONTRACT DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one Contract Document is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents.

C. Unless otherwise stated in the Contract Documents, if there is a discrepancy between the electronic versions of the Contract Documents (including any printed copies derived from such electronic versions) and the printed record version, the printed record version will govern.

D. The Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Contract Documents as provided herein.

F. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Owner and Contractor, which agree that the Contract Documents will be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

G. Nothing in the Contract Documents creates:

1. any contractual relationship between Owner or Engineer and any Subcontractor, Supplier, or other individual or entity performing or furnishing any of the Work, for the benefit of such Subcontractor, Supplier, or other individual or entity; or

2. any obligation on the part of Owner or Engineer to pay or to see to the payment of any money due any such Subcontractor, Supplier, or other individual or entity, except as may otherwise be required by Laws and Regulations.

3.02 *Reference Standards*

A. *Standards Specifications, Codes, Laws and Regulations*

1. Reference in the Contract Documents to standard specifications, manuals, reference standards, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, means the standard specification, manual, reference standard, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Contract if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

2. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a Supplier, will be effective to change the duties or responsibilities of Owner, Contractor, or Engineer from those set forth in the part of the Contract Documents prepared by or for Engineer. No such provision or instruction shall be effective to assign to Owner or Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

inconsistent with the provisions of the part of the Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Contractor's Verification of Figures and Field Measurements*: Before undertaking each part of the Work, Contractor shall carefully study the Contract Documents, and check and verify pertinent figures and dimensions therein, particularly with respect to applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy that Contractor discovers, or has actual knowledge of, and shall not proceed with any Work affected thereby until the conflict, error, ambiguity, or discrepancy is resolved by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

2. *Contractor's Review of Contract Documents*: If, before or during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 7.15) until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies*

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the part of the Contract Documents prepared by or for Engineer take precedence in resolving any conflict, error, ambiguity, or discrepancy between such provisions of the Contract Documents and:

a. the provisions of any standard specification, manual, reference standard, or code, or the instruction of any Supplier (whether or not specifically incorporated by reference as a Contract Document); or

b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Contract Documents*

A. During the performance of the Work and until final payment, Contractor and Owner shall submit to the Engineer in writing all matters in question concerning the requirements of the Contract Documents (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Work under the Contract Documents, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Contract Documents, and judge of the acceptability of the Work.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Engineer will, with reasonable promptness, render a written clarification, interpretation, or decision on the issue submitted, or initiate an amendment or supplement to the Contract Documents. Engineer's written clarification, interpretation, or decision will be final and binding on Contractor, unless it appeals by submitting a Change Proposal, and on Owner, unless it appeals by filing a Claim.

C. If a submitted matter in question concerns terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work under the Contract Documents, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly notify Owner and Contractor in writing that Engineer is unable to provide a decision or interpretation. If Owner and Contractor are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Article 12.

3.05 *Reuse of Documents*

A. Contractor and its Subcontractors and Suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media versions, or reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Contract Documents, reuse any such Contract Documents for any purpose without Owner's express written consent, or violate any copyrights pertaining to such Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein precludes Contractor from retaining copies of the Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND PROGRESS OF THE WORK

4.01 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the 30th day after the Effective Date of the Contract or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Contract. In no event will the Contract Times commence to run later than the 60th day after the day of Bid opening or the 30th day after the Effective Date of the Contract, whichever date is earlier.

4.02 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work may be done at the Site prior to such date.

4.03 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.05 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.05) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times must be submitted in accordance with the requirements of Article 11.

B. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work will be delayed or postponed pending resolution of any disputes or disagreements, or during any appeal process, except as permitted by Paragraph 16.04, or as Owner and Contractor may otherwise agree in writing.

4.05 *Delays in Contractor's Progress*

A. If Owner, Engineer, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times.

B. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delay, disruption, or interference caused by or within the control of Contractor. Delay, disruption, and interference attributable to and within the control of a Subcontractor or Supplier shall be deemed to be within the control of Contractor.

C. If Contractor's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Owner, Contractor, and those for which they are responsible, then Contractor shall be entitled to an equitable adjustment in Contract Times. Such an adjustment will be Contractor's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Contract Times under this paragraph include but are not limited to the following:

1. Severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;

2. Abnormal weather conditions;

3. Acts or failures to act of third-party utility owners or other third-party entities (other than those third-party utility owners or other third-party entities performing other work at or adjacent to the Site as arranged by or under contract with Owner, as contemplated in Article 8); and

4. Acts of war or terrorism.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Contractor's entitlement to an adjustment of Contract Times or Contract Price is limited as follows:

1. Contractor's entitlement to an adjustment of the Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical path to completion of the Work, as of the time of the delay, disruption, or interference.

2. Contractor shall not be entitled to an adjustment in Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Contractor. Such a concurrent delay by Contractor shall not preclude an adjustment of Contract Times to which Contractor is otherwise entitled.

3. Adjustments of Contract Times or Contract Price are subject to the provisions of Article 11.

E. Each Contractor request or Change Proposal seeking an increase in Contract Times or Contract Price must be supplemented by supporting data that sets forth in detail the following:

1. The circumstances that form the basis for the requested adjustment;

2. The date upon which each cause of delay, disruption, or interference began to affect the progress of the Work;

3. The date upon which each cause of delay, disruption, or interference ceased to affect the progress of the Work;

4. The number of days' increase in Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and

5. The impact on Contract Price, in accordance with the provisions of Paragraph 11.07.

Contractor shall also furnish such additional supporting documentation as Owner or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion of the Work.

F. Delays, disruption, and interference to the performance or progress of the Work resulting from the existence of a differing subsurface or physical condition, an Underground Facility that was not shown or indicated by the Contract Documents, or not shown or indicated with reasonable accuracy, and those resulting from Hazardous Environmental Conditions, are governed by Article 5, together with the provisions of Paragraphs 4.05.D and 4.05.E.

G. Paragraph 8.03 addresses delays, disruption, and interference to the performance or progress of the Work resulting from the performance of certain other work at or adjacent to the Site.

ARTICLE 5—SITE; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

5.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor in writing of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which permanent improvements are to be made and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

5.02 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas*

1. Contractor shall confine construction equipment, temporary construction facilities, the storage of materials and equipment, and the operations of workers to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and such other adjacent areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for (a) damage to the Site; (b) damage to any such other adjacent areas used for Contractor's operations; (c) damage to any other adjacent land or areas, or to improvements, structures, utilities, or similar facilities located at such adjacent lands or areas; and (d) for injuries and losses sustained by the owners or occupants of any such land or areas; provided that such damage or injuries result from the performance of the Work or from other actions or conduct of the Contractor or those for which Contractor is responsible.

2. If a damage or injury claim is made by the owner or occupant of any such land or area because of the performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible, Contractor shall (a) take immediate corrective or remedial action as required by Paragraph 7.13, or otherwise; (b) promptly attempt to settle the claim as to all parties through negotiations with such owner or occupant, or otherwise resolve the claim by arbitration or other dispute resolution proceeding, or in a court of competent jurisdiction; and (c) to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against any such claim, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused directly or indirectly, in whole or in part by, or based upon, Contractor's performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible.

B. *Removal of Debris During Performance of the Work*: During the progress of the Work the Contractor shall keep the Site and other adjacent areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris will conform to applicable Laws and Regulations.

C. *Cleaning*: Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor shall remove from the Site and adjacent areas all tools, appliances, construction equipment

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading of Structures*: Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent structures or land to stresses or pressures that will endanger them.

5.03 *Subsurface and Physical Conditions*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. Those reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data;

2. Those drawings of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data; and

3. Technical Data contained in such reports and drawings.

B. *Underground Facilities*: Underground Facilities are shown or indicated on the Drawings, pursuant to Paragraph 5.05, and not in the drawings referred to in Paragraph 5.03.A. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data.

C. *Reliance by Contractor on Technical Data*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely upon the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b.

D. *Limitations of Other Data and Documents*: Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings;

3. the contents of other Site-related documents made available to Contractor, such as record drawings from other projects at or adjacent to the Site, or Owner's archival documents concerning the Site; or

4. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions, or information.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

5.04 *Differing Subsurface or Physical Conditions*

A. *Notice by Contractor*: If Contractor believes that any subsurface or physical condition that is uncovered or revealed at the Site:

1. is of such a nature as to establish that any Technical Data on which Contractor is entitled to rely as provided in Paragraph 5.03 is materially inaccurate;

2. is of such a nature as to require a change in the Drawings or Specifications;

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any Work in connection therewith (except with respect to an emergency) until receipt of a written statement permitting Contractor to do so.

B. *Engineer's Review*: After receipt of written notice as required by the preceding paragraph, Engineer will promptly review the subsurface or physical condition in question; determine whether it is necessary for Owner to obtain additional exploration or tests with respect to the condition; conclude whether the condition falls within any one or more of the differing site condition categories in Paragraph 5.04.A; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the subsurface or physical condition in question and the need for any change in the Drawings or Specifications; and advise Owner in writing of Engineer's findings, conclusions, and recommendations.

C. *Owner's Statement to Contractor Regarding Site Condition*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the subsurface or physical condition in question, addressing the resumption of Work in connection with such condition, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations, in whole or in part.

D. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the subsurface or physical condition in question may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the condition in question has been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

E. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times, to the extent that the existence of a differing subsurface or physical condition, or any related delay, disruption, or interference, causes an increase or decrease in

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. Such condition must fall within any one or more of the categories described in Paragraph 5.04.A;

b. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03; and,

c. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times with respect to a subsurface or physical condition if:

a. Contractor knew of the existence of such condition at the time Contractor made a commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract, or otherwise;

b. The existence of such condition reasonably could have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas expressly required by the Bidding Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such commitment; or

c. Contractor failed to give the written notice required by Paragraph 5.04.A.

3. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

4. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the subsurface or physical condition in question.

F. *Underground Facilities; Hazardous Environmental Conditions*: Paragraph 5.05 governs rights and responsibilities regarding the presence or location of Underground Facilities. Paragraph 5.06 governs rights and responsibilities regarding Hazardous Environmental Conditions. The provisions of Paragraphs 5.03 and 5.04 are not applicable to the presence or location of Underground Facilities, or to Hazardous Environmental Conditions.

5.05 *Underground Facilities*

A. *Contractor's Responsibilities*: Unless it is otherwise expressly provided in the Supplementary Conditions, the cost of all of the following are included in the Contract Price, and Contractor shall have full responsibility for:

1. reviewing and checking all information and data regarding existing Underground Facilities at the Site;

2. complying with applicable state and local utility damage prevention Laws and Regulations;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. verifying the actual location of those Underground Facilities shown or indicated in the Contract Documents as being within the area affected by the Work, by exposing such Underground Facilities during the course of construction;

4. coordination of the Work with the owners (including Owner) of such Underground Facilities, during construction; and

5. the safety and protection of all existing Underground Facilities at the Site, and repairing any damage thereto resulting from the Work.

B. *Notice by Contractor*: If Contractor believes that an Underground Facility that is uncovered or revealed at the Site was not shown or indicated on the Drawings, or was not shown or indicated on the Drawings with reasonable accuracy, then Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing regarding such Underground Facility.

C. *Engineer's Review*: Engineer will:

1. promptly review the Underground Facility and conclude whether such Underground Facility was not shown or indicated on the Drawings, or was not shown or indicated with reasonable accuracy;

2. identify and communicate with the owner of the Underground Facility; prepare recommendations to Owner (and if necessary issue any preliminary instructions to Contractor) regarding the Contractor's resumption of Work in connection with the Underground Facility in question;

3. obtain any pertinent cost or schedule information from Contractor; determine the extent, if any, to which a change is required in the Drawings or Specifications to reflect and document the consequences of the existence or location of the Underground Facility; and

4. advise Owner in writing of Engineer's findings, conclusions, and recommendations.

During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

D. *Owner's Statement to Contractor Regarding Underground Facility*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the Underground Facility in question addressing the resumption of Work in connection with such Underground Facility, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations in whole or in part.

E. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the Underground Facility may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the Underground Facility in question and conditions affected by its presence have been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

F. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in the Contract Price or Contract Times, to the extent that any existing Underground Facility at the Site that was not shown

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

or indicated on the Drawings, or was not shown or indicated with reasonable accuracy, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03;

b. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E; and

c. Contractor gave the notice required in Paragraph 5.05.B.

2. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

3. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the Underground Facility in question.

4. The information and data shown or indicated on the Drawings with respect to existing Underground Facilities at the Site is based on information and data (a) furnished by the owners of such Underground Facilities, or by others, (b) obtained from available records, or (c) gathered in an investigation conducted in accordance with the current edition of ASCE 38, Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data, by the American Society of Civil Engineers. If such information or data is incorrect or incomplete, Contractor's remedies are limited to those set forth in this Paragraph 5.05.F.

5.06 *Hazardous Environmental Conditions at Site*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site;

2. drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site; and

3. Technical Data contained in such reports and drawings.

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely on the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for removing or remediating any Hazardous Environmental Condition encountered, uncovered, or revealed at the Site unless such removal or remediation is expressly identified in the Contract Documents to be within the scope of the Work.

D. Contractor shall be responsible for controlling, containing, and duly removing all Constituents of Concern brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible, and for any associated costs; and for the costs of removing and remediating any Hazardous Environmental Condition created by the presence of any such Constituents of Concern.

E. If Contractor encounters, uncovers, or reveals a Hazardous Environmental Condition whose removal or remediation is not expressly identified in the Contract Documents as being within the scope of the Work, or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, then Contractor shall immediately: (1) secure or otherwise isolate such condition; (2) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 7.15); and (3) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 5.06.F. If Contractor or anyone for whom Contractor is responsible created the Hazardous Environmental Condition in question, then Owner may remove and remediate the Hazardous Environmental Condition, and impose a set-off against payments to account for the associated costs.

F. Contractor shall not resume Work in connection with such Hazardous Environmental Condition or in any affected area until after Owner has obtained any required permits related thereto, and delivered written notice to Contractor either (1) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (2) specifying any special conditions under which such Work may be resumed safely.

G. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, as a result of such Work stoppage, such special conditions under which Work is agreed to be resumed by Contractor, or any costs or expenses incurred in response to the Hazardous Environmental Condition, then within 30 days of Owner's written notice regarding the resumption of Work, Contractor may submit a Change Proposal, or Owner may impose a set-off. Entitlement to any such adjustment is subject to the provisions of Paragraphs 4.05.D, 4.05.E, 11.07, and 11.08.

H. If, after receipt of such written notice, Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work, following the contractual change procedures in Article 11. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 8.

I. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court, arbitration, or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition (1) was not shown or indicated in the Drawings, Specifications, or other Contract Documents, identified as Technical Data entitled to limited reliance pursuant to Paragraph 5.06.B, or identified in the Contract Documents to be included within the scope of the Work, and (2) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.I obligates Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

J. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the failure to control, contain, or remove a Constituent of Concern brought to the Site by Contractor or by anyone for whom Contractor is responsible, or to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.J obligates Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

K. The provisions of Paragraphs 5.03, 5.04, and 5.05 do not apply to the presence of Constituents of Concern or to a Hazardous Environmental Condition uncovered or revealed at the Site.

ARTICLE 6—BONDS AND INSURANCE

6.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish a performance bond and a payment bond, each in an amount at least equal to the Contract Price, as security for the faithful performance and payment of Contractor's obligations under the Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 15.08, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Contract.

B. Contractor shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Contract.

C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Owner prior to execution of the Contract, except as provided otherwise by Laws or

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

D. Contractor shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.

E. If the surety on a bond furnished by Contractor is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Contractor shall promptly notify Owner and Engineer in writing and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which must comply with the bond and surety requirements above.

F. If Contractor has failed to obtain a required bond, Owner may exclude the Contractor from the Site and exercise Owner's termination rights under Article 16.

G. Upon request to Owner from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Owner shall provide a copy of the payment bond to such person or entity.

H. Upon request to Contractor from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Contractor shall provide a copy of the payment bond to such person or entity.

6.02 *Insurance—General Provisions*

A. Owner and Contractor shall obtain and maintain insurance as required in this article and in the Supplementary Conditions.

B. All insurance required by the Contract to be purchased and maintained by Owner or Contractor shall be obtained from insurance companies that are duly licensed or authorized in the state or jurisdiction in which the Project is located to issue insurance policies for the required limits and coverages. Unless a different standard is indicated in the Supplementary Conditions, all companies that provide insurance policies required under this Contract shall have an A.M. Best rating of A-VII or better.

C. Alternative forms of insurance coverage, including but not limited to self-insurance and "Occupational Accident and Excess Employer's Indemnity Policies," are not sufficient to meet the insurance requirements of this Contract, unless expressly allowed in the Supplementary Conditions.

D. Contractor shall deliver to Owner, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Contractor has obtained and is maintaining the policies and coverages required by the Contract. Upon request by Owner or any other insured, Contractor shall also furnish other evidence of such required insurance, including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, full disclosure of all relevant exclusions, and evidence of insurance required to be purchased and maintained by

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Subcontractors or Suppliers. In any documentation furnished under this provision, Contractor, Subcontractors, and Suppliers may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those applicable to this Contract.

E. Owner shall deliver to Contractor, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Owner has obtained and is maintaining the policies and coverages required of Owner by the Contract (if any). Upon request by Contractor or any other insured, Owner shall also provide other evidence of such required insurance (if any), including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, and full disclosure of all relevant exclusions. In any documentation furnished under this provision, Owner may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those relevant to this Contract.

F. Failure of Owner or Contractor to demand such certificates or other evidence of the other party's full compliance with these insurance requirements, or failure of Owner or Contractor to identify a deficiency in compliance from the evidence provided, will not be construed as a waiver of the other party's obligation to obtain and maintain such insurance.

G. In addition to the liability insurance required to be provided by Contractor, the Owner, at Owner's option, may purchase and maintain Owner's own liability insurance. Owner's liability policies, if any, operate separately and independently from policies required to be provided by Contractor, and Contractor cannot rely upon Owner's liability policies for any of Contractor's obligations to the Owner, Engineer, or third parties.

H. Contractor shall require:

1. Subcontractors to purchase and maintain worker's compensation, commercial general liability, and other insurance that is appropriate for their participation in the Project, and to name as additional insureds Owner and Engineer (and any other individuals or entities identified in the Supplementary Conditions as additional insureds on Contractor's liability policies) on each Subcontractor's commercial general liability insurance policy; and

2. Suppliers to purchase and maintain insurance that is appropriate for their participation in the Project.

I. If either party does not purchase or maintain the insurance required of such party by the Contract, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage.

J. If Contractor has failed to obtain and maintain required insurance, Contractor's entitlement to enter or remain at the Site will end immediately, and Owner may impose an appropriate set-off against payment for any associated costs (including but not limited to the cost of purchasing necessary insurance coverage), and exercise Owner's termination rights under Article 16.

K. Without prejudice to any other right or remedy, if a party has failed to obtain required insurance, the other party may elect (but is in no way obligated) to obtain equivalent insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and the Contract Price will be adjusted accordingly.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

L. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor or Contractor's interests. Contractor is responsible for determining whether such coverage and limits are adequate to protect its interests, and for obtaining and maintaining any additional insurance that Contractor deems necessary.

M. The insurance and insurance limits required herein will not be deemed as a limitation on Contractor's liability, or that of its Subcontractors or Suppliers, under the indemnities granted to Owner and other individuals and entities in the Contract or otherwise.

N. All the policies of insurance required to be purchased and maintained under this Contract will contain a provision or endorsement that the coverage afforded will not be canceled, or renewal refused, until at least 10 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder shall provide a copy of the notice to each other insured and Engineer.

6.03 *Contractor's Insurance*

A. *Required Insurance*: Contractor shall purchase and maintain Worker's Compensation, Commercial General Liability, and other insurance pursuant to the specific requirements of the Supplementary Conditions.

B. *General Provisions*: The policies of insurance required by this Paragraph 6.03 as supplemented must:

1. include at least the specific coverages required;

2. be written for not less than the limits provided, or those required by Laws or Regulations, whichever is greater;

3. remain in effect at least until the Work is complete (as set forth in Paragraph 15.06.D), and longer if expressly required elsewhere in this Contract, and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work as a warranty or correction obligation, or otherwise, or returning to the Site to conduct other tasks arising from the Contract;

4. apply with respect to the performance of the Work, whether such performance is by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable; and

5. include all necessary endorsements to support the stated requirements.

C. *Additional Insureds*: The Contractor's commercial general liability, automobile liability, employer's liability, umbrella or excess, pollution liability, and unmanned aerial vehicle liability policies, if required by this Contract, must:

1. include and list as additional insureds Owner and Engineer, and any individuals or entities identified as additional insureds in the Supplementary Conditions;

2. include coverage for the respective officers, directors, members, partners, employees, and consultants of all such additional insureds;

3. afford primary coverage to these additional insureds for all claims covered thereby (including as applicable those arising from both ongoing and completed operations);

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. not seek contribution from insurance maintained by the additional insured; and

5. as to commercial general liability insurance, apply to additional insureds with respect to liability caused in whole or in part by Contractor's acts or omissions, or the acts and omissions of those working on Contractor's behalf, in the performance of Contractor's operations.

6.04 *Builder's Risk and Other Property Insurance*

A. *Builder's Risk*: Unless otherwise provided in the Supplementary Conditions, Contractor shall purchase and maintain builder's risk insurance upon the Work on a completed value basis, in the amount of the Work's full insurable replacement cost (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). The specific requirements applicable to the builder's risk insurance are set forth in the Supplementary Conditions.

B. *Property Insurance for Facilities of Owner Where Work Will Occur*: Owner is responsible for obtaining and maintaining property insurance covering each existing structure, building, or facility in which any part of the Work will occur, or to which any part of the Work will attach or be adjoined. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, providing coverage consistent with that required for the builder's risk insurance, and will be maintained until the Work is complete, as set forth in Paragraph 15.06.D.

C. *Property Insurance for Substantially Complete Facilities*: Promptly after Substantial Completion, and before actual occupancy or use of the substantially completed Work, Owner will obtain property insurance for such substantially completed Work, and maintain such property insurance at least until the Work is complete, as set forth in Paragraph 15.06.D. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, and provide coverage consistent with that required for the builder's risk insurance. The builder's risk insurance may terminate upon written confirmation of Owner's procurement of such property insurance.

D. *Partial Occupancy or Use by Owner*: If Owner will occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, as provided in Paragraph 15.04, then Owner (directly, if it is the purchaser of the builder's risk policy, or through Contractor) will provide advance notice of such occupancy or use to the builder's risk insurer, and obtain an endorsement consenting to the continuation of coverage prior to commencing such partial occupancy or use.

E. *Insurance of Other Property; Additional Insurance*: If the express insurance provisions of the Contract do not require or address the insurance of a property item or interest, then the entity or individual owning such property item will be responsible for insuring it. If Contractor elects to obtain other special insurance to be included in or supplement the builder's risk or property insurance policies provided under this Paragraph 6.04, it may do so at Contractor's expense.

6.05 *Property Losses; Subrogation*

A. The builder's risk insurance policy purchased and maintained in accordance with Paragraph 6.04 (or an installation floater policy if authorized by the Supplementary Conditions), will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Engineer or its consultants, or their officers, directors, members, partners, employees, agents, consultants, or subcontractors.

1. Owner and Contractor waive all rights against each other and the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from any of the perils, risks, or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Engineer, its consultants, all individuals or entities identified in the Supplementary Conditions as builder's risk or installation floater insureds, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, under such policies for losses and damages so caused.
2. None of the above waivers extends to the rights that any party making such waiver may have to the proceeds of insurance held by Owner or Contractor as trustee or fiduciary, or otherwise payable under any policy so issued.

B. Any property insurance policy maintained by Owner covering any loss, damage, or consequential loss to Owner's existing structures, buildings, or facilities in which any part of the Work will occur, or to which any part of the Work will attach or adjoin; to adjacent structures, buildings, or facilities of Owner; or to part or all of the completed or substantially completed Work, during partial occupancy or use pursuant to Paragraph 15.04, after Substantial Completion pursuant to Paragraph 15.03, or after final payment pursuant to Paragraph 15.06, will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against Contractor, Subcontractors, or Engineer, or the officers, directors, members, partners, employees, agents, consultants, or subcontractors of each and any of them, and that the insured is allowed to waive the insurer's rights of subrogation in a written contract executed prior to the loss, damage, or consequential loss.

1. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from fire or any of the perils, risks, or causes of loss covered by such policies.

C. The waivers in this Paragraph 6.05 include the waiver of rights due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other insured peril, risk, or cause of loss.

D. Contractor shall be responsible for assuring that each Subcontract contains provisions whereby the Subcontractor waives all rights against Owner, Contractor, all individuals or entities identified in the Supplementary Conditions as insureds, the Engineer and its consultants, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, relating to, or resulting from fire or other peril, risk, or cause of loss covered by builder's risk insurance, installation floater, and any other property insurance applicable to the Work.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

6.06 *Receipt and Application of Property Insurance Proceeds*

A. Any insured loss under the builder's risk and other policies of property insurance required by Paragraph 6.04 will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds, and give notice to such other insureds that adjustment and settlement of a claim is in progress. Any other insured may state its position regarding a claim for insured loss in writing within 15 days after notice of such claim.

B. Proceeds for such insured losses may be made payable by the insurer either jointly to multiple insureds, or to the named insured that purchased the policy in its own right and as fiduciary for other insureds, subject to the requirements of any applicable mortgage clause. A named insured receiving insurance proceeds under the builder's risk and other policies of insurance required by Paragraph 6.04 shall maintain such proceeds in a segregated account, and distribute such proceeds in accordance with such agreement as the parties in interest may reach, or as otherwise required under the dispute resolution provisions of this Contract or applicable Laws and Regulations.

C. If no other special agreement is reached, Contractor shall repair or replace the damaged Work, using allocated insurance proceeds.

ARTICLE 7—CONTRACTOR'S RESPONSIBILITIES

7.01 *Contractor's Means and Methods of Construction*

A. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction.

B. If the Contract Documents note, or Contractor determines, that professional engineering or other design services are needed to carry out Contractor's responsibilities for construction means, methods, techniques, sequences, and procedures, or for Site safety, then Contractor shall cause such services to be provided by a properly licensed design professional, at Contractor's expense. Such services are not Owner-delegated professional design services under this Contract, and neither Owner nor Engineer has any responsibility with respect to (1) Contractor's determination of the need for such services, (2) the qualifications or licensing of the design professionals retained or employed by Contractor, (3) the performance of such services, or (4) any errors, omissions, or defects in such services.

7.02 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who will not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

7.03 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall maintain good discipline and order at the Site.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of Contractor's employees; of Suppliers and Subcontractors, and their employees; and of any other individuals or entities performing or furnishing any of the Work, just as Contractor is responsible for Contractor's own acts and omissions.

C. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site will be performed during regular working hours, Monday through Friday. Contractor will not perform Work on a Saturday, Sunday, or any legal holiday. Contractor may perform Work outside regular working hours or on Saturdays, Sundays, or legal holidays only with Owner's written consent, which will not be unreasonably withheld.

7.04 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start up, and completion of the Work, whether or not such items are specifically called for in the Contract Documents.

B. All materials and equipment incorporated into the Work must be new and of good quality, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications will expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment must be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

7.05 *"Or Equals"*

A. *Contractor's Request; Governing Criteria*: Whenever an item of equipment or material is specified or described in the Contract Documents by using the names of one or more proprietary items or specific Suppliers, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material, or items from other proposed Suppliers, under the circumstances described below.

1. If Engineer in its sole discretion determines that an item of equipment or material proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer will deem it an "or equal" item. For the purposes of this paragraph, a proposed item of equipment or material will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment Engineer determines that the proposed item:

1) is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2) will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;

3) has a proven record of performance and availability of responsive service; and

4) is not objectionable to Owner.

b. Contractor certifies that, if the proposed item is approved and incorporated into the Work:

1) there will be no increase in cost to the Owner or increase in Contract Times; and

2) the item will conform substantially to the detailed requirements of the item named in the Contract Documents.

B. *Contractor's Expense*: Contractor shall provide all data in support of any proposed "or equal" item at Contractor's expense.

C. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each "or-equal" request. Engineer may require Contractor to furnish additional data about the proposed "or-equal" item. Engineer will be the sole judge of acceptability. No "or-equal" item will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an "or-equal," which will be evidenced by an approved Shop Drawing or other written communication. Engineer will advise Contractor in writing of any negative determination.

D. *Effect of Engineer's Determination*: Neither approval nor denial of an "or-equal" request will result in any change in Contract Price. The Engineer's denial of an "or-equal" request will be final and binding, and may not be reversed through an appeal under any provision of the Contract.

E. *Treatment as a Substitution Request*: If Engineer determines that an item of equipment or material proposed by Contractor does not qualify as an "or-equal" item, Contractor may request that Engineer consider the item a proposed substitute pursuant to Paragraph 7.06.

7.06 *Substitutes*

A. *Contractor's Request; Governing Criteria*: Unless the specification or description of an item of equipment or material required to be furnished under the Contract Documents contains or is followed by words reading that no substitution is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material under the circumstances described below. To the extent possible such requests must be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of equipment or material from anyone other than Contractor.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.06.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of equipment or material that Contractor seeks to furnish or use. The application:

   a. will certify that the proposed substitute item will:

      1) perform adequately the functions and achieve the results called for by the general design;

      2) be similar in substance to the item specified; and

      3) be suited to the same use as the item specified.

   b. will state:

      1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times;

      2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item; and

      3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

   c. will identify:

      1) all variations of the proposed substitute item from the item specified; and

      2) available engineering, sales, maintenance, repair, and replacement services.

   d. will contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

B. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each substitute request, and to obtain comments and direction from Owner. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No substitute will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an acceptable substitute. Engineer's determination will be evidenced by a Field Order or a proposed Change Order accounting for the substitution itself and all related impacts, including changes in Contract Price or Contract Times. Engineer will advise Contractor in writing of any negative determination.

C. *Special Guarantee*: Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

D. *Reimbursement of Engineer's Cost*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. *Contractor's Expense*: Contractor shall provide all data in support of any proposed substitute at Contractor's expense.

F. *Effect of Engineer's Determination*: If Engineer approves the substitution request, Contractor shall execute the proposed Change Order and proceed with the substitution. The Engineer's denial of a substitution request will be final and binding, and may not be reversed through an appeal under any provision of the Contract. Contractor may challenge the scope of reimbursement costs imposed under Paragraph 7.06.D, by timely submittal of a Change Proposal.

7.07 *Concerning Subcontractors and Suppliers*

A. Contractor may retain Subcontractors and Suppliers for the performance of parts of the Work. Such Subcontractors and Suppliers must be acceptable to Owner. The Contractor's retention of a Subcontractor or Supplier for the performance of parts of the Work will not relieve Contractor's obligation to Owner to perform and complete the Work in accordance with the Contract Documents.

B. Contractor shall retain specific Subcontractors and Suppliers for the performance of designated parts of the Work if required by the Contract to do so.

C. Subsequent to the submittal of Contractor's Bid or final negotiation of the terms of the Contract, Owner may not require Contractor to retain any Subcontractor or Supplier to furnish or perform any of the Work against which Contractor has reasonable objection.

D. Prior to entry into any binding subcontract or purchase order, Contractor shall submit to Owner the identity of the proposed Subcontractor or Supplier (unless Owner has already deemed such proposed Subcontractor or Supplier acceptable during the bidding process or otherwise). Such proposed Subcontractor or Supplier shall be deemed acceptable to Owner unless Owner raises a substantive, reasonable objection within 5 days.

E. Owner may require the replacement of any Subcontractor or Supplier. Owner also may require Contractor to retain specific replacements; provided, however, that Owner may not require a replacement to which Contractor has a reasonable objection. If Contractor has submitted the identity of certain Subcontractors or Suppliers for acceptance by Owner, and Owner has accepted it (either in writing or by failing to make written objection thereto), then Owner may subsequently revoke the acceptance of any such Subcontractor or Supplier so identified solely on the basis of substantive, reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor or Supplier.

F. If Owner requires the replacement of any Subcontractor or Supplier retained by Contractor to perform any part of the Work, then Contractor shall be entitled to an adjustment in Contract Price or Contract Times, with respect to the replacement; and Contractor shall initiate a Change Proposal for such adjustment within 30 days of Owner's requirement of replacement.

G. No acceptance by Owner of any such Subcontractor or Supplier, whether initially or as a replacement, will constitute a waiver of the right of Owner to the completion of the Work in accordance with the Contract Documents.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

H. On a monthly basis, Contractor shall submit to Engineer a complete list of all Subcontractors and Suppliers having a direct contract with Contractor, and of all other Subcontractors and Suppliers known to Contractor at the time of submittal.

I. Contractor shall be solely responsible for scheduling and coordinating the work of Subcontractors and Suppliers.

J. The divisions and sections of the Specifications and the identifications of any Drawings do not control Contractor in dividing the Work among Subcontractors or Suppliers, or in delineating the Work to be performed by any specific trade.

K. All Work performed for Contractor by a Subcontractor or Supplier must be pursuant to an appropriate contractual agreement that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract for the benefit of Owner and Engineer.

L. Owner may furnish to any Subcontractor or Supplier, to the extent practicable, information about amounts paid to Contractor for Work performed for Contractor by the Subcontractor or Supplier.

M. Contractor shall restrict all Subcontractors and Suppliers from communicating with Engineer or Owner, except through Contractor or in case of an emergency, or as otherwise expressly allowed in this Contract.

7.08 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If an invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights will be disclosed in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.09 *Permits*

A. Unless otherwise provided in the Contract Documents, Contractor shall obtain and pay for all construction permits, licenses, and certificates of occupancy. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of the submission of Contractor's Bid (or when Contractor became bound under a negotiated contract). Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

7.10 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

7.11 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work or takes any other action knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all resulting costs and losses, and shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work or other action. It is not Contractor's responsibility to make certain that the Work described in the Contract Documents is in accordance with Laws and Regulations, but this does not relieve Contractor of its obligations under Paragraph 3.03.

C. Owner or Contractor may give written notice to the other party of any changes after the submission of Contractor's Bid (or after the date when Contractor became bound under a negotiated contract) in Laws or Regulations having an effect on the cost or time of performance of the Work, including but not limited to changes in Laws or Regulations having an effect on procuring permits and on sales, use, value-added, consumption, and other similar taxes. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times resulting from such changes, then within 30 days of such written notice Contractor may submit a Change Proposal, or Owner may initiate a Claim.

7.12 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one printed record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, written interpretations and clarifications, and approved Shop Drawings. Contractor shall keep such record documents in good order and annotate them to show changes made during construction. These record documents, together with all approved Samples, will be available to Engineer for reference. Upon completion of the Work, Contractor shall deliver these record documents to Engineer.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.13 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations.

B. Contractor shall designate a qualified and experienced safety representative whose duties and responsibilities are the prevention of Work-related accidents and the maintenance and supervision of safety precautions and programs.

C. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury, or loss to:

1. all persons on the Site or who may be affected by the Work;

2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and

3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, other work in progress, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

D. All damage, injury, or loss to any property referred to in Paragraph 7.13.C.2 or 7.13.C.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor at its expense (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

E. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection.

F. Contractor shall notify Owner; the owners of adjacent property; the owners of Underground Facilities and other utilities (if the identity of such owners is known to Contractor); and other contractors and utility owners performing work at or adjacent to the Site, in writing, when Contractor knows that prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property or work in progress.

G. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. Any Owner's safety programs that are applicable to the Work are identified or included in the Supplementary Conditions or Specifications.

H. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

I. Contractor's duties and responsibilities for safety and protection will continue until all the Work is completed, Engineer has issued a written notice to Owner and Contractor in accordance with Paragraph 15.06.C that the Work is acceptable, and Contractor has left the Site (except as otherwise expressly provided in connection with Substantial Completion).

J. Contractor's duties and responsibilities for safety and protection will resume whenever Contractor or any Subcontractor or Supplier returns to the Site to fulfill warranty or correction obligations, or to conduct other tasks arising from the Contract Documents.

7.14 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of safety data sheets (formerly known as material safety data sheets) or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

7.15 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused by an emergency, or are required as a result of Contractor's response to an emergency. If Engineer determines that a change in the Contract Documents is required because of an emergency or Contractor's response, a Work Change Directive or Change Order will be issued.

7.16 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Contractor shall:

a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents;

b. determine and verify:

1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal;

2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

3) all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto;

c. confirm that the Submittal is complete with respect to all related data included in the Submittal.

2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review of that Submittal, and that Contractor approves the Submittal.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. With each Shop Drawing or Sample, Contractor shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Contract Documents. This notice must be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

B. *Submittal Procedures for Shop Drawings and Samples*: Contractor shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

1. *Shop Drawings*

a. Contractor shall submit the number of copies required in the Specifications.

b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.16.C.

2. *Samples*

a. Contractor shall submit the number of Samples required in the Specifications.

b. Contractor shall clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.16.C.

3. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Work, comply with the requirements of the Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 7.16.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

document any such approved variation from the requirements of the Contract Documents in a Field Order or other appropriate Contract modification.

5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for complying with the requirements of Paragraphs 7.16.A and B.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Contract Documents, will not, under any circumstances, change the Contract Times or Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance, or approval of a Shop Drawing or Sample will result in such item becoming a Contract Document.

8. Contractor shall perform the Work in compliance with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.16.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Contractor shall furnish required Shop Drawing and Sample submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Contractor shall be responsible for Engineer's charges to Owner for such time. Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges.

3. If Contractor requests a change of a previously approved Shop Drawing or Sample, Contractor shall be responsible for Engineer's charges to Owner for its review time, and Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges, unless the need for such change is beyond the control of Contractor.

E. *Submittals Other than Shop Drawings, Samples, and Owner-Delegated Designs*

1. The following provisions apply to all Submittals other than Shop Drawings, Samples, and Owner-delegated designs:

   a. Contractor shall submit all such Submittals to the Engineer in accordance with the Schedule of Submittals and pursuant to the applicable terms of the Contract Documents.

   b. Engineer will provide timely review of all such Submittals in accordance with the Schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the Schedule of Submittals will be deemed accepted.

   c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Contract Documents as to general form and content of the Submittal.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

d. If any such Submittal is not accepted, Contractor shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.

2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.03. 2.04, and 2.05.

F. Owner-delegated Designs: Submittals pursuant to Owner-delegated designs are governed by the provisions of Paragraph 7.19.

7.17 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective. Engineer is entitled to rely on Contractor's warranty and guarantee.

B. Owner's rights under this warranty and guarantee are in addition to, and are not limited by, Owner's rights under the correction period provisions of Paragraph 15.08. The time in which Owner may enforce its warranty and guarantee rights under this Paragraph 7.17 is limited only by applicable Laws and Regulations restricting actions to enforce such rights; provided, however, that after the end of the correction period under Paragraph 15.08:

1. Owner shall give Contractor written notice of any defective Work within 60 days of the discovery that such Work is defective; and

2. Such notice will be deemed the start of an event giving rise to a Claim under Paragraph 12.01.B, such that any related Claim must be brought within 30 days of the notice.

C. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, or improper modification, maintenance, or operation, by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

D. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents is absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents, a release of Contractor's obligation to perform the Work in accordance with the Contract Documents, or a release of Owner's warranty and guarantee rights under this Paragraph 7.17:

1. Observations by Engineer;

2. Recommendation by Engineer or payment by Owner of any progress or final payment;

3. The issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. Use or occupancy of the Work or any part thereof by Owner;

5. Any review and approval of a Shop Drawing or Sample submittal;

6. The issuance of a notice of acceptability by Engineer;

7. The end of the correction period established in Paragraph 15.08;

8. Any inspection, test, or approval by others; or

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

9. Any correction of defective Work by Owner.

E. If the Contract requires the Contractor to accept the assignment of a contract entered into by Owner, then the specific warranties, guarantees, and correction obligations contained in the assigned contract will govern with respect to Contractor's performance obligations to Owner for the Work described in the assigned contract.

7.18 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, and in addition to any other obligations of Contractor under the Contract or otherwise, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from losses, damages, costs, and judgments (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising from third-party claims or actions relating to or resulting from the performance or furnishing of the Work, provided that any such claim, action, loss, cost, judgment or damage is attributable to bodily injury, sickness, disease, or death, or to damage to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable.

B. In any and all claims against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.18.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.19 *Delegation of Professional Design Services*

A. Owner may require Contractor to provide professional design services for a portion of the Work by express delegation in the Contract Documents. Such delegation will specify the performance and design criteria that such services must satisfy, and the Submittals that Contractor must furnish to Engineer with respect to the Owner-delegated design.

B. Contractor shall cause such Owner-delegated professional design services to be provided pursuant to the professional standard of care by a properly licensed design professional, whose signature and seal must appear on all drawings, calculations, specifications, certifications, and Submittals prepared by such design professional. Such design professional must issue all certifications of design required by Laws and Regulations.

C. If a Shop Drawing or other Submittal related to the Owner-delegated design is prepared by Contractor, a Subcontractor, or others for submittal to Engineer, then such Shop Drawing or other Submittal must bear the written approval of Contractor's design professional when submitted by Contractor to Engineer.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, and approvals performed or provided by the design professionals retained or employed by Contractor under an Owner-delegated design, subject to the professional standard of care and the performance and design criteria stated in the Contract Documents.

E. Pursuant to this Paragraph 7.19, Engineer's review, approval, and other determinations regarding design drawings, calculations, specifications, certifications, and other Submittals furnished by Contractor pursuant to an Owner-delegated design will be only for the following limited purposes:

1. Checking for conformance with the requirements of this Paragraph 7.19;

2. Confirming that Contractor (through its design professionals) has used the performance and design criteria specified in the Contract Documents; and

3. Establishing that the design furnished by Contractor is consistent with the design concept expressed in the Contract Documents.

F. Contractor shall not be responsible for the adequacy of performance or design criteria specified by Owner or Engineer.

G. Contractor is not required to provide professional services in violation of applicable Laws and Regulations.

ARTICLE 8—OTHER WORK AT THE SITE

8.01 *Other Work*

A. In addition to and apart from the Work under the Contract Documents, the Owner may perform other work at or adjacent to the Site. Such other work may be performed by Owner's employees, or through contracts between the Owner and third parties. Owner may also arrange to have third-party utility owners perform work on their utilities and facilities at or adjacent to the Site.

B. If Owner performs other work at or adjacent to the Site with Owner's employees, or through contracts for such other work, then Owner shall give Contractor written notice thereof prior to starting any such other work. If Owner has advance information regarding the start of any third-party utility work that Owner has arranged to take place at or adjacent to the Site, Owner shall provide such information to Contractor.

C. Contractor shall afford proper and safe access to the Site to each contractor that performs such other work, each utility owner performing other work, and Owner, if Owner is performing other work with Owner's employees, and provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work.

D. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. If the proper execution or results of any part of Contractor's Work depends upon work performed by others, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

F. The provisions of this article are not applicable to work that is performed by third-party utilities or other third-party entities without a contract with Owner, or that is performed without having been arranged by Owner. If such work occurs, then any related delay, disruption, or interference incurred by Contractor is governed by the provisions of Paragraph 4.05.C.3.

8.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work at or adjacent to the Site, to perform other work at or adjacent to the Site with Owner's employees, or to arrange to have utility owners perform work at or adjacent to the Site, the following will be set forth in the Supplementary Conditions or provided to Contractor prior to the start of any such other work:

1. The identity of the individual or entity that will have authority and responsibility for coordination of the activities among the various contractors;

2. An itemization of the specific matters to be covered by such authority and responsibility; and

3. The extent of such authority and responsibilities.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

8.03 *Legal Relationships*

A. If, in the course of performing other work for Owner at or adjacent to the Site, the Owner's employees, any other contractor working for Owner, or any utility owner that Owner has arranged to perform work, causes damage to the Work or to the property of Contractor or its Subcontractors, or delays, disrupts, interferes with, or increases the scope or cost of the performance of the Work, through actions or inaction, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times. Contractor must submit any Change Proposal seeking an equitable adjustment in the Contract Price or the Contract Times under this paragraph within 30 days of the damaging, delaying, disrupting, or interfering event. The entitlement to, and extent of, any such equitable adjustment will take into account information (if any) regarding such other work that was provided to Contractor in the Contract Documents prior to the submittal of the Bid or the final negotiation of the terms of the Contract, and any remedies available to Contractor under Laws or Regulations concerning utility action or inaction. When applicable, any such equitable adjustment in Contract Price will be conditioned on Contractor assigning to Owner all Contractor's rights against such other contractor or utility owner with respect to the damage, delay, disruption, or interference that is the subject of the adjustment. Contractor's entitlement to an adjustment of the Contract Times or Contract Price is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Contractor shall take reasonable and customary measures to avoid damaging, delaying, disrupting, or interfering with the work of Owner, any other contractor, or any utility owner performing other work at or adjacent to the Site.

1. If Contractor fails to take such measures and as a result damages, delays, disrupts, or interferes with the work of any such other contractor or utility owner, then Owner may impose a set-off against payments due Contractor, and assign to such other contractor or utility owner the Owner's contractual rights against Contractor with respect to the breach of the obligations set forth in this Paragraph 8.03.B.

2. When Owner is performing other work at or adjacent to the Site with Owner's employees, Contractor shall be liable to Owner for damage to such other work, and for the reasonable direct delay, disruption, and interference costs incurred by Owner as a result of Contractor's failure to take reasonable and customary measures with respect to Owner's other work. In response to such damage, delay, disruption, or interference, Owner may impose a set-off against payments due Contractor.

C. If Contractor damages, delays, disrupts, or interferes with the work of any other contractor, or any utility owner performing other work at or adjacent to the Site, through Contractor's failure to take reasonable and customary measures to avoid such impacts, or if any claim arising out of Contractor's actions, inactions, or negligence in performance of the Work at or adjacent to the Site is made by any such other contractor or utility owner against Contractor, Owner, or Engineer, then Contractor shall (1) promptly attempt to settle the claim as to all parties through negotiations with such other contractor or utility owner, or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law, and (2) indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claims, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such damage, delay, disruption, or interference.

ARTICLE 9—OWNER'S RESPONSIBILITIES

9.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

9.02 *Replacement of Engineer*

A. Owner may at its discretion appoint an engineer to replace Engineer, provided Contractor makes no reasonable objection to the replacement engineer. The replacement engineer's status under the Contract Documents will be that of the former Engineer.

9.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

9.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in the Agreement.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

9.05 *Lands and Easements; Reports, Tests, and Drawings*

A. Owner's duties with respect to providing lands and easements are set forth in Paragraph 5.01.

B. Owner's duties with respect to providing engineering surveys to establish reference points are set forth in Paragraph 4.03.

C. Article 5 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of conditions at the Site, and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

9.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 6.

9.07 *Change Orders*

A. Owner's responsibilities with respect to Change Orders are set forth in Article 11.

9.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 14.02.B.

9.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

9.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 5.06.

9.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract (including obligations under proposed changes in the Work).

9.12 *Safety Programs*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed.

B. Owner shall furnish copies of any applicable Owner safety programs to Contractor.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 10—ENGINEER'S STATUS DURING CONSTRUCTION

10.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract.

10.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe, as an experienced and qualified design professional, the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 10.07. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

10.03 *Resident Project Representative*

A. If Owner and Engineer have agreed that Engineer will furnish a Resident Project Representative to represent Engineer at the Site and assist Engineer in observing the progress and quality of the Work, then the authority and responsibilities of any such Resident Project Representative will be as provided in the Supplementary Conditions, and limitations on the responsibilities thereof will be as provided in the Supplementary Conditions and in Paragraph 10.07.

B. If Owner designates an individual or entity who is not Engineer's consultant, agent, or employee to represent Owner at the Site, then the responsibilities and authority of such individual or entity will be as provided in the Supplementary Conditions.

10.04 *Engineer's Authority*

A. Engineer has the authority to reject Work in accordance with Article 14.

B. Engineer's authority as to Submittals is set forth in Paragraph 7.16.

C. Engineer's authority as to design drawings, calculations, specifications, certifications and other Submittals from Contractor in response to Owner's delegation (if any) to Contractor of professional design services, is set forth in Paragraph 7.19.

D. Engineer's authority as to changes in the Work is set forth in Article 11.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. Engineer's authority as to Applications for Payment is set forth in Article 15.

10.05 *Determinations for Unit Price Work*

A. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor as set forth in Paragraph 13.03.

10.06 *Decisions on Requirements of Contract Documents and Acceptability of Work*

A. Engineer will render decisions regarding the requirements of the Contract Documents, and judge the acceptability of the Work, pursuant to the specific procedures set forth herein for initial interpretations, Change Proposals, and acceptance of the Work. In rendering such decisions and judgments, Engineer will not show partiality to Owner or Contractor, and will not be liable to Owner, Contractor, or others in connection with any proceedings, interpretations, decisions, or judgments conducted or rendered in good faith.

10.07 *Limitations on Engineer's Authority and Responsibilities*

A. Neither Engineer's authority or responsibility under this Article 10 or under any other provision of the Contract, nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer, will create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

B. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

C. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

D. Engineer's review of the final Application for Payment and accompanying documentation, and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Contractor under Paragraph 15.06.A, will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals, that the results certified indicate compliance with the Contract Documents.

E. The limitations upon authority and responsibility set forth in this Paragraph 10.07 also apply to the Resident Project Representative, if any.

10.08 *Compliance with Safety Program*

A. While at the Site, Engineer's employees and representatives will comply with the specific applicable requirements of Owner's and Contractor's safety programs of which Engineer has been informed.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 11—CHANGES TO THE CONTRACT

11.01 *Amending and Supplementing the Contract*

A. The Contract may be amended or supplemented by a Change Order, a Work Change Directive, or a Field Order.

B. If an amendment or supplement to the Contract includes a change in the Contract Price or the Contract Times, such amendment or supplement must be set forth in a Change Order.

C. All changes to the Contract that involve (1) the performance or acceptability of the Work, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, must be supported by Engineer's recommendation. Owner and Contractor may amend other terms and conditions of the Contract without the recommendation of the Engineer.

11.02 *Change Orders*

A. Owner and Contractor shall execute appropriate Change Orders covering:

1. Changes in Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive;

2. Changes in Contract Price resulting from an Owner set-off, unless Contractor has duly contested such set-off;

3. Changes in the Work which are: (a) ordered by Owner pursuant to Paragraph 11.05, (b) required because of Owner's acceptance of defective Work under Paragraph 14.04 or Owner's correction of defective Work under Paragraph 14.07, or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Work involves the design (as set forth in the Drawings, Specifications, or otherwise) or other engineering or technical matters; and

4. Changes that embody the substance of any final and binding results under: Paragraph 11.03.B, resolving the impact of a Work Change Directive; Paragraph 11.09, concerning Change Proposals; Article 12, Claims; Paragraph 13.02.D, final adjustments resulting from allowances; Paragraph 13.03.D, final adjustments relating to determination of quantities for Unit Price Work; and similar provisions.

B. If Owner or Contractor refuses to execute a Change Order that is required to be executed under the terms of Paragraph 11.02.A, it will be deemed to be of full force and effect, as if fully executed.

11.03 *Work Change Directives*

A. A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the modification ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Work Change Directive's effect, if any, on the Contract Price and Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Contract Documents governing adjustments, expressly including Paragraph 11.07 regarding change of Contract Price.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. If Owner has issued a Work Change Directive and:

1. Contractor believes that an adjustment in Contract Times or Contract Price is necessary, then Contractor shall submit any Change Proposal seeking such an adjustment no later than 30 days after the completion of the Work set out in the Work Change Directive.

2. Owner believes that an adjustment in Contract Times or Contract Price is necessary, then Owner shall submit any Claim seeking such an adjustment no later than 60 days after issuance of the Work Change Directive.

11.04 *Field Orders*

A. Engineer may authorize minor changes in the Work if the changes do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Owner and also on Contractor, which shall perform the Work involved promptly.

B. If Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, then before proceeding with the Work at issue, Contractor shall submit a Change Proposal as provided herein.

11.05 *Owner-Authorized Changes in the Work*

A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work. Changes involving the design (as set forth in the Drawings, Specifications, or otherwise) or other engineering or technical matters will be supported by Engineer's recommendation.

B. Such changes in the Work may be accomplished by a Change Order, if Owner and Contractor have agreed as to the effect, if any, of the changes on Contract Times or Contract Price; or by a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved; or, in the case of a deletion in the Work, promptly cease construction activities with respect to such deleted Work. Added or revised Work must be performed under the applicable conditions of the Contract Documents.

C. Nothing in this Paragraph 11.05 obligates Contractor to undertake work that Contractor reasonably concludes cannot be performed in a manner consistent with Contractor's safety obligations under the Contract Documents or Laws and Regulations.

11.06 *Unauthorized Changes in the Work*

A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents, as amended, modified, or supplemented, except in the case of an emergency as provided in Paragraph 7.15 or in the case of uncovering Work as provided in Paragraph 14.05.C.2.

11.07 *Change of Contract Price*

A. The Contract Price may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Price must comply with the provisions of Paragraph 11.09. Any Claim for an adjustment of Contract Price must comply with the provisions of Article 12.

B. An adjustment in the Contract Price will be determined as follows:

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Where the Work involved is covered by unit prices contained in the Contract Documents, then by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 13.03);
2. Where the Work involved is not covered by unit prices contained in the Contract Documents, then by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 11.07.C.2); or
3. Where the Work involved is not covered by unit prices contained in the Contract Documents and the parties do not reach mutual agreement to a lump sum, then on the basis of the Cost of the Work (determined as provided in Paragraph 13.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 11.07.C).

C. *Contractor's Fee*: When applicable, the Contractor's fee for overhead and profit will be determined as follows:

1. A mutually acceptable fixed fee; or
2. If a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:
    a. For costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2, the Contractor's fee will be 15 percent;
    b. For costs incurred under Paragraph 13.01.B.3, the Contractor's fee will be 5 percent;
    c. Where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.07.C.2.a and 11.07.C.2.b is that the Contractor's fee will be based on: (1) a fee of 15 percent of the costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2 by the Subcontractor that actually performs the Work, at whatever tier, and (2) with respect to Contractor itself and to any Subcontractors of a tier higher than that of the Subcontractor that actually performs the Work, a fee of 5 percent of the amount (fee plus underlying costs incurred) attributable to the next lower tier Subcontractor; provided, however, that for any such subcontracted Work the maximum total fee to be paid by Owner will be no greater than 27 percent of the costs incurred by the Subcontractor that actually performs the Work;
    d. No fee will be payable on the basis of costs itemized under Paragraphs 13.01.B.4, 13.01.B.5, and 13.01.C;
    e. The amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in Cost of the Work will be the amount of the actual net decrease in Cost of the Work and a deduction of an additional amount equal to 5 percent of such actual net decrease in Cost of the Work; and
    f. When both additions and credits are involved in any one change or Change Proposal, the adjustment in Contractor's fee will be computed by determining the sum of the costs in each of the cost categories in Paragraph 13.01.B (specifically, payroll costs, Paragraph 13.01.B.1; incorporated materials and equipment costs, Paragraph 13.01.B.2; Subcontract costs, Paragraph 13.01.B.3; special consultants costs, Paragraph 13.01.B.4; and other costs, Paragraph 13.01.B.5) and applying to each such cost category sum the appropriate fee from Paragraphs 11.07.C.2.a through 11.07.C.2.e, inclusive.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

11.08 *Change of Contract Times*

A. The Contract Times may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Times must comply with the provisions of Paragraph 11.09. Any Claim for an adjustment in the Contract Times must comply with the provisions of Article 12.

B. Delay, disruption, and interference in the Work, and any related changes in Contract Times, are addressed in and governed by Paragraph 4.05.

11.09 *Change Proposals*

A. *Purpose and Content*: Contractor shall submit a Change Proposal to Engineer to request an adjustment in the Contract Times or Contract Price; contest an initial decision by Engineer concerning the requirements of the Contract Documents or relating to the acceptability of the Work under the Contract Documents; challenge a set-off against payment due; or seek other relief under the Contract. The Change Proposal will specify any proposed change in Contract Times or Contract Price, or other proposed relief, and explain the reason for the proposed change, with citations to any governing or applicable provisions of the Contract Documents. Each Change Proposal will address only one issue, or a set of closely related issues.

B. *Change Proposal Procedures*

1. *Submittal*: Contractor shall submit each Change Proposal to Engineer within 30 days after the start of the event giving rise thereto, or after such initial decision.

2. *Supporting Data*: The Contractor shall submit supporting data, including the proposed change in Contract Price or Contract Time (if any), to the Engineer and Owner within 15 days after the submittal of the Change Proposal.

    a. Change Proposals based on or related to delay, interruption, or interference must comply with the provisions of Paragraphs 4.05.D and 4.05.E.

    b. Change proposals related to a change of Contract Price must include full and detailed accounts of materials incorporated into the Work and labor and equipment used for the subject Work.

    The supporting data must be accompanied by a written statement that the supporting data are accurate and complete, and that any requested time or price adjustment is the entire adjustment to which Contractor believes it is entitled as a result of said event.

3. *Engineer's Initial Review*: Engineer will advise Owner regarding the Change Proposal, and consider any comments or response from Owner regarding the Change Proposal. If in its discretion Engineer concludes that additional supporting data is needed before conducting a full review and making a decision regarding the Change Proposal, then Engineer may request that Contractor submit such additional supporting data by a date specified by Engineer, prior to Engineer beginning its full review of the Change Proposal.

4. *Engineer's Full Review and Action on the Change Proposal*: Upon receipt of Contractor's supporting data (including any additional data requested by Engineer), Engineer will conduct a full review of each Change Proposal and, within 30 days after such receipt of the Contractor's supporting data, either approve the Change Proposal in whole, deny it in whole, or approve it in part and deny it in part. Such actions must be in writing, with a copy provided to Owner and Contractor. If Engineer does not take action on the Change

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Proposal within 30 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of Engineer's inaction the Change Proposal is deemed denied, thereby commencing the time for appeal of the denial under Article 12.

5. *Binding Decision*: Engineer's decision is final and binding upon Owner and Contractor, unless Owner or Contractor appeals the decision by filing a Claim under Article 12.

C. *Resolution of Certain Change Proposals*: If the Change Proposal does not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters, then Engineer will notify the parties in writing that the Engineer is unable to resolve the Change Proposal. For purposes of further resolution of such a Change Proposal, such notice will be deemed a denial, and Contractor may choose to seek resolution under the terms of Article 12.

D. *Post-Completion*: Contractor shall not submit any Change Proposals after Engineer issues a written recommendation of final payment pursuant to Paragraph 15.06.B.

11.10 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12—CLAIMS

12.01 *Claims*

A. *Claims Process*: The following disputes between Owner and Contractor are subject to the Claims process set forth in this article:

1. Appeals by Owner or Contractor of Engineer's decisions regarding Change Proposals;

2. Owner demands for adjustments in the Contract Price or Contract Times, or other relief under the Contract Documents;

3. Disputes that Engineer has been unable to address because they do not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters; and

4. Subject to the waiver provisions of Paragraph 15.07, any dispute arising after Engineer has issued a written recommendation of final payment pursuant to Paragraph 15.06.B.

B. *Submittal of Claim*: The party submitting a Claim shall deliver it directly to the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto; in the case of appeals regarding Change Proposals within 30 days of the decision under appeal. The party submitting the Claim shall also furnish a copy to the Engineer, for its information only. The responsibility to substantiate a Claim rests with the party making the Claim. In the case of a Claim by Contractor seeking an increase in the Contract Times or Contract Price, Contractor shall certify that the Claim is made in good faith, that the supporting data are accurate and complete, and that to the best of Contractor's knowledge

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

and belief the amount of time or money requested accurately reflects the full amount to which Contractor is entitled.

C. *Review and Resolution*: The party receiving a Claim shall review it thoroughly, giving full consideration to its merits. The two parties shall seek to resolve the Claim through the exchange of information and direct negotiations. The parties may extend the time for resolving the Claim by mutual agreement. All actions taken on a Claim will be stated in writing and submitted to the other party, with a copy to Engineer.

D. *Mediation*

1. At any time after initiation of a Claim, Owner and Contractor may mutually agree to mediation of the underlying dispute. The agreement to mediate will stay the Claim submittal and response process.

2. If Owner and Contractor agree to mediation, then after 60 days from such agreement, either Owner or Contractor may unilaterally terminate the mediation process, and the Claim submittal and decision process will resume as of the date of the termination. If the mediation proceeds but is unsuccessful in resolving the dispute, the Claim submittal and decision process will resume as of the date of the conclusion of the mediation, as determined by the mediator.

3. Owner and Contractor shall each pay one-half of the mediator's fees and costs.

E. *Partial Approval*: If the party receiving a Claim approves the Claim in part and denies it in part, such action will be final and binding unless within 30 days of such action the other party invokes the procedure set forth in Article 17 for final resolution of disputes.

F. *Denial of Claim*: If efforts to resolve a Claim are not successful, the party receiving the Claim may deny it by giving written notice of denial to the other party. If the receiving party does not take action on the Claim within 90 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of the inaction, the Claim is deemed denied, thereby commencing the time for appeal of the denial. A denial of the Claim will be final and binding unless within 30 days of the denial the other party invokes the procedure set forth in Article 17 for the final resolution of disputes.

G. *Final and Binding Results*: If the parties reach a mutual agreement regarding a Claim, whether through approval of the Claim, direct negotiations, mediation, or otherwise; or if a Claim is approved in part and denied in part, or denied in full, and such actions become final and binding; then the results of the agreement or action on the Claim will be incorporated in a Change Order or other written document to the extent they affect the Contract, including the Work, the Contract Times, or the Contract Price.

ARTICLE 13—COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

13.01 *Cost of the Work*

A. *Purposes for Determination of Cost of the Work*: The term Cost of the Work means the sum of all costs necessary for the proper performance of the Work at issue, as further defined below. The provisions of this Paragraph 13.01 are used for two distinct purposes:

1. To determine Cost of the Work when Cost of the Work is a component of the Contract Price, under cost-plus-fee, time-and-materials, or other cost-based terms; or

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. When needed to determine the value of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price. When the value of any such adjustment is determined on the basis of Cost of the Work, Contractor is entitled only to those additional or incremental costs required because of the change in the Work or because of the event giving rise to the adjustment.

B. *Costs Included*: Except as otherwise may be agreed to in writing by Owner, costs included in the Cost of the Work will be in amounts no higher than those commonly incurred in the locality of the Project, will not include any of the costs itemized in Paragraph 13.01.C, and will include only the following items:

1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor in advance of the subject Work. Such employees include, without limitation, superintendents, foremen, safety managers, safety representatives, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work will be apportioned on the basis of their time spent on the Work. Payroll costs include, but are not limited to, salaries and wages plus the cost of fringe benefits, which include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, sick leave, and vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on Saturday, Sunday, or legal holidays, will be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts will accrue to Owner. All trade discounts, rebates, and refunds and returns from sale of surplus materials and equipment will accrue to Owner, and Contractor shall make provisions so that they may be obtained.

3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, which will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee will be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 13.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed or retained for services specifically related to the Work.

5. Other costs consisting of the following:

a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.

b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, which are

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.

1) In establishing included costs for materials such as scaffolding, plating, or sheeting, consideration will be given to the actual or the estimated life of the material for use on other projects; or rental rates may be established on the basis of purchase or salvage value of such items, whichever is less. Contractor will not be eligible for compensation for such items in an amount that exceeds the purchase cost of such item.

c. *Construction Equipment Rental*

1) Rentals of all construction equipment and machinery, and the parts thereof, in accordance with rental agreements approved by Owner as to price (including any surcharge or special rates applicable to overtime use of the construction equipment or machinery), and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs will be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts must cease when the use thereof is no longer necessary for the Work.

2) Costs for equipment and machinery owned by Contractor or a Contractor-related entity will be paid at a rate shown for such equipment in the equipment rental rate book specified in the Supplementary Conditions. An hourly rate will be computed by dividing the monthly rates by 176. These computed rates will include all operating costs.

3) With respect to Work that is the result of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price ("changed Work"), included costs will be based on the time the equipment or machinery is in use on the changed Work and the costs of transportation, loading, unloading, assembly, dismantling, and removal when directly attributable to the changed Work. The cost of any such equipment or machinery, or parts thereof, must cease to accrue when the use thereof is no longer necessary for the changed Work.

d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.

e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of builder's risk or other property insurance established in accordance with Paragraph 6.04), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses will be included in the Cost of the Work for the purpose of determining Contractor's fee.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

g. The cost of utilities, fuel, and sanitary facilities at the Site.

h. Minor expenses such as communication service at the Site, express and courier services, and similar petty cash items in connection with the Work.

i. The costs of premiums for all bonds and insurance that Contractor is required by the Contract Documents to purchase and maintain.

C. *Costs Excluded*: The term Cost of the Work does not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals, general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 13.01.B.1 or specifically covered by Paragraph 13.01.B.4. The payroll costs and other compensation excluded here are to be considered administrative costs covered by the Contractor's fee.

2. The cost of purchasing, renting, or furnishing small tools and hand tools.

3. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.

4. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

5. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.

6. Expenses incurred in preparing and advancing Claims.

7. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 13.01.B.

D. *Contractor's Fee*

1. When the Work as a whole is performed on the basis of cost-plus-a-fee, then:

a. Contractor's fee for the Work set forth in the Contract Documents as of the Effective Date of the Contract will be determined as set forth in the Agreement.

b. for any Work covered by a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price on the basis of Cost of the Work, Contractor's fee will be determined as follows:

1) When the fee for the Work as a whole is a percentage of the Cost of the Work, the fee will automatically adjust as the Cost of the Work changes.

2) When the fee for the Work as a whole is a fixed fee, the fee for any additions or deletions will be determined in accordance with Paragraph 11.07.C.2.

2. When the Work as a whole is performed on the basis of a stipulated sum, or any other basis other than cost-plus-a-fee, then Contractor's fee for any Work covered by a Change

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price on the basis of Cost of the Work will be determined in accordance with Paragraph 11.07.C.2.

E. *Documentation and Audit*: Whenever the Cost of the Work for any purpose is to be determined pursuant to this Article 13, Contractor and pertinent Subcontractors will establish and maintain records of the costs in accordance with generally accepted accounting practices. Subject to prior written notice, Owner will be afforded reasonable access, during normal business hours, to all Contractor's accounts, records, books, correspondence, instructions, drawings, receipts, vouchers, memoranda, and similar data relating to the Cost of the Work and Contractor's fee. Contractor shall preserve all such documents for a period of three years after the final payment by Owner. Pertinent Subcontractors will afford such access to Owner, and preserve such documents, to the same extent required of Contractor.

13.02 *Allowances*

A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.

B. *Cash Allowances*: Contractor agrees that:

1. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

2. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment for any of the foregoing will be valid.

C. *Owner's Contingency Allowance*: Contractor agrees that an Owner's contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.

D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor for Work covered by allowances, and the Contract Price will be correspondingly adjusted.

13.03 *Unit Price Work*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.

B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Payments to Contractor for Unit Price Work will be based on actual quantities.

C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

D. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, and the final adjustment of Contract Price will be set forth in a Change Order, subject to the provisions of the following paragraph.

E. *Adjustments in Unit Price*

1. Contractor or Owner shall be entitled to an adjustment in the unit price with respect to an item of Unit Price Work if:

a. the quantity of the item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and

b. Contractor's unit costs to perform the item of Unit Price Work have changed materially and significantly as a result of the quantity change.

2. The adjustment in unit price will account for and be coordinated with any related changes in quantities of other items of Work, and in Contractor's costs to perform such other Work, such that the resulting overall change in Contract Price is equitable to Owner and Contractor.

3. Adjusted unit prices will apply to all units of that item.

ARTICLE 14—TESTS AND INSPECTIONS; CORRECTION, REMOVAL, OR ACCEPTANCE OF DEFECTIVE WORK

14.01 *Access to Work*

A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and authorities having jurisdiction have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply with such procedures and programs as applicable.

14.02 *Tests, Inspections, and Approvals*

A. Contractor shall give Engineer timely notice of readiness of the Work (or specific parts thereof) for all required inspections and tests, and shall cooperate with inspection and testing personnel to facilitate required inspections and tests.

B. Owner shall retain and pay for the services of an independent inspector, testing laboratory, or other qualified individual or entity to perform all inspections and tests expressly required by the Contract Documents to be furnished and paid for by Owner, except that costs incurred in connection with tests or inspections of covered Work will be governed by the provisions of Paragraph 14.05.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

D. Contractor shall be responsible for arranging, obtaining, and paying for all inspections and tests required:

1. by the Contract Documents, unless the Contract Documents expressly allocate responsibility for a specific inspection or test to Owner;

2. to attain Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work;

3. by manufacturers of equipment furnished under the Contract Documents;

4. for testing, adjusting, and balancing of mechanical, electrical, and other equipment to be incorporated into the Work; and

5. for acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work.

Such inspections and tests will be performed by independent inspectors, testing laboratories, or other qualified individuals or entities acceptable to Owner and Engineer.

E. If the Contract Documents require the Work (or part thereof) to be approved by Owner, Engineer, or another designated individual or entity, then Contractor shall assume full responsibility for arranging and obtaining such approvals.

F. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by Engineer, uncover such Work for observation. Such uncovering will be at Contractor's expense unless Contractor had given Engineer timely notice of Contractor's intention to cover the same and Engineer had not acted with reasonable promptness in response to such notice.

14.03 *Defective Work*

A. *Contractor's Obligation*: It is Contractor's obligation to assure that the Work is not defective.

B. *Engineer's Authority*: Engineer has the authority to determine whether Work is defective, and to reject defective Work.

C. *Notice of Defects*: Prompt written notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor.

D. *Correction, or Removal and Replacement*: Promptly after receipt of written notice of defective Work, Contractor shall correct all such defective Work, whether or not fabricated, installed, or completed, or, if Engineer has rejected the defective Work, remove it from the Project and replace it with Work that is not defective.

E. *Preservation of Warranties*: When correcting defective Work, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

F. *Costs and Damages*: In addition to its correction, removal, and replacement obligations with respect to defective Work, Contractor shall pay all claims, costs, losses, and damages arising out of or relating to defective Work, including but not limited to the cost of the inspection, testing, correction, removal, replacement, or reconstruction of such defective Work, fines levied against Owner by governmental authorities because the Work is defective, and the costs of repair or replacement of work of others resulting from defective Work. Prior to final payment, if Owner and Contractor are unable to agree as to the measure of such claims, costs,

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

losses, and damages resulting from defective Work, then Owner may impose a reasonable set-off against payments due under Article 15.

14.04 *Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, Owner prefers to accept it, Owner may do so (subject, if such acceptance occurs prior to final payment, to Engineer's confirmation that such acceptance is in general accord with the design intent and applicable engineering principles, and will not endanger public safety). Contractor shall pay all claims, costs, losses, and damages attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness), and for the diminished value of the Work to the extent not otherwise paid by Contractor. If any such acceptance occurs prior to final payment, the necessary revisions in the Contract Documents with respect to the Work will be incorporated in a Change Order. If the parties are unable to agree as to the decrease in the Contract Price, reflecting the diminished value of Work so accepted, then Owner may impose a reasonable set-off against payments due under Article 15. If the acceptance of defective Work occurs after final payment, Contractor shall pay an appropriate amount to Owner.

14.05 *Uncovering Work*

A. Engineer has the authority to require additional inspection or testing of the Work, whether or not the Work is fabricated, installed, or completed.

B. If any Work is covered contrary to the written request of Engineer, then Contractor shall, if requested by Engineer, uncover such Work for Engineer's observation, and then replace the covering, all at Contractor's expense.

C. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, then Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, and provide all necessary labor, material, and equipment.

1. If it is found that the uncovered Work is defective, Contractor shall be responsible for all claims, costs, losses, and damages arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and pending Contractor's full discharge of this responsibility the Owner shall be entitled to impose a reasonable set-off against payments due under Article 15.

2. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, then Contractor may submit a Change Proposal within 30 days of the determination that the Work is not defective.

14.06 *Owner May Stop the Work*

A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, then Owner may order Contractor to stop the Work,

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work will not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

14.07 *Owner May Correct Defective Work*

A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace defective Work as required by Engineer, then Owner may, after 7 days' written notice to Contractor, correct or remedy any such deficiency.

B. In exercising the rights and remedies under this Paragraph 14.07, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, and incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this paragraph.

C. All claims, costs, losses, and damages incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 14.07 will be charged against Contractor as set-offs against payments due under Article 15. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.

D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 14.07.

ARTICLE 15—PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

15.01 *Progress Payments*

A. *Basis for Progress Payments*: The Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments for Unit Price Work will be based on the number of units completed during the pay period, as determined under the provisions of Paragraph 13.03. Progress payments for cost-based Work will be based on Cost of the Work completed by Contractor during the pay period.

B. *Applications for Payments*

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents.

2. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment must also be accompanied by: (a) a bill of sale, invoice, copies of subcontract or purchase order payments, or other documentation

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

establishing full payment by Contractor for the materials and equipment; (b) at Owner's request, documentation warranting that Owner has received the materials and equipment free and clear of all Liens; and (c) evidence that the materials and equipment are covered by appropriate property insurance, a warehouse bond, or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.

3. Beginning with the second Application for Payment, each Application must include an affidavit of Contractor stating that all previous progress payments received by Contractor have been applied to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

4. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

C. *Review of Applications*

1. Engineer will, within 10 days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment and present the Application to Owner, or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

   a. the Work has progressed to the point indicated;

   b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 13.03, and any other qualifications stated in the recommendation); and

   c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

   a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract; or

   b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:
    a. to supervise, direct, or control the Work;
    b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto;
    c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work;
    d. to make any examination to ascertain how or for what purposes Contractor has used the money paid by Owner; or
    e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.
5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 15.01.C.2.
6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Owner from loss because:
    a. the Work is defective, requiring correction or replacement;
    b. the Contract Price has been reduced by Change Orders;
    c. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;
    d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible; or
    e. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Contractor and therefore justify termination for cause under the Contract Documents.

D. *Payment Becomes Due*

1. Ten days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended (subject to any Owner set-offs) will become due, and when due will be paid by Owner to Contractor.

E. *Reductions in Payment by Owner*

1. In addition to any reductions in payment (set-offs) recommended by Engineer, Owner is entitled to impose a set-off against payment based on any of the following:
    a. Claims have been made against Owner based on Contractor's conduct in the performance or furnishing of the Work, or Owner has incurred costs, losses, or damages resulting from Contractor's conduct in the performance or furnishing of the Work, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. Contractor has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Site;

c. Contractor has failed to provide and maintain required bonds or insurance;

d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

e. Owner has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

f. The Work is defective, requiring correction or replacement;

g. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

h. The Contract Price has been reduced by Change Orders;

i. An event has occurred that would constitute a default by Contractor and therefore justify a termination for cause;

j. Liquidated or other damages have accrued as a result of Contractor's failure to achieve Milestones, Substantial Completion, or final completion of the Work;

k. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens; or

l. Other items entitle Owner to a set-off against the amount recommended.

2. If Owner imposes any set-off against payment, whether based on its own knowledge or on the written recommendations of Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and the specific amount of the reduction, and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, if Contractor remedies the reasons for such action. The reduction imposed will be binding on Contractor unless it duly submits a Change Proposal contesting the reduction.

3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld will be treated as an amount due as determined by Paragraph 15.01.D.1 and subject to interest as provided in the Agreement.

15.02 *Contractor's Warranty of Title*

A. Contractor warrants and guarantees that title to all Work, materials, and equipment furnished under the Contract will pass to Owner free and clear of (1) all Liens and other title defects, and (2) all patent, licensing, copyright, or royalty obligations, no later than 7 days after the time of payment by Owner.

15.03 *Substantial Completion*

A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete and request that Engineer issue a certificate of Substantial Completion. Contractor shall at the same time

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

submit to Owner and Engineer an initial draft of punch list items to be completed or corrected before final payment.

B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.

C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a preliminary certificate of Substantial Completion which will fix the date of Substantial Completion. Engineer shall attach to the certificate a punch list of items to be completed or corrected before final payment. Owner shall have 7 days after receipt of the preliminary certificate during which to make written objection to Engineer as to any provisions of the certificate or attached punch list. If, after considering the objections to the provisions of the preliminary certificate, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the preliminary certificate to Owner, notify Contractor in writing that the Work is not substantially complete, stating the reasons therefor. If Owner does not object to the provisions of the certificate, or if despite consideration of Owner's objections Engineer concludes that the Work is substantially complete, then Engineer will, within said 14 days, execute and deliver to Owner and Contractor a final certificate of Substantial Completion (with a revised punch list of items to be completed or corrected) reflecting such changes from the preliminary certificate as Engineer believes justified after consideration of any objections from Owner.

D. At the time of receipt of the preliminary certificate of Substantial Completion, Owner and Contractor will confer regarding Owner's use or occupancy of the Work following Substantial Completion, review the builder's risk insurance policy with respect to the end of the builder's risk coverage, and confirm the transition to coverage of the Work under a permanent property insurance policy held by Owner. Unless Owner and Contractor agree otherwise in writing, Owner shall bear responsibility for security, operation, protection of the Work, property insurance, maintenance, heat, and utilities upon Owner's use or occupancy of the Work.

E. After Substantial Completion the Contractor shall promptly begin work on the punch list of items to be completed or corrected prior to final payment. In appropriate cases Contractor may submit monthly Applications for Payment for completed punch list items, following the progress payment procedures set forth above.

F. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the punch list.

15.04 *Partial Use or Occupancy*

A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:

1. At any time, Owner may request in writing that Contractor permit Owner to use or occupy any such part of the Work that Owner believes to be substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 15.03.A through 15.03.E for that part of the Work.

2. At any time, Contractor may notify Owner and Engineer in writing that Contractor considers any such part of the Work substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.

3. Within a reasonable time after either such request, Owner, Contractor, and Engineer shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 15.03 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 6.04 regarding builder's risk or other property insurance.

15.05 *Final Inspection*

A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work, or agreed portion thereof, is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

15.06 *Final Payment*

A. *Application for Payment*

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, annotated record documents (as provided in Paragraph 7.12), and other documents, Contractor may make application for final payment.

2. The final Application for Payment must be accompanied (except as previously delivered) by:

   a. all documentation called for in the Contract Documents;

   b. consent of the surety, if any, to final payment;

   c. satisfactory evidence that all title issues have been resolved such that title to all Work, materials, and equipment has passed to Owner free and clear of any Liens or other title defects, or will so pass upon final payment.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

d. a list of all duly pending Change Proposals and Claims; and

e. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of the Work, and of Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in Paragraph 15.06.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (a) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (b) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien, or Owner at its option may issue joint checks payable to Contractor and specified Subcontractors and Suppliers.

B. *Engineer's Review of Final Application and Recommendation of Payment*: If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract have been fulfilled, Engineer will, within 10 days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment and present the final Application for Payment to Owner for payment. Such recommendation will account for any set-offs against payment that are necessary in Engineer's opinion to protect Owner from loss for the reasons stated above with respect to progress payments. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. *Notice of Acceptability*: In support of its recommendation of payment of the final Application for Payment, Engineer will also give written notice to Owner and Contractor that the Work is acceptable, subject to stated limitations in the notice and to the provisions of Paragraph 15.07.

D. *Completion of Work*: The Work is complete (subject to surviving obligations) when it is ready for final payment as established by the Engineer's written recommendation of final payment and issuance of notice of the acceptability of the Work.

E. *Final Payment Becomes Due*: Upon receipt from Engineer of the final Application for Payment and accompanying documentation, Owner shall set off against the amount recommended by Engineer for final payment any further sum to which Owner is entitled, including but not limited to set-offs for liquidated damages and set-offs allowed under the provisions of this Contract with respect to progress payments. Owner shall pay the resulting balance due to Contractor within 30 days of Owner's receipt of the final Application for Payment from Engineer.

15.07 *Waiver of Claims*

A. By making final payment, Owner waives its claim or right to liquidated damages or other damages for late completion by Contractor, except as set forth in an outstanding Claim,

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

appeal under the provisions of Article 17, set-off, or express reservation of rights by Owner. Owner reserves all other claims or rights after final payment.

B. The acceptance of final payment by Contractor will constitute a waiver by Contractor of all claims and rights against Owner other than those pending matters that have been duly submitted as a Claim, or appealed under the provisions of Article 17.

15.08 *Correction Period*

A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the Supplementary Conditions or the terms of any applicable special guarantee required by the Contract Documents), Owner gives Contractor written notice that any Work has been found to be defective, or that Contractor's repair of any damages to the Site or adjacent areas has been found to be defective, then after receipt of such notice of defect Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:

1. correct the defective repairs to the Site or such adjacent areas;
2. correct such defective Work;
3. remove the defective Work from the Project and replace it with Work that is not defective, if the defective Work has been rejected by Owner, and
4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others, or to other land or areas resulting from the corrective measures.

B. Owner shall give any such notice of defect within 60 days of the discovery that such Work or repairs is defective. If such notice is given within such 60 days but after the end of the correction period, the notice will be deemed a notice of defective Work under Paragraph 7.17.B.

C. If, after receipt of a notice of defect within 60 days and within the correction period, Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. Contractor shall pay all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others). Contractor's failure to pay such costs, losses, and damages within 10 days of invoice from Owner will be deemed the start of an event giving rise to a Claim under Paragraph 12.01.B, such that any related Claim must be brought within 30 days of the failure to pay.

D. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.

E. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. Contractor's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph are not to be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 16—SUSPENSION OF WORK AND TERMINATION

16.01 *Owner May Suspend Work*

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by written notice to Contractor and Engineer. Such notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be entitled to an adjustment in the Contract Price or an extension of the Contract Times directly attributable to any such suspension. Any Change Proposal seeking such adjustments must be submitted no later than 30 days after the date fixed for resumption of Work.

16.02 *Owner May Terminate for Cause*

A. The occurrence of any one or more of the following events will constitute a default by Contractor and justify termination for cause:

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment, or failure to adhere to the Progress Schedule);

2. Failure of Contractor to perform or otherwise to comply with a material term of the Contract Documents;

3. Contractor's disregard of Laws or Regulations of any public body having jurisdiction; or

4. Contractor's repeated disregard of the authority of Owner or Engineer.

B. If one or more of the events identified in Paragraph 16.02.A occurs, then after giving Contractor (and any surety) 10 days' written notice that Owner is considering a declaration that Contractor is in default and termination of the Contract, Owner may proceed to:

1. declare Contractor to be in default, and give Contractor (and any surety) written notice that the Contract is terminated; and

2. enforce the rights available to Owner under any applicable performance bond.

C. Subject to the terms and operation of any applicable performance bond, if Owner has terminated the Contract for cause, Owner may exclude Contractor from the Site, take possession of the Work, incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere, and complete the Work as Owner may deem expedient.

D. Owner may not proceed with termination of the Contract under Paragraph 16.02.B if Contractor within 7 days of receipt of notice of intent to terminate begins to correct its failure to perform and proceeds diligently to cure such failure.

E. If Owner proceeds as provided in Paragraph 16.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds the cost to complete the Work, including all related claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects,

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

attorneys, and other professionals) sustained by Owner, such excess will be paid to Contractor. If the cost to complete the Work including such related claims, costs, losses, and damages exceeds such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this paragraph, Owner shall not be required to obtain the lowest price for the Work performed.

F. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue, or any rights or remedies of Owner against Contractor or any surety under any payment bond or performance bond. Any retention or payment of money due Contractor by Owner will not release Contractor from liability.

G. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 6.01.A, the provisions of that bond will govern over any inconsistent provisions of Paragraphs 16.02.B and 16.02.D.

16.03 *Owner May Terminate for Convenience*

A. Upon 7 days' written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):

1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses; and

3. other reasonable expenses directly attributable to termination, including costs incurred to prepare a termination for convenience cost proposal.

B. Contractor shall not be paid for any loss of anticipated profits or revenue, post-termination overhead costs, or other economic loss arising out of or resulting from such termination.

16.04 *Contractor May Stop Work or Terminate*

A. If, through no act or fault of Contractor, (1) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (2) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or (3) Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon 7 days' written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the contract and recover from Owner payment on the same terms as provided in Paragraph 16.03.

B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, 7 days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

provisions of this paragraph are not intended to preclude Contractor from submitting a Change Proposal for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this paragraph.

ARTICLE 17—FINAL RESOLUTION OF DISPUTES

17.01 *Methods and Procedures*

A. *Disputes Subject to Final Resolution*: The following disputed matters are subject to final resolution under the provisions of this article:

1. A timely appeal of an approval in part and denial in part of a Claim, or of a denial in full, pursuant to Article 12; and

2. Disputes between Owner and Contractor concerning the Work, or obligations under the Contract Documents, that arise after final payment has been made.

B. *Final Resolution of Disputes*: For any dispute subject to resolution under this article, Owner or Contractor may:

1. elect in writing to invoke the dispute resolution process provided for in the Supplementary Conditions;

2. agree with the other party to submit the dispute to another dispute resolution process; or

3. if no dispute resolution process is provided for in the Supplementary Conditions or mutually agreed to, give written notice to the other party of the intent to submit the dispute to a court of competent jurisdiction.

ARTICLE 18—MISCELLANEOUS

18.01 *Giving Notice*

A. Whenever any provision of the Contract requires the giving of written notice to Owner, Engineer, or Contractor, it will be deemed to have been validly given only if delivered:

1. in person, by a commercial courier service or otherwise, to the recipient's place of business;

2. by registered or certified mail, postage prepaid, to the recipient's place of business; or

3. by e-mail to the recipient, with the words "Formal Notice" or similar in the e-mail's subject line.

18.02 *Computation of Times*

A. When any period of time is referred to in the Contract by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

EJCDC® C-700, Standard General Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

18.03 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract. The provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

18.04 *Limitation of Damages*

A. With respect to any and all Change Proposals, Claims, disputes subject to final resolution, and other matters at issue, neither Owner nor Engineer, nor any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, shall be liable to Contractor for any claims, costs, losses, or damages sustained by Contractor on or in connection with any other project or anticipated project.

18.05 *No Waiver*

A. A party's non-enforcement of any provision will not constitute a waiver of that provision, nor will it affect the enforceability of that provision or of the remainder of this Contract.

18.06 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract, as well as all continuing obligations indicated in the Contract, will survive final payment, completion, and acceptance of the Work or termination of the Contract or of the services of Contractor.

18.07 *Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

18.08 *Assignment of Contract*

A. Unless expressly agreed to elsewhere in the Contract, no assignment by a party to this Contract of any rights under or interests in the Contract will be binding on the other party without the written consent of the party sought to be bound; and, specifically but without limitation, money that may become due and money that is due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract.

18.09 *Successors and Assigns*

A. Owner and Contractor each binds itself, its successors, assigns, and legal representatives to the other party hereto, its successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

18.10 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

SUPPLEMENTARY CONDITIONS OF THE CONSTRUCTION CONTRACT

These Supplementary Conditions amend or supplement EJCDC® C-700, Standard General Conditions of the Construction Contract (2018). The General Conditions remain in full force and effect except as amended.

The terms used in these Supplementary Conditions have the meanings stated in the General Conditions. Additional terms used in these Supplementary Conditions have the meanings stated below, which are applicable to both the singular and plural thereof.

The address system used in these Supplementary Conditions is the same as the address system used in the General Conditions, with the prefix "SC" added—for example, “Paragraph SC-4.05.”

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

SC-1.01 Modify 1.01 A. 20 and add the following:

For this Agreement the Engineer is Wall Engineering, LLC, 223 N. Washington Ave., Durant, OK 74701

SC-1.01A Add the following subparagraphs immediately after subparagraph 1.01.A.50

51. Award – The formal acceptance of the Bid by Owner.
52. Bid Guarantee (Bid Bond) – The security furnished with a Bid to guarantee that the Bidder will enter into the contract if Bidder’s Bid is accepted by Owner.
53. Design Engineer – Wall Engineering, LLC
54. Equipment (Construction) – All machinery and equipment, together with the necessary supplies for upkeep and maintenance, including tools and apparatus necessary for the proper construction and acceptable completion of the Work contemplated. (Installation) – All material or articles used in equipping a facility or apparatus required to fulfill a functional design.
55. Execution – Field or site performance, workmanship, installation, erection, application, field fabrication, quality control, and protection of installed products on the site.
56. Materials – All materials incorporated into the Project, including equipment and all other materials consumed or to be consumed in the performance of the Work contemplated.
57. Product Data – Type of Shop Drawing comprised of standard illustrations, schedules, performance charts, instructions, brochures, diagrams, catalog cuts, and other information assembled by or for the Contractor and submitted by the Contractor to illustrate materials or equipment for some portion of the Work.
58. Products – Materials, equipment, systems, shop fabrications, mixtures, and source controls.

EJCDC® C-800, Supplementary Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

59. Utility – Any public or private fixed works for the transportation of fluids, gases, electricity, signals, or communications.

1.02 ***Terminology***

SC-1.02 Add a new paragraph B.1 as follows:

1. "At no additional cost to Owner", "With no extra compensation to Contractor", "At Contractor's own expense", or similar words mean that the Contractor will perform or provide specified operation of work without any increase in the Contract Amount. It is understood that the cost for performing all work is included in the amount bid and will be performed at no additional cost to the Owner unless specifically stated otherwise.

SC-1.02 Add a new paragraph "E.5 and E.6" as follows:

5. Specifications are written in modified brief style. Requirements apply to all work of the same kind, class, and type even though the word "all" is not stated.

6. Simple imperative sentence structure is used which places a verb as the first word in the sentence. It is understood that the words "furnish", "install", "provide", or similar words include the meaning of the phrase "The Contractor shall..." before these words.

ARTICLE 2—PRELIMINARY MATTERS

2.02 ***Copies of Documents***

SC-2.02 Amend the first sentence of Paragraph 2.02.A. to read as follows:

Owner shall furnish to Contractor two (2) printed copies of the Contract Documents (including one fully signed counterpart of the Agreement), and one (1) in electronic portable document format (PDF).

2.03 ***Before Starting Construction***

SC-2.03 Add a new paragraph immediately after paragraph 2.03.A.3:

B. Before undertaking each part of the Work, Contractor shall carefully study and compare the Contract Documents and check and verify pertinent figures shown thereon and all applicable field measurements. Contractor shall promptly report in writing to the Engineer any conflict, error, ambiguity or discrepancy which the Contractor may discover and shall obtain a written interpretation from the Engineer before proceeding with any work affected thereby. In the event of a conflict in the Drawings, Specifications, or other portions of the Contract Document which were not reported prior to the Award of the Contract, the Contractor shall be deemed to have included the most expensive item in their bid.

2.04 ***Preconstruction Conference; Designation of Authorized Representatives***

SC-2.04.A Delete paragraph 2.04.A and insert the following in lieu thereof:

A. Before the Contract Times start to run, but after Notice to Proceed is given, a conference attended by Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

referred to in paragraph 2.03.A, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

ARTICLE 3—CONTRACT DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 Intent

SC 3.01 Add the following to 3.01 A

Drawings and specifications do not indicate or describe all of the work required to complete the project. Additional details required for the correct installation of selected products are to be provided by the Contractor and coordinated with the Engineer. Provide any work, materials or equipment required for a complete and functional system even if they are not detailed or specified

1. The contract requirements described in the General Conditions, Supplementary Conditions and General Requirements apply to each and all specification sections unless specifically noted otherwise.
2. Organization of Contract Documents is not intended to control or to lessen the responsibility of the Contractor when dividing work among Subcontractors, or to establish the extent of work to be performed by any trade, Subcontractor or Supplier. Specifications or details do not need to be indicated or specified in each specification or drawing. Items shown in the contract documents are applicable regardless of location in the Contract Documents.
3. Standard paragraph titles and other identifications of subject matter in the specifications are intended to aid in locating and recognizing various requirements of the specifications. Titles do not define, limit, or otherwise restrict specification text.

SC 3.01 Add new paragraphs “F - G” as follows:

F. Comply with the most stringent requirements where compliance with two (2) or more standards is specified, and they establish different or conflicting requirements for minimum quantities or quality levels, unless Contract Documents indicate otherwise. Commencement and Progress of the Work
    1. Quantity or quality level shown or indicated shall be minimum to be provided or performed in every instance.
    2. Actual installation may comply exactly with minimum quality indicated, or it may exceed that minimum within reasonable limits.
    3. In complying with these requirements, indicated numeric values are minimum or maximum values, as noted, or appropriate for context of requirements.
    4. Refer instances of uncertainty to the Engineer for a decision before proceeding.

G. Provide materials and equipment comparable in quality to similar materials and equipment incorporated in the project or as required to meet the minimum requirements

EJCDC® C-800, Supplementary Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

of the application if the materials and equipment are shown in the drawings but are not included in the specifications.

3.02 ***Reference Standards***

SC 3.02 Add a new paragraph "B" as follows:

B. Comply with applicable construction industry standards as if bound or copied directly into the Contract Documents regardless of lack of reference in the Contract Documents. Apply provisions of the Contract Documents where Contract Documents include more stringent requirements than the referenced standards.

1. Standards referenced directly in the Contract Documents take precedence over standards that are not referenced but recognized in the construction industry as applicable.

2. Comply with standards not referenced but recognized in the construction industry as applicable for performance of the work except as otherwise limited by the Contract Documents. The Engineer determines whether code or standard is applicable, or which of several are applicable.

3. Make copies of reference standards available as requested by Engineer or Owner.

3.03 Reporting and Resolving Discrepancies

SC 3.03 Add the following new Subparagraph immediately after Subparagraph 3.03.A.3:

3. In the event of a conflict in the Drawings, Specifications, or other portions of the Contract Documents which were not reported prior to the Bidding of the Contract, the Contractor shall be deemed to have included the most expensive item, system, procedure, etc. in his Bid.

ARTICLE 4— COMMENCEMENT AND PROGRESS OF THE WORK

4.05 ***Delays in Contractor's Progress***

SC-4.05 Amend Paragraph 4.05.C by adding the following subparagraphs:

5. *Weather-Related Delays*

a. If "abnormal weather conditions" as set forth in Paragraph 4.05.C.2 of the General Conditions are the basis for a request for an equitable adjustment in the Contract Times, such request must be documented by data substantiating each of the following: 1) that weather conditions were abnormal for the period of time in which the delay occurred, 2) that such weather conditions could not have been reasonably anticipated, and 3) that such weather conditions had an adverse effect on the Work as scheduled.

b. The existence of abnormal weather conditions will be determined on a month-by-month basis in accordance with the following:

1) Every workday on which one or more of the following conditions exist will be considered a "bad weather day":

EJCDC® C-800, Supplementary Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

i) Total precipitation (as rain equivalent) occurring between 7:00 p.m. on the preceding day (regardless of whether such preceding day is a workday) through 7:00 p.m. on the workday in question equals or exceeds ½" of precipitation (as rain equivalent), based on the snow/rain conversion. (1" of rain = 2" of sleet / 5" inches of snow)

ii) Ambient outdoor air temperature at 11:00 a.m. is equal to or less than the following low temperature threshold: 32 degrees Fahrenheit

2) Determination of actual bad weather days during performance of the Work will be based on the weather records measured and recorded by the nearest Mesonet weather monitoring station (see www.mesonet.org.)

3) Contractor shall anticipate the number of foreseeable bad weather days per month as follows:

TABLE A - NORMAL ADVERSE WEATHER DAYS (BY MONTH)	
January	11
February	10
March	6
April	7
May	7
June	4
July	4
August	2
September	3
October	4
November	5
December	7

4) In each month, every bad weather day exceeding the number of foreseeable bad weather days established in the table above will be considered as "abnormal weather conditions." The existence of abnormal weather conditions will not relieve Contractor of the obligation to demonstrate and document that delays caused by abnormal weather are specific to the planned work activities or that such activities thus delayed were on Contractor's then-current Progress Schedule's critical path for the Project.

ARTICLE 5—SITE, SUBSURFACE AND PHYSICAL CONDITIONS, HAZARDOUS ENVIRONMENTAL CONDITIONS

5.03 *Subsurface and Physical Conditions*

SC 5.03 Delete Paragraphs 5.06.A and 5.06.B in their entirety and insert the following:

A. No additional reports or drawings related are available beyond those included in the Contract Documents.

EJCDC® C-800, Supplementary Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

SC-5.05A Add the following subparagraphs to paragraph 5.05.A:

6. Generally, service connections are not indicated on the Drawings. Contractor shall be responsible for discovery of existing underground installations, in advance of excavating or trenching, by contacting all local utilities and by prospecting through hydro-excavation or potholing.

7. All information relative to Underground Facilities shall be recorded and incorporated into the record documents required by paragraph 7.11.

8. Contractor will be held responsible for any unauthorized interruption in the operation of Underground Facilities as a result of Contractor's operations. Unless the owner of the damaged facility elects to perform the repair and restoration work, Contractor shall repair and fully restore any damaged Underground Facility to a condition at least equal to that which existed just prior to the time of damage. All repair and restoration work shall be done to the satisfaction of the facility owner and Engineer.

9. Contractor shall arrange for any inspection of repaired or reconditioned Utility facilities required by authorities having jurisdiction. All inspection fees shall be paid by Contractor. If the facility owner elects to perform the repair and restoration work, Contractor shall render all assistance required. Contractor shall be responsible for all just and reasonable expenses incurred by the facility owners for such work.

5.06 ***Hazardous Environmental Conditions***

SC 5.06 Delete Paragraphs 5.06.A and 5.06.B in their entirety and insert the following:

A. No reports or drawings related to Hazardous Environmental Conditions at the Site are known to Owner.

B. Not Used.

ARTICLE 6—AND INSURANCE

6.01 ***Performance, Payment, and Other Bonds***

SC-6.01 Add the following paragraphs immediately after Paragraph 6.01.A:

1. *Required Performance Bond Form:* The performance bond that Contractor furnishes will be in the form of EJCDC® C-610, Performance Bond (2010, 2013, or 2018 edition).

2. *Required Payment Bond Form:* The payment bond that Contractor furnishes will be in the form of EJCDC® C-615, Payment Bond (2010, 2013, or 2018 edition).

SC-6.01 Add the following paragraphs immediately after Paragraph 6.01.B:

2. After Substantial Completion, Contractor shall furnish a warranty bond issued in the form of EJCDC® C-612, Warranty Bond (2018). The warranty bond must be in a bond amount of 100% percent of the final Contract Price. The warranty bond period will extend to a date 1 year after Substantial Completion of the Work. Contractor shall deliver the fully executed warranty bond to Owner prior to or with the final application for payment.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. The warranty bond must be issued by the same surety that issues the performance bond required under Paragraph 6.01.A of the General Conditions.

6.02 ***Insurance—General Provisions***

SC-6.02 Add the following paragraph immediately after Paragraph 6.02.B:

1. Contractor may obtain worker's compensation insurance from an insurance company that has not been rated by A.M. Best, provided that such company (a) is domiciled in the state in which the Project is located, (b) is certified or authorized as a worker's compensation insurance provider by the appropriate state agency, and (c) has been accepted to provide worker's compensation insurance for similar projects by the state within the last 12 months.

6.03 ***Contractor's Insurance***

SC-6.03 Supplement Paragraph 6.03 with the following provisions after Paragraph 6.03.C:

E. *Workers' Compensation and Employer's Liability:* Contractor shall purchase and maintain workers' compensation and employer's liability insurance, including, as applicable, United States Longshoreman and Harbor Workers' Compensation Act, Jones Act, stop-gap employer's liability coverage for monopolistic states, and foreign voluntary workers' compensation (from available sources, notwithstanding the jurisdictional requirement of Paragraph 6.02.B of the General Conditions).

Workers' Compensation and Related Policies	Policy limits of not less than:
Workers' Compensation	
State	Statutory
Applicable Federal (e.g., Longshoreman's)	Statutory
Foreign voluntary workers' compensation (employer's responsibility coverage), if applicable	Statutory
Employer's Liability	
Each accident	$500,000
Each employee	$500,000
Policy limit	$500,000

~~F. *Commercial General Liability—Claims Covered:* Contractor shall purchase and maintain commercial general liability insurance, covering all operations by or on behalf of Contractor, on an occurrence basis, against claims for:~~

~~1. damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees,~~

~~2. damages insured by reasonably available personal injury liability coverage, and~~

~~3. damages because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom.~~

G. *Commercial General Liability—Form and Content:* Contractor's commercial liability policy must be written on a 1996 (or later) Insurance Services Organization, Inc. (ISO) commercial

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

general liability form (occurrence form) and include the following coverages and endorsements:

1. Products and completed operations coverage.
    a. Such insurance must be maintained for three years after final payment.
    b. Contractor shall furnish Owner and each other additional insured (as identified in the Supplementary Conditions or elsewhere in the Contract) evidence of continuation of such insurance at final payment and three years thereafter.
2. Blanket contractual liability coverage, including but not limited to coverage of Contractor's contractual indemnity obligations in Paragraph 7.18.
3. Severability of interests and no insured-versus-insured or cross-liability exclusions.
4. Underground, explosion, and collapse coverage.
5. Personal injury coverage.
6. Additional insured endorsements that include both ongoing operations and products and completed operations coverage through ISO Endorsements CG 20 10 10 01 and CG 20 37 10 01 (together). If Contractor demonstrates to Owner that the specified ISO endorsements are not commercially available, then Contractor may satisfy this requirement by providing equivalent endorsements.
7. For design professional additional insureds, ISO Endorsement CG 20 32 07 04 "Additional Insured—Engineers, Architects or Surveyors Not Engaged by the Named Insured" or its equivalent.

~~H. *Commercial General Liability—Excluded Content:* The commercial general liability insurance policy, including its coverages, endorsements, and incorporated provisions, must not include any of the following:~~

~~1. Any modification of the standard definition of "insured contract" (except to delete the railroad protective liability exclusion if Contractor is required to indemnify a railroad or others with respect to Work within 50 feet of railroad property).~~

~~2. Any exclusion for water intrusion or water damage.~~

~~3. Any provisions resulting in the erosion of insurance limits by defense costs other than those already incorporated in ISO form CG 00 01.~~

~~4. Any exclusion of coverage relating to earth subsidence or movement.~~

~~5. Any exclusion for the insured's vicarious liability, strict liability, or statutory liability (other than worker's compensation).~~

~~6. Any limitation or exclusion based on the nature of Contractor's work.~~

~~7. Any professional liability exclusion broader in effect than the most recent edition of ISO form CG 22 79.~~

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

I. *Commercial General Liability—Minimum Policy Limits*

Commercial General Liability	Policy limits of not less than:
General Aggregate	$1,000,000/occur $2,000,000 agg
Products—Completed Operations Aggregate	$1,000,000/occur $2,000,000 agg
Personal and Advertising Injury	$1,000,000
Bodily Injury and Property Damage—Each Occurrence	$1,000,000

J. *Automobile Liability:* Contractor shall purchase and maintain automobile liability insurance for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance, or use of any motor vehicle. The automobile liability policy must be written on an occurrence basis.

Automobile Liability	Policy limits of not less than:
Bodily Injury	
Each Person	$1,000,000
Each Accident	$2,000,000
Property Damage	
Each Accident	$1,000,000
[or]	
Combined Single Limit	
Combined Single Limit (Bodily Injury and Property Damage)	$5,000,000

K. *Umbrella or Excess Liability:* Contractor shall purchase and maintain umbrella or excess liability insurance written over the underlying employer's liability, commercial general liability, and automobile liability insurance described in the Paragraphs above. The coverage afforded must be at least as broad as that of each and every one of the underlying policies.

Excess or Umbrella Liability	Policy limits of not less than:
Each Occurrence	$2,000,000
General Aggregate	$2,000,000

~~L. *Using Umbrella or Excess Liability Insurance to Meet CGL and Other Policy Limit Requirements:* Contractor may meet the policy limits specified for employer's liability, commercial general liability, and automobile liability through the primary policies alone, or through combinations of the primary insurance policy's policy limits and partial attribution of the policy limits of an umbrella or excess liability policy that is at least as broad in coverage as that of the underlying policy, as specified herein. If such umbrella or excess liability policy was required under this Contract, at a specified minimum policy limit, such umbrella or excess policy must retain a minimum limit of $**[specify amount]** after accounting for partial attribution of its limits to underlying policies, as allowed above.~~

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

M. *Contractor's Pollution Liability Insurance:* Contractor shall purchase and maintain a policy covering third-party injury and property damage, including cleanup costs, as a result of pollution conditions arising from Contractor's operations and completed operations. This insurance must be maintained for no less than three years after final completion.

Contractor's Pollution Liability	Policy limits of not less than:
Each Occurrence/Claim	$1,000,000
General Aggregate	$1,000,000

~~N.~~ Q. *Other Required Insurance:* Contractor shall purchase and maintain for Owner, at no additional cost, Owner's Protective Liability insurance naming Owner as the named insured with insurance that will protect said parties against claims which may arise from operations under the Contract Documents. This coverage shall be from the same company that provides Contractor's liability insurance coverage, and in the same minimum amounts. The Engineer and Engineer's consultants are additional insured as their interest may appear including their officers, directors, agents and employees.

SC-6.05 *Property Insurance*

SC-6.05 Add the following to the list of requirements in Paragraph 6.05.A, as a numbered item:

13. be subject to a deductible amount of no more than $5,000.00 for direct physical loss in any one occurrence.

SC-6.05.A.1 Add the following new subparagraph after subparagraph 6.05.A.1:

a. In addition to Owner, Contractor, and all Subcontractors, include as insureds the following:

1. Wall Engineering, LLC, 223 N Washington Ave, Durant, OK 74702

SC-6.05.A. Add the following to the list of items in Paragraph 6.05.A, as numbered items:

14. include for the benefit of Owner loss of profits and soft cost coverage including, without limitation, fixed expenses and debt service for a minimum of 12 months

SC-6.06 Add a new paragraph "6.07" as follows:

SC-6.07 Owner's Insurance for Project

A. Owner shall not be responsible for purchasing and maintaining any insurance to protect the interest of the Contractor, Subcontractors, or others in the Work. The stated limits of insurance required are minimum only. Contractor shall determine the limits that are adequate. These limits may be basic policy limits or any combination of basic limits and umbrella limits. In any event, Contractor is fully responsible for all losses arising out of, resulting from or connected with operations under this contract whether or not said losses are covered by insurance. The acceptance of certificates or other evidence of insurance by the Owner, Engineer, and/or others listed as additional insured in Paragraph 5.04 B.1 that in

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

any respect do not comply with the Contract requirements does not release the Contractor from compliance herewith.

ARTICLE 7—CONTRACTOR'S RESPONSIBILITIES

SC-7.01 Supervision and Superintendent

SC-7.01.B. Delete Paragraph 7.01 B. in its entirety, and insert the following:

B. Contractor's resident superintendent shall have a minimum of 7-years of superintendent experience on similar size and complexity projects. Contractor shall provide documentation to Engineer at least 14-days prior to beginning work on the site demonstrating that the superintendent meets all qualification requirements. Contractor's superintendent shall speak fluid English. Failure to meet the qualification requirements entitles the Engineer to require the Contractor replace the superintendent. Engineer/Owner shall review the superintendent's qualifications and accept the superintendent to perform their duties on the project. Superintendent shall be on site at all times when work is being performed on the Project by Contractor's work force or any of their subcontractors. Failure of the superintendent to be present will result in an automatic work-stoppage on the site until which time superintendent is present. The mandatory work-stoppage shall not entitle the Contractor to any additional compensation. Contractor's failure to properly address and resolve any superintendent issues due to qualifications, job site absenteeism, language barriers, etc., shall result in Owner holding payment to contractor until contractor properly resolves the issue(s).

7.03 Labor; Working Hours

SC-7.03 Delete paragraph 7.02 B. and insert the following in its place:

Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, no Work shall be performed at the Site between 6:00 p.m. and 7:00 a.m. Contractor will not permit the performance of Work on a Saturday, Sunday, or any District holiday without Owner's written consent. Should Contractor desire to work on these days, he shall contact the Owner, in writing, for approval at least 48 hours in advance.

Emergency work may be done without prior permission. Tie-ins and connections to existing facilities will be made at time authorized by the Owner

7.04 Services, Materials, and Equipment

SC-7.04 *Add the following paragraphs immediately after paragraph 7.04.C:*

D. Interfaces to Equipment, Instruments, and Other Components:

1. The drawings, specifications, and overall design are based on preliminary information furnished by various equipment manufacturers which identify a minimum scope of supply from the manufacturers. This information pertains to, but is not limited to, instruments, control devices, electrical equipment, packaged mechanical systems, and control equipment provided with mechanical systems.

2. Provide all material and labor needed to install the actual equipment furnished, and include all costs to add any additional conduit, wiring, terminals, or other electrical

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

hardwired to the work, which may be necessary to make a complete, functional installation based on the actual equipment furnished:

a. Make all changes necessary to meet the manufacturer's wiring requirements.

3. Submit all such changes and additions to the Engineer for acceptance in accordance with the General Conditions.

4. Review the complete set of drawings and specifications in order to ensure that all items related to the electrical power and control systems are completely accounted for. Include any such items that appear on drawings or in specifications from another specification of Work.

E. Until Substantial Completion of the Work is acknowledged by Owner, Contractor shall have the responsible charge and care of the Work and of materials to be used herein, including materials for which Contractor has received partial payment or materials which have been furnished by Owner, and shall bear the risk of injury, loss, or damage to any part thereof by the action of the elements or from any other cause, whether arising from the execution or from the nonexecution of the Work.

F. Contractor shall rebuild, repair, restore, and make good all injuries, losses, or damages to any portion of the Work or the materials occasioned by any cause before the Work's completion and acceptance and shall bear the expense thereof. Where necessary to protect the Work or materials from damage, Contractor shall, at Contractor's own expense, provide suitable drainage and erect such temporary structures or rent such structures as are necessary to protect the Work or materials from damage. The suspension of the Work or the granting of an extension of time from any cause whatever shall not relieve Contractor or Contractor's responsibility for the Work and materials as specified herein.

G. When the quality of a material, process, or article is not specifically set forth in the Contract Documents, the best available quality of the material, process, or article shall be provided.

H. Delivery and Inspection:

1. Deliver products in undamaged condition, in manufacturer's original container or packaging with identifying labels intact and legible. Include date of manufacture on label.

7.05 "Or Equals"

SC-7.05.A Delete paragraph 7.05.A and insert the following in lieu thereof:

A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. If the specification or description contains the words, "or equal" or "or equal allowed", or "or equal item is permitted", Contractor may request that Engineer authorize the use of other items of material or equipment, or items from other proposed suppliers under the circumstances described below. Unless these words are specifically written in the description of such item, no substitution is allowed per this Contract. If the item's description is followed by words reading that "no like", "no

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

equivalent", or "no or equal" item is permitted, then no substitution of like items or like manufacturers is allowed as part of this Contract.

1. If Engineer in its sole discretion determines that an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer shall deem it an "or equal" item. For the purposes of this paragraph, a proposed item of material or equipment will be considered functionally equal to an item so named if:
    a. in the exercise of reasonable judgment Engineer determines that:
        1) It is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;
        2) it will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;
        3) it has a proven record of performance and availability of responsive service; and
        4) it is not objectionable to Owner.
    b. Contractor certifies that, if approved and incorporated into the Work:
        1) there will be no increase in cost to the Owner or increase in Contract Times; and
        2) it will conform substantially to the detailed requirements of the item named in the Contract Documents.

7.06 Substitutes

SC-7.06.A Delete paragraph 7.06.A and insert the following in lieu thereof:

A. Unless the specification or description of an item of material or equipment required to be furnished under the Contract Documents contains or is followed by words reading that, "or equal" or "or equal allowed", or "or equal item is permitted", then no substitution of like items is permitted. If the item's description includes the words "no substitution is permitted", "no like", "no equivalent", or "no or equal" item is permitted, then no substitution of like items or like manufacturers is allowed as part of this Contract. If the words, "or equal is permitted, "or equal", or "like items are permitted", Contractor may request that Engineer authorize the use of other items of material or equipment under the circumstances described below. To the extent possible such requests shall be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of material or equipment from anyone other than Contractor.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.05.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of material or equipment that Contractor seeks to furnish or use. The application:

   a. shall certify that the proposed substitute item will:

      1) perform adequately the functions and achieve the results called for bythe general design,

      2) be similar in substance to that specified, and

      3) be suited to the same use as that specified.

   b. will state:

      1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times,

      2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item, and

      3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

   c. will identify:

      1) all variations of the proposed substitute item from that specified, and

      2) available engineering, sales, maintenance, repair, and replacement services.

   d. shall contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

7.07 Concerning Subcontractors and Suppliers

SC-7.07.D Delete paragraph 7.07.D and insert the following in lieu thereof, and add subparagraph 7.06.7.1:

B. Contractor shall submit to the Owner a list of certain Subcontractors, Suppliers, or other individuals or entities for acceptance by Owner as stipulated in the Bidding Documents. Owner's acceptance (either in writing or by failing to make written objection thereto within two weeks of submittal of the list) of any such Subcontractor, Supplier, or other individual or entity so identified may be revoked on the basis of reasonable objection after due investigation.

   1. Subcontracting: Contractor shall perform with Contractor's own organization work amounting to not less than 51 percent of the combined value of all items of the Work covered by the Contract.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

SC-7.07 Amend Paragraph 7.06.A by adding the following text to the end of the Paragraph:

The Contractor shall not award work valued at more than fifty percent of the Contract Price to Subcontractor(s), without prior written approval of the Owner.

7.10 *Taxes*

SC-7.10 Add a new paragraph immediately after Paragraph 7.10.A:

C. Owner is NOT exempt from payment of sales and compensating use taxes of the State of Oklahoma and of cities and counties thereof on all materials to be incorporated into the Work. Said sales and compensating use taxes should be incorporated into the price bid.

ARTICLE 8—OTHER WORK AT THE SITE

No suggested Supplementary Conditions in this Article.

ARTICLE 9—OWNER'S RESPONSIBILITIES

No suggested Supplementary Conditions in this Article.

ARTICLE 10—ENGINEER'S STATUS DURING CONSTRUCTION

10.03 Resident Project Representative

SC-10.03 Add the following new paragraphs immediately after Paragraph 10.03.B:

C. The Resident Project Representative (RPR) will be Engineer's representative at the Site. RPR's dealings in matters pertaining to the Work in general will be with Engineer and Contractor. RPR's dealings with Subcontractors will only be through or with the full knowledge or approval of Contractor. The RPR will:

1. *Conferences and Meetings:* Attend meetings with Contractor, such as preconstruction conferences, progress meetings, job conferences, and other Project-related meetings (but not including Contractor's safety meetings), and as appropriate prepare and circulate copies of minutes thereof.

2. *Safety Compliance:* Comply with Site safety programs, as they apply to RPR, and if required to do so by such safety programs, receive safety training specifically related to RPR's own personal safety while at the Site.

3. *Liaison*

   a. Serve as Engineer's liaison with Contractor. Working principally through Contractor's authorized representative or designee, assist in providing information regarding the provisions and intent of the Contract Documents.

   b. Assist Engineer in serving as Owner's liaison with Contractor when Contractor's operations affect Owner's on-Site operations.

   c. Assist in obtaining from Owner additional details or information, when required for Contractor's proper execution of the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. *Review of Work; Defective Work*

    a. Conduct on-Site observations of the Work to assist Engineer in determining, to the extent set forth in Paragraph 10.02, if the Work is in general proceeding in accordance with the Contract Documents.

    b. Observe whether any Work in place appears to be defective.

    c. Observe whether any Work in place should be uncovered for observation, or requires special testing, inspection or approval.

5. *Inspections and Tests*

    a. Observe Contractor-arranged inspections required by Laws and Regulations, including but not limited to those performed by public or other agencies having jurisdiction over the Work.

    b. Accompany visiting inspectors representing public or other agencies having jurisdiction over the Work.

6. *Payment Requests:* Review Applications for Payment with Contractor.

7. *Completion*

    a. Participate in Engineer's visits regarding Substantial Completion.

    b. Assist in the preparation of a punch list of items to be completed or corrected.

    c. Participate in Engineer's visit to the Site in the company of Owner and Contractor regarding completion of the Work, and prepare a final punch list of items to be completed or corrected by Contractor.

    d. Observe whether items on the final punch list have been completed or corrected.

D. The RPR will not:

1. Authorize any deviation from the Contract Documents or substitution of materials or equipment (including "or-equal" items).

2. Exceed limitations of Engineer's authority as set forth in the Contract Documents.

3. Undertake any of the responsibilities of Contractor, Subcontractors, or Suppliers.

4. Advise on, issue directions relative to, or assume control over any aspect of the means, methods, techniques, sequences or procedures of construction.

5 Advise on, issue directions regarding, or assume control over security or safety practices, precautions, and programs in connection with the activities or operations of Owner or Contractor.

6. Participate in specialized field or laboratory tests or inspections conducted off-site by others except as specifically authorized by Engineer.

7. Authorize Owner to occupy the Project in whole or in part.

ARTICLE 11—CHANGES TO THE CONTRACT

No suggested Supplementary Conditions in this Article.

ARTICLE 12—CLAIMS

No suggested Supplementary Conditions in this Article.

ARTICLE 13—COST OF WORK; ALLOWANCES, UNIT PRICE WORK

13.03 Unit Price Work

SC-13.03 Delete Paragraph 13.03.E in its entirety and insert the following in its place:

E. *Adjustments in Unit Price*

1. Contractor or Owner shall be entitled to an adjustment in the unit price with respect to an item of Unit Price Work if:

   a. the extended price of a particular item of Unit Price Work amounts to 20% percent or more of the Contract Price (based on estimated quantities at the time of Contract formation) and the variation in the quantity of that particular item of Unit Price Work actually furnished or performed by Contractor differs by more than 20% percent from the estimated quantity of such item indicated in the Agreement; and

   b. Contractor's unit costs to perform the item of Unit Price Work have changed materially and significantly as a result of the quantity change.

2. The adjustment in unit price will account for and be coordinated with any related changes in quantities of other items of Work, and in Contractor's costs to perform such other Work, such that the resulting overall change in Contract Price is equitable to Owner and Contractor.

3. Adjusted unit prices will apply to all units of that item.

ARTICLE 14—TESTS AND INSPECTIONS; CORRECTION, REMOVAL, OR ACCEPTANCE OF DEFECTIVE WORK

No suggested Supplementary Conditions in this Article.

ARTICLE 15—PAYMENTS TO CONTRACTOR; SET OFFS; COMPLETIONS; CORRECTION PERIOD

15.01 Progress Payments

SC-15.01.B Delete "At least twenty days before the date established for each progress payment (but not more than once a month)" in the first sentence of paragraph 15.01.B and insert "On the last day of each calendar month" in lieu thereof and add the following subparagraphs at the end of 15.01.B:

5. Stored Materials and Equipment: Payments for stored materials and equipment shall be based only upon the actual cost of the materials and equipment to Contractor and shall

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

not include any overhead or profit to Contractor. Partial payments will not be made for undelivered materials or equipment, except for payments associated with procurement contracts initiated by Owner and assigned to Contractor.

6. Schedules and Data: During the progress of the Work, each Application for Payment shall be accompanied by Contractor's updated schedule of operations, or progress report, with such shop drawings schedules, procurement schedules, value of material on hand included in application, and other data specified in Section 01 33 00 of the specifications or reasonably required by Engineer.

7. Payment for material delivered to the work site or stored under Owner's control will be based on the vendors' paid invoices or the bill of lading showing date of delivery and the work site where the delivery took place, a copy of which shall be furnished by Contractor to Engineer with each request for progress payment. Only those materials which have been incorporated into the Project or are stored under Owner's control may be included in the progress payment as material stored.

8. In addition to the amounts which Owner may retain as provided elsewhere in the Contract Documents, Owner may withhold a sufficient amount or amounts from any payment otherwise due Contractor as in Owner's judgment may be necessary to cover:

    a. Payments which may be due and payable for properly filed claims against Contractor or any Subcontractor for labor or materials furnished in or about the performance of the Contract.

    b. Estimated or actual costs for correcting defective work not remedied.

    c. Amounts claimed by Owner as forfeiture due to delays or other offsets. Owner may apply such withheld amount or amounts to the payment of such claim at Owner's discretion. In doing so, Owner shall be deemed the agent of Contractor and any payments so made by Owner shall be considered as a payment made under the Contract by Owner to Contractor, and Owner shall not be liable to Contractor for such payment made in good faith. Such payments may be made without prior judicial determination of the claim or claims. Owner shall render to Contractor a proper account of any such funds disbursed in or on behalf of Contractor.

9. Contractor shall disburse money paid to him, including any interest Contractor receives, to Subcontractors and Suppliers within 15 days after Contractor receives the money, in direct proportion to the Subcontractors' and Suppliers' basis in the total Contract between Contractor and Owner. Any money which is payable to a Subcontractor pursuant to this section accrues interest at the legal rate. Contractor may withhold 10 percent from the amount of any partial payment under a subcontract which is made before 50 percent of the Work has been completed under the subcontract. Thereafter Contractor shall pay any additional funds if, in the opinion of Contractor, satisfactory progress is being made in the work under the subcontract, and the payment must be equal to that paid by Owner to Contractor for the Work performed by the Subcontractor.

    a. The Contractor may retain the amount withheld under the subcontract until the subcontract is satisfactorily completed.

EJCDC® C-800, Supplementary Conditions of the Construction Contract.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. The amount withheld under the subcontract is due within 15 days after the acceptance of the subcontract work by Contractor.

c. Whenever Contractor receives a payment of interest earned on the amount withheld from the Contract, Contractor shall within 15 days pay to each Subcontractor that portion of the interest received from the state which is attributable to the amount of money withheld from the Subcontractor.

SC-15.01.D Delete paragraph 15.01.D.1 and insert the following paragraph in lieu thereof:

1. Sixty (60) days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended less amounts due to Owner and other amounts which are authorized to be reserved or retained by state law will (subject to the provisions of paragraph 15.01) become due and when due will be paid by Owner to Contractor.

15.03 Substantial Completion

SC-15.03.A Add the following subparagraphs immediately after paragraph 15.03.A:

1. For the work to be considered substantially complete, all portions of the work must be operational and ready for Owner's continuous use.

15.06 Final Payment

SC-15.06.E In the first sentence of paragraph 15.06.E, delete the word "Thirty" and replace with "Sixty".

SC-15.06.F Final Payments: Add the following subparagraphs immediately after paragraph 15.06.E:

E. Final Payments: At the project's completion, the Contractor shall execute a Release and Lien Waiver to release all claims against the Owner arising under and by virtue of his Contract. The date of the Release shall be that agreed to for the final acceptance of the project with the Owner. The Release form and Contractor's Affidavit form are included at the end of these Supplementary Conditions.

15.08 Correction Period

SC-15.08.A Delete "Substantial Completion" and insert "final acceptance" in lieu thereof.

SC-15.08.B Delete "Substantial Completion" and insert "final acceptance" in lieu thereof.

SC-15.08G Add the following paragraphs immediately after paragraph 15.08.F:

F. Contractor's obligation under this paragraph includes also providing a correction period from the substantial completion of any early completion items until the project's final completion and the beginning and completion of the 1-year completion's period as defined in paragraph 15.08.A.

G. Remedying Defects: If, at any time before expiration of the correction period under 15.08.A, Owner determines that the goods are defective, Contractor shall either correct the defects or remove the goods and replace them with non-defective goods.

H. Owner May Remedy: If Contractor fails to take action as required by Owner in accordance with paragraph 15.08.B, Owner may, after ten days' written notice to Contractor, remedy any such deficiency, instead of requiring removal or replacement. In an emergency where

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

delay would cause serious risk of loss or damage, Owner may take such action without notice to or waiting for action by Contractor.

I. Correction Period: Contractor's responsibility for remedying defects will extend for a period of one (1) year after date of final acceptance, or for such longer period of time as may be prescribed by law or by provisions of manufacturer's warranty or guarantee in conformance with the Contract Documents.

ARTICLE 16—SUSPENSION OF WORK AND TERMINATION

16.01 Owner May Suspend Work

SC-16.01 Delete paragraph 16.01.A and insert the following in lieu thereof:

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by written notice to Contractor and Engineer. Such notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. At the discretion of the Owner, the Contractor may be entitled to an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension. Any Change Proposal seeking such adjustments shall be submitted no later than 30 days after the date fixed for resumption of Work.

16.02 Owner May Terminate for Cause

SC-16.02 Delete paragraphs 16.02.A through 16.02.D and insert the following in lieu thereof:

A. If Contractor refuses or fails to prosecute the Work or any separable part thereof with such diligence as will ensure the completion of the Work within the Contract Times, or any extension thereof, or fails or refuses to complete such Work within such extension, or if Contractor should be adjudged bankrupt, or if Contractor should make assignment for the benefit of Contractor's creditors, or if Contractor files a petition to take advantage of any debtor's act, or if a receiver should be appointed on account of Contractor's insolvency, or if Contractor or any Subcontractor should violate any provision of the Contract, or if Contractor should persistently refuse or should fail to supply enough properly skilled workmen or proper materials to complete the Work in the time specified, or if Contractor should fail to make prompt payment to Subcontractors or for materials or labor, or if Contractor should disregard laws, ordinances, or instructions given by Owner, Engineer, or Owner's Operating Agent or disregard in any substantial way any provisions of the Contract Documents; Owner may without prejudice to any other right or remedy, serve written notice upon Contractor and Contractor's surety of Owner's intention to terminate the Contract. Such notice will contain the reasons for Owner's intention to terminate the Contract and unless such violations shall cease and satisfactory arrangements for the corrections thereof have been accepted by Owner in writing within 10 days after the service of such notice, the Contract shall upon the expiration of said 10 days cease and terminate. In the event of such termination, the Owner shall immediately serve written notice upon the Surety and Contractor, and Contractor shall be liable for all costs necessary to complete the Work.

B. The Surety shall, after receipt of notification from Owner of termination of the Contract, take over and perform the Work, utilizing a contractor which qualified under the prequalification

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

criteria and which is acceptable to Engineer. The Surety shall, within 10 days after receipt of the notice of termination, provide Owner with written notice of Surety's intent to take over and complete the Work in accordance with the Contract Documents, and shall commence the Work within 10 days thereafter.

C. If the Surety does not reply to the notice of termination, or fails to perform the Work in compliance with the Contract Documents, or provides the Owner with written notice that Surety does not intend to take over and perform the Work to completion, Owner may without prejudice on the part of the Surety, take over the Work and prosecute the same to completion by any method Owner may deem advisable for the account at the expense of Contractor, and the Surety shall be liable to Owner for any excess cost or other damage occasioned Owner thereby. In such event Owner may, without liability for so doing, take possession of and utilize in completing the Work such materials, appliances, plant, and other property belonging to Contractor that may be on the work sites and be necessary therefor. Contractor shall turn over to Owner's Operating Agent all materials and equipment in Contractor's possession that is to be incorporated into the Project, and shall make arrangements with Owner to turn over any materials or equipment in which Owner has made payment or partial payment but is not in Owner's possession.

D. Upon completion of the Work, if the unpaid balance of the Contract Price exceeds the direct and indirect cost of completing the Work, including, but not limited to, all costs incurred by Owner from professional services and attorneys' fees and all costs generated to insure or bond the Work of substituted contractors or subcontractors used to complete the Work, such excess shall be paid to Contractor. If such costs exceed the unpaid balance, Contractor shall pay the difference to Owner within 30 days upon demand; on failure of Contractor to pay, the Surety shall promptly pay the difference to Owner upon written notice of Contractor's failure of payment. Such difference or any portion thereof not paid by the Contractor or the Surety within the 30 days following the date of mailing of the demand for payment, shall earn interest at the rate of 10 percent per annum or the maximum rate authorized by state law, whichever is lower.

16.04 Contractor May Stop Work or Terminate

SC-16.04 Delete paragraph 16.04 in its entirety.

RULES AND REGULATIONS

TITLE 41 - PUBLIC CONTRACT AND PROPERTY MANAGEMENT

CHAPTER 60 - OFFICE OF FEDERAL CONTRACT COMPLIANCE PROGRAMS, EQUAL EMPLOYMENT OPPORTUNITY, DEPARTMENT OF LABOR COMPLIANCE RESPONSIBILITY FOR EQUAL EMPLOYMENT OPPORTUNITY FINAL RULE

60–1.4 Equal opportunity clause.

(b) Federally assisted construction contracts.

(1) Except as otherwise provided, each administering agency shall require the inclusion of the following language as a condition of any grant, contract, loan, insurance, or guarantee involving federally assisted construction which is not exempt from the requirements of the equal opportunity clause:

The applicant hereby agrees that it will incorporate or cause to be incorporated into any contract for construction work, or modification thereof, as defined in the regulations of the Secretary of Labor at 41 CFR Chapter 60, which is paid for in whole or in part with funds obtained from the Federal Government or borrowed on the credit of the Federal Government pursuant to a grant, contract, loan insurance, or guarantee, or undertaken pursuant to any Federal program involving such grant, contract, loan, insurance, or guarantee, the following equal opportunity clause:

During the performance of this contract, the contractor agrees as follows:

(1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex, or national origin. such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive considerations for employment without regard to race, color, religion, sex, or national origin.

(3) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representatives of the contractor's commitments under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(5) The contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the administering agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(7) The contractor will include the portion of the sentence immediately preceding paragraph (1) and the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for noncompliance: Provided, however, That in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the administering agency the contractor may request the United States to enter into such litigation to protect the interests of the United States.

The applicant further agrees that it will be bound by the above equal opportunity clause with respect to its own employment practices when it participates in federally assisted construction work: Provided, That if the applicant so participating is a State or local government, the above equal opportunity clause is not applicable to any agency, instrumentality or subdivision of such government which does not participate in work on or under the contract.

The applicant agrees that it will assist and cooperate actively with the administering agency and the Secretary of Labor in obtaining the compliance of contractors and subcontractors with the equal opportunity clause and the rules, regulations, and relevant orders of the Secretary of Labor, that it will furnish the administering agency and the Secretary of Labor such information as they may require for the supervision of such compliance, and that it will otherwise assist the administering agency in the discharge of the agency's primary responsibility for securing compliance.

The applicant further agrees that it will refrain from entering into any contract or contract modification subject to Executive Order 11246 of September 24, 1965, with a contractor debarred from, or who has not demonstrated eligibility for, Government contracts and federally assisted construction contracts pursuant to the Executive order and will carry out such sanctions and penalties for violation of the equal opportunity clause as may be imposed upon contractors and subcontractors by the administering agency or the Secretary of Labor pursuant to Part II, Subpart D of the Executive order. In addition, the applicant agrees that if it fails or refuses to comply with these undertakings, the administering agency may take any or all of the following actions: Cancel, terminate, or suspend in whole or in part this grant (contract, loan, insurance, guarantee); refrain from extending any further assistance to the applicant under the program with respect to which the failure or refund occurred until satisfactory assurance of future compliance has been received from such applicant; and refer the case to the Department of Justice for appropriate legal proceedings.

(c) Subcontracts. Each nonexempt prime contractor or subcontractor shall include the equal opportunity clause in each of its nonexempt subcontracts.

(d) Incorporation by reference. The equal opportunity clause may be incorporated by reference in all Government contracts and subcontracts, including Government bills of lading, transportation requests, contracts for deposit of Government funds, and contracts for issuing and paying U.S. savings bonds and notes, and such other contracts and subcontracts as the Deputy Assistant Secretary may designate.

(e) Incorporation by operation of the order. By operation of the order, the equal opportunity clause shall be considered to be a part of every contract and subcontract required by the order and the regulations in this part to include such a clause whether or not it is physically incorporated in such contracts and whether or not the contract between the agency and the contractor is written.

(f) Adaptation of language. Such necessary changes in language may be made in the equal opportunity clause as shall be appropriate to identify properly the parties and their undertakings.

[43 FR 49240, Oct. 20, 1978, as amended at 62 FR 66971, Dec. 22, 1997]

60-4.2 Solicitations.

(a) All Federal contracting officers and all applicants shall include the notice set forth in paragraph (d) of this section and the Standard Federal Equal Employment Opportunity Construction Contract Specifications set forth in § 60-4.3 of this part in all solicitations for offers and bids on all Federal and federally assisted construction contracts or subcontracts to be performed in geographical areas designated by the Director pursuant to § 60-4.6 of the part. Administering agencies shall require the inclusion of the notice set forth in paragraph (d)

of this section and the specifications set forth in § 60-4.3 of this part as a condition of any grant, contract, subcontract, loan, insurance or guarantee involving federally assisted construction covered by this Part 60-4.

(b) All nonconstruction contractors covered by Executive Order 11246 and the implementing regulations shall include the notice in paragraph (d) of this section in all construction agreements which are necessary in whole or in part to the performance of the covered nonconstruction contract.

(c) Contracting officers, applicants and nonconstruction contractors shall given written notice to the Director within 10 working days of award of a contract subject to these provisions. The notification shall include the name, address and telephone number of the contractor; employer identification number; dollar amount of the contract, estimated starting and completion dates of the contract; the contract number; and geographical area in which the contract is to be performed.

(d) The following notice shall be included in, and shall be a part of, all solicitations for offers and bids on all Federal and federally assisted construction contracts or subcontracts in excess of $10,000 to be performed in geographical areas designated by the Director pursuant to § 60-4.6 of this part (see 41 CFR 60-4.2(a)):

Notice of Requirement for Affirmative Action To Ensure Equal Employment Opportunity (Executive Order 11246)

1. The Offeror's or Bidder's attention is called to the "Equal Opportunity Clause" and the "Standard Federal Equal Employment Specifications" set forth herein.
2. The goals and timetables for minority and female participation, expressed in percentage terms for the Contractor's aggregate workforce in each trade on all construction work in the covered area, are as follows:

Goals for MBE

CONSTRUCTION 13.94%; SUPPLIES - 7.48%; SERVICES - 14.29%; EQUIPMENT - 9.13%

Goals for WBE

CONSTRUCTION - 6.92%; SUPPLIES - 0; SERVICES - 26.51%; EQUIPMENT - 19.90%

These goals are applicable to all the Contractor's construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor's goals shall be a violation of the contract, the Executive Order and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. The Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 working days of award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.
4. As used in this Notice, and in the contract resulting from this solicitation, the "covered area" is (insert description of the geographical areas where the contract is to be performed giving the state, county and city, if any).

[43 FR 49254, Oct. 20, 1978; 43 FR 51401, Nov. 3, 1978, as amended at 45 FR 65977, Oct. 3, 1980]

60-4.3 Equal opportunity clauses.

(a) The equal opportunity clause published at 41 CFR 60-1.4(a) of this chapter is required to be included in, and is part of, all nonexempt Federal contracts and subcontracts, including construction contracts and subcontracts. The

equal opportunity clause published at 41 CFR 60-1.4(b) is required to be included in, and is a part of, all nonexempt federally assisted construction contracts and subcontracts. In addition to the clauses described above, all Federal contracting officers, all applicants and all nonconstruction contractors, as applicable, shall include the specifications set forth in this section in all Federal and federally assisted construction contracts in excess of $10,000 to be performed in geographical areas designated by the Director pursuant to § 60-4.6 of this part and in construction subcontracts in excess of $10,000 necessary in whole or in part to the performance of nonconstruction Federal contracts and subcontracts covered under the Executive order.

Standard Federal Equal Employment Opportunity Construction Contract Specifications (Executive Order 11246)

1. As used in these specifications:
   a. "Covered area" means the geographical area described in the solicitation from which this contract resulted;
   b. "Director" means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;
   c. "Employer identification number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.
   d. "Minority" includes:
      (i) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
      (ii) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);
      (iii) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
      (iv) American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).
2. Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of $10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.
3. If the Contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each Contractor or Subcontractor participating in an approved Plan is individually required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other Contractors or Subcontractors toward a goal in an approved Plan does not excuse any covered Contractor's or Subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.
4. The Contractor shall implement the specific affirmative action standards provided in paragraphs 7 a through p of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered Construction contractors performing construction work in geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or

from Federal procurement contracting officers. The Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement, to refer either minorities or women shall excuse the Contractor's obligations under these specifications, Executive Order 11246, or the regulations promulgated pursuant thereto.
6. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.
7. The Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:
    a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.
    b. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.
    c. Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefor, along with whatever additional actions the Contractor may have taken.
    d. Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.
    e. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under 7b above.
    f. Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is

performed.

g. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

h. Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.

i. Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

j. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a Contractor's work force.

k. Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.

l. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

m. Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.

n. Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

o. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

p. Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (7a through p). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar group of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under 7a through p of these Specifications provided that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The

obligation to comply, however, is the Contractor's and failure of such a group to fulfill an obligation shall not be a defense for the Contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goals for women generally, the Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).
10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.
11. The Contractor shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.
12. The Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.
13. The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.
14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.
15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

(b) The notice set forth in 41 CFR 60-4.2 and the specifications set forth in 41 CFR 60-4.3 replace the New Form for Federal Equal Employment Opportunity Bid Conditions for Federal and Federally Assisted Construction published at 41 FR 32482 and commonly known as the Model Federal EEO Bid Conditions, and the New Form shall not be used after the regulations in 41 CFR Part 60-4 become effective.

[43 FR 49254, Oct. 20, 1978; 43 FR 51401, Nov. 3, 1978, as amended at 45 FR 65978, Oct. 3, 1980]

DAVIS BACON ACT REQUIREMENTS (subchapter IV of Chapter 31 of Title 40, United States Code and 29 CFR parts 1, 3, and 5) (SEE APPENDIX 1 FOR CLARIFYING INFORMATION)

The Project or Program to which the construction work covered by this contract pertains is being assisted by the United States of America and the following Federal Labor Standards Provisions are included in this contract pursuant to the provisions applicable to such assistance.

(a) Any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public work, or building or work

financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in Sec. 5.1.

(1) Minimum wages. (i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in Sec. 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

(ii)(A) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate)determined pursuant to paragraphs (a)(1)(ii) (B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) Withholding. The ***OWRB SRF*** or the ***Owner*** shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) Payrolls and basic records. (i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the ***Owner for transmission to the OWRB SRF***. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at beta.SAM.gov or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors.

Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the ***OWRB SRF*** if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit them to the ***Owner***, as the case may be, for transmission to the ***OWRB SRF***, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the Owner.

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance" signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under Sec. 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under Sec. 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the ***CWSRF*** or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees--(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination.

Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the (write in the name of the Federal agency) may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts.
The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses
in 29 CFR 5.5.

(7) Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of eligibility. (i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of
section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

(b) **Contract Work Hours and Safety Standards Act.** The following clauses set forth in paragraphs (b)(1), (2), (3), and (4) of this section in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by Sec. 5.5(a) or 4.6 of part 4 of this title. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (b)(1) of this section the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed

with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (b)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (b)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The ***Owner or the OWRB SRF*** shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (b)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (b)(1) through (4) of this section.

(c) In addition to the clauses contained in paragraph (b), in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in Sec. 5.1, the Agency Head shall cause or require the contracting officer to insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid. Further, the Agency Head shall cause or require the contracting officer to insert in any such contract a clause providing that the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the ***Owner or OWRB SRF*** and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

WAGE RATE REQUIREMENTS

Notwithstanding any other provision of law and in a manner consistent with other provisions, all laborers and mechanics employed by contractors and subcontractors on projects funded directly by or assisted in whole or in part with CWSRF funds shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of chapter 31 of title 40, United States Code. With respect to the labor standards specified in this section, the Secretary of Labor shall have the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (64 Stat. 1267; 5 U.S.C. App.) and section 3145 of title 40, United States Code.

See Appendix 1 for clarifying information.

AMERICAN IRON AND STEEL (BUY AMERICAN)

P.L 113-76, Consolidated Appropriations Act, 2014, "American Iron and Steel" Section 436.

(a)(1) None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States.

(2) In this section, the term ''iron and steel products'' means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

(b) Subsection (a) shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency (in this section referred to as the "Administrator") finds that—

(1) applying subsection (a) would be inconsistent with the public interest;
(2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or
(3) inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

(c) If the Administrator receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Web site of the Environmental Protection Agency.

(d) This section shall be applied in a manner consistent with United States obligations under international agreements.

(e) The Administrator may retain up to 0.25 percent of the funds appropriated in this Act for the Clean and Drinking Water State Revolving Funds for carrying out the provisions described in subsection (a)(1) for management and oversight of the requirements of this section.

(f) This section does not apply with respect to a project if a State agency approves the engineering plans and specifications for the project, in that agency's capacity to approve such plans and specifications prior to a project requesting bids, prior to the date of the enactment of this Act.

Please see Appendices 2-4 for Waiver Information.

SYSTEM FOR AWARD MANAGMENT (SAM)

SAM registration is required for all SRF programs (CWSRF and DWSRF) applicants and Awardees (Entities, Prime Contractors, Subcontractors, Vendors) in order to be awarded contracts by the SRF Programs. SAM replaces Central Contractor Registration/Federal Agency Registration, Online Representations and Certifications Application, and Excluded Parties List System. Applicants and awardees are required to complete a one-time free registration to provide basic information relevant to procurement and financial transactions. Registrants must retain an active status to be eligible for SRF projects. New Applicants and Awardees can go to SAM.gov to complete the registration process.

Note: In order to register in SAM, a Data Universal Number System (DUNS) number will be required. DUNS number is a unique, non-indicative 9-digit identifier issued and maintained by Dun & Bradstreet (D&B) that verifies the existence of a business entity globally. D&B assigns DUNS numbers for each physical location of a business. All entities doing business with the U.S Government can receive a DUNS number FREE of charge and, under normal circumstances, within 1-2 business days when using D&B web form process at http://fedgov.dnb.com/webform.

OTHER SUPPLEMENTAL CONDITIONS

Disadvantaged Business Enterprises (DBE)

40 CFR 33.301 Contracting with disadvantaged business enterprises and labor surplus area firms.

The SRF loan recipient and subcontractors will take all necessary affirmative steps to assure that minority firms, women's business enterprises, and labor surplus area firms are used when possible.

DBE participation requirements apply to projects constructed with funds directly made available by the federal capitalization grant (equivalency projects).

(1) EPA and the State will negotiate a "Fair Share Objective" (which shall represent a percentage of DBE participation).

(2) When soliciting for a subcontractor (A/E or construction contractor), the loan recipient shall take the following six good faith efforts:

(A) Include qualified Small, DBE businesses on solicitation lists.

(B) Assure that Small, DBE businesses are solicited whenever they are potential sources.

(C) When economically feasible, divide total requirements into smaller tasks or quantities so as to permit maximum Small, DBE business participation.

(D) Where the requirements of the work permits, establish delivery schedules which will encourage participation by Small, DBE businesses.

(E) Use the services and assistance of the Small Business Administration, the Office of Minority Business Enterprise of the United States Department of Commerce, as appropriate.

(F) If any subcontracts are to be let, require the prime contractor or A/E to take the good faith efforts in (A) through (E) of this paragraph (2).

2. Affirmative Steps shall include:

(i) Placing qualified small and minority businesses and women's business enterprises on solicitation lists;

(ii) Assuring that small and minority businesses, and women's business enterprises are solicited whenever they are potential sources;

(iii) Dividing total requirements, when economically feasible, into smaller tasks or quantities to permit maximum participation by small and minority business, and women's business enterprises;

(iv) Establishing delivery schedules, where the requirement permits, which encourage participation by small and minority business, and women's business enterprises;

(v) Using the services and assistance of the Small Business Administration, and the Minority Business Development Agency of the Department of Commerce; and

(vi) Requiring the prime contractor, if subcontracts are to be let, to take the affirmative steps listed in paragraphs (e)(2)(i) through (v) of this section.

Completion Date

If not stated elsewhere in these specifications, the contractor shall complete work under this contract within calendar days. Time for completion shall begin on the 10th day after issuance of the work order, which shall consist of a written request by the engineer for the contractor to proceed with the construction of the project.

Contractor's Liability and Builders All Risk Insurance

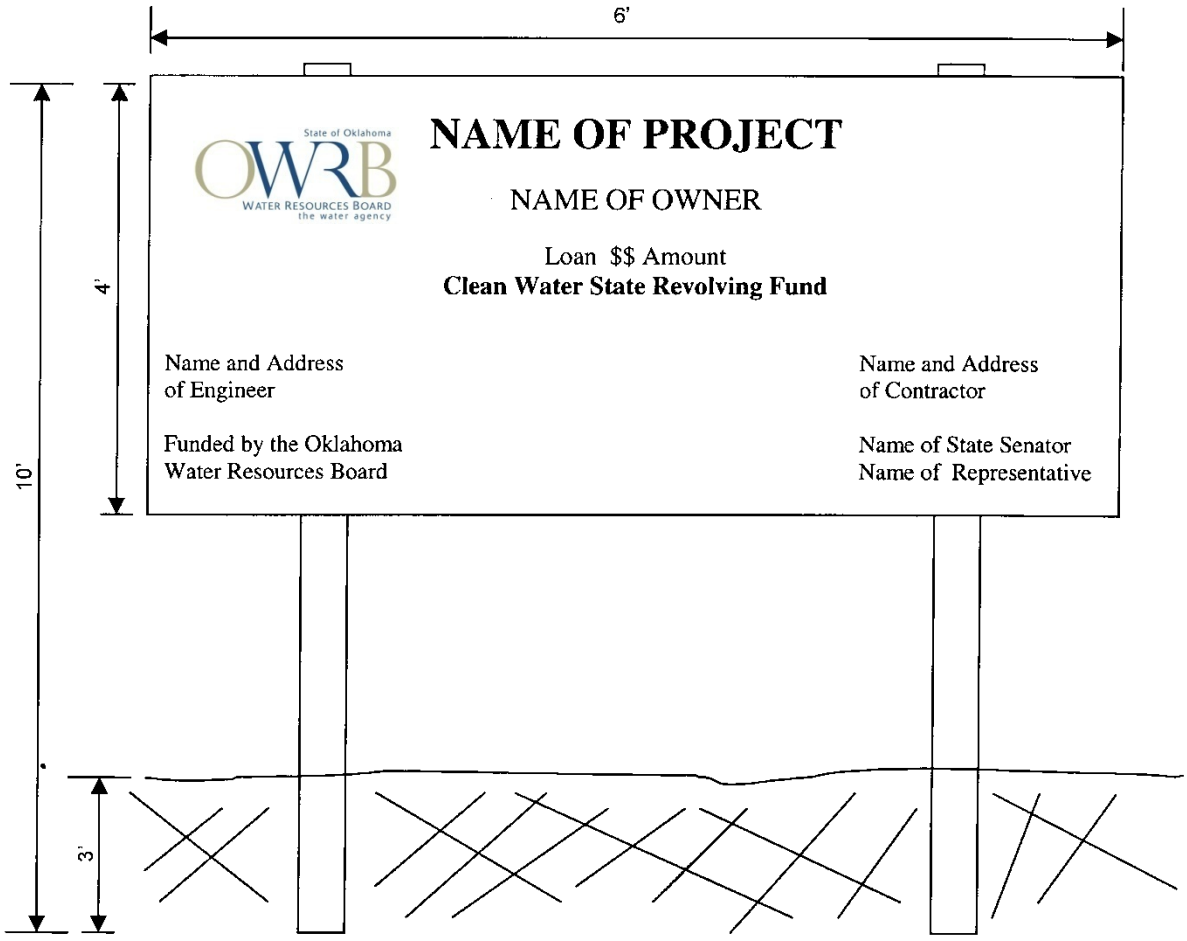
The contractor shall furnish the following insurance when the contract is awarded:

(A) Workmen's Compensation: The contractor shall carry on his work in accordance with the requirements of the Workmen's Compensation Law of the State of Oklahoma, and shall not reject the provisions thereof during the life of the contract. A certificate of coverage must be returned with the contract.

(B) Public Liability and Property Damage: He shall also protect himself by liability reinsurance against any and all claims for damages to persons or property which may arise out of operations under this contract, whether such operations be by himself or a subcontractor or by anyone directly employed by either of them. Certificates of such insurance shall be file with the Owner and shall be subject to its approval as to adequacy of protection. The public liability insurance shall have limits of not less than $100,000/$300,000 or an amount to be determined by OWRB and Property Damage insurance of not less than $50,000/$100,000 or an amount to be determined by OWRB shall be carried by the contractor during the life of the contract. A certificate of such coverage must be returned with the contract.

(C) Builder's Risk: Provide Builders Risk Insurance only if called for in other sections of the specifications.

Bonds



All bonds are for the full value of the contract and must be issued by a surety company authorized by the Oklahoma Insurance Commission to do business in the State of Oklahoma. They will be required after the award of the contact.

Three bonds are required for all contracts with a value exceeding Fifty Thousand Dollars ($50,000.00) They are: (1.) Performance Bond to insure the completion of the work in accordance with the contract documents in the time stipulated; (2.) Maintenance Bond to provide for defects in construction or materials for a period of one (1) year from the date of acceptance of the completed work; and (3.) Statutory Bond to assure the Owner is protected from the action of subcontractors, suppliers and employees for unpaid debts of the contractor.

Irrevocable Letters of Credit may be used as a substitute for bonds on contracts exceeding Fifty Thousand Dollars ($50,000.00). The letters of credit must be issued by a financial institution insured by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation on forms obtained from the Owner.

PROJECT SIGN

- The general contractor shall erect and maintain for the life of the construction contract a suitable sign, 4' x 6' in size, and detailed hereon, lettered black on white background. Sign shall be professionally painted. Lettering to be appropriate size. No separate bid item. Sign shall be the general obligation of the Contractor.
- The OWRB logo is required on the project sign if the project is funded in part with CWSRF funds. The OWRB logo is available at http://www.owrb.ok.gov/about/index.php or may be provided directly by OWRB.
- Redwood Posts shall be 4" x 4" x 10' buried securely a minimum of 3 feet below ground.
- Sign face shall be constructed of ¾" x 4' x 6' – 5 ply Dura-plywood board & mounted to Posts with four (4) 5/8" x 6" Carriage Bolts.

Appendix 1

Wage Rate Requirements

I. Requirements Under The Consolidated and Further Continuing Appropriations Act, 2013 (P.L. 113-6) For Subrecipients That Are Governmental and Not Governmental Entities:

The following terms and conditions specify how recipients will assist EPA in meeting its Davis-Bacon (DB) responsibilities when DB applies to EPA awards of financial assistance under the FY 2013 Continuing Resolution with respect to State recipients and subrecipients that are governmental entities, and for subrecipients that are not governmental entities. If a subrecipient has questions regarding when DB applies, obtaining the correct DB wage determinations, DB provisions, or compliance monitoring, it may contact the State recipient for guidance. If a State recipient needs guidance, the recipient may contact Dannell Brown at brown.dannell@epa.gov or at 214-665-7279 of EPA, Region VI Grants and Audit Management Branch for guidance. The recipient or subrecipient may also obtain additional guidance from DOL's website at http://www.dol.gov/whd/.

Under these terms and conditions, the Non-Governmental subrecipient must submit its proposed DB wage determinations to the State recipient for approval prior to including the wage determination in any solicitation, contract task orders, work assignments, or similar instruments to existing contractors.

1. Applicability of the Davis- Bacon (DB) prevailing wage requirements.

Under the FY 2013 Continuing Resolution, DB prevailing wage requirements apply to the construction, alteration, and repair of treatment works carried out in whole or in part with assistance made available by a State water pollution control revolving fund and to any construction project carried out in whole or in part by assistance made available by a drinking water treatment revolving loan fund. If a subrecipient encounters a unique situation at a site that presents uncertainties regarding DB applicability, the subrecipient must discuss the situation with the recipient State before authorizing work on that site.

2. Obtaining Wage Determinations.

(a) Subrecipients must obtain wage determinations for the locality or localities in which a covered activity subject to DB will take place at www.beta.sam.gov prior to issuing requests for bids, proposals, quotes or other methods for soliciting contracts (solicitation) for activities subject to DB. After the Subrecipient obtains its proposed wage determination, it must submit the wage determination to the assigned Financial Assistance Division Engineer, Oklahoma Water Resources Board, 3800 N. Classen Blvd, Oklahoma City, OK 73118. These wage determinations shall be incorporated into solicitations and any subsequent contracts. Prime contracts must contain a provision requiring that subcontractors follow the wage determination incorporated into the prime contract.

(i) While the solicitation remains open, the subrecipient shall monitor www.beta.sam.gov weekly to ensure that the wage determination contained in the solicitation remains current. The subrecipients shall amend the solicitation if DOL issues a modification more than 10 days prior to the closing date (i.e. bid opening) for the solicitation. If DOL modifies or supersedes the applicable wage determination less than 10 days prior to the closing date, the subrecipients may request a finding from the State recipient that there is not a reasonable time to notify interested contractors of the modification of the wage determination. The State recipient will provide a report of its findings to the subrecipient.

(ii) If the subrecipient does not award the contract within 90 days of the closure of the solicitation, any modifications or supersedes DOL makes to the wage determination contained in the solicitation shall be effective unless the State recipient, at the request of the subrecipient, obtains an extension of the 90 day period from DOL pursuant to 29 CFR 1.6(c)(3)(iv). The subrecipient shall monitor www.beta.sam.gov on a weekly basis if it does not award the contract within 90 days of closure of the solicitation to ensure that wage determinations contained in the solicitation remain current.

(b) If the subrecipient carries out activity subject to DB by issuing a task order, work assignment or similar instrument to an existing contractor (ordering instrument) rather than by publishing a solicitation, the subrecipient shall insert the appropriate DOL wage determination from www.beta.sam.gov into the ordering instrument.

(c) Subrecipients shall review all subcontracts subject to DB entered into by prime contractors to verify that the prime contractor has required its subcontractors to include the applicable wage determinations.

(d) As provided in 29 CFR 1.6(f), DOL may issue a revised wage determination applicable to a subrecipient's contract after the award of a contract or the issuance of an ordering instrument if DOL determines that the subrecipient has failed to incorporate a wage determination or has used a wage determination that clearly does not apply to the contract or ordering instrument. If this occurs, the subrecipient shall either terminate the contract or ordering instrument and issue a revised solicitation or ordering instrument or incorporate DOL's wage determination retroactive to the beginning of the contract or ordering instrument by change order. The subrecipient's contractor must be compensated for any increases in wages resulting from the use of DOL's revised wage determination.

3. Contract and Subcontract provisions.

(a) The Recipient shall insure that the subrecipient(s) shall insert in full in any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a treatment work under the CWSRF or a construction project under the DWSRF financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in § 5.1 or the FY 2013 Continuing Resolution, the following clauses:

(1) Minimum wages.

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans,

funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Subrecipients may obtain wage determinations from the U.S. Department of Labor's web site, www.dol.gov.

(ii)(A) The subrecipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The State award official shall approve a request for an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the subrecipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), documentation of the action taken and the request, including the local wage determination shall be sent by the subrecipient (s) to the State award official. The State award official will transmit the request, to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210 and to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification request within 30 days of receipt and so advise the State award official or will notify the State award official within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the subrecipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the request and the local wage determination, including the views of all interested parties and the recommendation of the State award official, to the Administrator for determination. The request shall be sent to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt of the request and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) Withholding. The subrecipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) Payrolls and basic records.

(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the subrecipient, that is, the entity that receives the sub-grant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the subrecipient shall provide written confirmation in a form

satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at http://www.dol.gov/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the subrecipient(s) for transmission to the State or EPA if requested by EPA , the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the subrecipient(s).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance" signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended and 29 CFR part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may by appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(7) Contract termination; debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and Subrecipient(s), State, EPA, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of eligibility.

(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

4. Contract Provision for Contracts in Excess of $100,000.

(a) Contract Work Hours and Safety Standards Act. The subrecipient shall insert the following clauses set forth in paragraphs (a)(1), (2), (3), and (4) of this section in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by Item 3, above or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less

than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (a)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (a)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The subrecipient**,** upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (a)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (a)(1) through (4) of this section.

(b) In addition to the clauses contained in Item 3, above, in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, the Subrecipient shall insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid. Further, the Subrecipient shall insert in any such contract a clause providing hat the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

5. Compliance Verification

(a) The subrecipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(6), all interviews must be conducted in confidence. The subrecipient must use Standard Form 1445 (SF 1445) or equivalent documentation to memorialize the interviews. Copies of the SF 1445 are available from EPA on request.

(b) The subrecipient shall establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. Subrecipients must conduct more frequent interviews if the initial interviews or other information indicated that there is a risk that the contractor or subcontractor is not complying with DB. Subrecipients shall immediately conduct interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence."

(c) The subrecipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. The subrecipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, if practicable, the subrecipient should spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract . Subrecipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. In addition, during the examinations the subrecipient shall verify evidence of fringe benefit plans and payments there under by contractors and subcontractors who claim credit for fringe benefit contributions.

(d) The subrecipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

(e) Subrecipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed above and to the appropriate DOL Wage and Hour District Office at 405-231-4158.

Appendix 2

Step-By-Step Waiver Process Related to P.L. 113-76, Consolidated Appropriation Act, 2014, "American Iron and Steel"

Application by Assistance Recipient

Each local entity that receives SRF water infrastructure financial assistance is required by section 436 of the Act to use American made iron and steel products in the construction of its project. However, the recipient may request a waiver. Until a waiver is granted by EPA, the AIS requirement stands, except as noted above with respect to municipalities covered by international agreements.

The waiver process begins with the SRF assistance recipient. In order to fulfill the AIS requirement, the assistance recipient must in good faith design the project (where applicable) and solicit bids for construction with American made iron and steel products. It is essential that the assistance recipient include the AIS terms in any request for proposals or solicitations for bids, and in all contracts. The assistance recipient may receive a waiver at any point before, during, or after the bid process, if one or more of three conditions is met:

1. Applying the American Iron and Steel requirements of the Act would be inconsistent with the public interest;
2. Iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or
3. Inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Proper and sufficient documentation must be provided by the assistance recipient. A checklist detailing the types of information required for a waiver to be processed is attached as Appendix 3.

Additionally, it is strongly encouraged that assistance recipients hold pre-bid conferences with potential bidders. A pre-bid conference can help to identify iron and steel products needed to complete the project as described in the plans and specifications that may not be available from domestic sources. It may also identify the need to seek a waiver prior to bid, and can help inform the recipient on compliance options.

In order to apply for a project waiver, the assistance recipient should email the request in the form of a Word document (.doc) to the State SRF program. It is strongly recommended that the State designate a single person for all AIS communications. The State SRF designee will review the application for the waiver and determine whether the necessary information has been included. Once the waiver application is complete, the State designee will forward the application to either of two email addresses. For CWSRF waiver requests, please send the application to: cwsrfwaiver@epa.gov. For DWSRF waiver requests, please send the application to: dwsrfwaiver@epa.gov.

Evaluation by EPA

After receiving an application for waiver of the AIS requirements, EPA Headquarters will publish the request on its website for 15 days and receive informal comment. EPA Headquarters will then use the checklist in Appendix 3 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

In the event that EPA finds that adequate documentation and justification has been submitted, the Administrator may grant a waiver to the assistance recipient. EPA will notify the State designee that a waiver request has been approved or denied as soon as such a decision has been made. Granting such a waiver is a three-step process:

1. Posting – After receiving an application for a waiver, EPA is required to publish the application and all material submitted with the application on EPA's website for 15 days. During that period, the public will have the opportunity to review the request and provide informal comment to EPA. The website can be found at: http://water.epa.gov/grants_funding/aisrequirement.cfm

2. Evaluation – After receiving an application for waiver of the AIS requirements, EPA Headquarters will use the checklist in Appendix 3 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

3. Signature of waiver approval by the Administrator or another agency official with delegated authority – As soon as the waiver is signed and dated, EPA will notify the State SRF program, and post the signed waiver on our website. The assistance recipient should keep a copy of the signed waiver in its project files.

Public Interest Waivers

EPA has the authority to issue public interest waivers. Evaluation of a public interest waiver request may be more complicated than that of other waiver requests so they may take more time than other waiver requests for a decision to be made. An example of a public interest waiver that might be issued could be for a community that has standardized on a particular type or manufacturer of a valve because of its performance to meet their specifications. Switching to an alternative valve may require staff to be trained on the new equipment and additional spare parts would need to be purchased and stocked, existing valves may need to be unnecessarily replaced, and portions of the system may need to be redesigned. Therefore, requiring the community to install an alternative valve would be inconsistent with public interest. EPA also has the authority to issue a public interest waiver that covers categories of products that might apply to all projects.

EPA reserves the right to issue national waivers that may apply to particular classes of assistance recipients, particular classes of projects, or particular categories of iron or steel products. EPA may develop national or (US geographic) regional categorical waivers through the identification of similar circumstances in the detailed justifications presented to EPA in a waiver request or requests. EPA may issue a national waiver based on policy decisions regarding the public's interest or a determination that a particular item is not produced domestically in reasonably available quantities or of a sufficient quality. In such cases, EPA may determine it is necessary to issue a national waiver.

If you have any questions concerning the contents of this memorandum, you may contact us, or have your staff contact 800-887-6063.

Appendix 3: Information Checklist for Waiver Request

Related to P.L. 113-76, Consolidated Appropriation Act, 2014, "American Iron and Steel"

The purpose of this checklist is to help ensure that all appropriate and necessary information is submitted to EPA. EPA recommends that States review this checklist carefully and provide all appropriate information to EPA. This checklist is for informational purposes only and does not need to be included as part of a waiver application.

Items	✓	Notes
General • Waiver request includes the following information: — Description of the foreign and domestic construction materials — Unit of measure — Quantity — Price — Time of delivery or availability — Location of the construction project — Name and address of the proposed supplier — A detailed justification for the use of foreign construction materials • Waiver request was submitted according to the instructions in the memorandum • Assistance recipient made a good faith effort to solicit bids for domestic iron and steel products, as demonstrated by language in requests for proposals, contracts, and communications with the prime contractor		
Cost Waiver Requests • Waiver request includes the following information: — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — Supporting documentation indicating that the contractor made a reasonable survey of the market, such as a description of the process for identifying suppliers and a list of contacted suppliers		
Availability Waiver Requests • Waiver request includes the following supporting documentation necessary to demonstrate the availability, quantity, and/or quality of the materials for which the waiver is requested: — Supplier information or pricing information from a reasonable number of domestic suppliers indicating availability/delivery date for construction materials — Documentation of the assistance recipient's efforts to find available domestic sources, such as a description of the process for identifying suppliers and a list of contacted suppliers. — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of construction materials • Waiver request includes a statement from the prime contractor and/or supplier confirming the non-availability of the domestic construction materials for which the waiver is sought • Has the State received other waiver requests for the materials described in this waiver request, for comparable projects?		

Appendix 4: HQ Review Checklist for Waiver Request
Related to P.L. 113-76, Consolidated Appropriation Act, 2014, "American Iron and Steel"

Instructions: To be completed by EPA. Review all waiver requests using the questions in the checklist, and mark the appropriate box as Yes, No or N/A. Marks that fall inside the shaded boxes may be grounds for denying the waiver. If none of your review markings fall into a shaded box, the waiver is eligible for approval if it indicates that one or more of the following conditions applies to the domestic product for which the waiver is sought:

1. The iron and/or steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality.
2. The inclusion of iron and/or steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Review Items	Yes	No	N/A	Comments
Cost Waiver Requests • Does the waiver request include the following information? — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products				
— Relevant excerpts from the bid documents used by the contractors to complete the comparison — A sufficient number of bid documents or pricing information from domestic sources to constitute a reasonable survey of the market				
• Does the Total Domestic Project exceed the Total Foreign Project Cost by more than 25%?				
Availability Waiver Requests • Does the waiver request include supporting documentation sufficient to show the availability, quantity, and/or quality of the iron and/or steel product for which the waiver is requested? — Supplier information or other documentation indicating availability/delivery date for materials — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of materials				
• Does supporting documentation provide sufficient evidence that the contractors made a reasonable effort to locate domestic suppliers of materials, such as a description of the process for identifying suppliers and a list of contacted suppliers?				
• Based on the materials delivery/availability date indicated in the supporting documentation, will the materials be unavailable when they are needed according to the project schedule? (By item, list schedule date and domestic delivery quote date or other relevant information)				
• Is EPA aware of any other evidence indicating the non-availability of the materials for which the waiver is requested? Examples include: — Multiple waiver requests for the materials described in this waiver request, for comparable projects in the same State — Multiple waiver requests for the materials described in this waiver request, for comparable projects in other States — Correspondence with construction trade associations indicating the non-availability of the materials				
• Are the available domestic materials indicated in the bid documents of inadequate quality compared those required by the project plans, specifications, and/or permits?

SECTION 01_00_01

BASIC REQUIREMENTS

PART 1 GENERAL

1.1 SCOPE OF WORK

A. These Basic Requirements apply to the entire project. It is **imperative** that the Contractor become **completely** familiar with this Specification section as these notes will be utilized in ascertaining whether the Contractor has completed and complied with project requirements. It is the responsibility of the Contractor to distribute relevant components of this section to any subcontractors, suppliers or others performing work or supplying goods on this project.

B. The City of Shawnee has selected the following Contractors as prequalified General Contractors:
1. Crossland Heavy Contractors, Edmond, OK
2. Downey Contracting, LLC, Oklahoma City, OK
3. MWH Constructors, Inc, Broomfield, CO
4. Oscar Renda Contracting, Inc, Grapevine, TX
5. Thalle Construction Co, Inc, Hillsborough, NC
6. Wynn Construction Co, Inc, Oklahoma City, OK

C. The City of Shawnee has selected the following Contractors as prequalified to install the HDPE piping:
1. Prequalified General Contractors (Self-Perform all associated work without subcontractors)
2. McGuire Brothers Construction, Tulsa, OK
3. Belt Construction, Texarkana, AR
4. Krapff Reynolds, Oklahoma City, OK
5. Orr Construction, Davenport, OK
6. TIMCO Blasting & Coatings, Inc, Bristow, OK
7. Marsau Enterprises, Enid, OK

D. This section outlines miscellaneous project requirements not specifically covered elsewhere in the Contract Documents. If a conflict exists between this section and any other specification section and/or provisions of the contract documents the more stringent/expensive shall govern. Notify engineer immediately of conflict.

E. Section includes:
1. Milestones
2. Specified materials & equipment
3. Related sections of the contract documents
4. Compliance with manufacturer's instructions
5. Drawing & Contract documents for contractor use
6. Related specifications
7. Contractor's superintendent
8. Contractor's field office
9. Engineer's field office

10. Bypass of raw or partially treated sewage
11. Road closings
12. Trenching within public right-of-way
13. Points of access to the site
14. Property provisions
15. Existing utilities and connections
16. Change of pipeline location
17. Groundwater & dewatering plan
18. Quality Assurance
19. Manufacture's Field Services
20. Equipment Electrical Verification
21. Rock Removal
22. Grades, lines & levels
23. Cutting & patching
24. Permits & regulations
25. Regulatory inspections
26. Saturday, Sunday, holiday and night work
27. Assistance by engineer
28. Progress cleaning
29. Incidental work
30. Schedules
31. Schedule of values
32. Payment Requests
33. Safety standards and accident prevention
34. Water for construction
35. Electrical power for construction
36. Materials delivery, handling & storage
37. Blasting
38. Security
39. Site maintenance
40. Pour sequence
41. Abandoned piping
42. Permit-required confined spaces
43. Progress meeting
44. Substantial and final completion
45. Project signs
46. Access and Parking
47. Removal of utilities, facilities and controls
48. Maintenance / spare parts
49. Transfer of utilities
50. Occupancy
51. Final Cleaning
52. Warranty date
53. Project record documents / as-builts
54. Closeout Documents
55. Labor standards
56. Scope of work

1.2 PROJECT

A. Shawnee Wastewater System Improvements

1.3 PROJECT PRIMARY ENGINEER

A. Brandon Wall, P.E.; Wall Engineering; (580) 924-1800

B. Physical Address (for UPS/FedEx Shipment); 223 N. Washington, Durant, OK 74701

C. Mailing Address (for postal mail); PO Box 1457, Durant, OK 74702

1.4 PROJECT CONSULTANTS

A. Unless there is a reasonable objection, the Consultants on this list should be used when/where services are needed.

B. Structural Engineering
   1. BKL, Tulsa, Oklahoma
      a. Stacy Loeffler, P.E., S.E., Principal, (918) 359-8007.
      b. Where services of an Oklahoma Structural Engineer (S.E.) are outlined in the Specifications it shall be BKL unless approved by Engineer for use of supplier/manufacturer Oklahoma Registered Structural Engineer (S.E.)

C. MEP Engineering
   1. Brown Engineering, Little Rock, Arkansas
      a. Bruce Brown, P.E., Principal, (501) 448-0100.

D. Architectural
   1. Redland Childers, Ada, OK
      a. Tim Elliott, AIA, Principal, (580) 436-0770

E. Survey
   1. Lemke Land Surveying, Norman, OK
      a. Steve Lemke, RPLS, (405) 366-8541
      b. Unless there a reasonable objection, Lemke Land Surveying shall be used for project survey.

F. Geotechnical Engineering
   1. Terracon, OKC, OK, (405) 525-0453
   2. Hinderliter Geotechnical Engineering, OKC, OK, (405) 942-4090

1.5 OWNER

A. Shawnee Municipal Authority; PO Box 1448, Shawnee, OK 74802

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 MILESTONES

A. Milestone 1 - Substantial Completion of all work under this Contract from NTP is 730 calendar days (excluding demolition.) Milestone shall be considered complete when 100% of City wastewater is being treated at Northside WWTP and Southside FEB is complete and fully online.

B. Milestone 2 - Final Completion of all work under this Contract from Substantial Completion is 120 calendar days (including Commissioning & Demolition)

C. Liquidated damages for uncompleted work that is required to meet the milestones set out above shall be $2,500 per Calendar Day.

3.2 SPECIFIED MATERIALS & EQUIPMENT

A. Where materials or equipment are specified by a trade or brand name, it is not the intention of the Owner to discriminate against an equal product of another manufacturer, but rather to set a definite standard of quality of performance, and to establish equal basis for the evaluation of bids. Where the words "equivalent" or "equal to" are used, they shall be understood to mean the equivalent of, or equal to, in the opinion or judgment of the Engineer. Unless a substitute has been approved in writing by written addenda prior to bid date by the Engineer, the Engineer shall have the right to require the use of originally specified item without additional justification.

B. All equipment being submitted as "equivalent" or "equal" shall follow Section 01_33_02 Pre-bid Equipment Submittal Requirements.

C. Should an approved equivalent be allowed by the Engineer the Contractor shall bear full responsibility for reimbursement to the Owner of any/all engineering costs associated with approved equivalent/equal.

D. No material which has been used by the Contractor for any temporary purpose whatsoever is to be incorporated in the permanent structure without written consent of the Engineer.

3.3 RELATED SECTIONS OF THE CONTRACT DOCUMENTS

A. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

B. Any Drawing or Specification that conflicts with other Specification sections shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the

Contractor is to assume that more expensive product/system/item is to apply and shall be included in the Contractor's bid.

3.4 COMPLIANCE WITH MANUFACTURERS INSTRUCTIONS

A. When Contract Documents require that installation of work shall comply with Manufacturer's printed instructions or recommendations, obtain and distribute copies of such instructions and / or recommendations to parties involved in the installation, including two copies to the Owner and one copy to the Engineer. Maintain one set of complete instructions at the job site during installation and until completion.

B. Handle, install, connect, clean, condition and adjust products in strict accord with such instructions / recommendations and in conformity with specified requirements.

C. Should job conditions or specified requirements conflict with Manufacturer's instruction, consult with Engineer for further instructions.

D. Do not proceed with work without clear instructions.

E. Perform work in accordance with Manufacturer's instructions / recommendations. Do not omit any preparatory step or installation procedure unless specifically authorized by the Engineer.

F. Manufacturer shall supply to the Engineer a statement of compliance on equipment / materials furnished, certifying that it meets the specification requirements and has been installed in accordance with the Manufacturer's instructions.

3.5 DRAWINGS AND CONTRACT DOCUMENTS FOR CONTRACTOR USE

A. The Specifications and Drawings have equal importance. The Contractor shall notify the Engineer of any conflicts discovered in the documents. In the case of conflicts, the most conservative criteria will govern and the Engineer will make final decisions on resolution.

B. When no clarification is provided the Contractor is to assume that more expensive product/system/item is to apply and shall be included in the Contractor's bid.

3.6 RELATED SPECIFICATIONS:

A. The Oklahoma Department of Transportation "Standard Specifications for Highway Construction" latest edition are hereby adopted as part of these Specifications where reference is made. Said Specifications may be hereinafter referred to as the "ODOT Standard Specifications". However, no portion of the Standard Specifications referring to Basis of Payment will be adopted as part of these Specifications.

B. All construction shall conform, wherever applicable, in its entirety to CWA (Clean Water Act) regulations and the most current edition of the ODEQ (Oklahoma Department of Environmental Quality) which govern public systems including OAC 252:626 & OAC 252:656 and all other section of ODEQ regulations cited therein. The requirements and standards called for shall be fully applicable and enforced in the construction of this project.

3.7 CONTRACTOR'S SUPERINTENDENT

A. All operations shall be under the control of the Contractor's general superintendent. The General Superintendent shall be experienced in all aspects of the project. The Superintendent's experience and diligence will be the key to maintaining proper quality control during the project. The contractor shall not complete any project work without a designated superintendent present, no exceptions. All written and verbal communications with designated superintendent shall be binding.

3.8 CONTRACTOR'S FIELD OFFICE:

A. During the performance of this contract, the Contractor shall maintain a suitable office on the site of the work which shall be headquarters of a representative authorized to receive drawings, instructions, or other communication or articles. Any communication given to the said representative or delivered at the Contractor's office at the site of the work in his absence shall be deemed to have been delivered to the Contractor.

B. Copies of the Drawings, Specifications, and other Contract Documents shall be kept at the Contractor's office at the site of the work available for use at all times.

C. The Contractor may store material on site as space is available or shall be responsible for obtaining a location for stored materials/stockpile off site as required. The stored material shall be kept in an orderly fashion, and located in an area where its use by the Contractor will be in accordance with any area zoning requirements as applicable.

3.9 ENGINEER'S FIELD OFFICE: (NORTHSIDE LOCATION)

A. Furnish and continuously maintain throughout the project duration a field office for the Owner and the Engineer's use which meets the following requirements:
   1. Minimum size of 12 feet x 60 feet.
      a. The building is to be divided into three separate spaces (two offices and conference) by full height walls with a single 3-foot 0-inch x 6-foot 8-inch door for passage in each wall. The office spaces are to be located at each end of the building and are to be 12 feet x 12 feet.
      b. Each space is to have an exterior 3-foot 0-inch x 6-foot 8-inch weathertight door located on one side of building.
      c. Each office space is to have a minimum of one (1) 4-foot 0-inch x 5-foot 0-inch window.
      d. Flooring may be plywood, vinyl, or VCT tile. Do not use carpet.
   2. Separate from Contractor's office.
   3. Structurally sound, weather-tight, and have floor raised above the ground.
   4. Adequately braced and anchored to prevent movement.
   5. Heated and air conditioned.
   6. Provide a fully plumbed indoor restroom located in one corner of the center section of the building. The restroom shall contain a flush toilet, sink, medicine cabinet with mirror, and storage shelving. Connect fixtures to complete potable water, sanitary, and vent systems.
   7. Make connections to electrical power source and provide electrical service to building for duration of project.
   8. Provide a skirt around perimeter of building of same material as building siding.

9. Construct a porch with steps and covered overhang at each entrance. Construct a handicap accessible ramp to main entrance. Provide railing around porch, steps, and ramp.
10. Provide burglar bars on all windows and hinged burglar bars on outside doors with padlocks or door locks.
11. Provide operable, screened windows with locks.
12. Provide Venetian type blinds for all windows.
13. Provide electric water cooler with bottled water supply for the duration of the project.
14. Provide furnishings manufactured by HON, or approved equal as follows:
    a. Three (3) 2-foot 6-inch x 5-foot 0-inch office desks with credenza.
    b. Three (3) fabric covered, cushioned adjustable arm chairs with swivel/tilt/roll capabilities and three (3) protective floor mats.
    c. One (1) 3-foot 0-inch x 8-foot 0-inch folding table.
    d. Two (2) 2-foot 6-inch x 5-foot 0-inch folding tables.
    e. Ten (10) padded folding chairs.
    f. One (1) Storage rack for 24”x36” plans
    g. One (1) Marking board at least 3 feet x 5 feet
    h. Two (2) cushioned drafting stool with back.
    i. Two (2) drafting table or layout table similar to Mayline Model 7737-B.
    j. Plan holding rack similar to Planhold Model 43CRI-30 with 10 holders.
    k. Two (2) legal size, 4-drawer filing cabinets.
    l. Two (2) 4-shelf metal bookshelves.
    m. Three (3) wastepaper baskets similar to Lawson Model H9-334-09.
15. Bottle water dispenser and service during the project
16. High speed internet access with at least 10 Mbps download speed & wireless capabilities
17. Provide a Hewlett Packard Laserjet 3200se Printer/Fax/Copier/Scanner, or approved equal.
18. Provide a new or leased copier.
    a. Konica 3135 copier or equal with auto feed/sort/collate features and 11x17 copying capabilities, or approved equal.
    b. Provide service and maintenance agreement throughout duration of project.
19. Furnish and maintain office supply stock, including but not limited to, pens, pencils, markers, staples, notepads, paper, posted notes, file folders, paper clips, binder clips, etc.
20. Furnish a microwave unit with a minimum cooking volume of 1.5 cubic feet.
21. Furnish a refrigerator with minimum storage capacity of 3.5 cubic feet. Refrigerator shall include a freezer section.
22. Provide sufficient lighting for office environment using fluorescent light fixtures with lenses energized by wall switches. Provide switches adjacent to doorway into each space.
23. Provide three (3) duplex receptacles in each office space and four (4) duplex receptacles for the remainder of the building.
24. Provide a fire extinguisher and first aid kit.
25. Office and/or materials of construction may be new or used but must be in good condition acceptable to the Owner/Engineer, serviceable, adequate for the intended purpose, and must not violate codes or regulations.
26. Field office and furniture will remain the property of the Contractor.

27. If all-weather parking surface is not readily available adjacent to the office, the Contractor shall provide and maintain a 4-inch crushed rock surfaced parking lot of sufficient size to park two full size cars with enough driveway area to provide unrestricted access to each parking space. At the completion of the project, the parking area shall be removed and the site returned to its original condition.

ENGINEER'S FIELD OFFICE: (SOUTHSIDE LOCATION)

B. For the use of the Engineer and other representatives of the Owner during the performance of this Contract, the Contractor shall provide and maintain at the site, at a location approved by the Engineer, a field office with a floor space of not less than 240 square feet and may be portable or other suitable type with 7-ft. minimum ceiling height. This office shall be of watertight construction with suitable windows and doors, properly screened, reasonably dustproof and shall contain:
   1. Toilet and wash facilities. Provide sewage disposal service for the toilet and drain in accordance applicable codes.
   2. Minimum features shall include the following:
      a. 110-volt lighting and wall plugs
      b. Ceiling lights
      c. Electric heating and self-contained air-conditioning units properly sized for the project location and conditions.
      d. Railed stairways and landings at entrances
      e. Windows at least every 15 feet
   3. One desks and chair (30”x48” minimum)
   4. Storage rack for 24”x36” plans
   5. Marking board at least 3 feet x 5 feet
   6. First aid kit
   7. Bottle water dispenser and service during the project
   8. High speed internet access with at least 10 Mbps download speed & wireless capabilities

C. If all-weather parking surface is not readily available adjacent to the office, the Contractor shall provide and maintain a 4-inch crushed rock surfaced parking lot of sufficient size to park two full size cars with enough driveway area to provide unrestricted access to each parking space. At the completion of the project, the parking area shall be removed and the site returned to its original condition.

D. The field office shall remain the property of the Contractor and shall be removed upon the completion of Work.

3.10 BYPASS OF RAW OR PARTIALLY TREATED SEWERAGE

A. No bypass of raw or partially treated solid waste or wastewater shall be permitted. If there is an accidental bypass and/or discharge of raw sewage at the site, Contractor shall immediately notify the Owner, the Engineer, and ODEQ. Contractor shall execute the required forms and provide copies to the Engineer and pay any and all fines levied by the regulatory agency for the bypass and/or illegal discharge.

3.11 ROAD CLOSINGS:

A. The Contractor shall notify the Owner of any public road at least five (5) days prior to the time he intends to obstruct any portion of the road. If the Owner agrees to the street obstruction, the Contractor shall notify the Fire Department, Police or Sheriff Department, ambulance service and news media forty-eight (48) hours prior to obstructing the road and shall keep the street in condition for unobstructed use by emergency vehicles. News media notification shall include at least one local newspaper and at least one local radio station.

B. The Contractor shall submit a traffic control plan detailing road closing to Engineer with sufficient review time prior to forty-eight (48) hour notice period.

3.12 TRENCHING WITHIN PUBLIC RIGHT-OF-WAY

A. Completely backfill trenches across streets and install temporary or permanent pavement as soon as possible after pipe laying.

B. Site conditions:
1. Use substantial steel plates with adequate trench bracing to bridge across trenches at street and alley crossings, commercial driveways, and residential driveways where trench backfill and temporary patch have not been completed during regular working hours.
2. Provide safe and convenient passage for pedestrians.
3. Maintain access to fire stations, fire hydrant, and hospitals at all times.
4. Provide traffic control devices, barricades, and signage as required by the regulating agency.

3.13 POINTS OF ACCESS TO THE SITE

A. Restrict entry into Site to points where the easements cross state and county roads and highways or other publicly owned roads and streets. Keep operations within the easement.

B. Maintain access to the facilities at all times. Do not obstruct roads, pedestrian walks, or access to the various buildings, structures, stairways, or entrances. Provide safe temporary walks or other structures to allow access for normal operations during construction.

C. Provide adequate and safe access for inspections. Leave ladders, bridges, scaffolding and protective equipment in place until inspections have been completed. Construct additional safe access if required for inspections.

D. Provide security at the construction Site as necessary to protect against vandalism and loss by theft.

E. Maintain security of the Site and access leading to it.
1. Close gates and keep locked.
2. Obtain permission of any landowners whose property must be crossed in gaining access to the Site.
3. Install a gate lock consisting of a chain with two locks. Give one lock and key to the landowner. Use one lock for the Contractor, Construction Manager, and Owner. Provide keys to the Contractor's lock to Owner and Construction Manager.

4. At the end of the Project, remove the Contractor's lock from the assembly.

3.14 PROPERTY PROVISIONS

A. Make adequate provisions to maintain the flow of storm sewers, drains, and water courses encountered during the construction. Restore structures which may have been disturbed during construction to their original position as soon as construction in the area is completed.

B. Protect trees, fences, signs, poles, guy wires, and all other property unless their removal is authorized. Restore any property damaged to equal or better condition.

C. Provide temporary fencing, with gates, to restrain livestock in areas where livestock are pastured unless the Contractor makes satisfactory arrangements with the property owner and/or tenant. Install temporary fence on the easement lines and removed after the trench has been backfilled. Pay damages for losses resulting from failure to maintain such barriers or failure of barriers to exclude livestock. Install temporary fencing on any tract in order to contain construction activities within easement limits.

3.15 EXISTING UTILITIES AND CONNECTIONS

A. Any existing utilities are shown based on what is visible outside and existing as-built maps. Depth of these utilities, which may interfere with pipeline construction, is not known. Contractor shall be aware of the possibility of running into existing utilities during construction and shall prepare his bid to cover any cost of repairing the damages that may be caused during construction. No additional payment shall be made to the Contractor for dealing with any existing utilities at the construction site.

B. There may be additional buried lines that are not shown and if such is encountered, said lines will be left in service. If said lines are broken by the Contractor, they shall be repaired as soon as possible. No additional payment shall be made to the Contractor for dealing with any existing utilities at the construction site. Contractor shall prepare his bid to cover any cost of field verifying existing utilities including uncovering where necessary.

C. Where connection to existing lines are shown on the Drawings, the work may be required to be done at night or at a time which will least interfere with the operation of the existing facility. The work shall be coordinated and scheduled with the Owner and will be done at a time to least inconvenience their operation.

D. Contractor shall be responsible for damage to utilities whether being shown on the Drawings or not.

E. Contractor shall be responsible for contacting all utility companies prior to construction.

F. See bid item descriptions and payment procedures for additional utility requirements.

3.16 CHANGE OF PIPELINE LOCATION

A. The alignment of the pipeline is shown on the Drawings, and no change is contemplated. It may be necessary to change the alignment due to utility conflicts, unanticipated

variations in existing conditions, or for any other reason prior to the time pipe is actually installed.

B. No additional compensation will be paid to the Contractor except as provided by unit prices, unless excessive cost is incurred that is directly applicable to such changes and this cost is documented in accordance with the General / Supplemental Conditions. No compensation will be paid for specials, field cuts, field welds, or other incurred cost resulting from failure to locate existing utilities prior to manufacture of pipe.

3.17 GROUNDWATER & DEWATERING PLAN

A. The Geotechnical Report indicates that groundwater will be present. It shall be the responsibility of the Contractor to dewater, as necessary to protect the work site and keep the worksite safe. Contractor shall consult a Geotechnical Engineer and provide a Dewatering Submittal outlining steps which will be taken to contend with groundwater for the different soil types in this area. All costs of dewatering construction work areas shall be included in most appropriate bid item and there shall be no additional cost to the Owner

B. Contractor shall take all necessary measures to keep excavations clear of ground water, sewage, or storm water during the process of the work and until the finished work is safe from injury.

C. Contractor shall be responsible for site, surface and subsurface drainage. Maintain such drainage as specified herein during the life of the contract.

D. Supply all supervision, labor, material, and equipment including standby equipment, necessary to maintain a dry excavation as may be necessary to construct the project.

E. Maintain groundwater in or below the bearing strata at a safe level at all times by methods which prevent loss of fines, which preserves the undisturbed state of subgrade soils and which sufficiently lowers the groundwater level in permeable strata at or below excavation and fill levels such that blowing or unstable conditions do not develop in the bottom or sides of excavation or fill areas.

F. Water shall be kept out of exaction areas as necessary to protect the supporting strength of foundation material, to permit efficient and satisfactory assembly, or replacement of facilities, to prevent floatation of equipment or structures, to prevent misalignment of facilities, and to prevent unstable conditions developing in the bottom or sides of excavation areas.

G. Protect all adjacent structures, existing and under construction , from settlement, flotation, damage, or other adverse effects resulting from accumulation of water, water removal, or dewatering methods.

H. Install all drains, ditching, sluiceways, pumping, and bailing equipment, wicking, sumps, wells, well points, cutoff trenches, curtains, sheeting, drains, and all other equipment and structures necessary to create and maintain a dry excavation and groundwater level at a minimum of 2 feet below excavation subgrades.
   1. As part of any dewatering system, observation wells or piezometers shall be provided and installed, as required, to effectively and efficiently monitor drawdown to required levels.

I. Discharge water removed from the site to natural watercourses, storm drains or channels
   1. Disposal of water shall be in a manner satisfactory to Engineer and Owner and in conformance with all Federal, State, and local rules, regulations, codes, and permits.
   2. Disposal of water shall cause no damage to property or any work under construction or constructed.
   3. Large quantities of water shall not be discharged as overland flow. Overland flow is not permitted onto private property.
   4. No water shall be discharged into sanitary sewers.
   5. Sanitary sewage shall be disposed of in a manner satisfactory to local, state, and federal officials.

J. Dewatering operations shall cease when all foundations, structures, pipe installations, and other excavated areas have been properly backfilled and compacted and are safe from damage, flotation, settlement, displacement, or other injury.

K. No pipe shall be laid in water, and water shall not be allowed to run over masonry until concrete or mortar has set at least forty-eight (48) hours.

L. Necessary precautions shall be taken to protect all new and existing structures from flooding and/or flotation from hydrostatic uplift.

M. Dewatering of the excavation shall be considered an integral part of the excavation work and should be bid with the most appropriate item

N. Operate and maintain dewatering and removal operations on a 24-hour basis for the time required to complete that portion of the Work which requires dewatering prior to its construction and which requires protection from floatation or displacement of such Work until proper backfilling and compaction is completed.

O. There are portions of the project where has no geotechnical data has been collection collected, but should groundwater be present it shall be the responsibility of the Contractor to dewater, as necessary to protect the work site and keep the worksite safe. All costs of dewatering construction work areas shall be included in most appropriate bid item and there shall be no additional cost to the Owner.

3.18 QUALITY ASSURANCE

A. The Contractor shall assume full responsibility for coordination of the entire project, including verification that all structures, piping, coating systems and equipment components are compatible. The Contractor shall initially operate each equipment system, and shall make all necessary adjustments so that each system is placed in proper operating condition.

B. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

C. Comply fully with manufacturers' instructions, including each step-in sequence. Taking delivery of materials that later prove to be unusable shall be the responsibility of the contractor. Contractor shall pay restocking fee if applicable, and as necessary. Shop

drawing approval by the Engineer does not guarantee payment for material or equipment not needed or not incorporated into the project.

D. Should manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

E. Comply with specified standards as a minimum quality for the Work except when more stringent tolerances codes, or specified requirements indicate higher standards or more precise workmanship.

3.19 MANUFACTURER FIELD SERVICES

A. When specified in individual specification Sections, required material or Product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, test, adjust, and balance of equipment and applicable, and to initiate instructions when necessary.

B. Individuals to report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions. Nothing should be contrary to Manufacturer's written instructions that would void Manufacturer's warranty.

C. If manufacturer' warranty is voided on any equipment for any reason it is the responsibility of the Contractor to replace the equipment at Contractor's cost.

D. Submit report within 2 days of observation to Engineer for review.

E. Services Provided by Representative
   1. Site Visit: Manufacturer's Representative shall:
      a. Inspect existing site facilities prior to starting work and factor in all site constraints in equipment design and configuration.
         1) Perform periodic visits to site during construction to assure installation tolerance and method meets manufacture and industry standards.
         2) Inspect,check, and adjust equipment as required and approve installation.
      b. Be present when equipment is placed in operation and during performance testing.
      c. Revisit the site as often as required to correct all problems and until equipment installation and operation are acceptable to Engineer, and Owner.

F. Training: The equipment Manufacturer shall submit the outlines of lesson plans and proposed training schedules to the Owner for approval 15 days prior to instructional period. The training shall include approximately 1/2 time for classroom instruction and 1/2 time for hands-on training. This work may be conducted in conjunction with Inspection and Testing, wherever possible, as provided in the detailed specifications. However, the total number of days specified for either instruction of Owner's and Engineer's representatives on proper operation and maintenance of equipment or field inspection and testing shall not be reduced. Each training shall be conducted in two separate sessions, so that the

Owner can schedule half the staff for each training session. The Contractor will videotape all training sessions for future training of the Owner's Personnel.

3.20 EQUIPMENT ELECTRICAL VERIFICATION

A. Contractor shall verify the electrical requirements of proposed equipment prior to bid and compare with the electrical drawings. Any electrical requirements for individual equipment shall be the Contractors responsibility, regardless of being shown or omitted from electrical drawings and should be included in the price bid.

3.21 ROCK REMOVAL

A. The geotechnical report indicates that rock will be present on this project. Rock removal will not be measured for payment and should be included in the price bid for other items of work.

B. Should rock differ substantially from what is shown in the Geotech Report, removal will be paid for from the bid allowance based on equipment hourly rates for actual time accrued.

3.22 GRADES, LINES & LEVELS:

A. The Contractor shall provide all surveying and construction staking required to construct the project. The Contractor shall employ a surveyor licensed in the State of Oklahoma to provide said surveys and staking. The Owner will provide points for horizontal control and bench marks for elevation.

B. The Contractor shall construct all structures and pipelines to within the following tolerances. In all cases, the grading must be such that water is not ponded and drainage is not impeded. Field adjustment is permissible to establish drainage.

	Alignment	Grade
Structures	±0.10 ft.	±0.02 ft.
Pavement	±0.20 ft.	±0.05 ft.
Pipelines	± 0.1 ft.	± 0.2 ft
Grading	--	±0.10 ft.
Ductbanks	1.00 ft./1000 ft.	0.25 ft./100 ft.

C. All permanent benchmarks at the site (if existing) are shown on the plans.

D. Prior to mobilization the Contractor shall verify the grade and location of all permanent benchmarks. If a discrepancy is found, the Contractor shall have the benchmarks checked and resolve the discrepancy. After such time, the Contractor shall be responsible for the accuracy and protection of all benchmarks.

E. The Contractor shall be responsible for layout, staking and control of all grades, lines and levels from control shown on the plans.

F. The Contractor shall safeguard all permanent benchmarks at the site and shall bear the cost of replacing the benchmarks and assume entire expense or correcting work improperly constructed due to failure to maintain and protect such established points and marks

3.23 CUTTING AND PATCHING

A. Perform cutting, fitting, and patching required to complete the Work or to:
1. Uncover Work to provide for installation of new Work or the correction of defective Work.
2. Provide routine penetrations of non-structural surfaces for installation of mechanical, electrical, and plumbing Work.
3. Uncover Work that has been covered prior to observation by the Engineer.

B. Submit written notification to the Engineer in advance of performing any cutting which affects:
1. Work of any other contractors or the Owner.
2. Structural integrity of any structure or system of the Project.
3. Integrity or effectiveness of weather exposed or moisture resistant structure or systems.
4. Efficiency, operational life, maintenance, or safety of any structure or system.
5. Appearance of any structure or surfaces exposed occasionally or constantly to view.

C. The notification shall include:
1. Identification of the Project.
2. Location and description of affected Work.
3. Reason for cutting, alteration, or excavation.
4. Effect on the Work of any separate contractor or Owner.
5. Effect on the structural or weatherproof integrity of the Project.
6. Description of proposed Work, including:
    a. Scope of cutting, patching, or alteration.
    b. Trades that will perform the Work.
    c. Products proposed for use.
    d. Extent of refinishing to be performed.
    e. Cost proposal, when applicable.
7. Alternatives to cutting and patching.
8. Written authorization from any separate contractor whose Work would be affected.
9. Date and time Work will be uncovered or altered.

D. Examine the existing conditions, including structures subject to damage or to movement during cutting or patching.
1. Inspect conditions affecting installation of products or performance of the Work after uncovering the Work.
2. Provide a written report of unacceptable or questionable conditions to the Engineer. The Contractor shall not proceed with Work until Engineer has provided further instructions. Beginning Work will constitute acceptance of existing conditions by the Contractor.

E. Protect the structure and other parts of the Work and provide adequate support to maintain the structural integrity of the affected portions of the Work. Provide devices and methods to protect adjacent Work and other portions of the Project from damage. Provide protection

from the weather for portions of the Project that may be exposed by cutting and patching Work.

F. Execute cutting and demolition by methods which will prevent damage to other Work, and will provide proper surfaces to receive installation of repairs.

G. Execute fitting and adjustment of products to provide a finished installation to comply with specified products, functions, tolerances, and finishes.

H. Cut, remove, and legally dispose of selected mechanical equipment, components, and materials as indicated, including but not limited to, the removal of mechanical piping, heating units, plumbing fixtures and trim, and other mechanical items made obsolete by the modified Work.

I. Restore work which has been cut or removed. Install new products to provide completed work per the Contract Documents.

J. Fit Work airtight to pipes, sleeves, ducts, conduit, and other penetrations through the surfaces. Where fire rated separations are penetrated, fill the space around the pipe or insert with materials with physical characteristics equivalent to fire resistance requirements of penetrated surface.

K. Patch finished surfaces and building components using new products specified for the original installation.

L. Refinish entire surfaces as necessary to provide an even finish to match adjacent finishes:
1. For continuous surfaces, refinish to the nearest intersection.
2. For an assembly, refinish the entire unit.

3.24 PERMITS AND REGULATIONS:

A. The Contractor & all Subcontractors shall secure and pay for all construction and Owner required permits required to carry out the work unless otherwise specified and shall produce same upon demand of the Owner. The Contractor shall obtain completion survey, certificate of completion or occupancy if required by local regulations.

B. All features of design and construction shall comply with the local building regulations and/or other lawful or public regulations which apply at the site. If any features of construction as shown on the Owner's plan, do not conform to the regulations, the Contractor shall notify the Owner of such discrepancy, and shall base his quotation and work on features of construction which do conform to the regulations.

C. If the Contractor performs any work contrary to such laws, ordinances, rules and regulations and without such notice to the Owner, he shall bear all costs arising there from.

D. All Contractor and Subcontractors shall register with City prior to beginning construction (if required.)

3.25 REGULATORY INSPECTIONS:

A. The Contractor will provide access to the work site and facilities for representatives of the Oklahoma Department of Environmental Quality (ODEQ) and other agencies, as well as, Owner and Engineer, as required whenever the work is in progress.

3.26 SATURDAY, SUNDAY, HOLIDAY AND NIGHT WORK:

A. No work shall be done between the hours of 7:00 p.m. and 7:00 a.m., nor on Saturday, Sunday or legal holidays without the approval of the Engineer, in each case, except such work as may be necessary for the proper care, maintenances and protection of work already done, or of equipment, or in the case of an emergency.

3.27 ASSISTANCE BY ENGINEER:

A. It is understood and agreed that such assistance as the Engineer may render to the Contractor in connection with the interpretation of drawings and Specifications shall not relieve the Contractor from any responsibility for the work. Any work which proves faulty shall be corrected by the Contractor without delay. The failure of the Engineer, or Resident Project Representative to call the Contractor's attention to faulty work or work performed which is not in accordance with Drawings and Specifications shall not imply acceptance or exempt the Contractor for correcting the improper work.

3.28 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition. Where work is performed in residential and commercial areas, cleanup sufficient to permit normal access and use by property owners shall be performed daily. Final cleanup shall be performed after each individual water or sewer extension has been installed. Failure to perform clean-up work as described above may result in retainage of an additional 10 percent of the cost of the work completed until the clean-up work has been completed or non-processing of additional pay requests.

3.29 INCIDENTAL WORK:

A. Work called for on the Drawings and/or Specifications and are not set forth in the Bid Schedule as pay items, shall be considered as incidental work and will not be paid for directly, but shall be included in the price bid for the various pay items.

3.30 SCHEDULES:

A. The Contractor shall furnish the Engineer with a tentative schedule, in a format approved by the Engineer, setting forth in detail the procedure he proposes to follow, and giving the dates on which he expects to start and to complete separate portions of the work. The schedule shall be updated and submitted to the Engineer on a monthly basis corresponding with the date of the monthly progress meetings and/or pay applications.

B. If at any time, in the opinion of the Engineer, proper progress is not being maintained, such changes shall be made in the schedule of operations which will satisfy the Engineer that the work will be completed within the period stated in the proposal.

C. Whenever it becomes apparent from the current schedule and monthly progress reports that delays to the critical path have resulted and the Contract completion date will not be met, or when so directed by the Owner, the Contractor shall take some or all of the following actions at no additional cost to the Owner. The Contractor shall submit to the Owner for approval, a written statement of the steps he intends to take to remove or arrest the delay to the critical path in the approved schedule.
   1. Increase construction manpower
   2. Increase the number of working hours per shift, shifts per day, working days per week, and/or the amount of construction equipment
   3. Reschedule activities to achieve maximum schedule gain

D. Float is not for the exclusive benefit of the Contractor, but is an expiring resource available to the Owner and the Contractor to accommodate changes in the Work, however originated. Contract time extensions will be granted only to the extent that delays to affected work paths exceed available float along the critical path of the current updated construction schedule in effect at the time of delay. Contract time extensions will be granted only to the extent that such delays are beyond the control and without fault of negligence of the Contractor or any subcontractor at any tier. Contractors shall develop initial construction schedule to include 30 days of float allocated to the Owner.

3.31 SCHEDULE OF VALUES

A. Within ten (10) calendar days following the Effective Date of the Contract, the Contractor shall submit to the Engineer a schedule of values (a breakdown of each lump sum bid) which in turn shall be used to determine partial payment estimates and may be used to verify costs of credits, change orders, etc.
   1. The tentative schedule of values will be reviewed by the Engineer to determine whether, in his judgment, the schedule of values is of sufficient detail and if the prices included are "unbalanced" or "front-end loaded", in an effort to inflate the prices of those items of work to be completed in the early stages of the work.
   2. The Engineer will provide the Contractor with his comments and/or may request additional information from the Contractor to justify certain item quantities and prices therefore. The Contractor shall address the Engineer’s comments, revise the schedule, and resubmit the tentative schedule for further review and/or approval.
   3. Once the tentative schedule is accepted by the Engineer, it shall become the schedule of values to be used in verifying partial payment estimates.
   4. No partial payment request (including the first) shall be approved until the schedule of values has been approved by the Engineer and received by the Owner.
   5. Each partial payment request by the Contractor shall include the approved schedule of values, modified to indicate the total quantity and price of the work completed to the date of the request. After acceptance of the schedule of values submittal, no modifications will be made to the schedule of values, except as required by approved change orders.
   6. In so far as possible, total quantities and unit prices shall be shown for all items of work, separating for each item the materials and labor and such other sub-items as the Contractor may desire. "Lump sum", "miscellaneous", and other such general entries in the schedule shall be avoided whenever possible. Such items as Bond premiums, insurance, temporary facilities and equipment storage may be listed separately in the schedule of values provided the costs can be substantiated. Overhead and profit shall not be listed as separate items.

7. No additional payment will be allowed if the quantities shown on the schedule are less than those actually required to accomplish the work, unless the quantities are altered by a change order.

3.32 PAYMENT REQUEST PROCEDURE

A. Contractor shall prepare the partial pay estimate and submit it to the engineer's field personnel.

B. Engineer's field personnel will check the estimate for accuracy and completeness and recommend any changes.

C. Contractor shall make revisions to the estimate and submit required number of copies to the Engineer for processing.

D. Pay requests shall not be submitted more than once per Month.

3.33 SAFETY STANDARDS AND ACCIDENT PREVENTION:

A. With respect to all work performed under this Contract the Contractor shall:
1. Comply with the safety standards provisions of applicable laws, building and construction codes and the "Manual of Accident Prevention in Construction" published by the Associated General Contractors of America, the requirements of the Occupational Safety and Health Act of 1970 (Public Law 91-596), and the requirements of Title 29 of the Code of Federal Regulations, Section 1910 or 1926, as applicable.
2. Exercise every precaution at all times for the prevention of accidents and the protection of persons (including employees) and property.
3. Follow standard / OSHA practices of trench safety throughout project.

3.34 WATER FOR CONSTRUCTION:

A. The Contractor shall arrange for the necessary temporary water service, including the securing of any necessary permits.
1. The Contractor shall make the necessary arrangement to supply water required for testing the work prior to acceptance of the work, unless otherwise specifically stated in the Specifications for the equipment, system, or facility.
2. Cost of water usage shall be borne by the Contractor. The Contractor shall use temporary water meters as required by the City to monitor the use of potable water.
3. Contractor shall implement dust control measures to minimize the creation and dispersion of dust. Dust control will include application of water to control dust from roadways and other activities. Contractor shall apply clean water to gravel and unsurfaced roads. Contractor must use a fire hydrant meter to obtain water from the plant. Contractor shall bear the cost of water used for dust control.

3.35 ELECTRICAL POWER FOR CONSTRUCTION

A. The Contractor shall determine the type and amount required and make arrangements for providing temporary electric power. The Contractor shall pay all costs related to obtaining temporary electrical services

1. The Contractor shall maintain the temporary electric power system during the Contract period at his expense.
2. The electrical service shall be of adequate capacity for all construction tools and equipment without overloading the temporary facilities. The temporary systems and their components shall be furnished and installed in conformance with the requirements of the National Electrical Code and all local authorities having jurisdiction.
3. Temporary electric power installation shall meet the construction safety requirements of NEC. Federal (OSHA), State and other governing agencies.
4. Cost of electrical power usage for the Contractor's and his subcontractor's construction trailers and associated equipment shall be paid for by the Contractor.

3.36 MATERIAL DELIVERY, HANDLING AND STORAGE

A. Contractor's storage facilities, if necessary, will be located as specified, indicated in the drawings, or a bonded storage facility in the general vicinity. Any off-site storage is subject to Owner's approval. All storage costs and transportation are the responsibility of the Contractor.

B. Arrange deliveries of products in accordance with construction schedules; coordinate to avoid conflict with work and conditions at the site.

C. Deliver products in undamaged condition, in Manufacturer's original containers or packaging, with identifying labels intact and legible.

D. Immediately upon delivery, inspect shipments to assure compliance with requirements of Contract Documents and approved submittals, and that products are properly protected and undamaged.

E. Provide equipment and personnel to handle products by methods to prevent soiling or damage to products or packaging.

F. Owner will not accept deliveries for Contractor or assist in unloading.

G. All materials shall be stored in accordance with Manufacturer's recommendations.

H. Indoors:
1. Store products in accordance with Manufacturer's instructions, with seals and labels intact and legible.
2. Store products subject to damage by the elements in weathertight enclosures.
3. Maintain temperature and humidity within the ranges required by Manufacturer's instructions.

I. Outdoors:
1. Provide substantial platforms, blocking, or skids to support materials and products above ground; slope to provide drainage. Protect products from soiling or staining.
2. Cover products subject to dislocation or deterioration from exposure to the elements, with impervious sheet materials. Provide ventilation to prevent condensation below covering.
3. Store loose, granular materials on clean, solid surfaces, or on rigid sheet materials, to prevent mixing with foreign matter.

4. Provide surface drainage to prevent erosion and ponding of water.
5. Prevent mixing of refuse or chemically injurious materials or liquids with stored materials.
6. Pipes and conduits stored outdoors are to have open ends sealed to prevent the entrance of dirt, moisture, and other injurious materials. Protect PVC pipe from ultraviolet light exposure.
7. Store lightweight products to prevent wind damage.

3.37 BLASTING

A. Blasting for excavations is not allowed.

3.38 SECURITY

A. Furnish, install and maintain suitable barriers and protections to prevent public entry, and to protect the work, existing facilities and existing roads from construction operations. Damage to existing roads caused by the Contractors' vehicles shall be repaired by the Contractor at no cost to the Owner.

B. The Contractor shall take all necessary measures and be solely responsible for the protection of temporary facilities, finished construction areas, equipment, and materials at the site until the project has been completed and accepted by the Owner.

3.39 SITE MAINTENANCE

A. The Contractor shall limit his on-site operations and storage of equipment and materials to the area designated on the Plans and Specifications and as directed by the Owner.

B. Except as provided herein, no sidewalk, private property, or other areas adjacent to the plant site shall be used for storage of the Contractor's equipment and materials unless prior written approval is obtained from the Owner.

C. The Contractor shall maintain the area during construction in a manner that will not obstruct operations on street areas. Contractor shall proceed with his work in an orderly manner, maintaining the construction site free of debris and unnecessary equipment or materials.

D. At all times, the Contractor shall maintain areas covered by the Contract and public properties free from accumulations of waste, debris, and rubbish caused by construction operations. All trash and waste materials shall be cleaned up and disposed in an approved waste receptacle each day.

E. Excavated materials shall be removed from the site in a manner that will cause the least damage to adjacent lawns, grassed areas, trees, gardens, shrubbery, or fences regardless of whether these are on private property or on public right-of-ways.

3.40 POUR SEQUENCE

A. Contractor shall provide a pour sequence for each and every structure. All shop drawings pertaining to and affecting the structure shall be approved prior to starting this work. Bolt patterns for gate and equipment installations must be checked, equipment dimension shall

be verified to ascertain that proper installation can be accomplished, pipe penetrations shall be verified, and conflicts shall be immediately brought to Engineer's attention prior to doing the work. Contractor shall also verify location of windows, doors, ducts, equipment lifting devices, unit heaters, electrical and mechanical work which may affect the outcome of the project. Work done without proper verification or notification shall be removed and re-done at no additional expense to the Owner.

3.41 ABANDONED PIPING

A. Abandoned underground plant piping greater than 12" shall be removed or filled with flowable fill to prevent future cave-ins as part of the demolition process. No separate payment will be made for the removal or placement of flowable fill. Costs for this work shall be included in the bid item for demolition.

3.42 PERMIT-REQUIRED CONFINED SPACES

A. The contractor shall evaluate the project's work area(s) to determine if any spaces are permit-required confined spaces per the requirements of Federal Regulations Standards 29CFR 1910.146. If the work area(s) contains permit spaces, the Contractor shall inform all employees and subcontractor(s), by posting danger signs or by any other equally effective means, of the existence and location of, and the danger posed by, the permit spaces.

B. NOTE: A sign reading DANGER – PERMIT-REQUIRED CONFINED SPACE, DO NOT ENTER or using other similar language to satisfy the requirement for a sign.

C. If the Contractor decides that its employees and/or subcontractor(s) will not enter permit spaces, the Contractor shall take effective measures to prevent its employees and/or subcontractor(s) from entering the permit spaces and shall comply with paragraphs (c)(1), (c)(2), (c)(6) and (c)(8), of Federal Regulation Standards 29CFR 1910.146.

D. If the Contractor decides that its employees and/or subcontractor(s) will enter permit spaces, the Contractor shall develop and implement a written permit space program that complies with Federal Regulation Standards 29CFR 1910.146. the written program shall be available for review by employees and subcontractor(s). The written program shall also be available to the Owner's authorized representatives for information only.

E. The Contractor may use the alternate procedures specified in paragraph (c)(5)(ii) of the Federal Regulation Standards 29CFR 1910.146 for entering a permit space under the conditions set forth in paragraph (c)(5)(i) of the Federal Regulation Standards 29CFR 1910.146.

3.43 PROGRESS MEETINGS:

A. Contractor shall conduct regular project progress meetings on a monthly basis and at other times as requested by the Engineer or required by progress of the Work. Contractor, Engineer, and all subcontractors active on the site shall be represented at each meeting. Contractor may at his discretion request attendance by other parties involved in the project.

B. Contractor shall preside at the meetings. Meeting minutes will be prepared and distributed by Contractor. The purpose of the meetings will be to review the progress of the Work, maintain coordination of efforts, discuss changes in scheduling, and resolve other problems which may develop.

3.44 SUBSTANTIAL AND FINAL COMPLETION

A. When the work is substantially complete, Contractor shall notify the Owner and Engineer in writing that the entire work is substantially complete (operational or beneficial occupancy) and request that Engineer issues a certificate of substantial completion. Work which may remain uncompleted at substantial completion shall include only minor surface work relative to right-of-way restoration, sodding, seeding, pavement replacement, etc.

B. Upon written notice from Contractor to the Engineer and Owner that the entire work is complete within the time called out on the Bid the Engineer will make a final inspection with Owner and Contractor and will notify Contractor in writing all particulars of the project which are incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such work prior to final payment.

3.45 PROJECT SIGNS

A. Furnish and install a standard sign at the plant entrance road during the duration of the work at that facility as required by EPA, ODEQ, OWRB (Funding & Regulatory Agencies). Utilize a professional sign painter to design and use colors prescribed by Engineer.

B. Install in locations approved by Owner.

C. Signs not listed in this Specification and/or drawings permitted only upon approval of Engineer.

3.46 ACCESS AND PARKING

A. Access to the plant site for construction personnel shall be through the construction entrance, if shown on the drawings. Otherwise, the Contractor will coordinate access to the site with the Operator and Engineer. At no time, shall the Contractor impede access to the plant site that will interfere with plant operations. Signs shall be installed to divert all traffic to that gate, including signs inside the plant site if needed. Location of job sign will be as directed by Owner.

3.47 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary above grade or buried utilities, equipment, facilities, materials, prior to Final Inspection.

B. Remove underground installations to a minimum depth of two feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

3.48 MAINTENANCE / SPARE PARTS

A. The Contractor shall provide the Owner, upon acceptance of the equipment, all special accessories required to place each item of equipment in full operation. These special accessory items include, but are not limited to, the specified spare parts, adequate oil and grease required for the first lubrication of the equipment, light bulbs, fuses, hydrant wrenches, valve wrenches, valve keys, handwheels, chain operators for valve handles more than 6 feet above floor, and other expendable items as required for initial start-up and operation of all equipment.

3.49 TRANSFER OF UTILITIES

A. Transfer utilities to the Owner shall occur after Substantial Completion and owner taking beneficial use of the work.

B. Submit final meter readings for utilities and similar data as of the date the Owner occupied the work.

3.50 OCCUPANCY

A. Owner will occupy the premises during the entire period of construction for the conduct of his normal operations. Contractor shall cooperate with Owner in all construction operations to minimize conflict, and to facilitate Owner's usage.

B. As soon as any portion of the structure and equipment are ready for use, the Owner shall have the right to operate the portion upon written notice to the Contractor.

C. Testing of equipment and appurtenances including specified test periods, training, and start-up does not constitute acceptance for operation.

D. Owner may accept the facility for continued use after start-up and testing at the option of the Owner. If acceptance is delayed at the option of the Owner, shut down facilities per approved Operation and Maintenance procedures.

E. The execution of bonds is understood to indicate the consent of the surety to these provisions.

F. Provide an endorsement from the insurance carrier permitting occupancy of the structures and use of equipment during the remaining period of construction.

3.51 FINAL CLEANING

A. Perform final cleaning prior to inspections for Substantial Completion and again prior to Final Inspection on unoccupied portions.

B. Employ skilled workers who are experienced in cleaning operations.

C. Use cleaning materials which are recommended by manufacturers of surfaces to be cleaned.

D. Prevent scratching, discoloring, and otherwise damaging surfaces being cleaned.

E. Clean roofs, gutters, downspouts, and drainage systems.

F. Broom clean exterior paved surfaces and rake clean other surfaces of site work:
1. Police yards and grounds to keep clean.

G. Remove dust, cobwebs, and traces of insects and dirt.

H. Clean grease, mastic, adhesives, dust, dirt, stains, fingerprints, paint, blemishes, sealants, plaster, concrete, and other foreign materials from sight-exposed surfaces, and fixtures and equipment.

I. Remove non-permanent protection and labels.

J. Polish waxed woodwork and finish hardware.

K. Wash tile.

L. Wax and buff hard floors, as applicable.

M. Wash and polish glass, inside and outside.

N. Wash and shine mirrors.

O. Polish glossy surfaces to clear shine.

P. Vacuum carpeted and soft surfaces.

Q. Clean permanent filters and replace disposable filters when heating, ventilation, and air conditioning units were operated during construction.

R. Clean ducts, blowers and coils when units were operated without filters during construction.

S. Clean light fixtures and replace burned-out or dim lamps.

T. Probes, elements, sample lines, transmitters, tubing, and enclosures have been cleaned and are in like-new condition.

3.52 WARRANTY DATE

A. Treatment Plant and Equipment warranty shall begin only upon final acceptance of the entire WWTP project as a whole by Owner. Usage of equipment during startup, testing and completion of punch list prior to final inspection shall be considered as demonstration period. Equipment manufacturer and Contractor shall include the cost for using equipment during start up and testing to not be considered as beneficial occupancy in the bid for warranty. This will apply regardless of what is submitted and/or approved in manufacturer's submittal data / warranty data.

3.53 PROJECT RECORD DOCUMENTS / AS-BUILTS

A. Contract shall prepare and maintain record documents (as-builts) for the project to accurately reflect the construction as built. Documents must be submitted upon completion as a condition of final acceptance.
   1. Drawing Requirements
      a. Legibly mark contract drawings to record actual construction:
         1) Horizontal and vertical location of underground and under slab utilities and appurtenances referenced to permanent surface improvements.
         2) Location of internal utilities and appurtenances referenced to permanent surface improvements.
         3) Field changes of dimension and detail.
         4) Changes made by change order or field order.
         5) Details not on original contract drawings.
   2. Specifications Requirements
      a. Legibly mark specifications and addenda to record:
         1) Manufacturer, trade name, catalog number and supplier of each product and item of equipment actually installed;
         2) Changes made by change order or field order;
         3) Other matters not originally specified.

3.54 CLOSEOUT DOCUMENTS

A. Submit following Closeout Submittals upon Substantial Completion and at least 7 days prior to submitting Application for Final Payment:
   1. Evidence of Compliance with Requirements.
   2. Project Record Documents.
   3. Operation and Maintenance Manuals.
   4. Warranties and Bonds.
   5. Keys and Keying Schedule.
   6. Evidence of Payment and release forms as outlined in Contract Documents.
   7. Release of claims as outlined in Conditions of the Contract.
   8. Certificate of Final Completion.

3.55 LABOR STANDARDS

A. It is the responsibility of the Contractor to verify required wage rates for all anticipated laborer classifications prior to bid. Any discrepancies found by governing bodies and/or decisions rendered during construction will be borne by the Contractor. Owner assumes no responsibility nor oversight and is not a party to the labor requirements.

3.56 SCOPE OF WORK

A. The Contractor shall, except as otherwise specifically stated herein or in any applicable parts of these Contract Documents, provide and pay for all labor, materials, equipment, tools, construction equipment and other facilities and services necessary for proper execution, testing, successful start-up and completion of the Work.

B. Any part or item of the Work which is reasonably implied or normally required to make each installation satisfactorily and completely operable shall be performed by the

Contractor and the expense thereof shall be included in the bid price. It is the intent of these Specifications to provide the Owner with complete operable systems. All miscellaneous appurtenances and other items or work that are incidental in meeting the intent of these Specifications shall be considered as having been included in the bid price, even though these items may not be specifically called for in the Specifications.

C. The Work shall include all civil, architectural, structural, mechanical, HVAC, electrical and instrumentation work for complete and operable systems.
   1. See Section 01_10_00 Summary of Work

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_11_01

SEQUENCE OF CONSTRUCTION

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. The Owner's operations necessary to meet these requirements are of higher priority than construction activities. Schedules of connections, renovations and modifications shall be submitted to the Owner for approval, and all such items shall be coordinated throughout the entire construction period. These schedules shall permit full and normal treatment of wastewater including necessary delivery of chemicals.

B. The Contractor shall not operate any valves, gates, or equipment in the plant or yard piping system unless directed to do so by the Owner, and under the Owner's direct supervision. The Contractor shall schedule all valve or gate, operations with the Owner. Existing valves and gates should be expected to not seal completely or properly. Contractor shall provide any temporary containment and dewatering equipment, at no additional cost to the Owner, to perform the work.

C. Contractor shall maintain access to all plant facilities at all times.

D. Existing plugged pipelines, in which water or wastewater has been standing, may have to be cleaned of debris prior to connecting to a new pipeline or installing protective coatings and linings.

E. The Contractor shall submit shop drawings to show details of all temporary services, bypasses, tie-ins to existing systems, temporary chemical fill stations, and temporary roads. Shop drawings shall include size and type of all temporary and/or permanent equipment, piping, valving, controls and associated appurtenances.

1.2 PLANT SHUTDOWNS

A. This work may be concurrent with other work at the plant. Plant outages that may be required by other Contractors at the Treatment Plant will be coordinated by the Owner, and Engineer. In case of conflicts in scheduling work requiring shutdowns or partial outages at multiple facilities, the Owner will determine which treatment process shutdowns will be delayed.

B. The Contractor shall perform the work of the construction activities to accommodate normal plant operations with only minimal process interruptions necessary for process unit isolation, chemical feed application point piping, process piping, electrical connections, and chemical deliveries.

C. Influent flow to the facility cannot be completely shut down during any portion of the project. Flow Equalization Basins (FEBs) are available to store flow for short periods if a plant shutdown is needed. If the FEBs are used, the Contractor shall be responsible for all temporary pumping and for cleaning of the basins after use. To use the FEBs, the Contractor must comply with the coordination procedures discussed below.

D. Peak flow to the plant is 12 MGD. If a shutdown occurs during wet weather conditions, the Contractor shall have 12 MGD of pumping capacity on the site. The Contractor shall be responsible to pump at a sufficient rate as to prevent upstream sanitary sewer overflows. All peak flow temporary pumping shall be transported to the Flow Equalization Basin using either temporary piping to the basin or using temporary connections to the existing FEB Influent pipe as long as the temporary connection does not interfere with the operation of other facilities.

E. Regardless of the dates outlined herein, partial or total shutdown of any facility requires special coordination and planning with the Owner. The Contractor shall comply with the operational constraints of the facility during the shutdown periods.

F. The Contractor shall notify the Owner in writing at least 14 days in advance and again 3 days prior to beginning work on a particular area, and coordinate with the Owner the specific items to be isolated and the duration for each. Contractor shall obtain written approval from the Owner prior to each shutdown. High demand conditions creating the need for increased treatment plant flow may require the rescheduling of an approved shutdown or cancellation of work in progress. Emergency work may be accomplished without obtaining prior permission; however, Contractor shall notify onsite operators, Owner, and Engineer immediately of any emergencies.

G. At least fourteen (14) calendar days prior to partially or totally shutting down any facility, the Contractor shall submit to the Owner for review.
   1. A detailed description of the work to be performed.
   2. A schedule outlining the duration of each scheduled task and total duration of the shutdown.
   3. A list of all equipment and materials required to complete each task.
   4. Documentation that all manpower, equipment and materials necessary to complete each task are available on site.

H. A minimum of two working days prior to shutdowns, a special coordination meeting will be held with the Contractor, Owner, Engineer, and other parties (subcontractor) as requested by Owner to review procedures.

I. Prior to beginning work, the Contractor shall have on-site all materials, equipment, and personnel necessary to complete the work in the time scheduled. The Contractor shall also perform all possible tasks to the most complete state possible prior to shutdowns. All exposed bolts and nuts on valves or fittings that are to be disassembled shall be removed and replaced one at a time prior to shutdown to assure timely progress.

J. The Owner’s plant manager and/or his designee shall be responsible for directing shutdown operations. The Contractor shall provide any labor assistance necessary to complete shutdown operations including but not limited to:
   1. Operating gates and valves (under direction and supervision of the Owner's plant operating staff).
   2. Removing water, scale, mud and debris from pipelines and containing, pumping and conveying water, which will leak through existing gates and valves.

K. The Contractor shall work whatever hours are necessary to maintain schedules during shutdowns, at no additional cost to the Owner. While a facility is partially or totally shut down, the Contractor shall work 24 hours/day to minimize the shutdown period.

L. Failure of the Contractor to properly plan and perform the work in the prescribed manner may result in discharge of inadequately treated wastewater. In this case, the Contractor may be liable for payment of fines, fees or other charges imposed upon the Owner by state or federal regulatory agencies, and all other costs associated with the inadequately treated discharge.

1.3 SEQUENCE OF CONSTRUCTION

A. The following sequence is for information only and is intended to represent a general sequence of construction of major activities in which the Work can proceed. The following items are not necessarily in the order that construction will proceed. The sample sequence provided below is not intended to represent a complete work plan.

1. Establish SWPPP and storm water controls.
2. Locate existing utilities and piping and perform SUE.
3. Perform sequentially or simultaneously:
    a. Northside Improvements
    b. Southside Improvements (with the exception of FEB improvements)
    c. Conveyance Improvements
4. Conduct, at Northside WWTP
    a. Startup
    b. Performance Testing
    c. Functional Testing
    d. Clean Water Testing
    e. Operational Testing
5. Bring Northside WWTP fully online operated by City personnel
6. Conduct, at Southside
    a. Startup
    b. Performance Testing
    c. Functional Testing
    d. Clean Water Testing
    e. Operational Testing
7. Bring Southside fully online
8. Southside FEB Improvements
9. Startup & Test FEB Improvements
10. Southside Demolition
11. Northside Demolition

1.4 CONSTRUCTION CONSTRAINTS

A. The treatment plant must be capable of treating wastewater to a quality that complies with the discharge permit. Prior to demolition or decommissioning of existing treatment facilities, the proposed improvements for the main treatment process must be completed and accepted by the Owner.

B. At no additional cost to the Owner, the Contractor shall provide all temporary pumping and associated fuel necessary to temporarily bypass existing facilities as needed to construct proposed improvements.

C. At no additional cost to the Owner, the Contractor shall provide all temporary electrical and controls necessary to temporarily operate existing and proposed facilities as needed to construct improvements.

D. Demolition
   1. Contractor has the right to salvage demolished materials and equipment.
   2. When demolishing buildings and basins, the Contractor shall remove all concrete, piping and equipment. Removal of structures shall include removal of all equipment and concrete within 6-ft of the ground surface as well as the filling and compacting with soil of any openings to natural grade.
   3. Contractor is responsible for final dewatering of the basins.
      a. Grit, rags, biosolids and other residuals remaining in the basins being demolished shall be removed prior to demolition. These materials shall be disposed in accordance with applicable regulations.
      b. Wastewater from the basins may be returned to the head of the plant through the Flow Equalization Basins. The Contractor shall closely coordinate basin dewatering activities with the Operators to ensure the dewatering the basins will not adversely impact operations of the treatment plant.

E. Roads and Entrance
   1. During construction of the roads and entrance, Contractor shall maintain alternate routes and construct temporary roads to allow for operation of the plant and chemical deliveries.
   2. Prior to constructing any paving, all underground piping, culverts, and ductbanks shall be installed. Once paving is placed, no partial paving repairs are allowed. If Contractor must cut paving, the complete paving section between joints shall be replaced.
   3. During construction of the entrance, the Contractor shall maintain plant security in the area at all times.

F. Partial shut-downs for Electrical Tie-Ins shall not exceed 4-hours. Planning and approvals for partial shutdowns shall comply with this specification. Contractor is responsible to provide bypass pumping during the shutdowns.

G. Dewatering of structures, dewatering of piping connection points, and removal of obstructions shall be the full responsibility of the Contractor. The Contractor shall provide any additional bulkheads, dewatering equipment, or other protection as needed to allow installation of the improvements under proper conditions. Existing valves and gates may leak considerably or not hold at all. Pumping equipment, piping and valving and associated costs shall be borne by the Contractor at no additional cost to the Owner. The Contractor shall coordinate with the Owner on approved discharge locations, discharge quantity, discharge times and discharge durations. All dewatering operations required for construction are part of the overall "down time" for any of the recommended sequence steps in this specification. No additional time will be given for the dewatering operations.

H. For all construction activities removal and replacement of equipment or appurtenances, the replacement equipment and appurtenances must be on site prior to any demolition activities.

I. For all construction activities in the plant, vehicular access shall be maintained for Plant Staff to perform all daily operation and maintenance activities. If the Contractor determines that a roadway should be temporarily shut down, the Contractor must request and receive approval from the Owner in writing five (5) days prior to the closure of the road. The Contractor shall cover all the excavated pipe trenches with cover plates when not performing any construction activity in the pipe trenches. In addition, the Contractor shall also provide traffic rated closure plates at all times on the construction site to cover the excavated roads at the end of every construction day or within one (1) hour at Owner's request at any time during the work day to allow for movement of traffic over the excavated roads.

J. Contractor shall coordinate with the Owner on any other concurrent construction projects before any shutdown of any facilities or utilities.

K. Unless noted otherwise in the Contract Documents or in writing by the Owner, existing equipment and systems shall remain in place and operational until new equipment and systems are fully functional for at least 30 days and are accepted by the Owner.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_29_00

PAYMENT PROCEDURES

PART 5 GENERAL

5.1 SUMMARY

F. This Section describes the method by which the work will be measured and paid in accordance with the Bid Form.

G. It outlines how the work was divided into parts for ease of payment. The scope of each part, however, will primarily be as per the Drawings & Specifications.

H. The contents of this section shall complement the scope of work in the Contract Documents. If there is a conflict between the Specifications/Drawings and this section, the more stringent of the two requirements shall apply and be included in the Contractor's bid.

I. All provisions for payments in the Section apply to all Subcontractors and Suppliers.

J. The Contractor's lump sum bid price in the bid proposal shall include all construction cost associated with the completion of the project including but not limited to equipment, materials, tools, labor, insurance, goods, supplies, safety, fuel, rentals, maintenance, repairs, permits, legal fees, licenses, direct costs, indirect costs, overhead, and profit, and any other cost or expense incurred.

K. Work and materials not specifically set forth on the Bid Form shall be considered subsidiary obligations of Contractor and costs shall be included in the price bid. A Contractor who submitted a bid on this project must consider himself qualified to perform and prepare a bid for the work described in the Contract Documents and fully understand what work and materials are required to complete the project. The contract price proposal is to be full compensation for all work and materials needed to complete the project described in the Contract Document. Any work or materials not specifically called out in the Bid Form shall be incidental to the project. In preparing the bid for this project, Contractor shall request clarification from the Engineer for any item he feels may have been omitted from the Bid Form. The Contractor, who has done similar work who considers himself qualified to prepare the bid, by submitting his bid, acknowledges that the total price bid is adequate for completing the entire project described in the Contract Documents.

L. Progress payments will be based on the Engineer's observations and evaluations of quantities incorporated in the Work multiplied by the unit price.

M. Final payment for Work governed by unit prices will be made on the basis of the actual measurements and quantities determined by Engineer multiplied by the unit price for Work which is incorporated in or made necessary by the Work.

5.2 RELATED SECTIONS

F. Section 01_00_01 Basic Requirements

G. Section 01_33_01 General Submittal Requirements

H. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

5.3 SUBMITTALS

F. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

5.4 NONPAYMENT FOR REJECTED OR UNUSED PRODUCTS

F. Payments will not be made for the following:
1. Loading, hauling and disposing of rejected materials
2. Quantities of materials wasted or disposed of in a manner not called for by the Contract Documents
3. Rejected loads of material, including material rejected after it has been placed by reason of failure of the Contractor to conform to provisions of the Contract Documents.
4. Defective work not accepted by Owner
5. Material remaining on hand after completion of work.

5.5 ALLOWANCES

F. Allowance items in the Bid Form shall be used to pay the Contractor for specific Owner preferred products or services that are not included in the Base Bid. Allowance items may only be used upon written authorization from the Engineer. The actual amount of the allowance total authorized whether higher or lower shall adjust the final Payment Amount.
1. The allowance is not intended to be used to procure payments for items covered in the Contract Documents.
2. Expenditure of the allowance is at the sole discretion of the Engineer.
3. The allowance may be used in full or in part as the Engineer deems necessary.
4. If no extra work is identified and approved by Engineer, the allowance will not be expended.

G. Procedure:
1. Prior to initiating any item of extra work under the Allowances, Owner, Engineer, and Contractor will agree to the scope of work to be performed and the amount of payment to be made for a particular item of extra work under consideration.

H. Payment: Lump sum based on actual work completed.

I. Costs included in allowances for furnishing products only:
1. Net cost of product.
2. Delivery and unloading at site.

3. Applicable taxes if any.
4. Other expenses as required to furnish products.

J. Costs included in allowances for furnishing and installing products:
1. Net cost of product.
2. Delivery and unloading at site.
3. Applicable taxes, if any.
4. Handling at site, including uncrating and storage.
5. Protection from elements and from damage.
6. Labor, installation, testing, and finishing.
7. Other expenses required to complete installation.

K. The Contractor's overhead, profit, insurance, sales tax, bond expense and any other expense for allowance items (not included in items above) shall be included in the Contractor's Lump Sum Bid.

L. No payment will be made for nonproductive time on the part of the Contractor for delays in processing or installation of an allowance item.

PART 6 PRODUCTS (NOT USED)

PART 7 EXECUTION

7.1 BID ITEMS

F. This section covers the components considered to be a portion of each Bid Items as may or may not be listed in the Bid Schedule and is furnished to aid the Contractor in preparing his bid.
1. Of necessity, the items described as components of the various items are discussed in a general manner only, describing the major pieces of equipment and/or materials.
2. Any items and/or appurtenances not specifically mentioned shall be considered a portion of the bid item to which, in the opinion of the Engineer, its function is most directly related.
3. Failure to list all items and/or appurtenances does not relieve the Contractor from furnishing all apparatuses, devices, labor, or materials of whatever nature required for a complete and operating installation in accordance with the intent of the Drawings, approved Shop Drawings, and the Specifications.

G. Estimated Quantities
1. Where estimated quantities are shown for the various classes of work to be done and material to be furnished under this contract, they are approximate and are to be used only as a basis for estimating the probable cost of the work and for comparing the proposals offered for the work.
2. It is understood that the actual amount of work to be done and material to be furnished under this contract may differ somewhat from these estimates, and that where the basis of payment is the unit price method, payment shall be made for the actual amount of work done and the material furnished.

H. General Bid Items #1-#14

1. SWPPP & Erosion Control

a. Description

1) This item shall include the development, design, implantation and all necessary labor, materials, and equipment to provide SWPPP for the duration of the project. This includes all fees associated with, but not limited to, preparation of the SWPPP, review and permitting fees, installation and maintenance of the SWPPP items, fines, and other incidental items as described in the specifications.

2) This item shall include the filing of any/all required notices including, but not limited to, the Notice of Intent (NOI) and Notice of Termination (NOT) with the appropriate Regulatory agencies.

3) If project duration changes due to changes by the Owner, no additional payment will be made to the Contractor.

b. Measurement

1) Measurement will be made on a lump sum (LS) basis.

c. Payment

1) Payment will be made on a lump sum (LS) based on percentage complete of sewermain. Payment shall be allowed for 25% of the lump sum bid price upon receipt of the plan by the Owner. The remaining 75% of the lump sum bid price shall be paid monthly and calculated as the total lump sum amount divided by the contract time (in months).

2) Payment shall be total compensation for furnishing all design, materials, tools, equipment, labor and any other incidentals necessary to complete the work.

d. Additional Information

1) No exceptions will be made to the lump sum price established by the Contractor.

2. Mobilization, Demobilization, Bonds & Insurance

a. Description

1) This item shall consist of the establishment of offices and other facilities on the Site and the movement of personnel, construction equipment and supplies to the Site or to the vicinity of the Site in order to enable the Contractor to begin the Work. This item also includes all costs associated with bonding and insurance.

b. Measurement

1) Measurement will be made per lump sum

2) The maximum bid for this item shall be 5% of the total amount bid including alternates.

c. Payment

1) Payment shall be on a lump sum basis at no greater than the maximum price allowed. The maximum amount shown in the proposal is the amount allowed to assist the Contractor in defraying the initial cost of operations. Partial payment will be made as follows provided the amount does not exceed 5% of the total amount bid for the project:

a) When 1% of the adjusted contract amount for construction items is earned, 50% of the item lump sum will be paid.

b) When 50% of the adjusted contract amount for construction items is earned, 80% of the item lump sum will be paid. Previous payments under this Item will be deducted from this amount.

c) When 100% of the adjusted contract amount for construction items is earned and the final inspection has been completed, 100% of the item lump sum will be paid. Previous payments under this Item will be deducted from this amount.

d. Additional Information

1) It is not intended that the lump sum amount allowed will cover all costs for bonds, insurance, mobilization, and other costs associated with project start-up. Cost in excess of the amount shown shall be included in the unit price bid for individual construction items.

2) No exceptions will be made to the lump sum price established by the Contractor.

3. Construction Staking

a. Description

1) This item shall consist of furnishing all labor, equipment and materials necessary to layout and maintain sufficient control and monuments for construction staking for the installation of improvements to the lines and grades shown on the Drawings and associated easements. Due to the nature of this work, staking may be performed multiple times without additional compensation. Price bid should also include any As-Built survey requirements.

2) Construction staking shall be performed by a Oklahoma licensed surveyor. Unless it is adequately justified and approved by the Engineer, Contractor shall utilize the services of the surveyor responsible for the design survey to execute Construction staking on the project. Construction work shall be staked and the stakes periodically checked for horizontal and vertical control accuracy throughout construction. Temporary benchmarks shall be set to expedite construction. Foundation locations, building comers, finished floor elevations, slab levels, line alignments, structure locations, pipe penetrations, etc., shall be confirmed and checked by the licensed surveyor and the accuracy of the construction survey shall be certified.

b. Measurement & Payment

1) Measurement and payment will be made on a lump sum basis based on the percent complete

c. Additional Information

1) No exceptions will be made to the lump sum price established by the Contractor.

4. Traffic Control Plan & Implementation

a. Description

a) This item shall include all necessary labor, materials, and equipment to provide traffic control for the duration of the project. This includes all fees associated with, but not limited to, preparation of the traffic control plan, review

and permitting fees, installation and maintenance of the traffic control devices, fines, and other incidental items as described in the specifications.

b) If project duration changes due to changes by the Owner, no additional payment will be made to the Contractor.

c) Item includes obtaining approvals by governing authorities, required traffic control for ODOT installation and permitting requirements, preparation and submittal of traffic control plan and subsequent approval from Owner and any other entity prior to commencing work in their right-of-way.

d) Provisions for traffic control devices that may include barrels, barricades, control panels, signage including arrow boards, temporary striping, low profile concrete barriers, temporary relocating of existing traffic signs, control devices, and mailboxes and placing beyond the proposed pavement, maintaining access to driveways, and provision of equipment and personnel as necessary to protect the work and the public in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

e) The traffic control plans will be submitted to Owner for review and approval prior to traffic control devices being set in place. Construction will not begin until the traffic control plan has been approved and the traffic control devices are in place.

f) It is the Contractor's responsibility to provide an all-weather access to residents and such costs shall be included in the traffic control pay item. Temporary driveways shall utilize crushed concrete, asphalt millings, or select fill topped with 6 to 8 inches of crushed concrete or asphalt millings. The Contractor is responsible for maintaining the driveways during construction.

g) No separate payment will be made for flaggers or uniformed officer as required for the Project. Flaggers or uniformed officer shall be considered incidental to the traffic control and regulation bid item.

b. Measurement
   1) Measurement will be made on a lump sum basis

c. Payment
   1) Payment will be made on a lump sum basis (LS) and shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

d. Additional Information
   1) No exceptions will be made to the lump sum price established by the Contractor.

5. Trench Safety System
   a. Description
      1) This item shall include the development, design, and implementation as required by the Occupational Safety and Health Administration (OSHA) and the assumption of responsibility for the system.

2) No additional payment shall be made for rented equipment, Contractor's equipment, or materials used or damaged during the installation, use, and/or removal of equipment and materials whether owned, rented, or leased by the Contractor or his subcontractors.
3) No evaluation of the adequacy of the trench safety systems used by the Contractor shall be made by the Engineer. The means, methods and responsibility for trench safety rests solely with the Contractor.
4) By approving the Contractor's request for payment of excavation safety, the Engineer makes no representation that the Contractor's work for this pay item has been performed in a manner consistent with the Contract Documents and/or local, State, or Federal laws.

b. Measurement
1) Measurement will be made per lump sum for the design and implementation of the system for the duration of the project.

c. Payment
1) Payment shall be made on a lump sum basis (LS) and shall be total compensation for furnishing design and all materials, tools, equipment, labor and any other incidentals necessary including removal of the system.

d. Additional Information
1) No exceptions will be made to the lump sum price established by the Contractor.

6. Materials Testing & Disinfection
a. Description
1) This item shall consist of furnishing all labor, equipment and materials necessary to perform construction quality assurance testing and disinfection. Testing shall include, but not be limited to, soil compaction, concrete, strength and slump test, testing of concrete materials, aggregate, manhole testing, mandrel, pressure testing, disinfection and other testing as required and specified by the Contract Documents. Copies of test results shall be sent to the Engineer and Owner immediately after completion and recording of test results. Testing company shall be approved by the Engineer prior to beginning construction.

b. Measurement & Payment
1) Measurement and payment shall be made on a lump sum basis (LS) based on percent complete and shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

c. Additional Information
1) No exceptions will be made to the lump sum price established by the Contractor.

7. CCTV Security System
a. Description
1) This item shall consist of furnishing all labor, equipment and materials necessary to design & install a CCTV security system in accordance with the Specifications.

b. Measurement & Payment

1) Measurement and payment shall be made on a lump sum basis (LS) based on percent complete and shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

c. Additional Information

1) No exceptions will be made to the lump sum price established by the Contractor.

8. Waste Sludge Handling and Disposal

a. Description

1) This item shall include all necessary labor, materials, and equipment to dispose of Waste Sludge in full compliance with the Specifications.

b. Measurement and Payment

1) See Section 33_01_33 for additional details.

9. Hydroexcavation for Utilities Location

1) This item shall include all necessary labor, materials, equipment and costs necessary for the excavation using hydroexcavation or other similar non-destructive methods to confirm locations of existing utilities related to the construction. The lump sum price bid shall include full compensation for excavation of existing for utilities as required to verify/confirm location, depth, size, material, joint type and any other information necessary at all necessary locations whether or not shown on drawings.

2) Existing features shown on the plans are based upon existing construction plans, as-builts and other information available during design. It shall be the Contractor's responsibility to locate (horizontally and vertically) all existing franchise utilities, waterlines, sanitary sewer lines, storm drains, pavement, curbs, retaining walls, and all other existing utilities and facilities, prior to manufacture and installation of the pipelines and appurtenances. Any conflicts determined shall be reported to the Engineer.

3) Hydroexcavation are to be used on an as-needed basis. Extents and locations to be approved by the Engineer.

b. Measurement

1) Measurement will be made per lump sum

c. Payment

1) Payment will be made on a lump sum (LF) of hydroexcavation perro

2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

10. Allowance Items #10 - #14

a. Amount shown is an estimated amount to be included in the Base Bid with final payment based on actual costs.

b. Work Change Directives

1) Allowance to be used for miscellaneous work on a change authorization basis required during completion of the project to be solely at the discretion of the Owner & Engineer.

c. New Electric Service Extension

1) Allowance to compensate for cost paid direct to electric service provider for service extension from power to service meter at Northside WWTP & Southside WWTP.

d. Lab Equipment
   1) Allowance to for owner selected lab equipment.

e. Furniture, Fixtures & Equipment
   1) Allowance to materials to furnish and install Owner selected FFE.

f. Rock Removal
   1) Allowance to compensate for Rock Removal where the quality differs substantially from the information provided in the bid proposal requiring removal by non-conventional means.
   2) Will be paid as labor and equipment.

I. Northside Bid Items #15 - #46
   a. Description
      1) Lump sum bid items for Northside Wastewater Treatment Plant Improvements.
      2) All associated construction costs shall be grouped into the most appropriate lump sum item
   b. Measurement
      1) Measurement will be made per lump sum
   c. Payment
      1) Payment shall be made on a lump sum basis (LS) based on % complete.
   d. Additional Information
      1) No exceptions will be made to the lump sum price established by the Contractor.

J. Collection System Lift Station Controls & SCADA Bid Item #47
   a. Description
      1) Lump sum bid item for improvements made to Collection System lift stations outlined in the Drawings and should represent all work required on the Collection System Lift Station as required by the Contract Documents.
      2) Work to be provided turn-key by System Integrator.
   b. Measurement
      1) Measurement will be made per lump sum
   c. Payment
      1) Payment shall be made on a lump sum basis (LS) based on % complete.
   d. Additional Information
      1) No exceptions will be made to the lump sum price established by the Contractor.

K. Southside Bid Items #48 - #67
   a. Description
      1) Lump sum bid items for improvements at the Southside Improvements.
      2) All associated construction costs shall be grouped into the most appropriate lump sum item
   b. Measurement

1) Measurement will be made per lump sum

c. Payment

1) Payment shall be made on a lump sum basis (LS) based on % complete.

d. Additional Information

1) No exceptions will be made to the lump sum price established by the Contractor.

L. Conveyance Bid Items #68 - #80

68. Sewerline Restoration

a. Description

1) This item shall include all necessary labor, materials, and equipment necessary for restoring any disturbed areas impacted by construction activities where no specific bid items existing in the Bid Form. The lump sum price shall include full compensation for restoring the construction areas to pre-existing conditions.

2) Restoring (including temporary relocation where necessary) of:

a) storm drainage swells
b) ditches
c) structures
d) banks
e) sloped pipes
f) end treatments
g) signs
h) fences
i) mailboxes
j) landscaping
k) any other items whether or not shown or specifically noted on the Drawings

3) Replacement of items removed and/or disturbed during construction including:

a) riprap
b) gravel drives
c) asphalt pavement & drives
d) sloped pipes
e) end treatments
f) signs
g) concrete pavement & drives
h) curb & gutter
i) landscaping
j) fencing
k) trees outside construction area not detailed for removal
l) any other items impacted by proposed work whether or not shown or specifically noted on the Drawings

4) This item includes full compensation for all full width pavements replacement on Brangus Road beginning at approximate Station 164+00 (paving to be included in Sewermain Restoration.)

5) Any other restoration activities required that are not included in another specific bid item of the Bid Form.

6) It is the contractor's responsibility to accurately quantify the work required prior to bid to be included in the lump sum bid amount.

7) All restoration shall be to original or better conditions.

b. Measurement
   1) Measurement will be made per lump sum

c. Payment
   1) Payment will be made on a lump sum (LS) based on percentage complete
   2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

d. Additional Information
   1) No exceptions will be made to the lump sum price established by the Contractor.

69. Site Preparation

a. Description
   1) This item shall consist of the preparation of the project site and those areas adjacent to or offsite as may be designated on the plans for construction operations. This work shall include the removal of all obstructions and materials not designated on the plans to remain in place and particular items designated on the plans to be removed for which no pay item is listed in this proposal. This shall include, but not be limited to: signs, sprinkler systems, landscaping, trees, underbrush, vegetation, retaining walls, light standard, fences, gates, sidewalks, driveways, both concrete and asphalt pavement, base rock, concrete curb and gutters, drainage pipe and structures, above ground and below ground utilities and other structures. Approximate quantities of pavement removal are shown on the Drawings but represent an estimate only. Exact quantities to be removed shall be field determined by Contractor prior to bid. All pavements to be removed shall be sawcut. There is no additional pay for sawcutting. The maintenance and/or relocation of street signs and mail boxes shall be considered as part of this item.
   2) This item also includes payments from grading and drainage as required to re-establish existing grade after required removal and installation of sewermain.
   3) This item includes full compensation for all full width pavements removal, grading, drainage, and other miscellaneous costs associated with complete removal of pavement on Brangus Road beginning at approximate Station 164+00 (paving to be included in Sewermain Restoration.)
   4) It is the Contractor's responsibility to coordinate with utilities to avoid conflicts.
   5) Unless otherwise noted with a specific pay item in the proposal, no separate payment will be made for the removal or relocation of existing structures within the limits of construction.
   6) Any existing improvement shown to remain, which is damaged or destroyed by these operations, shall be replaced at the Contractor's expense

b. Measurement
   1) Measurement will be made per lump sum

c. Payment

1) Payment will be made on a lump sum (LS) based on percentage complete
2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

d. Additional Information
1) No exceptions will be made to the lump sum price established by the Contractor.

70. Special Survey for Easement Staking
a. Description
1) This item shall consist of furnishing all labor, equipment and materials necessary to layout and stake all easements and ROW for the entire extent of the sewermain.
2) Easement staking shall be performed by a Oklahoma licensed surveyor.
b. Measurement & Payment
1) Measurement and payment will be made on a lump sum basis based on the percent complete
c. Additional Information
1) No exceptions will be made to the lump sum price established by the Contractor.

71. Subsurface Utility Engineering
a. Description
1) Perform Subsurface Utility Engineering as outlined in the Specification Section 02_21_20. Critical Locate Area stationing where SUE is to be performed is contained in the Specification. Spot locations where SUE is to be performed is defined on the Drawings.
b. Measurement & Payment
1) Measurement and payment will be made on a lump sum basis based on the percent complete.
c. Additional Information
1) No exceptions will be made to the lump sum price established by the Contractor.

72. 24" DR11 HDPE Forcemain (Direct Bury)
a. Description
1) Installation of 24" DR11 HDPE by direct bury.
2) This item shall include all necessary labor, materials, and equipment to include pipe, pipe delivery and storage, fittings, warning tape, excavation, backfill, jointing of pipe by fusion, thrust blocks, and other appurtenances necessary to construct sewermain piping in full compliance and as detailed in the Contract Documents.
b. Measurement
1) Measurement will be made per lump sum
c. Payment
1) Payment will be made on a lump sum (LS) based on percentage complete
2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.

3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.

73. Bid Items #73 - #75 & Bid Item 79
    a. Description
        1) Installation of 24" / 30" DR11 HDPE by Bore. Method of encasement is outlined in Bid Proposal and on Drawings.
    b. Measurement
        1) Measurement will be made per lump sum
        2) Bore length shown on the Drawings are ESTIMATED and should be field verified by Contractor prior to bidding.
        3) Contractor may elect to open cut any sections outlined for bore with exception of highway, rail and utility crossing scheduled for boring.
        4) Contractor may elect to bore any section scheduled for open cut. Positive grade must be maintained toward air/vac valves. Surface repair would not be required in areas of boring.
    c. Payment
        1) Payment will be made on a lump sum (LS) based on percentage complete
        2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.
        3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.

76. Combination Air/Vac Valve in Vault (24")
    a. Description
        1) This item shall include all necessary labor, materials, and equipment to provide air/vac valve assembly at the approximate location specified on the Drawings. Exact location to be coordinated with Engineer and shall be at the localized high point of the sewermain.
        2) The cost of all components shown on the Drawings Detail and any miscellaneous required components not specifically shown shall be included in the bid price. This includes, but not limited to, survey layout, excavation and backfill, bedding, surface repair, acquisition, delivery, and storage of the air/vac valves, vault, and other incidental items as described in the specifications and shown on the plans.
    b. Measurement
        1) Measurement will be made per lump sum
    c. Payment
        1) Payment will be made on a lump sum (LS) based on percentage complete
        2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.
        3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.

77. Combination Air/Vac Valve in Vault (30")
    a. Description
        1) This item shall include all necessary labor, materials, and equipment to provide air/vac valve assembly at the approximate location specified on the Drawings. Exact location to be coordinated with Engineer and shall be at the localized high point of the sewermain.
        2) The cost of all components shown on the Drawings Detail and any miscellaneous required components not specifically shown shall be included in the bid price. This includes, but not limited to, survey layout, excavation and backfill, bedding, surface repair, acquisition, delivery, and storage of the air/vac valves, vault, and other incidental items as described in the specifications and shown on the plans.
    b. Measurement
        1) Measurement will be made per lump sum
    c. Payment
        1) Payment will be made on a lump sum (LS) based on percentage complete
        2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.
        3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.
78. 30" DR11 HDPE Forcemain (Direct Bury)
    a. Installation of 30” DR11 HDPE by direct bury.
        1) This item shall include all necessary labor, materials, and equipment to include pipe, pipe delivery and storage, fittings, warning tape, excavation, backfill, jointing of pipe by fusion, thrust blocks, and other appurtenances necessary to construct sewermain piping in full compliance and as detailed in the Contract Documents.
    b. Measurement
        1) Measurement will be made per lump sum
    c. Payment
        1) Payment will be made on a lump sum (LS) based on percentage complete
        2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.
        3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.
80. Connect 30" HDPE to Existing 24" Ductile Iron Sewermain
    a. Description
        1) This item shall include all necessary labor, materials, and equipment to connect proposed 30” HDPE sewermain to existing 24” Ductile Iron Sewermain.

2) Any miscellaneous removals or associated work required due to exact field conditions at individual connections locations shall be verified by contractor and included in the price bid.
3) All fittings, valves and miscellaneous components required shall be included in the price bid whether or not shown on Drawings.
4) Connections shall include all fittings, concrete, blocking, dewatering, trenching, bypass pumping, bedding materials, backfilling, boots, grouting, seals, and incidentals as required to complete the connection.

b. Measurement
1) Measurement will be made per lump sum

c. Payment
1) Payment will be made on a lump sum (LS) based on percentage complete
2) Payment shall be total compensation for furnishing all materials, tools, equipment, labor and any other incidentals necessary to complete the work.
3) No extra payment shall be allowed for excavation in the various types of soils or rock encountered, bedding, or backfill compaction.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_32_34

PHOTO & VIDEO LOG

PART 1 GENERAL

1.1 SUMMARY OF WORK

A. It is the intent of this section to provide documentation of conditions of existing facilities / site prior to construction and post construction along with monthly progress pictures.

B. Provide a video recording with audio and narration or detailed labeled photographs of the site prior to the beginning of construction. The narration/label shall describe what is being shown in the video/photo.
   1. Record the condition of all existing facilities in or abutting the construction area (right-of-way) including but not limited to streets, curb and gutter, utilities, driveways, fencing, landscaping, etc.
   2. Record after construction staking is complete but prior to any clearing where possible.
   3. Record condition of any existing facility to be modified / replaced.
   4. Take photographs of all work in progress monthly
   5. Provide one copy of the photos/recording, dated and labeled to the Engineer before the start of construction. Provide additional photos/recording as directed by the Engineer if the photos/recording provided is not considered suitable for the purpose of recording conditions prior to construction.

C. Upon completion, furnish an adequate number of photographs of the Site to clearly depict the completed project.
   1. Provide a minimum of ten different views of each location.
   2. Photograph a panoramic view of the entire project site.
   3. Photograph all significant areas of completed construction.
   4. Take photographs/videos at same locations as prior to construction.
   5. Completion photographs are not to be taken until all construction trailers, excess materials, trash, and debris have been removed.

D. Additionally, furnish aerial photographs as follows:
   1. Provide aerial photographs of the completed Project from an angle and height to include the entire Site.
   2. Provide a minimum of four different views.
   3. Photograph a panoramic view of the entire Site.
   4. Photograph all significant areas of completed construction.
   5. Do not take completion photographs until all construction trailers, excess materials, trash, and debris have been removed.
   6. Employ a professional photographer approved by the Engineer to photograph the Project.
   7. Provide aerial photographs of the completed Project. Include one photograph for each 1,000 linear feet of the Project with adequate overlap to provide a continuous photograph of the Project without gaps. Each photograph should be taken from approximately the same distance above ground and that the same angle to provide a consistent perspective.

E. All photographs, video recordings, and a digital copy of this media are to become the property of the Owner. Photographs or recordings may not be used for publication, or public or private display without the written consent of the Owner.

1.2 SUBMITTALS

A. Pre-construction photographs and videos: Submit prior to beginning work at the Project site or prior to the Preconstruction Conference in accordance with Section 01_33_01 General Submittal Requirements.

B. Post-construction photographs and videos: Submit with project closeout documents

1.3 QUALITY ASSURANCE

A. Provide clear photographs and recordings taken with proper exposure. View photographs and recordings in the field and take new photographs or recordings immediately if photos of an adequate print quality cannot be produced or video quality is not adequate. Provide photographs with adequate quality and resolution to permit enlargements.

PART 2 PRODUCTS

2.1 VIDEOS

A. Provide in digital format with a minimum resolution of 1080p.

B. Provide a digital copy on DVD to Engineer prior to preconstruction conference.

2.2 PHOTOGRAPHS

A. Provide photographs in digital format with a minimum resolution of 1280 X 960, accomplished without a digital zoom.

B. Take photographs at locations to adequately depict conditions prior to beginning construction and after completion.

C. Provide a digital copy on a DVD or thumb drive of each photograph taken.

D. Identify each digital file name with:
1. Project name.
2. Date, time, location, and orientation of the exposure.
3. Description of the subject of photograph.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01_33_01

GENERAL SUBMITTAL REQUIREMENTS

PART 1 GENERAL

1.1 SUBMISSION FORMAT

A. The Contractor shall submit to the Engineer for review / comment a PDF copy of all submittals and shop drawings by email. Comments will be returned in email to sender. Upon approval and after making any revisions required, the Contractor shall submit six (6) hard copies of same for distribution. Approvals to preclude purchase, fabrication, or shipment to the project site. Two (2) copies will be returned to the Contractor. If more copies are required, then additional copies should be submitted.

B. All transmittals must be from Contractor and bear approval stamp on the submittal item. Transmittals will not be received from or returned to subcontractors. Shop drawing transmittal stamp shall read:

1. *"(Contractor's Name)" has determined and verified/checked all field dimensions and measurements, field construction criteria, tolerances, clearances, quantities, materials, fabrication processes, catalog numbers, similar data, and any/all other provisions outlined in the Contract Documents and hereby certifies compliance thereto. Any deviations from Contractor Documents have been itemized in summary in a page to follow and detailed on specific submittal pages. It is also understood that Engineer review / approval is for design conformity and general conformance only and in no way releases Contractor from adherence to the full requirements of the Contract Documents.*

C. Transmittals received will be initially reviewed to ascertain inclusion of Contractor's approval stamp. Drawings not stamped by the Contractor or stamped with a stamp containing language other than that specified in 1.1B will not be reviewed for technical content and will be returned without any action.

D. Submittals are to be sequentially numbered followed by Specification section and name in the following format:

1. **01 – Spec Section Title (example: "06 – 33_05_25 Steel Casing Pipe")**
2. **Subsequent revisions may be numbered with the revision number. (Example "06 Rev 1 – 33_05_25 Steel Casing Pipe."**
3. **Submittals not pertaining to a specific Specification section can have the section number replaced with the term "No Spec Section." (example: "06 – No Spec Section – HDPE Casing Pipe."**
4. **Submittals not numbered in accordance with this Specification will not be reviewed for approval.**
5. **Submittals for separate Specifications sections <u>may not be</u> combined into a single submittal document.**

1.2 PRODUCT SUBMITTALS AND SHOP DRAWINGS

A. Identify Project, Contractor, subcontractor and supplier; pertinent drawing and detail number, and specification section number, as appropriate.

B. Provide submittal information defining specific equipment or materials utilized on the project. Generalized product information not clearly defining specific equipment or materials to be provided will be rejected.

C. Apply Contractor's stamp, signed or initialed certifying that review, approval, verification of products required, field dimensions, adjacent construction Work, and coordination of information is in accordance with the requirements of the Work and Contract Documents.

D. For each submittal for review, allow 15 days excluding delivery time to and from the Contractor.

E. Identify variations from Contract Documents and product or system limitations which may be detrimental to successful performance of the completed Work.

F. A letter certifying full and complete compliance with the Specifications, Drawings and other project requirements. The letter shall list any exceptions to or deviations from specified requirements, if any, and reasons for same. Exceptions or deviations shall also be clearly marked in a separate color in submittals. If the submittal includes a deviation that is not clearly noted in the letter and the Engineer does not explicitly accept the deviation in a response letter, the deviation is not approved and the Contractor is obligated to perform the work as stipulated in the drawings and specifications at no additional cost to the Owner or Engineer.

G. Provide space for review stamps.

H. When revised for resubmission, identify all changes made since previous submission.

I. Distribute copies of reviewed submittals as appropriate. Instruct parties to promptly report any inability to comply with requirements.

J. Submittal data shall be in such form and so presented that the Engineer may readily review the data. This means that submittals must be bound in an 8-1/2 by 11 format. Engineering drawings are to be reduced to an 11 by 17 format, folded and bound with the submittal. Bound submittals shall be for individual specification sections and shall be complete by section.

K. Approval by Engineer indicates general compliance or acceptability; however, it does not relieve the Contractor of final responsibility for proper dimensions, character, quantity, quality, strength or sufficiency of the items involved.

L. Waivers, or exceptions, to the Plans and Specifications may be validated only in writing by the Engineer. Written validation will specifically identify the feature in question and no such waiver or exception shall be assumed as a result of omissions or oversights in examining and approving the above drawings or other materials.

M. Any equipment installed by the Contractor, not formally approved by the Engineer, shall be at the Contractor's risk if it is found that the installed equipment does not conform to the Specifications or manufacture’s requirements / guidelines.

N. Contractor at a minimum must submit sufficient information to determine:

1. Conformance to specifications, including: kind, type size, arrangement, finishes, and operation of component materials, and devices.
2. Conformance to Contract Documents, including dimensions, orientation, appearance, external connections and anchorages, installation clearances.
3. Specific purpose or design conditions and adequacy to meet same: weights, dynamic, loads, supports required, operating characteristics.
4. Coordination with other work, including items needed by this trade, but furnished by others, and information needed by others to perform their part.
5. Delivery Date:
    a. Include if product / material delivery delay could potentially impact construction schedule.
    b. This should be stated as a firm date of delivery, not measured from approval of drawings to date of shipping. For this purpose, the time taken by the Engineer to process data may be taken as not exceeding 21 calendar days. The Engineer does not assume responsibility for correctness or completeness of the data; however, the Contractor should determine that proposed delivery dates will not cause delay or result in failure to complete the project on time.
    c. No extension of time or waiver of liquidated damages will be granted due to failure to deliver on time unless the Contractor presents written evidence that favorable delivery is not obtainable for an acceptable item.
    d. Such evidence will be considered as a basis for extension of time only when presented promptly after award of contract.
    e. Failure of contractor to include a delivery date waives any future claim for time extensions. The Engineer does not assume responsibility for verifying inclusion of delivery date in submittal nor review of contractor's schedule.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_33_02

PRE-BID EQUIPMENT SUBMITTAL REQUIREMENTS

PART 1 GENERAL

1.1 SCOPE OF WORK

A. The contractor is required to utilize equipment on this project as specified herein by manufacturer or identified by brand name, or which has been prior approved by the engineer as the owner's representative, utilizing the pre-bid submittal process specified herein. No exceptions.

B. The three (3) apparent low bidders will be required to complete and execute 00_41_16 List of Manufactures of these Contract Documents within 48 hours of bid opening date / time. This form governs major equipment only. Any equipment not contained on 00_41_16 will still be subject to requirements of this Section.

1.2 SPECIFIED EQUIPMENT

A. The equipment specified in these contract documents is deemed to be the most appropriate for this project. Equipment has been selected because of optimum efficiency, durability, longevity and manufacturer/supplier field support.

B. The equipment selected for the basis of project design has been specified by manufacture's name or brand name. Other prior approved substitute equipment may be acceptable for use on this project, providing the pre-bid submittal requirements as specified herein, have been strictly adhered to. Substitute equipment must be approved prior to bid. Consideration of substitute after the bid will not be given.

C. For unnamed equipment to be deemed acceptable, the manufacturer must have ten (10) or more similar installations in Oklahoma operating continuously for more than five (5) years. Provide detailed list of installations with contact information in submittal.

1.3 SUBMITTAL REQUIREMENTS

A. Any manufacturer, supplier, contractor, or other party wishing to provide substitute equipment on this project must comply with the pre-bid submittal requirements as specified herein.

B. Pre-bid submittals for substitute equipment must be provided to the engineer for review at least fifteen (15) days prior to bid. Pre-bid submittals must be provided in triplicate and may remain the property of the review engineer. A reviewed copy of the pre-bid submittal may be returned to the submitting party, at the option of the engineer, and only if the proposed substitute equipment is deemed acceptable, in the professional opinion of the engineer. The utilization of approved substitute equipment on this project is conditional upon strict compliance with the engineer's review comments.

C. If, in the professional opinion of the engineer, a substitute item is deemed acceptable, that substitute item will be named in an addendum as approved for use in the project. Approval

of a pre-bid submittal in no way waives a manufacturer or supplier of the responsibility of providing full equipment submittals post bid, nor are any requirements of these specifications mitigated in any way.

D. Pre-bid submittals must be bound into a concise all-inclusive document. The document must contain a cover identifying the Project, Engineer, Owner, submitting party, submittal date, date of bid, and proposed substitute equipment. The pre-bid submittal will contain an index or table of contents. Attachments must be bound to or attached to the document.

E. Pre-bid submittal must include a precise outline of each and every specification call out / value contained in the original specification section. If values of any item do not meet/exceed, it will be the responsibility of the proposer to provide justification. Submittals not in full compliance will not be considered.

F. Local product representation is critically important. Along with the specific material information, pre-bid submittal should include an outline of how equipment will be serviced / maintained and who locally will provide this service.

G. Engineer will issue an addendum within five (5) days of bid date listing approved major equipment. Equipment not specifically named WILL NOT be acceptable for use.

1.4 MODIFICATIONS TO APPROVED ENGINEERING DESIGN

A. Should any modification to design, plans, specifications or any other project detail be required the Contractor shall reimburse the Owner for the cost of associated design work billed at a rate of $250/hour for engineering and drafting time required for inclusion of alternate equipment (excluding review time.)

B. Engineer will return an estimate of hourly engineering charges with approved submittals.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

END OF SECTION

SECTION 01_36_00

PIPE LAYING PROVE-OUT

PART 1 GENERAL

1.1 SUMMARY

A. This specification outlines how the Owner will verify the viability of the Contractor's intended methods to achieve a reliable and repeatable pipe compaction in accordance with the project specifications throughout the pipeline alignment.
   1. Intent
      a. The intent of the Prove-out Demonstration is that the Contractor, the Owner, and design Engineer will agree on the standard field approach and level of care to be taken by the installation crews to promote compliance with the specifications, details, manufacturers' recommendations, and accepted industry standards throughout the project. Acceptable embedment density test results shall be based on this trench test performed by the Contractor at the beginning of pipe laying operations.

1.2 PRICE AND PAYMENT PROCEDURES

A. Measurement & Payment
   1. The trench test, including all labor, equipment, and testing, shall be incidental to the pipe laying operations and shall be included in the overall bid price for the installed pipe.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Required Attendees
   1. The Contractor will schedule for the inspector, materials testing company representative, Owner's project manager, and Engineer to be onsite to review the findings of the pipe prove out. Failure for one of these individuals to participate may result in the need to reschedule the prove-out or to re-demonstrate the installation.

1.4 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

1.5 QUALITY ASSURANCE

A. Sample Size
   1. The Prove-out should be demonstrated on a minimum of two joints of applicable pipe material and size specified for the project. It shall be placed in the project limits and observed during installation by the Inspector.

B. Trench Test Requirements
   1. The demonstration shall be performed prior to any open-cut pipe installation
   2. All submittals for pipe and backfill/embedment material shall be complete and approved based on 01 33 01 – General Submittal Requirements prior to the demonstration.
   3. The Contractor shall schedule the demonstration with the Owner at least 14 days in advance.
   4. This process will establish a relationship between the density achieved at the spring line and the density achieved at the haunch area by the Contractor's proposed placement and compaction method.
   5. The density at the spring line may have to be higher than the minimum specified density in order to achieve the minimum specified density in the haunch area.
   6. The density at the spring line required to achieve the minimum specified density in the haunch area shall be the target density at the spring line but shall be no less than the minimum specified density.
   7. Additional test sections shall be performed for all different embedment materials, or if the Contractor proposes to change methods of placement and compaction.
   8. The means, methods, and techniques of placement and compaction shall be the sole responsibility of the Contractor, and the trench test will be considered only as a means to verify that the Contractor's methods are capable of achieving the specified compaction throughout the embedment zone.
   9. The actual quality of the embedment and backfill, as compacted, shall be the responsibility of the Contractor and the satisfactory results from the trench test(s) and field density tests shall not be considered as a guarantee of the quality of the Contractor's embedment and backfill operations.
   10. Changes in the embedment material after completion of the Prove-out Demonstration shall require a new Prove-out Demonstration, unless specifically waived by the Owner. Such changes after the Prove-out Demonstration will require specific, written approval from the Owner.

C. Trench Test Procedure
   1. This process will establish a relationship between the density achieved at the spring line and the density achieved at the haunch area by the Contractor's proposed placement and compaction method. The Contractor shall demonstrate the pipe embedment placement and compaction approach in the following manner:
      a. Employ all safety procedures that apply to the permanent work.
      b. Utilize the same equipment and crews that will be used for the permanent work, to the extent practical.
      c. Excavate the trench to the width and minimum depth shown on the drawings.
      d. Prepare the trench subgrade and bedding to the requirements of the specification and trench details
      e. Install and embed one complete section of pipe, extending compacted fill up to the spring line of the pipe using the materials and density requirements specified. Lifting straps shall be left in place.
      f. Use bulkheads as needed to allow the specified compaction to extend to within two feet of each end of the pipe section.
      g. Testing lab shall perform density tests in the embedment material near the spring line of the pipe at two locations to be designated by the Owner.

h. Carefully remove the pipe from the trench, preserving the embedment to the extent possible.

i. Check deflection of within the pipe after the backfill is complete to ensure it is within manufacturer's acceptable range. (Pipe will sometimes float due to over compaction on the sides) Upon request of the OWNER the Contractor may be asked to recheck deflection on the prove-out pipe at 30 days to confirm original findings.

j. Testing lab shall perform a second set of in-place density tests on the compacted embedment to verify the Contractor's method has achieved the specified density and uniformity of embedment. Failure of the compacted embedment to hold the shape or achieve the specified density will be a failure of the pipe embedment demonstration.

2. In the event of a failure, the Contractor shall clean the trench to subgrade, adjust his methods and retest, all as needed, to demonstrate acceptable results.

PART 3 EXECUTION (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_43_24

SYSTEM INTEGRATOR PREQUALIFICATION

PART 1 GENERAL

1.1 SCOPE OF WORK

A. The System Integrator (Integrator) shall be responsible for the PLC System, Control Panels, Field Instrumentation, SCADA, telemetry, and coordination with the Owner's existing facilities. Equipment supplied by other vendors will not be the responsibility of the Integrator with the exception of integrating the vendor supplied equipment into the system. It is the responsibility of the Integrator to verify what is required of vendor supplied equipment and specifics of I/O required for operations.

B. The Integrator shall work directly for the Contractor.

C. It is the intent of this project that Integrator shall provide a fully functional and working system to bring all components supplied by Integrator and outside vendors into system. This includes off-site equipment located at remote lift stations and the Southside site location.

D. Prequalified System Integrators that may be used on this project without additional submittal include:
   1. Haynes Equipment, LLC, Oklahoma City, OK

1.2 QUALIFICATION REQUIREMENTS

A. Systems Integrators wanting pre-approval shall submit documentation indicating they meet the requirements of this specification to the Engineer for review and approval a minimum of fifteen (15) days prior to bid.

B. The Integrator shall be engaged full time in the design and manufacturer of PLC based control systems. The Integrator shall have documented experience in the municipal water and wastewater market. Specifically, the Integrator shall have completed a minimum of ten (10) projects in Oklahoma in the past 5 years where they served as primary Integrator for a municipal water or wastewater project.

C. The Integrator shall maintain a local office within 150 driving miles of the project site for the past two years. This office shall be equipped with programming equipment, and staffed with a minimum 5 service technicians capable of performing routine maintenance, trouble shooting, and field programming changes on the proposed PLC control systems.

D. The control system Integrator shall have a panel shop located at their main facility and shall be able to obtain a UL listing for control panels.

E. All software development for this project shall be done in the local office.

F. The integrator shall have experience as the primary integrator of a project of similar magnitude on a municipal water or wastewater treatment plant in the past twelve (12) months.

1.3 QUALIFICATION

A. If, in the professional opinion of the engineer, a submitter meets the requirements of this section, the submitter will be named in an addendum as approved for use in the project.

B. Submittals must be bound into a concise all-inclusive document. The document must contain a cover identifying the Project, Engineer, Owner, submitting party, submittal date, and date of bid. The pre-bid submittal will contain an index or table of contents. Attachments must be bound to or attached to the document.

C. It is the responsibility of the submitter to fully satisfy the engineer as to qualifications they possess to accomplish a project of this magnitude.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01_45_29

TESTING LABORATORY SERVICES

PART 1 GENERAL

1.1 SCOPE OF WORK

A. This Section describes services to be provided by an independent testing laboratory approved by the Engineer, including the Contractor's responsibilities

B. The Contractor shall employ and pay for services of an independent testing laboratory to perform specified testing. Cost to be included in price bid for item(s) being tested or associated items of work.

C. The independent testing laboratory will perform tests and other services specified in individual specification Sections and as required by the Engineer and/or Owner.

D. Representatives from the independent testing laboratory shall collect all samples in the field.

E. The independent testing laboratory shall be acceptable to the Owner. The Owner reserves the right to reject testing laboratories that the Owner believes does not have sufficient qualifications.

F. When initial tests indicate non-compliance with the Contract Documents, all subsequent retesting occasioned by the non-compliance shall be performed by the same testing laboratory at the sole expense of the Contractor

G. The Contractor shall furnish concrete batch designs, properties of materials, and confirmation cylinders made from batch design at the Contractor's expense.

H. Employment of a testing laboratory by the Contractor in no way relieves the Contractor of his obligation to perform the work according to the Contract Documents.

1.2 SUBMITTALS

A. Prior to start of Work, submit testing laboratory name, address, and telephone number, and names of full-time registered Engineer, specialist and responsible officer.

1.3 REFERENCE STANDARDS

A. ASTM D3740 - Practice for Evaluation of Agencies Engaged in Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction.

B. ASTM E329 - Recommended Practice for Inspection and Testing Agencies for Concrete, Steel, and Bituminous Materials as Used in Construction.

1.4 QUALITY ASSURANCE

A. Comply with "Recommended Requirements for Independent Laboratory Qualification," published by the American Council of Independent Laboratories.

B. Comply with basic requirements of ASTM E329, "Standards of Recommended Practice for Inspection and Testing Agencies for Concrete Steel, and Bituminous Materials as Used in Construction." ASTM D3740 - Practice for Evaluation of Agencies Engaged in Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction.

C. Laboratory: Authorized to operate in the state of Oklahoma.

D. Laboratory Staff: Maintain a full-time registered Engineer on staff to review services.

E. Testing Equipment: Calibrated at reasonable intervals with devices of an accuracy traceable to either National Bureau of Standards (NBS) Standards or accepted values of natural physical constants.

1.5 LABORATORY RESPONSIBILITIES

A. Cooperate with Engineer and Contractor; provide qualified personnel at the site after due notice.

B. Test samples of mixes submitted by Contractor.

C. Perform specified inspections, sampling, and testing of materials in accordance with specified standards

D. Ascertain compliance of materials and mixes with requirements of Contract Documents.

E. Promptly notify Engineer and Contractor of observed irregularities or non-conformance of work or products.

F. Perform additional inspections and tests required by Engineer.

G. Attend conferences and progress meetings, when requested.

1.6 LABORATORY REPORTS

A. Promptly submit written report of each test and inspection; one copy each to Engineer, Owner, Contractor, and one copy to Record Document File. Each report shall include:
   1. Date Issued.
   2. Project Title and Number.
   3. Testing Laboratory Name, Address and Telephone Number.
   4. Name and Signature of Laboratory Inspector.
   5. Date and Time of Sampling or Inspection.
   6. Record of Temperature and Weather Conditions.
   7. Date of Test.
   8. Identification of Product and Specification Section.
   9. Location of Sample or Test in the Project.
   10. Type oflnspection or Test.

11. Results of tests and compliance with Contract Documents.

B. Laboratory is not authorized to:
1. Release, revoke, alter, or enlarge on requirements of Contract Documents.
2. Approve or accept any portion of the Work.
3. Perform any duties of the Contractor.
4. Stop the Work.

1.7 CONTRACTOR'S RESPONSIBILITIES

A. The Contractor shall assume full responsibility for coordination of the entire project, including verification that all structures, piping, coating systems and equipment components are compatible. The Contractor shall initially operate each equipment system, and shall make all necessary adjustments so that each system is placed in proper operating condition.

B. Cooperate with laboratory personnel, provide access to Work and to manufacturer's operations.

C. Secure and deliver to the laboratory adequate quantities of samples of materials proposed to be used and which require testing.

D. Provide to the laboratory the preliminary design mix proposed to be used for concrete, and other materials mixes which require control by the testing laboratory.

E. Furnish copies of products test reports as required.

F. Provide incidental labor and facilities to provide access to Work to be tested, to obtain and handle samples at the site or at source of Products to be tested, to facilitate tests and inspections, storage and curing of test samples.

G. Notify laboratory sufficiently in advance of operations to allow for laboratory assignment of personnel and scheduling of tests.

H. Notify Engineer 24 hours prior to expected time for operations requiring inspection and testing.

SECTION 01_56_17

DUST CONTROL

PART 1 GENERAL

1.1 SCOPE OF WORK

A. This item shall consist of the application of water on haul routes and/or construction sites for the purpose of maintaining these areas relatively free of dust.

B. This item shall not be measured for payment and will considered subsidiary to other items of work.

1.2 SUBMITTALS

A. Dust control plan to be submitted to the Engineer prior to construction

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 CONSTRUCTION

A. Dust control shall be achieved by the application of water sprinkled in amounts sufficient to control the dust to the satisfaction of the Engineer and the Owner.

B. The Contractor shall submit his plan for dust containment to the Engineer for approval prior to start of construction.

C. The contractor shall furnish and operate an approved sprinkler vehicle equipped with valves to regulate the flow of the liquid to the sprinkler bar so that the liquid will be evenly distributed, and at a controllable rate over the entire width sprinkled.

D. It shall be the Contractor's continuous responsibility at all times, including nights, holidays, and weekends until final acceptance of the project by the Owner to maintain the specified areas relatively free of dust in a manner which will cause the least inconvenience to the personnel at the plant site and owner.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_75_23

TESTING, TRAINING & FACILITY STARTUP

PART 1 GENERAL

1.1 SUMMARY

A. This specification covers the work necessary to furnish Testing, Training & Startup as specified herein.

B. Performance Testing and Operation shall be the testing, balancing and operation of every piece of equipment furnished in this contract operating as an individual unit as well as a complete unit with the rest of the wastewater treatment plant. proper operation of all blowers, valves, lines, controls, lights, remote indications and all other items in this contract operating and functioning properly and as a whole.

C. Training shall be provided for ALL systems and equipment provided on the project or as otherwise defined and required in the Specifications.

D. Contractor shall prepare and submit a COMPLETE systems and equipment training list to the Engineer for approval prior to beginning work within this section. This training list shall, as a minimum, contain specification section, description, type of training, number of classes, instructions per class, etc.

E. Section includes:
1. Start-Up Plan.
2. Water Tightness Testing
3. Performance Testing.
4. General Start-Up and Testing Procedures.
5. Functional Testing.
6. Clean Water Testing.
7. Operational Testing.
8. Certificate of Proper Installation.
9. Services of manufacturer's representatives.
10. Training of Owner's personnel.
11. Final testing requirements for the complete facility.

F. Complete testing, training, and start-up will be performed within the Contract Times as outlined in the Contract Documents.
1. Allow realistic durations in the Progress Schedule for testing, training, and start-up activities.

G. Furnish labor, power, chemicals, tools, equipment, instruments, and services required for and incidental to completing functional testing, performance testing, and operational testing.

H. Provide competent, experienced technical representatives of equipment manufacturers for assembly, installation and testing guidance, and operator training.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 01_91_01 Facility Commissioning

D. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Contractor shall prepare and submit a COMPLETE systems and equipment training list to the Engineer for approval prior to beginning work within this section. This training list shall, as a minimum, contain specification section, description, type of training, number of classes, instructions per class, etc.

C. Submit start-up plan for each piece of equipment and each system not less than 3 weeks prior to planned initial start-up of equipment or system.

D. Provide schedule with the following activities identified:
1. Manufacturer's services.
2. Installation certifications.
3. Operator training.
4. Submission of Operation and Maintenance Manual.
5. Functional testing.
6. Performance testing.
7. Operational testing.

E. Provide testing plan with test logs for each item of equipment and each system when specified. Include testing of alarms, control circuits, capacities, speeds, flows, pressures, vibrations, sound levels, and other parameters.

F. Provide summary of shutdown requirements for existing systems which are necessary to complete start-up of new equipment and systems.

G. Revise and update start-up plan based upon review comments, actual progress, or to accommodate changes in the sequence of activities.

1.4 WATER-TIGHTNESS TESTING

A. Prior to the application of damp-proofing or waterproofing materials on exterior concrete surfaces or backfilling, each structure listed below shall be tested for water-tightness. This article applies to the following:
   1. All manholes and utility structures as specified herein.
   2. SBR, AD, EQ basins, Lift stations, Fine screen & grit removal units, UV basin and all water & wastewater holding structures, chemical storage tanks, etc.

B. Each structure shall be filled to its maximum normal water surface elevation. For structures equipped with overflows, it shall be filled to the overflow weir elevation. The duration of the test shall be as follows:
   1. Manholes as specified.
   2. All other structures 48-hrs.

C. After filling, each structure shall be inspected by the Contractor and Engineer, Inspection shall include, but not be limited to walls, floors, footings, sumps, piping penetrations, and under-drains .
   1. The water level will be accurately measured over the test period to measure the drop in water level for comparison with allowable leakage.
   2. Evaporative losses and rainfall gains shall be measured and deducted/added to determine the net water leakage.
   3. The net water leakage for any 24-hour period shall not exceed the calculated value of 0.0005 times the structure nominal volume
   4. Damp spots on the exterior wall surface shall be deemed a failure
   5. Any measurable leakage at any wall/footing joint shall be deemed a failure.
   6. Damp spots/leakage is defined as locations where moisture can be picked up by dry hand

D. All leakage over the allowable value and all damp spots shall be repaired at Contractor's expense until retesting confirms that they are eliminated.

E. Damp-proofing and/or waterproofing materials may not be used until successful testing has been accomplished.

1.5 PERFORMANCE TESTING

A. Test equipment for proper performance at point of manufacture or assembly

B. Include ALL costs associated with witnessing performance tests in the bid price.

1.6 GENERAL START-UP AND TESTING PROCEDURES

A. Mechanical Systems: As specified in the individual equipment Specification sections as well as:
   1. Remove rust preventatives and oils applied to protect equipment during construction.
   2. Flush lubrication systems and dispose of flushing oils. Recharge lubrication system with lubricant recommended by manufacturer.
   3. Flush fuel system and provide fuel for testing and start-up.

4. Install and adjust packing, mechanical seals, O-rings, and other seals. Replace defective seals.
5. Remove temporary supports, bracing, or other foreign objects installed to prevent damage during shipment, storage, and erection.
6. Check rotating machinery for correct direction of rotation and for freedom of moving parts before connecting driver.
7. Perform cold alignment and hot alignment to manufacturer's tolerances.
8. Adjust V-belt tension and variable pitch sheaves.
9. Inspect hand and motorized valves for proper adjustment. Tighten packing glands to ensure no leakage, but permit valve stems to rotate without galling. Verify valve seats are positioned for proper flow direction.
10. Tighten leaking flanges or replace flange gasket. Inspect screwed joints for leakage.
11. Install gratings, safety chains, handrails, shaft guards, and sidewalks prior to operational testing.

B. Electrical Systems: As specified in Division 26 and the individual equipment specification sections:
1. Perform insulation resistance tests on wiring except 120-volt lighting, wiring, and control wiring inside electrical panels.
2. Perform continuity tests on grounding systems.
3. Test and set switchgear and circuit breaker relays for proper operation.
4. Perform direct current high potential tests on all cables that will operate at more than 2,000 volts. Obtain services of independent testing lab to perform tests.
5. Check motors for actual full load amperage draw. Compare to nameplate value.

C. Instrumentation Systems: As specified in Division 26 and the individual equipment specification sections:
1. Bench or field calibrate instruments and make required adjustments and control point settings.
2. Leak test pneumatic controls and instrument air piping.
3. Energize transmitting and control signal systems, verify proper operation, ranges and settings.

D. Contractor shall submit qualifications of start-up personnel for Engineer's approval at least six months before startup operations are anticipated. During the initial start-up phase, the Contractor and Manufacturer's field representative shall perform check starts and functional testing of individual pieces of equipment, sub systems, and systems to assure that they are ready for the operational performance test. The functional testing shall not be combined with the operational performance test.

1.7 FUNCTIONAL TESTING

A. Perform checkout and performance testing as specified in the individual equipment specification sections.

B. Functionally test mechanical and electrical equipment, and instrumentation and controls systems for proper operation after general start-up and testing tasks have been completed.

C. Demonstrate proper rotation, alignment, speed, flow, pressure, vibration, sound level, adjustments, and calibration. Perform initial checks in the presence of and with the assistance of the manufacturer's representative.

D. Demonstrate proper operation of each instrument loop function including alarms, local and remote controls, instrumentation and other equipment functions. Generate signals with test equipment to simulate operating conditions in each control mode.

E. Conduct continuous 8-hour test under full load conditions. Replace parts which operate improperly.

1.8 CLEAN WATER TESTING

A. Perform checkout and performance testing as specified in the individual equipment specification sections.

B. Fill all facilities with clean water or secondary effluent.
1. Contractor shall coordinate with Owner for availability of water source. Generally, this water shall be available at the plant's effluent. Contractor shall be responsible for transporting clean water from the plant's effluent to the facility to be tested.
2. Contractor shall be responsible for providing all temporary piping, hoses, pumps and temporary power to pump clean water to the facility to be tested.

C. Operate facilities successfully for 72 hours (3 days) continuously.

D. Contractor shall be responsible for providing, installing, and removing all temporary piping and valving required to perform Clean Water Testing for each facility.

E. Functionally test mechanical and electrical equipment, and instrumentation and controls systems for proper operation after general start-up and testing tasks have been completed.

F. Demonstrate proper rotation, alignment, speed, flow, pressure, vibration, sound level, adjustments, and calibration. Perform initial checks in the presence of and with the assistance of the manufacturer's representative.

G. Demonstrate proper operation of each instrument loop function including alarms, local and remote controls, instrumentation, and other equipment functions. Generate signals with test equipment to simulate operating conditions in each control mode.

H. Conduct continuous 24-hour test under full load conditions. Replace parts which operate improperly.

I. Following successful testing, Contractor shall coordinate removal of test water from tested facilities with Owner, develop a mutually acceptable schedule to bleed the test water in the existing plant stream. Contractor shall provide and operate all equipment and piping required to remove the test water from the tested facilities. Contractor shall not direct test water to the plant's process stream without the Owner's authorization. Contractor shall not direct test water to the plant's process stream in such a manner to provide an upset, an overloading or disruption to the plant's operations without the Owner's authorization.

1.9 OPERATIONAL TESTING

A. After completion of operator training and Clean Water Testing, conduct operational test of the entire facility. Demonstrate satisfactory operation of equipment and systems in actual operation.

B. Prior to beginning operational testing, Contractor shall import seed organisms from a similar wastewater plant, at the Contractor's expense, to start the SBR & AD biological systems prior to the operational phase. It typically takes 20 to 30 calendar days to reach required MLSS levels in the SBR aeration tanks. Wasting of sludge from the SBR to the AD will not occur until appropriate MLSS levels have been reached in the SBR process tanks.

C. Conduct operational test for continuous 14-day period.

D. Owner will provide operations personnel, power, fuel, and other consumables for duration of each specified test.

E. Immediately correct defects in material, workmanship, or equipment which became evident during operational test.

F. Repeat operational test when malfunctions or deficiencies cause shutdown or partial operation of the facility or results in performance that is less than specified.

1.10 CERTIFICATE OF PROPER INSTALLATION

A. At completion of Functional Testing, furnish written report prepared and signed by manufacturer's authorized representative, certifying equipment:
   1. Has been properly installed, adjusted, aligned, and lubricated.
   2. Is free of any stresses imposed by connecting piping or anchor bolts.
   3. Is suitable for satisfactory full-time operation under full load conditions.
   4. Operates within the allowable limits for vibration.
   5. Controls, protective devices, instrumentation, and control panels furnished as part of the equipment package are properly installed, calibrated, and functioning.
   6. Control logic for start-up, shutdown, sequencing, interlocks, and emergency shutdown have been tested and are properly functioning.

B. Furnish written report prepared and signed by the electrical and/or instrumentation subcontractor certifying:
   1. Motor control logic that resides in motor control centers, control panels, and circuit boards furnished by the electrical and/or instrumentation subcontractor has been calibrated and tested and is properly operating.
   2. Control logic for equipment start-up, shutdown, sequencing, interlocks and emergency shutdown has been tested and is properly operating.
   3. Co-sign the reports along with the manufacturer's representative and subcontractors.

1.11 TRAINING OF OWNER’S PERSONNEL

A. Provide operations and maintenance training for items of mechanical, electrical and instrumentation equipment. Utilize manufacturer's representatives to conduct training sessions.

B. Unless specifically noted otherwise, all training shall be conducted in accordance with the following general requirements.
   1. Schedule of Classes: Classes shall be scheduled in collaboration with the Treatment Plant Superintendent. Typically, Tuesday thru Thursday training hours are preferred.
   2. Number of classes on each subject:
      a. A minimum of two classes on identical subject matter shall be conducted within the same workday unless otherwise noted. Classes shall consist of a morning session and an afternoon session.
      b. The purpose of having two classes on each subject is to accommodate the attendance of as many Owner personnel working different shifts as possible.
      c. Coordinate training sessions to prevent overlapping sessions. Arrange sessions so that individual operators and maintenance technicians do not attend more than 2 sessions per week.
   3. Class Agenda
      a. A class agenda shall be prepared by the business conducting the training and submitted via the Contractor to the Engineer at least four weeks in advance of the date of the first corresponding class.
      b. This draft class agenda shall be submitted and shall conform to the Contractor prepared training list.
      c. The agenda shall include:
         1) A listing of subjects to be discussed.
         2) The training goals.
         3) The methods to be used to achieve that training goal(s).
         4) Time estimated for each subject.
         5) List of documentation to be used or provided to support training.
         6) A period for the instructor to question staff members to ensure that the training was successful.
         7) Instructor name.
      d. Agendas shall include an allocation of time for Owner staff to ask questions and discuss the subject matter .
      e. The Owner may request that particular subjects be emphasized and the agenda shall be adjusted to accommodate these requests. Copies of the agenda shall be distributed to each student at the beginning of each training class.
   4. Number of Students: It is estimated that 4 to 7 persons will attend each training class. The actual number of students will be determined by the Owner.

C. Length of Training:
   1. Each class shall be planned to be completed within 4 hours, including two 10-minute breaks.
   2. Requests for longer class periods must be approved by the Engineer.

D. Instructor Qualifications:
   1. Instructors shall be completely knowledgeable in the projects and systems for which they are providing training, and experienced in conducting classes.
   2. Sales representatives are not qualified instructors unless they possess the detailed operating and maintenance knowledge required for proper class instruction.

3. If, in the opinion of the Engineer, the scheduled training was not provided by an appropriately knowledgeable person, such training shall be rescheduled and repeated with a suitable instructor at the Contractor's expense.

E. Training Aids:
   1. Each instructor is encouraged to use audio-visual devices, models, charts, and so forth to increase the transfer of knowledge.
   2. The business conducting the training shall provide models, laptop computers, charts, and so forth for each class.
   3. It shall be the responsibility of the business conducting the training to confirm in advance that the classroom will be appropriate for the types of audio-visual equipment to be employed.
   4. Classroom Documentation:
      a. Provide final, approved Operation and Maintenance Manuals to Owner for specific pieces of equipment or systems two weeks prior to training session for that piece of equipment or system.
      b. If training is being completed on equipment, systems, or products which are required to provide an operations and maintenance manual, this operations and maintenance manual shall be complete and used during the classroom instruction.
      c. The quantity of operations and maintenance manuals required shall be provided and available for classroom use. Supplemental documentation handouts shall be provided to support instruction.

F. Training at the Actual Equipment ("hands on"):
   1. Shall be a part of each class.
   2. This portion of the instruction shall include operation, preventative maintenance points, calibration (wherever applicable), troubleshooting, common repairs, and manufacturer recommended servicing.

G. Coordinate training sessions to prevent overlapping sessions. Arrange sessions so that individual operators and maintenance technicians do not attend more than 2 sessions per week.

H. Provide Operation and Maintenance Manual for specific pieces of equipment or systems 1 month prior to training session for that piece of equipment or system.

I. Satisfactorily complete functional testing before beginning operator training.

J. Provide training sessions for each work shift. Pooling of shifts will not be permitted unless accepted by Owner.

K. Training Sessions: Provide training sessions for equipment as specified in the individual equipment specification sections.

L. The Contractor shall video all training sessions and provide a copy for the Owner.

M. The Contractor shall designate and provide one or more persons to be responsible for coordinating and expediting his/her training duties. The person or persons so designated shall be present at all training coordination meetings with the Owner.

N. The Contractor's coordinator shall coordinate the training periods with Owner personnel and manufacturer's representatives, and shall submit a training schedule for each piece of equipment or system for which training is to be provided. Such training schedule shall be submitted not less than 21 calendar days prior to the time that the associated training is to be provided and shall be based on the current plan of operation.

1.12 RECORD KEEPING

A. Maintain and submit following records generated during start-up and testing phase of Project:

B. Daily logs of equipment testing identifying all tests conducted and outcome.

C. Logs of time spent by manufacturer's representatives performing services on the job site.

D. Equipment lubrication records.

E. Electrical phase, voltage, and amperage measurements.

F. Insulation resistance measurements.

G. Data sheets of control loop testing including testing and calibration of instrumentation devices and setpoints.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.1 GENERAL

A. Furnish Manufacturers' services when required by an individual specification section, to meet the requirements of this Section.

B. Where time is necessary in excess of that stated in the Specifications for Manufacturer's services, or when a minimum time is not specified, all the time required to perform the specified services shall be considered incidental to the price bid.

C. Schedule Manufacturer's services to avoid conflict with other onsite testing or other Manufacturer's onsite services.

D. Determine, before scheduling services, that all conditions necessary to allow successful testing have been met.

E. Only those days of service approved by Engineer will be credited to fulfill the specified minimum services.

F. Manufacturer's onsite services shall include:

1. Assistance during product (system, subsystem, or component) installation to include observation, guidance, instruction of Contractor's assembly, erection, installation or application procedures.
2. Inspection, checking, and adjustment as required for product (system, subsystem, or component) to function as warranted by Manufacturer and necessary to furnish Manufacturer's Certificate of Proper Installation.
3. Providing, on a daily basis, copies of all Manufacturer's representatives' field notes and data to Engineer.
4. Revisiting the Site as required to correct problems and until installation and operation are acceptable to Engineer.
5. Resolution of assembly or installation problems attributable to or associated with, respective Manufacturer's products and systems.
6. Assistance during functional and performance testing, and facility startup and evaluation.
7. Training of Owner's personnel in the operation and maintenance of respective product as required.
8. Additional requirements may be specified elsewhere.

G. Facility Startup Meetings: Schedule to discuss test schedule, test methods, materials, chemicals and liquids required, facilities operations interface, and Owner involvement.

H. Contractor's Testing and Startup Representative:
1. Designate and furnish one or more personnel to coordinate and expedite testing and facility startup.
2. Representative(s) shall be present during startup meetings and shall be available at all times during testing and startup.

I. Provide temporary valves, gauges, piping, test equipment and other materials and equipment required for testing and startup.

J. Provide Subcontractor and equipment Manufacturer's with adequate staff to prevent delays. Schedule ongoing work so as not to interfere with or delay testing and startup.

K. Owner will:
1. Provide water, power, chemicals, and other items as required for startup, unless otherwise indicated.
2. Operate process units and facility with support of Contractor.
3. Provide labor and materials as required for laboratory analyses.

3.2 MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION

A. Manufacturer's Certificate of Proper Installation form, a copy of which is attached to this Section, shall be completed and signed by the equipment Manufacturer's representative.

B. Such form shall certify that the signing party is a duly authorized representative of the Manufacturer, is empowered by the Manufacturer to inspect, approve, and operate their equipment and is authorized to make recommendations required to assure that the equipment is complete and operational.

3.3 TRAINING

A. General:
1. Furnish Manufacturer's representatives for detailed classroom and hands-on training to Owner's personnel on operation and maintenance of specified product (system, subsystem, component) and as may be required in applicable Specifications.
2. Furnish trained, articulate personnel to coordinate and expedite training, to be present during training coordination meetings with Owner, and familiar with operation and maintenance manual information.
3. Manufacturer's representative shall be familiar with facility operation and maintenance requirements as well as with specified equipment.
4. Furnish complete training materials, to include operation and maintenance data, to be retained by each trainee.

B. Training Schedule:
1. List specified equipment and systems that require training services and show:
   a. Respective Manufacturer.
   b. Estimated dates for installation completion.
   c. Estimated training dates.
2. Allow for multiple sessions when several shifts are involved.
3. Adjust schedule to ensure training of appropriate personnel as deemed necessary by Owner, and to allow full participation by Manufacturer's representatives. Adjust schedule for interruptions in operability of equipment.

C. Lesson Plan: When Manufacturer or vendor training of Owner personnel is specified, prepare for each required course, containing the following minimum information:
1. Title and objectives.
2. Recommended types of attendees (e.g., managers, engineers, operators, maintenance).
3. Course description and outline of course content.
4. Format (e.g., lecture, self-study, demonstration, hands-on).
5. Instruction materials and equipment requirements.
6. Resumes of instructors providing the training.

D. Pre-startup Training:
1. Coordinate training sessions with Owner's operating personnel and Manufacturer's representatives, and with submission of operation and maintenance manuals.
2. Complete at least 14 days prior to beginning of facility startup.

E. Post-startup Training: If required in Specifications furnish and coordinate training of Owner's operating personnel by respective Manufacturer's representatives.

F. Taping of Training Sessions:
1. Furnish audio and color video taping of all instruction sessions, including Manufacturer's representatives, hands-on equipment instruction and classroom sessions.
2. Video training shall be transferred to an Owner on an external hard drive with each file named in accordance with training session.
3. Format to be suitable for playback on standard equipment available commercially in the United States.

3.4 EQUIPMENT TESTING

A. Preparation:
   1. Complete installation before testing.
   2. Furnish qualified Manufacturer's representatives
   3. Obtain and submit from equipment Manufacturer's representative Manufacturer's Certificate of Proper Installation Form.
   4. Equipment Test Report Form: Provide written test report for each item of equipment to be tested, to include the minimum information:
      a. Owner/Project Name.
      b. Equipment or item tested.
      c. Date and time of test.
      d. Type of test performed (Functional or Performance).
      e. Test method.
      f. Test conditions.
      g. Test results.
      h. Signature spaces for Contractor and Engineer as witness.
   5. Cleaning and Checking: Prior to beginning functional testing:
      a. Calibrate testing equipment in accordance with Manufacturer's instructions.
      b. Inspect and clean equipment, devices, connected piping, and structures to ensure they are free of foreign material.
      c. Lubricate equipment in accordance with Manufacturer's instructions.
      d. Turn rotating equipment by hand when possible to confirm that equipment is not bound.
      e. Open and close valves by hand and operate other devices to check for binding, interference, or improper functioning.
      f. Check power supply to electric-powered equipment for correct voltage.
      g. Adjust clearances and torque.
      h. Test piping for leaks.
   6. Ready-to-test determination will be by Engineer-based at least on the following:
      a. Acceptable Operation and Maintenance Data.
      b. Notification by Contractor of equipment readiness for testing.
      c. Receipt of Manufacturer's Certificate of Proper Installation, if so specified.
      d. Adequate completion of work adjacent to, or interfacing with, equipment to be tested.
      e. Availability and acceptability of Manufacturer's representative, when specified, to assist in testing of respective equipment.
      f. Satisfactory fulfillment of other specified Manufacturer's responsibilities.
      g. Equipment and electrical tagging complete.
      h. Delivery of all spare parts and special tools.

B. Functional Testing:
   1. Conduct as specified in individual Specification sections.
   2. Notify Owner and Engineer in writing at least 10 days prior to scheduled date of testing.
   3. Prepare Equipment Test Report summarizing test method and results.
   4. When in Engineer's opinion, equipment meets functional requirements specified such equipment will be accepted for purposes of advancing to performance testing phase, if so required by individual Specification sections. Such acceptance will be evidenced by Engineer/Owner's signature as witness on Equipment Test Report.

C. Performance Testing:
   1. Conduct as specified in individual Specification sections.
   2. Notify Engineer and Owner in writing at least 10 days prior to scheduled date of test.
   3. Performance testing shall not commence until equipment has been accepted by Engineer as having satisfied functional test requirements specified.
   4. Type of fluid, gas, or solid for testing shall be as specified.
   5. Unless otherwise indicated, furnish labor, materials, and supplies for conducting the test and taking samples and performance measurements.
   6. Prepare Equipment Test Report summarizing test method and results.
   7. When, in Engineer's opinion, equipment meets performance requirements specified, such equipment will be accepted as to conforming to Contract requirements. Such acceptance will be evidenced by Engineer's signature on Equipment Test Report.

3.5 STARTUP OF UNIT PROCESSES

A. Prior to unit process startup, equipment within unit process shall be accepted by Engineer as having met functional and performance testing requirements specified.

B. Startup sequencing of unit processes shall be as chosen by Contractor to meet schedule requirements.

C. Make adjustments, repairs, and corrections necessary to complete unit process startup.

D. Startup shall be considered complete when, in opinion of Engineer, unit process as operated in manner intended for 5 continuous days without significant interruption. This period is in addition to functional or performance test periods specified elsewhere.
   1. Significant Interruption: May include any of the following events:
   2. Failure of Contractor to provide and maintain qualified onsite startup personnel as scheduled.
   3. Failure to meet specified functional operation for more than 2 consecutive hours.
   4. Failure of any critical equipment or unit process that is not satisfactorily corrected within 5 hours after failure.
   5. Failure of any non-critical equipment or unit process that is not satisfactorily corrected within 8 hours after failure.
   6. As determined by Engineer.

E. A significant interruption will require startup then in progress to be stopped. After corrections are made; start up test period and start from beginning again.

3.6 FACILITY PERFORMANCE DEMONSTRATION

A. When, in the opinion of Engineer, startup of all unit processes has been achieved, sequence each unit process to the point that facility is operational.

B. Demonstrate proper operation of required interfaces within and between individual unit processes.

C. After facility is operating, complete performance testing of equipment and systems not previously tested.

D. Document, as defined in Facility Startup and Performance Demonstration Plan, the performance of the facility.

E. Certify, on the Facility Performance Demonstration/Certification Form, that facility is capable of performing its intended function(s), including fully automatic operation.

END OF SECTION

MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION

Owner: City of Shawnee / Shawnee Mun Authority Equipment:_____

Project: Wastewater System Improvements Spec Section:_____

I hereby certify that the above referenced equipment/system has been (check applicable):

	Installed in accordance with Manufacturer's recommendations
	Inspected, checked, and adjusted
	Serviced with proper initial lubricants
	Electrical and mechanical connections meet quality and safety standards
	All applicable safety equipment has been properly installed
	Functionally tested in accordance with Manufacture's recommendations
	System has been performance tested, and meets or exceeds specified performance requirements as outlined by Manufacturer and in accordance with Manufacturer's recommendations

Provide and attach any certifications, reports, etc provided by the Manufacturer.

Relevant Comments:

SECTION 01_78_23

OPERATING & MAINTENANCE DATA

PART 1 GENERAL

1.1 RELATED WORK

A. Section 01_00_01 Basic Requirements

1.2 SCOPE OF WORK

A. Compile product data and related information appropriate for Owner's maintenance and operation of products furnished under the contract and provide four (4) original bound sets.

B. At completion of project, along with hard copies specified herein, submit to engineer six (6) complete copy of all final O&M manuals in PDF format compatible with Adobe Acrobat Reader on thumb drives.

C. Prepare operating and maintenance data as specified in this section, as referenced in other pertinent sections of specifications and in accordance with OAC 252:656-3-10.

D. Instruct Owner's personnel in the maintenance of products and in the operation of equipment and systems.

E. Provide operation and maintenance data for the following items.
1. All process, plumbing and electrical equipment.
2. Valves, cocks, gates and related accessories.
3. Instruments, control and SCADA devices and systems.
4. Flow Meters.
5. Pumps and pump drives.
6. All Facilities or Equipment specified in other specification sections or the plans

F. Submit Operations and Maintenance Data electronically to Engineer no later than 30 days prior to the scheduled equipment installation date.

1.3 QUALITY ASSURANCE

A. Preparation of data shall be done by personnel:
1. Trained and experienced in maintenance and operation of the described products.
2. Completely familiar with requirements of this Section.
3. Skilled as a technical writer to the extent required to communicate essential data.
4. Skilled as a draftsman competent to prepare required drawings.

1.4 FORM OF SUBMITTALS

A. Prepare data in the form of an instructional manual for use by owner's personnel.

B. Format:

1. Size: 8-1/2 in. x 11 in.
2. Paper: 20 pound minimum, white, for typed pages.
3. Test: Manufacturer's printed data, or neatly typewritten.
4. Drawings:
    a. Provide reinforced punched binder tab, bind in with text.
    b. Fold larger drawings to the size of the text pages.
5. Provide fly-leaf for each separate product, or each piece of operating equipment.
    a. Provide typed description of product, and major component parts of equipment.
    b. Provide indexed tabs.
6. Cover: Identify each volume with typed or printed title "OPERATING AND MAINTENANCE INSTRUCTIONS" and list:
    a. Title of Project.
    b. Identity of separate structure as applicable.
    c. Identity of general subject matter covered in the manual.

C. Binders:
1. Commercial quality three-ring binders with durable and cleanable plastic covers.
2. Maximum ring size: 1-1/2".
3. When multiple binders are used, correlate the data into related consistent groupings.

1.5 CONTENT OF MANUAL

A. Neatly typewritten table of contents of each volume, arranged in a systematic order.

B. Contractor, name of responsible principal, address and telephone number.

C. A list of each product required to be included, indexed to the content of the volume.

D. List, with each product, the name, address and telephone number of:
1. Subcontractor or installer.
2. Maintenance Contractor, as appropriate.
3. Identify the area of responsibility of each.
4. Local source of supply for parts and replacement.

E. Identify each product-by-product name and other identifying symbols as set forth in Contract Documents.

F. Product Data:
1. Include only those sheets which are pertinent to the specific product.
2. Annotate each sheet to:
    a. Clearly identify the specific product or part installed.
    b. Clearly identify the data applicable to the installation.
    c. Delete references to inapplicable information.

G. Drawings:
1. Supplement product data with drawings as necessary to clearly illustrate:
    a. Relations of component parts of equipment and systems.
    b. Control and flow diagrams.

2. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.
3. Do not use project Record Documents as maintenance drawings.

H. Written text, as required to supplement product data for the particular installation:
1. Organize in a consistent format under separate headings for different procedures.
2. Provide a logical sequence of instructions for each procedure.

I. Copy of each warranty, bond and service contract issued.
1. Provide information sheet for Owner's personnel, give:
a. Proper procedures in the event of failure.
b. Instances which might affect the validity of warranties or bonds.

J. All instructions, product data, and drawings must be marked to delete nonapplicable information.

1.6 MANUAL FOR EQUIPMENT AND SYSTEMS

A. Content, for each unit of equipment and system, as appropriate:
1. Tracing, photocopy or other suitable reproduction of the equipment nameplates.
2. Equipment performance curves, where applicable.
3. Installation and start-up instructions.
4. Description of unit and component parts.
a. Function, normal operating characteristics, and limiting conditions.
b. Performance curves, engineering data and tests.
c. Complete nomenclature and commercial number of all replaceable parts.
5. Operating Procedures:
a. Start-up, break-in, routine and normal operating instructions, regulation and control, shutdown, and emergency conditions.
b. Regulation, control, stopping, shut-down and emergency instructions.
c. Summer and winter operating instructions.
d. Special operating instructions.
6. Maintenance Procedures:
a. Routine operations.
b. Guide to common operating problems and "trouble-shooting"
c. Disassembly, repair and reassembly.
d. Alignment, adjusting and checking.
7. Servicing and lubrication schedule.
a. List of lubricants required.
8. Manufacturer's printed operating and maintenance instructions and/or water reuse system maintenance requirements.
9. Description of sequence of operation by control manufacturer.
10. Original manufacturer's parts list, illustrations, assembly drawings and diagrams required for maintenance.
a. Predicted life of parts subject to wear.
b. Items recommended to be stocked as spare parts.
c. Chemical inventory
11. As-installed control diagrams by controls manufacturer.
12. Each Contractor's coordination drawings.
a. As-installed color-coded piping diagrams.
13. Alternative and emergency operations.

14. Safety information
15. Other data as required under pertinent sections of specifications.
16. Name, address and telephone number of the Manufacturer.
17. Name, address and telephone number of sources of replacement parts and service nearest to the Project site.
18. Complete, detailed written preventive maintenance instructions for each system and subassembly.
19. Recommended spare parts lists and life expectancy of each part.
20. Written explanations of all safety considerations relating to operation or maintenance procedures.
21. Parts list showing parts and catalog numbers with exploded view showing interrelationship of parts.
22. Recommended schedule for execution of preventive maintenance tasks.
23. Lubrication and other consumables charts, including rate of consumption and alternate lubricants.
24. Troubleshooting instructions and diagnostic procedures.
25. List of required maintenance tools and equipment.
26. Warranty certificates.

B. Content, for each electric and electronic system, as appropriate:
   1. Description of system and component parts.
      a. Function, normal operating characteristics, and limiting conditions.
      b. Performance curves, engineering data and tests.
      c. Complete nomenclature and commercial number of replaceable parts.
   2. Circuit directories of panel boards.
      a. Electrical service.
      b. Controls.
      c. Communications.
   3. As-installed color-coded wiring diagrams.
   4. Operating Procedures:
      a. Routine operations.
      b. Guide to "trouble-shooting".
      c. Disassembly, repair and reassembly.
      d. Adjustment and checking.
   5. Manufacturer's printed operating and maintenance instructions.
   6. List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.
   7. Other data as required under pertinent sections of specifications.

C. Prepare and include additional data when the need for such data becomes apparent during instruction of Owner's personnel.

D. Additional requirements for operation and maintenance data is given in the respective sections of specifications.

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 01_78_34

WARRANTIES AND BONDS

PART 1 GENERAL

1.1 SUBMITTALS

A. Provide duplicate, notarized copies of warranties and bonds required by the Contract Documents. Assemble Contractor's documents and those of subcontractors, suppliers, and Manufacturers. Provide table of contents and assemble in binder with durable plastic cover.

B. The Contractor shall additionally submit a warranty document from each Manufacturer that is specific to the stipulations of the Contract Documents. The Contractor shall submit all warranties/bonds for the project in one submittal upon project acceptance. Items to be included are the bond, warranty period, list of contacts for replacement parts, and other pertinent information found to be of importance for the warranty/bond. All items are to be submitted in a PDF file and a 3-ring binder with tabs that differentiate the different warranty/bond sections.

1.2 WARRANTY INITIATION

A. Treatment Plant and Equipment warranty shall begin only upon final acceptance of the entire project as a whole by Owner. Usage of equipment during startup, testing and completion of punch list prior to final inspection shall be considered as demonstration period. Equipment manufacturer and Contractor shall include the cost for using equipment during start up and testing to not be considered as beneficial occupancy in the bid for warranty. This will apply regardless of what is submitted and/or approved in manufacturer's submittal data / warranty data.

1.3 WARRANTY PERIOD

A. For all improvements indemnify the Owner against any repairs which may become necessary to any part of the work performed and to items of equipment and systems procured for or furnished under this Contract, arising from defective workmanship or materials used therein, for a period of one (1) year after date established by the Owner as the warranty start date. Such warranty period shall be provided by the Contractor regardless of suppliers' standard warranty provisions.

1.4 REMEDY ACTIONS

A. In the event the Contractor fails to proceed to remedy the defects of which he has been notified within fifteen (15) days of the date of such notice, the Owner reserves the right to cause the required materials to be procured and the work to be done, as described in the Drawings and Specifications, and to hold the Contractor and the sureties on his bond liable for the cost and expense thereof.

B. If immediate repairs are necessary to continue operations of the facility, the Owner reserves the right to cause those repairs to be made and hold the Contractor liable for the expense of such repairs. In such a case, every reasonable effort will be made by the Owner

to notify the Contractor in advance but, failure of such notification shall not constitute a waiver of the Contractor's liability. In any case, the Contractor will be notified as soon as reasonably possible of the need for such repairs.

SECTION 01_91_01

FACILITY COMMISSIONING

PART 1 GENERAL

1.1 SUMMARY

A. This specification covers the work necessary to fully commission facility.

B. Demolition, permanent abandonment or cut/plug of lines to the existing facility shall not commence until Facility Commissioning is complete.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 01_75_23 Testing, Training & Facility Startup

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 REQUIREMENTS

A. Commissioning Process will commence after successful completion of 14-day operational test and issuance of Substantial Completion to Contractor.

B. Commissioning Process will be 30 days in duration.

C. During the course of the Commissioning Process, the Engineer and Owner will evaluate any issues and recommend design modifications which shall be implemented by the Contractor through the Change Order process.

1.5 RESPONSIBILITIES

A. General
   1. Responsibilities listed do not relieve the Contractor from all other responsibilities and duties associated with project closeout as defined in the Contract Documents.

B. Contractor
   1. All preventive and unscheduled maintenance of all equipment and facilities in the plant. This shall include, but not be limited to the following:
      a. Providing all lubricants.
      b. Lubrication of all equipment in accordance with manufacturer's recommendations.

c. Perform all manufacturer recommended preventive maintenance.
d. Exercise all equipment not in use during Commissioning phase.
e. Repair all failed equipment.
f. Periodic check of all equipment alignment, vibration, and noise levels in accordance with Specifications.
g. Provide all parts required for equipment repair.
h. Provide all tools and miscellaneous equipment required for equipment repair.
i. Administration/logging/documentation of all preventive maintenance and repair work.
j. Cleanup associated with equipment failure and repair.
k. Daily cleanup of buildings.
l. Landscaping maintenance.
m. Roadway cleanup and maintenance.
n. Replacement of all HVAC filters.

2. Warranty related issues/items.
3. Owner's personnel training required after successful completion of the 7-day testing.
4. Assist in transition to Automatic/SCADA operational mode.
5. Other contractual requirements including, but not limited to, incomplete work list.

C. Owner

1. Provide all chemicals required for plant operations, including scheduling and securing of chemical deliveries to the plant and respective storage tanks.
2. Perform all laboratory analysis required for plant operations.
3. Review training schedules and plans, and schedule personnel training.
4. Assisting Engineer in the evaluation of issues and recommendations of modifications to be implemented by the Contractor through the change order process.
5. Provide staff for Commissioning.
6. Operation of facilities.

SUBSURFACE UTILITY ENGINEERING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes: Requirements for subsurface utility engineering (SUE) in Critical Locate Areas.

B. Critical Locate Areas include the following stationing where SUE Quality Level A SUE is required:
   1. STA. 76+00 to STA. 107+00.
   2. STA. 183+00 to STA. 190+00
   3. STA 217+00 to STA. 232+00
   4. STA. 242+00 to STA 272+00
   5. STA. 310+00 to STA 328+00

C. The Drawings also denote additional Critical Locate Areas for SUE Quality Level A services. These are at any/all locations where the proposed main crosses existing utilities crossings outside of other Critical Locate Areas specified above.

1.2 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Shop drawings:
   1. Contractor shall submit all SUE information as follows:
      a. Plan drawings that clearly illustrate vertical and horizontal location of utilities based on SUE.
         1) Horizontal location shall include northing and easting coordinates and measurements from relevant facilities (fence, edge of pavement, etc.)
      b. Identifies size and material and service for known utilities.
      c. Identify size and material for unknown utilities encountered.
   2. Review of shop drawings and calculations by Engineer and Owner are for record purposes only.
   3. Drawings shall be performed, stamped, and endorsed by a Civil Engineer registered in the state the project is located.
   4. Field survey information shall be performed, stamped, and endorsed by a Surveyor registered in the state the project is located.

C. Detailed sequence of SUE:
   1. Submit a schedule for all SUE events that shows start, end, and intermediate milestones.

1.3 REFERENCES

A. The Contractor shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American Society of Civil Engineers (ASCE):
   1. 38-02 Standard Guideline for the Collection and Depiction of Existing and Subsurface Utility Data. Quality Level A.

1.4 DESCRIPTION/DESIGN REQUIREMENTS

A. Existing utilities indicated on the Drawings are approximate only and are provided based on the best information available.

B. Existing utilities are shown for the convenience of Contractor only.
   1. It is the Contractor's responsibility to field verify the vertical and horizontal location of all utilities including those not indicated or incorrectly indicated on the Drawings.

C. Contractor is responsible to review all geotechnical reports, record drawings, and Contract Documents.

D. Coordinate with utility locator, such as CALL OKIE BEFORE YOU DIG, and other affected entities.

E. Contractor is responsible for protecting all utilities encountered.

F. If a conflict exists between what is indicated on the Drawings and what exists in the field, Contractor shall notify Engineer immediately.

G. Provide subsurface utility engineering services by a Civil Engineer registered in the state the project is located in accordance with ASCE 38-02.
   1. Quality Level A to be achieved through the use of hydrovac excavation, minimum, as well as other mean recommended by SUE engineer.

1.5 QUALIFICATIONS

A. General: Contractor shall utilize the services of a qualified subconsultant for SUE services with minimum qualifications that include but are not limited to:
   1. Minimum of 5 years of SUE experience in the state the project is located in where providing vertical and horizontal locations of utilities in accordance with ASCE 38-02 utility quality level A was required.
   2. Completion of 5 SUE projects of equal or greater magnitude within the past 5 years.

1.6 SEQUENCING

A. Do not begin Work until submittals have been accepted by Engineer and until equipment and materials necessary for installation are on site.

B. Submit submittals a minimum of 30 days prior to the scheduled date to begin excavation work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 CRITICAL LOCATE AREA

A. At Critical Locate Areas, perform hydro vacuum excavation to field verify horizontal and vertical locations of such lines within 4 feet horizontally of proposed work.
   1. Verify location of existing utilities minimum of 30 working days in advance of pipe laying activities. Use extreme caution and care when uncovering utilities designated by Critical Locate.
   2. Notify Engineer immediately upon identification of any obstructions.

B. Notify involved utility companies of date and time that investigation excavation will occur and request that their respective utility lines be marked in field. Comply with utility or pipeline company requirements that their representative be present during excavation. Provide Engineer with 48 hours notice prior to field excavation or related work.

C. Survey vertical and horizontal locations of obstructions relative to project baseline and datum and provide to Engineer. Submittal shall be signed and sealed by Professional Land Survey licensed in the state the project is located for determination of vertical and horizontal locations. Provide a digital copy of survey drawings to Engineer in AutoCAD format.

D. Complete all Critical Locate Area SUE services prior to preparing submittals for all underground water lines, gas lines, storm sewers, sanitary sewers, telecommunication lines, electric lines or power ducts, pipelines, and concrete structures. Submit SUE documentation to Engineer as noted in this specification and identify any conflicts or discrepancies from Drawings to the Engineer.

3.2 SUE SCHEDULE

A. Provide SUE services for pipelines and utilities crossing as indicated herein on the drawings identified as Critical Utility Locate Area.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 02_30_00

SUBSURFACE INVESTIGATION

PART 1 GENERAL

1.1 EXISTING CONDITIONS

A. General:
1. Soil and subsurface investigations were conducted at the site by an independent testing laboratory and a report prepared which contained logs of borings made.
2. This report was obtained for the Engineer's design use only.
3. A copy of report is included in the project documents for informational purposes.

B. Interpretations:
1. Soil investigation data is available only for information and convenience of bidders, and is not warranted to indicate actual conditions.
2. The Owner and Engineer do not assume responsibility for variations in kind, depth, quantity and conditions of soils; they disclaim any responsibility for accuracy, true location, and extent of soils investigation that has been prepared by others; and they further disclaim responsibility for interpretation of that data by bidders as in projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
3. Soil investigation data is not a part of the Contract Documents, and should be considered for reference only and not be used for bidding purposes.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 BIDDER INVESTIGATION

A. Bidder shall visit the site and acquaint himself with site conditions.

B. Bidder shall, at his expense and prior to bidding, make all soil surveys and investigations he considers necessary.

C. Obtain authorization of Owner, through Engineer, prior to the start of additional boring or subsurface investigations.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 02_41_00

DEMOLITION

PART 1 GENERAL

1.1 SCOPE OF WORK

A. The work of this section consists of the removal and disposal of existing structures as outlined on the plans and specified herein including salvaging of materials and backfilling of resulting trenches, holes, and pits.

B. Demolition may include the complete or partial removal as indicated or specified. Contractor has rights to salvage unless noted in the Drawings. Equipment and material not specifically stated as being retained by the Owner shall be disposed of offsite in accordance with local and State laws.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 33_01_33 Wastewater Liquid & Solids Removal & Disposal

D. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 REQUIREMENTS

A. Take necessary photographs of the existing facilities/construction to verify existing condition prior to demolition work.

B. Owner assumes no responsibility for actual condition of equipment and portions of structures to be demolished. Conditions existing at time of inspection for bidding purposes will be maintained by Owner insofar as practicable.

C. Use of explosives will not be permitted.

D. Conduct demolition operations and removal of debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks or other occupied or used facilities without permission from Owner. Provide alternate routes around closed or obstructed traffic ways if required by Owner.

E. If support system/shoring plan is required it shall be designed by the Contractor's Professional Engineer licensed in the state where the Project is located. Contractor's Engineer shall submit the sealed plans of the support system. Contractor shall keep a copy of the support system plans on site at all-times.

F. Do not interrupt existing utilities serving occupied or operating facilities, except when authorized in writing by the Owner. Provide temporary services during interruptions to existing utilities, as acceptable to Owner.

G. Salvage items designated for Owner's salvage shall be stored as a unit. Salvage items shall be cleaned, list and tag prior to storage. Protect the items from damage and deliver to Owner's designated location. Salvage each item with auxiliary or associated equipment required for operation.

H. Assume possession of demolished materials, unless specified otherwise. Remove demolished materials from site at least weekly.

I. Prevent airborne dust. Use water or dust palliative when necessary. Provide and maintain hoses and connections to water main or hydrant.

J. Do not burn materials on site.

K. Immediately upon discovery, remove and dispose of contaminated, vermin-infested, or dangerous materials by safe means so as not to endanger health of workers and public.

L. Remove trees and shrubs within marked areas; clear undergrowth and dead plant material.

M. Backfill open pits and holes caused by demolition.

N. Rough grade areas affected by demolition and grade to drain.

O. Remove demolished materials, tools, and equipment upon completion of demolition.

P. Repair damage caused by demolition.

Q. Topsoil all disturbed areas, grade to drain, hydromulch and water until established.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 PERFORMANCE

A. Remove process water and sludge from unit in accordance with Section 33_01_33.

B. Demolish as outlined in Drawings and remove from site. Use such methods as required to complete work within limitations of governing regulations.

C. Proceed with demolition in a systematic manner, from top to ground.

D. Take care in the removal of equipment and materials to be salvaged to prevent damage to such.

E. When demolishing buildings and basins, the Contractor shall remove all concrete, piping and equipment. Removal of structures shall include removal of all equipment and concrete within 6-ft of the ground surface as well as the filling and compacting with soil of any openings to natural grade.
   1. Contractor is responsible for final dewatering of the basins.
      a. Grit, rags, biosolids and other residuals remaining in the basins being demolished shall be removed prior to demolition. These materials shall be disposed in accordance with applicable regulations.
      b. Wastewater from the basins may be returned to the head of the plant through the Flow Equalization Basins. The Contractor shall closely coordinate basin dewatering activities with the Operators to ensure the dewatering the basins will not adversely impact operations of the treatment plant.

F. Remove existing exposed piping and electrical wiring and conduits to be abandoned from structural surface, cut flush, plug or cap, and finish to match existing surfaces.

G. Remove buried piping, wiring, and conduits to be abandoned a minimum of 3’ outside of new structure lines, excavation-lines, or as indicated on Drawings.
   1. Plug the remainder flush.
   2. Mark the plugged or capped piping, wiring, and conduits with a marker which extends from the plug or cap to 2” above surrounding ground conditions.
   3. Place a 3’ lath with flagging by the marker which extends 2’ above the surrounding ground.
   4. Following completion and approval of project record documents, remove lath to elevation of surrounding ground.

H. Pavement Removal
   1. Remove to existing joints or sawed to limits indicated on Drawings.
   2. Saw cut depth shall be sufficient to avoid disturbing remaining existing pavement. No saw cut depth shall be less than 1-1/2”.

I. Contractor shall be responsible for lead abatement. Contractor shall notify Owner immediately upon encountering asbestos during demolition work. Owner will be responsible for asbestos abatement.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 03_11_00

CONCRETE FORMWORK

PART 1 GENERAL

1.1 SUMMARY

A. Formwork Requirements for cast-in-place concrete.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_20_00 Concrete Reinforcement

D. Section 03_30_00 Cast-in-Place Concrete

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Shop Drawings:
   1. Show reinforcement fabrication, bar placement location, splices, spacing and bar designation, bar type, length, size, bending, number of bars, bar support type, and other pertinent information, including dimensions. Information must correspond directly to data listed on the bill of materials.
   2. Provide sufficient detail to permit placement of reinforcement without use of design drawings. Reproduction of design drawings for use as shop drawings is not permitted. Do not begin fabrication of reinforcing steel until after shop drawings have been reviewed by the Owner's Representative.
   3. Detail shop drawings in accordance with ACI 315.
   4. Rebar submittal shall include following information.
      a. Grade of bars.
      b. Table of bending dimensions, bar size, bar length, number of bars and spacing.

c. The reinforcing shall be listed separately for each structural element (wall, slab, footing, beam, etc.). Each element shall be labeled on the bar list and clearly identified on the shop drawings.
d. Each bar shall be identified such as corner bars, tie bars, vertical bars, etc.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American Concrete Institute (ACI):
1. ACI 117: Specifications for Tolerances for Concrete Construction and Materials.
2. ACI 301: Specifications for Structural Concrete.
3. ACI 315: Details and Detailing of Concrete Reinforcement.
4. ACI 318: Building Code Requirements for Structural Concrete.
5. ACI 347: Guide to Formwork for Concrete.
6. ACI 347.2R: Guide for Shoring/Reshoring of Concrete Multistory Buildings.
7. ACI 350: Code Requirements for Environmental Engineering Concrete Structures.

1.5 STORAGE & HANDLING

A. Store materials above ground on framework or blocking. Cover wood for forms and other accessory materials with protective waterproof covering, providing for adequate ventilation. Store materials in accordance with all manufacturer's recommendations.

B. Form lumber shall be delivered to the job site as far in advance of its use as is practical, and shall be carefully stacked clear of the ground in such a manner as to facilitate air-drying.

C. Handle materials to prevent damage in accordance with the manufacturer's recommendations.

1.6 QUALITY ASSURANCE

A. Design Criteria for Formwork, Falsework and Shoring
1. The design and engineering of all concrete formwork, including all shoring, bracing and reshoring, shall be the responsibility of the Contractor and shall be performed by an Professional Engineer licensed in the state where the project is located.
2. Design for loads, lateral pressure, and allowable stresses as described in ACI 347. Design for all lateral loads and other applicable requirements of controlling local building codes.
3. Camber formwork to compensate for anticipated deflection during placement of concrete when required to maintain specified tolerances.
4. Design formwork to be readily removed without impact, shock, or damage to concrete surfaces and adjacent materials.
5. Design for fresh concrete as the pressure exerted by a liquid weighing 150 pounds per cubic foot. Additionally, the rate of concrete placement, concrete temperature and all other pertinent factors shall be taken into account.
6. Design for all construction loads imposed during construction.

7. Forms shall have adequate stiffness to maintain mortar-tightness and true final dimensions of member being constructed within specified construction tolerances.
8. Falsework and shoring shall be designed to provide required strength and stiffness to insure safety and that no excessive settlement or deformation occurs.
9. Falsework and shoring shall be supported on an adequate foundation to provide required strength and stiffness to support the superimposed load without settlement.

B. Alignment Control & Allowable Tolerances
1. Construct and erect formwork in accordance with ACI 117, ACI 301 and ACI 347.
2. True alignment of walls and other vertical surfaces having straight lines shall be controlled and checked. Forming shall be arranged with provisions for adjusting the horizontal alignment after the form has be filled with concrete. Establish a transit line or other reference so that adjustments can be made to an established line while the concrete is still plastic.

PART 2 PRODUCTS

2.1 MATERIALS

A. Lumber & Plywood
1. Properly seasoned and of good quality; free from loose or unsound knots, holes, shakes, splits, decay and other imperfections that would affect its strength or adversely affect the finished concrete surface.

B. Form Linings
1. Fiberboard: Hardwood finished smooth on one side with minimum thickness of 3/16 inch.
2. Plywood: Conforming to APA HDO; exterior exposure waterproof adhesive with minimum thickness of 3/8 inch.

C. Form Release Agent:
1. A ready to use water based material formulated to eliminate or reduce surface imperfections free of kerosene, mineral oils, waxes or resins.
2. Release agent shall not discolor or injuriously affect the finished concrete surface, subsequent coatings or concrete curing.

D. Coating for Plastic Forms

E. Alkali-resistant gel-coat. Chamfer Strips: Wood, metal, PVC or rubber strips ¾ by ¾ inch minimum.

2.2 FABRICATIONS

A. Forms
1. General
a. Chamfers: Provide a chamfer on all exposed edges by using either wooden or plastic chamfer strips. Chamfer strips shall be a forty-five degree right triangle in section with the two shorter sides measuring 3/4-inch.

b. Waterproofed Surfaces: At surfaces to be waterproofed, provide formwork with sufficient anchor pattern to facilitate bond of the membrane waterproofing.

2. Smooth Forms:
   a. Construct formwork with plywood; tempered, concrete-form hardboard; dressed lumber faced with plywood or fiberboard lining; metal; plastic; or metal-framed plywood-faced panel material acceptable to the Engineer to provide continuous, straight smooth surfaces. Form material will be free of raised grain, torn surfaces, worn edges, patches, dents or other defects. Furnish material in largest practical sizes to minimize the number of joints and, when shown on the drawings, conform to the joint system shown. Form material will have sufficient strength and thickness to withstand the pressure of newly placed concrete without bow or deflection.
   b. Smooth forms will be used on all concrete surfaces exposed to view or liquid in the completed structure.
3. Rough Forms:
   a. Construct forms of dressed or undressed lumber free of knots, splits, or other defects; plywood; metal; or other material acceptable to the Engineer. Material shall have sufficient strength and thickness to withstand the pressure of newly placed concrete without bow or deflection.
   b. Rough forms may be used on concrete surfaces that will not be exposed to view or liquid in the completed structure.

B. Void/Carton Forms.
1. Use new carton forms of corrugated cardboard. Forms shall be impregnated throughout with paraffin and laminated with water resistant adhesive. Do not use trapezoidal carton forms.
2. Forms of the height indicated on the drawings shall be designed to support the wet concrete plus normal construction loads.
3. Soil retainers shall be composed of materials that are not adversely affected by moisture and as directed in the Drawings.
4. Carton forms provided around the perimeter of drilled shafts shall be installed using pre- manufactured sealed void forms with curved edges.
5. Install carton forms according to the manufacturer's recommendation and maintain in a dry condition prior to concrete placement. Carton forms that have not been maintained in a dry condition shall be replaced before concrete is placed.
6. Acceptable Manufacturers:
   a. VoidForm Products
   b. Savway Carton Forms
   c. Voidco Fiberboard Void Forms

C. Metal Forms
1. All specified requirements for "Forms" regarding design, mortar tightness, geometry, bevels, chamfers, bracing, alignment, removal, re-use, oiling, etc. shall apply equally to metal forms.
2. Metal used for forms shall have adequate thickness to remain true to shape. Clamps, pins and other connecting devices shall be designed to hold the forms rigidly together and allow form removal without injury to the concrete.
3. Bolt and rivet heads on exposed surfaces shall be countersunk.
4. Metal forms that do not present a smooth surface free from rust, grease or other foreign materials that discolor concrete shall not be used.

D. Slip Forming
1. Slip forming is not permitted.

2.3 FORM ACCESSORIES

A. Form Ties
1. Form ties shall be of the removable end, permanently embedded body type and shall have sufficient strength and rigidity to support and maintain the form in proper position and alignment without the use of auxiliary spreaders.
2. Ties of a type intended to be entirely removed shall be coated with an acceptable lubricant to safeguard against damaging the concrete during such removal. The use of wire ties will not be permitted.
3. Use removable cones of one-inch by one-inch minimum size on the end of the form tie.
4. Grout depressions left in concrete by the cones with non-shrink grout after the ends of the cones have been removed.

B. Form Sealer
1. Surface sealer that will not bond with, stain, or adversely affect concrete surfaces, and will not impair subsequent treatments of concrete surfaces when applied to most forms or form liners. A ready-to-use water based material formulated to reduce or eliminate surface imperfections, containing no mineral oil or organic solvents. Environmentally safe, meeting local, state, and federal regulations.

PART 3 EXECUTION

3.1 FORM CONSTRUCTION

A. General
1. Design and installation of formwork shall comply with ACI 301.
2. All formwork, scaffolds and work platforms shall be safe and conform to OSHA Requirements.
3. Construct and maintain formwork, complying with ACI 347 and this Section so that it will maintain correct sizes of members, shape, alignment, elevation and position during concrete placement and until concrete has gained sufficient strength. Provide for openings, offsets, sinkages, keyways, recesses, moldings, anchorages and inserts, as required.
4. Construct forms for easy removal without damage to concrete surfaces.
5. Formwork shall be sufficiently tight to prevent leakage of cement paste during concrete placement. Solidly butt joints and provide backup material at joints as required to prevent leakage and fins.
6. Chamfer strips shall be placed in forms to bevel all edges and corners permanently exposed to view, except the top edges of walls and slabs which are shown to be tooled. Edges of formed joints and interior corners shall not be beveled unless shown or specified otherwise. Equipment bases shall have formed beveled edges for all vertical and horizontal corners. Unless otherwise noted, bevels shall be 3/4-inch wide.
7. Form ties shall be employed in such places and at such intervals as to securely hold the forms in position during the placing of concrete, and to withstand the weight and pressure of the wet concrete.

8. Provide temporary openings at the base of column and wall forms and at other points as required to facilitate observation and cleaning immediately before concrete is placed. Temporary opening shall be 2' x 2' in size or as required by Owner's Representative.
9. If runways are required for moving equipment, provide for support of runways with struts or legs resting directly on the formwork or structural member. Do not allow runways or supports to rest on reinforcing steel.
10. Provide openings below large pipe (over 10" diameter) or large embedments to allow adequate concrete fill and minimize honeycombs and voids.
11. Construct forms with such care as to produce concrete surfaces which will not have unsightly or objectionable form marks in exposed concrete surfaces. Forms shall have all contact surfaces thoroughly cleaned before reuse.

B. Forms for Surfaces Exposed to View or Liquids:
1. Drill forms to suit ties used and to prevent leakage of concrete mortar around tie holes. Form ties shall be uniformly spaced and aligned in rows.
2. Provide sharp, clean corners at intersecting planes, without visible edges or offsets. Back joints with extra studs or girts to maintain true, square intersections.
3. Form molding shapes, recesses and projections with smooth-finish materials and install in forms with sealed joints to prevent displacement.
4. Form exposed corners of beams and columns to produce square, smooth, solid, unbroken lines. Provide all exterior exposed corners with 3/4-inch chamfer.
5. Arrange facing material in an orderly and symmetrical fashion. Keep the number of seams to a practical minimum. Support facing material adequately to prevent deflection in excess of allowable tolerances.
6. For flush surfaces exposed to view in the completed structure, overlap previously placed hardened concrete with form sheathing by approximately 1-inch. Hold forms against hardened concrete to maintain true surfaces, preventing offsets or loss of mortar.

C. Edge Forms and Screed Strips for Slabs: Set edge forms or bulkheads and intermediate screed strips for slabs to obtain required elevations and contours in the finish slab surface. Provide and secure units to support types of screeds required.

D. Surface to Receive Membrane Waterproofing: Provide chamfers for external corners in concrete surfaces that will be covered with membrane waterproofing. Provide a continuous reglet at line of top of membrane waterproofing on vertical surfaces. Coordinate location with waterproofing applicators.

3.2 TOLERANCES

A. Construct formwork so that concrete surfaces will conform to tolerance limits as listed in ACI 117, ACI 301 and ACI 347.

B. Establish sufficient control points and bench marks as references for tolerance checks. Maintain these references in undisturbed condition until final completion and acceptance of the project.

3.3 ADJUSTMENTS OF FORMWORK

A. Use wedges or jacks to provide positive adjustment of shores and struts. Wedges used for final adjustment of forms should be fastened in position after final inspection and before concrete placement.

B. Securely brace forms against lateral deflections. Prepare to compensate for settling during concrete placement.

C. For wall openings, construct wood forms that facilitate any necessary loosening to counteract swelling of forms.

3.4 PREPARATION OF FORM SURFACES

A. Before placing concrete, clean surfaces of forms and embedded materials. Remove accumulated mortar, grout, rust and other foreign matter.

B. Coat forms for exposed or painted concrete surfaces with form oil or form-release agent before placing reinforcement. Cover form surfaces with coating material used in strict accordance with the Manufacturer's printed instructions. Do not allow excess coating material to accumulate in forms or to contact hardened concrete against which fresh concrete will be placed. Remove coating material from reinforcement before placing concrete.

C. Other than retained-in-place metal forms, forms for unexposed surfaces may be wet with water immediately before concrete placement in lieu of coating. One exception is that when a possibility of freezing temperatures exists, use of a coating is mandatory.

3.5 REMOVAL OF FORMS

A. Forms shall not be removed until the concrete has adequately hardened and set. Clamps or tie rods may be loosened twenty-four (24) hours after the concrete is placed; ties, except for a sufficient number to hold the forms in place, may be removed at that time.

B. Forms on vertical surfaces, when repair of surface defects or finishing is required before concrete is aged, may be removed as soon as concrete has hardened sufficiently to resist damage from removal operations.

C. Remove top forms on sloping surfaces of concrete as soon as concrete has attained sufficient stiffness to prevent sagging. Loosen wood forms for wall openings as soon as this can be accomplished without damage to concrete. Formwork for columns, walls, sides of beams, and other parts not supporting weight of concrete may be removed provided that concrete has hardened sufficiently to resist damage from removal operations and provided the removal of these forms will not disturb members supporting the weight of the concrete.

D. All forms and shoring used to support weight of concrete or any construction loads shall remain in place until concrete has reached the minimum strength specified for removal of forms and shoring as specified in item 3.06 of this Section. In no case shall forms be removed in less than 4 days.

E. If removal of formwork occurs before required curing is complete, exposed concrete surfaces shall be cured immediately after the removal of formwork until all curing requirements are met. See Section 03 30 00 for curing requirements.

3.6 REMOVAL STRENGTH

A. Specified Removal Strength
1. The minimum concrete compressive strengths for removal of all formwork supporting the weight of concrete shall be 100 percent of the specified minimum 28 day strength of the class of concrete involved.

B. Control Tests: Suitable strength control tests will be used as evidence that concrete has attained the removal strength required for removal of formwork or shoring supporting the weight of concrete in structural members or construction loads.
1. Field-Cured Test Cylinders. When field-cured test cylinders reach the specified removal strength, formwork or shoring may be removed from the respective concrete placements. Strength data from field-cured test cylinders shall be furnished by the Contractor.
2. Laboratory-Cured Test Cylinders. When concrete has been cured as specified for cast-in- place concrete for the same time period required by laboratory-cured cylinders to reach
3. the specified removal strength, the formwork or shoring may be removed from respective concrete placements. Determine the length of time that the concrete placement has been cured by totaling the number of days or fraction of days, not necessarily consecutive, during which the air temperature surrounding the concrete is above 70 degrees F and the concrete has been damp or thoroughly sealed against evaporation and loss of moisture.

3.7 SHORING AND RESHORING

A. When reshoring is permitted or required, plan operations in advance and secure approval of such operations from the Engineer. All shoring and reshoring shall be designed by a Professional Engineer retained by the Contractor who is licensed in the State in which the project is constructed.

B. Shoring and Reshoring shall comply with ACI 301, ACI 347 and ACI 347.2R.

C. While reshoring is under way, keep live load and construction loads off the new construction. Do not permit concrete beams, slab, column or other structural member to be subjected to combined dead and construction loads in excess of loads permitted for developed concrete strength at the time of reshoring.

D. Place reshores as soon as practicable after stripping operations are complete but in no case later than the end of the working day on which stripping occurs. Tighten reshores to carry the required loads without overstressing construction. Leave reshores in place until tests representative of concrete being supported have reached specified strength.

E. Floors supporting shores under newly placed concrete shall have their original supporting shores left in place or shall be reshored. The reshores shall be located directly under a shore position above unless other locations are permitted. Extend reshoring over a sufficient number of stories to distribute weight of newly placed concrete, forms and

construction live loads in such a manner that design superimposed loads of floors supporting shores are not exceeded.

3.8 FORM REUSE

A. Do not reuse forms that are worn or damaged beyond repair. Thoroughly clean and recoat forms before reuse. For wood and plywood forms to be used for exposed smooth finish, sand or otherwise dress concrete contact surface to original condition or provide form liner facing material. For metal forms, straighten, remove dents and clean to return to original condition.

SECTION 03_15_20

CONCRETE JOINTS & EMBEDDED ITEMS

PART 1 GENERAL

1.1 SUMMARY

A. Requirements for all concrete joints and embedded items for cast-in-place concrete

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Division 3 - Concrete

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Submit shop drawings showing all concrete joints, proposed sequences for concrete placement and type of concrete specified. Concrete may not be placed without a joint layout and pour sequence reviewed by the Engineer

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American Society for Testing and Materials (ASTM):
1. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
2. ASTM C510 - Standard Test Method for Staining and Color Change of Single- or Multicomponent Joint Sealants.
3. ASTM C603 - Standard Test Method for Extrusion Rate and Application Life of Elastomeric Sealants.
4. ASTM C639 - Standard Test Method for Rheological (Flow) Properties of Elastomeric Sealants.
5. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer.
6. ASTM C679 - Standard Test Method for Tack-Free Time of Elastomeric Sealants.
7. ASTM C719 - Standard Test Method for Adhesion and Cohesion of Elastomeric Joint Sealants Under Cyclic Movement (Hockman Cycle).
8. ASTM C792 - Standard Test Method for Effects of Heat Aging on Weight Loss, Cracking, and Chalking of Elastomeric Sealants.

9. ASTM C793 - Standard Test Method for Effects of Laboratory Accelerated Weathering on Elastomeric Joint Sealants.
10. ASTM C794 - Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.
11. ASTM C881 - Standard Specifications for Epoxy-Resin-Base Bonding Systems for Concrete.
12. ASTM C920 – Standard Specification for Elastomeric Joint Sealants.
13. ASTM C1059 - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete.
14. ASTM C1247 - Standard Test Method for Durability of Sealants Exposed to Continuous Immersion in Liquids.
15. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension.
16. ASTM D471 - Standard Test Method for Rubber Property—Effect of Liquids.
17. ASTM D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.
18. ASTM D638 - Standard Test Method for Tensile Properties of Plastics.
19. ASTM D994 - Standard Specification for Preformed Expansion Joint Filler for Concrete (Bituminous Type).
20. ASTM D1751 - Standard Specification for Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
21. ASTM D1752 - Standard Specification for Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.
22. ASTM D2240 - Standard Test Method for Rubber Property - Durometer Hardness.
23. ASTM D2628 - Standard Specification for Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements.
24. ASTM D6690 - Standard Specification for Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements

C. American Concrete Institute (ACI)
1. ACI 301 - Specifications for Structural Concrete.
2. ACI 503.2 - Standard Specification for Bonding Plastic Concrete to Hardened Concrete with a Multi-Component Epoxy Adhesive.

D. U.S. Army Corps of Engineers (CRD)
1. CRD-C572 - Corps of Engineers Specifications for Polyvinyl Chloride Waterstops.

1.5 QUALITY ASSURANCE

A. Mock-ups:
1. Welding demonstration:
a. Demonstrate ability to weld acceptable joints in polyvinyl chloride waterstops before installing waterstop in forms.

B. Field joints:
1. Polyvinyl chloride waterstops field joints: Shall be free of misalignment, bubbles, inadequate bond, porosity, cracks, offsets, and other defects which would reduce the potential resistance of the material to water pressure at any point. Replace defective joints. Faulty material will be removed from the site and disposed of by the Contractor at its own expense.

C. Inspections:
1. Quality of welded joints will be subject to acceptance of the Engineer.
2. Polyvinyl chloride waterstop: The following defects represent a partial list that will be grounds for rejection:
a. Offsets at joints greater than 1/16 inch or 15 percent of the material thickness, at any point, whichever is less.
b. Exterior crack at joint due to incomplete bond, which is deeper than 1/16 inch or 15 percent of the material thickness, at any point, whichever is less.
c. Any combination of offset or crack that will result in a net reduction in the cross section of the waterstop in excess of 1/16 inch or 15 percent of the material thickness, at any point, whichever is less.
d. Misalignment of the joint that will result in misalignment of the waterstop in excess of 1/2 inch in 10 feet.
e. Porosity in the welded joint as evidenced by visual inspection.
f. Bubbles or inadequate bonding.

PART 2 PRODUCTS

2.1 CONCRETE EXPANSION JOINTS, GENERAL

A. Expansion Joint Sealant
1. Single or multi-component cold-applied polyurethane elastomeric joint sealant conforming to ASTM C920. Sealant must be appropriate for the specific application. Provide joint primer according to Manufacturer's recommendation.
2. Material Properties
a. Movement capability (ASTM C719): 25% min.
b. Tensile strength (ASTM D412): 160 psi min.
c. Ultimate elongation (ASTM D412): 280% min.
d. Tear strength (ASTM D624): 50 lb./in., min.
e. Adhesion in peel (concrete): 10 lb./in., min.
f. Ultimate hardness (ASTM C661, Shore): 20 to 45.
g. Color: gray.
3. Water Immersion & Chemical Resistance
a. If joint will be immersed in water or exposed to wastewater, or chemicals, sealant must exhibit good resistance to water immersion and good chemical resistance

B. Expansion Joint Filler
1. Resilient non-bituminous material conforming to ASTM D1752. Material must be compatible with the joint sealant.

C. Joint Accessories
1. Backer Rod
a. Extruded closed-cell polyethylene foam rod compatible with the joint sealant. Rod shall be 25% larger than the joint opening.
2. Bond Breaker Tape
a. Polyethylene or TFE-fluorocarbon self adhesive tape, compatible with the joint sealant.

2.2 CONCRETE EXPANSION JOINTS (EXTERIOR ROADWAY & PAVEMENTS ONLY)

A. Expansion Joint Sealant
   1. Hot-poured elastic joint sealant conforming to ASTM D6690. Sealant must be appropriate for concrete pavement. Provide joint primer according to Manufacturer's recommendation.

B. Expansion Joint Filler
   1. Preformed bituminous type conforming to ASTM D994. Material must be compatible with the joint sealant.

2.3 CONCRETE BONDING AGENT

A. Concrete Exposed to Water and/or Chemicals
   1. ASTM C881, Type IV. Grade and Class shall be as required for the project application. A field service representative of the Manufacturer shall be available during initial application to instruct the Contractor in the proper use of the product when so requested by the Engineer or the Owner.

B. Concrete Not Exposed to Water or Chemicals
   1. Acrylic bonding agent conforming to ASTM C1059.

2.4 BOND BREAKER

A. 30-pound asphalt saturated felt or polyethylene membrane.

2.5 EXPANSION JOINT DOWELS

A. Smooth steel bars shall conform to the requirements of Section 03_20_00. Cut dowels to length at shop or mill before delivery to the site. Dowels must be straight and clean, free of loose flaky rust and loose scale.

2.6 EXPANSION JOINT DOWEL SLEEVES

A. Metal or plastic dowel sleeve. Sleeve shall be sized to allow dowel to move complete width of joint without binding.

2.7 WATERSTOPS

A. General
   1. All waterstop materials shall be compatible with potable water applications per AWWA and any other industry standards.
   2. Unless otherwise called for in the Drawings or specified herein, provide PVC waterstops where waterstops are indicated in the Drawings.
   3. Manufacturers: One of the following or equal:
      a. Vinylex Corporation.
      b. Greenstreak Plastic Products Company, Inc.
   4. Dumbbell-type waterstop will not be allowed unless otherwise specified or indicated on the Drawings.
   5. No scrap or reclaimed material shall be used.

B. Polyvinyl Chloride Waterstops (PVC)
   1. Material Requirements
      a. Waterstops shall be extruded from virgin polyvinyl chloride compound and shall conform to the requirements of the Corps of Engineers Specification CRD-C572. Waterstops shall be uniform in dimension, homogenous and free from porosity. No reclaimed or scrap material may be used.
      b. Tensile strength: 1400 psi minimum.
      c. Ultimate Elongation: 280 percent minimum.
   2. Construction Joints
      a. Ribbed type without center bulb.
      b. 6 inch minimum width.
      c. 3/8 inch minimum thickness.
   3. Expansion Joints
      a. Dumbbell type with a minimum 3/4-inch inside diameter center bulb.
      b. 9 inch minimum width.
      c. 3/8 inch minimum thickness.

C. Thermoplastic Elastomeric Rubber (TPE-R)
   1. Where joints will be exposed to harsh chemical environments and where indicated in the Drawings, provide TPE-R waterstops in lieu of PVC waterstops.
   2. Material Requirements
      a. Waterstops shall be a fully vulcanized blend of EPDM and polypropylene (thermoplastic vulcanizate). Waterstops shall be uniform in dimension, homogenous and free from porosity. No reclaimed or scrap material may be used.
      b. Tensile strength: 2000 psi minimum.
      c. Ultimate Elongation: 450 percent minimum.
   3. Construction Joints
      a. Ribbed type without center bulb.
      b. 6 inch minimum width.
      c. 3/8 inch minimum thickness.
   4. Expansion Joints
      a. Dumbbell type with a minimum 3/4-inch inside diameter center bulb.
      b. 9 inch minimum width.
      c. 3/8 inch minimum thickness.

D. Hydrophilic Waterstops
   1. Hydrophilic waterstop materials shall be bentonite-free and expand by a minimum of 80% of dry volume in the presence of water to form a water-tight joint without damaging the concrete in which it is cast.
   2. The material shall absorb water and cause an increase in volume in a completely reversible and repeatable process. The material shall be dimensionally stable after repeated wet-dry cycles with no deterioration in swelling potential.
   3. Minimum cross-sectional dimensions are 3/16 inch by 3/4 inch.
   4. Provide only where specifically indicated in the Project Documents.

E. Hydrophilic Sealants
   1. Hydrophilic sealant shall be compatible with hydrophilic waterstop and shall firmly adhere to concrete, metal and PVC in a dry or damp condition. When cured, it shall be elastic indefinitely.

F. Hydrophilic Injection Resin

1. Hydrophilic injection resin shall be acrylate-ester based with a viscosity of less than 50 cps. The resin shall be water soluble in its uncured state, solvent free and non-water reactive. In its cured state it shall form a solid hydrophilic flexible material resistant to permanent water pressure and compatible with bitumen, joint sealants and concrete.

2.8 EPOXY ANCHORS

A. Provide stainless steel adhesive anchors and hardware complying with ASTM F593, AISI Type 316 headed with stainless steel nuts and washers.

B. Adhesive system shall Hilti HIT-HY200 adhesive, by Hilti. No substitutions will be considered.

C. Embedment depth of the anchor shall provide pullout strength equal to the allowable tensile capacity of the anchor, unless otherwise noted in the Drawings. Reduction in pullout strength due to spacing and edge distances shall be made.

2.9 MISCELLANEOUS EMBEDDED METAL ITEMS

A. Miscellaneous embedded metal items shall conform to the requirements Section 05051 or the section of the specifications to which they apply. In the case of conflicting requirements, the most restrictive requirements shall apply.

B. Use "Form Saver" or "Threaded Coupler" to avoid drilling holes in the forms.

C. Paint aluminum contact surfaces with a zinc rich primer where aluminum items are embedded in concrete.

PART 3 EXECUTION

3.1 CONSTRUCTION JOINTS

A. General

1. Make construction joints only at locations shown and required on the Contract Drawings, the reviewed shop drawings or as directed or approved by the Engineer. Any additional construction joints or relocation of construction joints shown on the drawings that are proposed by the Contractor must be submitted to the Engineer for review.
2. Allow a minimum of three (3) days to elapse before placing concrete adjacent to a slab or wall previously placed.
3. All joints shall be perpendicular to main reinforcement; continue all reinforcing across the joint.
4. Provide waterstops in all wall and slab construction joints as specified or in all water bearing structures, all below grade joints and at locations shown on the Drawings.

B. Additional Construction Joints

1. In addition to construction joints explicitly shown in the Drawings, provide and locate additional construction joints as follows:
2. Walls.
   a. Locate vertical construction joints at a maximum spacing of 40 feet.
3. Foundation slabs and slabs-on-grade
   a. Locate construction joints at a spacing of 50 feet maximum. Place concrete in a strip pattern, unless otherwise indicated in the Contract Drawings, to a maximum of 2500 square feet in any one placement.
4. Structural slabs and beams

C. Locate construction joints at a maximum spacing of 50 feet. Locate construction joints in compliance with ACI 301, unless otherwise indicated in the drawings, to a maximum of 2500 square feet in any one placement.

D. Construction Joint Preparation
1. The joint surface of the previously cast member or existing concrete in all cases shall be cleaned free of all oil, grease, curing compound, dirt, or laitance, and shall be wetted. Cleaning shall be accomplished by high pressure water jet, wet sand blasting, dry sand blasting, or scrubbing, singly or in combination, as required and shall remove loosened particles of aggregate, damaged concrete at surface, and other substances which may prevent complete adhesion. Remove accumulated concrete on projecting reinforcing steel.
2. Construction joints shall be roughened mechanically to a full amplitude of ¼ inch. Thoroughly clean joint surfaces as described in this Section. Coat joints with neat cement slurry with the consistency of a heavy paste and scrub into surfaces by means of a stiff bristled brush. Place new concrete before cement paste dries. As an alternative to using a neat cement slurry, a bonding agent may be utilized.

3.2 EXPANSION JOINTS

A. Do not extend reinforcement or other embedded metal items that are continuously bonded to concrete through any expansion joints.

B. Position dowels accurately if called for in the Drawings. Support dowels against displacement during concrete placement and vibration. Install dowel sleeve grout-tight to prevent bonding of the dowel during concrete placement.

C. Position expansion joint filler material accurately. Support against displacement during concrete placement and vibration. Place filler the full depth of the member less an allowance to form a groove for sealant as detailed.

3.3 CONTROL JOINTS

A. Control joints shall be provided in non-water bearing slabs-on-grade only as called for in the Drawings and specified herein

B. Make top grooves for control joints in slabs on grade as detailed and seal as specified. Grooves may be made with joint forming strip, via tooling or may be sawed.

C. If control joints are sawed, properly time cutting with concrete set. Start cutting as soon as concrete has hardened sufficiently to prevent aggregates from being dislodged by the

saw. Complete cutting before shrinkage stresses have developed sufficiently to induce cracking and within twelve (12) hours of concrete placement. The Contractor shall have at least one spare saw available during the sawing operation.

D. Control joints shall be cleaned and filled with expansion joint sealant. Inject sealant through a nozzle into the bottom of the joint, filling the entire joint space without air voids.

3.4 WATERSTOPS

A. General
1. Provide waterstops in all horizontal and vertical joints in foundation slabs and peripheral walls of all structures up to a minimum of 12 inches above final ground level and all walls and slabs of liquid-containing structures or compartments to a minimum of 12 inches above maximum liquid level unless specifically shown otherwise on the Drawings.
2. Provide PVC waterstops unless TPE-R waterstops are called for in the Drawings.
3. Carry waterstops in walls into lower slabs and join to waterstops in slabs with appropriate types of fittings.
4. In waterbearing structures: Provide all joints with waterstops, whether indicated on the Drawings or not.
5. Provide waterstops that are continuous.
6. Set waterstops accurately to position and line as indicated on the Drawings.
7. Hold and securely fix edges in position at intervals of not more than 24 inches so that they do not move during placing of concrete.
8. Position the waterstop so that symmetrical halves of the waterstop are equally divided between the concrete pours. The center axis of the waterstop shall be coincident with the centerline of the joint.
9. Do not drive nails, screws, or other fasteners through waterstops in vicinity of construction joints.
10. Use wires at not more than 24 inches on centers near outer edge of the waterstop to tie waterstops into position.
11. Special clips may be used in lieu of wires, at Contractor's option.
12. Terminate waterstops 3 inches from top of finish surfaces of walls and slabs unless otherwise specified or indicated on the Drawings.
13. When any waterstop is installed in the concrete on one side of a joint, while the other half or portion of the waterstop remains exposed to the atmosphere for more than 2 days, suitable precautions shall be taken to shade and protect the exposed waterstop from direct rays of sunlight during the entire exposure and until the exposed portion is embedded in concrete.
14. When placing concrete at waterstops in slabs, lift the edge of the waterstop while placing concrete below the waterstop. Manually force the waterstop against and into the concrete. Then cover the waterstop with fresh concrete.

B. PVC and TPE-R Waterstops
1. Each piece of pre-molded waterstop must be of maximum practicable length for a minimal number of end joints.
2. All waterstops shall be continuous, and so jointed as to form a complete barrier to the passage of water through any construction, control/contraction or expansion joint.
3. Joints in waterstops shall be made by heat sealing or other method approved by the Manufacturer in accordance with the requirements of the Manufacturer. The

joints in strips of waterstop shall be such that the entire cross section of the joint shall be dense, homogeneous and free of all porosity. All finished joints shall have a tensile strength of not less than 75% of the material of the strip as extruded.

4. Weld joints such as unions, crosses, ells, and tees, with thermostatically controlled equipment recommended by waterstop manufacturer:
   a. The material shall not be damaged by heat sealing.
   b. Make joints by overlapping, then simultaneously cut the ends of the sections to be spliced so they will form a smooth even joint. Heat the cut ends with the splicing tool until the plastic melts. Press the 2 ends together until the plastic cools.
   c. The continuity of the waterstop ribs and tubular center axis shall be maintained.
   d. The splices shall have a tensile strength of not less than 60 percent of the unspliced materials tensile strength.
5. Where waterstop is continuous in orthogonal directions, provide factory-made, pre- formed tee or cross waterstop pieces. Waterstop joints in the field shall only be butt-type joints.
6. All waterstops shall be installed so that half its width will be embedded on each side of the joint. Tie the waterstop to the reinforcement at a maximum spacing of 18 inches to ensure that the waterstop will be held securely in true position and in straight alignment in the joint during placement and vibration of concrete.
7. Care shall be exercised to ensure that the PVC waterstop is completely embedded in concrete and without voids.

C. Hydrophillic Waterstops
1. Install hydrophilic waterstops as called for in the Drawings in accordance with the Manufacturer’s requirements. Install hydrophilic sealant in accordance with all Manufacturer’s requirements.
2. The hydrophilic waterstop shall be installed in a bed of hydrophilic sealant compatible with the hydrophilic waterstop before skinning and curing begins so that any irregularities in the concrete surface are completely filled and the waterstop is bonded to the sealant. After the sealant has cured, secure the waterstop to the concrete in accordance with the Manufacturer’s instructions.
3. Prior to installation of the hydrophilic sealant, clean the concrete surface to removed laitance and any other materials that will adversely affect bonding of the sealant to the concrete.

3.5 SEALING JOINTS

A. Clean, prime and apply sealants in accordance with Manufacturer's recommendations.

B. Sealant shall be applied when the ambient temperature is between 40° F and 90° F, unless recommended otherwise by the sealant Manufacturer.

C. During application, exercise care to prevent sealant from spilling onto surfaces adjacent to joints.

3.6 DOWELS

A. Where indicated on Drawings, install dowels at right angles to construction joints and expansion joints. Align dowels accurately with finished surface. Rigidly hold in place and support during concrete placement.

3.7 SETTING ANCHORS

A. Anchor embedded reinforcing, bolts and other items as shown on the Drawings into existing concrete with an epoxy in accordance with these Specifications and all Manufacturer's recommendations.

3.8 SETTING ANCHOR BOLTS

A. Set anchor bolts for structural steel specified

B. Install equipment anchor bolts as required by the equipment Manufacturer.

C. Provide accurately made templates for positioning anchor bolts.

3.9 EMBEDDED ITEMS

A. Placement
   1. Place embedded items to least impair strength of the structure. Obtain approval of locations for embedded items not shown on the Drawings before placement of concrete. Should locations of embedded items be detrimental to the strength of the structure, notify the Owner's Representative and relocate items as directed by the Owner.
   2. Do not cut or reposition reinforcing steel to facilitate installation of inserts, conduit, sleeves, anchor bolts, mechanical openings and similar items without prior approval of the Engineer, except that reinforcing bars may be moved one bar diameter or within tolerances specified in the Concrete Reinforcement section without approval of the Engineer as long as minimum specified reinforcing cover requirements are maintained.
   3. It is the Contractor's responsibility to coordinate the requirements for embedded items and to ensure that embedded items are properly placed.

B. Installation
   1. Accurately position and support embedded items against displacement during concrete placement.
   2. Voids in sleeves, inserts, anchors, etc., shall be filled temporarily with readily removable material to prevent the entry of concrete into the voids.
   3. Conduits, pipes and inserts of aluminum shall not be embedded in structural concrete unless effectively coated or covered to prevent aluminum-concrete reaction or electrolytic action between aluminum and steel.
   4. Except when plans for conduits and pipes are approved by the Engineer, conduits and pipes embedded within a slab, wall or beam shall satisfy the following:
      a. They shall not be larger in outside dimension than 1/3 the overall thickness of slab, wall or beam in which they are embedded.
      b. They shall not be spaced closer than three diameters or widths on center.
      c. They shall not significantly impair the strength of the member.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 03_20_00

CONCRETE REINFORCEMENT

PART 1 GENERAL

1.1 SUMMARY

A. Formwork Requirement for cast-in-place concrete.

B. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_20_00 Concrete Formwork

D. Section 03_20_00 Cast-in-Place Concrete

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Shop Drawings:
   1. Show reinforcement fabrication, bar placement location, splices, spacing and bar designation, bar type, length, size, bending, number of bars, bar support type, and other pertinent information, including dimensions. Information must correspond directly to data listed on the bill of materials.
   2. Provide sufficient detail to permit placement of reinforcement without use of design drawings. Reproduction of design drawings for use as shop drawings is not permitted. Do not begin fabrication of reinforcing steel until after shop drawings have been reviewed by the Owner's Representative.

3. Detail shop drawings in accordance with ACI 315.
4. Rebar submittal shall include following information.
    a. Grade of bars.
    b. Table of bending dimensions, bar size, bar length, number of bars and spacing.
    c. The reinforcing shall be listed separately for each structural element (wall, slab, footing, beam, etc.). Each element shall be labeled on the bar list and clearly identified on the shop drawings.
    d. Each bar shall be identified such as corner bars, tie bars, vertical bars, etc.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American Society for Testing and Materials (ASTM):
1. ASTM A36: Standard Specification for Carbon Structural Steel.
2. ASTM A184: Standard Specification for Welded Deformed Steel Bar Mats for Concrete Reinforcement.
3. ASTM A615: Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
4. ASTM A706: Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
5. ASTM A775: Standard Specification for Epoxy-Coated Steel Reinforcing Bars.
6. ASTM A1064: Standard Specification for Carbon Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

C. American Concrete Institute (ACI):
1. ACI 117: Specifications for Tolerances for Concrete Construction and Materials.
2. ACI 301: Specifications for Structural Concrete.
3. ACI 315: Details and Detailing of Concrete Reinforcement.
4. ACI 318: Building Code Requirements for Structural Concrete.
5. ACI 350: Code Requirements for Environmental Engineering Concrete Structures.

D. Concrete Reinforcing Steel Institute (CRSI):
1. CRSI: Manual of Standard Practice.
2. CRSI: Placing Reinforcing Bars.

E. American Welding Society (AWS):
1. D1.4: Structural Welding Code – Reinforcing Steel.

F. Wire Reinforcement Institute (WRI):
1. WWR-500-R: Manual of Standard Practice – Structural Welded Wire Reinforcement.

PART 2 PRODUCTS

2.1 REINFORCEMENT

A. Deformed Bars:
   1. Use Grade 60 deformed bars conforming to ASTM A615 unless indicated otherwise in the drawings.
   2. Where welding of reinforcement is called for in the Drawings, use Grade 60 deformed bars conforming to ASTM A706.

B. Welded Wire Fabric:
   1. Welded Deformed Wire Fabric. Conform to ASTM A1064 unless indicated otherwise in the drawings.
   2. Provide wire size, spacing and type as shown.

C. Marking: Clearly mark all bars and welded wire fabric with waterproof tags showing the number of bars, size, mark, length and yield strength.

2.2 MECHANICAL CONNECTIONS

A. Reinforcing steel bars shall be spliced with a mechanical connection when called for in the drawings.

B. Mechanical Couplers
   1. The mechanical coupler shall meet building code requirements for development in tension or compression. The coupler may be one of two types:
      a. Positive locking, taper threaded type coupler manufactured from high quality steel. The bar ends must be taper threaded using the manufacturer's requirements.
      b. Mechanical butt splices utilizing lock-shear bolts and internal serrated grip rails within the coupling sleeve.
   2. The mechanical coupler shall develop both tension and compression to a minimum of 125 percent of the specified yield strength of the reinforcing bar.
   3. Acceptable Products and Manufacturers:
      a. LENTON taper threaded couplers as manufactured by ERICO
      b. Bar Lock mechanical coupler system manufactured by Dayton Superior.

C. Metal Sleeve
   1. Provide with cast filler metal, capable of developing in tension or compression a minimum of 100 percent of specified ultimate tensile strength of the bar and not less than 150 percent of the specified yield strength.
   2. Acceptable Products and Manufacturers:
      a. CADWELD Full Tensile Strength Splices, as manufactured by ERICO.

2.3 TIE WIRE

A. Comply with ASTM A1022

B. Provide 16-gauge, black, soft-annealed wire where tie wire is not closer than 1 inch from surface of form after tying in place.

C. Provide nylon-, epoxy-, or plastic-coated tie wire to fasten non-coated reinforcing steel, unless tie wire is bent to maintain a minimum of 1 inch from surface of form.

D. Provide coated tire wire to fasten epoxy coated reinforcing steel.

2.4 BAR SUPPORTS

A. A. Provide chairs, riser bars, ties and other accessories made of metal, except as otherwise specified. Bar supports and accessories shall be of the sizes required to provide concrete cover as specified. Metal bar supports and accessories shall be Class 1 or 2 conforming to the requirements of CRSI Manual of Standard Practice.

B. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire, all-plastic bar supports, or CRSI Class 2 stainless steel bar supports.

2.5 FABRICATION

A. In accordance with CRSI"s "Manual of Standard Practice".

B. Bending:
1. Shop fabricate bars to the shapes shown on the drawings by cold bending. Bends shall conform to the minimum bend diameters specified in ACI 318. Do not heat, straighten or rebend bars without specific written approval from the Engineer.
2. Field bending of bars is not permitted.

C. Splices:
1. Locate splices as shown on the drawings. Where it is necessary to splice reinforcement at locations other than shown on the drawings, the splices shall be clearly located in the Shop Drawings for review by the Engineer.
2. Use a minimum number of splices located at the points of minimum stress. Stagger splices in adjacent bars.
3. Length of lap splices shall be in accordance with ACI 315, unless called out in the Drawings. When there is a conflict between ACI 315 and the Drawings, the more restrictive provision shall apply.

D. Fabrication Tolerances:
1. Bars must conform to the fabrication tolerances listed in all reference specifications. When there is a conflict in the reference specifications the more restrictive requirement shall apply.

PART 3 EXECUTION

3.1 GENERAL

A. Meet all requirements of the ACI, CRSI and WRI documents referenced in this Section.

B. No field bending will be allowed.

3.2 CLEANING

A. Clean reinforcement of all scale, loose or flaky rust or other foreign material, including oil, mud or coating that will reduce the bond to concrete.

3.3 PLACING REINFORCING BARS

A. Placement in Forms:
   1. Use spacers, chairs, wire ties and other accessory items necessary to properly assemble, space and support reinforcing. Wire ties through forms and temporary spacers will not be allowed.
   2. Provide accessories of sufficient number, size and strength to adequately prevent deflection or displacement of reinforcement due to construction loads or concrete placement. Use appropriate accessories to position and support bolts, anchors and other embedded items. Tie reinforcing bars at each intersection and to accessories. Blocking reinforcement with concrete or masonry is prohibited.

B. Placement for Concrete on Ground:
   1. Support reinforcement on precast concrete blocks spaced at approximately 3 feet on centers each way. Use a minimum of one block for each 9 square feet. Tie blocks to at least one reinforcing bar using tie wires embedded in the block.

C. Placement Tolerances:
   1. Meet the placement tolerances listed in all reference specifications. When there is a conflict in the reference specifications the more restrictive requirement shall apply.

D. Interferences:
   1. If reinforcing interferes with the location of other reinforcing steel, conduits or embedded items, bars may be moved within specified tolerances or one bar diameter whichever is greater. If greater movement of bars is required to avoid interference, notify the Engineer. Do not cut reinforcement to install inserts, conduits, mechanical openings or other items without approval of the Engineer.

E. Protection, Spacing and Positioning:
   1. Conform to reviewed shop drawings, Project Drawings, and all applicable reference specifications. When there is a conflict in the reference specifications the more restrictive requirement shall apply.
   2. Bundle or space bars as approved on shop drawings, instead of bending where construction access through reinforcing is necessary.

F. Splices:
   1. Do not splice bars, except at locations shown on the Drawings or the reviewed Shop Drawings, without approval of the Engineer.
   2. Lap Splices: Tie securely with wire to prevent displacement of splices during placement of concrete.
   3. Stagger splices in adjacent bars.

G. Construction Joints.
   1. Place reinforcing continuous through construction joints.

H. Reinforcement Around Openings:
1. Place an equivalent area of steel around pipe or opening and extend on each side sufficiently to develop bond in each bar unless otherwise noted in the Drawings.
2. Refer to Details on Drawings for bar extension length of each side of opening.
3. Where welded wire fabric is used, provide extra reinforcing using fabric or deformed bars.

I. Bar Supports
1. Provide a sufficient number to prevent sagging, to prevent shifting, and to support loads during construction; but in no case less than quantities and at locations as indicated in ACI SP-66.
2. Do not use brick, broken concrete masonry units, spalls, rocks, wood or similar materials for supporting reinforcing steel.
3. Do not use give away bars that have less cover than required by the Contract Documents. Do not adjust location of reinforcement required by the Contract Documents to provide cover to the giveaway bars.

J. Tying of Bar Reinforcement
1. Fasten bars securely in place with wire ties.
2. Tie bars sufficiently often to prevent shifting.
3. Provide at least 3 ties in each bar length.
   a. Do not apply to dowel lap splices or to bars shorter than 4 feet, unless necessary for rigidity.
4. Tie slab bars at every intersection around periphery of slab.
5. Tie wall bars and slab bar intersections other than around periphery at not less than every fourth intersection, but at not greater than following maximum spacings:
6. After tying wire ties, bend ends of wire ties in towards the center of the concrete section.
   a. The cover for wire ties shall be the same as the cover requirements for reinforcing bars.

Bar Size	Slab Bar Spacing Inches	Wall Bar Spacing Inches
Bars Number 5 and Smaller	60	48
Bars Number 6 through Number 9	96	60
Bars Number 10 and Number 11	120	96

3.4 PLACING WELDED WIRE FABRIC

A. Install wire fabric in as long lengths as practicable. Lap adjoining pieces at least one full mesh plus 2 inches, or 6 inches, whichever is larger. Do not make end laps midway between supporting beams, or directly over beams of continuous structures. Offset end laps in adjacent widths to prevent continuous laps.

B. Tie laps and splices securely at ends and at least every 24 inches with 16-gauge black annealed steel wire.

C. Place welded wire fabric on concrete blocks at proper distance above bottom of slab and rigidly support equal to that furnished for typical deformed bar reinforced steel.

D. Do not use fabric that has been rolled. Install flat sheets only.

3.5 WELDING

A. Welding of reinforcement is not permitted unless called for in the Drawings or without written approval of the Engineer.

3.6 FIELD BENDING

A. Field bending of reinforcing steel bars is not permitted without written permission of the Engineer.

3.7 FIELD CUTTING

A. Reinforcing bars cut on the job shall be cut by shearing or sawing. Do not cut bars with a cutting torch.

3.8 MECHANICAL SPLICES AND CONNECTIONS

A. Use only in areas shown in the Drawings or specifically approved in writing by the Engineer.

B. Install as required by Manufacturer.

C. Carefully inspect each splice and verify that each component meets Manufacturer's requirements.

D. Maintain minimum edge distance and concrete cover.

SECTION 03_21_18

EPOXY BONDING IN CONCRETE

PART 1 GENERAL

1.1 SUMMARY

A. Epoxy Bonding in concrete as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American National Standards Institute (ANSI):
   1. Standard B212.15 – Carbide Tipped Masonry Drills and Blanks for Carbide Tipped Masonry Drills.

C. ASTM international (ASTM):
   1. C 881 – Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.

D. ICC Evaluation Service, Inc. (ICC-ES):
   1. AC308 – Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements.

E. Society for Protective Coatings (SSPC):
1. Surface Preparation Standards (SP)
a. SP-1 – Solvent Cleaning.

PART 2 PRODUCTS

2.1 EPOXY ADHESIVE FOR SELF-CONTAINED CARTRIDGE SYSTEM

A. Epoxy adhesive shall have a current ICC Evaluation Service report documenting acceptance under AC308 for use with cracked concrete and for the seismic design categories specified.

B. Materials
1. In accordance with ASTM C 881, Type IV, Grade 3, Class B or C depending on site conditions.
2. 2-component, 100 percent solids, insensitive to moisture, and gray in color.
3. Cure temperature, pot life, and workability: Compatible with intended use and environmental conditions.

C. Packaging.
1. Furnished in side-by-side cartridges with resin and hardener components isolated until mixing through manufacturer's static mixing nozzle. Nozzle designed to thoroughly blend the components for injection from the nozzle directly into prepared hole.
2. Container markings: Include manufacturer's name, product name, batch number, mix ratio by volume, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.

D. Manufacturers: One of the following or equal:
1. Hilti, Inc., Tulsa, OK: RE 500-SD.

PART 3 EXECUTION

3.1 GENERAL

A. Provide Epoxy Adhesive Packaged as Follows:
1. Disposable, self-contained cartridge system capable of dispensing both epoxy components in the proper mixing ratio, and fit into a manually or pneumatically operated caulking gun.
2. Dispense components through a mixing nozzle that thoroughly mixes components.

3.2 HOLE SIZING AND INSTALLATION

A. Drilling holes:
1. Determine location of reinforcing bars or other obstructions with a non- destructive indicator device, and mark locations with construction crayon on the surface of the concrete.
2. Do not damage or cut existing reinforcing bars, electrical conduits, or other items embedded in the existing concrete without acceptance by Engineer.

B. Hole drilling equipment:
   1. Electric or pneumatic rotary impact type with medium or light impact.
   2. Drill bits: Carbide-tipped in accordance with ANSI B212-15 unless otherwise recommended by the manufacturer or required as a "condition of use" in the ICC Evaluation Report submitted.
   3. Hollow drill bits with flushing air systems are preferred. Air supplied to hollow drill bits shall be free of oil, water, or other contaminants that will reduce bond.
   4. Where edge distances are less than 2 inches, use lighter impact equipment to prevent microcracking and concrete spalling during drilling process.

C. Hole diameter: Reinforcing bar diameter or all thread rod diameter plus 1/8 inch.

D. Obstructions in drill path:
   1. If an existing reinforcing bar or other obstruction is hit while drilling hole, stop drilling hole and fill the hole with drypack mortar. Relocate the hole to miss the obstruction and drill another hole. Repeat the above until the hole has been drilled to the required depth.
   2. Avoid drilling an excessive number of holes in an area of a structural member, which would excessively weaken the structural member and endanger the stability of the structure. Drypack holes which hit obstructions and allow drypack to reach strength equal to the existing concrete before drilling adjacent holes. Epoxy grout may be substituted for drypack when acceptable to Engineer.
   3. When existing reinforcing steel is encountered during drilling and when acceptable to Engineer, enlarge the hole by 1/8 inch, core through the existing reinforcing steel at the larger diameter, and resume drilling at original hole diameter.
   4. Bent bar reinforcing bars: Where edge distances are critical, and striking reinforcing steel is likely, and if acceptable to Engineer, drill hole at 10 degree angle or less from axis of reinforcing bar or all thread rod being installed.

E. Install reinforcing bars and all thread rods to depth, spacings, and locations as indicated on the Drawings.
   1. Do not install epoxy bonded all-thread rods or reinforcing bars in overhead applications.

F. Cleaning holes:
   1. Insert long air nozzle into hole and blow out loose dust. Use compressed air that is free of oil, water, or other contaminants that will reduce bond.
   2. Use a stiff bristle brush to vigorously brush hole to dislodge compacted drilling dust.
   3. Repeat step 1.
   4. Repeat above steps as required to remove drilling dust or other material that will reduce bond. The hole shall be clean and dry.

G. Cleaning reinforcing bars and all thread rods:
   1. Solvent clean reinforcing bar and all thread rods over the embedment length in accordance with SSPC SP-1 Solvent Cleaning. Provide an oil and grease free surface to promote bonding of adhesive to steel.
   2. Clean reinforcing bars and all thread rods over embedment length to bare metal. The reinforcing bars and all thread rods shall be free of oil, grease, paint, dirt, mill scale, rust, or other coatings that will reduce bond.

H. Filling hole with epoxy:
   1. Fill hole with epoxy before inserting the reinforcing bar or all thread rod. Fill hole with epoxy starting from bottom of hole. Fill hole without creating air voids.
   2. Fill hole with sufficient epoxy so that excess epoxy is extruded out of the hole when the reinforcing bar or all thread rod is inserted into the hole.
   3. Do not install epoxy prior to receiving epoxy manufacturer's onsite training.

3.1 MANUFACTURERS' SERVICES

A. Furnish manufacturer's representative to conduct jobsite training for proper installation, handling, and storage of epoxy, for personnel who will perform actual installation. Engineer may attend training sessions.

END OF SECTION

SECTION 03_30_00

CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SUMMARY

A. Cast-in-place concrete work, as indicated on the drawings and specified herein.

B. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_11_00 Concrete Formwork

D. Section 03_20_00 Concrete Reinforcement

E. Section 03_15_20 Concrete Joints & Embedded Items

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Submit mix designs for each specified concrete and grout type. Design data shall include the name of the concrete supplier; manufacturer/supplier and type of cement used; size and type of aggregate; proportional weights of cement, aggregate, and water per cubic yard of concrete; name and quantity of admixture used.

C. Concrete Mix Design
   1. Concrete mix design.
      a. Mixture Identification and intended use.
      b. Minimum 28-day compressive strength.
   2. Constituent quantities per cubic yard.
   3. Sources of all concrete mix components including coarse aggregate, fine aggregate, cement, water, admixtures, and pozzolans where included.
   4. Cement type and manufacturer, include chemical analysis (mill test report) for each cement type to be used.

5. Pozzolan type and source; include chemical analysis for each pozzolan type to be used.
6. Water/cement ratio, by weight.
7. Air content
8. Mix design slump.
9. Nominal maximum aggregate size.
10. Average compressive strengths conforming to the requirements of ACI 318 at 28 days.
11. Provide both average strengths and sample standard deviation. Provide results at 7 and 14 days if available.
12. Laboratory shrinkage test results for concrete mix designs, where specified.

D. Aggregate for Mix Design:
1. Laboratory sieve analysis, conforming to ASTM C33.
2. Verification that aggregate is not "deleterious," or "potentially deleterious." Provide documentation or other certification that aggregate does not contain deleterious substances and has been used without issues on previous projects.

E. Admixtures.
1. Submit Manufacturer's data brochures on all admixtures proposed for use and provide certification of compliance with specified ASTM standards for each admixture.

F. Submit Manufacturer's data sheets and product specifications for curing compounds and items specified in other Sections including form release agents, bonding agents, etc. Identify the locations where each will be used in the Work as a part of the submittal.

1.4 REFERENCES

15. ACI 309: Guide for Consolidation of Concrete
16. ACI 318: Building Code Requirements for Structural Concrete.
17. ACI 350: Code Requirements for Environmental Engineering Concrete Structures

1.5 QUALITY ASSURANCE

A. Conform to ACI 305R when concreting during hot weather.

B. Conform to ACI 306R when concreting during cold weather.

C. Manufacturer's Qualifications:
1. Manufacturer must be certified by the National Ready Mix Concrete Association's Certification of Ready Mixed Concrete Production Facilities.

D. Concrete Consistency
1. Test for slump shall be performed at the job site immediately prior to placing in accordance with ASTM C143. Slump tests shall be performed for each batch of concrete to indicate workability and consistency from batch to batch.
2. If the slump is outside the allowed limits, the concrete shall be rejected. Concrete showing either poor cohesion or poor coating of the coarse aggregate with paste shall be remixed or rejected.
3. If the slump is within the allowable limit, but excessive bleeding, poor workability, or poor finishability are observed, the concrete shall be rejected and changes in the concrete mix shall be made only by an adjustment of one or more of the following:
   a. The gradation of aggregate.
   b. The proportion of fine and coarse aggregate.

c. The percentage of entrained air, within the allowable limits.

E. Concrete Temperature
1. Comply with ACI 301, ACI 306.1 and ACI 305.1
2. Concrete temperature shall be taken immediately before placement with the point of measurement being in the chute or bucket.
3. Perform temperature test for each batch and record result on batch ticket.
4. If fresh concrete temperature does not meet requirements in this section the concrete shall be rejected.

F. Concrete Air Content
1. Test for air content shall be made on a fresh concrete sample for each batch prior to placing in forms.
2. Air content for concrete made of ordinary aggregates having low absorption shall be made in accordance with either ASTM C231, or ASTM C173. If light weight aggregates or aggregates with high absorptions are used, use ASTM C173.
3. If air content of fresh concrete does not meet requirements specified in this Section, the concrete shall be rejected. Do not place concrete that does not meet the air entrainment requirements of this Section.

G. Compressive Strength
1. Compression test specimens shall be made, cured and tested in accordance with ASTM C31 and ASTM C39.
2. Compressive strength tests shall be made on cylinders at 7 and 28 days. The value of each test result shall be the average compressive strength of a minimum of 2 cylinders taken at the same time from the same batch of concrete.
3. Compressive test specimens shall be 6" x 12" cylinders; 4" x 8" cylinders are not permitted.
4. Sets of concrete test cylinders shall be cast for each concrete pour as follows.
   a. A "set" of test cylinders consists of a minimum of six cylinders, two to be broken and strengths averaged at seven days; and two broken and strengths averaged at 28 days. Two hold cylinders will remain unbroken so that they will be available to be broken upon unforeseen circumstances or upon the option of the Engineer to break cylinders at different times.
   b. A minimum of one "set" of cylinders will be made for each concrete pour up to 25 CY in volume. For pours larger than 25 CY, additional "sets" of cylinders will be made for each additional 25 CY of concrete poured.
5. Evaluation of compressive strength for compliance with design requirements will be conducted by the Engineer per ACI 318 – Section 26.12 based on the results of the 28 day test.

H. Failure to Meet Requirements
1. The Owner may withhold payment for any section of concrete which does not meet the requirements of the Plans and Specifications. Withheld payment shall be based upon unit prices established for concrete, if available. Payment shall be withheld until the unacceptable concrete has been repaired or removed and replaced or otherwise brought into conformance with the Plans and Specifications.
2. Concrete Strength
   a. If the 28 day strength test results fall below required values, additional curing may be performed and test cores may be obtained in accordance with ASTM C42 with approval of the Engineer. Additional curing, core

removal and testing, if allowed by the Engineer, shall be at the Contractor's expense.

b. If the strength results from test cores do not exhibit the required strength, the Engineer or Owner's Representative reserves the right to require strengthening, replacement of substandard materials and/or additional testing at the Contractor's expense. The choice of remedy is at the sole discretion of the Engineer or Owner's Representative.

3. Other Concrete Properties

a. If concrete properties besides strength do not meet required values, the Engineer may require concrete samples to be obtained in accordance with ASTM C42 and evaluated in accordance with ASTM C856 at the Contractor's expense.

b. If concrete properties besides strength do not meet required values, and the results of additional examination per ASTM C856 are deemed unsatisfactory at the sole discretion of the Engineer, the Owner reserves the right to require strengthening, replacement of substandard materials and/or additional testing at the Contractor's expense.

1.6 DESCRIPTION/DESIGN REQUIREMENTS

A. All concrete shall be 4,000 psi unless otherwise noted. See Section 2.4 for additional requirements.

B. Concrete shall not be placed in any form until formwork has been inspected by the Engineer and permission is given to start placing.

C. Notify Engineer a minimum of 48 hours prior to concrete placement.

D. Fly ash will not be accepted for use in mix designs

E. Provide PVC waterstop at all submerged joints and as outlined in the plans and other specification sections.

F. Retempering by adding water to concrete at the jobsite will not be permitted unless prior approval is obtained from the Engineer.

G. All slabs to receive 10ml vapor barrier prior to concrete placement

H. All cracks greater than 0.05" wide not located in control joints shall be sealed by cutting a bevel groove on the water side of the crack 1/2" to 3/4" wide and caulking with epoxy sealant. Crack widths shall be measured at the concrete surface.

PART 2 PRODUCTS

2.1 CONCRETE MATERIALS

A. Cement: ASTM C150, Type I/II, Type I – Only type of one brand of cement shall be used.

B. Coarse Aggregates: Shall consist of gravel, crushed gravel, crushed stone, air-cooled blast furnace slag, or a combination thereof, conforming to ASTM C-33 with a maximum size of

1½-inches. Where required due to minimum spacing of reinforcing steel, maximum size of coarse aggregate shall be reduced to 1-inch with prior written approvalof the Engineer.

C. Fine Aggregate: Shall conform to ASTM C-33 and shall be washed river sand composed of clean, uncoated grains of strong materials.

D. Abrasive aggregates shall be equal to fine (c.f.) "Alumdum" aggregate as manufactured by Norton Company, Worcester, Mass. or "Frictex NS" as manufactured by Sonneborn - Contech. Use only as approved by Engineer.

E. Water: Potable water free from detrimental chemicals and solids that will decrease the strength of the concrete.

F. Embedded Items: Embedded items shall be of the size and type shown or as needed for the application.

G. Curing Materials: Curing materials shall be burlap, impervious sheets, or membrane-forming compounds.

H. Dowels: Plain carbon steel bars, minimum yield point of 60,000 psi for use in slabs on grade.

I. Expansion Joint Filler Strips: Premolded nonextruding, resilient bituminous or non-bituminous type for use in concrete paving or construction, thickness as shown.

J. Form Materials: Wood, metal or other Engineer approved materials that will produce the specified finishes without adversely affecting the concrete surfaces in accordance with Section 03_11_00 Concrete Formwork.

K. Form Coating: Nonstaining form oil or form-release agent that will not deleteriously affect concrete surfaces nor impair subsequent applications.

L. Form Ties: Metal, factory-fabricated removable snap-off type, that will not leave holes less than 1/4 inch nor more than 1 inch deep and not more than 1 inch in diameter.

M. Joint Sealant: As approved by Engineer for sealing joints in concrete against moisture infiltration for specific application.

N. Reinforcement: Bar reinforcement shall be deformed, Grade 60 conforming to ASTM A615. Mesh reinforcement shall be welded wire fabric with wires at right angles to eachother. See Section 03_20_00 Concrete Reinforcement.

O. Bonding Agent: As approved by Engineer.

P. Admixtures: Air-entraining, retarders, and other admixtures as approved by Engineer
1. Air-entraining admixture: ASTM C260.
2. Water-Reducing Admixture: ASTM C494/C494M, Type A.
3. Retarding Admixture: ASTM C494/C494M, Type B.
4. Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type D.
5. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.

6. High-Range, Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type G.
7. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

2.2 ADMIXTURES

A. A retarding admixture, conforming to ASTM C-494, pre-tested with job materials under job conditions, may be used if approved by Engineer, whenever necessary to prevent cold joints due to the quantity of concrete placed, to permit revibration of the concrete, to offset the effects of high concrete temperature rise.

2.3 ACCESSORIES

A. Curing Compound: Concrete curing compound shall be of a nature and composition not deleterious to concrete and shall be of a standard and uniform quality ready for use as shipped by the manufacturer. At the time of use, the curing compound shall be in a thoroughly stirred condition. Curing compounds shall not be diluted by the addition of solvent or thinners, or be altered in any manner without the specific approval of and ina manner prescribed by the manufacturer. Curing compound shall conform to the requirements of ASTM C-309 Type 1.

1. The curing compound shall be sufficiently transparent and free from color so that there will be no permanent change in the color of the concrete. The compound shall contain, however, a temporary dye of sufficient color to make the membrane clearly visible for a period of at least four hours after application.

2.4 CONCRETE MIX QUALITY AND CONTROL

A. No fly ash will be permitted in mix designs.

B. Design: Concrete shall be composed of Portland cement, fine aggregate, coarse aggregate and water. All concrete shall be designed by an approved testing laboratory in accordance with the ACI Standard Recommended Practice for Selecting Proportions for Concrete (ACI-211) to produce the strength for each class of concrete specified, and with slumps and maximum sizes of coarse aggregate in accordance with the requirements outlined below.

C. Prior to placing any concrete, the Contractor shall submit for review mix designs for each specified concrete and grout type.

D. Concrete Classifications

Class	Min. 28-Day Compressive Strength (psi)	Coarse Aggregate Size (in.)	Max. Water Cement Ratio	Max. Slump (in.)	Min. Cement Content (lb. per CY)
A	4000	1.5 (No. 467)	0.45	5	517
B	3000	1.5 (No. 467)	0.50	4	470

C	4000	1.0 (No. 57)	0.45	4	564
D	5000	0.75 (No. 67)	0.45	5	611
E	1500	1.5 (No. 467)	0.70	4	376
F	4000	0.375 (No. 8)	0.45	8	611

E. Concrete Usage

Class	Usage
A	All reinforced concrete unless otherwise specified
B	Concrete Encasement; Sidewalks
C	Drilled Shafts; Pumped Concrete; Thin Wall Sections
D	Precast Concrete and Panels
E	Lean Concrete Backfill; Foundation Seal; Blocking/Cradling
F	Underground Duct Banks

F. In not specifically noted in the table above, concrete shall be 4,000 psi.

G. The slump shall not exceed the maximum specified above for the type of construction for which it is to be used. The 28-day compressive strength determined in accordance with current ASTM Specifications C-39 and C-31 and with specimens cured in accordance with C-31 shall not be less than that shown above for the specified class of concrete. No water will be added after the amount specified by the mix design.

H. If admixtures are used, slump shall be as approved by Engineer.

I. Production of Concrete: All ready-mixed concrete shall be batched, mixed and transported in accordance with "Specifications for Ready-Mixed Concrete (ASTM C-94)". Plant equipment and facilities shall conform to the "Check List for Certification of Ready-Mixed Concrete Production Facilities" of the National Ready-Mixed Concrete Association.

J. Laboratory Testing: The Owner shall engage an independent testing laboratory to conduct concrete tests. Unless otherwise informed the Contractor will be responsible for sampling concrete for test cylinders, recording, providing all materials required, and for making all slump tests in the field directed by the Engineer. All costs in connection with work performed by the laboratory shall be paid by the Owner. When cylinder reports indicate concrete does not meet strength requirements delineated in the Contract Documents, the Contractor shall be responsible for the costs of developing a redesign of the concrete mix.

K. At least one test shall be made on fresh concrete for each 60 cubic yards of each class of concrete (or fraction thereof) placed on any one day and in any event, not less than one test for each class of concrete each day it is used. Testing shall be done in accordance with the following ASTM Specifications, latest edition:

1. C-172 - Standard Method of Sampling Fresh concrete
2. C-31 - Standard Method of Making and Curing Concrete Compression & Flexure Test Specimens in the Field
3. C-39 - Standard Method of Test of Compressive Strength of Molded concrete Cylinders
4. C-143 - Standard Method of Slump Test for Consistency of Portland Cement Concrete

L. Before any concrete is poured, the Contractor shall construct a storage box in accordance with ASTM Specification C-31. Each set of tests shall consist of one slump test and three compression test cylinders. All cylinders shall be kept in the storage box for the first 24 hours. The three cylinders shall be laboratory cured and tested for adequacy of the design for strength of the concrete in accordance with ASTM Specification C-31. One cylinder shall be tested at seven days and two at twenty-eight days.

M. Failure of Concrete to Meet Strength Requirements: The concrete shall be considered acceptable if, for any one class of concrete, the average of all tests or any five consecutive tests is equal to or greater than the specified strength, provided that no more than one test of the five falls between 90 percent and 100 percent of the specified strength. The only cylinders to be used for determination of concrete acceptability will be those laboratory cured and tested at twenty-eight days. When it appears the tests of laboratory-cured cylinders will fail to meet these requirements, the Engineer may require changes in the proportions of concrete for the remainder of the work in order to meet the strength requirements. In addition, the Engineer may also require additional curing not to exceed a total of twenty-one days on portions of the concrete already poured.

N. The Engineer may also require tests in accordance with Methods of Securing, Preparing and Testing Specimen from Hardened Concrete for Compressive and Flexural Strengths (ASTM Specifications C-42) when the concrete cylinder tests fail to meet strength requirements. In the event there still is question as the quality of the concrete in the structure, the Engineer may require load tests for that portion where the questionable concrete has been placed. Such load tests will be made as outlined in Chapter 20 of American Concrete Institute Building Code. (ACI 318-71), and shall be at the expense of the Contractor.

O. Removal of Under Strength Concrete: If the above tests indicate that a particular batch of previously placed concrete is under strength, the Engineer may direct that the under strength batch be removed and replaced. The removal of the under strength concrete shall also include the removal of concrete that has obtained the required strength if the Engineer deems this necessary to obtain structural or visible continuity when the concrete is replaced.

P. The removal, and replacement of any under strength concrete, shall be made at no additional cost to the Owner. This shall include any new formwork required or any reinforcing steel that may be required. The Owner shall not be charged any additional costs for any extra work that is required because of the failure of any concrete to meet the minimum test requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify requirements for concrete cover over reinforcement as referenced in Section 03_20_00 are met.

B. Verify that anchors, seats, plates, reinforcement and other items to be cast into concrete are accurately placed, positioned securely, and will not cause hardship in placing concrete.

3.2 PREPARATION

A. All items, including lines and grades, forms, waterstops, reinforcing, inserts, piping, electrical, plumbing and the Contractor's concreting materials and equipment shall be complete and in compliance with the plans and specifications before proceeding with concrete placement.

B. Concrete finishing shall be completed in daylight hours. When this is not possible, brilliantly light the work site so that all operations are plainly visible.

C. Water shall be removed from excavations before concrete is deposited. Hardened concrete, wood chips, shavings, and other debris shall be removed from interior of forms and inner surfaces of mixing and conveying equipment. Wood forms shall be oiled or, except in freezing weather, wetted with water in advance of pouring. Contractor shall verify that all reinforcement is properly place, aligned, and secured prior to pouring concrete and shall coordinate with Resident Project Representative.

D. Soil at bottom of foundation systems is subject to testing for soil bearing value by the testing laboratory. Place concrete immediately after approval of foundation excavations. Excavate and backfill as necessary to complete the concrete work. Place concrete on sub-grades that are well compacted to level and true grade. Before concrete is poured in areas between slabs on grade previously poured, recheck compaction of subgrades and if necessary, recompact to avoid settlement of slabs at joints. Seal extremely porous subgrades. Remove all ice, debris and excess water from subgrades. After completion of the concrete work, backfill all excavations.

E. Mix concrete only in quantities for immediate use. Discard concrete which has set; re-tempering is not permitted. **Completely discharge concrete at the site within one hour and 30 minutes after adding cement to aggregate. In hot weather, reduce this time to one hour or less to prevent stiffening of concrete before it is placed.**

F. If concrete arrives at the project with slump below that specified, water may be added only if the addition of water does not exceed either the maximum permissible water-cement ratio or maximum slump. Mix adjustments to obtain specified slump must be approved by the Engineer.

G. Protection from Adverse Weather
   1. If adverse weather is imminent, no concrete placement is permitted. Do not permit rainwater to increase mixing water or to damage the surface finish. If rainfall occurs after placing operations begin, provide adequate covering to protect the work.

3.3 CONVEYING

A. Concrete shall be conveyed from mixer to forms as rapidly as practicable and by methods which will prevent segregation and loss of ingredients. It shall be deposited as nearly as practicable in its final position. Chutes used shall be such that concrete slides in them and does not flow. Chutes, if permitted, shall have a slope of less than 1 on 2. Where a vertical drop greater than 5 feet is necessary, placement shall be through elephant trunks or similar devices to prevent segregation.

3.4 PLACING

A. Completely discharge concrete at the site within one hour and 30 minutes after adding cement to aggregate. In hot weather, reduce this time to one hour or less to prevent stiffening of concrete before it is placed.

B. Unless otherwise specified, all concrete shall be placed upon clean, damp surfaces free from running water, or upon properly consolidated fills, but never upon soft mud or dry, porous earth. The concrete shall be compacted and worked in an approved manner into all corners and angles of the forms and around reinforcement and embedded fixtures as to prevent segregation of the coarse aggregate. Construction of forms for the lifts of vertical.

C. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.
   1. If a section cannot be placed continuously, provide construction joints as indicated.
   2. Deposit concrete to avoid segregation.
   3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
   4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
      a. Do not use vibrators to transport concrete inside forms.
      b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
      c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
      d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

D. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
   1. Do not place concrete floors and slabs in a checkerboard sequence.
   2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   3. Maintain reinforcement in position on chairs during concrete placement.
   4. Screed slab surfaces with a straightedge and strike off to correct elevations.
   5. Level concrete, cut high areas, and fill low areas.
   6. Slope surfaces uniformly to drains where required.
   7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.

8. Do not further disturb slab surfaces before starting finishing operations.

3.5 VIBRATION

A. Consolidate concrete, including floor slabs on grade, by internal concrete vibrators supplemented by hand-spading, rodding, or tamping so that the concrete is thoroughly worked around reinforcement and embedded items and into the corners of forms. Consolidate each layer of concrete with previously placed layers in a manner that will eliminate all air or stone pockets which may cause honeycombing, pitting, or planes of weakness. Internal vibrators shall produce a minimum frequency of 7000 impulses per minute when submerged in concrete. Do not use vibrators to transport concrete. Insert and withdraw vibrators at uniformly spaced points not farther apart than the visible effectiveness of the machine. Duration of vibration shall be limited to time necessary to produce satisfactory consolidation without causing objectionable segregation. The vibrating equipment shall at all times be adequate in number of units and power to properly consolidate all concrete. Spare units shall be on hand as necessary to ensure such adequacy.

3.6 CONSTRUCTION JOINTS

A. Construction joints shall be in accordance with Section 03_15_20 – Concrete Joints & Embedded Items. Waterstops shall be installed in all construction joints below grade or in liquid containing structures as noted on the plans.

3.7 BONDING

A. Roughen surfaces of set concrete at all joints, except where bonding is obtained by use of a concrete bonding agent, and clean surfaces of laitance, coatings, loose particles, and foreign matter. Roughen surfaces in a manner to expose bonded aggregate uniformly and to not leave laitance, loose particles of aggregate, or damaged concrete at the surface.

B. Prepare for bonding of fresh concrete to new concrete that has set but is not fully cured, as follows:
   1. At joints between footings and walls and between walls and beams or slabs they support, and elsewhere unless otherwise specified herein, dampen, but do not saturate, the roughened and cleaned surface of set concrete immediately before placing fresh concrete.
   2. At joints in exposed work; at vertical joints in walls; at joints in girders, beams, supported slabs, and other structural members; and at joints designed to contain liquids; dampen, but do not saturate, the roughened and cleaned surface of set concrete and apply either a liberal coating of neat cement grout or a commercial bonding agent.
   3. Use neat cement grout consisting of equal parts Portland cement and fine aggregate by weight and not more than 6 gallons of water per sack of cement. Apply with a stiff broom or brush to a minimum thickness of 1/16". Deposit fresh concrete before cement grout has attained its initial set.

3.8 PATCHING

A. Any concrete which is not formed as shown on the Plans, or for any reason is out of alignment or level or shows a defective surface shall be considered as not conforming with

the intent of these Specifications and shall be removed from job by Contractor at his expense, unless the Engineer grants permission to patch defective area, which shall be done in accordance with the following procedures.

B. Permission to patch any such area shall not be considered a waiver of the right of the Engineer to require complete removal of defective work if patching does not, in the opinion of the Engineer, satisfactorily restore quality and appearance of surface. Suitable non-shrink, latex or epoxy mortar shall be used for patching and repairing defective surface if directed by the Engineer.

C. After removing forms, all concrete surfaces shall be inspected and any poor joints, void, stone pockets, all tie holes, or other defective areas shall be patched, if permitted by the Engineer. Where necessary, defective areas shall be chipped away to a depth of not less than 1" with edges perpendicular to the surface. Area to be patched and a space at least 6" wide entirely surrounding it shall be wetted to prevent absorption of water from the patching mortar. A grout of equal parts Portland cement and sand, with sufficient water to produce a brushing consistency, shall then be well brushed into the surface followed immediately by the patching mortar. The patch shall be made of the same material and of approximately the same proportions and shall not be richer than one part cement to three parts sand. White Portland cement shall be substituted for a part of the gray Portland cement to match color of the surrounding concrete. The proportion of white and gray cements shall be determined by making a trial patch. The amount of mixing water shall be as little as consistent with the requirements of handling and placing. The mortar shall be retempered without the addition of water by allowing it to stand for a period of one hour during which time it shall be mixed occasionally with a trowel to prevent setting.

D. The mortar shall be thoroughly compacted into place and screeded off so as to leave patch slightly higher than surrounding surface. It shall then be left undisturbed for a period of one to two hours to permit initial shrinkage before being finally finished. The patch shall be finished in such a manner as to match the adjoining surface. On exposed surfaces where unlined forms have been used, the final finish shall be obtained by striking off the surface with a straightedge spanning the patch and held parallel to the direction of the form marks.

E. Tie holes left by withdrawal of rods or the holes left by removal of ends of ties shall be filled solid with mortar after first being thoroughly wetted.

3.9 SLABS ON GRADE

A. The Contractor shall insure that subgrade has been thoroughly compacted and leveled prior to concrete placement. Sprinkle all sub-grades with water no more than half an hour prior to placing concrete.
   1. Place vapor barrier below interior slabs unless noted otherwise. Sprinkling of fill is not necessary when using vapor barrier. Lap vapor barrier 6" in direction of pour, and seal laps with specified mastic. Repair all ruptures of the vapor barrier that might occur before or during concrete pour.
   2. The Contractor shall insure that all reinforcing steel is located properly prior to pour, and that steel will not be vertically displaced during the pour.

3.10 EDGING

A. Edges exposed to view on the outside of structures, footings, pads and slabs, and all those in the inside of structures shall be chamfered, unless otherwise approved by the Engineer. Chamfer shall be at an angle of 45 degrees, as shown on the Plans. If so required by the Engineer, however, the Contractor shall provide square edges for any portion of the work.

3.11 SLAB FINISHES

A. Exterior Walks: The top surface shall be "slip-resistant" as follows:
   1. The surface shall be steel troweled as noted in Paragraph C below, and have a final finish applied by brushing lightly with a soft bristle brush to form a slightly roughed surface.

B. Interior slabs that are to receive a finish floor covering (this does not include ceramic tile covering) shall be finished by tamping the concrete with special tools to force the coarse aggregate below the surface, then screeding and floating with straightedges to bring the surface to the required finish level. While the concrete is still green but sufficiently hardened to bear a man's weight without deep imprint, it shall be wood floated to a true and even plane with no coarse aggregate visible. Sufficient pressure shall be used on the wood floats to bring moisture to the surface. After surface moisture has disappeared, surfaces shall be steel-trowelled to a smooth, even, impervious finish, free from trowel marks. After cement has set enough to ring the trowel, surface of all slabs shall be given a second steel trowelling to a burnished finish.

C. Interior slabs to receive fill or mortar setting bed shall be finished by tamping concrete with special tools to force coarse aggregate below the surface, and screeded with straightedges to bring surface to required finish plane. Surface shall be left roughened sufficiently to produce good bond with topping material.

D. Top and bottom slabs of all structures and water carrying conduits except as noted otherwise on the Plans shall be finished as follows: The top of the slab shall be screeded to grade and cross section; lightly tamped as required to bring up a good bed of mortar for finishing and re-screeded as necessary. The surface shall then be finished with a wood float and leveling darby. No further finish will be required on top slabs of structures or conduits which are to be buried. In the case of all exposed top slabs of structures and conduits, they shall be given a final wood float and a light broomed, slip resistant finish to a uniform surface which conforms with accuracy to required shape, slope and grade. Slabs shall be edged as appropriate.

E. All interior floor slabs shall be "slip resistant finish", unless called out otherwise, as follows: The top surface shall be steel trowelled as noted in Paragraph B above and have a final finish applied by brushing lightly with a soft bristle brush to form a slightly roughed surface.

F. The floor surfaces of basins in which raking mechanisms are to be installed shall be finished, as indicated on the Plans, by sweeping in cement grout with the mechanism. The cement grout to be used shall be composed of one part Portland cement and two parts sand by weight.

G. The sweeping-in process shall be performed in the presence of the Engineer or the Engineer's Representative or, if necessary, under the supervision of a factory representative of the equipment manufacturer.

H. The slab upon which the grout is to be applied shall be finished in accordance with the provisions of Paragraph D above except that after leveling and floating, it shall be raked in such a manner as to provide a good bond for the grout. Before grout is deposited on the slab, it shall be thoroughly cleaned, wet down with clean water, and lightly dusted with neat cement immediately prior to placement of the grout.

I. Concrete Hardener shall be applied to the floors where scheduled to be exposed concrete. Concrete surfaces to be treated must be thoroughly set and dry, clean and free of dust. Three applications of "lapidolith", "saniseal", "hornolith", "vitrox", or Engineer approved equal liquid are required, using one gallon per 100 square feet for the complete treatment. Apply hardener strictly according to the manufacturer's printed instructions. Any substitution for the specified hardeners must be of the magnesium fluosilicate or zinc fluosilicate types.

3.12 FINISH OTHER THAN FLOORS

A. All top surfaces, other than slabs, not covered by forms, and which are not to be covered by additional concrete or fill shall receive a wood float finish without additional mortar. Care shall be taken that no excess water is present when the finish is made. Other surfaces shall be brought to finished elevations and left true and regular. All exposed interior concrete shall be grouted smooth and give a cement wash of one part light colored Portland cement and two parts fine aggregate mixed with water to consistency of thick paint. Grout shall be cork or wood floated to fill all pits, air bubbles, and surface holes.

B. Excess grout shall be scraped off with a trowel and rubbed with burlap to remove any visible grout film. Surface shall be kept damp during setting period. The finish for any area shall be completed in same day and the limits of a finished area shall be made at natural breaks in finished surface.

C. Rubbed Finish: Unless otherwise indicated, all faces (except top surfaces of slabs) exposed to view, such as walls, grade beams, columns, beams, canopy soffits and fascias, etc. shall be finished as follows:
   1. Forms shall be removed and all fins removed, off-sets leveled, damaged places and depressions resulting from the removal of metal ties or other causes shall be carefully pointed with a mortar of sand and cement in the proportion which has been employed for the particular class of concrete treated.
   2. The surface film of all such pointed places shall be carefully removed before setting occurs.
   3. After the point has set sufficiently to permit it, all exposed surfaces shall be dampened and rubbed with a No. 16 carborundum stone, to a smooth even plane. Final rubbing shall be done with a No. 30 carborundum stone, or an abrasive of equal quality, to obtain an entire surface of a smooth texture and uniformity in color.
   4. Mortar or grout worked up during rubbing shall be promptly removed by sacking with burlap or other suitable means so that no visible grout film or paste will remain. A cement wash or plaster coat shall not be used.

5. All surfaces shall be finished uniformly smooth and washed clean. The rubbed finish for any area shall be completed in the same day and the limits of a finished area shall be made at natural breaks in the finished surface.
6. If the Contractor does not provide suitable surface finish using carborundum stones specified above the Engineer, without additional cost to the Owner, may require to use of a power operated grinding machine to produce the desired finish.

3.13 CURING

A. Unformed concrete surfaces shall be water cured to prevent check of the fresh concrete surface. Where drying conditions are severe, as determined by the Engineer, fog sprays shall be employed to prevent checking of the fresh concrete surface. Fog spraying shall be continued as specified until the finished surface has attained sufficient strength to permit flooding or covering with burlap mats. Where drying conditions are not severe, as determined by the Engineer, unformed concrete surfaces shall be covered with wet burlap mats as soon as the concrete has sufficiently set, and shall thereafter be kept under wet burlap. Comply with ACI 308.1.

B. Formed surfaces, both interior and exterior, shall be water cured by water sprays or under burlap mats beginning as soon as the forms are stripped. Prior to stripping of forms, the concrete and forms shall be kept moist by the water sprays. Comply with ACI 308.1.

C. Unless otherwise specified, surfaces shall be water cured for seven days after the concrete is placed.

D. After 48 hours of water cure, and with the acceptance of the Engineer, the curing of concrete surfaces may be completed by the curing compound method. Curing compounds shall be applied in strict conformance with the manufacturer's instructions. If the compound is applied to a surface which is later to be painted, the Contractor shall thoroughly sandblast the surface to remove all vestiges of the compound prior to concrete finishing. Curing compound shall not be used on any surfaces against which additional concrete or other finishing materials are to be bonded.

E. In all concrete structures, concrete made with normal Portland cement shall be prevented from drying for at least the first seven days after placing. Whenever the temperature of the surrounding air is between 40ºF and 60ºF, adequate provision shall be made for maintaining the temperature of concrete above 60ºF or the moist curing period shall be extended to ensure a compressive strength corresponding to that which would be secured under provisions of the previous part of this paragraph.

F. Whenever the temperature of surrounding air is below 40ºF, all concrete shall be maintained at a temperature of not less than 50ºF for at least 72 hours for normal concrete or for as much more time as is necessary to insure proper rate of curing of the concrete. The housing, covering or other protection used in connection with curing shall remain in place and intact at least 24 hours after the artificial heating is discontinued. No salt or other chlorides shall be used for prevention of freezing.

G. Protection from the Sun: All concrete shall be adequately protected from injurious action of sun in a manner satisfactory to the Engineer.

H. Temperature Control: During and at the conclusion of the specified curing period, means shall be provided to ensure that the temperature of the air immediately adjacent to the concrete does not fall more than 3ºF in any one hour nor more than 30ºF in any 24 hours.

3.14 CONCRETING IN COLD WEATHER

A. When the atmospheric temperature may be expected to drop below 40ºF at the time concrete is delivered to the work site, during placement, or at any time during the curing period, the following provisions also shall apply:
   1. Prevent damage to concrete due to early age freezing and limit rapid changes in temperature at early ages consistent with the requirements of ACI 306R, ACI 306.1 and the requirements in this Section.
   2. If the air temperature is at or below 40 degrees F, cold weather concreting shall be performed in accordance with ACI 306R and ACI 306.1. This includes cases where the temperature drops below 40 degrees F after concrete operations have been started. The temperature shall be taken in shade away from artificial heat.
   3. When air temperatures are at or below 40 degrees F, heated mixing water or a combination of heated mixing water and heated aggregates shall be used, if required, to raise the concrete temperature at placement to the minimum values (or greater) listed in ACI 306R – Chapter 5. The temperature of the heated water or aggregates shall not exceed 150 degrees F when entering the mixer.
   4. Concrete placement is not permitted when the air temperature is at or below 35 degrees F. The temperature shall be taken in shade away from artificial heat.
   5. Do not place concrete against a frozen subgrade or formwork that is at or below 35 F.
   6. Salts, chlorides, chemicals or other foreign materials shall not be mixed with the concrete to prevent freezing or act as an accelerator.
   7. When temperatures at or below 35 F may be expected during the curing period, the concrete shall be maintained at a temperature of at least 50 degrees F for five days or 70 degrees F for three days after placement. Rapid cooling or heating of concrete shall not be permitted.

B. Hot Weather Concreting.
   1. Hot weather concreting shall comply with ACI 305R and ACI 305.1. At air temperatures of 90 degrees F or above, concrete placement shall be in accordance with Hot Weather Concreting requirements in ACI 305R, ACI 305.1 and requirements in this Section.
   2. The temperature of the concrete when placed in the work shall not exceed 90 degrees F. Use chilled water or ice or other approved methods to reduce the temperature of the concrete as required.
   3. Concrete shall be placed in the forms without the addition of any more water than is required by design. No excess water may be added to the concrete surface to aid in finishing. Control of the initial set and extending the time for finishing may be accomplished through the use of admixtures in accordance with these Specifications.
   4. Plastic shrinkage cracking, due to rapid evaporation of moisture, shall be prevented. Concrete shall not be placed when the evaporation rate (actual or anticipated) equals or exceeds 0.2 pound per square foot per hour, as determined by Figure 4.2 in ACI 305R.

3.15 CONCRETING IN HOT WEATHER

A. When climatic or other conditions are such that the temperature of the concrete may reasonably be expected to exceed 90ºF at the time of delivery at the work site, during placement, or during the first 24 hours after placement, the following provisions also shall apply:

1. The Contractor shall maintain the temperature of the concrete below 90ºF during mixing, conveying, and placing. Methods used shall conform to "Recommended Practice for Hot Weather Concreting," ACI Standard 305.
2. The concrete shall be placed in the work immediately after mixing. Truck mixing shall be delayed until only time enough remains to accomplish it before the concrete is placed.
3. Exposed concrete surfaces, which tend to dry or set too rapidly, shall be continuously moistened by means of fog sprays or otherwise protected from drying during the time between placement and finishing, and after finishing.
4. Finishing of slabs and other exposed surfaces shall be started as soon as the condition of the concrete allows and shall be completed without delay.
5. Concrete surfaces exposed to the air shall be covered as soon as the concrete has hardened sufficiently and shall be kept continuously wet for at least the first 48 hours of the curing period, and for the entire curing period unless curing compound is applied as specified.
6. Formed surfaces shall be kept completely and continuously wet for the duration of curing period (prior to, during, and after form removal) or until curing compound is applied as specified.

3.16 EMBEDDED ITEMS, JOINTS & WATERSTOP

A. See Section 03_15_20 Concrete Joint & Embedded Items

3.17 DRY PACK MORTAR

A. Where surfaces are required to be built up with mortar, such surfaces shall be thoroughly roughened by brushing, completely cleaned, and coated with appropriate bonding compound before the application of the required mortar. The mortar shall be applied immediately following the application of the bonding compound in bands or strips to form a compact durable covering of the required thickness and shall be free from lumps and depression. Construction joints in the mortar shall be sloped to thin edges and, before application is resumed, the joint shall be thoroughly cleaned. Dry pack mortar shall be used for built-up surfaces, setting miscellaneous metal items, and correcting minor repairs and imperfections.

B. No mortar shall be applied during freezing weather unless adequate protection is provided.

C. The mortar shall be cured as specified for concrete.

3.18 MODIFICATION OF EXISTING CONCRETE

A. Where the work indicated on the Plans requires modification of existing concrete structures or concrete poured over six months previously to be removed or modified, the existing concrete shall be cut accurately to the lines required in the presence of the Engineer or the Engineer’s Representative. Concrete faces exposed to view shall be cut with a concrete

saw. The cutting shall be accomplished in a manner that preserves, free from cracks or other injuries, those parts of the existing structure that are to remain. Where the cut surface is to be left exposed, it shall be cleaned and faced with non-shrink grout and finished to match adjacent surface. Where new concrete or mortar is to be placed against existing concrete surfaces or surfaces that have been cut, such surfaces shall be thoroughly cleaned by sandblasting, and coated with bonding compound just prior to the placement of the new concrete. Bonding compounds shall be as specified herein. Depth of saw cut should be ¾" minimum. Unless otherwise indicated on the Plans or specified, continuity of reinforcing steel shall be obtained by either exposing bars to provide sufficient laps with new bars or by welding existing bars with new bars as specified. Where indicated, existing bars shall be exposed and fully developed by; embedding in new concrete.

3.19 PROTECTION OF CONCRETE

A. All surfaces shall be protected against injury. During the first 72 hours after placing the concrete, any wheeling, working or walking on the concrete shall not be permitted. All slabs subject to wear shall be covered with a layer of sand or other suitable material as soon as the concrete has set. Sisalcraft paper or other similar tough waterproof paper may also be used, provided all joints between adjacent strips of paper are carefully sealed. This does not alter the requirements for proper curing as specified herein.

B. No concrete slabs or top surfaces or walls shall be placed during rain unless acceptable protective shelter is provided, and during such weather, all concrete placed within the preceding 12 hours shall be protected with waterproof canvas or other suitable coverings. These shall be provided and kept ready at hand.

3.20 SURFACE REPAIRS

A. Patching Defective Areas:
   1. Repair and patch defective areas with cement mortar immediately after removal of forms. Use epoxy-based mortar for structural repairs.
   2. Before patching is performed, the Engineer shall be notified and provided sufficient time to observe extent of repairs required.
   3. Cut out honeycomb and rock pockets, down to solid concrete but, in no case, to a depth of less than 1". Where defective concrete extends to the depth of reinforcing steel or where reinforcing steel is exposed during concrete chipping, concrete shall be removed to a minimum depth of 3/4 inch clear beyond depth of reinforcing steel. Saw-cut perimeter or area to be patched to provide edges cut perpendicular to the concrete surface.
   4. For exposed-to-view surfaces, blend white Portland cement and standard Portland cement so that, when dry, the patching mortar will match the color of the surrounding concrete. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with the patching. Compact mortar in place and strike off slightly higher than the surrounding surface.
   5. Fill holes extending through concrete by means of a plunger-type gun or other suitable device from the least exposed face, using a flush stop held at the exposed face to ensure complete filling.

B. Repair of Formed Surfaces:
   1. Repair exposed-to-view formed concrete surfaces, where possible, that contain defects which adversely affect the appearance of the finish. Remove and replace

the concrete having defective surfaces if the defects cannot be repaired to the satisfaction of the Engineer. Surface defects, as such, include color and texture irregularities, crack, spalls, air bubbles, honeycomb, rock pockets, and holes left by the rods and bolts; fins and other projections on the surface; and stain and other discolorations that cannot be removed by cleaning.

2. Repair concealed formed' concrete surfaces, where possible, that contain defects that adversely affect the durability of the concrete. If defects cannot be repaired, remove and replace the concrete having defective surfaces. Surface defects, as such, include cracks in excess of 0.01" wide, cracks of any width through nonreinforced sections, honeycomb, rock pockets, holes left by tie rods and bolts, and spalls except minor breakage at corner.

C. Repair of Uniformed Surfaces:

1. Test unformed surfaces, such as monolithic slabs, for smoothness and to verify surface plane to the tolerances specified for each surface and finish. Correct low and high areas as herein specified.
2. Test unformed surfaces sloped to drain for trueness of slop, in addition to smoothness, using a template having the required slope. Correct high and low areas as herein specified.
3. Repair finished unformed surfaces that contain defects which adversely affect the durability of the concrete. Surface defects, as such, include crazing, cracks in excess of 0.01" wide or which penetrate to the reinforcement or completely through nonreinforced sections regardless of width, spalling, popouts, honeycomb, rock pockets, and other objectionable conditions.
4. Correct high areas in unformed surfaces by grinding, after the concrete has cured sufficiently so that repairs can be made without damage to adjacent areas.
5. Correct low areas in unformed surfaces during or immediately after completion of surface finishing operations by cutting out the low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete.
6. Repair defective areas, except random cracks and single holes not exceeding 1" diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around. Dampen all concrete surfaces in contact with patching concrete and brush with a neat cement grout coating, or use concrete bonding. agent. Place patching concrete before grout takes its initial set. Mix patching concrete of the same materials to provide concrete of the same type or class as the original adjacent concrete. Place, compact, and finish as required to blend with adjacent finished concrete. Cure in the same manner as adjacent concrete.
7. Repair isolated random cracks and single holes not over 1" in diameter by the dry-pack method. Groove the top of cracks, and cut out holes to sound concrete and clean of dust, dirt, and loose particles. Dampen all cleaned concrete surfaces and brush with a neat.cement grout coating. Place dry-pack before the cement grout takes its initial set. Mix dry-pack consisting of one part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched areas continuously moist for not less than 72 hours.

SECTION 03_35_00

CONCRETE FINISHES

PART 1 GENERAL

1.1 SUMMARY

A. Tooled concrete finishes of cast-in-place concrete.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_11_00 Concrete Formwork

D. Section 03_20_00 Concrete Reinforcement

E. Section 03_30_00 Cast-in-Place Concrete

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

1.5 QUALITY ASSURANCE

A. Provide mock-up test panels for F4 & F5 finishes including tie-hole repair. Test panels serve as standard of quality and workmanship for project.

PART 2 PRODUCTS

2.1 MORTAR MIXES

A. Mortar mix for F4 finish: Consist of 1 part cement and 1-1/2 parts of fine sand passing Number 100 screen. Mix with enough water and emulsified bonding agent to have consistency of thick cream.

B. Mortar mix for F5 finish: Consist of 1 part cement to 1-1/2 parts of sand which passes Number 16 screen.

PART 3 EXECUTION

3.1 CONCRETE FINISHES

A. Cement for finishes:
   1. Addition of white cement may be required to produce finish which matches color of concrete to be finished.

B. Finish vertical concrete surfaces with one of the following finishes as indicated in the Finish Schedule:
   1. F1 finish: No special treatment other than repair defective work and fill depressions 1 inch or deeper and tie holes with mortar after removal of curing compound.
   2. F2 finish: No special treatment other than repair defective work, remove fins, fill depressions 1/2 inch or deeper and tie holes with mortar after removal of curing compound.
   3. F3 finish: Repair defective work, remove fins, offsets, and grind projections smooth. Fill depressions 1/4 inch or larger in depth or width and tie holes with mortar after removal of curing compound.
   4. F4 finish: Receive same finish as specified for F3 finish, and, in addition fill depressions and holes 1/16 inch or larger in width with mortar.
      a. "Brush-Off" sandblast surfaces prior to filling holes to expose all holes near surface of the concrete.
      b. Thoroughly wet surfaces and commence filling of pits, holes, and depressions while surfaces are still damp.
      c. Perform filling by rubbing mortar over entire area with clean burlap, sponge rubber floats, or trowels.
      d. Do not let any material remain on surfaces, except that within pits and depressions.
      e. Wipe surfaces clean and moist cure.
   5. F5 finish: Receive same finish as specified for F3 finish, and, in addition, receive special stoned finish, in accordance with following requirements:
      a. Remove forms and perform required repairs, patching, and pointing as specified in this Section.
      b. Wet surfaces thoroughly with brush and rub with hard wood float dipped in water containing 2 pounds of portland cement per gallon.
      c. Rub surfaces until form marks and projections have been removed.
      d. Spread grindings from rubbing operations uniformly over surface with brush in such manner as to fill pits and small voids.
      e. Moist cure brushed surfaces and allow to harden for 3 days:
         1) After curing, obtain final finish by rubbing with carborundum stone of approximately Number 50 grit until entire surfaces have smooth texture and are uniform in color.
         2) Continue curing for remainder of specified time.
      f. If any concrete surface is allowed to become too hard to finish in above specified manner, sandblast and wash related surfaces exposed to view, whether finished or not.
         1) While still damp, rub over surface, plastic mortar, as specified for brushed surfaces and handstoned with Number 60 grit carborundum stone, using additional mortar for brushed surfaces until surface is evenly filled without an excess of mortar.
         2) Continue stoning until surface is hard.

3) After moist curing for 3 days, make surface smooth in texture and uniform in color by use of Number 50 or Number 60 grit carborundum stone.
4) After stoning, continue curing until 7 day curing period is completed.

C. Finish horizontal concrete surfaces with one of the following finishes as indicated in the Finish Schedule after proper and adequate vibration and tamping:
1. S1 finish: Screeded to grade and leave without special finish.
2. S2 finish: Smooth steel trowel finish.
3. S3 finish: Steel trowel finish free from trowel marks. Provide smooth finish free of all irregularities.
4. S4 finish: Steel trowel finish, without local depressions or high points, followed by light hairbroom finish. Do not use stiff bristle brooms or brushes. Perform brooming parallel to slab-drainage. Provide resulting finish that is rough enough to provide nonskid finish. Finish is subject to review and acceptance by the Engineer.
5. S5 finish: Nonslip abrasive: After concrete has been screeded level and hardened enough to support man standing on a board, sprinkle abrasive from shake screen into surface at uniform rate of 25 pounds for each 100 square feet of surface area, wood float into finish, then trowel abrasive into surface with steel trowel properly exposing abrasive in surface as required to provide nonslip surface.
6. S6 finish: Roughened finish: After concrete has been screeded to grade, apply a roughened finish by use of a jitterbug roller or similar device.

D. Finish concrete floor surfaces to which surfacing material is applied: Finish smooth with tolerance within 1/8 inch in 10 feet in any direction from lines indicated on the Drawings.

3.2 CONCRETE FINISH SCHEDULE

A. Finish concrete surfaces as follows:
1. F4 finish for following vertical surfaces:
   a. Concrete surfaces specified or indicated to be painted.
   b. Concrete surfaces, interior or exterior, exposed to view.
2. Surfaces in open channels, basins, and similar structures:
   a. F3 finish for vertical surfaces which are normally below water surface.
   b. F4 finish for vertical surfaces located above normal water surface and exposed to view.
   c. Remove fins and fill tie holes from concrete surfaces located in closed boxes or channels where there is normally no access or passageway.
3. S1 finish for following surfaces:
   a. Projecting footings which are to be covered with dirt.
   b. Slab surfaces which are to be covered with concrete fill.
4. S2 finish for following surfaces:
   a. Tops of corbels.
   b. Tops of walls and beams not covered above in this Section.
   c. Tops of slabs not covered above in this Section.
   d. All other surfaces not specified to be finished otherwise.
5. S3 finish for following surfaces:
   a. Building and machine room floors which are not covered with surfacing material: Provide floors that are free from trowel marks.
6. S4 finish for following surfaces:

a. Exterior walkways.
b. Tops of exterior walls or beams which are to serve as walkways.
c. Tops of exterior walls or beams which are to support gratings.
d. Top surface of slabs for basins, channels, digesters, and similar structures.

7. S6 finish for following surfaces:
   a. Basin bottoms, or other similar slab surfaces, over which layer of basin bottom grout will be applied.

END OF SECTION

SECTION 03_60_00

GROUTING

PART 1 GENERAL

1.1 SUMMARY

A. Grouting in locations outlined and as required.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Cement Grout & Mortar
   1. Mix Design
   2. Materials

C. Non-shrink Grout - Submit manufacturer's literature

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. ASTM International (ASTM):
   1. C 109 – Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (using 2-inch or [50-millimeter] cube specimens).
   2. C 230 – Standard Specification for Flow Table for Use In Tests of Hydraulic Cement.
   3. C 531 – Standard Test Method for Liner Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.
   4. C 579 – Standard Test Method for Compressive Strength of Chemical- Resistant Mortars, Grouts, and Monolithic Surfacings and Polymer Concretes.
   5. C 939 – Standard Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method).
   6. C 942 – Standard Test Method for Compressive Strength of Grouts for Preplaced-Aggregate Concrete in the Laboratory.
   7. C 1107 – Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrink).

8. C 1181 – Standard Test Methods for Compressive Creep of Chemical- Resistant Polymer Machinery Grouts.

1.5 DELIVERY, HANDLING AND STORAGE

A. Deliver materials to the jobsite in their original, unopened packages or containers, clearly labeled with the manufacturer's product identification and printed instructions.

B. Store materials in a cool dry place and in accordance with the manufacturer's recommendations.

C. Handle materials in accordance with the manufacturer's instructions.

PART 2 PRODUCTS

2.1 MATERIALS

A. Non-shrink epoxy grout:
1. Manufacturers: One of the following:
   a. Five Star Products, Inc., Fairfield, CT, Five Star Epoxy Grout.
   b. Approved equal.
2. Non-shrink epoxy grout shall be a 100 percent solid, premeasured, prepackaged system containing a 2-component thermosetting epoxy resin and inert aggregate.
3. Maintain a flowable consistency for at least 45 minutes at 70 degrees Fahrenheit.
4. Shrinkage or expansion (less than 0.0006 inches/inch) when tested in accordance with ASTM C 531.
5. Minimum compressive strength: 10,000 pounds per square inch at 24 hours and 14,000 pounds per square inch at 7 days when tested in accordance with ASTM C 579, Method B.
6. Compressive creep: Not exceed 0.0027 inches/inch when tested under a 400 pounds per square inch constant load at 140 degrees Fahrenheit in accordance with ASTM C 1181.
7. Coefficient of thermal expansion: Not exceed 0.000018 inches per inch per degree Fahrenheit when tested in accordance with ASTM C 531, Method B

B. Non-shrink grout:
1. Manufacturers: One of the following:
   a. Five Star Products, Inc., Fairfield, CT, Five Star Grout.
   b. Approved equal.
2. In accordance with ASTM C 1107.
3. Proportioned and prepackaged cement-based mixture:
   a. It shall contain no metallic particles such as aluminum powder and no metallic aggregate such as iron filings.
   b. It shall require only the addition of potable water.
4. Water for pre-soaking, mixing, and curing: Potable water.
5. Free from the emergence of mixing water from within or the presence of water on its surface.
6. Remain at a minimum flowable consistency for at least 45 minutes after mixing at 45 degrees Fahrenheit to 90 degrees Fahrenheit when tested in accordance with ASTM C 230.

a. If at a fluid consistency, it shall be verified in accordance with ASTM C 939.

7. Dimensional stability (height change):
   a. In accordance with ASTM C 1107, volume-adjusting Grade B or C at 45 degrees Fahrenheit to 90 degrees Fahrenheit.
   b. Have 90 percent or greater bearing area under bases.
8. Have minimum compressive strengths at 45 degrees Fahrenheit to 90 degrees Fahrenheit in accordance with ASTM C 1107 for various periods from the time of placement, including 5,000 pounds per square inch at 28 days when tested in accordance with ASTM C 109 as modified by ASTM C 1107.

2.2 MIXES

A. Cement grout:
   1. Consist of concrete mix with coarse aggregate removed and water quantity adjusted as required.
   2. Use the same materials for cement grout that are used for concrete.
   3. Use water-to-cementitious materials ratio that is no more than that specified for concrete being repaired.
   4. For spreading over the surfaces of construction or cold joints. Mix with no more water used than allowed by water-to-cementitious materials ratio specified for concrete.

B. Cement mortar:
   1. Consist of concrete mix with coarse aggregate removed and water quantity adjusted as required.
   2. Use the same materials for cement mortar that are used for concrete.
   3. Use water-to-cementitious materials ratio that is no more than that specified for concrete being repaired.
   4. At exposed concrete surfaces not to be painted or submerged in water: Use sufficient white cement to make color of finished patch match that of surrounding concrete.

C. Dry-pack mortar:
   1. Mix in proportions by weight of 1 part portland cement to 2 parts of concrete sand.
      a. Portland cement: As specified in Section 03_30_00.
      b. Concrete sand: As specified in Section 03_30_00.
   2. Use only enough water so that resulting mortar will crumble to touch after being formed into ball by hand.

D. Epoxy grout:
   1. Consist of mixture of epoxy or epoxy gel and concrete sand.
      a. Epoxy: As specified in Section 03_63_01.
      b. Epoxy gel: As specified in Section 03_63_01.
      c. Sand: Clean, bagged, graded, and kiln dried silica sand.
   2. Proportioning:
      a. For horizontal work: Consist of mixture of 1 part epoxy with not more than 2 parts sand.
      b. For vertical or overhead work: Consist of 1 part concrete epoxy gel with not more than 2 parts sand.

E. Grout:

1. Mix in proportions by weight of 1 part portland cement to 4 parts of concrete sand.
   a. Portland cement: As specified in Section 03_30_00.
   b. Concrete sand: As specified in Section 03_30_00.

F. Non-shrink epoxy grout: Mix in accordance with manufacturer's installation instructions.

G. Non-shrink grout: Mix in accordance with manufacturer's installation instructions such that resulting mix has flowable consistency and is suitable for placing by pouring.

PART 3 EXECUTION

3.1 EXAMINATION

A. Inspect concrete surfaces to receive grout or mortar and verify that they are free of ice, frost, dirt, grease, oil, curing compounds, paints, impregnations, and all loose material or foreign matter likely to reduce the bond or performance of grout or mortar.

3.2 PREPARATION

A. Surface preparation:
   1. Remove grease, oil, dirt, curing compounds, laitance, and other deleterious materials that may affect bond from concrete and bottoms of baseplates.
   2. Roughen concrete surfaces by heavy sandblasting, waterblasting, chipping, or other mechanical means.
      a. Remove loose or broken concrete.
   3. Metal surfaces: Sandblast to a 2 to 3 mil peak-to-valley profile.

3.3 PLACEMENT

A. General:
   1. Use mortar mixer with moving paddles for mixing grouts. For cement grouts, pre-wet the mixer and empty out excess water before beginning mixing.

B. Cement grout:
   1. Exercise particular care in placing cement grout since it is required to furnish structural strength, impermeable water seal, or both.
   2. Do not use cement grout that has not been placed within 30 minutes after mixing.

C. Epoxy grouts:
   1. Use where indicated on the Drawings.
   2. Wet surfaces with epoxy for horizontal work or epoxy gel for vertical or overhead work prior to placing epoxy grout.

D. Non-shrink grout:
   1. Add non-shrink cement grout to a premeasured amount of water that does not exceed the manufacturer's maximum recommended water content.
   2. Mix in accordance with manufacturer's instructions to uniform consistency.
   3. May be drypacked, flowed, or pumped into place. Do not overwork grouts.
   4. Do not retemper grout by adding more water after stiffening.

E. Non-shrink epoxy grout:
1. Mix in complete units. Do not vary the ratio of components or add solvent to change the consistency of the mix.
2. Pour the hardener into the resin and mix for at least 1 minute and until mixture is uniform in color. Pour the epoxy into a mortar mixer wheelbarrow and add the aggregate. Mix until aggregate is uniformly wetted. Over mixing will cause air entrapment in the mix.
3. Keep temperature of non-shrink epoxy grout from exceeding manufacturer's recommendations.

F. Curing:
1. Cement based grouts:
a. Non-shrink grout: Cure in accordance with manufacturer's recommendations. Keep grout wet for a minimum of 7 days. Use wet burlap, a soaker hose, sun shading, ponding, and in extreme conditions, a combination of methods.
b. Maintain grout above 40 degrees Fahrenheit until it has attained a compressive strength of 3,000 pounds per square inch, or above 70 degrees Fahrenheit for a minimum of 24 hours to avoid damage from subsequent freezing.

G. Epoxy based grouts:
1. Cure grouts in accordance with manufacturers' recommendations.
a. Do not wet cure epoxy grouts.
2. Do not allow any surface in contact with epoxy grout to fall below 50 degrees Fahrenheit for a minimum of 48 hours after placement.

H. Grouting equipment bases and baseplates: As specified in Section 46_05_10.

I. Grouting other baseplates:
1. General:
a. All baseplate grouting shall take place from one side of a baseplate to the other in a continuous flow to avoid trapping air.
b. Hydrostatic head pressure shall be maintained by keeping the level of the grout in the headbox above the bottom of the baseplate. The headbox should be filled to the maximum level and the grout worked down.
2. Forms and headboxes:
a. Build forms for grouts of material with adequate strength to withstand the placement of grouts.
b. Forms shall be rigid and liquidtight. Caulk cracks and joints with an elastomeric sealant. Line forms with polyethylene for easy grout release. Forms carefully wax with 2 coats of heavy-duty paste wax will also be acceptable.
c. Forms shall be 4 to 6 inches higher than the baseplate on one side of the baseplate configuration when using head pressure for placement.
3. Non-shrink epoxy grout:
a. Cut back epoxy grout after setting. Install epoxy grout with chamfer edges built into the formwork.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 03_60_01

BASIN BOTTOM GROUT

PART 1 GENERAL

1.1 SUMMARY

A. Grouting of basin bottoms where indicated on drawings

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_60_00 Grouting

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. International Concrete Repair Institute (ICRI):
   1. 310.2 - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays.

1.5 QUALITY ASSURANCE

A. Schedule meeting with Engineer prior to placement of grout to discuss method of placement.

PART 2 PRODUCTS

2.1 MATERIALS

A. Materials for grout:
   1. See Section 03_60_00 Grouting

2.2 GROUT MIXTURES

A. Grout mixture:
   1. One-part portland cement and 4-1/2 parts sand, by weight.
   2. Water content:
      a. Sufficient to allow workability for spreading grout with screeds attached to arms of equipment mechanism.
      b. Not excessive, to prevent formation of surface water, laitance, segregation, and to allow grout to stay in place after screeding.
   3. Do not use admixtures.

PART 3 EXECUTION

3.1 PREPARATION

A. Surface preparation:
   1. Basin bottom slab surface preparation:
      a. Concrete slab surfaces shall have rough texture, suitable for bonding grout.
      b. During concrete placement: finish concrete surface with jitterbug. Do not provide a smooth troweled surface.
      c. Roughen top of slab surface to a ICRI 310.2 surface profile of CSP-5 or rougher using one of the following methods:
         1) Abrasive blasting.
         2) Steel shotblasting.
         3) Ultra high-pressure water jetting.
      d. Clean entire slab surface as required to remove dirt, oil, curing compound, laitance, dust, and other matter that may prevent proper grout bonding.
      e. Saturate concrete slabs with water for minimum of 3 days just before placing grout. At time grout is placed, concrete shall be saturated and surface damp.

B. Equipment preparation:
   1. Preparation of equipment for grouting basin bottom slabs:
      a. Setting the screeds (where applicable / required):
         1) Bolt nominal 2-inch by 4-inch section of lumber blades on arms of equipment mechanism.
         2) Locate leading edge of lumber approximately 2 inches in front of blade and cut it parallel to centerline of arm.
         3) Securely nail nominal 2-inch by 6-inch screed board to ends of 2 by 4 lumber, in manner such that screed runs parallel to centerline of arm.
         4) Nail bent sheet metal to lower edge of screed board.
         5) Ensure that bottom of screed board is 1-1/2 inches below steel blades on arms of equipment mechanism.

3.2 APPLICATION

A. Grouting basin bottom slabs:
   1. Placement, general:

a. Place grout in accordance with equipment manufacturer's instructions and in accordance with limitations and precautions given in such instructions.
b. Bring promptly to attention of the Engineer, conflicts between manufacturer's instructions and this Section.

2. Placing grout:
a. Use grouting equipment to apply grout for basin bottom slabs.
b. Perform grouting continuously without interruptions until basin slab is covered.
c. Use misters or means acceptable to Engineer to keep grout from drying out before start of curing.

3. Following grout placement:
a. After completion of slab grouting, allow mechanism to run continuously until there is no more danger that grout sloughing may occur (where applicable).
b. Prevent dry clumps of grout or rocks from being caught under screed board and gouging finish surface of grout.

4. Corrections:
a. Before grout has set:
1) Where sloughing has occurred, remove grout from sloughed areas and place grout in low areas.
2) Repair gouges in grouted surface.

5. Curing:
a. After grout has set, water cure grout for 7 days.
b. Keep grout surface continuously wet for duration of curing period.

B. Tolerances:
1. For grouting basin bottom slabs:
a. Tolerance in elevation of finished grout surface: Plus or minus 1/8 inch.
1) Specified tolerance is more exacting than customary industry standards for slab finish.
2) Tolerance is required for proper operation of equipment.
b. Thickness of grout layer:
1) Not less than 1 inch at any point.
2) Provide average thickness of grout as indicated on the Drawings.

3.3 FIELD QUALITY CONTROL

A. Inspection:
1. Verify grout elevation tolerance on basin bottom slabs as follows:
a. After grout has set, operate grouting equipment with blades set to clear grout surface.
b. Under these conditions, blades shall not clear grout surface by more than 1/4 inch at any point:
1) Excess clearance: Correct as specified in article titled "Adjusting" in this Section.

3.4 ADJUSTING

A. Grouting basin bottom slabs:
1. After grout has set:

a. Where clearance between blades and grouted surface exceeds tolerance specified in this Section, grind high points in grout surface using terrazzo machine until specified tolerance is met.
b. Grout that has not bonded to concrete slab is not acceptable. Remove and replace such grout.

END OF SECTION

SECTION 03_70_00

MASS CONCRETE

PART 1 GENERAL

1.1 SUMMARY

A. Placement of concrete 3 feet thick or greater.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Product data.

C. Thermal Control Plan.

D. Temperature Monitoring Program.

E. Temperature monitoring data:
   1. Tabular data of hourly temperature for each temperature sensor.
   2. Tabular data for hourly temperature differential for each temperature sensor.
   3. Plot of temperature and temperature differential for each temperature sensor.

F. Layout of cooling pipe system, if used, showing pipe sizes and material type, connections, location, spacing, method of support, and system for monitoring the temperature of the water in the cooling pipes.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

1.5 DESCRIPTION/DESIGN REQUIREMENTS

A. Design requirements:
   1. Thermal Control Plan:
      a. General:

1) Submit a Thermal Control Plan signed by a licensed engineer, registered in the state where the project is located. Include the following as a minimum:
   a) Calculations for maximum concrete temperature and maximum differential concrete temperature for each mass concrete element.
   b) Concrete mix design.
   c) Duration and method of curing.
   d) Procedures to control concrete temperature at time of placement.
   e) Methods of controlling temperature differentials.
   f) Temperature sensor types and locations.
   g) Temperature monitoring and recording system.
   h) Field measures to ensure conformance with the maximum concrete temperature and maximum temperature differential requirements.
   i) Corrective measure to take if it appears the specified maximum temperature and differential temperature will be exceeded.
2) Have temperature control measures in place during the placement of concrete to limit the maximum initial concrete temperature rise to
20 degrees Fahrenheit.
3) Difference in temperature between concrete interior and surface temperatures shall not exceed 35 degrees Fahrenheit.
4) Allow the interior of the concrete to cool down and stabilize.
5) The maximum allowable concrete temperature: 145 degrees Fahrenheit.
6) Do not place mass concrete until the Engineer has accepted in writing, the Thermal Control Plan.

b. Pre-cooling of concrete:
   1) Cooling of the concrete mix, prior to placement, may be attained by following means:
      a) Cool batch water. Ice may be substituted for a portion of the batch water.
      b) Continuously spray coarse aggregate with water to cool the aggregate. Adjust the water content of the concrete mix to account for the cooling water.
      c) Alternative means proposed by the Contractor and acceptable to the Engineer.

c. Post-cooling of concrete:
   1) At Contractor's option, use embedded thin-walled piping for circulating water to control temperature gain in the previously cast concrete:
      a) Clearly indicate in the Thermal Control Plan if cooling piping will be embedded in the concrete.
      b) Do not install embedded piping within the top 20 inches of the slab or wall.
      c) Operate cooling pipe system for the duration of the cooling period.

d) After use of cooling pipes to cool the concrete is complete, fill pipes with grout.

d. Misting concrete:
1) Use fog sprayers to reduce the ambient air temperature and increase the humidity during concrete placement.

e. Curing concrete:
1) Water cure or plastic membrane cure as soon as possible following placement of concrete as specified in Section 03_30_00.
a) If water curing is used, use methods that minimize differential concrete temperature.
b) Consider the type of curing in the Thermal Control Plan.

2. Temperature monitoring program:
a. Temperature monitoring and recording system:
1) Consist of temperature sensors connected to a data acquisition system capable of printing, storing, and downloading data to a computer.
2) Locate temperature sensors such that the maximum temperature difference within a mass concrete element can be monitored.
3) As a minimum, monitor concrete temperatures at the calculated hottest location, on at least 2 outer faces, 2 corners, and top surfaces.

b. Temperature readings:
1) Automatically recorded on an hourly or more frequent basis.
2) Hourly temperature recording may be discontinued when:
a) Maximum internal temperature is falling.
b) Difference between the interior concrete temperature and the average daily air temperature is less than the allowable temperature difference for 3 consecutive days.
c) There are no mass concrete elements to be cast adjacent.
3) Print and submit data to the Engineer daily.

c. Methods of concrete consolidation: Prevent damage to the temperature monitoring and recording system.
1) Protect wiring connected to temperature sensors cast into the concrete to prevent movement.
2) Keep wire runs as short as possible.
3) Do not allow ends of the temperature sensors to come into contact with either a support or concrete form, or reinforcing bar.
4) When any equipment used in the temperature control and monitoring and recording system fails during the mass concrete construction operation, take immediate measures to correct the situation in accordance with Thermal Control Plan. Failure to conform to the temperature requirements will be cause for rejection of the concrete.

PART 2 PRODUCTS

2.1 MATERIALS

A. Concrete admixtures:
1. Air entraining admixture:

a. As specified in Section 03_30_00.

2. Retarding admixture:
   a. At the Contractor's option, a set retarding admixture may be used to control set time and minimize premature setting of concrete and formation of cold joints.
   b. As specified in Section 03_30_00.
   c. Dosage: In accordance with manufacturer's written requirements.
3. Water reducing admixture:
   a. As specified in Section 03_30_00.

B. Coarse aggregate:
1. As specified in Section 03_30_00.
2. Maximum coarse aggregate size: 1-1/2 inches.
3. Coarse aggregate grading: In accordance with of Table 2.5.8 of ACI 207.1R.

C. Fine aggregate:
1. As specified in Section 03_30_00.

D. Portland cement:
1. Type II, except as modified in this Section.
2. Contain no more than 12 percent Tricalcium Aluminate.
3. Sum of Tricalcium Aluminate and Tricalcium Silicate: Less than 58 percent.

E. Pozzolan:
1. As specified in Section 03_30_00.

F. Water and ice:
1. Mixing water: As specified in Section 03_30_00.
2. Water for making ice: Meet the requirements of mixing water as specified in Section 03_30_00.
3. Ice may be substitute for mixing water on a 1 to 1 ratio based on weight.

2.2 MIXES

A. As specified in Section 03_30_00, except as modified by this Section.

B. Concrete mix for mass concrete:
1. Water-cementitious material ratio: Not to exceed 0.45.
2. Entrained air content range: 2 to 4 percent.
3. Slump range: 2 inches to 4 inches.
4. Pozzolan:
   a. Minimum of 15 percent pozzolan.
   b. Maximum of 25 percent pozzolan.

PART 3 EXECUTION

3.1 INSTALLATION

A. Concrete placement: As specified in to Section 03_30_00 except as modified in this Section.

3.2 FIELD QUALITY CONTROL

A. Temperature Monitoring Program:
   1. Install a temperature monitoring system to measure temperatures in the interior and near the surface of the concrete.
   2. Continuously monitor the temperature of the interior of the concrete and surfaces of the concrete during the cooling period.
   3. Temperature monitoring data not conforming to requirements of this Section:
      a. Stop placing mass concrete.
      b. Concrete not conforming to temperature requirements of this Section will be rejected. Remove rejected mass concrete at Contractor's expense.
      c. Modify Thermal Control Plan and calculations to correct problem and resubmit.
      d. Do not place mass concrete until revised Thermal Control Plan and calculations have been accepted by Engineer.

SECTION 05_05_20

ANCHORAGES

PART 1 GENERAL

1.1 SUMMARY

A. Anchorages as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. Where anchorage size / depth is not be provided on the Drawings, specified herein or recommended by the Manufacturer, the Contractor shall employ the services of an Oklahoma Registered Structural Engineer (SE) to provide sizing / depth along with a submittal cover letter stating submittal complies with all references and standards cited herein.

C. Any Drawing or Specification that conflicts with this Specification Section shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the Contractor is to assume that more expensive product/system/item applies and shall be included in the Contractor's bid.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Division 3 - Concrete

D. Division 5 - Metals

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. ASTM
1. ASTM A 36, Specification for Carbon Structural Steel.
2. ASTM A 123, Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A 153, Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
4. ASTM A 307, Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
5. ASTM A 484, Specification for General Requirements for Stainless and Heat-Resisting Steel Bars, Billets and Forgings.
6. ASTM A 525, Specification for General Requirements for Steel Sheet, Zinc- Coated (Galvanized) by the Hot-Dip Process.
7. ASTM A 536, Specification for Ductile Iron Castings.
8. ASTM A 570, Specification for Steel, Sheet and Strip, Carbon, Hot-Rolled, Structural Quality.
9. ASTM B 633, Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
10. ASTM F 593, Stainless Steel Bolts; Hex Cap Screws, and Studs.

C. Federal Specifications WW-H-171E for Malleable Iron.

D. ICBO, International Conference of Building Officials.

E. International Building Code.

F. Inserts shall be ICBO, UL, or FM approved.

G. Toggle Bolts: Federal Specification FF-B-588C, Type I, Class A, Style 1.

PART 2 PRODUCTS

2.1 DESIGN CRITERIA

A. When the size, length or load carrying capacity of an anchorage is not shown on the Drawings, provide the following:
1. For anchor bolts (cast-in-place), provide the size, length and capacity required to carry the design load based on the values and requirements given in the International Building Code.
2. For concrete anchors (adhesive types) and concrete inserts, provide the size, length, type, and capacity required to carry the design load based on the values and requirements given in the ICBO Evaluation Report, or similar certifications by UL or FM, for the anchor to be used. Alternately the capacity may be based on independent testing lab capacities for tension and shear strength using a minimum safety factor of four. Consideration of reduced capacity due to spacing and edge distance shall be made.

B. Determine design loads as follows:
1. For equipment anchors, use the design load recommended by the equipment manufacturer and approved by Engineer.
2. For pipe hangers and supports, use the total weight of: pipe, fittings, and water contained in pipe, plus the full weight of valves and accessories located between the hanger or support in question.
3. Concrete anchors shall develop ultimate shear and pull-out loads of not less than the following values in 4,000 psi concrete:

Bolt Diameter (Inches)	Min. Shear (Pounds)	Min. Pull-Out Load (Pounds)
1/2	5,000	7,600
5/8	8,000	12,000
3/4	11,500	17,000
7/8	15,700	20,400
1	20,500	28,400

2.2 MATERIALS

A. Anchor Bolts:
1. Provide stainless steel bolts and hardware complying with ASTM F 593, AISI Type 316 headed or non-headed type with Nitronic 60 stainless steel nuts and locknuts, unless otherwise indicated.
2. For equipment, provide anchor bolts, which meet the equipment manufacturer's recommendations for size, material, and strength. Anchors shall be Type 316 stainless steel.
3. Provide anchor bolts as shown on the Drawings or as required to secure structural steel to concrete or masonry.
4. Locate and accurately set the anchor bolts using templates or other devices as required.
5. Protect threads and shank from damage during installation of equipment and structural steel.
6. Comply with manufacturer’s required embedment length and necessary anchor bolt projection.

B. Adhesive Anchors:
1. Provide stainless steel adhesive anchors complying with ASTM F 593, AISI Type 316 with Nitronic 60 stainless steel nuts and locknuts.
2. Anchors shall be of the size required for the concrete strength specified.
3. Adhesive anchors shall consist of threaded rods or bolts anchored with an adhesive system into hardened concrete. The adhesive system shall use a two-component adhesive mix and shall be injected with a static mixing nozzle following manufacturer’s instructions. The embedment depth of the rod/bolt shall provide a minimum allowable bond strength that is equal to the allowable tensile capacity of the rod/bolt, unless noted otherwise on the Drawings.
4. Product and Manufacturer:
   a. HIT HY-150 Injection Adhesive Anchor System, as manufactured by Hilti. Use Hilti Hit ICE where ambient temperatures are below 45 degrees F.
   b. Acrylic Tie or Epoxy-Tie ET, as manufactured by Simpson.
5. Do not use adhesive anchors to support overhead pipe or equipment.

C. Concrete Inserts:
   1. For piping, grating, floor plate and masonry lintels, provide malleable iron inserts. Comply with Federal Specification WW-H-171E (Type 18). Provide those recommended by the manufacturer for the required loading.
   2. Finish shall be black.
   3. Product and Manufacturer: Provide inserts by one of the following:
      a. Figure 282, as manufactured by ITT Grinnell.
      b. No. 380, as manufactured by Hohmann and Barnard, Incorporated.

D. Toggle Bolts:
   1. Provide spring-wing toggle bolts, with two-piece wings.
   2. Provide Type 316 stainless steel bolts.
   3. Product and Manufacturer: Provide toggle bolts by one of the following:
      a. Hilti.
      b. Simpson.

E. Powder activated fasteners shall not be used.

F. Expansion anchors shall not be used.

PART 3 EXECUTION

3.1 INSPECTION

A. Contractor shall examine areas and conditions under which anchor bolts, toggle bolts and concrete insert Work is to be installed, and notify Engineer, in writing, of conditions detrimental to proper and timely completion of Work. Do not proceed with Work until unsatisfactory conditions have been corrected in a manner acceptable to Engineer.

3.2 INSTALLATION

A. Assure that embedded items are protected from damage and are not filled in with concrete.

B. Use concrete inserts for pipe hangers and supports for the pipe size and loading recommended by the insert manufacturer.

C. Use toggle bolts for fastening brackets and other elements onto masonry units.

D. For the adhesive anchors and adhesive material, Contractor shall comply with the manufacturer's installation instructions on the hole diameter and depth required to fully develop the tensile strength of the adhesive anchor or reinforcing bar. Contractor shall properly clean out the hole utilizing a wire brush and compressed air to remove all loose material from the hole, prior to installing adhesive capsules or material. Refer to the Drawings for details.

E. Use torque wrench for all anchor installations and torque to manufacturer recommendations.

3.3 CLEANING

A. After embedding concrete is placed, remove protection and clean bolts and inserts.

3.4 FIELD QUALITY CONTROL

A. Contractor shall employ a testing laboratory to perform field quality testing of installed anchors. Owner representative shall determine the level of testing which is required for the various types of adhesive anchors and anchor bolts. A minimum of ten percent of the adhesive anchors are to be tested to 50 percent of the ultimate tensile capacity of the adhesive anchor as published in the manufacturer's catalogue.

B. If failure of any of the adhesive anchors or reinforcing bars occurs, Contractor will be required test the remaining 90 percent of anchors.

C. Contractor shall correct improper workmanship, remove and replace, or correct as directed by the Engineer, all adhesive anchors or bars found unacceptable or deficient, at no additional cost to the Owner.

D. Contractor shall pay for all corrections and subsequent tests required to confirm the integrity of the adhesive anchor or bar.

E. The testing and inspection agency shall complete a report on each area. The report should summarize the observations made by the inspector and be submitted to Engineer.

F. Provide access for the testing agency to places where Work is being produced so that required inspection and testing can be accomplished.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 05_05_25

MECHANICAL ANCHORING

PART 1 GENERAL

1.1 SUMMARY

A. Mechanical anchoring as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. Where anchorage size / depth is not be provided on the Drawings, specified herein or recommended by the Manufacturer, provide a letter sealed by a Licensed Professional Structural Engineer in the State which the project will be built stating that the proposed cover plates and details have been designed and detailed under their supervision and meet all codes referenced by this Section and requirements of this Section.

C. Any Drawing or Specification that conflicts with this Specification Section shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the Contractor is to assume that more expensive product/system/item applies and shall be included in the Contractor's bid.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Division 3 - Concrete

D. Division 5 - Metals

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

13. B 633 – Standard Specification for *Electrodeposited* Coatings of Zinc on Iron and Steel.
14. B 695 – Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel.
15. E 488 – Standard Test Methods for Strength of Anchors in Concrete Elements.
16. F 436 – Standard Specification for Hardened Steel Washers.
17. F 1554 – Standard Specification for Anchor Bolts, Steel, 36, 55 and 105-ksi Yield Strength.

F. International Code Council Evaluation Service, Inc. (ICC-ES):

1. AC01 – Acceptance Criteria for Expansion Anchors in Masonry Elements.

G. AC106 – Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry. AC193 – Acceptance Criteria for Mechanical Anchors in Concrete Elements.

PART 2 PRODUCTS

2.1 MANUFACTURED UNITS

A. General:
1. Furnish threaded fasteners with flat washers and hex nuts fabricated from materials corresponding to the material used for threaded portion of the anchor.
   a. Cast-in anchors: Provide flat washers and nuts as listed in the ASTM standard for the anchor materials specified.
   b. Post-installed anchors: Provide flat washers and nuts supplied for that product by the manufacturer of each anchor.
2. Size of anchors and fasteners, including diameter and length or minimum effective embedment depth: As indicated on the Drawings or as specified in this Section. In the event of conflicts, contact Engineer for clarification.
3. Where anchors and connections are not specifically indicated on the Drawings or specified, their material, size and form shall be equivalent in quality and workmanship to items specified.

B. Materials:
1. Provide and install anchors of materials as in this Section.

2.2 CAST-IN ANCHORS AND FASTENERS

A. Anchor bolts:
1. Description:
   a. Straight steel rod having one end with integrally forged head, and one threaded end. Embedded into concrete with the headed end cast into concrete at the effective embedment depth indicated on the Drawings or specified, and with the threaded end left to project clear of concrete face as required for the connection to be made.
   b. Furnish anchor bolts with heavy hex forged head or equivalent acceptable to Engineer.
      1) Rods or bars with angle bend for embedment in concrete (i.e.: "L" or "J" shaped anchor bolts) are not permitted in the Work.
2. Materials:
   a. Type 316 stainless steel.
      1) Surfaces descaled, pickled, and passivated in accordance with ASTM A 308.
      2) Bolts: ASTM A 193, Grade B8M, Class 1, heavy hex.
      3) Nuts: ASTM A 194, Grade 8M, heavy hex.
      4) Washers: Type 316 stainless steel.

B. Anchor rods:
1. Description: Straight steel rod having threads on each end or continuously threaded from end to end. One threaded end is fitted with nuts or plates and embedded in

concrete to the effective depth indicated on the Drawings, leaving the opposite threaded end to project clear of the concrete face as required for the connection to be made at that location.

2. Materials:
   a. Stainless steel: Type 316.
      1) Surfaces descaled, pickled, and passivated in accordance with ASTM A 308.
      2) Rod: ASTM A 193, Grade B8M, Class 1.
      3) Nuts: ASTM A 194, Grade 8M.
      4) Washers: Type 316 stainless steel.
      5) Plates (embedded): ASTM A 240.

C. Concrete insert: Ductile embed.
   1. Description: 1-piece, integrally hot forged sleeve for embedment in concrete. Provided with flange for nailing to forms and female threaded coupler at the exposed concrete face, and washer-faced hex headed foot to resist pullout from concrete at the embedded end.
   2. Manufacturers: One of the following or equal:
      a. Dayton Superior: F-54 Ductile Embed Insert.
   3. Materials:
      a. Galvanized steel:
         1) Hot-dip galvanized coating in accordance with ASTM A 123 or A 153 where indicated on the Drawings.
         2) Steel: ASTM A 29 hot rolled, Grade 1045.

D. Deformed bar anchors:
   1. Description: Steel rod with rebar-like deformations along its length and welding ferrule at one end for attachment to structural steel members (plates or shapes).
   2. Manufacturers: One of the following or equal:
      a. Nelson Stud Welding Company: D2L Deformed Bar Anchors (D2L-DBA).
      b. Stud Welding Products, Inc.: Deformed Anchor Studs.
   3. Materials:
      a. Galvanized steel:
         1) Hot dip galvanized coating in accordance with ASTM A 153 where indicated on the Drawings.
         2) Steel: ASTM A 496 wire deformed for concrete reinforcement.

E. Welded studs:
   1. Description: Anchor with forged head for embedment into concrete on one end, and welding ferrule for attachment to steel on the other. Welded to steel members or plates to provide anchorage for steel connections to concrete.
   2. Acceptance criteria:
      a. Welded studs in accordance with AWS D1.1, Type B.
   3. Manufacturers: One of the following or equal:
      a. Nelson Stud Welding Company: H4L Concrete Anchors or S3L Shear Connectors as indicated on the Drawings.
      b. Stud Welding Products: Headed Concrete Anchors (HCA) or Headed Shear Connectors (HSC) as indicated on the Drawings.
   4. Materials:
      a. Stainless steel: Type 316L.
      b. Stainless steel: Type 304L.

F. Steel plates or shapes for fabrications including assemblies with welded studs or deformed bar anchors:
   1. Stainless steel: Type 316L or Type 304L.
      a. Plates (embedded): ASTM A 240.
   2. Galvanized steel:
      a. Hot dip galvanized in accordance with ASTM A 123.
      b. Steel: ASTM A 36.

2.3 POST-INSTALLED ANCHORS AND FASTENERS – ADHESIVE

A. Epoxy bonding of reinforcing bars, all thread rods, and threaded inserts in concrete: As specified in Section 03_21_18.

2.4 POST-INSTALLED ANCHORS AND FASTENERS – MECHANICAL

A. General:
   1. Post-installed anchors used for the Work shall hold a current ICC Evaluation Service Report demonstrating acceptance for use under the building code specified in Section 01_41_00.
      a. Conditions of use: The acceptance report shall indicate acceptance of the product for use under the following conditions:
         1) In regions of concrete where cracking has occurred or may occur.
         2) To resist short-term loads due to wind forces.
         3) To resist short-term loading due to seismic forces for the Seismic Design Category of the structure where the product will be used.
   2. Substitutions: When requesting product substitutions, submit calculations, indicating the diameter, effective embedment depth and spacing of the proposed anchors, and demonstrating that the substituted product will provide load resistance that is equal to or greater than that provided by the anchors listed in this Section.
      a. Calculations shall be prepared by and shall bear the signature and sealed of a Professional Engineer licensed in the State of Oklahoma.
      b. Decisions regarding the acceptability of proposed substitutions shall be at the discretion of the Engineer.

B. Concrete anchors:
   1. Description. Post-installed anchor assembly consisting of a threaded stud and a surrounding wedge expansion sleeve that is forced outward by torquing the center stud to transfer loads from the stud to the concrete through bearing, friction, or both. (Sometimes referred to as "expansion anchors" or "wedge anchors.")
      a. Do not use slug-in, lead cinch, and similar systems relying on deformation of lead alloy or similar materials to develop holding power.
   2. Concrete anchors for anchorage to concrete:
      a. Acceptance criteria. Concrete anchors shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified for performance in both cracked and un-cracked concrete, and for short term loading due to wind and seismic forces for Seismic Design Categories A through F in accordance with ACI 355.2 and with ICC-ES AC193 (including all mandatory tests and optional tests for seismic tension and shear in cracked concrete).
      b. Manufacturers: One of the following or equal:

1) Hilti: Kwik Bolt TZ Expansion Anchor.
2) Powers fasteners: PowerStud+ SD2.
3) Simpson Strong-Tie®: Strong Bolt 2 Wedge Anchor.

c. Materials. Integrally threaded stud, wedge, washer and nut:
1) Stainless steel: Type 316.
a) Type 304 stainless steel acceptable for use at wet and moist locations when accepted in writing by the Engineer.
2) Galvanized: Carbon steel, zinc plated in accordance with ASTM B 633, minimum 5 microns (Fe/Zn 5).

3. Concrete anchors for anchorage to concrete masonry (fully grouted cells):
a. Acceptance criteria: Concrete anchors shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified in accordance with ICC-ES AC01, including all mandatory tests and optional seismic tests.
b. Manufacturers: One of the following or equal:
1) Hilti: Kwik Bolt 3 Expansion Anchor.
2) Powers fasteners: Power-Stud+ SD1.
3) Simpson Strongtie: Wedge-All Anchor.
c. Materials. Integrally threaded stud, wedge, washer and nut:
1) Stainless steel: Type 316.
a) Type 304 stainless steel acceptable for use at wet and moist locations when accepted in writing by the Engineer.
2) Galvanized: Carbon steel, zinc plated in accordance with ASTM B 633, minimum 5 microns (Fe/Zn 5) or mechanically galvanized in accordance with ASTM B 695, Class 55, Type 1.

C. Flush shells:
1. Description: Post-installed anchor assembly consisting of an internally threaded mandrel that is forced into a pre-drilled concrete hole with a setting tool until the top of the anchor is flush with the face of the concrete. Once installed, a removable threaded bolt is installed in the mandrel.
2. Flush shell anchors are not permitted in the Work.

D. Sleeve anchors:
1. Description: Post-installed, torque-controlled anchor assembly consisting of an externally threaded stud with a spacer sleeve near the surface of the base material, and an expansion sleeve on the lower part of the stud. The expansion sleeve is forced outward by torquing of the center stud to transfer load.
a. Do not use slug-in, lead cinch, and similar systems relying on deformation of lead alloy or similar materials in order to develop holding power.
2. Sleeve anchors for anchorage to concrete.
a. Acceptance criteria. Sleeve anchors shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified for performance in both cracked and un-cracked concrete, and for short term loading due to wind and seismic forces for Seismic Design Categories A through F in accordance with ACI 355.2 and with ICC-ES AC193 (including all mandatory tests and optional tests for seismic tension and shear in cracked concrete).
b. Manufacturers: One of the following or equal:
1) Hilti: HSL-3 Heavy Duty Expansion (sleeve) Anchor.
2) Powers fasteners: Power Bolt+ Heavy Duty Sleeve Anchor.

c. Materials:
1) Galvanized steel: Carbon steel, zinc plated in accordance with ASTM B 633, minimum 5 microns (Fe/Zn 5).

3. Sleeve anchors for anchorage to concrete masonry (fully grouted only):
a. Acceptance criteria. Sleeve anchors shall have a current ICC-ES Report demonstrating that anchors have been tested and qualified for performance in masonry, including short term loading due to wind and seismic forces in accordance with ICC-ES AC01.
b. Materials:
1) Galvanized steel: Carbon steel, zinc plated in accordance with ASTM B 633, minimum 5 microns (Fe/Zn 5).

E. Screw anchors:
1. Description: Post-installed concrete anchor that develops tensile strength from mechanical interlock provided by creating a helical "key" that is larger than the diameter of the bolt itself along the length of the anchor shaft.
2. Screw anchors for anchorage to concrete:
a. Acceptance criteria: Screw anchors shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified for performance in both cracked and un-cracked concrete, and for short term loading due to wind and seismic forces for Seismic Design Categories A through F in accordance with ACI 355.2 and ICC ES AC193 (including all mandatory tests and optional tests for seismic tension and shear in cracked concrete).
b. Manufacturers: Screw anchor: One of the following or equal:
1) Hilti: Hex head: HUS-EZ Screw Anchor.
a) With internally threaded head: HUS-EZ I Hanger Anchor.
2) Powers fasteners: Wedge-Bolt+.
a) With internally threaded head: Vertigo+ Rod Hanging System
3) Simpson strong-tie: Titen HD Screw Anchor.
a) With internally threaded head: Titen HD Rod Hanger.
c. Materials:
1) Galvanized steel: Carbon steel, zinc plated in accordance with ASTM B 633, minimum 5 microns (Fe/Zn 5); or equal.
3. Screw anchors for anchorage to concrete masonry (fully grouted only):
a. Acceptance criteria:
1) Acceptance criteria. Screw anchors shall have a current ICC-ES Report demonstrating that anchors have been tested and qualified for performance in masonry, including short term loading due to wind and seismic forces in accordance with ICC-ES AC106.
b. Manufacturers: One of the following or equal:
1) Hilti: HUS-EZ Screw Anchor.
2) Simpson strong-tie: Titen HDScrew Anchor.
c. Materials:
1) Galvanized steel: Carbon steel. Zinc plated in accordance with ASTM B 633 , minimum 5 microns (Fe/Zn 5); or mechanically galvanized in accordance with ASTM B 695; Class 55, Type I.

F. Undercut concrete anchors:

1. Description: Post-installed concrete anchor that develops tensile strength from mechanical interlock provided by creation of an undercut "key" at the embedded end of the anchor. The undercut may be achieved with a special drill before anchor installation, or by the anchor itself during installation.
2. Acceptance criteria:
   a. Acceptance criteria: Undercut concrete anchors shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified for performance in both cracked and un-cracked concrete, and for short term loading due to wind and seismic forces for Seismic Design Categories A through F in accordance with ACI 355.2 and ICC ES AC193 (including all mandatory tests and optional tests for seismic tension and shear in cracked concrete).
   b. Use pre-setting units. Through setting units are not allowed unless prior written acceptance for specific locations is obtained from the Engineer.
3. Manufacturers: One of the following or equal:
   a. Hilti: HDA (carbon steel) or HAD-R (stainless steel) Undercut Anchor.
   b. Powers fasteners: Atomic+ Undercut Anchor.
   c. Simpson strong-tie: Torq-Cut Anchor.
   d. USP Structural Connectors: DUC-L Undercut Anchors.
4. Materials:
   a. Stainless steel: Corrosive, and wet and moist and locations: Type 316.

2.5 APPURTENANCES FOR ANCHORING AND FASTENING

A. Anchor bolt sleeves
   1. Having inside diameter approximately 2 inches greater than bolt diameter and minimum 10-bolt diameters long.
   2. Plastic sleeves:
      a. High-density polyethylene, corrugated sleeve, threaded to provide adjustment of location on the anchor bolt.
   3. Fabricated steel sleeves: Construct as specified in Section 05_50_00.
      a. At galvanized carbon steel anchor bolts, provide galvanized carbon steel sleeves.
      b. At stainless steel anchor bolts, provide stainless steel sleeves of same Type (304 or 316) as bolt, except that sleeves shall be constructed from low carbon stainless steel for welding (304L or 316L.
   4. Fabricated steel sleeves:
      a. Fabricate to the following dimensions unless otherwise indicated on the Drawings.
         1) Inside diameter: At least 2 inches greater than bolt diameter.
         2) Inside length: Not less than 10 bolt diameters.
         3) Bottom plate:
            a) Square plate with dimensions equal to the outside diameter of the sleeve plus 1/2 inch each side.
            b) Thickness equal to or greater than one-half of the anchor bolt diameter.
      b. Carbon steel anchor bolts:
         1) Fabricated from ASTM A 36 plate and ASTM A 53, Grade B pipe.
         2) Welded connections: Conform to requirements of AWS D1.1
         3) Hot dip galvanized in accordance with ASTM A 153.
      c. Stainless steel anchor bolts:

1) Fabricated from ASTM A 240 plate and pipe. Type 304L or Type 316L to match Type of the anchor bolt.
2) Welded connections: In accordance with AWS D1.6.

B. Forged steel hardware:
1. See Section 05_12_05 for forged steel hardware connectors, including: clevises, turnbuckles, eye bolts, eye nuts, and sleeve nuts.

C. Isolating sleeves and washers.
1. Manufacturers: One of the following or equal:
a. Central Plastics Company, Shawnee, Oklahoma.
b. Corrosion Control Products, PSI Inc., Gardena, CA.
2. Sleeves: Mylar, 1/32 inch thick, 4,000 volts per mil dielectric strength, of proper size to fit bolts and extending half way into both steel washers.
3. One sleeve required for each bolt.
4. Washers: The inside diameter of all washer shall fit over the isolating sleeve and both the steel and isolating washers shall have the same inside diameter and outside diameter.
a. Proper size to fit bolts. 2 insulating washers are required for each bolt.
b. Two 1/8-inch thick steel washers for each bolt.
c. G3 Phenolic:
1) Thickness: 1/8 inch.
2) Base material: Glass.
3) Resin: Phenolic.
4) Water absorption: 2 percent.
5) Hardness (Rockwell): 100.
6) Dielectric strength: 450 volts per mil.
7) Compression strength: 50,000 pounds per square inch.
8) Tensile strength: 20,000 pounds per square inch.
9) Maximum operating temperature: 350 degrees Fahrenheit.

D. Coating for repair of galvanized surfaces.
1. Manufacturers: One of the following or approved equal:
a. Galvinox.
b. Galvo-Weld.

E. Thread coating. For use with threaded stainless steel fasteners.
1. Manufacturers: One of the following or equal:
a. Never Seez Compound Corporation, Never-Seez.
b. Oil Research, Inc., WLR No. 111.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine Work in place to verify that it is satisfactory to receive the Work of this Section. If unsatisfactory conditions exist, do not begin this Work until such conditions have been corrected.

3.2 INSTALLATION: GENERAL

A. Where anchors and fasteners are not specifically indicated on the Drawings or specified, make attachments with materials specified in this Section.

B. Substitution of anchor types.
   1. Post-installed anchors may not be used as an alternative to cast-in / built-in anchors at locations where the latter are indicated on the Drawings.
   2. Cast-in/built-in anchors may be used as an alternative to post-installed mechanical anchors at locations where the latter are indicated on the Drawings.

C. Protect products from damage during installation. Take special care to protect threads and threaded ends.

D. Accurately locate and position anchors and fasteners.
   1. Unless otherwise indicated on the Drawings, install anchors perpendicular to the surfaces from which they project.
   2. Install anchors so that at least 2 threads, but not more than 1/2 inch of threaded rod, projects past the top nut.

E. Interface with other products:
   1. Where steel anchors come in contact with dissimilar metals (aluminum, stainless steel, etc.), bolt with stainless steel bolts and separate or isolate dissimilar metals using isolating sleeves and washers.
   2. Prior to installing nuts, coat threads of stainless steel fasteners with thread coating to prevent galling of threads.

3.3 INSTALLATION: CAST-IN ANCHORS

A. General:
   1. Accurately locate cast-in and built-in anchors.
      a. Provide anchor setting templates to locate anchor bolts and anchor rods. Secure templates to formwork.
      b. Brace or tie off embedments as necessary to prevent displacement during placement of plastic concrete or of surrounding masonry construction.
      c. Position and tie cast-in and built-in anchors in place before beginning placement of concrete or grout. Do not "stab" anchors into plastic concrete, mortar, or grout.
      d. Do not allow cast-in anchors to touch reinforcing steel. Where cast-in anchors are within 1/4 inch of reinforcing steel, isolate the metals by wrapping the anchors with a minimum of 4 wraps of 10-mil polyvinyl chloride tape in area adjacent to reinforcing steel.
   2. For anchoring at machinery bases subject to vibration, use 2 nuts, with 1 serving as a locknut.
   3. Where anchor bolts or anchor rods are indicated on the Drawings as being for future use, thoroughly coat exposed surfaces that project from concrete or masonry with non-oxidizing wax. Turn nuts down full length of the threads, and neatly wrap the exposed thread and nut with a minimum of 4 wraps of 10-mil waterproof polyvinyl tape.

B. Anchor bolts:
   1. Minimum effective embedment: 10-bolt diameters, unless a longer embedment is indicated on the Drawings.
   2. Where indicated on the Drawings, set anchor bolts in plastic, galvanized steel or stainless steel sleeves to allow for adjustment. Seal top of sleeve to prevent grout from filling sleeve.

C. Anchor rods.
   1. Install as specified for anchor bolts.

D. Concrete inserts.
   1. Provide inserts with minimum clear concrete cover not less than that specified for reinforcing bars.

E. Deformed bar anchors.
   1. Butt weld to steel fabrications with automatic stud welding gun as recommended by manufacturer.
   2. Ensure that butt weld develops the full strength of the anchor.

F. Welded studs:
   1. Butt weld to steel fabrications with automatic stud welding gun as recommended by the manufacturer.
   2. Ensure that butt weld develops full strength of the stud.

3.4 INSTALLATION: POST-INSTALLED ADHESIVE ANCHORS.

A. Epoxy and acrylic adhesive bonding of reinforcing bars, all thread rods, and internally threaded inserts in concrete: As specified in Section 03_21_17.

B. Epoxy and acrylic adhesive bonding of reinforcing bars, all thread rods, and internally threaded inserts in masonry: As specified in Section 04_05_18.

3.5 INSTALLATION: POST-INSTALLED MECHANICAL ANCHORS.

A. General:
   1. Install anchors in accordance with the manufacturer's instructions, ACI 355.2, the anchor's ICC-ES Report. Where conflict exists between the ICC-ES Report and the requirements in this Section, the requirements of the ICC-ES Report shall control.
   2. Where anchor manufacturer recommends the use of special tools and/or specific drill bits for installation, provide and use such tools.
   3. After anchors have been positioned and inserted into concrete or masonry, do not:
      a. Remove and reuse/reinstall anchors.
      b. Loosen or remove bolts or studs.

B. Holes drilled into concrete and masonry:
   1. Do not drill holes in concrete or masonry until the material has achieved its minimum specified compression strength (f'c or f'm).
   2. Accurately locate holes.

a. Before drilling holes, use a reinforcing bar locator to identify the position of all reinforcing steel, conduit, and other embedded items within a 6-inch radius of each proposed hole.
b. If the hole depth exceeds the range of detection for the rebar locator, the Engineer may require radiographs of the area designated for investigation before drilling commences.

3. Exercise care to avoid damaging existing reinforcement and other items embedded in concrete and masonry.
   a. If embedments are encountered during drilling, immediately stop work and notify the Engineer. Await Engineer's instructions before proceeding.
4. Unless otherwise indicated on the Drawings, drill holes perpendicular to the concrete surface into which they are placed.
5. Drill using anchor manufacturer's recommended equipment and procedures.
   a. Unless otherwise recommended by the manufacturer, drill in accordance with the following:
      1) Drilling equipment: Electric or pneumatic rotary type with light or medium impact. Where edge distances are less than 2 inches, use lighter impact equipment to prevent micro-cracking and concrete spalling during drilling process.
      2) Drill bits: Carbide-tipped in accordance with ANSI B212-15. Hollow drills with flushing air systems are preferred.
6. Drill holes at manufacture's recommended diameter and to depth required to provide the effective embedment indicated.
7. Clean and prepare holes as recommended by the manufacturer and as required by the ICC-ES Report for that anchor.
   a. Unless otherwise recommended by anchor manufacturer, remove dust and debris using brushes and clean compressed air.
   b. Repeat cleaning process as required by the manufacturer's installation instructions.
   c. When cleaning holes for stainless steel anchors, use only stainless steel or non-metallic brushes.

C. Insert and tighten (or torque) anchors in full compliance with the manufacturer's installation instructions.
   1. Once anchor is tightened (torque), do not attempt to loosen or remove its bolt or stud.

D. Concrete anchors: Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Concrete Anchors			
Nominal Diameter	Minimum Effective Embedment Length		Minimum Required Member Thickness
	In Concrete	In Grouted Masonry	
3/8 inch	2 1/2 inch	2 5/8 inch	8 inch
1/2 inch	3 1/2 inch	3 1/2 inch	8 inch
5/8 inch	4 1/2 inch	4 1/2 inch	10 inch
3/4 inch	5 inch	5 1/4 inch	12 inch

E. Flush shell anchors:
1. Flush shell anchors are not permitted in the Work.
2. If equipment manufacturer's installation instructions recommend the use of flush shell anchors, contact Engineer for instructions before proceeding.

F. Sleeve anchors:
1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Sleeve Anchors			
Nominal Diameter	Minimum Effective Embedment Length		Minimum Member Thickness
	In Concrete	In Grouted Masonry	
M8 (1/2 inch)	70 mm (2 3/4 inch)	Not accepted	100 mm (8 inch)
M10 (5/8 inch)	76 mm (3 inch)	Not accepted	250 mm (10 inch)
M12 (3/4 inch)	80 mm (3 1/4 inch)	Not accepted	300 mm (12 inch)

2. Install with the sleeve fully engaged in the base material.

G. Screw anchors:
1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Screw Anchors			
Nominal Diameter	Minimum Effective Embedment Length		Minimum Member Thickness
	In Concrete	In Grouted Masonry	
3/8 inch	2 1/2 inch	3 1/4 inch	8 inch
1/2 inch	3 1/4 inch	4 1/2 inch	8 inch
5/8 inch	4 inch	5 inch	10 inch
3/4 inch	5 1/2 inch	6 1/4 inch	12 inch

2. Install screw anchors using equipment and methods recommended by the manufacturer. Continue driving into hole until the washer head is flush against the item being fastened.

H. Undercut concrete anchors:

1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Sleeve Anchors			
Nominal Diameter (bolt)	Minimum Effective Embedment Length		Minimum Member Thickness(1)
	In Concrete	In Grouted Masonry	
M10 (3/8 inch)	100 mm (4 inch)	Not accepted	200 mm (8 inch)
M12 (1/2 inch)	125 mm (5 inch)	Not accepted	350 mm (14 inch)
M16 (5/8 inch)	190 mm (7 1/2 inch)	Not accepted	460 mm (18 inch)
M20 (7/8 inch)	250 mm (10 inch)	Not accepted	510 mm (20 inch)

Notes:
(1) Thickness indicated is for pre-set units. If through-set units are accepted, obtain minimum member thickness requirements from the Engineer.

2. Installations of undercut anchors shall not be allowed where edge distances are less than 12 times the nominal diameter of the anchor stud.
3. Undercut bottom of hole using cutting tools manufactured for this purpose by the manufacturer of the undercut anchors being placed.

3.6 FIELD QUALITY CONTROL

A. Post-installed anchors:

1. Review anchor manufacturer's installation instructions and requirements of the Evaluation Service Report (hereafter referred to as "installation documents") for each anchor type and material.
2. Observe hole-drilling and cleaning operations for conformance with the installation documents.
3. Certify in writing to the Engineer that the depth and location of anchor holes, and the torque applied for setting the anchors conforms to the requirements of the installation documents.

3.7 NON-CONFORMING WORK.

A. Remove miss-aligned or non-performing anchors.

B. Fill empty anchor holes and repair failed anchor locations as specified using high- strength, non-shrink, non-metallic grout.

C. If more than 10 percent of all tested anchors of a given diameter and type fail to achieve their specified torque or proof load, the Engineer will provide directions for required modifications. Make such modifications, up to and including replacement of all anchors, at no additional cost to the Owner.

END OF SECTION

SECTION 05_50_00.01

MISCELLANEOUS METAL FABRICATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Miscellaneous metal fabrications as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. This section specifies metal elements including but not limited to the following. All items listed are not necessarily included in the project, see Project Drawings for specific project requirements.
   1. Shelf angles.
   2. Steel framing and supports for equipment and where framing and supports are not specified in other Sections.
   3. Pipe bollards.
   4. Prefabricated access hatches.
   5. Miscellaneous aluminum construction.

C. Any Drawing or Specification that conflicts with this Specification Section shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the Contractor is to assume that more expensive product/system/item applies and shall be included in the Contractor's bid.

D. If design and installation details are not adequately shown on the Drawings, specified herein or recommended by the Manufacturer, the Contractor shall employ the services of an Oklahoma Registered Structural Engineer (SE) and provide stamped design and details along with a submittal cover letter stating submittal complies with all references and standards cited herein.

E. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Division 3 - Concrete

D. Division 5 - Metals

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Shop Drawings
1. Submit shop drawings as required by the Contract Documents.
2. Submit detailed shop drawings showing sizes of members, method of assembly, anchorage, and connection to other members for approval prior to fabrication.

C. Submit Manufacturer's product data including span and deflection tables and details of construction.

D. Submit Manufacturer's installation instructions.

E. Submit samples if requested by the Engineer.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

PART 2 PRODUCTS

2.1 GENERAL

A. For metal fabrications exposed to view in the completed work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

2.2 ALUMINUM

A. Materials
1. Aluminum structural shapes, bars and plates:
a. Alloy 6061-T6 or 6063-T5.
2. Extruded aluminum pipe:
a. Alloy 6063-T6 or 6061-T6.
3. Aluminum Castings:
a. Alloy 535.

B. Fabrication
1. Follow general fabrication requirements elsewhere in this Section.
2. Fabricate miscellaneous aluminum shapes and plates as shown. Furnish welded and mitered angle frames and other fabrications complete with welded anchors attached. Furnish all miscellaneous aluminum shown but not otherwise detailed. Structural shapes and extruded items shall comply with the dimensions on the Drawings within the tolerances published by the Aluminum Association.
3. Weld aluminum work on the unexposed side when possible in order to prevent pitting or discoloration of exposed aluminum surfaces.

C. Finishes

1. All exposed aluminum surfaces shall have anodized finish unless otherwise specified. Apply a coat of methacrylate lacquer to all aluminum before shipment.

2.3 FERROUS METALS

A. Structural Steel:
   1. All rolled structural shapes, plates and bars must meet the standards for ASTM A992 and ASTM A572, Grade 50 unless otherwise shown in the Drawings.
   2. Clip angles, stiffeners, plates and other detail items must conform to standards of the main member to which the items are attached unless noted otherwise.

B. Steel Pipe
   1. Conform to ASTM A53, Type E or S, Grade B, welded or seamless. No hydrostatic tests required.

C. Structural Steel Tubing:
   1. Conform to ASTM A500, Grade B, with minimum yield strength of 46,000 psi. No hydrostatic tests required.

D. Stainless Steel:
   1. Use the stainless steel grade indicated on the drawings (304 or 316). Where the grade is not specified use AISI 316. Use a weldable (304L or 316L) grade of stainless steel for welded items.
   2. For all stainless steel, required minimum yield strength is as follows unless otherwise noted on the Drawings.
      a. 304 or 316: 30,000 psi.
      b. 304L or 316L: 25,000 psi.

E. Slotted Channel Framing:
   1. Galvanized steel cold-formed metal channels with flange edges returned toward web and with 9/16-inch wide slotted holes in webs at 2 inches on center.
   2. Fabricate from steel conforming to ASTM A1101, GR 33.
   3. Channel width:
      a. As indicated on the Drawings.
   4. Channel depth:
      a. As indicated on the Drawings.

F. Gray-Iron Castings:
   1. Gray iron castings conforming to ASTM A48, Class 30 unless another class is indicated or required by structural loads.

2.4 FASTENERS:

A. Provide ASTM F593, Type 316 fasteners for exterior use or when called for in the Drawings.

B. Structural Steel Bolts, Nuts & Washers
   1. Bolts & Nuts:
      a. Use high-strength bolts, conforming to ASTM A325 with hex nuts.
   2. Washers
      a. Plain washers, use round, carbon steel, ASME B18.22.1.
      b. Lock washers, use helical, spring type, carbon steel, ASME B18.22.1.

C. Prefabricated access hatches
1. General Requirements:
a. Provide prefabricated access hatches of the sizes and types shown on the Drawings.
b. Door leaf(s) shall be aluminum diamond plate as shown on Drawings.
c. Unless otherwise noted on the Drawings, use pivot torsion bars for counterbalance or spring operators for easy operation. Doors shall open to 90 degrees with automatic door hold open and shall be provided with a grip handle to release the cover for closing.
d. Hardware shall be durable and corrosion resistant with Type 316 stainless steel hardware used throughout. Provide removable lock handle.
e. Provide factory mill finish and bituminous coating to the exterior of the frames. Where specified to be watertight, a 1-1/2-inch drainage coupling shall be provided in the perimeter channel frame.
f. Break bond between dissimilar metals using a heavy coat of alkali resistant bituminous paint, or other coating recommended by the Manufacturer that will provide equivalent protection. Otherwise, hatches used at exposed exterior locations shall be weather stripped or sealed to resist penetration of water. Embedded frame with embedment anchors shall be supplied by the hatch Manufacturer.
g. Manufacturers shall provide access hatch with aluminum safety grating panel installed beneath access covers to provide additional protection against fall through accidents when the cover is left in the open position. The aluminum grating panel shall be designed, anchored, etc., by the hatch Manufacturer.
2. Load Requirements:
a. Hatches shall be designed to withstand an unfactored concentrated wheel loading (live load) of 16,000 lbs with an impact factor of 1.33 over a 20 inch by 10 inch tire contact area or an unfactored live load of 250 pounds per square foot, whichever produces the greatest stresses.
3. Acceptable Manufacturers: Subject to compliance with requirements, provide prefabricated roof hatch units by one of the following:
1) Halliday Products, Inc., Orlando, FL.

2.5 SHELF ANGLES

A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated in the Drawings.

B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete. Align expansion joints in angles with indicated control and expansion joints in cavity-wall exterior wythe.

C. Galvanized shelf angles to be installed in exterior walls.

D. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete unless otherwise indicated in the Drawings.

2.6 PIPE BOLLARDS

A. Fabricate pipe bollards from Schedule 80 steel pipe. Cap bollards consistent with details in the Drawings.

B. Where indicated, fabricate bollards with steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for anchor bolts. Base plate and anchor bolts size shall be as shown on Drawings. Where bollards are to be anchored to sloping concrete slabs, angle base plates for plumb alignment of bollards.

C. PREFABRICATED ACCESS HATCHES

D. Hatches:
1. General Requirements:
a. Provide prefabricated access hatches of the sizes and types shown on the Drawings.
b. Door leaf(s) shall be aluminum diamond plate as shown on Drawings.
c. Unless otherwise noted on the Drawings, use pivot torsion bars for counterbalance or spring operators for easy operation. Doors shall open to 90 degrees with automatic door hold open and shall be provided with a grip handle to release the cover for closing.
d. Hardware shall be durable and corrosion resistant with Type 316 stainless steel hardware used throughout. Provide removable lock handle.
e. Provide factory mill finish and bituminous coating to the exterior of the frames. Where specified to be watertight, a 1-1/2-inch drainage coupling shall be provided in the perimeter channel frame.
f. Break bond between dissimilar metals using a heavy coat of alkali resistant bituminous paint, or other coating recommended by the Manufacturer that will provide equivalent protection. Otherwise, hatches used at exposed exterior locations shall be weather stripped or sealed to resist penetration of water. Embedded frame with embedment anchors shall be supplied by the hatch Manufacturer.
g. Manufacturers shall provide access hatch with aluminum safety grating panel installed beneath access covers to provide additional protection against fall through accidents when the cover is left in the open position. The aluminum grating panel shall be designed, anchored, etc., by the hatch Manufacturer.
2. Load Requirements:
a. Hatches shall be designed to withstand an unfactored concentrated wheel loading (live load) of 16,000 lbs with an impact factor of 1.33 over a 20 inch by 10 inch tire contact area or an unfactored live load of 250 pounds per square foot, whichever produces the greatest stresses.
3. Acceptable Manufacturers: Subject to compliance with requirements, provide prefabricated roof hatch units by one of the following:
1) Halliday Products, Inc., Orlando, FL.

2.7 GALVANIZING

A. Hot-dipped zinc coat structural items specifically designated as galvanized after fabrication. Conform to the applicable standard, ASTM A123 or ASTM A153.

B. Use repair coating which conforms to ASTM A780. Acceptable products include:
   1. Carboline Carbo Zinc No. 11.
   2. Galv-Weld Products Galv-Weld Alloy.
   3. Koppers Organic Zinc coating.

C. Unless otherwise noted all structural steel shall be galvanized.

2.8 FABRICATION

A. Begin fabrication of structural steel only after shop drawings have been reviewed with no exceptions taken. Fabricate according to AISC and ASTM reference standards, codes, and these specifications unless directed or shown otherwise.

B. Fabricate structural members completely in the shop. Assemble structural assemblies in the shop to the greatest extent possible.

C. Drill, punch, cut and tap steel as required for anchorage, connection, or accommodating other work as shown, specified, or otherwise directed. Items with burned holes are considered defective and must be removed and replaced.

2.9 WELDING

A. Perform welding in accord with the AWS reference standard. Use procedures such as preheat or interpass temperature as recommended by AWS standards.

B. All shop and field welding must be performed by qualified welders who hold current welding certificates.

C. Surfaces to be welded must be free of loose scale, slag, rust, grease, paint and other foreign material. Mill scale which withstands vigorous wire brushing may remain.

D. Joint surfaces must be free of fins and tears caused by shearing. Wherever practicable, prepare edges by gas cutting using a mechanically guided torch.

E. Electrodes:
   1. For structural steel, use AWS Low Hydrogen, Electrode E70XX Series suitable for the welding process used.
   2. For stainless steel, use 70 ksi minimum tensile strength filler material suitable for base metals and welding process in accordance with AWS specifications.
   3. For aluminum, use filler alloy 5356 in accordance with AWS specifications.

F. Protect electrodes from exposure to moisture and coating.

G. If shop welding is done by automatic, submerged arc process, verify that physical properties of deposited weld metal will be similar to properties of the base metal.

H. No welding shall be done when the temperature of the base metal is below 32°F.

I. The cover bead or finish pass must have a smooth, uniform surface with reinforcement of 1/16 to 1/8 inch. Surface voids, cracks in finish weldments, or undercutting of base metal at the fusion line is not acceptable.

2.10 SURFACE PREPARATION AND PAINTING

A. All surfaces shall be prepared and finished in accordance with Division 9 requirements unless otherwise noted in the Drawings. Structural steel shall be shop primed. Stainless steel shall not be coated unless otherwise specified in the Drawings or elsewhere in the Specifications.

B. Galvanize structural steel items specifically shown or specified as galvanized in the Drawings. Members that are warped during the galvanizing process will be rejected.

2.11 INSPECTION AND TESTING

A. Mill or shop inspection and non-destructive testing (in addition to field inspection and non-destructive testing) may be done by the Owner.

B. Inspection in mill, shop, or field in no way relieves the Contractor from his responsibility to furnish satisfactory materials. Right is reserved to reject material at any time before final acceptance if material and workmanship do not conform to drawings and specifications.

PART 3 EXECUTION

3.1 ERECTION

A. Erect the structure according to AISC specifications and codes and reviewed shop drawings.

B. Give careful attention to leveling and plumbing of structural steel at all stages of construction.

C. Provide temporary shoring and bracing of sufficient strength to support imposed loads. Remove temporary shoring and bracing when permanent members are fully in place and all final connections have been made.

D. Furnish templates for setting anchor bolts in concrete.

E. Support column base plates on steel wedges with no portion of a wedge within one inch of base plate edge. Apply grout at base plates according to Manufacturer's recommendations.

F. Drift pins may be used only to bring parts together if used carefully so as not to distort or damage metal.

G. Connections shall be welded or bolted as shown. Weld as previously specified in this section. Install high strength bolts according to the RCRBSJ reference standard. Tighten by turn-of-the-nut method.

3.2 FIELD MODIFICATION

A. Field modification of structural steel members or assemblies is not permitted. Fabrication errors shall be corrected in the shop unless written approval is obtained in advance from the Engineer.

B. The use of a gas cutting torch for correcting fabrication errors or fit up issues is not permitted.

C. Where field holes are called for in the Drawings or reviewed shop drawings, create holes by drilling only.

3.3 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. Install framing and supports to comply with requirements of items being supported, including Manufacturers' written instructions and requirements indicated on Shop Drawings, if any.

3.4 INSTALLING PIPE BOLLARDS

A. Anchor bollards in place with concrete footings as shown in the Drawings. Support and brace bollards in position in footing excavations until concrete has been placed and cured.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting:
   1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA1 for touching up shop-painted surfaces. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
   2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09_91_00.13.

B. Repair of Galvanized Surfaces:
   1. Thoroughly clean field welds, bolted connections, abrasions, abraded areas and galvanized surfaces damaged from welding, handling, or installation shall be repaired immediately after installation with galvanizing repair material. Apply matching galvanized repair coat as specified in this Section. Galvanizing repair shall be performed and completed before concrete is placed. Any member requiring repair of more than 2 percent of the surface area shall be rejected.

END OF SECTION

SECTION 05_51_00.13

METAL LADDERS PLATFORMS & STAIRS

PART 1 GENERAL

1.1 SUMMARY

A. Metal ladders, platforms & stairs as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

C. Shop Drawings
1. Submit detailed shop drawings showing sizes of members, method of assembly, anchorage, and connection to other members for approval prior to fabrication.

D. Information shown on the Drawings is for reference only as to location. It is the intent that the any system / component be provided in a single system from a single manufacturer and designed and detailed under the supervision of an Oklahoma Registered Structural Engineer (SE.)

E. Provide a letter sealed by a Licensed Professional Structural Engineer (SE) in the State which the project will be built stating that the proposed items have been designed and detailed under their supervision and meet all codes referenced by this Section and requirements of this Section.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Division 3 – Concrete

D. Division 5 – Metals

E. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Shop Drawings
1. Submit shop drawings as specified in Division 1, General Provisions and required by the Contract Documents.
2. Submit detailed shop drawings showing sizes of members, method of assembly, anchorage, and connection to other members for approval prior to fabrication.

C. Provide a letter sealed by a Licensed Professional Structural Engineer in the State which the project will be built stating that the proposed items have been designed and detailed under their supervision and meet all codes referenced by this Section and requirements of this Section.

D. Submit Manufacturer's product data including span and deflection tables and details of construction.

E. Submit Manufacturer's installation instructions.

F. Submit samples if requested by the Engineer.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

K. United States Department of Labor:
1. OHSA Regulations (Standards - 29 CFR); Part 1926 - Safety and Health Regulations for Construction.

PART 2 PRODUCTS

2.1 GENERAL

A. For metal fabrications exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

2.2 ALUMINUM

A. Materials
1. Aluminum structural shapes, bars and plates:
a. Alloy 6061-T6 or 6063-T5.
2. Extruded aluminum pipe:
a. Alloy 6063-T6 or 6061-T6.
3. Aluminum Castings:
a. Alloy 535.

B. Fabrication
1. Follow general fabrication requirements elsewhere in this Section.
2. Fabricate aluminum shapes and plates as shown. Furnish welded and mitered angle frames and other fabrications complete with welded anchors attached. Furnish all miscellaneous aluminum shown but not otherwise detailed. Structural shapes and extruded items shall comply with the dimensions on the Drawings within the tolerances published by the Aluminum Association.

3. Weld aluminum work on the unexposed side when possible, in order to prevent pitting or discoloration of exposed aluminum surfaces.

C. Finishes
1. All exposed aluminum surfaces shall ave anodized finish unless otherwise specified. Apply a coat of methacrylate lacquer to all aluminum before shipment.

2.3 FERROUS METALS

A. Structural Steel:
1. All rolled structural shapes, plates and bars must meet the standards for ASTM A992 and ASTM A572, Grade 50 unless otherwise shown in the Drawings or called for in design.
2. Clip angles, stiffeners, plates and other detail items must conform to standards of the main member to which the items are attached unless noted otherwise.

B. Steel Pipe
1. Conform to ASTM A53, Type E or S, Grade B, welded or seamless. No hydrostatic tests required.

C. Structural Steel Tubing:
1. Conform to ASTM A500, Grade B, with minimum yield strength of 46,000 psi. No hydrostatic tests required.

D. Stainless Steel:
1. Use the stainless-steel grade indicated on the drawings (304 or 316). Where the grade is not specified use AISI 316. Use a weldable (304L or 316L) grade of stainless steel for welded items.
2. For all stainless steel, required minimum yield strength is as follows unless otherwise noted on the Drawings.
a. 304 or 316: 30,000 psi.
b. 304L or 316L: 25,000 psi.

2.4 FASTENERS:

A. Provide ASTM F593, Type 316 fasteners for exterior use or when called for in the Drawings.

B. Structural Steel Bolts, Nuts & Washers
1. Bolts & Nuts:
a. Use high-strength bolts, conforming to ASTM A325 with hex nuts.
2. Washers
a. Plain washers, use round, carbon steel, ASME B18.22.1.
b. Lock washers, use helical, spring type, carbon steel, ASME B18.22.1.

2.5 ALUMINUM LADDERS

A. Performance Criteria
1. Fixed ladders and side extensions shall meet the load requirements of ASCE-7, Section 4.5.4.
2. Fixed ladders and accessories shall be certified as meeting current requirements of reference standards IBC, ANSI, ASCE-7 and OSHA.

B. Materials:
1. Side Rails/Safety Cages, Rail Extension, and Platform:
a. Aluminum plates, alloy 6061-T6
b. Aluminum extrusions, alloy 6063-T5.
2. Rungs:
a. Knurled or serrated aluminum bars, 1.25-inch in square section, alloy 6061-T6.
b. Weld size and filler material shall meet required design strength.
3. Rail Extension:
a. Minimum 3'-6" above the landing and shall be fitted with deeply serrated, square, tubular grab rails.
4. Safety cage:
a. Provide safety cage on all ladders over 20 feet unless otherwise noted in the Drawings.
5. Landing Platform:
a. Provide at 30 foot intervals above the bottom of the ladder, complete with 1- 1/2 inch or greater diameter tubular aluminum guard rails and decks of serrated aluminum treads.
6. Wall/Floor Support Brackets:
a. Aluminum plates, alloy 6061-T6.
b. 316 SS fasteners/rigid attack/locking.

C. Acceptable Manufacturers:
1. O'Keefe's.
2. Alaco.

D. Ladder safety post extensions
1. Each fixed ladder occurring below a hatch door shall be provided with an attached telescoping safety post extension of aluminum construction. Unit shall be completely assembled with stainless steel fasteners and brackets for securing to the ladder rungs provided by the Manufacturer.
2. Acceptable Manufacturers: Bilco - Ladder Up Safety Post, Model 2; or equal.

2.6 STEEL LADDERS

A. Performance Criteria
1. Fixed ladders and side extensions shall meet the load requirements of ASCE-7, Section 4.5.4.
2. Fixed ladders and accessories shall be certified as meeting current requirements of reference standards IBC, ANSI, ASCE-7 and OSHA.

B. Materials:
1. General:
a. Provide stainless steel, coated steel or galvanized steel as called for in the Drawings.
2. Fasteners:
a. Provide fasteners of the same material type as the ladder elements.
b. Provide stainless steel anchor bolts unless otherwise specified in the Drawings.

C. Acceptable Manufacturers:

1. O'Keefe's.
2. Alaco.

D. Ladder safety post extensions
1. Each fixed ladder occurring below a hatch door shall be provided with an attached telescoping safety post extension of aluminum construction. Unit shall be completely assembled with stainless steel fasteners and brackets for securing to the ladder rungs provided by the Manufacturer.
2. Acceptable Manufacturers:
a. Bilco - Ladder Up Safety Post, Model 2; or equal.

2.7 SHIPS LADDERS

A. Performance Criteria
1. Ships ladders shall meet the load requirements of stairs per ASCE-7, Section 4.5.4 and Table 4-1
2. Ships ladders and accessories shall be certified as meeting current requirements of reference standards IBC, ANSI, ASCE-7 and OSHA.

B. Materials:
1. Aluminum:
a. Alloy 6061-T6 or 6063-T5.
2. Wall/Floor Support:
a. 316 SS fasteners/anchors.

C. Acceptable Manufacturers:
1. O'Keefe's.
2. Alaco.

2.8 STAIRS AND PLATFORMS

A. General
1. Provide stairs and platforms of the material designated where shown in the Drawings. If stair or platform details are not shown, provide a system meeting the criteria in this Section.

B. Performance Criteria
1. Fixed stairs and landing shall meet the load requirements of ASCE-7, Table 4-1.
2. Platforms shall be designed for the following loads, choose whichever gives the greatest stresses:
a. Uniform Live Load: 125 psf
b. Concentrated Live Load: 1,500 lbs.
c. Maximum Clear Span Deflection:
1) L/360 or 1/4 inch, whichever is less, under uniform loading of 100 psf.
3. Fixed stairs, landings, platforms and accessories shall be certified as meeting current requirements of reference standards IBC, ANSI, ASCE-7 and OSHA.

C. Geometric Requirements:

1. Meet all geometric requirements for stair tread sizes, rise/run, landing locations and sizes, clearances, etc. of the reference codes and standards listed in this section.

D. Materials:
   1. General:
      a. Provide the material as called for in the Drawings.
   2. Fasteners:
      a. Provide fasteners of the same material type as the stair or platform elements.
      b. Provide stainless steel anchor bolts unless otherwise specified in the Drawings.

E. Acceptable Manufacturers:
   1. O'Keefe's.
   2. Alaco.

2.9 GALVANIZING:

A. Hot-dipped zinc coat structural items specifically designated as galvanized after fabrication. Conform to the applicable standard, ASTM A123 or ASTM A153.

B. Use repair coating which conforms to ASTM A780. Acceptable products include:
   1. Carboline Carbo Zinc No. 11.
   2. Galv-Weld Products Galv-Weld Alloy.
   3. Koppers Organic Zinc coating.

C. Unless otherwise noted all structural steel shall be galvanized.

2.10 FABRICATION

A. Fabricate according to industry reference standards, codes, and these specifications unless directed or shown otherwise.

B. Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

C. Shear and punch metals cleanly and accurately. Remove burrs.

D. Ease exposed edges to a radius of approximately 1/32-inch (1 mm), unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Weld corners and seams continuously to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

G. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

H. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.

I. Allow for thermal movement resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening up of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

J. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.

K. Remove sharp or rough areas on exposed traffic surfaces.

L. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.

2.11 WELDING

A. Perform welding in accord with the AWS reference standard. Use procedures such as preheat or interpass temperature as recommended by AWS standards.

B. All shop and field welding must be performed by qualified welders who hold current welding certificates.

C. Surfaces to be welded must be free of loose scale, slag, rust, grease, paint and other foreign material. Mill scale which withstands vigorous wire brushing may remain.

D. Joint surfaces must be free of fins and tears caused by shearing. Wherever practicable, prepare edges by gas cutting using a mechanically guided torch.

E. Electrodes:
1. For structural steel, use AWS Low Hydrogen, Electrode E70XX Series suitable for the welding process used.
2. For stainless steel, use 70 ksi minimum tensile strength filler material suitable for base metals and welding process in accordance with AWS specifications.
3. For aluminum, use filler alloy 5356 in accordance with AWS specifications.
4. Protect electrodes from exposure to moisture and coating.

F. If shop welding is done by automatic, submerged arc process, verify that physical properties of deposited weld metal will be similar to properties of the base metal.

G. No welding shall be done when the temperature of the base metal is below 32°F.

H. The cover bead or finish pass must have a smooth, uniform surface with reinforcement of 1/16 to 1/8 inch. Surface voids, cracks in finish weldments, or undercutting of base metal at the fusion line is not acceptable.

2.12 SURFACE PREPARATION AND PAINTING

A. All surfaces shall be prepared and finished in accordance with Division 9 requirements unless otherwise noted in the Drawings. Structural steel shall be shop primed. Stainless steel shall not be coated unless otherwise specified in the Drawings or elsewhere in the Specifications.

B. Galvanize structural steel items specifically shown or specified as galvanized in the Drawings. Members that are warped during the galvanizing process will be rejected.

2.13 INSPECTION AND TESTING

A. Mill or shop inspection and non-destructive testing (in addition to field inspection and non-destructive testing) may be done by the Owner.

B. Inspection in mill, shop, or field in no way relieves the Contractor from his responsibility to furnish satisfactory materials. Right is reserved to reject material at any time before final acceptance if material and workmanship do not conform to drawings and specifications.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install items according to industry specifications and codes and reviewed shop drawings.

B. Fastening to In-Place Construction:
1. Provide anchorage devices and fasteners where necessary for securing metal fabrications to in-place construction. Include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts and other connectors.

C. Cutting, Fitting, and Placement:
1. Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size

limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with the following requirements:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

3.2 INSTALLING LADDERS

A. Install ladders to comply with requirements of the Drawings, Specifications and any Manufacturers' written instructions and requirements.

3.3 ADJUSTING AND CLEANING

A. Touchup Painting:
1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA1 for touching up shop-painted surfaces. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 9.

B. Repair of Galvanized Surfaces:
1. Thoroughly clean field welds, bolted connections, abrasions, abraded areas and galvanized surfaces damaged from welding, handling, or installation shall be repaired immediately after installation with galvanizing repair material. Apply matching galvanized repair coat as specified in this Section. Galvanizing repair shall be performed and completed before concrete is placed. Any member requiring repair of more than 2 percent of the surface area shall be rejected.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 05_52_00

METAL RAILINGS

PART 1 GENERAL

1.1 SUMMARY

A. Metal railings as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. Any Drawing or Specification that conflicts with this Specification Section shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the Contractor is to assume that more expensive & restrictive product/system/item applies and shall be included in the Contractor's bid.

C. Information shown on the Drawings is for reference only as to location. It is the intent that the any system / component be provided in a single system from a single manufacturer and designed and detailed under the supervision of an Oklahoma Registered Structural Engineer (SE.)

D. Provide a letter sealed by a Licensed Professional Structural Engineer (SE) in the State which the project will be built stating that the proposed items have been designed and detailed under their supervision and meet all codes referenced by this Section and requirements of this Section.

E. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Shop Drawings
   1. Submit shop drawings as specified in Division 1, General Provisions and required by the Contract Documents.
   2. Submit detailed shop drawings showing sizes of members, method of assembly, anchorage, and connection to other members for approval prior to fabrication.

C. Provide a letter sealed by a Licensed Professional Structural Engineer in the State which the project will be built stating that the proposed items have been designed and detailed under their supervision and meet all codes referenced by this Section and requirements of this Section.

D. Submit Manufacturer's product data including span and deflection tables and details of construction.

E. Submit Manufacturer's installation instructions.

F. Submit samples if requested by the Engineer.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

F. United States Department of Labor:
   1. OHSA Regulations (Standards - 29 CFR):
      a. Part 1926 - Safety and Health Regulations for Construction.

PART 2 PRODUCTS

2.1 GENERALS

A. Provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

2.2 ALUMINUM

A. Materials
   1. Aluminum structural shapes, bars and plates:
      a. Alloy 6061-T6.
   2. Extruded aluminum pipe:
      a. Alloy 6063-T6 or 6061-T6.
   3. Aluminum Castings:
      a. Alloy 535.

B. Fabrication

1. Follow general fabrication requirements elsewhere in this Section.
2. Structural shapes and extruded items shall comply with the dimensions on the Drawings within the tolerances published by the Aluminum Association.
3. Weld aluminum work on the unexposed side when possible in order to prevent pitting or discoloration of exposed aluminum surfaces.

C. Finishes
1. All exposed aluminum surfaces shall have anodized finish unless otherwise specified. Apply a coat of methacrylate lacquer to all aluminum before shipment.

2.3 GALVANIZED STEEL

A. Materials
1. Use ASTM A53, Type E or S, Grade B, welded or seamless steel pipe. No hydrostatic tests required.

B. Fabrication
1. Follow general fabrication requirements elsewhere in this Section.
2. Structural shapes shall comply with the dimensions on the Drawings within the tolerances published by AISC.

C. Finishes
1. All exposed surfaces shall be galvanized per the requirements elsewhere in this section.

2.4 STAINLESS STEEL

A. Stainless Steel:
1. Use the stainless steel grade indicated on the drawings (304 or 316). Where the grade is not specified use AISI 316. Use a weldable (304L or 316L) grade of stainless steel for welded items.
2. For all stainless steel, required minimum yield strength is as follows unless otherwise noted on the Drawings.
   a. 304 or 316: 30,000 psi.
   b. 304L or 316L: 25,000 psi.

B. Fabrication
1. Follow general fabrication requirements elsewhere in this Section.
2. Structural shapes shall comply with the dimensions on the Drawings within the tolerances published by AISC.

C. Finishes
1. All stainless steel surfaces shall have fabricator's standard mill finish unless otherwise specified.

2.5 FASTENERS:

A. A. Provide ASTM F593 and F594, Condition CW, Type 316 anchor bolts, nuts and washers.

2.6 ANCHOR BOLTS

A. A. Provide ASTM F593 and F594, Condition CW, Type 316 anchor bolts, nuts and washers.

2.7 HANDRAILS & RAILINGS

A. General:
1. Provide handrail and railing system of the material specified as shown on the Drawings.
2. Provide a system with three (3) rails and posts with a maximum spacing of four (4) feet. Provide toeboards as required by the referenced codes. The layout and geometry of the system must meet the performance criteria requirements referenced by this Section.
3. Where geometric requirements result in post locations at or near end of runs, uniformly space intermediate posts as required to meet loading and deflection criteria specified, but not greater than maximum spacing specified. Where posts are required at straight walkways and other locations where railing is provided on each side, locate railing system posts opposite each other; do not stagger.
4. Provide member sizes and connections to comply with required system performance criteria loadings and minimum safety factor specified in addition to all code requirements within, or referenced by, this Section.

B. Allowable Tolerances:
1. Limit variation of cast-in-place inserts, sleeves and field-drilled anchor and fastener holes to the following:
a. Spacing: ±3/8-inch.
b. Alignment: ±1/4-inch.
c. Plumbness: ±1/8-inch.
2. Minimum Handrails and Railings Systems Plumb Criteria:
a. Limit variation of completed handrail and railing system alignment to 1/4-inch in 12 feet - 0 inches with posts set plumb to within 1/16-inch in 3 foot - 0 inches.
b. Align rails so variations from level for horizontal members and from parallel with rake of stairs and ramps for sloping members do not exceed 1/4-inch in 12 feet - 0 inches.
c. Provide "pencil-line" thin butt joints.

C. Performance Criteria:
1. Handrails, railings, toeboards and all other related components shall be certified to meet:
a. Code requirements of IBC Section 1012 and 1013.
b. Load requirements of ASCE-7, Section 4.5.1.
c. OSHA Regulations Standard 1926.502.
2. If there is a conflict between code requirements, the more stringent requirements shall apply.

D. Expansion Joints:
1. Provide adequate expansion joints within the railing system to accommodate thermal movements by a material temperature range of 120F to 0F without warping or bowing of system components. Distance between expansion joints shall

be based on providing a 1/4-inch wide joint at 70F, which accommodates a movement of 150 percent of the calculated amount of movement for the specified temperature range.

2. Provide expansion joints in handrail and railing systems where systems cross expansion joints in structure.

E. Gates:
1. Hinges: Provide two self-closing hinges for each railing system gate shown on the Drawings.
2. Latches and Stops: Provide one latch and stop with rubber bumper and 1-inch diameter plastic knob for each railing system gate shown on the Drawings.
3. Provide hinges and latches in same material as railing system.

F. Safety Chains:
1. Provide oblong 0.250-inch welded link, Type 316 stainless steel chain, each link 1-1/8-inch by 7/16-inch.
2. Provide stainless steel eyebolts, ¼-inch stainless steel threaded quick links and heavy-duty swivel snaps with spring-loaded latch.

G. Fabrication:
1. Close pipe ends by using prefabricated fittings.
2. Remove burrs from all exposed edges.
3. Weep Holes:
   a. Fabricate joints, which will be exposed to the weather so as to exclude water.
   b. Provide 1/4-inch diameter weep holes at the lowest possible point on all handrail and railing systems posts.
   c. Provide pressure relief holes at closed ends of handrail and railing systems.
4. All railing system posts shall be provided with a circular profile solid reinforcing bar with outside diameter equal to inside diameter of post. Each post shall receive one reinforcing bar.

2.8 FABRICATION

A. Begin fabrication of items only after shop drawings have been reviewed with no exceptions taken. Fabricate according to industry reference standards, codes, and these specifications unless directed or shown otherwise.

B. Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

C. Shear and punch metals cleanly and accurately. Remove burrs.

D. Ease exposed edges to a radius of approximately 1/32-inch (1 mm), unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
1. Weld corners and seams continuously to comply with the following:
2. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

3. Obtain fusion without undercut or overlap.
4. Remove welding flux immediately.

E. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

G. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

H. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.

I. Allow for thermal movement resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening up of joints, overstressing of components, failure of connections, and other detrimental effects. Base

J. engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

K. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.

L. Remove sharp or rough areas on exposed traffic surfaces.

M. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.

2.9 WELDING

A. Perform welding in accord with the AWS reference standard. Use procedures such as preheat or interpass temperature as recommended by AWS standards.

B. All shop and field welding must be performed by qualified welders who hold current welding certificates.

C. Surfaces to be welded must be free of loose scale, slag, rust, grease, paint and other foreign material. Mill scale which withstands vigorous wire brushing may remain.

D. Joint surfaces must be free of fins and tears caused by shearing. Wherever practicable, prepare edges by gas cutting using a mechanically guided torch.

E. Electrodes:
1. For aluminum, use filler alloy 5356 in accordance with AWS specifications.

2. For structural steel, use AWS Low Hydrogen, Electrode E70XX Series suitable for the welding process used.
3. For stainless steel, use 70 ksi minimum tensile strength filler material suitable for base metals and welding process in accordance with AWS specifications.
4. Protect electrodes from exposure to moisture and coating.

F. If shop welding is done by automatic, submerged arc process, verify that physical properties of deposited weld metal will be similar to properties of the base metal.

G. No welding shall be done when the temperature of the base metal is below 32°F.

H. The cover bead or finish pass must have a smooth, uniform surface with reinforcement of 1/16 to 1/8 inch. Surface voids, cracks in finish weldments, or undercutting of base metal at the fusion line is not acceptable.

2.10 GALVANIZING:

A. Hot-dipped zinc coat structural items specifically designated as galvanized after fabrication. Conform to the applicable standard, ASTM A123 or ASTM A153.

B. Use repair coating which conforms to ASTM A780. Acceptable products include:

C. Carboline Carbo Zinc No. 11.

D. Galv-Weld Products Galv-Weld Alloy.

E. Koppers Organic Zinc coating.

F. All non-stainless steel railing not called to be coated in the Drawings or Specifications shall be galvanized.

2.11 INSPECTION AND TESTING

A. Mill or shop inspection and non-destructive testing (in addition to field inspection and non-destructive testing) may be done by the Owner.

B. Inspection in mill, shop, or field in no way relieves the Contractor from his responsibility to furnish satisfactory materials. Right is reserved to reject material at any time before final acceptance if material and workmanship do not conform to drawings and specifications.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install items according to industry specifications and codes and reviewed shop drawings.

3.2 INSTALLING HANDRAILS & RAILINGS

A. Install handrails and railings to comply with requirements of the Drawings, Specifications and any Manufacturers' written instructions and requirements.

3.3 COATING REPAIRS

A. Galvanized Surfaces:

1. Galvanized surfaces damaged from welding, handling, or installation shall be repaired immediately after installation with galvanizing repair material. Galvanizing repair shall be performed and completed before concrete is placed. Any member requiring repair of more than 2% of the surface area shall be rejected and replaced

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 09_91_00.13

PAINTING OF TREATMENT PLANTS

PART 1 GENERAL

1.1 SUMMARY

A. Painting as required by this section of the Contract Documents, uless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. The work includes painting and finishing of interior and exterior exposed items and surfaces such as structural steel, ferrous tanks, miscellaneous metals, ceilings, walls, floors, doors, frames, transoms, roof fans, construction signs, guardrails, posts, fittings, valves, equipment, and all other work obviously required to be painted unless otherwise specified herein or on the drawings NOT SPECIFIED IN ARCHITECTURAL DRAWINGS OR ARCHITECTURAL SPECIFICATIONS. The omission of minor items in the schedule of work shall not relieve the contractor of his obligation to include such items.

C. Any painting system specifically called out in architectural drawings, architectural specifications, etc for the Office/Lab Building architectural components shall supersede this Specification section.

D. Any painting system specifically called out in other Civil/MEP drawings, specifications, etc that conflicts with this Specification Section shall be brought to the attention of the engineer. When no clarification is provided the contractor is to assume that more expensive painting system to apply shall be included in the contractor's bid.

E. Concrete floor treatment schedule:
1. Main Building floor locations as specified on Architectural Drawings (Northside)
2. Blower Building (Northside)
3. Electrical Building (Southside)

F. Concrete Units/Structures to receive interior coating:
1. All Manholes (interior & exterior)
2. Headworks channels & Grit Removal Channels (Northside & Southside)
3. Influent Lift Station Wetwell (Northside & Southside)
4. Pre-EQ Basin (Northside)
5. Digesters (Northside)
6. Belt Filter Press – area inside containment wall extending over tops of wall and floor.

G. The following items will not be painted:
1. Any code requiring labels, such as Underwriters' Laboratories and Factory Mutual, or any equipment identification, performance rating, name or nomenclature plates.
2. Any moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, linkages, sinkages, sensing devices, motor and fan shafts, unless otherwise indicated.
3. Aluminum handrails, walkways, windows, louvers and grating unless otherwise specified herein.

4. Signs and nameplates.
5. Finish hardware.
6. Stainless steel angles, tubes, pipe, etc.
7. Products with polished chrome, aluminum, nickel, or stainless steel finish.
8. Plastic switch plates and receptacle plates.
9. Flexible couplings, lubricated bearing surfaces, insulation and metal and plastic pipe interior.
10. Sprinkler heads.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 09_96_02 Manhole Protective Coatings

D. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Samples: Include 8-inch square draw-downs or brush-outs of topcoat finish when requested. Identify each sample as to finish, formula, color name and number and sheen name and gloss units.

C. Manufacturer's instructions: Submit in accordance with requirements for ProductData. Include:
1. Special requirements for transportation and storage.
2. Mixing instructions.
3. Shelf life.
4. Pot life of material.
5. Precautions for applications free of defects.
6. Surface preparation.
7. Method of application.
8. Recommended number of coats.
9. Recommended thickness of each coat.
10. Recommended total thickness.
11. Drying time of each coat, including prime coat.
12. Required prime coat.
13. Compatible and non-compatible prime coats.
14. Recommended thinners, when recommended.

15. Limits of ambient conditions during and after application.
16. Time allowed between coats.
17. Required protection from sun, wind and other conditions.
18. Touch-up requirements and limitations.

D. All limitations, precautions and requirements that may adversely affect the paint; that may cause unsatisfactory results after the painting application; or that may cause the paint not to serve the purpose for which it was intended, that is, to protect the covered material from corrosion, shall be clearly and completely stated in the instructions. These limitations and requirements shall include, but not be limited to, the following:
1. Surface preparation.
2. Methods of application.
3. Number of coats.
4. Thickness of each coat.
5. Total thickness.
6. Drying time of each coat, including primer.
7. Drying time of final coat before placing in service.
8. Time allowed between coats.
9. Primer required to be used.
10. Primers not permitted.
11. Use of a primer.
12. Compatible topcoats.
13. Thinner and use of thinner.
14. Weather limitations during and after application (temperature, humidity, wind velocity).
15. Protection from sun.
16. Physical properties of paint, including percent solids content by volume, ingredient analysis, and weight per unit surface per dry mil thickness.
17. Cathodic disbonding limitations, if any.
18. Equipment settings (air cap, fluid tip, equipment pressure settings, etc.).
19. Manufacturer's specific ventilation requirements for products used on interior surfaces. Ventilation requirements shall be provided to ensure adequate evacuation of solvents to prevent solvent entrapment, worker exposure to solvents above the OSHA PEL and to provide for timely coating system cure.
20. Manufacturer's statement of conformance with ANSI/NSF 61 (NSF International) requirements for use on potable water mains.
21. Cleanup Procedures: Prior to the field cleaning or painting of any surface, the Contractor shall present a written plan to the Owner and Owner’s Representative for review concerning how paint and/or abrasive damage to automobiles and property will be handled, including a process for quick removal of the paint or abrasive, and who will do the work. This approval in no way shall relieve the contractor from the responsibility of settling claims for damage, but is intended as an avenue to expedite and minimize said claims.
22. Containment Procedures: Prior to the field cleaning or painting of any surface, the Contractor shall present a written plan to the Owner and Owner Representative for review concerning how spent cleaning debris and/or paint over spray or droplets will be contained/confined to the jobsite and tank site during the surface preparation and coating application operations. Reasonable care shall be exercised by the Contractor to prevent damage, nuisance, or hazardous conditions to adjacent or nearby property owners.

1.4 REFERENCES

A. ASTM International:
   1. ASTM D16 - Definitions of Terms Relating to Paint, Varnish, Lacquer, and Related Products.
   2. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Base Materials.
   3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. NACE (National Association of Corrosion Engineers) - Industrial Maintenance Painting.

C. NPCA (National Paint and Coatings Association) - Guide to U.S. Government Paint Specifications.

D. PDCA (Painting and Decorating Contractors of America) - Painting - Architectural Specifications Manual.

E. SSPC (Society for Protective Coatings) - Society for Protective Coatings Standards.

F. Materials to be used in contact with the raw water or potable water process stream shall meet the current requirements of the Food and Drug Administration Document, Title 21, Section 175.300 or have been approved by the EPA for potable water use and have been certified by the National Sanitation Foundation for Standard 61 listing. Submit certification that the material meets these requirements.

1.5 QUALITY ASSURANCE

A. Workmanship shall be performed by skilled workmen thoroughly trained in necessary crafts and completely familiar with specific requirements and methods specified herein.

B. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

C. Products: First line or best grade.

D. Total paint system shall be from one manufacturer and no cross coating allowed between primers and finish coats.

E. Applicator qualifications: Applicator of products similar to specified products withminimum 3 years' experience.

F. Containing Cleaning Debris and Overspray: The Contractor shall ensure that no spent cleaning/blasting debris, dust, overspray, coating droplets, or emissions of any kind, escape to the atmosphere, or adjacent buildings, private property, work sites and parking lots.
   1. The ground and floor shall be protected from any material scraped, sanded or removed in any fashion and the material shall be collected and properly disposed of by the contractor.

2. The Contractor shall be responsible for all materials that are used and for any apparatus used to contain dust, emissions, debris, overspray, and coating droplets.
3. If tarps are used as part of the containment system, the tarps shall be an impervious, solid, flame-resistant material, reinforced with a fiber mesh and shall allow as much light as possible to pass through the material.
4. The Owner reserves the right to stop work or to require additional or different containment methods if the Contractor's operations create a nuisance beyond the site property line in the sole opinion of the Owner, the Owner's designated representative, any regulatory agency, or neighbor. All costs of providing an adequate containment system shall be included by the Contractor in the Base Price Proposal.
5. Review of the containment system for containing the spent cleaning dust, debris, emissions, overspray, and coating droplets shall not warrant the structural integrity of the containment system and shall not warrant the structural integrity of the facility to support the containment system. Nor shall review of the containment system warrant the ability of the system to contain spent cleaning dust, debris, emissions, and overspray.

1.6 APPLICATION REQUIREMENTS

A. Surface moisture contents: Do not paint surfaces that exceed manufacturer specified moisture contents, or when not specified by the manufacturer, the following moisture contents:
   1. Plaster and gypsum wallboard: 12 percent.
   2. Masonry, concrete and concrete block: 12 percent.
   3. Interior located wood: 15 percent.
   4. Concrete floors: 7 percent.

B. Do not paint or coat:
   1. Under dusty conditions.
   2. When light on surfaces measures less than 15 foot-candles.
   3. When ambient or surface temperature is less than 50 degrees Fahrenheit or unless manufacturer allow a lower temperature.
   4. When relative humidity is higher than 85 percent, unless manufacturer allows a higher relative humidity.
   5. When surface temperature is less than 5 degrees Fahrenheit above dew point.
   6. When surface temperature exceeds the manufacturer's recommendation.
   7. When ambient temperature exceeds 90 degrees Fahrenheit, unless manufacturer allows a higher temperature.
   8. Apply clear finishes at minimum 65 degrees Fahrenheit.

C. Provide fans, heating devices, or other means recommended by coating manufacturer to prevent formation of condensate or dew on surface of substrate, coating between coats and within curing time following application of last coat.

D. Provide adequate continuous ventilation and sufficient heating facilities to maintain minimum 50 degrees Fahrenheit for 24 hours before, during and 48 hours after application of finishes.

1.7 PROTECTION

A. Protect adjacent surfaces from paint and damage. Repair damage resulting from inadequate or unsuitable protection.

B. Furnish sufficient drop cloths, shields, and protective equipment to prevent spray or droppings from fouling surfaces not being painted and in particular, surfaces within storage and preparation area.

C. Place cotton waste, cloths, and material that may constitute fire hazard in closedmetal containers and remove daily from site.

D. Remove electrical plates, surface hardware, fittings and fastenings, prior to painting operations.
   1. Carefully store, clean and replace on completion of painting in each area.
   2. Do not use solvent or degreasers to clean hardware that may removepermanent lacquer finish.

1.8 DELIVERY STORAGE & HANDLING

A. Deliver all material to site in original, new, unopened containers, labeled and bearing manufacturer's name and stock number, product and brand name, contents by volume for major constituents, instructions for mixing and reducing, and application instruction.

B. Provide adequate storage facilities designed exclusively for the purpose of paint storage and mixing. Facility area shall be located away from open flames, be well ventilated, and be capable of maintaining ambient storage temperature of no less than 45 degrees F.

C. Paint, coatings, reducing agents, and other solvents must be stored in original containers until opened; if not resealable, then must be transferred to UL approved safety containers. Provide proper ventilation, personal protection and fire protection for storage and use of same.

D. Comply with requirements set forth by Occupational Safety and Health Act, OSHA, for storage and use of painting materials and equipment.

E. Oily or solvent-soaked rags and all waste shall be removed from the job site every night, and all necessary precautions shall be taken to reduce fire hazards to a minimum.

F. Upon completion of the work, if the storage space was a fixed part of the project, it shall be left clean. Any damages to such storage space or its surroundings shall be repaired by the Contractor.

1.9 SAFETY AND HEALTH REQUIREMENTS

A. General: In accordance with requirements set forth by regulatory agencies applicable to the construction industry and Manufacturer's printed instructions and appropriate technical bulletins and manuals, the Contractor shall provide and require use of personal protective lifesaving equipment for persons working on or about the project site.

B. Ventilation: Where ventilation is used to control hazardous exposure, all equipment shall be explosion-proof. Ventilation shall reduce the concentration of air contaminants to the degree a hazard does not exist. Forced air circulation and exhausting of solvent vapors shall be continued until coatings have fully cured.

C. Whenever the occupational sound levels exceed the OSHA Standard 29 CFR 1926.52, the Contractor shall implement exposure control measures that protect employee hearing against the affects from these sound levels. One such control measure can be the use of hearing protective devices.

D. Illumination: Adequate illumination shall be provided while work is in progress, including explosion-proof lights and electrical equipment. Whenever required by the Owner's Representative, the Contractor shall provide additional illumination and necessary supports to cover all areas to be inspected. The level of illumination purposes shall be determined by the Owner's Representative.

1.10 EXTRA STOCK

A. Upon completion of work, provide owner with at least one gallon of each type and color of product used.

B. Containers shall be tightly sealed and clearly labeled for identification.

PART 2 PRODUCTS

2.1 GENERAL

A. The number of coats called for in this schedule shall be considered minimum. If more coats are required for complete coverage and uniform appearance, they shall be applied. Colors will be selected by the Owner from standard manufacturer's color samples. For cold weather applications, substitute Tnemec "fast cure" version of specified product. "Fast Cure" products must be submitted and approved by Engineer prior to project start.

2.2 COLOR SCHEDULE

A. Final color selection will be made by the Owner's Representative from color chips submitted by the Contractor; colors selected may or may not be a Manufacturer's standard color. Submit color charts to Owner at least 60 days prior to paint application to allow time for color selection.

B. Shop Painted Equipment: Motors, equipment, pumps, valve bodies and metal pump bases shall be shop painted, unless specified otherwise.
   1. Motors, equipment, pumps, pump bases and valve bodies shall be painted color as selected by the Owner.
   2. All bronze or stainless-steel valve bodies shall not be painted.

C. Moving Parts and Guards.
   1. Do not paint moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, linkages, sensing devices, motor, fan shafts, etc.

2. Contractor shall coordinate with Owner on color selection prior to painting guards or shields.

2.3 ACCEPTABLE MANUFACTURERS

A. Materials specified are those that have been evaluated for the specific service and are as supplied the Tnemec Company, Inc.

B. Equivalent materials of other manufacturer's may be submitted on written approval of the Engineer. As part of the proof of equality, the Engineer will require at the cost of the Contractor, certified test reports from a nationally known, reputable and independent testing laboratory conducting comparative tests as directed by the Engineer between the product specified and the requested substitution.

C. Requests for substitution shall include manufacturer's literature for each product giving name, product number, generic type, descriptive information, solids by volume, recommended dry film thickness and certified lab test reports showing results to equal the performance criteria of the products specified herein

D. All requests for product substitution shall be made at least 10 days prior to the bid date. Proposed substitute products and systems must have a minimum of 5 years satisfactory service in the field. Included with above information, provide a list of 5 projects satisfactorily completed by the contractor of similar size and scope utilizing proposed substitute systems and products.

E. Manufacturer's color charts shall be submitted to the Engineer at least 30 days prior to coating and/or paint application. General Contractor and Painting Contractor shall coordinate work so as to allow sufficient time (normally seven to ten days) for paint to be delivered to the job site.

2.4 COATING SCHEDULE

A. General
1. The number of coats called for in this schedule shall be considered minimum. If more coats are required for complete coverage and uniform appearance, they shall be applied. Colors will be selected by the Owner from standard manufacturer's color samples. For cold weather applications, substitute Tnemec "fast cure" version of specified product. "Fast Cure" products must be submitted and approved by Engineer prior to project start.
2. Types of Structures is for reference only. Should a structure not be specifically listed the painting system it should be equivalent to similar specified structures. Notify Engineer for clarification prior to bid.
3. All finished coatings on horizontal surfaces must be non-skid, slip-resistant.

B. Ferrous Metal, Interior, Non-Immersed, Subject to Non-Abrasive Conditions:
1. General. All interior above ground ferrous surfaces subject to dry non-abrasive conditions shall be painted in accordance to the following provisions. This includes, but is not limited to: exposed pumps, exterior of valves, pipes, motors, machinery, and miscellaneous metals such as structural steel. May be factory/shop coated.
2. Surface Preparation. SSPC SP-6 Commercial Blast Cleaning, Reference Part 2.02 Surface Preparation, item D for description.

3. Coating (Epoxy-Polyamide)

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	5.0
Finish Coat:	N69 Hi-Build Epoxoline II	5.0

C. Ferrous Metal, Non-Immersed, Subject to Non-Abrasive Conditions:
1. General. All exterior ferrous surfaces not submerged, and subject to non-abrasive conditions shall be painted in accordance to the following provisions. This includes but is not limited to: Exterior of non-submerged equipment, valves, pipes (not listed elsewhere), pipe sleeves, brackets, grates, structural steel, light poles, exterior face of overhead doors, etc. Surfaces intermittently or partially submerged will be treated as submerged.
2. Surface Preparation. SSPC SP-6 Commercial Blast Cleaning. Reference Part 2.02 Surface Preparation D for description.
3. Coating (Aliphatic-Polyurethane System)

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	5.0
Finish Coat:	Tnemec Series 1094 Endura-Shield	4.0

D. Ferrous Metals, Immersed or Subject to Abrasive Conditions
1. General. All ferrous surfaces below ground level, submerged, or subject to abrasive conditions shall be painted in accordance with the following provisions. This includes but is not limited to: Ladders, grates, checkered plates, handrails, access covers, exterior of submerged valves, piping (not listed elsewhere), brackets, structural steel, sluice gates, roller gates, drains, etc. (Surfaces that are questionable as to if they are subject to submerged or abrasive conditions will be considered as subject to those conditions).
2. Surface Preparation. SSPC SP-10 Near White Metal Blast Cleaning. Reference Part 2.02 Surface Preparation Ferrous Metal D for description.
3. Coating (Epoxy-Polyamide System)

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline	7.0
Finish Coat:	N69 Hi-Build Epoxoline	7.0

E. Non-Ferrous Metal Interior:
1. General. All non-ferrous surfaces where painting is required shall be painted in accordance with the following provisions. This includes but is not limited to: pipe supports, underside of roof decks and service doors.
2. Surface Preparation. SSPC-SP6 Commercial Blast Cleaning. Reference Part 2.02 Surface Preparation D for description.
3. Coating (Epoxy-Polyamide System)

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	4.0
Finish Coat:	N69 Hi-Build Epoxoline II	5.0

For exterior installations replace finish coat above with:

Finish Coat:	Series 1094 Endura-Shield	3.0

F. Exterior Exposed Ductile Iron Pipe
1. All exterior exposed ductile iron pipe
2. Surface Preparation: Clean all surfaces as per SSPC-SPI Solvent Cleaning. Measure surface profile in accordance with ASTM D 4417, Method C. If surface profile is less than 1.5 mils, abrasive blast as per SSPC-SP7 Brush-Off Blast Cleaning. If surface profile is greater than 1.5 mils, clean as per SSPC-SP3 Power Tool Cleaning.

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	5.0
Intermediate:	N69 Hi-Build Epoxoline II	4.0
Finish Coat:	Series 1094 Endura-Shield	3.0

G. Interior Exposed Ductile Iron Pipe
1. All interior exposed ductile iron pipe
2. Surface Preparation: Clean all surfaces as per SSPC-SPI Solvent Cleaning. Measure surface profile in accordance with ASTM D 4417, Method C. If surface profile is less than 1.5 mils, abrasive blast as per SSPC-SP7 Brush-Off Blast Cleaning. If surface profile is greater than 1.5 mils, clean as per SSPC-SP3 Power Tool Cleaning.

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	5.0
Finish Coat:	N69 Hi-Build Epoxoline II	4.0

H. Aluminum, Stainless Steel, Galvanized Steel, Copper, or Brass: Unless specifically called out, only clean these surfaces. Do not paint.

I. All Aluminum in Contact with Dissimilar Materials:
1. Surface Preparation. Remove all foreign matter and apply sealer as required by coating Manufacturer.
2. Coating (Epoxy-Polyamide)

Coating		Dry Film-Mils
Primer Coat:	N69 Hi-Build Epoxoline II	5.0
Finish Coat:	N69 Hi-Build Epoxoline II	4.0

J. Concrete, Submerged/Interior (Non-Potable)
1. Exterior concrete surfaces submerged and not listed as severe duty such as influent or effluent channels, parshall flumes, tank structures including, but not limited to:
   a. UV /NonPot Channels & Floor (Northside)
   b. SBR/PreEQ/Digester/PostEQ Structure Interior Walls & Floor (Northside)
   c. Valve Vaults (Northside & Southside)
   d. Wetwells (Northside & Southside)
2. Surface Preparation: Allow new masonry to cure 28 days. All surfaces shall be dry, clean and free of all contaminants. Brush-Off Blast all surfaces to be coated. Fill all voids and bugholes with Tnemec Series 218 Mortarclad.

Coating		Dry Film-Mils
Filler/Surfacer:	Tnemec Series 218 Mortarclad	1/16" to ½"
Initial Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0
Finish Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0

K. Exterior Concrete – Exposed, Non-Submerged
1. Surfaces include:
   a. SBR/PreEQ/Digester/PostEQ Structure Exterior Walls (Northside)
   b. Headworks Structure Interior Walls (Northside)
   c. Influent Lift Station & Vaults (Northside & Southside)
2. Surface Preparation: Remove all grease, oils and grime by washing with an emulsifying alkaline waterbase cleaner. All surface contaminants including existing coatings shall be removed prior to application of new coating. Brush blast or acid-etch concrete prior to coating. Surface preparation shall be as per Manufacturer's recommendations.

Coating		Dry Film-Mils
Primer Coat:	Not required	N/A
Initial Coat:	Tnemec Series 156 Enviro-Crete	12.0
Finish Coat:	Tnemec Series 157 Enviro-Crete	12.0

L. Concrete – Secondary Containment or Severe Duty
1. Severe Duty Areas include:
   a. Pre-Equalization Basin (Northside)
   b. Headworks & Grit Removal Channels (Northside & Southside)
   c. Influent Lift Station Wetwells (Northside & Southside)
2. Surface Preparation: Allow new concrete to cure 28 days. Abrasive blast as per SSPC-SP13 Surface Preparation of Concrete, achieving a surface profile equal to ICRI CSP 3 to 5. All surfaces shall be dry, clean and free of dust, dirt, oil, grease and other contaminants. Fill all voids, divots and cracks with Tnemec Series 215 Surfacing Epoxy and strike flush with adjacent surfaces.

Coating		Dry Film-Mils
Filler/Surfacer:	Tnemec Series 218 Mortarclad	1/16" to ½"
Initial Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0
Finish Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0

M. Concrete Manholes (Interior)
1. All concrete manhole interiors are to be coated:
2. Surface Preparation: SSPC-SP13 / NACE 6, ICRI CSP 5

Coating		Dry Film-Mils
Filler/Surfacer:	Tnemec Series 218 Mortarclad	1/16" to ½"
Initial Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0
Finish Coat:	Tnemec Series 435 Perma-Glaze	20.0 to 40.0

N. Concrete Manholes (Exterior)
1. All concrete manhole exteriors are to be coated:
2. Surface Preparation: SSPC-SP13 / NACE 6, ICRI CSP 3

Coating		Dry Film-Mils
First Coat:	Tnemec Series 46H-413 HB Tneme-Tar	14.0 to 20.0

O. Interior CMU - Exposed

1. Surface Preparation: Remove all oil, grease, and other contaminants. Allow mortar to cure for 14 days. Surface preparation shall be as per Manufacturer's recommendations.

Coating		Dry Film-Mils
First Coat:	Tnemec Series 130 Enviro	75 sq ft / gallon
Second Coat:	Tnemec Series N69 Hi-Build Epoxoline II	5.0
Third Coat:	Tnemec Series N69 Hi-Build Epoxoline II	5.0

P. Exterior Concrete Block Masonry – Exposed

1. Surface Preparation: Remove all oil, grease, and other contaminants. Allow mortar to cure for 14 days. Surface preparation shall be as per Manufacturer's recommendations.

Coating		Dry Film-Mils
First Coat:	Series 130 Enviro	115 sqft / gallon
Second Coat:	Tnemec Series 180 Tneme-Crete	6.0
Third Coat:	Tnemec Sereis 180 Tneme-Crete	6.0

Q. Interior PVC Pipe

1. Surface Preparation. As recommended by Manufacturer.
2. Coating (Epoxy-Polyamide)

Coating		Dry Film-Mils
First Coat:	Tnemec, N69 Hi-Build Epoxoline II	6.0

R. Exterior PVC Pipe

1. Surface Preparation. As recommended by Manufacturer.
   Coating (Hybrid-Polyurethane System).

Coating		Dry Film-Mils
Primer Coat:	Tnemec, N69 Hi-Build Epoxoline II	6.0
Finish Coat:	Series 1094 Endura-Shield	3.0

S. Interior Concrete Floors

1. All interior concrete floors where concrete will serve as the final wearing surface
2. Surface Preparation: Mechanically abrade per manufacturers recommendation.
3. The following locations will receive floor coating:
   a. Main Building floor locations as specified on Architectural Drawings (Northside)
   b. Blower Building (Northside)
   c. Electrical Building (Southside)
   d. Any additional location specifically called out on Drawings.

Coating		Dry Film-Mils
1st Coat:	Series 201 Epoxoprime	190 Sq. Ft./Gal
2nd Coat:	Series 280 Tneme Glaze	200 Sq. Ft./Gal

	3rd Coat:	Series 291 CRU	537 Sq. Ft./Gal.

2.5 COATING SYSTEM SCHEDULE, INSULATED PIPE

Surface Preparation:		Surface shall be clean and dry	Dry Film-Mils
1.	1st Coat:	Series 1029 Color EnduraTone	2.5-3.0
2.	2nd Coat:	Series 1029 Color EnduraTone	2.5-3.0

2.6 TNEMEC COLOR SYSTEM MATERIAL IDENTIFICATION

A. The following Tnemec colors/materials shall be utilized:

1.	Raw Water	olive green	110GN Clover
2.	Settled or Clarified	aqua	10GN Aqua Sky
3.	Finished or Potable	dark blue	11SF Safety Blue
4.	Sewage Plant Effluent	clay	07RD Terra Cotta
5.	Backwash Waste	light brown	68BR Twine
6.	Reclaimed Water	light purple	R0715 Light Purple
7.	Sludge	dark brown	84BR Weathered Bark
8.	Sanitary Sewer	dark gray	34GR Deep Spacel
9.	Alum/Prim Coagulant	orange	04SF Safety Orange
10.	Ammonia	white	11WH White
11.	Carbon Slurry	black	35GR Black
12.	Caustic	yellow with green band	02SF Safety Yellow/ 02SF Safety Green
13.	Chlorine	yellow	02SF Safety Yellow
14.	Chlorine Dioxide	yellow	02SF Safety Yellow
15.	Fluoride	light blue with red band	25BL Fountainbleu/ 06SF Safety Red
16.	Lime Slurry	light green	52GNAztec Grass
17.	Ozone	yellow w/ orange band	02SF Safety Yellow/ 04SF Safety Orange
18.	Phosphate Compounds	light grn w/ red band	52GN Aztec Grass/ 06SF Safety Red
19.	Polymers/coag aids	orange with green band	04SF Safety Orange/ 14SF Safety Purple
20.	Potass/Sod Perman	violet	14SF Safety Purple
21.	Soda Ash	lt grn w/ orange band	52GN Aztec Grass/
22.			04SF Safety Orange
23.	Sulfuric Acid	yellow w/ red band	02SF Safety Yellow/ 06SF Safety Red
24.	Sulfur Dioxide	lt grn w/ yellow band	52GN Aztec Grass/ 02SF Safety Yellow
25.	Compressed Air	dark green	91GN Balsam
26.	Gas	red	28RD Monterrey Tile
27.	Other Lines	light gray	32GR Light Gray
28.	Hoists/Trolleys	yellow	02SF Safety Yellow
29.	Fire Protection	red	06SF Safety Red

PART 3 EXECUTION

3.1 INSPECTION

A. Thoroughly examine surface scheduled to be painted prior to commencing work. Report in writing to the Owner's Representative any condition that may affect proper application and overall performance of coating system. Do not proceed with work until such conditions have been corrected. Commencing with work indicates acceptance of existing conditions and for responsibility for performance of applied coating.

3.2 PROTECTION

A. Extreme diligence shall be taken to ensure that vehicles, equipment, hardware, fixtures, materials, etc., are protected against paint spillage, overspray, etc. Such damages shall be corrected at no expense to Owner.

B. Surfaces not to be coated shall be masked, removed, or otherwise covered to protect against cleaning and coating application procedures and weather. Drop cloths shall be used to protect floor, walls, machinery, equipment, and previously coated surfaces.

C. Exercise care in erecting, bracing, handling, and dismantling staging and scaffolding, to avoid scratching or damaging walls, floors, equipment, etc.

3.3 SURFACE PREPARATION

A. Surface preparation standards are as described in this specification. The Steel Structures Painting Council, Surface Preparation Specification is used for steel and as a guide for concrete.

B. Solvent Cleaning: Remove oil, grease, soil and other contaminants by use of solvents, emulsions, cleaning compounds, steam cleaning, or similar materials and methods which involve a solvent or cleaning action, in accordance with Steel Structures Painting Council Surface Protection Specifications (SSPC) SP-1. Care must be taken to not allow solvent chemicals to enter treatment processes.

C. Hand Tool Cleaning: Remove all loose mill scale, loose rust, loose paint, and other loose detrimental foreign matter by hand chipping, scraping, sanding, and wire brushing.

D. Grinding: Remove weld splatter and rough edges and grind rough welds so that all surfaces are in proper condition, in the opinion of the Owner’s Representative, to receive the specified coating.

E. Abrasive Grit Cleaning: All abrasive blasting shall be done at the shop in accordance with SSPC-SP 10 near white metal blast. No abrasive blasting shall be allowed at the job site.

F. Alternative surface preparation methods and materials shall be approved by the Owner’s Representative before use. Contractor shall protect all electrical components from entrance of paint, solvents, or blast mediums into the cabinets. Contractor shall be responsible for any damage to switches, contacts, and other electrical controls if contaminated by blast media during painting operations.

3.4 TOUCH UP OF SHOP APPLIED COATINGS

A. All shop applied coatings with manufacturer's standard paint and in non-immersion service, shall be touched up with compatible barrier coating, Tnemec Series I Purple Prime, able to receive specified topcoat(s). Notify Architect/Engineer or Owner's Representative in writing of anticipated problems due to incompatible coating systems.

B. All shop applied coatings with specified primer as listed in PART 4 "Coating System Schedule" shall be touched up with same primer before any topcoat(s) are applied.

3.5 APPLICATION

A. No paint shall be applied when surrounding air temperature, as measured in the shade, is below 45 degrees F. No paint shall be applied when the temperature of the surface to be painted is below 40 degrees F. Paint shall not be applied to wet or damp surfaces, and shall not be applied in rain, snow, fog or mist, or when the relative humidity exceeds 85%. Paint shall not be applied when the substrate temperature is within 5 degrees of the dewpoint. Paint manufacturer's temperature guidelines must be followed.

B. No paint shall be applied when it is expected that the relative humidity will exceed 85% or that the air temperature will drop below 45 degrees F within 4 hours after the application of the paint.

C. Maintain proper ventilation in area of work to alleviate volatile solvents evaporating from coating materials.

D. All ingredients in any container of the coating materials shall be thoroughly mixed and shall be agitated often enough during application to keep the pigment suspended.

E. Should thinning be required use only the amounts specified by the coating manufacturer.

F. Application of coating shall be by brush, roller, mitt, or spray and in accordance with manufacturer's recommendations. All material shall be evenly applied to form a smooth, continuous, unbroken coating. Drips, runs, sags, or pinholes shall not be acceptable.

G. Provide proper application equipment, including ladders, scaffolding, masking materials, and tools to perform work. Ladders and scaffolding shall meet or exceed UL requirements and Metal Ladder Manufacturer's Association.

H. Meet all requirements set forth by Occupational Safety and Health Act, OSHA, for confined space.

3.6 SYSTEM INSPECTION AND TESTING

A. Contractor shall be responsible for and shall bear all the costs to perform the quality control tests for the coating.

B. Should any paint system fail to pass a test, the Contractor shall make necessary changes approved by the Construction Manager for the corrective measures. The paint system will then be retested.

C. After application of each coating in the specified system and its surface has cured, measure its thickness with a properly calibrated Nordson Microtest Dry Film Thickness Gauge, or equivalent. Follow standard method for measurement of dry paint thickness with magnetic gauges as outlined in Steel Structures Painting Council's SSPC PA2¬

D. Make as many determinations as needed to ensure the specified thickness values in each typical area. To all surfaces having less dry film thickness than specified, apply additional coat(s) at no extra cost to Owner to bring thickness up to specifications.

E. Structural metals in immersion service that receive a protective coating system shall be checked with a non destructive holiday detector that shall not exceed 67 1/2 volts. All pinholes or defects shall be repaired in accordance with manufacturer's printed recommendations and then retested.

F. Masonry, drywall, or other non metallic surfaces shall be continuously checked with wet film thickness gauges during application to ensure proper dry film thickness will be attained. Also, square feet coverage needs to be monitored to verify proper coverage rates.

G. Painting contractor shall permit Owner's Representative and/or paint & coating manufacturer (as requested by owner) to inspect his work for conformance to this specification. Owner reserves the right to reject all work that does not comply with this specification.

3.7 CLEAN-UP

A. Upon completion, painting contractor shall clean up and remove from site all surplus materials, tools, appliances, empty cans, cartons, and rubbish resulting from painting work. Site shall be left in neat, orderly condition.

B. Remove all protective drop cloths and masking from surfaces not being painted. Provide touch up around same areas as directed by Owner's Representative.

C. Remove all misplaced paint splatters or drippings resulting from this work.

END OF SECTION

SECTION 10_44_16

FIRE EXTINGUISHERS

PART 1 GENERAL

1.1 SUMMARY

A. Fire Extinguishers as required by this section of the Contract Documents, unless otherwise indicated specifically on individual plans and appropriate sections of Contract Documents.

B. Where fire extinguishers are called out in Architectural or other Drawings they should be considered additional to this Specification.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

PART 2 PRODUCTS

2.1 GENERAL

A. Suggested manufacturer is HS Fire Safety Products, Model 2409R4 by Hallmann Sales, LLC or approved equal.

B. Provide and install in the following quantity to be field located by Owner:
   1. Carbon Dioxide Fire Extinguisher (10 lbs, Total Qty. 10) - Locate as follows:
      a. Southside
         1) Electrical Building (x2)
         2) Headworks
      b. Northside
         1) Electrical Room
         2) Laboratory

3) Belt Press Room
4) Blower Building
5) Headworks
6) Effluent Lift Station
7) TBD

2. Dry Chemical Class (B, C), (10 lbs, Total Qty. 0) - Locate as follows:
   a. None
3. ABC Type Fire Extinguisher (10 lbs, Total Qty. 4) - Locate as follows:
   a. Northside
      1) Kitchen
      2) TDB (x3)

2.2 CABINET

A. Semi-recessed type with flat trim or wall mount if location has solid walls.

B. 9 1/2" x 24" x 6" complying with ADA requirements.

2.3 FABRICATION

A. Form body of cabinet from (0.0359-inch) thick sheet steel.

B. Fabricate door and trim from (0.0478-inch) thick sheet steel with all face joint s fully welded and ground smooth.
   1. Glaze doors with (1/4 inch) thick G- 19, clear acrylic sheet.
   2. Design doors to open 180 degrees.
   3. Provide continuous hinge, pull handle, and adjustable roller catch.

C. Cabinet shall be capable of holding a 10lb Fire Extinguisher.

2.4 FINISH

A. Finish interior of cabinet body with baked-on semi-gloss white enamel.

B. Finish door & frame with manufacturer's standard baked-on prime coat suitable for field painting.

PART 3 EXECUTION

END OF SECTION

SECTION 13_34_19

METAL BUILDING SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

A. Metal Building System as required by this section of the Contract Documents, unless otherwise indicated specifically on individual drawings and/or other appropriate sections of Contract Documents.

B. Information shown on the Drawings is for reference only as to location and conceptual design. It is the intent that the metal building system and components be provided in a single system from a single manufacturer and designed and detailed under the supervision of an Oklahoma Registered Structural Engineer (SE.)

C. Provide a letter sealed by a Licensed Professional Structural Engineer (SE) in the State which the project will be built stating that the proposed metal building system has been designed and detailed under their supervision and meet all codes and requirements referenced by this Section and the Drawings.

D. Any Drawing or Specification that conflicts with this Specification section shall be brought to the attention of the Engineer prior to bid. When no clarification is provided the Contractor is to assume that the more restrictive & expensive product/system/item applies and shall be included in the Contractor's bid.

E. Section includes
1. Structural-steel framing.
2. Metal roof panels.
3. Metal wall panels.
4. Metal soffit panels.
5. Thermal insulation.
6. Accessories

F. All structural steel framing components not having a full applied coating (complying with 09_91_00.13 or equivalent) are to be hot-dipped galvanized. Submittal to contain a cover page listing all materials NOT scheduled to be hot-dipped galvanized.

G. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

B. Product Data: For each type of metal building system component.

C. Shop Drawings: Indicate components by others. Include full building plan, elevations, sections, details and attachments to other work.

D. Samples: For units with factory-applied finishes.

E. Design Calculations

F. Delegated-Design Submittal: For metal building systems.
1. Include analysis data indicating compliance with performance requirements and design data signed and sealed by the qualified professional engineer responsible for their preparation.

G. Product Data: For each type of metal building system component.

H. Shop Drawings: Indicate components by others. Include full building plan, elevations, sections, details and attachments to other work.

I. Samples: For units with factory-applied finishes.

J. Design Calculations

K. Delegated-Design Submittal: For metal building systems.

L. Include analysis data indicating compliance with performance requirements and design data signed and sealed by the qualified professional engineer responsible for their preparation.

M. Welding certificates.

N. Letter of Design Certification: Signed and sealed by a qualified professional engineer registered in the state of Oklahoma. Include the following:
1. Name and location of Project.
2. Order number.

3. Name of manufacturer.
4. Name of Contractor.
5. Building dimensions including width, length, height, and roof slope.
6. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
7. Governing building code and year of edition.
8. Design Loads: Include dead load, roof live load, collateral loads, roof snow load, deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, and auxiliary loads (cranes).
9. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
10. Building-Use Category: Indicate category of building use and its effect on load importance factors.
11. Foundation Reactions

O. Material test reports.

P. Source quality-control reports.

Q. Field quality-control reports.

R. Sample warranties.

S. Maintenance Data

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer.
1. Accreditation: Manufacturer's facility accredited according to the International Accreditation Service's AC472, "Accreditation Criteria for Inspection Programs for Manufacturers of Metal Building Systems."
2. Engineering Responsibility: Preparation of comprehensive engineering analysis and Shop Drawings by a professional engineer who is legally qualified to practice in jurisdiction where Project is located.

B. Erector Qualifications: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.

C. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.5 WARRANTY

A. The manufacturer shall warrant the equipment to be of quality construction, free from defects in materials and workmanship. The warranty shall become effective upon acceptance of the project by the Owner (after completion of final inspection.)

B. The equipment, apparatus, and parts furnished shall be warranted from a period of one (1) year, excepting only those items that are normally consumed in service, such as oil,

grease, gaskets, o-rings, etc. The manufacturer shall be solely responsible for the warranty of the equipment and all components.

C. Upon request from the Engineer and/or the Owner, the manufacturer shall demonstrate proof of financial responsibility with respect to performance and delivery date. In addition, the manufacturer shall provide proof of evidence of facilities, equipment, and skills required to produce the equipment specified herein and provide technical service and replacement parts.

D. Components failing to perform as specified by the Engineer, or as represented by the manufacturer, or proven defective in service during the warranty period, shall be replaced, repaired, or satisfactorily modified by the manufacturer without cost of kind to the Owner.

E. It is not intended the manufacturer assume liability for consequential damages or contingent liabilities arising out of failure of any product or parts thereof to operate properly, however caused by or resulting from or arising out of defects in design or manufacture, delays in delivery, replacement, or otherwise.

F. Special Warranty on Metal Panel Finishes: Manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Finish Warranty Period: 25 years from date of Substantial Completion.

G. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that leak or otherwise fail to remain weathertight within specified warranty period.
   1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design metal building system.

B. Structural Performance: Metal building systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
   1. The structural steel building frame is an engineered system designed, manufactured and erected by the metal building contractor. The drawings, details and dimensions shown on the drawings are representative of the Field Engineer's requirements for the appearance of the final product. The foundation drawings are indicative of the expected loadings transmitted by this system. The metal building manufacturer is allowed to adjust the sizes and shapes to design the most efficient system for their product within these guidelines. Changes must be approved by the Field Engineer in writing. No additional compensation will be allowed for changes. The foundations are designed for pinned bases.
   2. Design Loads: As indicated on Drawings, ASCE 7-16 where not indicated on the drawings.

3. Deflection and Drift Limits: Design metal building system assemblies to withstand serviceability design loads without exceeding deflections and drift limits recommended in AISC Steel Design Guide No. 3 "Serviceability Design Considerations for Steel Buildings."
4. Deflection and Drift Limits: No greater than the following:
    a. Purlins and Rafters: Vertical deflection of 1/240 of the span.
    b. Girts: Horizontal deflection of 1/240 of the span.
    c. Metal Roof Panels: Vertical deflection of 1/240 of the span.
    d. Metal Wall Panels: Horizontal deflection of 1/240 of the span.
    e. Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.
    f. Lateral Drift: Maximum of 1/200 of the building height.

C. Seismic Performance: Metal building system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

E. Structural Performance for Metal Roof and Wall Panels: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
1. Wind Loads: As indicated on Drawings or latest edition on IBS Code, whichever is more restrictive.

F. Air Infiltration for Metal Roof Panels: Air leakage of not more than 0.06 cfm/sq. ft. when tested according to ASTM E1680 at the following test-pressure difference:
1. Test-Pressure Difference: 6.24 lbf/sq. ft..

G. Air Infiltration for Metal Wall Panels: Air leakage of not more than 0.06 cfm/sq. ft. when tested according to ASTM E283 at the following test-pressure difference:
1. Test-Pressure Difference: 6.24 lbf/sq. ft..

H. Water Penetration for Metal Roof Panels: No water penetration when tested according to ASTM E1646[or ASTM E331] at the following test-pressure difference:
1. Test-Pressure Difference: 6.24 lbf/sq. ft..

I. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
1. Test-Pressure Difference: 6.24 lbf/sq. ft..

J. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
1. Uplift Rating: UL 60.

K. Energy Star Listing: Roof panels that are listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for slope roof products.

L. Energy Performance: Provide roof panels according to one of the following when tested according to CRRC-1:
   1. Three-year, aged, solar reflectance of not less than 0.55 and emissivity of not less than 0.75.
   2. Three-year, aged, Solar Reflectance Index of not less than 64 when calculated according to ASTM E1980.

2.2 STRUCTURAL-STEEL FRAMING

A. All structural steel framing components not having an applied coating are to be hot-dipped galvanized.

B. Structural Steel: Comply with AISC 360, "Specification for Structural Steel Buildings."

C. Bolted Connections: Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts."

D. Cold-Formed Steel: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" for design requirements and allowable stresses.

E. Primary Framing: Manufacturer's standard primary-framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafters and rake beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.
   1. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.
      a. Slight variations in span and spacing may be acceptable if necessary to comply with manufacturer's standard, as approved by Architect.

F. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:

G. Secondary Framing: Manufacturer's standard secondary framing, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Unless otherwise indicated, fabricate framing from either cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet, prepainted with coil coating, to comply with the following:

H. Anchor Rods: Headed anchor rods as indicated in Anchor Rod Plan for attachment of metal building to foundation.

2.3 METAL ROOF PANELS

A. Standing-Seam, Metal Roof Panels. Formed with interlocking ribs at panel edges designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels.
   1. Material: Aluminum-zinc alloy-coated steel sheet, 0.030-inch nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
      a. Exterior Finish: Three-coat fluoropolymer

b. Color: As selected by from manufacturer's full range.
2. Clips: Two-piece floating to accommodate thermal movement.
3. Joint Type: Mechanically seamed
4. Panel Coverage: 24 inches
5. Panel Height: 3 inches

B. Exposed Fastener, Tapered-Rib, Metal Roof Panels; Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
1. Material: Aluminum-zinc alloy-coated steel sheet, 0.030-inch nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
a. Exterior Finish: Three-coat fluoropolymer
b. Color: As selected from manufacturer's full range
2. Panel Coverage: 36 inches.

2.4 METAL WALL PANELS

A. Concealed-Fastener, Flush-Profile, Metal Wall Panels: Formed with vertical panel edges and a single wide recess, centered between panel edges with flush joint between panels; with 1-inch-wide flange for attaching interior finish; designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps.

B. Material: Aluminum-zinc alloy-coated steel sheet, 0.030-inch nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755/A755M.

C. Exterior Finish: Fluoropolymer.

D. Color: As selected from manufacturer's full range.

E. Panel Coverage: 16 inches

2.5 ACCESSORIES

A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

B. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including copings, fasciae, corner units, ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.

C. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including copings, fasciae, mullions, sills, corner units, clips, sealants, gaskets,

fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.

D. Flashing and Trim: Aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match adjacent metal panels.

E. Gutters: Aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match roof fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch-long sections, sized according to SMACNA's "Architectural Sheet Metal Manual."
1. Gutter Supports: Fabricated from same material and finish as gutters.
2. Strainers: Bronze, copper, or aluminum wire ball type at outlets.

F. Downspouts: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match metal wall panels. Fabricate in minimum 10-foot-long sections, complete with formed elbows and offsets.
1. Mounting Straps: Fabricated from same material and finish as gutters.

G. Roof Ventilators: Gravity type, complete with hardware, flashing, closures, and fittings.
1. Continuous: Factory-engineered and -fabricated, continuous unit; aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match metal roof panels. Fabricated in minimum 10-foot-long sections. Provide throat size and total length indicated, complete with side baffles, ventilator assembly, end caps, splice plates, and reinforcing diaphragms.
a. Bird Screening: Galvanized steel, 1/2-inch-square mesh, 0.041-inch wire; or aluminum, 1/2-inch-square mesh, 0.063-inch wire.
b. Dampers: Manually operated, spring-loaded, vertically rising type; chain and worm gear operator; with pull chain of length required to reach within 36 inches of floor.
c. Throat Size: [9 inches] [or] [12 inches], [as standard with manufacturer, and as required to comply with ventilation requirements].

H. Roof Curbs: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.048-inch nominal uncoated steel thickness prepainted with coil coating; finished to match metal roof panels; with welded top box and bottom skirt, and integral full-length cricket; capable of withstanding loads of size and height indicated.

I. Pipe Flashing: Premolded, EPDM pipe collar with flexible aluminum ring bonded to base.

2.6 FABRICATION

A. General: Design components and field connections required for erection to permit easy assembly.
1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members shall be free of cracks, tears, and ruptures.

B. Tolerances: Comply with MBMA's "Metal Building Systems Manual" for fabrication and erection tolerances.

C. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.

D. Secondary Framing: Shop fabricate framing components to indicated size and section by roll forming or break forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.

E. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.

F. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

2.7 SOURCE QUALITY CONTROL

A. Special Inspection: Owner will engage a qualified special inspector to perform source quality control inspections and to submit reports.
1. Accredited Manufacturers: Special inspections will not be required if fabrication is performed by an IAS AC472-accredited manufacturer approved by authorities having jurisdiction to perform such Work without special inspection.

B. Product will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 EXECUTION

3.1 ERECTION OF STRUCTURAL FRAMING

A. Erect metal building system according to manufacturer's written instructions and drawings.

B. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.

C. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.

D. Base and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
1. Set plates for structural members on wedges, shims, or setting nuts as required.

2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.

F. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.
1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt type and joint type specified.
a. Joint Type: Snug tightened or pretensioned as required by manufacturer.

G. Secondary Framing: Erect framing level, plumb, rigid, secure, and true to line. Field bolt secondary framing to clips attached to primary framing.
1. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
2. Locate and space wall girts to suit openings such as doors and windows.
3. Provide supplemental framing at entire perimeter of openings, including doors, windows, ventilators, and other penetrations of roof and walls.

H. Steel Joists: Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders," joist manufacturer's written instructions, and requirements in this Section.
1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Joist Installation: Bolt joists to supporting steel framework using carbon-steel bolts unless otherwise indicated.
5. Joist Installation: Bolt joists to supporting steel framework using high-strength structural bolts unless otherwise indicated. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.
6. Joist Installation: Weld joist seats to supporting steel framework.
7. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

I. Bracing: Install bracing in roof and sidewalls where indicated on erection drawings.

1. Tighten rod and cable bracing to avoid sag.
2. Locate interior end-bay bracing only where indicated.

J. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.

K. Erection Tolerances: Maintain erection tolerances of structural framing within AISC 303.

3.2 METAL PANEL INSTALLATION, GENERAL

A. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
a. Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
2. Install metal panels perpendicular to structural supports unless otherwise indicated.
3. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Locate metal panel splices over structural supports with end laps in alignment.
6. Lap metal flashing over metal panels to allow moisture to run over and off the material.

B. Lap-Seam Metal Panels: Install screw fasteners using power tools with controlled torque adjusted to compress EPDM washers tightly without damage to washers, screw threads, or metal panels. Install screws in predrilled holes.
1. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply metal panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.

D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated; or, if not indicated, provide types recommended by metal panel manufacturer.
a. Seal metal panel end laps with double beads of tape or sealant the full width of panel. Seal side joints where recommended by metal panel manufacturer.

E. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

3.3 METAL ROOF PANEL INSTALLATION

A. General: Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.
   1. Install ridge caps as metal roof panel work proceeds.
   2. Flash and seal metal roof panels with weather closures at eaves and rakes. Fasten with self-tapping screws.

B. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint, at location and spacing and with fasteners recommended by manufacturer.
   1. Install clips to supports with self-drilling or self-tapping fasteners.
   2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
   3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
   4. Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so that clip, metal roof panel, and factory-applied sealant are completely engaged.
   5. Rigidly fasten eave end of metal roof panels and allow ridge end free movement for thermal expansion and contraction. Predrill panels for fasteners.
   6. Provide metal closures at peaks, rake edges, rake walls and each side of ridge and hip caps.

C. Lap-Seam Metal Roof Panels: Fasten metal roof panels to supports with exposed fasteners at each lapped joint, at location and spacing recommended by manufacturer.
   1. Provide metal-backed sealing washers under heads of exposed fasteners bearing on weather side of metal roof panels.
   2. Provide sealant tape at lapped joints of metal roof panels and between panels and protruding equipment, vents, and accessories.
   3. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps and on side laps of nesting-type metal panels, on side laps of ribbed or fluted metal panels, and elsewhere as needed to make metal panels weatherproof to driving rains.
   4. At metal panel splices, nest panels with minimum 6-inch end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.

D. Metal Fascia Panels: Align bottom of metal panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws. Flash and seal metal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

3.4 METAL WALL PANEL INSTALLATION

A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
   2. Shim or otherwise plumb substrates receiving metal wall panels.
   3. When two rows of metal panels are required, lap panels 4 inches minimum.

4. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
5. Rigidly fasten base end of metal wall panels and allow eave end free movement for thermal expansion and contraction. Predrill panels.
6. Flash and seal metal wall panels with weather closures at eaves and rakes, and at perimeter of all openings. Fasten with self-tapping screws.
7. Install screw fasteners in predrilled holes.
8. Install flashing and trim as metal wall panel work proceeds.
9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated on Drawings; if not indicated, as necessary for waterproofing.
10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws.
11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

B. Metal Wall Panels: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.

3.5 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal roof panel assembly, including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Install components for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
3. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

C. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than 36 inches

o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

D. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.
   1. Provide elbows at base of downspouts to direct water away from building.
   2. Tie downspouts to underground drainage system indicated.

E. Circular Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Mount ventilators on flat level base. Install preformed filler strips at base to seal ventilator to metal roof panels.

F. Continuous Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Join sections with splice plates and end-cap skirt assemblies where required to achieve indicated length. Install preformed filler strips at base to seal ventilator to metal roof panels.

G. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to panel as recommended by manufacturer.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform field quality control special inspections and to submit reports.

B. Product will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

SECTION 230000

MECHANICAL GENERAL REQUIREMENTS

A. GENERAL

1. Provide equipment, material, and labor for the heating, ventilation, air conditioning, piping, and plumbing in strict accordance with the specifications and drawings.

2. Work shall be executed and inspected in accordance with local and state codes. Obtain permits and inspections required.

3. Plumbing work shall comply with the State Plumbing Code.

4. In case of discrepancies between the plans, applicable codes, or specifications, the most stringent shall govern.

5. Should the Contractor perform any work that does not comply with requirements of applicable authorities, Contractor shall correct the deficiencies at no additional cost to the Owner.

6. It is the responsibility of the Contractor to investigate any desired substitutions for specified equipment prior to submission of his bid. The Contractor shall be responsible for any changes required in mechanical, electrical, structural, or plumbing and shall bear costs for those changes. Substitution requests will not be taken before bid date.

7. Final decision as to whether or not a specific piece of equipment meets specifications shall rest with Engineer.

8. Submit 6 copies of submittals for equipment. (Electronically or in 3 ring binders. No loose sets accepted.)

9. The Contractor shall field verify existing conditions and review and compare drawings and specifications for all disciplines to avert possible installation conflicts. Changes required in the work of the Contractor caused by his neglect to do so shall be made by him at no additional cost to the Owner.

10. Lines that pitch such as drain piping shall have the right-of-way over those that do not pitch.

11. Provide and install accessories, and incidental items to complete the work and provide complete systems ready for operation.

12. Contractor shall be responsible for required cutting and patching incidental to his work and shall make satisfactory repairs. In no case shall the Contractor cut into any major structural element, beam, or column.

13. Use of the Owner's Existing and New, Permanent HVAC System During Construction:

    a. **Use of the Owner's existing and currently being installed, permanent HVAC system during Construction is prohibited.** Provide temporary means for heating

and cooling required by construction activities for curing or drying completed installations or for protecting installed construction from adverse effects of temperature and humidity. Provide temporary dehumidification systems when required to reduce substrate moisture levels required to accommodate installation or application of finishes.

b. Maintain a minimum ambient temperature of 50 DEG. F. in areas where construction is in progress, unless indicated otherwise in the specifications.

c. Prevent dust, fumes, construction debris, and odors from entering existing and newly installed HVAC equipment, ductwork, and control system components. Prior to commencing work, isolate HVAC equipment. Where existing HVAC systems will be affected, isolate existing supply, return, and exhaust ducts by disconnecting ductwork at point where existing duct shall remain. Cover ends of existing ductwork securely with black plastic material.

d. Newly installed ductwork shall be thoroughly cleaned before installation. Each section that is installed at the end of the day shall have open ends securely covered with black plastic material.

e. Newly installed HVAC equipment shall be securely covered and protected with black plastic material or by other approved method. After installation of air moving equipment, duct connections shall be securely covered with black plastic material. Connections to duct systems shall not be made until final finishes have been installed, areas served are clean, and building is ready for HVAC equipment start-up and use.

f. Securely cover control system components to prevent damage from construction debris, dust, and dirt. Control systems shall not be energized for testing and adjusting until HVAC system start-up.

g. **HVAC Equipment, Ductwork, and Control Components contaminated by construction debris, dirt, and construction dust shall not be acceptable and shall be replaced at no additional cost to the Owner. HVAC Equipment, Ductwork, and Control components shall be kept clean throughout construction. Cleaning after an HVAC system has been contaminated shall not be an acceptable alternate to replacement.**

14. Contractor shall include adequate time in construction schedule for HVAC system start-up; testing, adjusting, and balancing; and control system installation, programming, testing, and commissioning.

15. Contractor and control system provider shall coordinate with Commissioning Agent and provide assistance as required throughout the commissioning period.

16. Equipment and materials shall be new and shall bear the manufacturer's name, trade name, and the UL label in every case where a standard has been established for the particular material. Equipment shall be the standard product of a manufacturer regularly engaged in the production of the required type of equipment, and shall be the manufacturer's latest approved design.

17. Equipment and materials of the same general type shall be of the same throughout the work to provide uniform appearance, operation, and maintenance.

18. Install sleeves for pipes and ducts that pass through floors or roof, and for pipes which pass through masonry or concrete walls or partitions. Sleeves for ducts shall be 16-gauge galvanized sheet steel.

19. Sleeves shall be large enough so that pipe and insulation can pass through freely, but not larger than necessary. Sleeves in floor slabs shall be extended 2" above the surface of the floor, whether in finished rooms, concealed spaces, chases or partitions. Sleeves in roof slab, walls, and partitions shall be flush with the finished surfaces.

20. In the exterior walls and at floor slab penetrations, the space between sleeves and pipes passing through the sleeves shall be sealed with "link-seal" sleeve seals.

21. It is the responsibility of the Contractor to investigate the job site and become familiar with the location and inverts of existing site utilities prior to submitting a bid or starting construction.

22. Excavation and Trenching: Excavate to provide three (3) foot minimum cover or greater depths as required by code to provide adequate slope and burial depth. Grade bottom of trenches to provide uniform bearing and support for each section of pipe on undisturbed soil. Provide a 4 inch thick (minimum) layer of pea gravel aggregate bedding beneath buried piping. Bedding shall be compacted and leveled to provide required sloping. Backfill trenches with excavated materials of earth, sandy clay, sand, gravel or other approved materials, free from clods of earth or stones 2 ½-inches maximum dimension, deposited in 6-inch layers and compacted to 95% standard proctor compaction test.

23. Remove waste and rubbish from the job.

24. Test and adjust phases of the work.

25. Supervise and coordinate electrical work in connection with the mechanical work.

26. Furnish motor controllers and contactors.

27. Control wiring shall be in conduit.

28. Provide access panels where shown or as required for maintenance.

29. Exposed ironwork, pipes, hangers, and miscellaneous steel without factory finish shall be prepped, primed with one coat alkyd primer, and painted with two coats alkyd enamel gloss. Color shall be black.

30. Install ducts and piping to provide the maximum possible clear height underneath.

31. Provide a redline set of record drawings at the conclusion of the project which indicate the as-installed condition. Provide final drawings to Owner.

32. Any damage to existing buildings, equipment, grounds, or product, which is the result of the Contractor's operations, shall be repaired or replaced to the Owner's satisfaction without additional cost to the Owner.

33. Provide miscellaneous supporting systems for the quipment installed.

34. Instruct the Owner's representative in the proper operation and maintenance of elements of the mechanical systems.

35. The work herein specified shall be free from defects in workmanship and material under normal use and service. If within twelve (12) months from the date of acceptance by the Owner, any of the equipment or materials, or the installation thereof, is found to be defective in workmanship or materials, it shall be replaced or repaired at no charge to the Owner.

36. Drawings are diagrammatic; therefore, offsets, fittings, valves and accessories are not shown. Plan work around building details and other crafts.

37. It is the intention that the plans and specifications shall provide a complete installation. Accessories and apparatus necessary for complete operational systems shall be included. The omission of specific reference to any part of the work necessary for such complete installation shall not be interpreted as relieving this Contractor from furnishing and installing such part.

B. ELECTRICAL REQUIREMENTS FOR MECHANICAL EQUIPMENT

1. Conduit, wiring, disconnect switches, and electrical connections for electric motors and equipment and starters for motors are specified under electrical, unless specifically furnished by Contractor. Starting switches, protective devices and other means for the operation and control of equipment shall be furnished with the mechanical equipment unless otherwise specifically noted.

2. Electrical work shall comply with the N.E.C.

3. Variable Frequency Drives shall be ABB unless otherwise noted.

C. MECHANICAL SUPPORTING SYSTEMS

1. Pipe hangers shall be equal to Grinnell, designed for the weight and installation.

2. Provide saddles on insulated pipe.

3. Hanger spacing shall be:

Pipe Size	Steel	Copper
to 3/4	7'	5'
1	7	6
1-1/4	7	7
1-1/ 2	9	8
2 to 2-1/2	10	8
3	12	10

4. Pipe hangers and supports shall conform to MSS-SP-58 and MSS-SP-69 latest editions.

5. Provide insulation inserts on insulated piping.

6. Provide copper hangers on un-insulated copper piping.

7. Provide supports at concentrated loads.

8. Furnish auxiliary steel and paint.

D. MECHANICAL VIBRATION CONTROLS

1. Provide 4-inch minimum concrete pads for floor-mounted equipment.

2. Provide concrete inertia bases for fans and pumps located above the basement or ground floor level.

3. Provide flexible connections on connections of piping and ductwork to rotating equipment.

4. Provide vibration isolation at fans and equipment with internal fans. Provide vibration isolation hangers for suspended units.

E. SEISMIC PROTECTION OF MECHANICAL EQUIPMENT

1. Comply with seismic requirements of IBC 2000/2003.

2. Manufacturer of seismic restraints shall provide submittals for products as follows:

   a. Catalog/data sheets on seismic restraints.

   b. Support, anchor, and installation details.

   c. Seismic restraint calculations stamped by registered Engineer licensed in Arkansas.

3. See specific equipment specifications for additional requirements.

F. EQUIPMENT, PIPE, AND VALVE IDENTIFICATION

1. Install pipe ID markers on plumbing, and HVAC piping.

2. Colors and descriptions shall comply with ANSI requirements.

3. Labels shall comply with OSHA standards and Owner requirements.

4. Equipment, switches, and controls shall have a laminated tag identifying the piece of equipment or the equipment the device controls.

5. Provide equipment ID for HVAC equipment.

G. MECHANICAL SYSTEMS INSULATION

1. PLUMBING

   a. Indoors: Domestic water:

      1) Run-outs: 1/2" thick F.G. with ASJ and molded fittings.

2) Mains: 1” thick, F.G. with ASJ and molded fittings, 1-1/2” thick over 2” pipe size.

3) Internal storm: 1” thick, F.G. with ASJ, and molded fittings on horizontal runs, and elbow to horizontal.

4) Sewer: 1” thick, F.G. with ASJ, and molded fittings on piping carrying condensate drainage and where subject to sweating.

5) Handicapped fixtures: insulate exposed drains and water piping.

b. Underground: Domestic water: Foamglass, 1” thick.

c. Mechanical spaces:

1) Domestic water: 1-1/2” thick, F.G. with ASJ and molded fittings. 1” thick on run-outs.

2) Storm Drain: 1-1/2” thick, F.G. with ASJ and molded fittings.

3) Sewer Lines and Traps: 1-1/2” thick, F.G. with ASJ and molded fittings.

2. HVAC PIPING

a. Hydronic piping: 2” thick F.G. with ASJ and molded fittings, 1-1/2" thick through 2" pipe size, and 2" thick for piping 2-1/2" and larger.

b. Refrigerant piping: 3/4” Armaflex AP

c. Condensate drain: 3/4” Armaflex AP

d. Provide rigid inserts at support points.

3. HVAC DUCTS

a. Duct wrap: 2" thick, F.G., 3/4 # density.

b. Semi-rigid board: 1-1/2” thick for dimensional sizes over 36” and ductwork with-in 6 feet of the finished floor. Insulate all outdoor ductwork with 1-1/2” thick semi-rigid board.

c. Insulate all ductwork except exhaust.

d. Kitchen exhaust ducts: 2” thick 3M fire barrier duct wrap 15A. Install in accordance with manufacturer’s instructions.

4. HVAC EQUIPMENT

a. Insulate chiller surfaces, chilled water pump bodies, air separator, chemical feeder, expansion tank, storage tank, and other surfaces subject to sweating with 3/4” Armaflex AP.

b. Insulate tops of ceiling supply air devices with R-6 foil-faced ductwrap.

5. Install systems of insulation in accordance with the manufacturer's instructions.

6. Generator Muffler and Tail Pipe: 2" thick Owens-Corning Kaylor calcium silicate with 0.020" aluminum insulated jacket and stainless steel bands. Fittings shall be insulated with mitered sections and finished with 1/4" thick layer of insulating cement.

7. DUCTWORK EXPOSED TO WEATHER: Cover semi-rigid finished insulation with painted, 0.24" aluminum smooth jacket. Overlap sides and edges 2" and make edges hemmed smooth. Seal laps with weatherproofing sealant. Position laps to shed water. Secure jackets in place with ½" wide metal bands on 48" centers. Extend ends of jacketing inside building penetration or equipment and finish for weatherproofing.

8. PIPE INSULATION EXPOSED TO WEATHER: Provide smooth aluminum jacket 0.016". Provide side and end laps of 2" minimum with cut edge of side lap turned under 1" for smooth edge. Seal laps with weatherproof sealant. Position laps to shed water. Secure jacket in place with bands 1/2" X 0.015" thick placed on 9" centers. Extend exterior insulation and jacketing 2" beyond sleeve inside building.

9. Maintain adequate vapor barrier on insulation covering equipment, piping, and ductwork subject to sweating. Water soaked insulation is not acceptable and shall be replaced.

H. FIRESTOPPING AND SMOKE STOPPING

1. Provide the required fire and smoke stopping for mechanical systems penetrations of the fire and smoke construction of the building.

2. Submit shop drawings and product data sheets for system components.

3. Fire and smoke stopping systems and components shall be equal to 3M.

I. BUILDING SERVICES PIPING AND SPECIALTIES BASICS

1. Provide and install a complete system of piping and valves as indicated or as necessary to completely control the entire apparatus appurtenances. The piping drawings are diagrammatic and indicate the general location and connections.

2. Open ends of pipes and equipment shall be properly capped or plugged to keep dirt and other foreign materials out of the system.

3. Contractor shall take every precaution to remove dirt, grease, and other foreign matter from each length of piping before making field connections.

4. Maintain piping clean and dry.

5. Systems shall be free of noise.

6. Piping stored on site shall be protected from damage and weather.

7. Material shall be new and undamaged.

8. Materials and methods will comply with ASME and ANSI standards.

9. Route lines parallel or perpendicular with the building.

10. Piping with grades will take precedence. Maintain piping as close as possible to the structure.

11. Plans are diagrammatic and do not indicate offsets or arrangements required.

12. Conceal pipes unless indicated otherwise.

13. Install drains at low points. Install air vents at high points.

14. Seal pipe penetrations. Provide sleeves. Seal penetrations in fire or smoke construction to maintain rating.

15. Remove scale, slag, dirt and debris for the piping.

16. Provide unions or flanges at equipment.

17. Use standard fittings for joints and bends.

18. Provide dielectric unions for dissimilar metals. Provide shut-off valve on either side for service.

19. Fittings shall match the piping materials.

20. Clean, flush, and inspect piping systems.

21. Test piping systems.

J. VALVES

1. Valves shall be equal to Milwaukee unless note otherwise.

2. Refer to specific system specifications for special valve requirements.

3. Valves for Domestic Hot and Cold Water:

   a. Gate Valves:

      1) 2 inch and Smaller: 125# SWP-200# WOG, body and bonnet of ASTM B 62 cast bronze, threaded ends, solid wedge disc, bronze stem, brass packing gland, threaded bonnet, and aluminum handwheel.

      2) 2-1/2 Inch and Larger: 125# SWP – 200# WOG, iron body and bonnet conforming to ASTM A 126 Class B, flanged ends, solid wedge disc, bolted bonnet, cast iron handwheel, and brass packing gland.

   b. Ball Valves: Valves 2 Inch and Smaller: 150# SWP – 400# WOG, threaded ends, 3-piece construction, bronze body conforming to ASTM B 62, full port, chrome-plated brass ball, replaceable PTFE seats and seals, blowout proof stem, and vinyl-covered steel handle; Milwaukee BA-300 or equal. For valves subject to sweating, provide insulated handle equal to Nibco Nib-Seal.

c. Plug Valves: 150# SWP – 200# WOG, 2" and smaller – threaded ends, 2-1/2" and larger – flanged ends. Lubricated plug type, semi-steel body, single gland, wrench operated; Homestead or equal.

d. Globe Valves:

1) 2 Inch and Smaller: 125# SWP – 200# WOG, body and screwed bonnet of ASTM B 62 cast bronze, threaded ends, bronze disc, bronze stem, bronze packing gland, and aluminum handwheel.

2) 2-1/2 Inch and Larger: 125# SWP – 200# WOG, iron body and bolted bonnet conforming to ASTM A 126, Class B, bronze disc, cast iron handwheel, flanged ends, and brass packing gland.

e. Butterfly Valves:

1) 1-1/2 Inch and Larger: 200# WOG. Cast iron body conforming to ASTM A 126, Class B. Valves shall have field replaceable EPDM sleeve, with nickel-plated ductile iron disc, stainless steel stem, and EPDM stem seals. Size 2 through 6 inches shall have wheel handle with stem operators and locks, and sizes 8 through 24 inches shall have gear operators with position indicator. Valves shall be lug type, drilled and tapped. Valves shall be suitable for dead end service, bubble tight shut off. Milwaukee ML/CL Series.

f. Check Valves:

1) Swing Check Valves:

a) 2-Inch and Smaller: 125# SWP – 200# WOG, cast bronze body and cap conforming to ASTM B 62, horizontal swing, bronze disc, and threaded ends. Valve shall be capable of being reground while the valve remains in the line.

b) 2-1/2 Inch and Larger: 125# SWP – 200# WOG, cast iron body and bolted cap conforming to ASTM A 126, Class B, horizontal swing, bronze disc, and flanged ends. Valve shall be capable of being refitted while the valve remains in the line.

2) Spring Loaded (Non-Slam Check Valves for Pumps): Valves shall be iron body, globe typed silent check valves, bronze mounted, stainless steel spring with flanged (125-pounds drilling) end connections for installation between ASA 150 lbs. flat face steel slip on weld flanges.

4. Valves shall be accessible.

K. CONDENSATE DRAIN PIPING

1. Piping shall be SCH 40 PVC with glued joints.

2. Provide with traps and vents.

L. HVAC EQUIPMENT

1. Submit equipment for approval.

2. See the plans for equipment schedules.

3. Install equipment in strict accordance with manufacturer's recommendations.

4. Refrigeration compressors shall have a 5 year factory warranty.

5. See other specific equipment specification sections.

6. See Section A for use of Owner's new and existing, permanent HVAC Equipment during construction.

M. HVAC DUCT WORK

1. Louvers and dampers shall be equal to Ruskin.

N. HVAC CONTROLS

1. Coordinate installation with the equipment installed.

2. Wiring shall be in conduit.

3. Provide controllers and operators for valves, dampers and other devices.

O. TESTING, ADJUSTING, AND BALANCING

1. HVAC systems shall be tested, adjusted, and balanced by a company or individual approved by the Engineer.

2. All phases of the HVAC system shall be tested and balanced to the design conditions. A written report shall include the start up logs of the major equipment, the motor amps, installed cfm and static pressure, and the water flow rates at pumps and coils. Engineer shall not accept job until the report is received.

3. Provide the following as part of the tab work:

    a. Provide test data for air and water equipment

    b. Balance air system terminals

    c. Balance air device to air flows indicated

    d. Test and set system pump flows

    e. Balance flow through system coils, heat exchangers, chillers, and similar hydronic equipment.

    f. Balance bypass legs at water coils

4. If procedures were not performed during near peak summer or winter conditions, perform additional testing as required to confirm operation at peak seasonal conditions.

SECTION 260500

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. General requirements applicable to all Electrical Work.

2. General requirements for electrical submittals.

3. Interfaces to equipment, instruments, and other components:

4. The Drawings, Specifications, and overall design are based on preliminary information furnished by various equipment manufacturers which identify a minimum scope of supply from the manufacturers. This information pertains to, but is not limited to, instruments, control devices, electrical equipment, packaged mechanical systems, and control equipment provided with mechanical systems.

5. Provide all material and labor needed to install the actual equipment furnished, and include all costs to add any additional conduit, wiring, terminals, or other electrical hardware to the Work, which may be necessary to make a complete, functional installation based on the actual equipment furnished:

   a. Make all changes necessary to meet the manufacturer's wiring requirements.

   b. Submit all such changes and additions to the Engineer for acceptance.

6. Review the complete set of Drawings and Specifications in order to ensure that all items related to the electrical power and control systems are completely accounted for. Include any such items that appear on the Drawings or in the Specifications from another discipline in the scope of Work:

   a. If a conflict between Drawings and Specifications is discovered, refer conflict to the Engineer as soon as possible for resolution.

7. Loop drawings:

   a. Provide all electrical information required in the preparation of loop drawings including, but not limited to:

      1) Conduit numbers and associated signal(s) contained within each conduit.

      2) Wire numbers.

      3) Equipment terminal numbers.

      4) Junction boxes and signal(s) contained within each junction box.

      5) Equipment power sources, and associated circuit numbers.

      6) As-built drawings detailing wiring.

B. All electrical equipment and systems for the entire Project must comply with the requirements of the Electrical Specifications, whether referenced in the individual Equipment Specifications or not:

1. The requirements of the Electrical Specifications apply to all Electrical Work specified in other sections.

2. Inform all vendors supplying electrical equipment or systems of the requirements of the Electrical Specifications.

3. Owner is not responsible for any additional costs due to the failure of Contractor to notify all subcontractors and suppliers of the Electrical Specifications requirements.

C. Contract Documents:

1. General:

a. The Drawings and Specifications are complementary and are to be used together in order to fully describe the Work.

2. Specifications:

a. The General and Supplementary Conditions of the Contract Documents govern the Work.

b. These requirements are in addition to all General Requirements.

3. Contract Drawings:

a. The Electrical Drawings show desired locations, arrangements, and components of the Electrical Work in a diagrammatic manner.

b. Locations of equipment, control devices, instruments, boxes, panels, etc. are approximate only; exercise professional judgment in executing the Work to ensure the best possible installation:

c. The equipment locations and dimensions indicated on the Drawings are approximate. Use the shop drawings to determine the proper layout, foundation, and pad requirements, etc. for final installation. Coordinate with all subcontractors to ensure that all electrical equipment is compatible with other equipment and space requirements. Make changes required to accommodate differences in equipment dimensions.

d. The Contractor has the freedom to select any of the named manufacturers identified in the individual specification sections; however, the Engineer has designed the spatial equipment layout based upon a single manufacturer and has not confirmed that every named manufacturer’s equipment fits in the allotted space. It is the Contractor’s responsibility to ensure that the equipment being furnished fits within the defined space.

e. Installation details:

1) The Contract Drawings include typical installation details the Contractor is to use to complete the Electrical Work. For cases where a typical detail does not apply, develop installation details that may be necessary for completing the Work, and submit these details for review by the Engineer.

2) Not all typical installation details are referenced within the Drawing set. Apply and use typical details where appropriate.

4. Schematic diagrams:

a. All controls are shown de-energized.

b. Schematic diagrams show control function only. Incorporate other necessary functions for proper operation and protection of the system.

c. Add slave relays, where required, to provide all necessary contacts for the control system or where needed to function as interposing relays for control voltage coordination, equipment coordination, or control system voltage drop considerations.

d. Mount all devices shown on motor controller schematic diagrams in the controller compartment enclosure, unless otherwise noted or indicated.

e. Schematic diagrams are to be used in conjunction with the descriptive operating sequences in the Contract Documents. Combine all information and furnish a coordinated and fully functional control system.

1.2 REFERENCES

A. Code compliance:

1. As specified in the section for Regulatory Requirements.
The publications are referred to in the text by the basic designation only. The latest edition accepted by the Authority Having Jurisdiction of referenced publications in effect at the time of the bid governs.

2. The standards listed are hereby incorporated into this Section.

a. American National Standards Institute (ANSI).

b. American Society of Civil Engineers (ASCE):

c. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

d. ASTM International (ASTM).

e. Illuminating Engineering Society (IES).

f. Institute of Electrical and Electronics Engineers (IEEE).

g. Insulated Cable Engineers Association (ICEA).

h. International Code Council (ICC):

i. International Code Council Evaluation Service (ICC-ES).

j. AC 156 - Acceptance Criteria for Seismic Certification by Shake Table Testing of Non-Structural Components (ICC-ES AC 156).

k. International Society of Automation (ISA).

l. National Electrical Manufacturers Association (NEMA):

m. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

n. National Fire Protection Association (NFPA):

o. 70 - National Electrical Code (NEC).

p. National Institute of Standards and Technology (NIST).

q. Underwriters' Laboratories, Inc. (UL).

r. Compliance with laws and regulations: As specified in Document 00700 - General Conditions.

1.3 DEFINITIONS

A. Definitions of terms and other electrical and instrumentation considerations as set forth by:

1. IEEE.
2. NETA.
3. IES.
4. ISA.
5. NEC.
6. NEMA.
7. NFPA.
8. NIST.
9. Specific definitions:
10. FAT: Factory acceptance test.
11. LCS: Local Control Station
12. ICSC: Instrumentation and controls subcontractor.
13. LCP: Local control panel: Operator interface panel that may contain an HMI, pilot type control devices, operator interface devices, control relays, etc. and does not contain a PLC or RIO.
14. PCM: Process control module: An enclosure containing any of the following devices: PLC, RTU, or RIO.
15. PCIS: Process control and instrumentation system.
16. RTU: Remote telemetry unit: A controller typically consisting of a PLC, and a means for remote communications. The remote communications devices typically are radios, modems, etc.
17. Space: That portion of the switchgear, motor control center, panelboard, switchboard or control panel that does not physically contain a device but is capable of accepting a device with no modifications to the equipment, i.e., provide all standoffs, bus, and hardware, as part of the space.
18. Spare: That portion of the switchgear, motor control center, panelboard, switchboard or control panel that physically contains a device with no load connections to be made.
19. VCP: Vendor control panel: Control panels that are furnished with particular equipment by a vendor other than the ICSC. These panels may contain PLCs, RIO, OIT, HMI, etc.
20. Unequipped space: That portion of the switchgear, motor control center, panelboard, switchboard or control panel that does not physically contain a device, standoff, bus, hardware, or other equipment.

1.4 SYSTEM DESCRIPTION

A. General requirements:

1. The Work includes everything necessary for and incidental to executing and completing the Electrical Work indicated on the Drawings and specified in the Specifications and reasonably inferable there from:
    a. The Electrical Drawings are schematic in nature; use the Structural, Architectural, Mechanical, and Civil Drawings for all dimensions and scaling purposes.

2. It is the intent of these Specifications that the entire electrical power, instrumentation, and control system be complete and operable. Provide all necessary material and labor for the complete system from source of power to final utilization equipment, including all connections, testing, calibration of equipment furnished by others as well as equipment furnished by the Contractor, whether or not specifically mentioned but which are necessary for successful operation.

3. Provide all Electrical Work, including conduit, field wiring, and connections by the electrical subcontractor under the provisions of the Electrical Specifications for all aspects of the Work.

4. Coordinate all aspects of the Work with the electrical subcontractor and other subcontractors before bidding in order to ensure that all costs associated with a complete installation are included. The Owner is not responsible for any change orders due to lack of coordination of the Work between the Contractor, the electrical subcontractor, the other subcontractors or suppliers.

5. Portions of this Project involve installation in existing facilities and interfaces to existing circuits, power systems, controls, and equipment:

    a. Perform and document comprehensive and detailed field investigations of existing conditions (circuits, power systems, controls, equipment, etc.) before starting any Work. Determine all information necessary to document, interface with, modify, upgrade, or replace existing circuits, power systems, controls, and equipment.

    b. Provide and document interface with, modifications to, upgrades, or replacement of existing circuits, power systems, controls, and equipment.

    c. Provide all trenching, forming, rebar, concrete, back filling, hard surface removal and replacement, for all items associated with the Electrical Work and installation:

        1) As specified in the Contract Documents.

B. Operating facility:

1. The Facility is an operating facility. Portions of this facility must remain fully functional throughout the entire construction period. In consideration of this requirement, comply with the following guidelines:

    a. All outages must be of minimal duration and fully coordinated and agreed to by the Owner. Adjust the construction schedule to meet the requirements of the Owner. All changes in schedule and any needs to reschedule are included in the Work.

    b. As weather and water demand conditions dictate, re-adjust the construction schedule to meet the demands placed upon Owner by its users.

    c. Coordinate the construction and power renovation, bear all costs, so that all existing facilities can continue operation throughout construction.

    d. According to individual circumstances and in compliance with the Drawings, extend or replace conduit and cable connections from existing locations.

    e. The standards of documentation, instrument tagging, cable and conductor ferruling, terminal identification and labeling that apply to the new installation apply equally to the existing installation which forms part of the modified system.

1.5 SUBMITTALS

A. General:

1. Instruct all equipment suppliers of submittals and operation and maintenance manuals of the requirements in this Section.
2. Furnish the submittals required by each section in the Electrical Specifications.
3. Adhere to the wiring numbering scheme specified in the section for Identification for Electrical Systems throughout the Project:
4. Uniquely number each wire.
5. Wire numbers must appear on all Equipment Drawings.
6. Use equipment and instrument tags, as indicated on the Drawings, for all submittals.

B. Seismic requirements:

1. Provide electrical equipment with construction and anchorage to supporting structures designed to resist site seismic loads based on the seismic design criteria in Specifications.
2. For equipment installed in structures designated as seismic design category C, D, E or F, prepare and submit the following:
    a. Statement of seismic qualification, and special seismic certification:
        1) “Statement of seismic qualification:” Provide manufacturer’s statement that the equipment satisfies the seismic design requirements of the building code indicated in the section for Regulatory Requirements, including the requirements of ASCE 7, Chapter 13.
        2) “Special seismic certification:” Provide manufacturer’s certification that the equipment, when subjected to shake table testing in accordance with ICC-ES AC 156, meets the “Post-Test Functional Compliance Verification” requirements of ICC-ES AC 156 for “Components with Ip = 1.5.” Compliance shall include both operability and containment of hazardous materials as appropriate to the unit being tested.
    b. Substantiating test data: With seismic qualification and special seismic certification statements, submit results of testing in accordance with ICC-ES AC 156.
    c. Anchoring design calculations and details:
        1) Submit project-specific drawings and supporting calculations, prepared and sealed by a professional engineer licensed in the state where the Project is being constructed, and showing details for anchoring electrical equipment to its supports and for anchoring supports provided with the equipment to the structure. Prepare calculations in accordance with the requirements of the section for Seismic Design Criteria.
        2) Exemptions: A “statement of seismic qualification” and a “special seismic certification” are not required for the following equipment:
    d. Temporary or moveable equipment.
        1) Equipment anchored to the structure and having a total weight of 20 pounds or less.
        2) Distribution equipment anchored to the structure and having a total unit weight of 3 pounds per linear foot, or less.

C. Submittal organization:

1. First page:
    a. Specification section reference.

b. Name and telephone number of individual who reviewed submittal before delivery to Engineer.

c. Name and telephone number of individual who is primarily responsible for the development of the submittal.

d. Place for Contractor's review stamp and comments.

2. Next pages:

a. Provide confirmation of specification compliance:

1) Specification section: Include with each submittal a copy of the relevant specification section.

2) Indicate in the left margin, next to each pertinent paragraph, either compliance with a check (√) or deviation with a consecutive number (1, 2, 3).

3) Provide a list of all numbered deviations with a clear explanation and reason for the deviation.

b. Include a response in writing to each of the Engineer's comments or questions for submittal packages which are re-submitted:

1) In the order that the comments or questions were presented throughout the submittal.

2) Referenced by index section and page number on which the comment appeared.

c. Acceptable responses to Engineer's comments are either:

1) Engineer's comment or change is accepted and appropriate changes are made.

2) Explain why comment is not accepted or requested change is not made.

3) Explain how requirement will be satisfied in lieu of comment or change requested by Engineer.

d. Any re-submittal, which does not contain responses to the Engineer's previous comments shall be returned for Revision and Re-submittal.

e. No further review by the Engineer will be performed until a response for previous comments has been received.

3. Remaining pages:

a. Actual submittal data:

1) Organize submittals in exactly the same order as the items are referenced, listed, and/or organized in the specification section.

2) For submittals that cover multiple devices used in different areas under the same specification section, the submittal for the individual devices must list the area where the device is intended to be used.

D. Submittal requirements:

1. Furnish submittals that are fully indexed with a tabbed divider for every component.

2. Sequentially number pages within the tabbed sections. Submittals and operation and maintenance manuals that are not fully indexed and tabbed with sequentially numbered pages, or are otherwise unacceptable, will be returned without review.

3. Edit all submittals and operation and maintenance manuals so that the submittal specifically applies to only the equipment furnished.

4. Neatly cross out all extraneous text, options, models, etc. that do not apply to the equipment being furnished, so that the information remaining is only applicable to the equipment being furnished.

5. Submit copies of shop drawings, and product data:

    a. Show dimensions, construction details, wiring diagrams, controls, manufacturers, catalog numbers, and all other pertinent details.

6. Where submittals are required, provide a separate submittal for each specification section. In order to expedite construction, the Contractor may make more than 1 submittal per specification section, but a single submittal may not cover more than 1 specification section:

    a. The only exception to this requirement is when 1 specification section covers the requirements for a component of equipment specified in another section. (For example, circuit breakers are a component of switchgear. The switchgear submittal must also contain data for the associated circuit breakers, even though they are covered in a different specification section.)

7. Exceptions to Specifications and Drawings:

    a. Include a list of proposed exceptions to the Specifications and Drawings along with a detailed explanation of each.

    b. If there is insufficient explanation for the exception or deviation, the submittal will be returned requiring revision and re-submittal.

    c. Acceptance of any exception is at the sole discretion of the Engineer.

    d. Provide all items (materials, features, functions, performance, etc.) required by the Contract Documents that are not accepted as exceptions.

    e. Replace all items that do not meet the requirements of the Contract Documents, which were not previously accepted as exceptions, even if the submittals contained information indicating the failure to meet the requirements.

8. Specific submittal requirements:

    a. Shop drawings:

        1) Required for materials and equipment listed in this and other sections.

        2) Furnish sufficient information to evaluate the suitability of the proposed material or equipment for the intended use, and for compliance with these Specifications.

        3) Shop drawings requirements:

            a) Front, side, and, rear elevations, and top and bottom views, showing all dimensions.

            b) Locations of conduit entrances and access plates.

            c) Component layout and identification.

            d) Schematic and wiring diagrams with wire numbers and terminal identification.

            e) Connection diagrams, terminal diagrams, internal wiring diagrams, conductor size, etc.

            f) Anchoring method and leveling criteria, including manufacturer’s recommendations for the Project site seismic criteria.

            g) Weight.

h) Finish.

b. Nameplates:

1) As specified in the section for Identification for Electrical Systems.

2) Temperature limitations, as applicable.

c. Product data:

1) Submitted for non-custom manufactured material listed in this and other sections and shown on shop drawings.

2) Include:

a) Catalog cuts.

b) Bulletins.

c) Brochures.

d) Quality photocopies of applicable pages from these documents.

e) Identify on the data sheets the Project name, applicable specification section, and paragraph.

f) Identify model number and options for the actual equipment being furnished.

g) Neatly cross out options that do not apply or equipment not intended to be supplied.

h) Detailed sequence of operation for all equipment or systems.

E. Operation and maintenance manuals:

1. As specified in the section for Operation and Maintenance Data.

2. Furnish the Engineer with a complete set of written operation and maintenance manuals 8 weeks before Functional Acceptance Testing.

F. Material and equipment schedules:

1. Furnish a complete schedule and/or matrix of all materials, equipment, apparatus, and luminaries that are proposed for use:

2. Include sizes, names of manufacturers, catalog numbers, and such other information required to identify the items.

G. Schedule of values:

1. In addition to completing all items referred to in the schedule of values, submit per unit material and labor costs used in developing the final bid for the electrical system, for the express purpose of pricing and cost justification for any proposed change orders. In addition to the items shown on the schedule of values, provide per unit material and labor costs for conduit and wire installation for specific types, sizes, and locations as indicated on the Drawings. It is the responsibility of the electrical subcontractor to prove to the Engineer’s satisfaction that said per unit costs were used in the development of the final Bid amount.

H. Roof penetrations:

1. Submit details of all portions of the electrical installation that penetrate the roof. Include details showing support of the penetrating component, and the sealing means to be utilized.

I. Record Documents:

1. Provide Record Documents of all Electrical Drawings.
2. Record Drawing requirements:
    a. Update Record Drawings weekly.
    b. Record Drawings must be fully updated as a condition of the monthly progress payments.
    c. Submit Record Drawings upon completion of the Work for final review.
    d. Clearly and neatly show all changes including the following:
        1) All existing pipe, conduit, wire, instruments or other structures encountered or uncovered during construction.
3. Shop drawings:
    a. Upon completion of the Work, update all shop drawings to indicate the final as-built configuration of the systems:
    b. Provide as-built shop drawings for all electrical equipment on 11-inch by 17-inch paper.
    c. Size all drawings to be readable and legible on 11-17-inch media.
    d. Provide electronic copies of these documents on CD-ROM or DVD disks in PDF format.
4. Review and corrections:
    a. Correct any record documents or other documents found to be incomplete, not accurate, of poor quality, or containing errors.
    b. Promptly correct and re-submit record documents returned for correction.

J. Test reports:
1. Include the following:
    a. A description of the test.
    b. List of equipment used.
    c. Name of the person conducting the test.
    d. Date and time the test was conducted.
    e. All raw data collected.
    f. Calculated results.
2. Each report signed by the person responsible for the test.
3. Additional requirements for field acceptance test reports are specified in the section for Field Electrical Acceptance Tests.

K. Calculations:
1. Where required by specific Electrical Specifications:
    a. Because these calculations are being provided by a registered professional engineer, they will be reviewed for form, format, and content but will not be reviewed for accuracy and calculation means.

1.6 QUALITY ASSURANCE

A. Furnish all equipment listed by and bearing the label of UL or of an independent testing laboratory acceptable to the Engineer and the Authority Having Jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the section for Product Requirements.

B. Shipping precautions:

1. After completion of shop assembly and successful factory testing, pack all equipment in protective crates, and enclose in heavy duty polyethylene envelopes or secured sheeting to provide complete protection from damage, dust, and moisture.

2. Place dehumidifiers, when required, inside the polyethylene coverings.

3. Skid-mount the equipment for final transport.

4. Provide lifting rings for moving without removing protective covering.

5. Display boxed weight on shipping tags together with instructions for unloading, transporting, storing, and handling at the job site.

C. Delivery and inspection:

1. Deliver products in undamaged condition, in manufacturer's original container or packaging with identifying labels intact and legible. Include date of manufacture on label.

D. Special instructions:

1. Securely attach special instructions for proper field handling, storage, and installation to each piece of equipment before packaging and shipment.

1.8 PROJECT OR SITE CONDITIONS

A. Site conditions:

1. Provide an electrical, instrumentation and control system, including all equipment, raceways, and any other components required for a complete installation that meets the environmental conditions for the Site as specified in the General Requirements and below.

2. Seismic load resistance:

a. Provide electrical equipment with construction and anchorage to supporting structures designed to resist site seismic loads as specified in Specifications.

3. Wind load resistance:

a. Provide electrical equipment with construction and anchorage to supporting structures designed to resist site wind loads as specified in Specifications.

4. Altitude, temperature and humidity:

a. As specified in Specifications.

b. Provide all electrical components and equipment fully rated for continuous operation at this altitude, with no additional derating factors applied.

c. Provide additional temperature conditioning equipment to maintain all equipment in non-conditioned spaces subject to these ambient temperatures, with a band of 10 degrees Fahrenheit above the minimum operating temperature and 10 degrees Fahrenheit below maximum operating temperature, as determined by the equipment manufacturer's guidelines:

d. Provide all power conduits wiring for these devices (e.g. heaters, fans, etc.) whether indicated on the Drawings or not.

5. Outdoor installations:

a. Provide electrical, instrumentation and control equipment suitable for operation in the ambient conditions where the equipment is located.

b. Provide heating, cooling, and dehumidifying devices incorporated into and included with electrical equipment, instrumentation and control panels to maintain the enclosures within the rated environmental operating ranges as specified in this Section for the equipment:

c. Provide all wiring necessary to power these devices.

d. Provide enclosures for electrical, instrumentation and control equipment, regardless of supplier or subcontractor furnishing the equipment, that meet the requirements outlined in NEMA Standard 250 for the following types of enclosures:

1) NEMA Type 1: Intended for indoor use, primarily to provide a degree of protection from accidental contact with energized parts or equipment.

2) NEMA Type 4: Intended for indoor or outdoor use, primarily to protect equipment from exposure to windblown dust and rain, splashing or hose directed water, ice formation and freezing.

3) NEMA Type 4X: Made from corrosion resistant materials and are intended for indoor or outdoor use, primarily to protect equipment from exposure to windblown dust and rain, splashing or hose directed water, ice formation and freezing, and corrosion. Provide specific materials as specified or indicated on the Drawings.

4) NEMA Type 12: Intended for indoor use, primarily to provide a degree of protection from dust, falling dirt and dripping non-corrosive liquids.

5) NEMA Type 7: Intended for installation in locations where explosive or combustible gas or vapors may be present (Class I Division 1 or Class I Division 2) meeting the requirements outlined in the section for Hazardous Classified Area Construction.

6. Plant area Electrical Work requirements:

a. Provide all Electrical Work in accordance with the following table, unless otherwise specifically indicated on the Drawings:

PLANT AREA	NEMA ENCLOSURE TYPE	EXPOSED CONDUIT TYPE	ENVIRONMENT W = WET D = DAMP C = CLEAN/DRY X = CORROSIVE H = HAZARDOUS	SUPPORT MATERIALS
Indoor Conditioned Spaces	NEMA 1	Galvanized rigid steel	C	Stainless steel
Above lay-in ceilings	NEMA 1	EMT	C	Stainless steel
Indoor Non-Conditioned Spaces	NEMA 1	Galvanized rigid steel	C	Stainless steel
Below Grade/Vault	NEMA 3R	Galvanized rigid steel	X	Stainless steel
Outdoor	NEMA 3R	Galvanized rigid steel	W	Stainless steel

PLANT AREA	NEMA ENCLOSURE TYPE	EXPOSED CONDUIT TYPE	ENVIRONMENT W = WET D = DAMP C = CLEAN/DRY X = CORROSIVE H = HAZARDOUS	SUPPORT MATERIALS
Classified Areas	NEMA Type 7	Galvanized rigid steel	H	Stainless steel

Modify exposed conduit runs as specified in the section for Conduits.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING

A. General:

1. Testing requirements are specified in the section for Field Electrical Acceptance Tests and other sections.

B. Pre-submittal conference:

1. Before producing any submittals, schedule a pre-submittal conference for the purposes of reviewing the entire Project, equipment, control philosophy, schedules, and submittal requirements.

2. Contractor, electrical subcontractor, all suppliers, and individual equipment manufacturers furnishing major pieces of equipment must attend.

C. Factory acceptance testing (FAT):

1. Where FAT is required for equipment covered by these Specifications, notify the Engineer in writing when the equipment is completed and ready for factory inspection and testing:

2. Indicate the desired dates for inspection and testing.

3. Schedule the FAT after approval of the FAT procedures submittal:

a. Submit a copy of the test procedures including all forms at least 21 days before any scheduled test date.

b. Notify the Engineer of the scheduled tests a minimum of 15 days before the date of the test.

1.11 WARRANTY

A. Warrant the Electrical Work as specified in General Conditions:

B. Provide additional warranty as specified in the individual Electrical Specifications.

1.12 SYSTEM START-UP

A. Replace or modify equipment, software, and materials that do not achieve design requirements after installation in order to attain compliance with the design requirements:

B. Following replacement or modification, retest the system and perform additional testing to place the complete system in satisfactory operation and obtain compliance acceptance from the Engineer.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE

A. Before Substantial Completion, perform all maintenance activities required by any sections of the Specifications including any calibrations, final adjustments, component replacements or other routine service required before placing equipment or systems in service.

B. Furnish all spare parts as required by other sections of the Specifications.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Provide similar items of same manufacturer throughout the electrical and instrumentation portion of the Project.

B. Allowable manufacturers are specified in individual Electrical Specifications.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Furnish all materials under this Contract that are new, free from defects, and standard products produced by manufacturers regularly engaged in the production of these products and that bear all approvals and labels as required by the Specifications.

B. Provide materials complying with the applicable industrial standard as specified in General Conditions.

C. Stainless steel:

1. Where stainless steel is indicated or used for any portion of the Electrical Work, provide a non-magnetic, corrosion-resistant alloy, ANSI Type 316, satin finish.

2. Provide exposed screws of the same alloys.

3. Provide finished material free of any burrs or sharp edges.

4. Use only stainless steel hardware, when chemically compatible, in all areas that are or could be in contact with corrosive chemicals.

5. Use stainless steel hardware, when chemically compatible, in all chemical areas or areas requiring NEMA Type 4X construction.

6. Do not use stainless steel in any area containing chlorine, gas or solution, chlorine products or ferric chloride.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Provide all equipment that is new, free from defects, and standard products produced by manufacturers regularly engaged in the production of these products.

PART 3 - EXECUTION

3.1 EXAMINATION

A. The electrical subcontractor is encouraged to visit the site to examine the premises completely before bidding.

B. **Review the site conditions and examine all shop drawings for the various items of equipment in order to determine exact routing and final terminations for all wiring and cables.**

C. It is the electrical subcontractor's responsibility to be fully familiar with the existing conditions and local requirements and regulations.

D. Comply with pre-bid conference requirements as specified in Instructions to Bidders.

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. Equipment locations shown on Electrical Drawings may change due to variations in equipment size or minor changes made by others during construction:

B. Verify all dimensions indicated on the Drawings:

1. Actual field conditions govern all final installed locations, distances, and levels.

C. Review all Contract Documents and approved equipment shop drawings and coordinate Work as necessary to adjust to all conditions that arise due to such changes.

D. Make minor changes in location of equipment before rough in, as directed by the Owner or Engineer.

E. Provide a complete electrical system:

1. Install all extra conduits, cables, and interfaces as may be necessary to provide a complete and operating electrical system.

2. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

F. Cutting and patching:

1. Perform all cutting, patching, channeling, core drilling, and fitting required for the Electrical Work, except as otherwise directed:

2. Secure the permission of the Engineer before performing any operation likely to affect the strength of a structural member such as drilling, cutting or piercing:

3. Before cutting, channeling, or core drilling any surface, ensure that no penetration of any other systems will be made:

a. Verify that area is clear and free of conduits, cables, piping, ductwork, post-tensioning cables, etc.

b. Use tone-locate system or X-ray to ensure that area is clear of obstructions.

c. Review the complete Drawing set to ensure that there are no conflicts or coordination problems before cutting, channeling, or core drilling any surface.

4. Perform all patching to the same quality and appearance as the original work. Employ the proper tradesmen to secure the desired results. Seal around all conduits, wires, and cables penetrating walls, ceilings, and floors in all locations with a fire stop material, typically:
    a. 3M: CP 25WB+: Caulk.
    b. 3M: Fire Barrier: Putty.
5. Install all conduits and equipment in such a manner as to avoid all obstructions and to preserve headroom and keep openings and passageways clear:
    a. Install all conduits and equipment in accordance with working space requirements in accordance with the NEC.
    b. This includes any panel, disconnect switch or other equipment that can be energized while open exposing live parts regardless of whether it is likely to require examination or has serviceable parts.
    c. Where the Drawings do not show dimensions for locating equipment, install equipment in the approximate locations indicated on the Drawings.
    d. Adjust equipment locations as necessary to avoid any obstruction or interferences.
    e. Where an obstruction interferes with equipment operation or safe access, relocate the equipment.
    f. Where the Drawings do not indicate the exact mounting and/or supporting method to be used, use materials and methods similar to the mounting details indicated on the Drawings.

G. Earthwork and concrete:
1. Install all trenching, shoring, concrete, backfilling, grading and resurfacing associated with the Electrical Work:
    a. Requirements as specified in the Contract Documents.

H. Roof penetrations:
1. Seal conduit penetrations in accordance with roofing manufacturer’s instructions.

I. Terminations:
1. Provide and terminate all conductors required to interconnect power, controls, instruments, panels, and all other equipment.

J. Miscellaneous installation requirements:
1. In case of interference between electrical equipment indicated on the Drawings and the other equipment, notify the Engineer as specified in General Conditions.
2. Location of manholes and pullboxes indicated on the Drawings are approximate. Coordinate exact location of manholes and pullboxes with Mechanical and Civil Work.
3. Provide additional manholes or pullboxes to those shown where they are required to make a workable installation.
4. Circuits of different service voltage:
    a. Voltage and service levels:
    b. Medium voltage: greater than 1.0 kV.
    c. Low voltage: 120 V to 480 V.
    d. Instrumentation: Less than 50 VDC.

e. Install different service voltage circuits in separate raceways, and junction boxes.

5. In manholes, install all cables operating at less than 50 VDC in PVC coated flexible metallic conduit, with corrosion resistant fittings.

6. Labeling:

K. Equipment tie-downs:

1. Anchor all instruments, control panels, and equipment by methods that comply with seismic and wind bracing criteria, which apply to the Site.

2. **ALL CONTROL PANELS MUST BE PERMANENTLY MOUNTED AND TIED DOWN TO STRUCTURES IN ACCORDANCE WITH THE PROJECT SEISMIC CRITERIA.**

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 FIELD QUALITY CONTROL

A. Inspection:

1. Provide any assistance necessary to support inspection activities.

2. Engineer inspections may include, but are not limited to, the following:

3. Inspect equipment and materials for physical damage.

4. Inspect installation for compliance with the Drawings and Specifications.

5. Inspect installation for obstructions and adequate clearances around equipment.

6. Inspect equipment installation for proper leveling, alignment, anchorage, and assembly.

7. Inspect equipment nameplate data to verify compliance with design requirements.

8. Inspect raceway installation for quality workmanship and adequate support.

9. Inspect cable terminations.

10. Inspection activities conducted during construction do not satisfy inspection or testing requirements specified in the section for Field Electrical Acceptance Tests.

B. Field acceptance testing (Functional Testing):

1. Notify the Engineer when the Electrical Work is ready for field acceptance testing.

2. Perform the field acceptance tests as specified in the section for Field Electrical Acceptance Tests.

3. Record results of the required tests along with the date of test:

4. Use conduit identification numbers to indicate portion of circuit tested.

C. Workmanship:

1. Leave wiring in panels, manholes, boxes, and other locations neat, clean, and organized:

2. Neatly coil and label spare wiring lengths.

3. Shorten, re-terminate, and re-label excessive used as well as spare wire and cable lengths, as determined by the Engineer.

3.8 ADJUSTING (NOT USED)

3.9 CLEANING

A. Remove all foreign material and restore all damaged finishes to the satisfaction of the Engineer and Owner.

B. Clean and vacuum all enclosures to remove all metal filings, surplus insulation and any visible dirt, dust or other matter before energization of the equipment or system start-up:

C. Use of compressors or air blowers for cleaning is not acceptable.

D. As specified in other sections of the Contract Documents.

3.10 PROTECTION

A. Protect all Work from damage or degradation until Substantial Completion.

B. Maintain all surfaces to be painted in a clean and smooth condition.

3.11 SCHEDULES (NOT USED)

END OF SECTION

SECTION 260520

HAZARDOUS CLASSIFIED AREA CONSTRUCTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Executing and completing Work in hazardous and/or classified areas as defined by the NEC Articles 500 through 516, NFPA 820, and as indicated on the Drawings and specified in the Specifications.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:

1. For the purposes of these Specifications, the terms “Hazardous” and “Classified” will be considered synonymous.

1.4 SYSTEM DESCRIPTION (NOT USED)

1.5 SUBMITTALS

A. Furnish submittals as specified in the Sections covering Submittal Procedures and Common Work Results for Electrical.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Regulatory requirements:

1. All wiring in hazardous and/or classified locations shall comply with all applicable articles of the NEC, in particular Articles 500 through 516.
2. Except as modified in Articles 500 through 516, all other applicable rules contained in the NEC shall apply to electric equipment and wiring installed in hazardous and/or classified locations.
3. All devices used in Class I Division 1 or Division 2 areas must have visible manufacturer installed nameplates specifically stating the Class, Division, and Group for which the device is approved.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. The following areas are classified Class I, Division 1:

1. Refer to classification area drawing.

1.9 SEQUENCING

A. Conduit seals shall be filled during start-up and commissioning after verification of field wiring. Conduit seals shall be filled prior to the introduction of process or gas to the equipment/area.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY (NOT USED)

1.12 SYSTEM START-UP (NOT USED)

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS (NOT USED)

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Conduit and sealing fittings:

1. As specified in the Conduits section.

B. Conduit boxes and bodies:

1. As specified in the Boxes section.

C. Wiring devices:

1. As specified in the Wiring Devices section.

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Conduit installation:
   1. As specified in the Conduits section.
   2. Wrench tighten all conduit joints to minimize sparking when fault current flows through the conduit system.
   3. Make all conduit connections so that there are a minimum of 5 threads fully engaged in the connection.
   4. Flexible conduit:
      a. Class I Division 1 hazardous areas:
         1) Approved and marked suitable for Class I Division 1.
         2) Listed for compatibility with the group type atmosphere where used.
      b. Class I Division 2 areas:
         1) Liquidtight metal conduit with approved fittings.
      c. Maximum length as specified in the Conduits section.

C. Sealing fittings:
   1. Provide an approved seal, no more than 12 inches from the enclosure, for all conduits entering an enclosure containing switches, circuit breakers, fuses, relays, resistors, or any other apparatus which may produce arcs, sparks, or high temperatures:
      a. Only explosion proof unions, couplings, elbows, capped elbows, and conduit bodies similar to “L”, “T”, and “X” may be installed between the sealing fitting and the enclosure.
   2. Provide entire assemblies approved for Class I locations for self-sealing or factory sealed assemblies where the equipment that may produce arcs, sparks, or high temperatures is located in a compartment separate from the compartment containing splices or taps, and an integral seal is provided where conductors pass from one compartment to the other:
      a. Seals are required in all conduit connections to the compartment containing splices and must be within 12 inches of the enclosure.
   3. Install a conduit seal within 12 inches of the boundary in each conduit run entering or leaving a classified location. No union, coupling, box, or fitting is allowed in the conduit between the sealing fitting and the point at which the conduit leaves the classified location.
   4. For underground conduits entering or leaving a classified location or between Class I Division 1 and Division 2 locations:
      a. Provide a conduit seal at both points where the conduit emerges from the ground:
         1) Place the conduit seal within 18 inches of finished grade.
         2) No union, coupling, box, or fitting is allowed in the conduit system between the seal fitting and the point at which the conduit enters the ground.
   5. Separate all conductors within the conduit system and seal using an approved packing dam installed to both hold the sealing compound and to maintain the separation between the wires:
      a. Remove the outer jacket of multi-conductor non-shielded cables in the area of the sealing fitting and separate each conductor from the cable and seal individually.
   6. Install seals with drains in all electrical control stations, low points of conduit or any place where moisture may condense and accumulate.
   7. Install the sealing compound with a minimum thickness of 5/8 inch or the trade size of the conduit, whichever is greater.

D. Boxes and fittings:
   1. Class I Division 1 areas:
      a. Utilize threaded connections for all metallic boxes, fittings, and joints to the conduit system.
   2. Class I Division 2 areas:
      a. Provide approved grounding bushings on conduits entering and exiting metallic boxes to bond the conduits together.

E. Outlet boxes and bodies:
   1. Provide conduits bodies and boxes suitable for the conduit system as specified in the Conduits section.
   2. Class I Division 2 areas:
      a. Boxes not containing arcing parts:
         1) Material and NEMA ratings as specified in Section 16050 - Common Work Results for Electrical.
         2) Pressed metal boxes are not allowed.
      b. Provide heavy duty cast construction type conduit fittings and joints:
         1) Explosion proof rated fittings and joints are not necessary.
      c. Any enclosure containing arcing parts, etc. shall have all construction associated with the enclosure, conduit system, etc. conforming to Class I Division 1 construction.

F. Motor connections:
   1. Conduit installation in Class I Division 1 and Class I Division 2 locations for motors that contain arcing parts, shall proceed as follows:
      a. First - Conduit.
      b. Second - Explosion proof flexible coupling.
      c. Third - Sealing fitting.
      d. Fourth - Explosion proof union.
      e. Fifth - Connection to the motor terminal box.
   2. Wiring connections to motor leads shall be as specified in Section 16150 - Low Voltage Wire Connections.
   3. Bond the non-current-carrying metal parts of equipment, raceways and other enclosures as required by the NEC to ensure electrical continuity.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOTNUSED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Obtain inspection and approval from the Engineer before and after each seal is poured.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION (NOT USED)

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 260600

GROUNDING AND BONDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Grounding materials and requirements.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical.

B. ASTM International (ASTM):
   1. B3 - Standard Specification for Soft or Annealed Copper Wire.
   2. B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.

C. Institute of Electrical and Electronics Engineers (IEEE):
   1. 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System.

D. Underwriters Laboratories, Inc. (UL):
   1. 467 - Ground and Bonding Equipment.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SUBMITTALS

A. Furnish submittals as specified in the Submittal Procedures section and the Common Work Results for Electrical section.

B. Product data:
   1. Catalog cut sheets.

1.5 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. All grounding components and materials shall be UL listed and labeled.

1.6 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.7 PROJECT/SITE CONDITIONS (NOT USED)

1.8 SEQUENCING (NOT USED)

1.9 SCHEDULING (NOT USED)

1.10 WARRANTY

A. As specified in the Common Work Results for Electrical.

1.11 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.12 OWNER'S INSTRUCTIONS (NOT USED)

1.13 MAINTENANCE (NOT USED)

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Exothermic connectors: One of the following or equal:
   1. Erico.
   2. Harger.
   3. Burndy.
   4. Thomas & Betts.

B. Ground rods: One of the following or equal:
   1. Erico.
   2. Harger.
   3. Nehring.
   4. Thomas & Betts.

C. Ground cable: One of the following or equal:
   1. Erico.
   2. Harger.
   3. Nehring.
   4. Southwire.

D. Precast ground well boxes: One of the following or equal:
   1. Brooks Products, 3-RT Valve Box.
   2. Christy Concrete Products, G12 Valve Box.

2.2 SYSTEM DESCRIPTION

A. Ground equipment and raceway systems so that the completed installation conforms to all applicable code requirements.

B. Provide a complete electrical grounding system as indicated on the Drawings and as specified including but not limited to:
   1. Grounding electrodes.
   2. Bonding jumpers.
   3. Ground connections.

C. Provide bonding jumpers and wire, grounding bushings, clamps and appurtenances required for complete grounding system to bond equipment and raceways to equipment grounding conductors.

D. The ground system resistance (electrode to ground) of the completed installation, as determined by tests specified in Section 16950 - Field Electrical Acceptance Tests, shall be:
   1. 5 ohms or less for industrial systems.

2.3 EXISTING PRODUCTS (NOT USED)

2.4 MATERIALS

A. Ground rod:
   1. Minimum: 3/4-inch diameter, 10 feet long.
   2. Uniform 10 mil covering of electrolytic copper metallically bonded to a rigid steel core:
      a. The copper-to-steel bond shall be corrosion resistant.
   3. In accordance with UL 467.
   4. Sectional type joined by threaded copper alloy couplings.
   5. Fit the top of the rod with a threaded coupling and steel-driving stud.

B. Ground cable:
   1. Requirements:
      a. Soft drawn (annealed).
      b. Concentric lay, coarse stranded in accordance with ASTM B8.
   2. Size is as indicated on the Drawings, but not less than required by the NEC.

C. Exothermic welds:
   1. Current carrying capacity equal to that of the conductor.
   2. Permanent molecular bond that cannot loosen or corrode over time.
   3. Will not deteriorate with age.
   4. Use low emission welds for indoor installations.

D. Equipment grounding conductors:
   1. Conductors shall be the same type and insulation as the load circuit conductors:
      a. Use 600-volt insulation for the equipment grounding conductors for medium voltage systems.
   2. Minimum size in accordance with the NEC.

E. Grounding electrode conductors:
   1. Minimum size in accordance with the NEC.

F. Main bonding jumpers and bonding jumpers:
   1. Minimum size in accordance with the NEC.

2.5 MANUFACTURED UNITS (NOT USED)

2.6 EQUIPMENT (NOT USED)

2.7 COMPONENTS (NOT USED)

2.8 ACCESSORIES

A. Precast ground well boxes:
   1. Minimum 10-inch interior diameter.
   2. Traffic-rated cast iron cover.

3. Permanent “GROUND” marking on cover.

2.9 MIXES (NOT USED)

2.10 FABRICATION (NOT USED)

2.11 FINISHES (NOT USED)

2.12 SOURCE QUALITY CONTROL (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Provide a separate, green insulated, grounding conductor in each raceway independent of raceway material:
   1. Multi-conductor power and control cables shall include an integral green insulated grounding conductor.
   2. Provide a separate grounding conductor in each individual raceway for parallel feeders.

C. Provide a separate grounding conductor for each motor and connect at motor terminal box. Do not use bolts securing motor box to frame or cover for grounding connectors:
   1. When grounding motors driven by variable frequency drives (VFD) comply with the requirements of the VFD manufacturer.

D. Provide a grounding type bushing with lug for connection of grounding conductor for conduits that originate from each motor control center section, switchboard, or panelboard:
   1. Individually bond these raceways to the ground bus in the equipment.

E. Provide grounding type bushings with lugs for connection of grounding conductor at both ends of metallic conduit runs. Bond ground bushings to the grounding system.

F. Provide a green insulated wire-grounding jumper from the ground screw to a box grounding screw and, for grounding type devices, to equipment grounding conductor.

G. Interconnect the secondary switchgear, switchboard, or panelboard neutral bus to the ground bus in the secondary switchgear, switchboard, or panelboard compartment, only at service entrance point or after a transformer.

H. Duct bank ground system:
   1. Provide a bare copper grounding conductor the entire length of each duct bank.
   2. Bond duct bank ground conductors together where duct banks join, merge, intersect, or split.

I. Grounding at service (600 V or Less):
   1. Connect the neutral to ground only at one point within the enclosure of the first disconnecting means on the load side of the service transformer.

J. Ground connections:
   1. All connections to the ground grid system, the duct bank grounding system, equipment, ground rods, etc., shall be made using exothermic welds as indicated on the Drawings, UL listed, and labeled for the application.
   2. Make ground connections in accordance with the manufacturer's instructions.

K. Grounding electrode system:
   1. Ground ring:
      a. Provide all trenching and materials necessary to install the ground ring as indicated on the Drawings.
      b. Ground ring conductor shall be in direct contact with the earth.
      c. Minimum burial depth 36 inches or as indicated on the Drawings.
      d. Re-compact disturbed soils to original density in 6-inch lifts.
   2. Ground rods:
      a. Locations as indicated on the Drawings.
      b. Length of rods forming an individual ground array shall be equal in length.
      c. Drive ground rods and install grounding conductors before construction of concrete slabs and duct banks.
   3. Metal underground water pipe:
      a. Bond metal underground domestic water pipe to grounding electrode system.
   4. Metal frame of building or structure:
      a. Bond metal frame of building or structure to grounding electrode system.
   5. Extend grounding conductors through concrete to accessible points for grounding equipment and electrical enclosures.
   6. Where grounding conductors are not concrete-encased or direct buried, install in Schedule 40 PVC conduit for protection.
   7. Install grounding system at each structure where switchgear, motor control centers, switchboards, panelboards, panels, or other electrical equipment are installed.

L. Shield grounding:
   1. Analog signal cables shields shall only be grounded at a single point in the loop. Unless otherwise noted, ground signal cable shields at control panel.
   2. For communication and data line signal cable shields and drain wires should be grounded at both ends of the cable run.
   3. Insulate the shielding and exposed drain wire for each signal cable with heat-shrink tubing.
   4. Terminate the signal cable shield on a dedicated grounding terminal block.

M. Where indicated on the Drawings, install ground rods in precast ground wells.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Measure grounding electrode system resistance to ground in accordance with IEEE 81.

3.9 ADJUSTING

A. Under the direction of the Engineer, add additional parallel connected ground rods and/or deeper driven rods until the ground resistance measurement meets the specified resistance requirements:
   1. Use of salts, water, or compounds to attain the specified ground resistance is not acceptable.

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in Section 16050 - Common Work Results for Electrical.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 260700

HANGERS AND SUPPORTS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Mounting and supporting electrical equipment and components.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. ASTM International (ASTM):
1. A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
2. A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
3. A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Design requirements:
1. Demonstrate the following using generally accepted engineering methods:
a. That the anchors to the structure are adequate to resist the loads generated in accordance with the Building Code and equipment requirements.
b. That the required load capacity of the anchors can be fully developed in the structural materials to which they are attached.
2. Design loading and anchoring requirements:
a. As indicated in the Building Code unless otherwise specified.
b. Seismic loading requirements:
1) Freestanding, suspended, or wall-hung equipment shall be anchored in place by methods that will satisfy the requirements for the seismic design specified in the Common Work Results for Electrical section.
c. Wind loading requirements:
1) All exterior equipment shall be anchored in place by methods that will satisfy the requirements for wind design specified in the Common Work Results for Electrical section.
d. Minimum safety factor against overturning: 1.5.
e. The foundation and structures to which hangers and supports are attached shall be capable of withstanding all anchor loads.

B. Performance requirements:
1. Hangers and supports individually and as a system shall resist all weights and code-required forces without deflections and deformations that would damage the supporting elements, the equipment supported, or the surrounding construction.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Submittal Procedures section and the Common Work Results for Electrical section.

B. Product data:
   1. Supports:
      a. Materials.
      b. Geometry.
      c. Manufacturer.
   2. Hardware:
      a. Materials.
      b. Manufacturer.

C. Shop drawings:
   1. Complete dimensioned and scalable shop drawings of all supporting structures, trapezes, wall supports, etc.
   2. Complete anchoring details for equipment, lighting and raceway, supporting structures, trapezes, and wall supports for all equipment:
      a. For free standing supports and wall supports supporting equipment weight in excess of 200 pounds:
         1) Stamped by a professional engineer licensed in the state where the Project is being constructed.
      b. Said submittals, by virtue of the fact that they bear the stamp of a registered engineer, will be reviewed for general consistency with the requirements specified in the Contract Documents, but not for context, accuracy, or method of calculation.
   3. Include data on attachment hardware and construction methods that will satisfy the design loading and anchoring criteria.

D. Installation instructions:
   1. Furnish anchorage instructions and requirements based on the seismic and wind conditions of the Site:
      a. Stamped by a professional engineer licensed in the state where the Project is being constructed.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM STARTUP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Preformed channel:
      a. Thomas & Betts.
      b. Power-Strut.
      c. Unistrut.
      d. Cooper B-Line.
      e. Robroy.
      f. Tyco.

B. Nonmetallic cable rack:
   1. Underground Devices Inc.
   2. Hubbell.
   3. Unistrut.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Use materials appropriate for the area as specified in the Common Work Results for Electrical section.

B. Preformed channel:
   1. Stainless steel:
      a. Supports:
         1) In accordance with ASTM A240.
         2) ANSI Type 316 material.
      b. Hardware:
         1) ANSI Type 316 material.

C. Non-metallic cable rack:
   1. Consists of stanchions and cable support arms.
   2. Stanchions:
      a. 50 percent glass reinforced nylon or other non-metallic material.
      b. Capable of supporting multiple arms.
      c. Recessed bolt mounting holes.
      d. Length as required.
   3. Arms:
      a. 50 percent glass reinforced nylon or other non-metallic material.
      b. Size the arms based on the length and weight of the cable to be supported.
   4. Stainless steel mounting hardware.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Preformed Channel:
   1. Mount all raceways, cabinets, boxes, fixtures, instruments, and devices on Contractor-fabricated racks unless otherwise indicated on the Drawings.
      a. Provide the necessary sway bracing to keep trapeze type structures from swaying under seismic events or wind loading.
   2. Brace and anchor freestanding equipment supports using methods that provide structural support based on the seismic loads and wind loads:
      a. Lateral deflection at top of supports not to exceed support height divided by 240 unless otherwise approved by the Engineer.
   3. Provide fabricated steel support pedestals for wall mounted panels that weigh more than 200 pounds:
      a. Fabricate pedestals out of welded angle, tube sections, or preformed channel.
      b. If the supported equipment is a panel or cabinet, match the supported equipment in physical appearance and dimensions.
      c. Provide auxiliary floor supports for transformers hung from stud walls and weighing more than 200 pounds.
   4. Mount all equipment, cabinets, boxes, instruments, and devices in damp or wet locations on minimum of 7/8-inch preformed mounting channel.
      1) Mount channel vertically along the length of the device so that water or moisture may run freely behind the device.
   5. Corrosion protection:
      a. Isolate dissimilar metals, except where required for electrical continuity.
         1) Use neoprene washers, 9-mil polyethylene tape, or gaskets for isolation.
   6. Raceway:
      a. Furnish all racks and trapeze structures needed to support the raceway from the structure.
         1) Group raceway and position on racks to minimize crossovers.
         2) Provide the necessary bracing to keep trapeze type structures from swaying under loads from cable installation, seismic forces, or wind forces.
   7. Anchoring methods:

a. Solid concrete: Anchor bolts, anchor rods or post-installed anchors.
b. Metal surfaces: Machine screws or bolts.
c. Hollow masonry units: Post-installed anchors.

8. When supporting devices on metal or wood stud construction, bridge studs with preformed channel, and mount the devices to the channel.
9. Recoat or seal all drilled holes, cut or scratched surfaces or with products recommended by the manufacturer.

C. Non-metallic cable rack:
1. Install the non-metallic cable rack in accordance with the manufacturer's recommendations.
2. Provide at least 2 stanchions and 2 arms at each installation.
3. Mount the cable rack so that the supported cable does not interfere with access to manhole or handhole and so that the supported cable does not lie on the floor.
4. Do not exceed the cable manufacturer's minimum bending radius.
5. Use nylon cable ties to secure the cable to the supports.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

SECTION 260750

IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

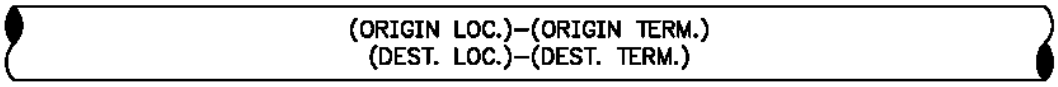
A. Section includes:
1. Identification of electrical equipment, devices and components.
2. Material, manufacturing and installation requirements for identification devices.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Occupational Safety and Health Administration (OSHA).

1.3 DEFINITIONS



A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Nameplates:
1. Provide a nameplate for each piece of electrical equipment and devices, control panel and control panel components.
2. Provide all nameplates of identical style, color, and material throughout the facility.
3. Device nameplates information:
a. Designations as indicated on the Drawings and identified on the Process and Instrumentation Drawings.

B. Wire numbers:
1. Coordinate the wire numbering system with all vendors of equipment so that every field wire has a unique number associated with it for the entire system:
a. Wire numbers shall correspond to the wire numbers on the control drawings or the panel and circuit numbers for receptacles and lighting.
b. Wire numbers shall correspond to the terminal block number to which they are attached in the control panel.
c. Internal panel wires on a common terminal shall have the same wire number.
d. Multi-conductor cables shall be assigned a cable number that shall be attached to the cable at intermediate pull boxes and stub-up locations beneath freestanding equipment. All multi-conductor and instrumentation cables shall be identified at pull points as described above:
1) Label armored multi-conductor cable using the conduit number as indicated on the Drawings, following the requirements for conduit markers in the Conduits section.
2. Provide the following wiring numbering schemes throughout the project for field wires between process control module, (PCM), vendor control panels, (VCP), motor control centers, (MCC), field starters, field instruments, etc.

OR

a. Where:
   1) ORIGIN LOC.= Designation for originating panel or device
   2) ORIGIN TERM. = Terminal designation at originating panel or device
   3) DEST. LOC. = Designation for destination panel or device
   4) DEST. TERM. = Terminal designation at destination panel or device or PLC
   5) I/O address at destination panel:
      a) Identify equipment and field instruments as the origin.
      b) PCMs are always identified as the destination.
      c) Location is the panel designation for VCP, LCP, or PCM. For connections to MCCs, location is the specific starter tag and loop number. Location is the tag and loop number for motor starters, field instruments and equipment. Any hyphen in the panel designation or tag and loop number shall be omitted.
      d) Terminal designation is the actual number on the terminal block where the conductor terminates at field devices and vendor control panels. For multi-conductor cables, all terminal numbers shall be shown, separated by commas.
      e) Terminal designations at motor leads shall be the motor manufacturer's standard terminal designation (e.g. T1, T2, T3, etc.).
      f) Terminal designations at PCMs where the field conductor connects to field terminal blocks for a PLC input or output shall be the PLC address (Note: the following PLC I/O numbering scheme is typical for Allen-Bradley, the numbering scheme should be modified to match that of the actual PLC manufacturer used for the project):

         (1) Discrete Point: W:X:Y/Z.

3. Analog Point: W:X:Y.Z.
   a. Where:
      1) W= I for input, O for output
      2) X= PLC number (1, 2, 3…)
      3) Y= Slot number (01, 02, 03…)
      4) Z= Terminal number (00, 01, 02…) for a discrete point or a word number for an analog point (1, 2, 3…)
   b. Terminal designations at PCMs where the conductor does not connect to a PLC I/O point shall be the terminal number with a "C" prefix (e.g. C0010). For common power after a fuse or neutrals after a switch, the subsequent points shall have and capital letter suffix starting with "A" (e.g. C0010A).

4. Case 1: Vendor control panel (VCP) to process control module (PCM):
    a. Field wire number/label: A-B/C-D
    b. A = Vendor control panel number without hyphen (VCP#)
    c. B = Terminal number within VCP (manufacturer's or vendor's standard terminal number)
    d. C = Process control module number without hyphen (PCM#)
    e. D = Either the PLC address if the field terminal is connected directly to a PLC input or output point or the terminal number with a "C" prefix if not connected directly to a PLC I/O point (C0010)
    f. Examples:
        1) VCP#-10/PCM#-I: 1:01/01
        2) VCP#-10/PCM#-O: 1:10/07
        3) VCP#-10/PCM#-C0100

5. Case 2: Field instrument to process control module (PCM):
    a. Field wire number/label: E-F/C-D
    b. C = Process control module number without hyphen (PCM#)
    c. D = Either the PLC address if the field terminal is connected directly to a PLC input or output point or the terminal number with a "C" prefix if not connected directly to a PLC I/O point (C0010)
    d. E = Field mounted instrument tag and loop numbers without hyphen (EDV#)
    e. F = Manufacturer's standard terminal number within instrument. Use both terminal numbers for analog points separated by a comma
    f. Examples:
        1) TIT#-2,3/PCM#-I: 1:01.1
        2) TSH#-1/PCM#-I: 2:01/00

6. Case 3: Motor control center (MCC) to process control module (PCM):
    a. Field wire number/label: G-B/C-D
    b. B =Terminal number within Motor Control Center (manufacturer's or vendor's standard terminal number)
    c. C = Process control module without hyphen (PCM#)
    d. D = Either the PLC address if the field terminal is connected directly to a PLC input or output point or the terminal number with a "C" prefix if not connected directly to a PLC I/O point (C0010)
    e. G = Actual starter designation in the motor control center without hyphen (MMS#)
    f. Examples:
        1) MMS#-10/PCM#-I: 1:01/01
        2) MMS#-10/PCM#-O: 1:10/07
        3) MMS#-10/PCM#-C0100

7. Case 4: Motor control center (MCC) to vendor control panel (VCP):
    a. Field wire number/label: G-B/A-B
    b. A = Vendor control panel number without hyphen (VCP#)
    c. B = Terminal number within motor control center or vendor control panel (manufacturer's or vendors standard terminal number)
    d. G = Actual starter designation in the motor control center without hyphen (MMS#)
    e. Example: MMS#-X2/VCP#-10

8. Case 5: Motor leads to a motor control center (MCC):
    a. Field wire number/label: H-I/G-B
    b. B = Terminal number within motor control center (manufacturer's standard terminal number)
    c. G = Actual starter designation in the motor control center without hyphen (MMS#)
    d. H = Equipment tag and loop number without hyphen (PMP#)
    e. I = Motor manufacturer's standard motor lead identification (e.g. T1, T2, T3, etc.)
    f. Example: PMP-#-T3/MMS#-T3

9. Identify all spare conductors as required for other field wires with an “S” prefix:
    a. Example: S MMS#-10/PCM#-C011

1.5 SUBMITTALS

A. Furnish submittals as specified in the Submittal Procedures section and the Common Work Results for Electrical section.

B. Product data:
1. Nameplates:
    a. Color.
    b. Size:
        1) Outside dimensions.
        2) Lettering.
    c. Material.
    d. Mounting means.
2. Nameplate schedule:
    a. Show exact wording for each nameplate.
    b. Include nameplate and letter sizes.
3. Wire numbers:
    a. Manufacturer’s catalog data for wire labels and label printer.

C. Record documents:
1. Update the conduit schedule to reflect the exact quantity of wire numbers including spares and destination points for all wires.

1.6 QUALITY ASSURANCE (NOT USED)

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT SITE CONDITIONS (NOT USED)

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER’S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Nameplates and signs:
   1. One of the following or equal:
      a. Brady.
      b. Seton.

B. Conductor and cable markers:
   1. Heat-shrinkable tubing:
      a. One of the following or equal:
         1) Raychem.
         2) Brady.
         3) Thomas & Betts.
         4) Kroy.
   2. Non heat-shrinkable tubing:
      a. One of the following or equal:
         1) Brady.
         2) Seton.
   3. Pre-printed slip-on sleeve markers:
      a. The following or equal: Engineer knows of no equal.
         1) Grafoplast.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Nameplates:
   1. Colors:
      a. Warning nameplates: White-center, red face.
      b. Other nameplates: Black-center, white face.
   2. Laminated plastic engraving stock:
      a. 3/32-inch thick material.
      b. 2-ply.
      c. With chamfered edges.
   3. Block style engraved characters of adequate size to be read easily from a distance of 6 feet:
      a. No characters smaller than 1/8-inch in height.

B. Signs:
   1. Automatic equipment and high voltage signs:
      a. Suitable for exterior use.
      b. In accordance with OSHA regulations.

C. Conductor and cable markers:
   1. Machine printed black characters on white tubing.
   2. 10-point type or larger.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Nameplates:
1. Provide all nameplates for control panel operator devices (e.g. pushbuttons, selector switches, pilot lights, etc.):
a. Same material and same color and appearance as the device nameplates, in order to achieve an aesthetically consistent and coordinated system.

PART 3 - EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Nameplates:
1. Attach nameplates to equipment with rivets, bolts or sheet metal screws, approved waterproof epoxy-based cement or install in metal holders welded to the equipment.
2. On NEMA Type 4, NEMA Type 4X, or NEMA Type 7 enclosures, use epoxy-based cement to attach nameplates.
3. Nameplates shall be aligned and level or plumb to within 1/64 inch over the entire length:
a. Misaligned or crooked nameplates shall be remounted, or provide new enclosures at the discretion of the Engineer.

C. Conductor and cable markers:
1. Apply all conductor and cable markers before termination.
2. Non heat-shrinkable tubing:
a. Tubing shall be sized for the wire and insulation on which it is to be placed.
b. Tubing shall be tight on the wire.
c. Characters shall face the open panel and shall read from left to right or top to bottom.
d. Marker shall start within 1/32 inch of the end of the stripped insulation point.

D. Signs and labeling:
1. Furnish and install permanent warning signs at mechanical equipment that may be started automatically or from remote locations:
a. Fasten warning signs with round head stainless steel screws or bolts.
b. Locate and mount in a manner to be clearly legible to operations personnel.
2. Furnish and install permanent and conspicuous warning signs on equipment (front and back), doorways to equipment rooms, pull boxes, manholes, etc. where the voltage exceeds 600 volts.
3. Furnish and install warning signs on equipment that has more than one source of power.
a. Warning signs to identify every panel and circuit number of the disconnecting means of all external power sources.

4. Place warning signs on equipment that has 120 VAC control voltage sources used for interlocking.
    a. Identify panel and circuit number or conductor tag for control voltage source disconnecting means.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. Replace any nameplates, signs, conductor markers, cable markers or raceway labels that in the sole opinion of the Engineer do not meet the Engineer's aesthetic requirements.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION (NOT USED)

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 261230

600-VOLT OR LESS WIRES AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. 600 volt class or less wire and cable.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. ASTM International (ASTM):
   1. B3 - Standard Specification for Soft or Annealed Copper Wire.
   2. B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.

C. CSA International (CSA).

D. Insulated Cable Engineers Association (ICEA):
   1. NEMA WC 70/ICEA S-95-658-1999 - Standard for Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy.
   2. NEMA WC 57/ICEA S-73-532 - Standard for Control, Thermocouple Extension, and Instrumentation Cables.

E. National Fire Protection Association (NFPA):
   1. 72 - National Fire Alarm and Signaling Code.
   2. 101 - Life Safety Code.

F. Telecommunications Industry Association/Electronics Industry Association (TIA/EIA):
   1. 568-C.2 - Balanced Twisted-Pair Telecommunication Cabling and Components Standard.
   2. 569-B – Commercial Building Standards for Telecommunications Pathways and Spaces.
   3. 1005 – Industrial Cabling Standard.

G. Underwriter's Laboratories Inc., (UL):
   1. 44 - Thermoset-Insulated Wires and Cables.
   2. 1277 - Standard for Electrical Power and Control Tray Cables with Optional Optical-Fiber Members.
   3. 1424 - Standard for Cables for Power-Limited Fire-Alarm Circuits.
   4. 1569 - Standard for Metal-Clad Cables.
   5. 2196 - Standard for Fire Test for Circuit Integrity of Fire-Resistive Power, Instrumentation, Control, and Data Cables.
   6. 2225 - Standard for Cables and Cable-Fittings for Use in Hazardous (Classified) Locations.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions and abbreviations:
   1. AWG: American wire gauge.
   2. BCCS: Bare copper-covered steel.
   3. CPE: Chlorinated polyethylene.
   4. FEP: Fluorinated ethylene propylene.
   5. FHDPE: Foam high-density polyethylene.
   6. FPE: Foam polyethylene.
   7. OD: Outside diameter.
   8. PVC: Polyvinyl chloride.
   9. XHHW: Cross-linked high heat water resistant insulated wire.

C. Definitions of terms and other electrical considerations as set forth in the:
   1. ASTM.
   2. ICEA.

1.4 SYSTEM DESCRIPTION

A. Furnish and install the complete wire and cable system.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Manufacturer of wire and cable.
   2. Insulation:
      a. Type.
      b. Voltage class.
   3. AWG size.
   4. Conductor material.
   5. Pulling compounds.

C. Shop drawings:
   1. Show splice locations.
      a. For each proposed splice location provide written justification describing why the splice is necessary.

D. Test reports:
   1. Submit test reports for meg-ohm tests.

E. Calculations:
   1. Submit cable pulling calculations to the Engineer for review and comment for all cables that will be installed using mechanical pulling equipment. Show that the maximum cable tension and sidewall pressure will not exceed manufacturer recommended values:
      a. Provide a table showing the manufacturer’s recommended maximum cable tension and sidewall pressure for each cable type and size included in the calculations.
      b. Submit the calculations to the Engineer a minimum of 2 weeks before conduit installation.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. All wires and cables shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS (NOT USED)

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER`S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. 600 volt class wire and cable:
      a. General Cable.
      b. Okonite Co.
      c. Southwire Co.
      d. Service Wire.
   2. Instrumentation class wire and cable:
      a. Alpha Wire Co.
      b. Belden CDT.
      c. General Cable.
      d. Okonite Co.
      e. Rockbestos Surprenant Cable Corp.
   3. Network cables:
      a. General Cable.
      b. Belden.
      c. CommScope.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Conductors:
   1. Copper in accordance with ASTM B3.

2.4 MANUFACTURED UNITS

A. General:
   1. Provide new wires and cables manufactured within 1 year of the date of delivery to the Site.
   2. Permanently mark each wire and cable with the following at 24-inch intervals:
      a. AWG size.
      b. Voltage rating.
      c. Insulation type.
      d. UL symbol.
      e. Month and year of manufacture.
      f. Manufacturer's name.
   3. Identify and mark wire and cable as specified in the Identification for Electrical Systems section:
      a. Use integral color insulation for #2 AWG and smaller wire.
      b. Wrap colored tape around cable larger than #2 AWG.

B. 600 volt class wire and cable:
   1. Provide AWG or kcmil sizes as indicated on the Drawings:
      a. When not indicated on the Drawings, size wire as follows:
         1) In accordance with the NEC:
            a) Use 75 degree Celsius ampacity ratings.
            b) Ampacity rating after all derating factors, equal to or greater than rating of the overcurrent device.
         2) Provide #12 AWG minimum for power conductors.
         3) Provide #14 AWG minimum for control conductors.
   2. Provide Class B stranding in accordance with ASTM B8:
      a. Provide Class C stranding where extra flexibility is required.
   3. Insulation:
      a. XHHW-2.
      b. 90 degree Celsius rating.
   4. Multiconductor cables:
      a. Number and size of conductors as indicated on the Drawings.
      b. Individual conductors with XHHW-2 insulation.
      c. Overall PVC jacket.
      d. Tray cable rated.
      e. Color-coding for control wire in accordance with ICEA Method 1, E-2 in accordance with NEMA WC 57/ICEA S-73-532.
      f. Ground conductor: Insulated, green:
         1) Sized in accordance with NEC.

C. Instrumentation class cable:
   1. Type TC.
   2. Suitable for use in wet locations.
   3. Voltage rating: 600 volts.
   4. Temperature rating:
      a. 90 degree Celsius rating in dry locations.
      b. 75 degree Celsius rating in wet locations.
   5. Conductors:
      a. Insulation:
         1) Flame-retardant PVC, 15 mils nominal thickness, with nylon jacket 4 mils nominal thickness.

b. #16 AWG stranded and tinned.
c. Color code: ICEA Method 1:
1) Pair: Black and white.
2) Triad: Black, white and red.
3) Multiple pairs or triads:
a) Color-coded and numbered.

6. Drain wire:
a. #18 AWG.
b. Stranded, tinned.
7. Jacket:
a. Flame retardant, moisture and sunlight resistant PVC.
b. Ripcord laid longitudinally under jacket to facilitate removal.
8. Shielding:
a. Individual pair/triad:
1) Minimum 1.35-mil double-faced aluminum foil-polyester tape overlapped to provide 100 percent coverage.
b. Multiple pair or triad shielding:
1) Group shield: Minimum 1.35-mil double-faced aluminum foil-polyester tape overlapped to provide 100 percent coverage.
2) Completely isolate group shields from each other.
3) Cable shield: 2.35 mils double-faced aluminum and synthetic polymer backed tape overlapped to provide 100 percent coverage.
c. All shielding to be in contact with the drain wire.

D. Network cables:
1. Category 5e:
a. General:
1) Provide Cat 5e cables meeting the standards set by TIA/EIA-568-C.2 and verified by third-party testing laboratory.
b. Conductors:
1) #24 AWG solid bare annealed copper.
c. Insulation:
1) Polyolefin.
2) 4 non-bonded twisted pair cables formed into a cable core.
d. Shielding: None.
e. Color code (T568B):
1) Pair 1: White/blue stripe and blue.
2) Pair 2: White/orange stripe and orange.
3) Pair 3: White/green stripe and green.
4) Pair 4: White/brown stripe and brown.
f. Outer jacket:
1) PVC with ripcord.
g. Electrical characteristics
1) Voltage rating: 600VAC.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES

A. Wire ties:

1. One of the following or equal:
    a. T&B, "Ty-Rap" cable ties.
    b. Panduit, cable ties.

B. Wire markers:
    1. As specified in the Identification for Electrical Systems section.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Assembly and testing of cable shall comply with the applicable requirements of ICEA S-95-658-1999.

B. Test Type XHHW-2 in accordance with the requirements of UL 44.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Color-coding:
    1. Color-coding shall be consistent throughout the facility.
    2. The following color code shall be followed for all 240/120 volt and 208/120 volt systems:
        a. Phase A: Black.
        b. Phase B: Red.
        c. Phase C: Blue.
        d. Single phase system: Black for 1 hot leg, red for the other.
        e. Neutral: White.
        f. High phase or wild leg: Orange.
        g. Equipment ground: Green.
    3. The following color code shall be followed for all 480/277 volt systems:
        a. Phase A: Brown.
        b. Phase B: Orange.
        c. Phase C: Yellow.
        d. Neutral: Gray.
        e. Equipment ground: Green.
    4. The following color code shall be followed for all 120 VAC control wiring:
        a. Power: Red.
        b. Neutral: White.
    5. The following color code shall be followed for all general purpose DC control circuits:
        a. Grounded conductors: White with blue stripe.

b. Ungrounded conductors: Blue.
6. Switch legs shall be violet. 3-way switch runners shall be pink.
7. Wires in intrinsically safe circuits shall be light blue.
8. Wire colors shall be implemented in the following methods:
   a. Wires manufactured of the desired color.
   b. Continuously spiral wrap the first 6 inches of the wire from the termination point with colored tape:
      1) Colored tape shall be wrapped to overlap 1/2 of the width of the tape.

C. Install conductors only after the conduit installation is complete, and all enclosures have been vacuumed clean, and the affected conduits have been swabbed clean and dry:
   1. Install wires only in approved raceways.
   2. Do not install wire:
      a. In incomplete conduit runs.
      b. Until after the concrete work and plastering is completed.

D. Properly coat wires and cables with pulling compound before pulling into conduits:
   1. For all #4 AWG and larger, use an approved wire-pulling lubricant while cable is being installed in conduit:
      a. Ideal Products.
      b. Polywater Products.
      c. 3M Products.
      d. Greenlee Products.
      e. Or equal as recommended by cable manufacturer.
      f. Do not use oil, grease, or similar substances.

E. Cable pulling:
   1. Prevent mechanical damage to conductors during installation.
   2. For cables #1 AWG and smaller, install cables by hand.
   3. For cables larger than #1 AWG, power pulling winches may be used if they have cable tension monitoring equipment.
   4. Provide documentation that maximum cable pulling tension was no more than 75 percent of the maximum recommended level as published by the cable manufacturer. If exceeded, the Engineer may, at his discretion, require replacement of the cable.
   5. Ensure cable pulling crews have all calculations and cable pulling limitations while pulling cable.
   6. Make splices or add a junction box or pullbox where required to prevent cable pulling tension or sidewall pressure from exceeding 75 percent of manufacturer’s recommendation for the specified cable size:
      a. Make splices in manholes or pull boxes only.
      b. Leave sufficient slack to make proper connections.

F. Use smooth-rolling sheaves and rollers when pulling cable into cable tray to keep pulling tension and bending radius within manufacturer’s recommendations.

G. Install and terminate all wire in accordance with manufacturer's recommendations.

H. Neatly arrange and lace conductors in all switchboards, panelboards, pull boxes, and terminal cabinets by means of wire ties:
   1. Do not lace wires in gutter or panel channel.
   2. Install all wire ties with a flush cutting wire tie installation tool:
      a. Use a tool with an adjustable tension setting.
   3. Do not leave sharp edges on wire ties.

I. Terminate stranded conductors on equipment box lugs such that all conductor strands are confined within the lug:
   1. Use ring type lugs if box lugs are not available on the equipment.

J. Lighting circuits:
   1. Each circuit shall have a dedicated neutral.

K. Splices:
   1. Provide continuous circuits from origin to termination whenever possible:
      a. Obtain Engineer's approval prior to making any splices.
   2. Lighting and receptacle circuit conductors may be spliced without prior approval from the Engineer.
   3. Where splices are necessary because of extremely long wire or cable lengths that exceed standard manufactured lengths:
      a. Splice box NEMA rating requirements as specified in the Common Work Results for Electrical section.
      b. Make splices in labeled junction boxes for power conductors.
      c. Make splices for control and instrument conductors in terminal boxes:
         1) Provide terminal boards with setscrew pressure connectors, with spade or ring lug connectors.
   4. Power and control conductors routed in common raceways may be spliced in common junction boxes.
   5. Clearly label junction and terminal boxes containing splices with the word "SPLICE LOCATED WITHIN".
   6. Leave sufficient slack at junction boxes and termination boxes to make proper splices and connections. Do not pull splices into conduits.
   7. Install splices with compression type butt splices and insulate using a heat-shrink sleeve:
      a. In NEMA Type 4 or NEMA Type 4X areas, provide heat-shrink sleeves that are listed for submersible applications.
   8. Splices in below grade pull boxes, in any box subject to flooding, and in wet areas shall be made waterproof using:
      a. A heat shrink insulating system listed for submersible applications.
      b. Or an epoxy resin splicing kit.

L. Apply wire markers to all wires at each end after being installed in the conduit and before meg-ohm testing and termination.

M. Instrumentation class cable:
   1. Install instrumentation class cables in separate raceway systems from power cables:
      a. Install instrument cable in metallic conduit within non-dedicated manholes or pull boxes.
      b. Install cable without splices between instruments or between field devices and instrument enclosures or panels.
   2. Do not make intermediate terminations, except in designated terminal boxes as indicated on the Drawings.
   3. Shield grounding requirements as specified in the Grounding and Bonding section.

N. Copper Ethernet cables:
   1. Comply with TIA/EIA-568-C.2.
   2. Pathways:

a. For initial installation, the maximum fill capacity for pathways (i.e. conduit, raceways, trays, baskets) is 40 percent. The maximum fill capacity of 60 percent is allowed to accommodate future additions after initial installation.
b. Conduit should be run in the most direct route possible with no more than two 90 degree bends between pull boxes and serve no more than 3 outlet boxes.

3. Cable bend radius:
   a. Proper cable bend radius control must be maintained throughout the pathways. The bend radius needs to be at a minimum 10 times the cable diameter.
4. Cable pulling:
   a. Provide cable pulling swivel system to prevent winding and tangling of rope and cables during pull.
   b. The maximum pulling tension is not to exceed manufacturer recommendations. Cable installation should not in any way deform the cable jacket.
   c. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
5. Cable management:
   a. Organize and manage cables for quick and easy moves, adds and changes.
6. Testing:
   a. All cables and termination hardware shall be 100 percent tested for defects in installation and to verify cabling system performance under installed conditions according to the requirements of TIA/EIA-568-C.1 Section 11.
      1) All pairs of each installed cable shall be verified prior to system acceptance.
      2) Any defect in the cabling system installation including but not limited to cable, connectors, feed through couplers, patch panels, and connector blocks shall be repaired or replaced in order to ensure 100 percent useable conductors in all cables installed.
   b. All twisted-pair copper cable links shall be tested for compliance to the requirements in TIA/EIA/568-C.2 for the appropriate Category of cabling installed.
   c. All cables shall be tested in accordance with the contract documents, TIA/EIA standards, and best industry practice.
   d. The field test equipment shall meet the requirements of TIA/EIA-568-C. The appropriate level III tester shall be used to verify Category 6 cabling.
   e. Visually inspect UTP jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA/EIA-568-C.1.
   f. Visually inspect cable placement, cable termination, grounding and bonding, equipment and labeling of all components.
   g. Test UTP copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors.
      1) Test operation of shorting bars in connection blocks.
      2) Test cables after termination but not cross-connection.
         a) Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-C.2.
            (1) Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex.
            (2) Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
7. Separation from EMI sources:

a. Comply with TIA/EIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
b. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
    1) Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches.
    2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches.
    3) Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches
c. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
    1) Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches.
    2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches.
    3) Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches.
d. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
    1) Electrical Equipment Rating Less Than 2 kVA: No requirement.
    2) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches.
    3) Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches.
e. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches.

O. Multi-conductor cable:
1. Where cable is not routed in conduit with a separate ground conductor, use 1 conductor in the cable as a ground conductor:
    a) Use an internal ground conductor, if it is no smaller than as indicated on the Drawings and in accordance with NEC requirements for equipment ground conductor size.
    b) Where 2 parallel cables are used, and the internal ground conductor in each cable does not meet NEC requirements for the combined circuit, use 4-conductor cable, with one of the full-sized conductors serving as ground.

P. Armored cable:
1. Where 2 parallel cables are used, and the internal ground conductor in each cable does not meet NEC requirements for the combined circuit, use 4-conductor cable, with 1 of the full-sized conductors serving as ground.
2. The cable armor is not acceptable as a ground conductor.
3. Where armored cable terminates at a device, switchboard, panel, etc., use armored cable connector.
4. Where armored cable run continues in conduit, strip jacket and armor for portions in conduit, and terminate cable and jacket with an armored cable connector threaded into a coupling or conduit box.

Q. Telephone cable:
1. Install telephone cables in dedicated metallic raceways, including raceways in duct banks, manholes, and pull boxes.

R. Fire alarm cable:
1. Install fire alarm cable in dedicated metallic raceways as indicated on the Drawings.

S. Signal cable:

1. Separate and isolate electrical signal cables from sources of electrical noise and power cables by minimum 12 inches.

T. Submersible cable in wet wells:
   1. Provide Kellem's grip or stainless steel wire mesh to support cable weight and avoid stress on insulation.

U. Wiring allowances:
   1. Equipment locations may vary slightly from the drawings. Include an allowance for necessary conductors and terminations for motorized equipment, electrical outlets, fixtures, communication outlets, instruments, and devices within 10 linear feet of locations indicated on the Drawings.
   2. Locations for pull boxes, manholes, and duct banks may vary slightly from the drawings. Include an allowance for necessary conductors and related materials to provide conductors to all pull boxes, manholes and duct banks within 20 linear feet of locations indicated on the Drawings.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Grounding:
   1. As specified in the Grounding and Bonding section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 261250

FIBER OPTIC CABLE AND APPURTENANCES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Fiber optic cable.
   2. Fiber splices and terminations.
   3. Accessories.

B. Furnish a complete fiber optic network as indicated on the Drawings.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Bellcore Standards:
   1. GR-409, “Generic Requirements for Indoor Fiber.”

C. Electronic Industry Association (EIA) 455B "Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices, and Other Fiber Optic Components":
   1. FOTP-25 - Impact testing of Fiber Optic Cables and Cable Assemblies.
   2. FOTP-33 - Fiber Optic Cable Tensile Loading and Bending Test.
   3. FOTP-41 - Compressive Loading Resistance of Fiber Optic Cables.
   4. FOTP-81 - Compound Flow (Drip) Test for Filled Fiber Optic Cable.
   5. FOTP-104 - Fiber Optic Cable Cyclic Flexing Test.
   6. FOTP-181 - Lightning Damage Susceptibility Test for Fiber Optic Cables with Metallic Components.

D. Insulated Cable Engineer’s Association (ICEA):
   1. S-83-596, “Optic Fiber Premises Distribution Cables.”
   2. S-87-640, “Optic Fiber Outside Plant Communications Cable.”
   3. S-104-696, “Indoor-Outdoor Optic Fiber Cable.”

E. TIA/EIA Standards:
   1. 598 - “Optical Fiber Cable Color Coding.”
   2. 11801 – Information technology – Generic cabling for customer premises.

F. Underwriters Laboratories, Inc. (UL):
   1. 1666 - Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.
   2. 1685 - Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section and the Common Work Results for Process Control and Instrumentation Systems section.

B. Specific definition:
   1. N/Cm: Newtons per centimeter.
   2. OTLS: Optical Loss Test Set (Tier 1 test).
   3. OTDR: Optical Time Domain Reflectometer (Tier 2 test).

1.4 SYSTEM DESCRIPTION (NOT USED)

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Complete manufacturer's brochures that identify materials and options.
   2. Completed data sheets, including catalog number and source for determining catalog number.
   3. Manufacturer's installation instructions.
   4. Include the following:
      a. Manufacturer's data on testing equipment used on this project.
      b. Manufacturer's specifications and data sheets for all fiber types.
      c. Manufacturer's specifications and data sheets for all connectors, bulkheads, splicing kits, breakout devices, and appurtenances used connecting and terminating the fiber spans.
   5. Catalog data on all testing devices proposed for use plus certifications of accuracy, calibration, and traceability to standards of the NIST.
   6. Manufacturer's test procedures and quality assurance procedures:
      a. After review, the Engineer may require that additional tests be performed before installation.

C. Shop drawings:
   1. Interconnection cabling diagrams for the complete system including every fiber in each cable.
   2. Drawings indicating the locations of all pull boxes including pull box identifiers and lengths.
   3. Submit optical power budget calculations for all fiber segments. Include the following:
      a. Minimum transmit power of active devices.
      b. Minimum receive sensitivity.
      c. Available power, in dBm.
      d. Loss for each segment in dBm, including cable attenuation and connector losses. Use manufacturer's data for cable attenuation, at the wavelength to be used. Assume 0.5 dB per connector.
      e. Demonstrate that remaining power budget at each receiver is equal to or greater than 3.0 dBm.

D. Installation instructions:
   1. Submit a cable pulling and splicing work plan a minimum of 45 days before the planned initiation of cable pulling. The cable pulling and splicing work plan must be approved a minimum of 15 days before pulling cable. Include the following:
      a. Pull tension calculations.
      b. Detailed description of pull operation methods for all conduit runs.
      c. Tools and equipment to be used for cable installation and testing.
      d. Physical location of equipment setup and type.
      e. Exact locations of splice points.
      f. Safety and manual assist cable-pulling operations.
      g. Detailed schedule for pulling and testing cables.
      h. The name and qualifications of the supervisory personnel directly responsible for the installation of the conduit system.

i. Sample fiber optic cable test sheets.
j. All signed test sheet results.

E. Operation and maintenance manuals:
1. Compile completed test reports, instruction manuals, and manufacturer's information into the operating manuals and submitted in accordance with the Operation and Maintenance Data section.

F. Test reports:
1. Submit the results of all specified tests to the Engineer.
2. Submit 3 copies of all test reports showing the results of all tests specified herein or in the Field Electrical Acceptance Tests section:
a. Test forms shall include the following information at a minimum:
1) Test type.
2) Test location.
3) Test date.
4) Wavelength.
5) Index of refraction.
6) Cable identification.
7) Fiber type.
8) Fiber number.
9) Fiber color.
10) Result of the value of the tested parameter.
3. Furnish hard copy and electronic copy for all OTDR traces.
4. Submit certification that the fiber optic cable has passed each testing stage:
a. Submit separate documentation for each testing stage result.

G. Record documents:
1. Furnish updated electrical drawings, network diagrams, and fiber cable block diagrams at the end of construction and submit as Record Drawings.

H. Calculations:
1. Cable pulling calculations for all conduit runs:
a. Indicate on the submittal any additional pull boxes that are required, including pull box identifiers and a written description of the location.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Furnish all cable and appurtenances manufactured within 1 year of installation.

C. Proof test all optical fibers by the fiber manufacturer at a minimum load of 50 kpsi.

D. Provide 100 percent attenuation testing for all optical fibers:
1. Include with each cable reel the attenuation of each fiber.

E. Provide information on at least 5 successful fiber optic cable installations of comparable size and complexity in the past 3 years with name, address, and telephone number of facility owner, name of project with completion date, and type of conduit system and length of cable pulled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

B. Package the cable for shipment on wooden reels:
   1. Seal both ends of the cable to prevent the ingress of moisture.
   2. Place fiber cable assemblies on reels such that both cable ends are available for testing.
   3. Weatherproof cable reel markings shall include the following:
      a. Manufacturer.
      b. Date of manufacture.
      c. Shipping date.
      d. Cable identification.
      e. Cable configuration/fiber count.
      f. Cable length.
      g. Gross weight.
      h. Cable test date.
      i. Handling instructions.
      j. Direction to unreel.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. Testing:
   1. Perform testing of each fiber in each cable as follows:
      a. At the factory before shipment.
      b. At the project site upon delivery.
      c. After installation, before breakout and terminations.
      d. After installation is complete.
   2. Submit test reports following each set of tests as specified in this Section.

B. Notify the Engineer and Owner a minimum of 15 days before post-installation testing.

1.10 SCHEDULING

A. As specified in the Common Work Results for Electrical section.

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP (NOT USED)

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable manufacturers are indicated with each component type as listed in the remainder of this specification.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. General fiber cable requirements:
   1. Suitable for the installed environment.
   2. Color-coded fibers according to EIA/TIA-598.
   3. Color-coded buffer tubes according to EIA/TIA-598.
   4. Furnish buffer tubes of a single layer nylon construction or of a material with similar mechanical performance.
   5. Fillers may be included in the cable core to lend symmetry to the cable cross-section where needed.
   6. Apply binders with sufficient tension to secure the buffer tubes to the central member without crushing the buffer tubes:
      a. Provide binders that are:
         1) Non-hygroscopic.
         2) Non-wicking (or rendered so by the flooding compound).
         3) Dielectric with low shrinkage.
   7. Provide a minimum of 1 ripcord under the cable sheath.
   8. Provide the high tensile strength Aramid yarns, Kevlar, and/or fiberglass helically stranded evenly around the cable core:
      a. No metallic elements whatsoever are allowed in non-armored cable.
   9. The jacket or sheath shall be free of holes, splits, and blisters.
   10. Mark the jacket or sheath with:
      a. Manufacturer's name.
      b. The words "Optical Cable”.
      c. Year of manufacture.
      d. Sequential meter marks.
      e. Repeat markings every 1-meter.
      f. The actual length of the cable to be within 1 percent of the length marking.
      g. The marking must be in a contrasting color to the cable jacket.
      h. The height of the marking:
         1) Approximately 2.5 millimeters.
   11. The shipping, storage, and operating temperature range of the cable shall be -40 degrees Celsius to +70 degrees Celsius.
   12. General performance characteristics:
      a. The rated tensile load of the cables:
         1) Indoor/outdoor:
            a) Short term: 1,330 N.
            b) Long term: 400 N.
      b. Non-armored fiber optic cables: Compressive load withstand of 220 N/cm applied uniformly over the length of the cable.
      c. Armored fiber optic cables: Compressive load withstand of 440 N/cm applied uniformly over the length of the cable.
      d. The average increase in attenuation for the fibers: Less than or equal to 0.10 dB at 1,550 nm for a cable subjected to this load:
         1) With no measurable increase in attenuation after load removal.
      e. Test in accordance with FOTP-41, "Compressive Loading Resistance of Fiber Optic Cable,” except that the load must be applied at the rate of 3 millimeters to 20 millimeters per minute and maintained for 10 minutes.
      f. Capable of withstanding 25 cycles of mechanical flexing at a rate of 30 within 1 cycles/minute.
      g. The average increase in attenuation for the fibers: Less than or equal to 0.10 dB at 1,550 nm at the completion of the test.

h. For armored cables, any visible cracks causing separation of the armor and propagating more than 5 millimeters constitutes failure.
i. Outer cable jacket cracking or splitting observed under 10X times magnification, constitutes failure.

B. Indoor/outdoor cable:
1. Cable construction:
a. General:
1) Cable type: Indoor/Outdoor - Flame retardant, low smoke, zero halogen, UV resistant.
2) Fiber count: As indicated on the Drawings.
3) Fiber type: As indicated on the Drawings.
4) Buffer tube: Loose tube.
5) Armoring: None.
6) Waterproofing: Water blocking layer.
7) Strength member:
a) Loose tube: Utilize a central, nonmetallic strength member with a coefficient of thermal expansion similar to the fibers as the central anti-buckling member.
8) Approvals and listings: UL 1666 and UL 1685.
9) Design and test criteria: In accordance with ICEA S-104-696.
b. Testing:
1) All fibers in the cable:
a) Proof test of 100 kpsi.
b) Each optical fiber: Bellcore GR-409 strip force testing.
c) No gaps are allowed between the coating material and the buffer material visible under a 50-power microscope.
c. Outer jacket material:
1) Linear low-density polyethylene.
2) Meet all requirements of the NEC for use in all indoor/outdoor areas (excluding plenums) without being enclosed in conduit.
3) Flame retardant OFNR riser rated conforming to UL 1666.
4) Printed with all necessary UL marks and manufacturer identification.
5) Sequential printing of footage in 2-foot increments.
6) With a ripcord incorporated under the cable jacket.

C. Single mode fibers:
1. All fibers in the cable must be usable fibers and meet required specifications.
2. Each optical fiber shall consist of a doped silica core surrounded by a concentric silica cladding.
3. Single mode fiber characteristics:
a. Category: OS2 compliant with ITU-G.657.A1.
b. Jacket color: Yellow

D. Indoor/outdoor:

1. Loose tube:
a. Corning Cable Systems, Freedm®.
b. CommScope, LazrSPEED/TerraSPEED.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES

A. Patch cords:
   1. General:
      c. Connector types to match supplied equipment and the patch panel terminations.
      d. Maximum length of patch cords: 25 feet.
      e. Provide 2 spare patch cords (or 1 duplex patch cord) of each type used at each PLC or network cabinet.
      f. Factory assembled and optically tested.
      g. Provide mode-conditioning cords for multimode fibers operating at 1310 nm.
   2. Manufacturers: One of the following or equal:
      h. CommScope.
      i. Corning Cable Systems.

B. Fiber connectors:
   1. As specified in the Control Systems: Network Materials and Equipment section.

C. Fiber optic identification/warning tags:
   1. Black letters on orange or yellow background.
   2. UV resistant polyethylene or other suitable material.
      j. Manufacturers: The following or equal.
         1) Almetek.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify the condition of the conduit system before installation of the fiber optic cable or inner duct.

B. Pass a test mandrel through all fiber optic conduits prior to pulling fiber or installing inner duct.
   1. Run the mandrel in both directions.

C. Examine all materials and equipment before installation and verify they are free from physical damage and defects.

3.2 PREPARATION

A. Before fiber splicing terminating or testing activities, verify sufficient workspace is available to perform the activity without interferences from other trades.

B. Pre-installation test:
   1. Conduct pre-installation tests on all fiber optic cable.
   2. Upon arrival at the site:
      a. Inspect the cable and reel for damage.
      b. Test all fibers with an optical time domain reflectometer (OTDR) for fiber integrity.
      c. Verify that the fiber lengths are consistent with the cable manufacture.
      d. Verify that all traces yield no point discontinuities.
   3. Complete test sequence and obtain approval from the Engineer of submitted test results before cable installation:
      a. Replace any cable failing to meet the requirements of the required tests and test before installation.
   4. Submit copies of the test results to the Engineer within 5 days after the delivery to the site.

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install fiber optic patch cords in open network trays or in dedicated conduits no longer than 25 feet in length.

C. Install all fiber optic system components in accordance with the recommendations of the manufacturer.

D. Install fiber optic cable in continuous lengths without intermediate splices, except where approved by the Engineer.

E. Installation:
   1. Utilize personnel certified by the manufacturer with specific knowledge of the cable manufacturer's recommended procedures:
      a. Schedule Engineer, 5 days before installation, to witness all cable installations.
   2. Properly attach the fiber optic cable’s strength elements to a 600-pound breakaway swivel containing tension or shear pins using Kellums pulling grips that are a minimum of 18 inches long.
   3. Certify that cable tensile limits do not exceed cable pull tension and bend limits using tension monitoring devices.

4. Leave an extra loop of fiber optic cable in each pull box.
5. Conform with the cable manufacturer's specifications, practices, and the following requirements:
    a. When power equipment is used to install fiber optic cables, use low speeds and do not exceed a rate of 30 meters per minute.
    b. Do not exceed the tensile and bending limitation for fiber optic cables under any circumstances.
    c. Use large diameter wheels, pulling sheaves, and cable guides to maintain the specified bending radius.
    d. Use commercial dynamometers or load cells to monitor pulling tension.
    e. A nonfreezing type of swivel inserted between the pulling line and cable pulling grip to prevent twisting under strain.
    f. All cable to be installed using a breakaway swivel.
6. Apply to all conduits a lubricant at each conduit ingress and egress location during the pull operation:
    a. Pour or pump lubricant into the end of the conduit at the feed location at a nominal application rate of 3 gallons per 1,000 feet of cable.
    b. If the conduit is open at intermediate locations, then apply the appropriate proportion of lubricant at each opening.
    c. Continuously lubricate the cable as it is being pulled by pouring or pumping the lubricant into the conduit at the feed location and at each intermediate location.
    d. Station workers at each intermediate location as required.
    e. Remove all excess lubricant that has collected.
    f. Remove and clean the surrounding area after cable installation.
7. Install using a hydraulic capstan or winch equipped with a recording running line dynamometer graph which measures and records pulling tensions:
    a. Use pulling equipment with “slip-load” capability to allow the winch to maintain a constant pulling force without taking up the winch line.
    b. Use pulling equipment equipped with a hydraulic bypass set so that a maximum tension of 600 pounds is not exceeded.
    c. Use only equipment designed to prevent a preset pulling tension from being exceeded.
    d. Fiber optic cable manufacturer to provide the pulling tension setpoint.
    e. If during the pulling operation excessive tension is detected, cease all operations and notify the Engineer.
8. Position the cable reel at the feed point in alignment with the raceway and in such a position that the cable can be passed from the top of the reel in a long, smooth bend into the raceway system:
    a. The use of a cable feeder is required, unless the cable is hand-pulled.
9. Supply all bull wheels, blocks, split wheels, cable feeders, and necessary equipment required to provide a clean and safe operation:
    a. The cable shall not be allowed to travel over any wheel or block that has a radius less than the minimum radius allowed by the cable manufacturer.
10. Minimize the use of snatch blocks and rollers to guide the cable into the conduit at the feed point:
    a. Slack feed by hand the cable into the feed point and raceway without the use of rollers.
11. Tend the cable reel at all times and turn by hand to provide the required cable slack:
    a. Under no circumstances shall the cable tension be allowed to turn the cable reel.
12. Use a rim roller, with a wheel radius greater than the minimum cable bending radius placed at the manhole or vault opening to prevent the cable from dragging on the manhole rim or steps.
13. Perform a continuous thorough visual inspection for flaws, breaks, and abrasions in the cable sheath as the cable leaves the reel, and maintain a slow pulling speed to permit this inspection.
14. Damage to the sheath or finish of the cable is cause for rejecting the cable:

15. Replace any cable damaged in any way during installation.
16. If the cable becomes damaged during installation, stop operations and notify the Engineer immediately:
    a. Engineer to determine whether to replace the entire reel of cable or to install a termination panel to eliminate the damaged section.
17. Document all pulls by a graph which is annotated with the following information:
    a. Reel number.
    b. Pull point ID.
    c. Date and time.
    d. Explanations for abnormalities in readings or interruptions.
    e. Sign-off by Contractor and Engineer.
18. Under no conditions shall the fiber optic cable be left exposed or unattended.
19. After the cables are installed and spliced:
    a. Rack the cables.
    b. Loosely secure in racked position with wire ties.
    c. Attach imprinted plastic coated cloth identification/warning tags to each cable in at least 2 locations in each handhole/manhole.
20. Armored fiber optic cables containing metallic members shall be grounded in accordance with NEC.

F. Splices:
1. Submit all splice locations to the Engineer for approval before installation of the fiber cables.
2. Provide field splices in a splice tray located in a waterproof splice enclosure:
    a. Manufacturers: The following or equal:
        2) Tyco/Raychem, FOSC style splice enclosure.
2. Loop the individual fibers a minimum of 1 full turn within the splice tray to avoid macro/micro bending.
3. After completion of cable terminations, neatly dress all cables.
4. Protect all splices with a thermal shrink sleeve.
5. Provide fusion type fiber optic cable splicing meeting the following requirements:
    a. Joins multimode or single mode fibers.
    b. Establishes a permanent fusion splice.
    c. Waterproof.
    d. Re-enterable, rearrangable, and reusable.
    e. Splice loss less than 0.10 dB.
    f. Protected by a splice enclosure.
6. Requirement for outdoor fiber splice enclosures:
    a. Seal.
    b. Bond.
    c. Anchor.
    d. Protect fiber optic cable splices.
    e. Stand-alone unit that does not require an outer enclosure.
    f. Provide for a maximum of 6 cable entries in a butt-end configuration.
    g. Used in aerial, underground, and direct buried applications.
7. Requirement for indoor fiber splice enclosures:
    a. Anchor.
    b. Protect fiber optic cable splices.
    c. Stand-alone unit that does not require an outer enclosure.
    d. Suitable for the minimum number of splices at that location plus additional capacity for reconfigurations.
8. Re-splice any splice that has a loss greater than 0.10 dB.
9. Leave a minimum of 20 feet of fiber optic cable at each end of splice.

G. Terminations:
1. Terminate all fiber inside a patch panel.
a. Direct landing to a switch, router hub, or PLC will not be allowed.
2. Terminate outdoor cables using a breakout kit that seals the cable and provides physical protection for the fiber strands.
3. Terminate indoor cables using breakout kits with field installed terminators.
4. Labeling:
a. Permanently label all cable terminations. Use labels produced by a wire printer using pressure sensitive polyester labels. Label patch panels as specified in the Identification for Electrical Systems section.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Factory test:
10. Before shipment and while on the shipping reel, test 100 percent of all fibers for attenuation:
a. Copies of the results shall be:
1) Maintained on file.
2) Attached to the cable reel in a waterproof pouch.
3) Submitted before the delivery of the cable to the job site to Engineer for approval.
11. Conduct the flex test in accordance with FOTP-104 test condition I and III with a maximum sheave diameter of 20 times the cable OD.
12. Verify that the cable withstands 25 impact cycles with:
a. The average increase in attenuation for the fibers less than 0.20 dB at 1,550 nm.
b. No evidence of cracking or splitting.
c. Conduct the test in accordance with FOTP-25.
13. Certify that the cable withstands a tensile load of 2,700 N (600 pounds):
a. Without exhibiting an average increase in attenuation of greater than 0.10 dB.
b. Test in accordance with FOTP-33 using a maximum mandrel and sheave diameter of 560 millimeters.
c. Apply the load for 1 hour in Test Condition II.
14. Certify that the cable withstands a simulated lightning strike:
a. Peak value of the current pulse greater than 105kA.
b. Use a test current with a damped oscillatory maximum time-to-peak value of 15 µs (which corresponds to a minimum frequency of 16.7 kHz) and a maximum frequency of 30 kHz.
c. The time to half-value of the waveform envelope 40 to 70 µs.
d. Conduct the test in accordance with the FOTP-181.
e. In addition to the analysis criterion set forth in FOTP-181, the integrity of the buffer tubes (or analogous loose tube, i.e. core tube) and strength members must be intact after removal of the cable specimens from the test box.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. General:
1. All test results shall meet or exceed manufacturer specifications:

a. Test each fiber of each cable for breaks, abnormalities, and overall attenuation characteristics.
b. Replace any fiber that does not meet or exceed manufacturer specifications.

2. Conduct post-installation tests of the fiber optic system in accordance with the Field Electrical Acceptance Tests section.
3. Pre-installation tests and post-installation tests to be witnessed and signed off by Engineer and Owner.
4. Perform OLTS test with equipment capable and calibrated to show anomalies of 0.1 dB as a minimum:
   a. Test multimode fibers at 850 nm and 1,300 nm.
   b. Test single mode fibers at 1,310 and 1,550 nm.
5. Perform OTDR tests on fiber cables less than 100 meters with the aid of a launch cable:
   a. Adjust OTDR pulse width settings to a maximum setting of 1/1000th of the cable length or 10 nanoseconds.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. Clean all fiber optic connectors after termination and before testing. After cleaning, cover all un-terminated connectors with a protective boot.

B. At the completion of construction, touch up the finish on all fiber patch panels and enclosures.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

B. Protect the fiber system from physical damage and the encroachment of dust, before, during, and after installation.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 16130

CONDUITS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Metallic conduits.
2. Nonmetallic conduits.
3. Conduit bodies.
4. Conduit fittings and accessories.
5. Conduit installation.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. American National Standards Institute (ANSI):
1. C80.1 - Electrical Rigid Steel Conduit.
2. C80.3 - Steel Electrical Metallic Tubing.
3. C80.5 - Electrical Rigid Aluminum Conduit.
4. C80.6 - Electrical Intermediate Metal Conduit.

C. National Electrical Manufacturer's Association (NEMA):
1. RN-1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Steel Conduit.
2. TC2 - Electrical Polyvinyl Chloride (PVC) Conduit.
3. TC3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing.
4. TC7 - Smooth-Wall Coilable Electrical Polyethylene Conduit.
5. TC13 - Electrical Nonmetallic Tubing.
6. TC14 - Reinforced Thermosetting Resin Conduit (RTRC) and Fittings.

D. Underwriters Laboratories (UL):
1. 1 - Standard for Flexible Metal Conduit.
2. 6 - Standard for Electrical Rigid Metal Conduit - Steel.
3. 6A - Standard for Electrical Rigid Metal Conduit - Aluminum, Red Brass, and Stainless Steel.
4. 360 - Standard for Liquidtight Flexible Steel Conduit.
5. 651 - Standard for Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings.
6. 651B - Standard for Continuous Length HDPE Conduit.
7. 797 - Standard for Electrical Metallic Tubing - Steel.
8. 1242 - Standard for Electrical Intermediate Metal Conduit - Steel.
9. 1653 - Standard for Electrical Nonmetallic Tubing.
10. 1660 - Standard for Liquidtight Flexible Nonmetallic Conduit.
11. 1684 - Standard for Reinforced Thermosetting Resin Conduit (RTRC) and Fittings.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions and abbreviations:

1. Conduit bodies: A separate portion of a conduit system that provides access through a removable cover to the interior of the system at a junction of 2 or more conduit sections. Includes, but not limited to, Shapes C, E, LB, T, X, etc.
2. Conduit fitting: An accessory that primarily serves a mechanical purpose. Includes, but not limited to, bushings, locknuts, hubs, couplings, reducers, etc.
3. GRC: Galvanized rigid steel conduit.
4. PCS: Polyvinyl chloride (PVC) coated rigid steel conduit.
5. EMT: Electrical metallic tubing.
6. PVC: Polyvinyl chloride rigid nonmetallic conduit.
7. SLT: Sealtight-liquidtight flexible conduit.
8. EFLX: Explosion proof flexible conduit.
9. RAC: Rigid aluminum conduit.
10. NPT: National pipe thread.

1.4 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
1. Furnish complete manufacturer's catalog sheets for every type and size of conduit, fitting, conduit body, and accessories to be used on the Project.
2. Furnish complete manufacturer's recommended special tools to be used for installation if required.

C. Certifications:
1. Furnish PVC-coated conduit manufacturer's certification for each installer.

D. Record Documents:
1. Incorporate all changes in conduit routing on electrical plan drawings.
2. Dimension underground and concealed conduits from building lines.
3. Furnish hard copy drawings.

1.5 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. All conduits, conduit bodies, and fittings shall be UL listed and labeled.

C. Every installer of PVC-coated metallic conduit shall be certified by the manufacturer for installation of the conduit.

1.6 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

B. Do not expose non-metallic conduit to direct sunlight.

C. Do not store conduit in direct contact with the ground.

D. Do not store aluminum conduit in contact with concrete.

1.7 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.8 SEQUENCING

A. Before installing any conduit or locating any device box:
   1. Examine the complete set of Drawings and Specifications, and all applicable shop drawings.
   2. Verify all dimensions and space requirements and make any minor adjustments to the conduit system as required to avoid conflicts with the building structure, other equipment, or the work of other trades.

1.9 SCHEDULING (NOT USED)

1.10 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.11 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.12 OWNER'S INSTRUCTIONS (NOT USED)

1.13 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Galvanized rigid steel conduit:
   1. One of the following or equal:
      a. Western Tube and Conduit.
      b. Allied Tube and Conduit.
      c. Wheatland Tube Co.

B. PVC-coated rigid steel conduit:
   1. One of the following or equal:
      a. Robroy Ind.
      b. Ocal, Inc.
      c. Calbond.
      d. Allied.
      e. NEC, Inc. BlackGuard.

C. Sealtight-liquidtight flexible conduit:
   1. One of the following or equal:
      a. Southwire.
      b. AFC Cable Systems.
      c. Electri-Flex Co.
      d. Anaconda.

D. Explosion proof flexible conduit:
   1. One of the following or equal:
      a. Appleton.
      b. Crouse-Hinds.
      c. Hubbell Killark.

E. Conduit bodies:

1. One of the following or equal:
    a. Crouse-Hinds.
    b. Appleton.
    c. O-Z/Gedney.
    d. Ocal, Inc.
    e. Robroy Ind.
    f. Calbond.
    g. Carlon.

F. Joint compound:
    1. The following or equal:
        a. Thomas and Betts.

G. Galvanized rigid steel conduit expansion fittings:
    1. One of the following or equal:
        a. Crouse-Hinds.
        b. Appleton.
        c. O-Z/Gedney.

H. PVC-coated rigid steel conduit expansion fittings:
    1. One of the following or equal:
        a. Ocal, Inc.
        b. Robroy Ind.
        c. NEC, Inc. BlackGuard.

I. Conduit sleeve:
    1. One of the following or equal:
        a. Crouse-Hinds.
        b. Appleton.
        c. O-Z/Gedney.

J. Conduit seals:
    1. One of the following or equal:
        a. Appleton.
        b. Crouse-Hinds.
        c. O-Z/Gedney.

K. Conduit hangers and supports:
    1. As specified in the Hangers and Supports section.

L. Conduit through wall and floor seals:
    1. The following or equal:
        a. O-Z/Gedney:
            1) Type "WSK."
            2) Type “CSM.”

2.2 SYSTEM DESCRIPTION

A. Provide conduits, conduit bodies, fittings, junction boxes, and all necessary components, whether or not indicated on the Drawings, as required, to install a complete electrical raceway system.

2.3 EXISTING PRODUCTS (NOT USED)

2.4 MATERIALS (NOT USED)

2.5 MANUFACTURED UNITS (NOT USED)

2.6 EQUIPMENT (NOT USED)

2.7 COMPONENTS

A. GRC:
   1. All threads: NPT standard conduit threads with a 3/4-inch taper per foot:
      a. Running conduit threads are not acceptable.
   2. Hot-dip galvanized inside and out:
      a. Ensures complete coverage and heats the zinc and steel to a temperature that ensures the zinc alloys with the steel over the entire surface.
      b. Electro-galvanizing is not acceptable.
   3. Manufactured in accordance with:
      a. UL-6.
      b. ANSI C80.1.

B. PCS:
   1. The steel conduit, before PVC coating, shall be new, unused, hot-dip galvanized material, conforming to the requirements for Type GRC.
   2. Coated conduit NEMA Standard RN-1:
      a. The galvanized coating may not be disturbed or reduced in thickness during the cleaning and preparatory process.
   3. Factory-bonded PVC jacket:
      a. The exterior galvanized surfaces shall be coated with primer before PVC coating to ensure a bond between the zinc substrate and the PVC coating.
      b. Nominal thickness of the exterior PVC coating shall be 0.040 inch except where part configuration or application of the piece dictates otherwise.
      c. PVC coating on conduits and associated fittings shall have no sags, blisters, lumps, or other surface defects and shall be free of holes and holidays.
      d. The PVC adhesive bond on conduits and fittings shall be greater than the tensile strength of the PVC plastic coating:
         1) Confirm bond with certified test results.
   4. A urethane coating shall be uniformly and consistently applied to the interior of all conduits and fittings:
      a. Nominal thickness of 0.002 inch.
      b. Conduits having areas with thin or no coating are not acceptable.
      c. All threads shall be coated with urethane.
   5. The PVC exterior and urethane interior coatings applied to the conduits shall afford sufficient flexibility to permit field bending without cracking or flaking at temperature above 30 degrees Fahrenheit (-1 degree Celsius).
   6. PCS conduit bodies and fittings:
      a. Malleable iron.
      b. The conduit body, before PVC coating, shall be new, unused material and shall conform to appropriate UL standards.
      c. The PVC coating on the outside of conduit bodies shall be 0.040-inch thick and have a series of ribs to protect the coating from tool damage during installation.
      d. 0.002-inch interior urethane coating.
      e. Utilize the PVC coating as an integral part of the gasket design.
      f. Stainless steel cover screw heads shall be encapsulated with plastic to ensure corrosion protection.

g. A PVC sleeve extending 1 conduit diameter or 2 inches, whichever is less, shall be formed at each female conduit opening.
    1) The inside diameter of the sleeve shall be the same as the outside diameter of the conduit to be used.
    2) The sleeve shall provide a vapor- and moisture resistant seal at every connection.

C. SLT:
1. Temperature rated for use in the ambient temperature at the installed location but not less than the following:
    a. General purpose:
        1) Temperature range: -20 degrees Celsius to +80 degrees Celsius.
    b. Oil-resistant:
        1) Temperature range: -20 degrees Celsius to +60 degrees Celsius.
2. Sunlight-resistant, weatherproof, and watertight.
3. Manufactured from single strip steel, hot-dip galvanized on all 4 sides before conduit fabrication.
4. Strip steel spiral wound resulting in an interior that is smooth and clean for easy wire pulling.
5. Overall PVC jacket.
6. With integral copper ground wire, built in the core, in conduit trade sizes 1/2 inch through 1-1/4 inch.

D. EFLX:
1. Suitable for the hazardous Class and Group where installed:
    a. As specified in the Common Work Results for Electrical section.
2. Metallic braid shall provide continuous electrical path.
3. Stainless steel construction.
4. Provide fittings and unions as required for the installation.

E. PVC:
1. Extruded from virgin PVC compound:
    a. Schedule 40 unless otherwise specified.
    b. Schedule 80 extra-heavy wall where specified.
2. Rated for 90 degrees Celsius conductors or cable.
3. Rated for use in direct sunlight.

F. Conduit bodies:
1. Material consistent with conduit type:
    a. Malleable iron bodies and covers when used with Type GRC.
    b. Cast aluminum bodies and covers when used with Type RAC.
    c. PVC bodies and covers when used with Type PVC.
    d. PVC-coated malleable iron bodies and covers when used with Type PCS.
2. Conduit bodies to conform to Form 8, Mark 9, or Mogul design:
    a. Mogul design conforming to NEC requirements for bending space for large conductors for conduit trade sizes of 1 inch and larger with conductors #4 AWG and larger, or where required for wire-bending space.
3. Gasketed covers attached to bodies with stainless steel screws secured to threaded holes in conduit body.

2.8 ACCESSORIES

A. Connectors and fittings:
1. Manufactured with compatible materials to the corresponding conduit.

B. Insulated throat metallic bushings:

1. Construction:
    a. Malleable iron or zinc-plated steel when used with steel conduit.
    b. Aluminum when used with aluminum conduit.
    c. Positive metallic conduit end stop.
    d. Integrally molded non-combustible phenolic-insulated surfaces rated at 150 degrees Celsius.
    e. Use fully insulated bushings on nonmetallic conduit system made of high-impact 150 degrees Celsius rated non-combustible thermosetting phenolic.

C. Insulated grounding bushings:
    1. Construction:
        a. Malleable iron or steel, zinc-plated, with a positive metallic end stop.
        b. Integrally molded non-combustible phenolic-insulated surfaces rated at 150 degrees Celsius.
        c. Tin-plated copper grounding saddle for use with copper or aluminum conductors.

D. Electrical unions (Erickson Couplings):
    1. Construction:
        a. Malleable iron for use with steel conduit.
        b. Aluminum for use with aluminum conduit.
        c. Concrete tight, 3-piece construction.
        d. Rated for Class I Division 1 Group D in hazardous areas.

E. SLT fittings:
    1. Construction:
        a. Malleable iron.
        b. Furnished with locknut and sealing ring.
        c. Liquidtight, raintight, oiltight.
        d. Insulated throat.
        e. Furnish as straight, 45-degree elbows, and 90-degree elbows.
        f. Designed to prevent sleeving:
            1) Verify complete bonding of the raceway jacket to the plastic gasket seal.
        g. Equipped with grounding device to provide ground continuity irrespective of raceway core construction. Grounding device, if inserted into raceway and directly in contact with conductors, shall have rolled-over edges for sizes under 5 inches.
        h. Where terminated into a threadless opening using a threaded hub fitting, a suitable moisture-resistant/oil-resistant synthetic rubber gasket shall be provided between the outside of the box or enclosure and the fitting shoulder. Gasket shall be adequately protected by and permanently bonded to a metallic retainer.
    2. Corrosion-resistant and outdoor SLT fittings:
        a. Construction:
            1) PVC-coated liquidtight fittings with a bonded 0.040-inch thick PVC coating on the metal connector to form a seal around the SLT conduit.
            2) Insulated throat and an integral sealing ring.

F. Hubs for threaded attachment of steel conduit to sheet metal enclosures:
    1. Construction:
        a. Insulated throat.
        b. PVC-coated when used in corrosive areas.
        c. Bonding locknut.
        d. Recessed neoprene o-ring to ensure watertight and dusttight connector.
        e. 1/2-inch through 1-1/4-inch steel zinc electroplated.
        f. 1-1/2-inch through 6-inch malleable iron zinc plated.
        g. Aluminum with aluminum conduit.
    2. Usage:

a. All conduits in damp, wet, outdoor, and corrosive areas shall use threaded hubs for connections to sheet metal enclosures.

G. Sealing fittings:
1. Construction:
a. 40-percent wire fill capacity.
b. PVC-coated when used in corrosive areas.
c. Malleable ductile iron with steel conduit.
d. Aluminum with aluminum conduit.
e. Type EYDX where drains are required.
f. Type EYSX where drains are not required.
g. UL listed for use in Class I, Division 1, Groups A, B, C, D; Class I, Division 2, Groups A, B, C, D; and Class II, Divisions 1 and 2, Groups E, F, and G.
2. Sealing compound:
a. Fiber filler and cement as recommended by the sealing fitting manufacturer.
b. Approved for the conditions and use.
1) Not affected by surrounding atmosphere or liquids.
c. Melting point shall be 200 degrees Fahrenheit minimum.

H. PVC fittings:
1. Materials:
a. All devices shall be made of PVC, using the same materials as used for Type PVC conduit.
b. All metal hardware shall be stainless steel.

I. Through wall and floor seals:
1. Materials:
a. Body: Casting of malleable or ductile iron with a hot-dip galvanized finish Aluminum.
b. Grommet: Neoprene.
c. Pressure rings: PVC-coated steel.
d. Disc material: PVC-coated steel.

J. Expansion/deflection couplings:
1. Use to compensate for movement in any directions between 2 conduit ends where they connect.
2. Shall allow movement of 3/4 inch from the normal in all directions.
3. Shall allow angular movement for a deflection of 30 degrees from normal in any direction.
4. Constructed to maintain electrical continuity of the conduit system.
5. Materials:
a. End couplings: Bronze or galvanized ductile iron.
b. Sleeve: Neoprene.
c. Bands: Stainless steel.
d. Bonding jumper: Tinned copper braid.

K. Expansion couplings:
1. Shall allow for expansion and contraction of conduit:
a. Permitting 8-inch movement, 4 inches in either direction.
2. Constructed to maintain electrical continuity of the conduit system.
3. Materials:
a. Head: Malleable or ductile iron.
b. Sleeve: Steel.
c. Insulating bushing: Phenolic.
d. Finish: Hot-dip galvanized.
e. Aluminum when used with Type RAC.

f. PVC-coated when used with Type PCS.

L. Conduit markers:
1. As specified in the Identification for Electrical Systems section.

2.9 MIXES (NOT USED)

2.10 FABRICATION (NOT USED)

2.11 FINISHES (NOT USED)

2.12 SOURCE QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. General:
1. Conduit routing:
a. The electrical drawings are diagrammatic in nature:
1) Install conduit runs as specified with schematic representation indicated on the Drawings and as specified.
2) Modify conduit runs to suit field conditions, as accepted by the Engineer:
a) Make changes in conduit locations that are consistent with the design intent but are dimensionally different, or routing to bypass obstructions.
b) Make changes in conduit routing due to the relocation of equipment.
3) The electrical drawings do not indicate all required junction boxes and pull boxes:
a) Provide junction boxes and pull boxes to facilitate wire pulling as required:
(1) To meet cable manufacturer’s pulling tension requirements.
(2) To limit total conduit bends between pull locations.
b) Install junction boxes and pull boxes at locations acceptable to the Engineer.
b. The Contractor is responsible for any deviations in general location, conduit size, routing, or changes to the conduit schedule without the express written approval or direction by the Engineer:
1) The Engineer is the sole source in determining whether the change is constituted as a deviation:
2) Perform any changes resulting in additional conduits, or extra work from such deviations.
3) Incorporate any deviations on the Record Documents.
2. Use only tools recommended by the conduit manufacturer for assembling the conduit system.

3. Provide adequate clearances from high-temperature surfaces for all conduit runs. Provide minimum clearances as follows:
    a. Clearance of 6 inches from surfaces 113 degrees Fahrenheit to 149 degrees Fahrenheit.
    b. Clearance of 12 inches from surfaces greater than 149 degrees Fahrenheit.
    c. Keep conduits at least 6 inches from the coverings on hot water and steam pipes, 18 inches from the coverings on flues and breechings, and 12 inches from fuel lines and gas lines.
    d. Where it is necessary to route conduits close to high-temperature surfaces, provide a high-reflectance thermal barrier between the conduit and the surface.
4. Support conduit runs on water-bearing walls a minimum of 7/8-inch away from wall on an accepted preformed channel:
    a. Do not run conduits within water-bearing walls unless otherwise indicated on the Drawings.
5. Do not install 1-inch or larger conduits in or through structural members unless approved by the Engineer.
6. Run conduits exposed to view parallel with or at right angles to structural members, walls, or lines of the building:
    a. Install straight and true conduit runs with uniform and symmetrical elbows, offsets, and bends.
    b. Make changes in direction with long radius bends or with conduit bodies.
7. Install conduits with total conduit bends between pull locations less than or equal to 270 degrees.
8. Route all exposed conduits to preserve headroom, access space and work space, and to prevent tripping hazards and clearance problems:
    a. Install conduit runs so that runs do not interfere with proper and safe operation of equipment and do not block or interfere with ingress or egress, including equipment-removal hatches.
    b. Route conduits to avoid drains or other gravity lines. Where conflicts occur, relocate the conduit as required.
9. When installing conduits through existing slabs or walls, make provisions for locating any possible conflicting items where the conduit is to penetrate. Use tone signal or X-ray methods to make certain that no penetrations will be made into the existing conduits, piping, cables, post-tensioning cables, etc.
10. Plug conduits brought into pull boxes, manholes, handholes, and other openings until used to prevent entrance of moisture.
11. Install conduits through wall and floor seals where indicated on the Drawings.
12. For existing and new 2-inch and larger conduit runs, snake conduits with a conduit cleaner equipped with a cylindrical mandrel of a diameter not less than 85 percent of nominal diameter of the conduit:
    a. Remove and replace conduits through which mandrel will not pass.
13. Provide all sleeves and openings required for the passage of electrical raceways or cables even when these openings or sleeves are not specifically indicated on the Drawings.
14. Install complete conduit systems before conductors are installed.
15. Provide metallic conduits terminating in transformer, switchgear, motor control center, or other equipment conduit windows with grounding bushings and ground with a minimum No. 6 AWG ground wire.
16. Underground conduits:
    a. Install underground conduits, including conduit runs below slabs-on-grade in concrete-reinforced duct bank construction:
        1) As specified in the Duct Banks section.
    b. Make underground conduit size transitions at handholes and manholes.
    c. Install spare conduits in underground duct banks towards top center of runs to allow for ease of installation of future cables as conduits enter underground manholes and handholes.

d. Seal around conduit penetrations of below grade walls with a mechanical seal.

C. Lighting and receptacle conduits:
1. Provide conduit runs for lighting and receptacle circuits, whether or not indicated on the Drawings:
2. Install conduits in accordance with the requirements of this Section unless otherwise indicated.
3. Minimum conduit size:
a. 3/4-inch for exposed conduits.
b. 1-inch for underground or in-slab conduits.
4. Provide conduit materials for the installed location as specified in the Common Work Results for Electrical section.

D. Hazardous areas:
1. As specified in the Common Work Results for Electrical section for hazardous areas and specific Class and Division.
2. As specified in the Hazardous Classified Area Construction section for hazardous area conduit installation requirements.

E. Conduit usage:
1. Exposed conduits:
a. Rigid conduit:
1) Install the rigid conduit type for each location as specified in the Common Work Results for Electrical section.
2) Minimum size: 3/4-inch.
b. Flexible conduit:
1) Use flexible conduit for final connections between rigid conduit and motors, vibrating equipment, instruments, control equipment, or where required for equipment servicing:
a) Use Type SLT with rigid metallic conduit.
b) Use Type EFLX in Class I Division 1 locations.
2) Minimum size: 3/4-inch:
a) 1/2 when required for connection to instruments.
3) Maximum length:
a) Fixed equipment:

Conduit Trade Size	Flexible Conduit Length (inch)
3/4	18
1	18
1-1/4	18
1-1/2	18
2	36
2-1/2	36
3	36
3-1/2	38
4	40

b) Removable instruments or hinged equipment:
(1) As required to allow complete removal or full movement without disconnecting or stressing the conduit.

2. Concrete-encased and embedded conduits:
    a. Straight runs and bends less than 45 degrees:
        1) Type PVC Schedule 40.
    b. Bends with total deflection greater than 45 degrees;
        1) PCS,
    c. Entering and exiting duct bank, underground or embedded conduit runs a minimum 12 inches above and below grade, finished floor, or entering equipment:
        1) PCS.
    d. Minimum size:
        1) 2-inch in duct banks.
        2) 1-inch for in-slab conduits.
        3) Provide conduit fittings to enlarge the conduit from the exposed size in the conduit schedule as required.
3. Direct-buried and sand-bedded duct bank conduits:
    a. Type PCS.
    b. Minimum size: 1-inch.
4. Below-slab conduits:
    a. Type PCS.
    b. Minimum size: 1-inch.
5. PVC-coated rigid metallic conduit:
    a. Use specifically manufactured or machined threading dies to manufacturer's specifications to accommodate the PVC jacket.
6. GRC:
    a. Conduit shall be cut square and reamed before threading.

F. Conduit joints and bends:
1. General:
    a. Where conduit is underground, under slabs on grade, exposed to the weather, or in NEMA Type 4 or NEMA Type 4X locations, make joints liquidtight.
    b. Keep bends and offsets in conduit runs to an absolute minimum.
    c. All bends shall be symmetrical.
    d. The following conduit systems shall use large-radius sweep elbows:
        1) Underground conduits.
        2) Conduits containing fiber optic cables.
    e. Provide large-radius factory-made bends for 1-1/4-inch trade size or larger.
    f. Make field bends with a radius of not less than the requirements found in the NEC:
        1) The minimum bending radius of the cable must be less than the radius of the conduit bend.
        2) Make all field bends with power bending equipment or manual benders specifically intended for the purpose:
            a) Make bends so that the conduit is not damaged and the internal diameter is not effectively reduced.
            b) For the serving utilities, make bends to meet their requirements.
    g. Replace all deformed, flattened, or kinked conduit.
2. Threaded conduit:
    a. Cut threads on rigid metallic conduit with a standard conduit-cutting die that provides a 3/4-inch per foot taper and to a length such that all bare metal exposed by the threading operation is completely covered by the couplings or fittings used. In addition, cut the lengths of the thread such that all joints become secure and wrench-tight just preceding the point where the conduit ends would butt together in couplings or where conduit ends would butt into the ends or shoulders of other fittings.
    b. Thoroughly ream conduit after threads have been cut to remove burrs.
    c. Use bushings or conduit fittings at conduit terminations.

d. On exposed conduits, repair scratches and other defects with galvanizing repair stick, Enterprise Galvanizing “Galvabar™,” or CRC “Zinc It.”
e. Coat conduit threads with an approved electrically conductive sealant and corrosion inhibitor that is not harmful to the conductor insulation:
1) Apply to the male threads and tighten joints securely.
2) Clean excess sealant from exposed threads after assembly.
f. Securely tighten all threaded connections.
g. Any exposed threaded surfaces must be cleaned and coated with a galvanizing solution so that all exposed surfaces have a galvanized protective coating.

3. PVC:
a. Use approved solvent-weld cement specifically manufactured for the purpose. Spray-type cement is not allowed.
b. Apply heat for bends so that conduit does not distort or discolor. Use a spring mandrel as required to ensure full inside diameter at all bends:
1) Utilize a heater specifically for PVC conduit as recommended by the conduit manufacturer.

G. Conduit sealing and drainage:
1. Conduit drainage and sealing other than required for hazardous and classified areas:
a. Provide sealing and drainage in vertical drops of long (in excess of 20 feet), exterior, above-grade conduit runs at the points at which the conduit enters buildings, switchgear, control panels, lighting panelboards, and other similar enclosures.
b. Provide seal fittings with drains in vertical drops directly above grade for exterior and above-grade conduit runs that are extended below grade.
c. Provide conduit seals with drains in areas of high humidity and rapidly changing temperatures:
1) Where portions of an interior raceway pass through walls, ceilings, or floors that separate adjacent areas having widely different temperatures.
d. Provide conduit seals similar to O-Z/Gedney (Type CSM) on all conduits between corrosive and non-corrosive areas.
e. Seal one end only of all underground conduits at highest point with O-Z/Gedney sealing (non-hazardous) filling, or equal.
2. Install seals with drains at any location along conduit runs where moisture may condense or accumulate. This requirement includes, but is not limited to, the following locations: control panels, junction boxes, pullboxes, or low points of the conduit.

H. Conduit supports:
1. General:
a. Provide appropriate hangers, supports, fasteners, and seismic restraints to suit applications:
1) As specified in the Hangers and Supports section.
2) Provide support materials consistent with the type of conduit being installed as specified in the Common Work Results for Electrical section.
b. Support conduit at the intervals required by the NEC.
c. Perforated strap and plumbers tape are not acceptable for conduit supports.
2. Conduit on concrete or masonry:
a. Use 1-hole malleable iron straps with metallic or plastic expansion anchors and screws or support from preset inserts.
b. Use preset inserts in concrete when possible.
c. Use pipe spacers (clamp backs) in wet locations.
3. Suspended conduit:
a. Use malleable-iron factory-made split-hinged pipe rings with threaded suspension rods sized for the weight to be carried (minimum 3/8-inch diameter), Kindorf, or equal.

b. For grouped conduits, construct racks with threaded rods and tiered angle iron or preformed channel cross members. Clamp each conduit individually to a cross member. Where rods are more than 2-feet long, provide rigid sway bracing.

4. Supports at structural steel members:
   a. Use beam clamps.
   b. Drilling or welding may be used only as specified or with approval of the Engineer.
5. PVC-coated rigid metal systems:
   a. Provide right-angle beam clamps and “U” bolts specially formed and sized to snugly fit the outside diameter of the coated conduit. Provide "U" bolts with PVC-encapsulated nuts that cover the exposed portions of the threads.
   b. Securely fasten exposed conduits with Type 316 stainless steel clamps or straps.

I. Expansion or expansion/deflection fittings:
1. General:
   a. Align expansion coupling with the conduit run to prevent binding.
   b. Follow manufacturer’s instructions to set the piston opening.
   c. Install expansion fittings across concrete expansion joints and at other locations where necessary to compensate for thermal or mechanical expansion and contraction.
   d. Furnish fittings of the same material as the conduit system.
2. For metallic conduit, provide expansion or expansion/deflection couplings, as appropriate, where:
   a. Install expansion fittings a minimum of every 200 feet in straight conduit runs.

J. Empty conduits:
1. Provide a polyethylene rope rated at 250 pounds tensile strength in each empty conduit more than 10 feet in length.
2. Seal ends of all conduits with approved, manufactured conduit seals, caps, or plugs immediately after installation:
   a. Keep ends sealed until immediately before pulling conductors.

K. Miscellaneous:
1. Seal roof penetrations for raceways and other items that penetrate the roof in accordance with roofing manufacturer’s instructions and as indicated on the Drawings.
2. Provide electrical unions at all points of union between ends of rigid conduit systems that cannot otherwise be coupled:
   a. Running threads and threadless couplings are not allowed.
3. Replace any conduits installed that the Engineer determines do not meet the requirements of this Specification.

3.4 ERECTION, INSTALLATION, APPLICATIONS, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION

SECTION 261330

DUCT BANKS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Electrical underground duct banks.
   2. Duct bank installation requirements.

1.02 REFERENCES

A. As specified in the Common Work Results for Electrical section.

1.03 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.04 SYSTEM DESCRIPTION

A. Provide trenching, forming, spacers, conduit, concrete, backfill, and compaction necessary for the complete installation of the duct banks.

B. Provide concrete duct banks for all conduits installed below grade, on the site, below structures, or in contact with the earth, unless otherwise indicated on the Drawings.

1.05 SUBMITTALS

A. Furnish submittals as specified in the Submittal Procedures section and the Common Work Results for Electrical section.

B. Product data:
   1. PVC conduit spacers.
   2. Detectable underground marking tape.
   3. Pull line.

C. Shop drawings:
   1. Submit site plan drawings of duct banks including underground profiles indicating all underground utilities.
   2. For duct bank routings crossing under building footers or foundations alternative to designed routings indicated on the Drawings:
      a. Submit shop drawings detailing the new building footer crossing locations and plan drawings labeling all equipment to be installed on top of the new routing for approval by the project Structural Engineer.

1.06 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.09 SEQUENCING

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Conduit spacers:
   1. One of the following or equal:
      a. Carlon Snap-Loc.
      b. Cantex.
      c. Osburn Associates, Inc.

B. Detectable underground marking tape:
   1. One of the following or equal:
      a. Blackburn Manufacturing Co.
      b. Pro-Line Safety Products.
      c. Panduit.

C. Pull line:
   1. One of the following or equal:
      a. Arnco.
      b. Greenlee.
      c. Osburn Associates, Inc.

D. Duct seal:
   1. The following or equal:
      a. OZ Gedney type DUX.

2.02 EXISTING PRODUCTS (NOT USED)

2.03 MATERIALS

A. Provide conduit as specified in the Conduits section:
   1. Use duct suitable for use with 194 degree Fahrenheit rated conductors.

2.04 MANUFACTURED UNITS

A. Conduit spacers:
   1. Provide conduit spacers recommended by the conduit manufacturer or specified above.
   2. Saddle type.
   3. Non-metallic, non-corrosive, non-conductive.
   4. Interlocking type:
      a. Vertical interlocking.
      b. Horizontal interlocking.
   5. Suitable for concrete encasement.
   6. Molded-in rebar holder.
   7. Accommodates 2-inch through 6-inch conduit sizes.
   8. Relieves the conduit from both horizontal and vertical stresses.

B. Pull line:
   1. Minimum 1/4-inch wide, flat design.
   2. Polyester.
   3. Minimum pulling strength 1,200 pounds.

C. Detectable marking tape:
   1. Provide a detectable tape, locatable by a cable or metal detector from above the undisturbed grade.
   2. Aluminum core laminated between polyethylene film.
   3. 6-inch wide red tape imprinted with black lettering stating "CAUTION - BURIED ELECTRIC LINE BELOW" or equivalent.

D. Duct seal:
   1. Non-hardening sealing compound.
   2. Flexible, can be applied by hand.
   3. UL Listed for use with installed conductors.

2.05 EQUIPMENT (NOT USED)

2.06 COMPONENTS (NOT USED)

2.07 ACCESSORIES (NOT USED)

2.08 MIXES

A. Provide a red-oxide conduit encasement coloring agent.

2.09 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.01 EXAMINATION (NOT USED)

3.02 PREPARATION (NOT USED)

3.03 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Duct banks:
   1. Install duct banks encased in concrete at least 24 inches below finish grade, unless otherwise indicated on the Drawings.
   2. Damage minimization:
      a. Conduit should not be left exposed in an open trench longer than is necessary.
      b. Protect all underground duct banks against damage during pouring of concrete or backfilling.
   3. All plastic conduit fittings to be joined should be exposed to the same temperature conditions for a reasonable length of time before assembly.
   4. Provide No. 4/0 American Wire Gauge bare copper ground wire the entire length of duct bank and bond to the grounding system at each end of the duct bank.
   5. Install underground ducts to be self-draining:
      a. Slope duct banks away from buildings to manholes, handholes, or pullboxes.
      b. Slope duct banks uniformly from manholes, handholes, or pullboxes to manholes, handholes, or pullboxes or both ways from high points between manholes, handholes, or pullboxes.
      c. Slope a minimum of 1/4 inch per 10 feet.
   6. Where new duct banks join to existing manholes, handholes, or pullboxes, make the proper fittings and fabricate the concrete envelopes to ensure smooth durable transitions, as indicated on the Drawings.
   7. Install pull line in spare conduits:
      a. Provide adequate pull line at both ends of conduits to facilitate conductor pulling.
      b. Cap above ground spare conduit risers at each end with screw-on conduit caps.

C. Trenching:
   1. Trench must be uniformly graded with the bottom, rock free and covered with select material.
   2. Whenever possible, use the walls of the trench as forms for concrete encasement:
      a. Forms are required where the soil is not self-supporting.
   3. Avoid damaging existing ducts, conduits, cables, and other utilities.

D. Duct spacing:
   1. Separate conduits with manufactured plastic spacers using a minimum space between the outside surfaces of adjacent conduits of 2 inches, unless otherwise indicated on the Drawings:
      a. Separate medium voltage ducts a minimum of 7.5 inches on center.
   2. Install spacers to maintain uniform spacing of duct assembly a minimum of 4 inches above the bottom of the trench during concrete pour. Install spacers on 8-foot maximum intervals:
      a. Due to some distortion of conduit from heat, and other means, it may be necessary to install extra spacers within the duct bank:
         1) Install the intermediate set of spacers within normal required spacing to maintain the proper horizontal clearance:
            a) Clearance is required to allow the proper amount of concrete to infiltrate vertically among the duct to ensure proper protection.
   3. Spacers shall not be located at the center of a bend:
      a. Locate spacer in the tangent, free of the coupling on fabricated bends.
      b. Locate spacers midway between the tangent and the center bend on trench formed sweeps.

E. Terminating:
   1. Use bell ends in duct at entrances into cable vaults.
   2. Make conduit entrances into cable vaults tangential to walls of cable vault.
   3. Form trapezoidal transitions between duct bank and cable vaults as needed in order to ensure adequate cable bending radius for the duct bank-to-vault transition.
   4. Install duct seal in all conduits including spare conduits, at entrance to manholes/handholes, and building/equipment stub-ups. Form by hand to conduit and around cables to develop moisture barrier.
   5. New manhole or handhole applications, provide a single opening or “window” per duct bank, sized to accommodate the duct bank envelope.

F. Concrete:
   1. Provide nonferrous tie wires to prevent displacement of the conduits during pouring of concrete:
      a. Tie wire shall not act as a substitute for spacers.
   2. Install minimum 3-inch cover around conduit and rebar.
   3. Consolidation of encasement concrete around duct banks shall be by hand puddling, with no mechanical vibration.
   4. Conduit is subject to temperature rise. As concrete cures, allow the free end to expand by pouring the concrete from the center of the run or from one tie in point.

G. Marking tape:
   1. Install a detectable marking tape 12 inches above the duct bank the entire length of the duct bank.

3.04 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.05 REPAIR/RESTORATION (NOT USED)

3.06 RE-INSTALLATION (NOT USED)

3.07 COMMISSIONING (NOT USED)

3.08 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

3.09 ADJUSTING (NOT USED)

3.10 CLEANING

A. Clean conduits of dirt and debris by use of an appropriately sized steel mandrel no less than 1/2 inch smaller than the inside diameter of the conduit.

3.11 PROTECTION

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Provide shoring and pumping to protect the excavation and safety of workers.

C. Protect excavations with barricades as required by applicable safety regulations.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 261340

BOXES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Device boxes.
   2. Raceway system boxes.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

C. ASTM International (ASTM):
   1. A47 - Standard Specification for Ferritic Malleable Iron Castings.
   2. D149 - Standard Test Method for Dielectric Breakdown Voltage and Dielectric Strength of Solid Electrical Insulating Materials at Commercial Power Frequencies.
   3. D495 - Standard Test Method for High-Voltage, Low-Current, Dry Arc Resistance of Solid Electrical Insulation.
   4. D570 - Standard Test Method for Water Absorption of Plastics.
   5. D648 - Standard Test Method for Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position.
   6. D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
   7. D792 - Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement.

D. Joint Industry Conference (JIC).

E. Underwriters Laboratories, Inc. (UL):
   1. 94 - Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. Arcing parts: Circuit breakers, motor controllers, switches, fuses, or any device intended to interrupt current during its operation.
   2. Raceway system boxes: Boxes that are used for wire and cable pullboxes, conduit junction boxes, or terminal boxes.

1.4 SYSTEM DESCRIPTION

A. Provide outlet boxes for devices such as switches, receptacles, telephone and computer jacks, security systems, junction, and pullboxes for use in the raceway systems, etc.

B. Provide boxes as indicated on the Drawings or as needed to complete the raceway installation.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Manufacturer.
   2. Materials.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.
      d. Weight.
      e. NEMA rating.
   4. Conduit entry locations.
   5. Catalog cut sheets.
   6. Installation instructions.

C. Shop drawings:
   1. Include identification and sizes of pullboxes.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Regulatory requirements:
   1. Outlet boxes shall comply with all applicable standards of:
      a. JIC.
      b. NEC.
      c. NEMA.
      d. UL.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. As specified in the Common Work Results for Electrical.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Cast device boxes:
      a. Appleton.
      b. Crouse - Hinds.
      c. OZ/Gedney.
   2. Stainless steel enclosures:
      a. Hoffman.
      b. Stahlin.
      c. Rittal.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. Cast device boxes:
   1. Construction:
      a. With internal green ground screw.
      b. Furnished with a suitable gasketed cover.
      c. With integral cast mounting lugs when surface mounted.
      d. Conduit sizes range from 3/4 inch to 1 inch.
      e. Tapered threaded hubs with integral bushing.
   2. Malleable iron boxes:
      a. Conforming to ASTM A47 Grade 32510.

B. Plastic coated cast device boxes:
   1. Construction:
      a. With internal green ground screw.
      b. Furnished with a suitable gasketed cover.
      c. With integral cast mounting lugs when surface mounted.
      d. Conduit sizes range from 3/4 inch to 1 inch.
      e. Double coated with a nominal 0.002-inch (2 mil) urethane on both the interior and exterior before application of PVC coating.
      f. With a minimum 0.040-inch (40 mil) PVC coating bonded to exterior.
      g. With pressure sealing sleeve to protect the connection with conduit.

C. Class I Division 1 areas:
   1. Provide boxes designed and listed for Class I Division 1 locations and group type atmosphere in which they will be used:
      a. The approval ratings must be permanently marked on each item.

D. Class I, Division 2 areas:
   1. For boxes not containing arcing parts:
      a. As specified in the Common Work Results for Electrical section.
      b. Pressed metal boxes are not allowed.
   2. For boxes containing arching parts provide:
      a. Boxes designed and listed for Class I Division 1 locations and group type atmosphere in which they will be used:
         1) The approval ratings must be permanently marked on each item.

3. Cast iron Cast copper - free aluminum box and cover.
4. Precision machined flame path between box and cover with neoprene o-ring.
5. For applications requiring hinged cover, provide flexible hinge mounting either left or right side.
6. External flange.
7. Provisions for mounting pan.
8. Ground lug.
9. Stainless steel:
    a. NEMA Type 4X:
        1) Boxes in locations subject to flooding or temporary submersion:
            a) NEMA Type 6.
    b. Fabricated from 14-gauge Type 316 stainless steel.
    c. All seams continuously welded.
    d. Door:
        1) Rolled lip around 3 sides.
        2) Attached to enclosure by means of a continuous stainless steel hinge and pin.
    e. Neoprene door gasket to provide a watertight seal:
        1) Attached with an adhesive.
        2) Retained by a retaining strip.
    f. Fabricate all external removable hardware for clamping the door to the enclosure body from heavy gauge stainless steel:
        1) With a hasp and staple for padlocking.
    g. Provide large enclosures with door and body stiffeners for extra rigidity.
    h. No holes or knockouts.
    i. Finish:
        1) Brushed.
    j. Stainless steel external mounting brackets when surface mounted.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES

A. Fasteners:
    1. Electroplated or stainless steel in boxes with wiring devices.
    2. Screws, nuts, bolts, and other threaded fasteners:
        a. Stainless steel.

B. Provide breather and drain fittings where appropriate.

C. Internal panels:
    1. Provide internal panels where required for mounting of terminal strips or other equipment.
    2. With plated steel shoulder studs.
    3. Steel with white polyester powder finish.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. General:
1. Provide materials and construction suitable for environmental conditions at the location of the box as specified in the Common Work Results for Electrical section.
2. Provide outlet box materials to match the conduit system:
   a. GRC - Cast ferrous boxes.
   b. PCS - PVC coated cast ferrous boxes.
   c. PVC - PVC boxes.
3. Solid type gang boxes:
   a. For more than 2 devices.
   b. For barriered outlets.
4. Support all wall mounted NEMA Type 4 or NEMA Type 4X boxes to maintain a minimum of 7/8-inch free air space between the back of the enclosure and the wall:
   a. Use machined spacers to maintain air space; built-up washers are not acceptable.
   b. Use stainless steel or nylon materials for spacers.
5. Use cast malleable iron boxes when box must support other devices.
6. Boxes serving luminaires or devices:
   a. Use as pullboxes wherever possible.
7. Fit all cast boxes and pressed steel boxes for flush mounting in concrete with cast, malleable box covers and gaskets.
8. In terminal boxes, furnish terminals as indicated on the Drawings, with a minimum of 50 percent spare terminals:
   a. Furnish wireways for discrete and analog/DC wiring.
   b. Separate analog wiring from 120 V discrete or power wiring.
9. Size boxes in accordance with NEC requirements and to provide sufficient room for the future components and cables indicated on the Drawings.
10. For fire-rated construction, provide materials and installation for use in accordance with the listing requirements of the classified construction.

C. Outlet boxes:
1. Locate outlet boxes as indicated on the Drawings:
   a. Adjust locations so as not to conflict with structural requirements or other trades.
2. Use deep threaded-hub malleable iron or aluminum boxes:
   a. In hazardous areas.
   b. Where exposed to the weather.
   c. In unheated areas.
   d. Where subject to mechanical damage:
      1) Defined as exposed boxes less than 10 feet above the floor.
   e. To act as a pullbox for conductors in a conduit system.
   f. Accommodate wiring devices.
3. Use deep threaded-hub plastic coated malleable iron boxes in corrosive and NEMA Type 4X area and when the conduit system is PVC coated steel.
4. Outlet boxes may be used as junction boxes wherever possible.

D. Pullboxes and junction boxes:
1. Size pullboxes in accordance with NEC requirements and to provide sufficient room for any future conduits and cables as indicated on the Drawings.

2. Install pullboxes such that access to them is not restricted.

E. For boxes not indicated:
   1. Provide types and mountings as required to suit the equipment and that will be consistent with the conduit system and environmental conditions as indicated in the Common Work Results for Electrical section.
   2. Outlet, switch, and junction boxes for flush-mounting in general purpose locations:
      a. One-piece, galvanized, pressed steel.
   3. Ceiling boxes for flush mounting in concrete:
      a. Deep, galvanized, pressed steel.
   4. Outlet, switch, and junction boxes where surface mounted in exposed locations:
      a. Cast ferrous boxes with mounting lugs, zinc or cadmium plating finish.
   5. Outlet, control station, and junction boxes for installation in corrosive locations:
      a. Fiberglass reinforced polyester, stainless steel, or plastic coated steel to match the conduit system.
      b. Furnished with mounting lugs.

F. Hazardous locations:
   1. All metallic boxes, fittings, and joints shall utilize threaded connections to the conduit system.
   2. All threaded connections shall be wrench tightened so that at least 5 threads are fully engaged.
   3. Conduits entering and exiting metallic boxes in Class I Division 2 areas shall utilize approved grounding bushings to bond the conduits together.
   4. Provide the following types of conduit bodies and boxes:
      a. Malleable iron bodies and boxes with GRC or IMC conduit systems.
      b. PVC coated conduit bodies and boxes with PCS conduit systems.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 REINSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 261360

WIREWAY

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Wireway systems as indicated on the Drawings.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. National Electrical Manufacturers Association (NEMA):
1. ICS-6 - Industrial Control and Systems: Enclosures.

C. Underwriter's Laboratories (UL):
1. Article 870 - Wireways, Auxiliary Gutters, and Associated Fittings.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. System includes horizontal and/or vertical straight runs of wireway, fittings, covers, splices, barriers, and related accessory and supports:
1. Connected to form a complete system.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
1. Technical information:
a. Catalog cut sheets.
b. Wireway construction and materials.
c. Maximum loading and span.
d. NEMA enclosure type.
2. Dimensions:
a. Width.
b. Depth.
3. Weight of wireway sections and fittings.
4. Complete bill of materials.
5. Manufacturer's installation instructions.

C. Shop drawings:
1. Provide complete details and scaled drawings for the layout of the installed wireway system showing all components and proposed mounting details.

D. Calculations:

1. Provide cross sectional area and fill calculations.
    a. Cross sectional area and fill shall be in accordance with the NEC.
2. Provide structural calculations to ensure that the installed system meets all structural, seismic as specified in the Common Work Results for Electrical section, wind as specified in the Common Work Results for Electrical Requirements section at the Project Site with respect to support and mounting:
    a. Stamped by a professional engineer licensed in the state where the Project is being constructed.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Manufacturer qualifications:
    1. Member of NEMA for the manufacturer of wireway systems and fittings of types and capacities required.

C. Wireway shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. The Drawings indicate the general route of the wireway systems. Data presented on those drawings are as accurate as preliminary surveys and planning can determine until final equipment selection is made.

B. Specifications and Drawings are for assistance and guidance but exact routing, locations, distances, and levels will be governed by actual field conditions. Make field surveys as part of the work before ordering material.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER’S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Metallic wireway:
1. One of the following or equal:
   a. B-Line.
   b. Hoffman.
   c. Hammond.
   d. Rittal Electromate.

B. Non-metallic wireway:
1. One of the following or equal:
   a. Hoffman.
   b. Carlon.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Provide wireways as indicated on the Drawings with respect to:
1. Type (lay-in or feed-through or trough).
2. Dimensions.
3. NEMA enclosure rating.
4. Wireway material.

2.6 COMPONENTS

A. Fittings:
1. Elbows, tees, and crossings:
   a. Of the same materials and construction as the straight runs.
2. Expansion fittings:
   a. Provide flexible or sliding fittings.

B. Covers:
1. Hinged on one side.

2.7 ACCESSORIES

A. Mounting hardware:
1. As specified in the Common Work Results for Electrical section.

2.8 MIXES (NOT USED)

2.9 FABRICATIONS (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Manufactured in accordance with NEMA ICS-6.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify all dimensions and route before ordering wireway:
   1. Make all necessary field measurements.
   2. Coordinate with all subcontractors and suppliers to determine structural dimensions and equipment dimensions to avoid all potential conflicts with other systems.

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the wireway per the manufacturer's guidelines and submitted installation instructions to meet the seismic and wind requirements at the project site.

C. General:
   1. Install in straight runs as much as possible, minimizing the number of turns.
   2. Expansion fittings:
      a. Install as recommended by the manufacturer to accommodate thermal expansion.
      b. Install where wireway crosses structural expansion joints.
   3. Fittings:
      a. Not all fittings are indicated on the Drawings:
         1) Provide all fittings required to suit the installation.
   4. Wireway supports:
      a. Support wireway in accordance with manufacturer's instructions and as required by the seismic conditions.
      b. Support bracket spacing shall meet the requirements of the wireway manufacturer, and NEC.
      c. Provide wireway supports with channels under the entire width of wireway.
      d. Secure wireway to supports with manufacturer-approved fittings.
   5. Mounting:
      a. Oriented to allow hinged doors to be opened minimum 90 degrees.
      b. Oriented to allow safe access to doors for maintenance and future installations.
   6. Wiring installation:
      a. In accordance the NEC.
      b. Begin wiring installation only after the complete raceway system is installed.
      c. Verify that all wireway surfaces and accessories are smooth, free from burrs or sharp edges.
      d. Only install wiring that is UL listed for wireway use.
   7. Wall penetrations:
      a. Terminate wireway on both sides of penetration, and penetrate wall via conduits:
         1) Seal all open spaces inside and around conduits where they penetrate building exterior walls or fire-rated walls.
         2) Fill spare conduits with sealing compound.
         3) Provide sealing material in accordance with all applicable codes and regulations.

3.4 ERECTION, INSTALLATION, APPLICATION, AND CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 PRE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Inspect entire wireway system for the following:
   1. Secure anchoring.
   2. Proper supports.
   3. Burrs or sharp edges.
   4. Sufficient clearance from ducts and piping, especially hot pipes.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 261400

WIRING DEVICES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Switches.
   2. Receptacles.
   3. Plates.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Federal Specifications (FS):
   1. W-C 596 - Connector, Electrical, Power, General Specification for.
   2. W-S 896/2 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification).

C. National Electrical Manufacturers Association (NEMA):
   1. WD1 - General Color Requirements for Wiring Devices.
   2. ICS 5 - Industrial Control and Systems, Control Circuit and Pilot Devices.
   3. OS1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers and Box Supports.
   4. WD6 - Wiring Devices Dimensional Specifications.

D. Telecommunications Industry Association:
   1. T568A - Eight-position jack pin/pair assignment.
   2. T568B - Optional eight-position jack pin/pair assignment.

E. Underwriters Laboratories, Inc. (UL):
   1. 20 - General Use Snap Switches.
   2. 498 - Standard for Attachment Plugs and Receptacles.
   3. 514D - Cover Plates for Flush-Mounted Wiring Devices.
   4. 943 - Ground-Fault Circuit-Interrupters.
   5. 1472 - Solid State Dimming Controls.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. GFCI: Ground fault circuit interrupter.

1.4 SYSTEM DESCRIPTION

A. Switches, receptacles, and plates as indicated on the Drawings wired and operable to form a complete system.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Catalog cut sheets.

C. Shop drawings:
   1. Engraving schedule:
      a. Furnish complete engraving schedule for engraved nameplates.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Wiring devices shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Switches:
   1. One of the following or equal:
      a. Hubbell.
      b. Leviton.
      c. Cooper Wiring Devices.
   2. Switches for hazardous areas:
      a. One of the following or equal:
         1) Appleton.
         2) Crouse-Hinds.

B. Receptacles:
    1. General purpose receptacles:
        a. One of the following or equal:
            1) Hubbell.
            2) Leviton.
            3) Cooper Wiring Devices.
    2. Receptacles for hazardous areas:
        a. One of the following or equal:
            1) Crouse-Hinds.
            2) Appleton.

C. Plates:
    1. General location:
        a. One of the following or equal:
            1) Legrand.
            2) Cooper Wiring Devices.
    2. Wet or corrosive areas:
        a. One of the following or equal:
            1) Hubbell.
            2) Cooper Wiring Devices.
            3) Thomas and Betts.
            4) Pass and Seymour.
    3. In-use covers:
        a. One of the following or equal:
            1) TayMac.
            2) Cooper Wiring Devices.
            3) Pass and Seymour.
            4) Thomas and Betts.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. Switches:
    1. General:
        a. 120-277 VAC.
        b. 20 ampere.
        c. Listed in accordance with UL 20.
        d. Designed and constructed in accordance with FS W-S-896/2.
        e. Back and side wired unless otherwise indicated.
        f. Integral grounding terminal.
        g. Totally enclosed:
            1) Color-coded body with color corresponding to ampere rating.
        h. Provide switches with the operator style and contact arrangement as indicated on the Drawings and as required for proper operation.
        i. Color:
            1) Ivory in finished areas.
            2) Brown in all other areas.
    2. General purpose switches:
        a. Toggle type.
    3. Switches for office areas:
        a. Rocker type.
        b. Rectangular.
    4. Switches for use with photocell:

a. Maintained contact.
b. 2 circuit.
c. 3 position:
1) Center off.

5. Switches for hazardous areas:
a. Suitable for use in Class I Division 1 and Class I Division 2 locations.
b. Factory sealed.
c. Through-feed or dead-end as required.

B. Receptacles:
1. General purpose receptacles:
a. Single or duplex as indicated on the Drawings.
b. 125 VAC.
c. 20 ampere or as indicated on the Drawings.
d. NEMA Type 5-20R configuration for 20 ampere receptacles.
e. Other NEMA configurations as indicated on the Drawings.
f. Listed in accordance with UL 498.
g. Designed and constructed in accordance with FS W-C-596.
h. Back and side wired.
i. 1-piece, rivet-less mounting strap.
j. Color:
1) Ivory in finished areas.
2) Brown in all other areas.
3) Orange when powered by a UPS.

2. Ground fault interrupter receptacles (GFCI):
a. 125 VAC.
b. 20 ampere.
c. Trip level 4-6 milliamperes.
d. Individual and feed through protection.
e. UL 943 and UL 498 listed.
f. NEMA Type 5-20R configuration.
g. For damp or wet locations:
1) Weather resistant, in accordance with UL 498.

3. Receptacles for hazardous areas:
a. 125 VAC.
b. 20 ampere.
c. Factory sealed.
d. Single receptacle.
e. 2-wire, 3-pole.
f. Grounded through extra pole and shell.
g. Dead-front construction.
h. Interlocked to prevent plug from being withdrawn until circuit has been broken.

C. Plates:
1. General location:
a. Type 302 or 304 stainless steel.
b. Brushed satin finish.
c. Minimum thickness: 0.032 inches.
d. Rectangular or square shape.
e. Engraving:
1) Engrave each switch plate with the following:
a) Area served.
b) Panelboard and Circuit.
2) Engrave each receptacle plate with the following:
a) Panelboard and Circuit.
3) Treat engraving to improve visibility.

4) Characters shall be block letter pantograph engraved with a minimum character height of 1/8-inch.

f. Coordinate the number of gangs, number, and type of openings with the specific location.

2. Outdoor and wet areas requiring NEMA Type 4 or NEMA Type 4X enclosures:
   a. General:
      1) UL listed for wet locations.
      2) Gasketed.
      3) Die cast metal:
         a) Match material to box material.
   b. Switches:
      1) Lever operated:
         a) Provide toggle switch.
   c. Receptacles:
      1) Weather proof in-use cover:
         a) Die cast metal construction with electrostatic powder coating for corrosion resistance.
         b) Gasketed.
         c) Lockable.
         d) UL listed and in accordance with NEC.
3. Corrosive areas:
   a. Neoprene.
   b. Gasketed.
   c. Weatherproof.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Mounting heights:
   1. Process and production areas:
      a. Switches and receptacles 48 inches from finished floor to top of plate.
   2. Offices and finished areas:
      a. Switches: 48 inches from finished floor to top of plate.

b. Receptacles: 18 inches from finished floor to center of plate.

C. Receptacles:
1. Provide GFCI receptacles as indicated on the Drawings.
a. Provide weather resistant GFCI receptacles in all wet or damp areas.
1) As specified in the Common Work Results for Electrical section.
2. Mount non-weatherproof receptacles vertically:
a. Ground slot down.
3. Mount weatherproof receptacles horizontally:
a. Neutral slot up.
4. 3-phase receptacles shall be consistent with respect to phase connection at the receptacle terminals. Correct errors in phasing at the source and not the receptacle.

D. Ensure all plates make a firm seal with wall for recessed mounted devices:
1. Outside edges of plates parallel with building lines.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

LOW VOLTAGE WIRE CONNECTIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Wire connecting devices.
2. Terminations.
3. Splices.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. ASTM International (ASTM):
1. D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape.

C. CSA International (CSA):
1. C22.2 - No.197-M1983 (R2208) - PVC Insulating Tape.

D. Underwriters Laboratories, Inc. (UL):
1. 510 - Standard for Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Provide a complete system of wiring connectors, terminators, fittings, etc. for a complete wiring system suitable for the cables and conductors used.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
1. Catalog cut sheets.
2. Installation instructions.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. All materials shall be UL listed.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers for each type of technology are specified with the equipment in this Section.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Control connections:
   1. Use insulated ring type wire terminators for connections to all screw terminals:
      a. With chamfered/funneled terminal barrel entry.
      b. Deep internal serrations.
      c. Long barrel design to reduce electrical resistance and increased insulator-barrel surface area to ensure that the insulator remains in contact with the barrel.
      d. Electroplated-tin copper conductor.
      e. Manufacturers: The following or equal:
         1) Thomas and Betts, Stakon.
   2. For process equipment connections work from manufacturer's drawings.

B. Joints, splices, taps, and connections:
   1. 600-volt conductors:
      a. Use solderless connectors.
      b. Use only plated copper alloy connectors or lugs:
         1) Aluminum connectors or lugs are not acceptable for copper conductors.
      c. Under those specific conditions where aluminum conductors have been allowed or are specified then the connectors for aluminum conductors shall be specifically designed for that purpose.

d. For wire Number 10 AWG and smaller use compression splice caps, with insulating caps:
    1) Manufacturers: The following or equal:
        a) Buchanan, 2006S or 2011S, with 2007 or 2014 insulating caps.
e. For wire Number 8 AWG and larger, use heavy duty copper compression connectors:
    1) Manufacturers: One of the following or equal:
        a) Burndy.
        b) Thomas and Betts.
f. Heat shrink tubing:
    1) Suitable for indoors, outdoors, overhead, direct burial or submerged applications.
    2) Minimum shrink ratio: 4 to 1.
    3) Continuous operating temperature: -55 degrees Celsius to 110 degrees Celsius.
    4) Internally applied adhesive sealant.
    5) Cross-linked polyolefin:
        a) Manufacturers: One of the following or equal:
            (1) 3M, ITCSN.
            (2) Thomas & Betts, Shrink-Kon.

2. Instrumentation class cable splices:
    a. Suitable for indoor, outdoors, weather exposed, direct buried, or submersed applications.
    b. Utilizing an epoxy, polyurethane, and re-enterable compounds.
    c. For use with shielded or unshielded plastic- and rubber-jacketed, signal, control, and power cables rated up to 1 kilovolt.
    d. Two-part mold body with tongue and groove seams and built in spacer webbing.
    e. Manufacturers: The following or equal:
        1) 3M, Scotchcast 72-N.

C. Insulating tape:
1. General purpose insulating tape:
    a. Minimum 7 mil vinyl tape.
    b. Suitable for application in an ambient of -18 degrees Celsius (0 degrees Fahrenheit).
    c. Operating range up to 105 degrees Celsius (220 degrees Fahrenheit).
    d. Flame retardant, hot- and cold- weather resistant, UV resistant.
    e. For use as a primary insulation for wire cable splices up to 600 VAC.
    f. Meeting and complying with:
        1) ASTM D3005 Type I.
        2) UL 510.
        3) CSA C22.2.
    g. Manufacturers: The following or equal:
        1) 3M, Scotch Number Super 33+.
2. General-purpose color-coding tape:
    a. Minimum 7 mil vinyl tape.
    b. Suitable for application on PVC and polyethylene jacketed cables.
    c. For use indoors and outdoors in weather protected enclosures.
    d. Available with the following colors:
        1) Red.
        2) Yellow.
        3) Blue.
        4) Brown.
        5) Gray.
        6) White.
        7) Green.

8) Orange.
9) Violet.

e. For use as phase identification, marking, insulating, and harnessing.

f. Meeting and complying with:
1) UL 510.
2) CSA C22.2.

g. Manufacturers: The following or equal:
1) 3M, Scotch Number 35.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Load connections:
1. Connect loads to the circuits as indicated. Color-code all branch circuits as specified in Section 16123 - 600-Volt or Less Wires and Cables.

C. Zero to 600-volt systems:
1. Make all connections with the proper tool and die as specified by the device manufacturer.
2. Use only tooling and dies manufactured by the device manufacturer.
3. Insulate all connections and splices with Scotch 33+ tape and Scotchfill, or pre-molded plastic covers, or heat shrink tubing and caps.
4. Number all power and control wires before termination.

D. Motor connections (600 volts and below):
1. Terminate all leads and wires with compression type ring lugs.
2. Terminations on all motor leads, including leads that are connected together to accommodate the motor voltage, and the machine wires entering the motor terminal box from the power source, shall have ring type compression lugs.
3. Cover bolted connectors with a heat shrinkable, cross-linked polyolefin material formed as a single opening boot:
a. In damp and wet locations, use a complete kit containing mastic that shall seal out moisture and contamination.
b. Shrink cap with low heat as recommended by manufacturer.
4. Wire markers shall be readable after boot installation.

5. Manufacturers: The following or equal:
   a. Raychem, MCK.

SECTION 262100

UTILITY COORDINATION

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Coordination with the utility companies to provide service.
   2. Contractor's responsibilities for connecting to utilities and providing utility service to the facilities.
   3. Descriptions of utility services required.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Electrical service:
   1. Provide all Work and materials and bear all costs for providing temporary construction power and the permanent electrical service, including but not limited to:
      a. All Work and materials not provided by the electric utility.
      b. All permits and fees required by the electric utility.
   2. Provide electrical ducts, raceways, conductors and connections indicated on the Drawings, and all other Work and materials required for a complete electrical service, including but not limited to the following:
      a. Electrical service conduits and conductors from the point of electric utility connection to the service entrance equipment.
      b. Metering conduits from the instrument transformers to the meter.

B. Telephone service:
   1. Provide all Work and materials and bear all costs for the telephone service during construction:
      a. All permits and fees required by the telephone utility.
   2. Provide the telephone entrance conduit(s) from the terminal pole/pedestal to the telephone board, and all other Work and materials required for a complete telephone service.

C. General:
   1. Coordinate and obtain inspections and final installation approval from the serving utilities and other authorities having jurisdiction.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Certification:

1. Submit certification that the intended installation has been coordinated with the utility companies.
2. Include a narrative description of the utility's requirements and points of connection, names and telephone numbers for contacts at the utilities.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Materials and equipment used in performance of Electrical Work shall be listed or labeled by UL, or other equivalent recognized independent testing laboratory, for the class of service intended.

1.7 DELIVERY, STORAGE, AND HANDLING (NOT USED)

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING

A. General:
1. Before start of Site Work, make arrangements for temporary telephone and electrical service as required.

B. Electrical systems:
1. Before bidding, the electrical contractor shall contact the utilities to determine the Work and materials that will be required from the Contractor, and all fees and permits that will be required, so that all utility systems furnished by the Contractor will be included in the bid.
2. Coordinate Work with Engineer to minimize downtime of existing operating equipment and electrical distribution systems and to preclude unsafe operation:
   a. Notify Owner 10 days before power interruptions.
   b. Coordinate downtime with Owner and local electric utility.
3. Before commencing Work, coordinate electric service entrance requirements with local electric utility to ensure that the installation will be complete as specified in these Contract Documents:
   a. Ensure power transformer size, electrical characteristics, and location are consistent with the design and service voltage provided by the electric utility coordinated with other trades.
   b. Arrange for utility revenue meter.
   c. Coordinate installation of metering CTs and PTs furnished by the electric utility.
   d. Pay any charges required by the electric utility for connection and turn-on.

C. Telephone systems:
1. Before commencing Work, coordinate complete telephone service:
   a. Verify compliance with telephone utility requirements.
   b. Verify exact location of each service point and type of service.
   c. Pay any charges required by the telephone utility for connection and turn-on.
2. Coordinate complete telephone line connections at locations indicated on the Drawings with the local telephone utility.

D. Before commencing Site Work, coordinate underground conduit installations with other Work to eliminate conflicts and avoid interferences with other underground systems.

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS (NOT USED)

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Furnish materials in accordance with the applicable requirements of the utilities and as specified in these Specifications.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Furnish equipment in accordance with the applicable requirements of the utilities and as specified in these Specifications.

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 262620

VARIABLE FREQUENCY DRIVES 0.50 - 50 HORSEPOWER

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Variable frequency drives (VFD) 0.5 to 50 horsepower for control of NEMA Design B squirrel cage induction motors.
   2. **NOTE: SIZE ALL VFD'S AT 125% OF APPROVED MOTOR NAMEPLATE FLA**

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. International Organization for Standardization (ISO):
   1. 9001 - Quality Management Systems - Requirements.

C. National Electrical Manufacturers Association (NEMA):
   1. MGI, Part 31 – Motors with higher peak voltage capability.

D. Underwriters' Laboratories (UL):
   1. 508A - Standard for Safety for Industrial Control Panels.
   2. 508C - Standard for Power Conversion Equipment.
   3. 845 - Standard for Motor Control Centers.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. Point of common coupling: the point of common coupling for all harmonic calculation and field measurements for both voltage and current distortions is defined as the closest directly connected bus supplying power to the VFD.

1.4 SYSTEM DESCRIPTION

A. Design requirements:
   1. Each VFD system consists of all components required to meet the performance, protection, safety, testing, and certification criteria of this Section.
   2. The VFD system:
      a. Is a fully integrated package.
      b. Includes all material necessary to interconnect all VFD system elements, even if shipped separately.
   3. Coordinate bearing protection methods with the supplier of the driven equipment.

B. Any modifications to a standard product necessary to meet this Section shall be made only by the VFD manufacturer:
   1. Each VFD shall be completely factory pre-wired, assembled, and then tested as a complete system by the VFD manufacturer to ensure a properly coordinated, fully integrated drive system.

2. The VFD shall be capable of operating standard NEMA Design B motors. It is the responsibility of the VFD manufacturer to ensure that the drive will not damage motor insulation due to high carrier frequency, reflected wave, dv/dt or other drive electrical characteristics based upon the installed conditions:
    a. Provide equipment necessary to mitigate potential damage to motor insulation.
    b. Motors as specified in the Low Voltage Motors up to 500 Horsepower section.

C. Performance:
1. Operating envelope:
    a. Speed and torque requirements:
        1) Provide a variable torque or constant torque VFD as required by the driven load.
        2) The VFD shall be capable of producing a variable alternating voltage/frequency output to provide continuous operation over the 40 to 200 percent (25 to 120 hertz) speed range.
    b. Current requirements:
        1) Full rated current output on a continuous basis.
        2) Variable torque VFD:
            a) Minimum 110 percent current overload for 1 minute.
        3) Constant torque VFD:
            a) Minimum 150 percent current overload for 1 minute.
2. Minimum VFD system efficiency:
    a. 96 percent when operating at the rated kW output.
    b. VFD system efficiency shall be calculated as follows:

D.

$$\text{Efficiency (\%)} = \frac{\text{Power (Load)}}{\text{Power (Supply)}} \text{ x } 100$$

E. Power (Load) is the total power measured at the output terminals of the drive system, including VFD, output filters, or transformers. Power (Supply) is the total power measured at the input terminals of the VFD including input filters, line reactors, isolation transformers, harmonic distortion attenuation equipment and auxiliary equipment (e.g., controls, fans) for complete system operation.

1. Total power factor:
    a. Minimum of 0.96 lagging across the entire speed range.
    b. At no speed shall the VFD have a leading power factor.
2. Frequency accuracy:
    a. Minimum of within 0.01 percent.
3. Speed regulation:
    a. Minimum of within 0.5 percent across the entire speed range.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section:
1. Custom prepared by the VFD manufacturer and specific for the equipment furnished.

B. Product data:
1. Manufacturer of the VFD.
2. Manufacturer of all components of the VFD.
3. Dimensions:
    a. Height.
    b. Width.
    c. Depth.
    d. Weight.
4. Nameplate schedule.
5. Bill of material.

6. Ratings:
    a. Voltage.
    b. Phase.
    c. Input current.
    d. Output current.
    e. Interrupting rating.
    f. Momentary current rating.
7. List of recommended spare parts.
8. Catalog cut sheets for major components.
9. Design data:
    a. Efficiency and power factor values.
    b. Certification that the drive is sized for the full nameplate motor horsepower and current of the driven load at the installed altitude and ambient temperature.
    c. Certification that based upon VFD design, cable length to motor, and motor dielectric insulation level that the VFD will not damage motor insulation due to carrier frequency, reflected wave, dv/dt, or other VFD produced characteristics.
    d. Certification that all electronic circuits and printed circuit boards are conformally coated.
10. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:
    a. Manufacturer’s statement of seismic qualification with substantiating test data.
    b. Manufacturer’s special seismic certification with substantiating test data.

C. Shop drawings:
1. Complete plan and elevation drawings showing:
    a. All dimensions.
    b. Panel, sub-panel, and component layout indexed to the bill of material.
    c. Conduit connections.
2. Block diagram showing the basic control and protection systems specifying the protection, control, trip and alarm functions, the reference signals and commands and the auxiliary devices.
3. Complete schematic, wiring and interconnection diagrams showing connections to both internal and external devices:
    a. Include terminal number and wire numbers.
4. Complete single-line and 3-line diagrams including, but not limited to, circuit breakers, motor circuit protectors, contactors, instrument transformers, meters, relays, timers, control devices, and other equipment comprising the complete system:
    a. Clearly indicate device electrical ratings on the drawings.

D. Installation instructions:
1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. For equipment installed in structures designated as seismic design category A or B:
    a. Provide manufacturer’s installation instructions and anchoring details for connecting equipment to supports and structures.
3. For equipment installed in structures designated as seismic design category C, D, E, or F:
    a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
    b. Submit anchoring drawings with supporting calculations.
    c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

E. Operation and maintenance manuals:

1. Spare parts list with supplier names and part numbers.
2. Startup and commissioning instructions and data.
3. Operating manuals:
    a. Submit operating instructions and a maintenance manual presenting full details for care and maintenance of each model of VFD provided under this Contract.
4. Operating instructions:
    a. Written descriptions detailing the operational functions of all controls on the front panel.
5. Maintenance manual:
    a. Furnish maintenance manuals with instructions covering all details pertaining to care and maintenance of all equipment as well as identifying all parts.
    b. Manuals shall include, but are not limited to the following:
        1) Adjustment and test instructions covering the steps involved in the initial test, adjustment, and start-up procedures.
        2) Detailed control instructions which outline the purpose and operation of every control device used in normal operation.
        3) All schematic wiring and external diagrams:
            a) Furnish drawings in a reduced 11-inch by 17-inch format that are fully legible at that size.

F. Test forms and reports:
1. Submit complete factory acceptance test procedures and all forms used during the test.

G. Manufacturer’s Certificate of Installation and Functionality Compliance.

H. Manufacturer’s field reports:
1. Report listing the setting of all VFD adjustable parameters and their values after start-up.

I. Record Documents:
1. Certified Record Documents of equipment with information listed above.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Qualifications:
1. Any third-party certification, safety or protection requirements shall be applied to the VFD system as a whole. Certification or protection of system elements or individual components by themselves is not acceptable.
2. VFDs shall be UL 508C listed and labeled:
    a. UL 508C for individual units.
    b. UL 508A for VFD systems in control panels.
    c. UL 845 for VFD systems in motor control centers.
3. Variable frequency drives shall be manufactured by the VFD manufacturer at its own facility which shall have a quality assurance program that is certified in conformance with ISO 9001.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

B. Ship the VFDs and associated equipment to the job site on a dedicated air ride vehicle that will allow the Contractor to utilize on site off loading equipment:
1. VFDs shall be delivered to the site preassembled and wired.

C. Furnish temporary equipment heaters within the VFD to prevent condensation from forming.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. Conduct factory acceptance test and submit certified test results for Engineer's review.

B. Ship equipment to project site after successful completion of factory acceptance test.

C. Assemble equipment in the field.

D. Conduct field acceptance test and submit results for Engineer's review.

E. Submit Manufacturers Certificate of Installation and Functionality Compliance.

F. Conduct Owner's training sessions.

G. Commissioning and process start-up as specified in the Commissioning section.

1.10 SCHEDULING

A. As specified in the Common Work Results for Electrical section.

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

B. The VFD manufacturer shall be responsible for start-up of the VFDs in the presence of the equipment suppliers, Contractor, Engineer, and Owner.

1.13 OWNERS INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE

A. Spare parts:
   1. The following spare parts shall be furnished:
      a. 1 set of all power and control fuses for each VFD.
      b. One complete main control key pad for each type and rated size of VFD.
      c. 1 spare fan for each VFD unit.
      d. 2 sets of ventilation filters for each VFD unit (if applicable in VFD cabinet louvers).
      e. 1 set of thyristors or power electronics for each type and rated size of VFD.
      f. Any special dedicated tools for emergency service and troubleshooting.
      g. All hardware and software required for configuration, maintenance, troubleshooting, and inquiry of all drive parameters.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
1. Eaton.
2. Allen-Bradley.
3. Siemens-Robicon.
4. Schneider Electric.
5. General Electric.
6. ABB.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. General:
1. Sinusoidal pulse width modulated (PWM) type drive.
a. 6-pulse insulated gate bipolar transistor (IGBT) power section.
b. Microprocessor based controls.
c. Line and load reactors.

B. Ratings:
1. Voltage:
a. Input voltage as indicated on the Drawings.

C. Operational features:
1. Protective features:
a. Provide the following minimum protective features:
1) Motor overload protection.
2) Instantaneous overcurrent.
3) Instantaneous overvoltage.
4) Undervoltage.
5) Power unit overtemperature.
6) Phase loss.
7) VFD output short circuit.
2. Control mode:
a. Operation in either a constant volts/hertz or sensorless vector mode:
1) The control mode selectable using the programming keypad.
3. Frequency control:
a. Minimum of 3 selectable skip frequencies with adjustable bandwidths.
b. Programmable minimum frequency.
c. Programmable maximum frequency.
4. Acceleration/deceleration:
a. Separately adjustable acceleration and deceleration rates:
1) Each rate adjustable from 0.01 to 1,800 seconds.
5. Spinning load:
a. The VFD shall be capable of determining the speed and direction of a spinning load, “catch” the load and accelerate or decelerate it without damage to the load.
6. Programmable loss of signal:
a. Upon loss of speed reference the VFD shall be programmable to either:
1) Stop.

2) Maintain current speed.
3) Default to pre-selected speed.

7. Power interrupt ride-through:
   a. The VFD shall be capable of continuous operation in the event of a power loss of 5 cycles or less.
8. Inputs/Outputs:
   a. Manufacturer's standard number the following:
      1) Analog inputs:
         a) Configurable as either 0 to 10 volts or 4 to 20 milliamperes.
      2) Analog outputs:
         a) Programmable 4 to 20 milliamperes isolated.
      3) Discrete inputs:
         a) Programmable.
      4) Discrete outputs:
         a) Programmable.
         b) Form C relay contacts.
      5) Potentiometer 3-wire input.
   b. Provide additional inputs/outputs as required to meet the control functions indicated on the Drawings.
9. Communications:
   a. Provide each VFD with a EtherNet i/P Modbus TCP communications interface module.
10. Diagnostics:
    a. Store a minimum of 4 fault conditions in non-volatile memory on a first in-first out basis.
    b. Operational parameters stored at the time of the fault:
       1) Operating frequency.
       2) Drive status.
       3) Power mode.
    c. Fault memory accessible via RS-232, RS-422, or RS-485.
11. Automatic restart:
    a. User selectable automatic restart feature allowing the VFD to restart following a momentary power failure or other VFD fault:
       1) Programmable for up to 9 restart attempts.
       2) Adjustable time delay between restart attempts.

2.6 COMPONENTS

A. Enclosure:
   1. NEMA Type 12 or motor control center as indicated on the Drawings.
   2. Provide cooling devices required to maintain the VFD within the manufacturer's specified temperature limits for the Project conditions:
      a. Provide cooling device failure alarm.

B. Power disconnect:
   1. Flange-mounted thermal magnetic circuit breaker.
   2. Lockable in the OFF position.

C. Input Reactor:
   1. 5 percent input line reactor.

D. Keypad:
   1. Provide each VFD with a keypad for programming and control.
   2. Keypad requirements:
      a. Password security to protect drive parameters.
      b. Mounted on the door of the motor control center.

c. Back-lit LCD:
    1) Minimum of 2 lines with a minimum of 16 characters per line.
d. Programming and display features language: English.
e. Capable of displaying the following parameters:
    1) Speed (percent).
    2) Output current (amperes).
    3) Output frequency (hertz).
    4) Input voltage.
    5) Output voltage.
    6) Total 3-phase kilowatt.
    7) Kilowatt-hour meter.
    8) Elapsed run time meter.
    9) Revolutions per minute.
    10) Direct current bus voltage.

3. In addition to all keys required for programming, provide the following controls on the keypad:
    a. Auto/manual selector.
    b. Start pushbutton.
    c. Stop pushbutton.
    d. Jog pushbutton.
    e. Speed increment.
    f. Speed decrement.
    g. Forward/reverse selector.
    h. Run LED indicator.
    i. Program LED indicator.
    j. Fault LED indicator.
4. Provide the VFD with the hardwired controls as indicated on the Drawings.

E. Control power transformer:
1. Furnish a control power transformer mounted and wired inside the VFD enclosure.
2. With primary and secondary fusing.
3. Sized to power all VFD controls and options as well as any external devices indicated on the Drawings including the motor winding heater.

2.7 ACCESSORIES

A. Metal oxide varistors:
1. Provide protection for the VFD against:
    a. Line transients: 5,000 volt peak minimum.
    b. Line to ground transients: 7,000 peak minimum.

B. Conformal coating:
1. Provide conformal coating material applied to electronic circuitry and printed circuit boards to act as a protection against moisture, dust, temperature extremes, and chemicals such as H_2S and chlorine.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES

A. Enclosure finish shall be manufacturer’s standard gray.

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
1. Furnish all cables, conduit, lugs, bolts, expansion anchors, sealants, and other accessories needed to complete the installation of the VFD (free-standing or within motor control center).
2. Assemble and install the VFD in the locations and with the layouts indicated on the Drawings.
3. Perform work in accordance with manufacturer's instructions and shop drawings.
4. Furnish components and equipment as required to complete the installation.
5. Replace any hardware lost or damaged during the installation or handling to provide a complete installation.
6. Install free-standing enclosures on a raised concrete housekeeping pad:
   a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units.
   b. Weld and/or bolt the VFD frame to the leveling channels.
7. Provide openings in top or bottom of the VFD (free-standing or within motor control center) enclosure for conduit only, no additional openings will be allowed:
   a. Improperly cut holes will require that the entire panel be replaced:
      1) No hole closers or patches will be allowed.
8. Bundle circuits together and terminate in each unit:
   a. Tie with nylon wire ties.
   b. Label all wires at each end with wire numbers shown on the approved control drawings.
   c. All connections to and from the VFD (free-standing or within motor control center) enclosure must be made via terminal blocks.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

B. Source testing (Factory Acceptance Tests):
1. Owner and Engineer will witness the Factory Acceptance Test as specified in the Common Work Results for Electrical section.
2. General:

a. Incoming inspection of components and raw materials based on strategic supplier base and experience.
b. All VFDs furnished under this Section shall be tested and inspected as specified below. Testing of VFDs based on sampling plans is not allowed.
c. The testing procedures specified are the minimum acceptable requirements. The manufacturer may perform additional tests at its discretion.

3. Failure of any component during testing requires repair of the faulted component and complete retest.
4. Tests:
   a. Perform manufacturer's standard factory acceptance tests.

C. Provide Manufacturer’s Certificate of Installation and Functionality Compliance as specified in the Commissioning section.

D. Owner training:
   1. As specified in the Common Work Results for Electrical section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Provide the services of a VFD manufacturer representative for startup assistance and training:
   1. Inspection and field adjustment:
      a. Supervise the following and submit written certification that the equipment and controls have been properly installed, aligned, adjusted, and readied for operation.
   2. Startup field testing:
      a. Provide technical direction for testing, checkout, and startup of the VFD equipment in the field.
      b. Under no circumstances are any portions of the drive system to be energized without authorization from the manufacturer's representative.

3.9 ADJUSTING

A. Make all adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

B. Provide the services of a VFD manufacturer factory technician to make all drive parameters and protective device settings:
   1. Protective device settings provided by the VFD manufacturer in accordance with the manufacturer of the driven equipment requirements.
   2. Provide documentation of VFD settings included but not limited to:
      a. Minimum speed.
      b. Maximum speed.
      c. Skip speeds.
      d. Current limit.
      e. Acceleration time.
      f. Deceleration time.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 262650

REDUCED HARMONIC VARIABLE FREQUENCY DRIVES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Reduced harmonic 18 pulse or active front end, variable frequency drives (VFD), 60 to 500 horsepower for control of standard NEMA Design B squirrel cage induction motors.
2. **NOTE: SIZE ALL VFD'S AT 125% OF APPROVED MOTOR NAMEPLATE FLA**

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. National Electrical Manufacturers Association (NEMA).

C. Underwriters' Laboratories (UL):
1. 50 – Standards for Enclosures for Electrical Equipment.
2. 508A – Standard for Safety for Industrial Control Panels.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific Definitions
1. VFD: Variable Frequency Drive.
2. AFE: Active Front End.
3. IGBT: Insulated Gate Bipolar Transistor.

1.4 SYSTEM DESCRIPTION

A. Design requirements:
1. Each VFD system shall consist of all components required to meet the performance, protection, safety, testing and certification criteria of this Section.
2. The VFD system:
   a. Is a fully integrated package.
   b. Includes all material necessary to interconnect VFD system elements, even if shipped separately.
3. Any modifications to a standard product necessary to meet this Section shall be made only by the VFD manufacturer.
4. Each VFD shall be completely factory pre-wired, assembled and then tested as a complete package by the VFD manufacturer to ensure a properly coordinated, fully integrated drive system.
5. The VFD shall be capable of operating standard NEMA Design B motors. It is the responsibility of the VFD manufacturer to ensure that the drive will not damage motor insulation due to high carrier frequency, reflected wave, dv/dt or other drive electrical characteristics:
   a. The VFD manufacturer shall furnish equipment necessary to mitigate potential damage to motor insulation.
   b. Coordinate bearing protection methods with the supplier of the driven equipment.
   c. Motors as specified in the Low Voltage Motors section up to 500 Horsepower.

B. Performance:
1. Operating envelope:
a. Speed and torque requirements:
1) Provide a variable torque or constant torque VFD as required by the driven load.
2) The VFD shall be capable of producing a variable alternating voltage/frequency output to provide continuous operation over the 40 to 110 percent (25 to 66 hertz) speed range.
b. Current requirements:
1) Provide 100 percent of rated output current on a continuous basis.
2) Variable torque VFD :
a) Minimum 110 percent current overload for 1 minute.
3) Constant torque VFD :
a) Minimum 150 percent current overload for 1 minute.
2. Harmonics:
a. The VFD shall meet the following distortion limits at 2 percent line voltage unbalance measured at the input terminals of the VFD:
1) Voltage harmonics: The maxmimum allowable total harmonic distortion, THD, for each VFD shall not exceed 5 percent.
2) Current harmonics: The maximum allowable total harmonic current distortion limit, TDD, for each VFD shall not exceed 5 percent as measured at the input terminals of the VFD system.
3. Efficiency:
a. VFD system minimum efficiency shall be 93 percent at rated kilowatt output of the VFD. VFD system efficiency shall be calculated as follows:

$$Efficiency\ (\%) = \frac{Power\ (Load)}{Power\ (Supply)}\ x\ 100$$

b. Power:
1) Load power is the total 3-phase power measured at the output terminals of the drive system, including the output filter.
2) Supply power is the total power measured at the input terminals of the VFD including phase shifting transformer or active front end components and auxiliary equipment (e.g., controls, fans) for complete system operation.
4. Total power factor:
a. Minimum of 0.96 lagging across the entire speed range.
b. Under no operating conditions shall the VFD have a leading power factor.
5. Frequency accuracy:
a. Minimum of within 0.01 percent.
6. Speed regulation:
a. Minimum of within 0.5 percent across the entire speed range.
7. Capable of working with all available power sources (utility and on-site generation) and with all new and existing VFDs.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section:
1. Custom prepared by the VFD manufacturer and specific for the equipment furnished.

B. Product data:
1. Manufacturer of the VFD.
2. Manufacturer of all components of the VFD.
3. Dimensions:
a. Height.

b. Width.
c. Depth.

4. Weight.
5. Nameplate schedule.
6. Bill of material.
7. Ratings:
   a. Voltage.
   b. Phase.
   c. Input current.
   d. Output current.
   e. Interrupting rating.
   f. Momentary current rating.
8. Catalog cut sheets for major components.
9. Surge protection data.
10. Design data:
    a. Efficiency and power factor values.
    b. Certification that the drive is sized for the full nameplate motor horsepower and current (at rated RPM) of the driven load at the installed altitude.
    c. Certification that based upon VFD design, cable length to motor, and motor dielectric insulation level that the VFD will not damage motor insulation due to carrier frequency, reflected wave, dv/dt, or other VFD produced characteristics.
    d. Certification that all electronic circuits and printed circuit boards are conformably coated.
    e. Certification that the VFD will operate with all power sources (including alternate utilities and on-site generation when applicable).
11. List of recommended spare parts.
12. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:
    a. Manufacturer’s statement of seismic qualification with substantiating test data.
    b. Manufacturer’s special seismic certification with substantiating test data.

C. Shop drawings:
1. Complete plan and elevation drawings showing:
   a. All dimensions.
   b. Panel, sub-panel and component layout indexed to the bill of material.
   c. Conduit connections.
   d. Required clearance around equipment.
2. Block diagram showing the basic control and protection systems identifying the protection, control, trip and alarm functions, the reference signals and commands and the auxiliary devices.
3. Complete schematic, wiring and interconnection diagrams showing connections to both internal and external devices:
   a. Wiring diagrams shall include terminal number and wire numbers.
4. Complete 1-line and 3-line diagrams including, but not limited to, circuit breakers, motor circuit protectors, contactors, instrument transformers, meters, relays, timers, control devices, and other equipment comprising the complete system:
   a. Device electrical ratings shall be clearly indicated on the Drawings.

D. Certifications:
1. Certification letter from the VFD manufacturer stating that the VFD(s) are capable of operating with all new and existing sources (utility sources and on-site generation).
2. Certification letter from the VFD manufacturer stating that the VFD(s) are capable of operating with all new and existing VFDs on site.

E. Installation instructions:

1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. For equipment installed in structures designated as seismic design category A or B:
    a. Provide manufacturer's installation instructions and anchoring details for connecting equipment to supports and structures.
3. For equipment installed in structures designated as seismic design category C, D, E, or F:
    a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
    b. Submit anchoring drawings with supporting calculations.
    c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

F. Test forms and reports:
1. Submit complete factory acceptance test procedures and all forms used during the test.
    a. For VFD units less than 250 horsepower, provide certified test results for the actual VFD being furnished or prototype units. For VFD units 250 horsepower and larger, provide certified test results for the actual VFD being furnished.
    b. Provide the following certified test reports:
        1) Efficiency at rated power output and output frequency of 60 hertz.
        2) Power factor at 0 percent, 25 percent, 50 percent, 75 percent, and 100 percent speed.
        3) Harmonics at the input terminals of the VFD at 100 percent speed and 100 percent load.
            a) Voltage distortion: Measure individual harmonics up to and including the 50^{th} harmonic and total harmonic distortion.
            b) Current distortion: Measure individual harmonics up to and including the 50^{th} harmonic and total demand distortion.
    c. Submit complete field acceptance test procedures and all forms used during the test:
        1) Certification that the actual measured harmonic distortion for both voltage and current is within the specification limits at the installed site.
        2) Certification that the actual measured peak voltage at the motor terminations is less than 90 percent of the motor insulation dielectric withstand level.

G. Record documents:
1. Certified record documents of all equipment with information listed above.

H. Manufacturer's field reports:
1. Certification letter from the VFD manufacturer that the VFD(s) has been inspected and installed in accordance with the manufacturer's requirements.
2. Report listing the setting of all VFD adjustable parameters and their values after start-up.
3. Certification letter from the VFD manufacturer stating that the VFD(s) are programmed to avoid system resonances when connected to high impedances sources like standby generator.

I. Operation and maintenance manuals:
1. Spare parts list with supplier names and part numbers.
2. Start-up and commissioning instructions and data.
3. Complete bill of material indexed to the drawings, identifying the catalog or part numbers, manufacturer, and quantities of components of the VFD system.
4. Operating manuals:

a. Submit operating instructions and a maintenance manual presenting full details for care and maintenance of each model of VFD provided under this Contract.

5. Operating instructions:
   a. The written descriptions shall detail the operational functions of all controls on the front panel including keypad functions and parameters.
6. Maintenance manual:
   a. Furnish maintenance manuals with instructions covering all details pertaining to care and maintenance of all equipment as well as identifying all parts.
   b. Manuals shall include but are not limited to the following:
      1) Adjustment and test instructions covering the steps involved in the initial test, adjustment and start-up procedures.
      2) Detailed control instructions that outline the purpose and operation of every control device used in normal operation.
      3) All schematic wiring and external diagrams:
         a) Furnish drawings in a fully legible reduced 11-inch by 17-inch format.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Qualifications:
1. Any third party certification, safety or protection requirements shall be applied to the VFD system as a whole. Certification or protection of system elements or individual components by themselves is not acceptable.
2. VFDs shall be UL 508C listed and labeled.
3. VFD systems (packaged VFD panels) shall be UL 508A listed and labeled.
4. VFDs shall be manufactured by the VFD manufacturer at its own facility, which shall have a quality assurance program that is certified in accordance with ISO 9001.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

B. Ship VFDs to the job site on a dedicated air ride vehicle that will allow the Contractor to utilize on site off-loading equipment:
1. VFDs shall be delivered to the site pre-assembled and wired.
2. Ship each VFD with 2 tamperproof accelerometers that record the maximum shock and vibration experienced by the VFD during shipping and handling.

C. Furnish temporary equipment heaters within the VFD to prevent condensation from forming.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. Conduct factory acceptance test and submit certified test results for Engineer’s review.

B. Ship equipment to Project Site after successful completion of factory acceptance test.

C. Assemble equipment in the field.

D. Conduct field acceptance tests including harmonic testing and submit results for Engineer’s review.

1. All utility power sources and on-site generation shall be installed and operable for field test.

E. Submit manufacturer's certification that equipment has been properly installed and is fully functional for Engineer's review.

F. Conduct Owner's training sessions.

G. Commissioning and process start-up as specified in the Commissioning section.

1.10 SCHEDULING

A. As specified in the Common Work Results for Electrical section.

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

B. The VFD manufacturer shall be responsible for start-up of the VFDs in the presence of the equipment suppliers, Contractor, Engineer, and Owner.

1.13 OWNERS INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE

A. As specified in the Common Work Results for Electrical section.

B. Maintenance service: Manufacturer shall describe the field service system available to support the proposed VFD system. As a minimum describe:
   1. Type of technical support available (e.g., system engineering and technician).
   2. Location of field service personnel.
   3. Field service daily rates in dollars per hour and dollars per day.
   4. Guaranteed response times to service requests.

C. Spare parts:
   1. The following spare parts shall be furnished:
      a. Any special dedicated tools for emergency service and troubleshooting.
      b. All hardware and software required for configuration, maintenance, troubleshooting and inquiry of all drive parameters.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton.
   2. Allen-Bradley.
   3. Schneider-Electric.
   4. ABB.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. General:
1. Sinusoidal pulse width modulated, (PWM), voltage source type drive shall consist of the following:
   a. Rectifier section.
   b. Direct current link with capacitors.
   c. Insulated gate bipolar transistor (IGBT), inverter section.
   d. Microprocessor based controls.
   e. Output filter.
2. Rectifier section:
   a. Provide VFDs with either an 18-pulse rectifier section or an active front end:
   b. 18-pulse rectifier:
      1) Integral phase shifting auto-transformer:
         a) Converts 3-phase utility power to 3 sets of 3 power circuits with each set phase shifted and powering its own 3-phase bridge rectifier.
      2) Minimum 18-pulse diode rectifier section consisting of 3 three-phase bridge rectifiers.
         a) Specifically designed as a system to share currents between the bridges to within 1 percent.
   c. Active front end rectifier:
      1) IGBT based converter module.
         a) Six IGBTs minimum.
      2) Inductor/capacitor/inductor, LCL, harmonic filter.
         a) Low pass filter.
         b) The filter shall be disconnected from the line when the VFD is off.

B. Ratings:
1. Voltage:
   a. Input voltage: 480 Volts plus or minus 10 percent, 3-phase, 3-wire, 60 hertz.
   b. Solidly grounded.
2. Short-circuit rating:
   a. 65 kA RMS symmetrical.

C. Operational features:
1. Protective features:
   a. Annunciated at the keypad and available via network connection.
   b. Include the following protective features:
      1) Motor overload protection.
      2) Instantaneous overcurrent.
      3) Instantaneous overvoltage.
      4) Undervoltage.
      5) Power unit overtemperature.
      6) Phase loss.
      7) VFD output short circuit.
      8) VFD output ground fault.
      9) Blown fuse with blown fuse indication.
      10) IGBT protection.
      11) Cooling fan failure.
      12) Component failure.
2. Control mode:

a. The VFD shall operate in a either a constant volts/hertz or sensorless vector mode. Selectable using the programming keypad.

3. Frequency control:
   a. Minimum of 3 selectable skip frequencies with adjustable bandwidths.
   b. Programmable minimum frequency.
   c. Programmable maximum frequency.
4. Acceleration/Deceleration:
   a. Separately adjustable acceleration and deceleration rates.
   b. Each rate shall be adjustable from 0.01 to 1,800 seconds.
5. Spinning load:
   a. Capable of determining the speed and direction of a spinning load, “catch” the load and accelerate or decelerate it without damage to the load.
6. Programmable loss of signal:
   a. Upon loss of reference speed signal the VFD shall be programmable to either stop, maintain current speed, or default to preselected speed.
7. Power interrupt ride through:
   a. Capable of continuous operation in the event of a power loss of 5 cycles or less.
8. Hardwired inputs and outputs:
   a. Manufacturer’s standard number the following:
      1) Analog inputs:
         a) Configurable as either 0 to 10 volts or 4 to 20 milliamperes.
      2) Analog outputs:
         a) Programmable 4 to 20 milliamperes isolated.
      3) Discrete inputs:
         a) Programmable.
      4) Discrete outputs:
         a) Programmable.
         b) Form C relay contacts.
      5) Potentiometer 3-wire input.
   b. Provide additional inputs and outputs as required to meet the control functions indicated on the Drawings.
9. Communications:
   a. Provide each VFD with a EtherNet i/P communications interface module.
   b. The use of gateways is not acceptable.
   c. Control and monitoring of the bypass starter shall be available over the communications network.
   d. All protocols shall be certified by the governing authority.
10. Real-time clock:
   a. Capable of providing time-stamped events.
   b. Set locally or via a remote controller.
   c. Programable for day, month, year, local time zones in hours, minutes and seconds.
11. Diagnostics:
   a. Minimum of 4 fault conditions in memory on a first in - first out basis.
   b. Time stamped.
   c. Operating frequency, drive status and power mode shall also be stored at the time of the fault.
   d. Fault memory shall be maintained in the event of a power outage.
   e. The fault memory shall be accessible via RS-232, RS-422 or RS-485.
12. Automatic restart:
   a. User selectable, automatic restart feature allowing the VFD to restart following a momentary power failure or other VFD fault:
      1) Programmable for up to 9 automatic restart attempts with an adjustable time delay between restart attempts.

2.6 COMPONENTS

A. Enclosure:
   1. NEMA Type 12.
   2. Provide cooling devices required to maintain the VFD within the manufacturer's specified temperature limits for the Project conditions:
      a. Provide cooling device alarm.

B. Power disconnect:
   1. Flange mounted thermal magnetic circuit breaker:
      a. Lockable in the OFF position.

C. Phase shifting transformer:
   1. Auto-transformer.
   2. Integral part of the VFD assembly and factory mounted and wired within the VFD enclosure.
   3. Embedded thermal protection.
   4. Rated for rectifier duty.
   5. Copper or aluminum windings with 180-degree Celsius insulation.

D. Keypad:
   1. Furnished with a keypad for programming and control.
   2. Password security to protect drive parameters.
   3. Mounted on the door of the VFD.
   4. Back-lit LCD with a minimum of 2 lines of a minimum of 16 characters each.
   5. Programming and display features language: English.
   6. Capable of displaying the following parameters:
      a. Speed (percent).
      b. Input current (amperes).
      c. Output current (amperes).
      d. Output frequency (hertz).
      e. Input voltage.
      f. Output voltage.
      g. Total 3-phase kilowatt.
      h. Kilowatt hour meter.
      i. Elapsed run time meter.
      j. Revolutions per minute.
      k. Direct current bus voltage.
   7. In addition to all keys required for programming, the keypad shall have the following:
      a. Automatic/Manual selector.
      b. Start pushbutton.
      c. Stop pushbutton.
      d. Jog pushbutton.
      e. Speed increment.
      f. Speed decrement.
      g. Forward/Reverse selector.
      h. RUN indicator.
      i. PROGRAM indicator.
      j. FAULT indicator.
      k. DRIVE READY indicator.
      l. Diagnostics.
   8. Provide the VFD with the hardwired controls indicated on the Drawings.

E. Control power transformer:
   1. Furnish a control power transformer mounted and wired inside the drive enclosure:
      a. Primary and secondary fusing.

2. Size the transformer to supply power to all VFD controls and options as well as any external devices indicated on the Drawings including the motor winding heater.

2.7 ACCESSORIES

A. Surge protection:
1. Metal oxide varistors:
a. Provide protection for the VFD against:
1) Line transients: 5,000 volt peak minimum.
2) Line to ground transients: 7,000 peak minimum.

B. Conformal coating:
1. Provide conformal coating material applied to electronic circuitry and printed circuit boards to act as protection against moisture, dust, temperature extremes, and chemicals such as H_2S and chlorine.

C. Air filters:
1. Mounted on the outside of the VFD enclosure:
a. Replaceable without requiring that the VFD be turned off or the door opened.
2. Located on the front or top of the VFD enclosure.
a. Side or rear mounted air filters are not acceptable.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES

A. Enclosure finish shall be manufacturer's standard gray.

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
1. Furnish all cables, conduit, lugs, bolts, expansion anchors, sealants, and other accessories needed to complete installation of the VFD (free-standing or within motor control center).
2. Assemble and install the VFD in the locations and with the layouts indicated on the Drawings.
3. Perform Work in accordance with the manufacturer's instructions and shop drawings.
4. Furnish components, and equipment as required to complete the installation.
5. Replace any hardware lost or damaged during the installation or handling to provide a complete installation.

6. Install free-standing enclosures on a raised concrete housekeeping pad:
    a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units.
    b. Weld and/or bolt the VFD frame to the leveling channels.
7. Provide openings in top or bottom of the VFD (free-standing or within motor control center) enclosure for conduit only, no additional openings will be allowed:
    a. Improperly cut holes will require that the entire panel be replaced:
        1) No hole closers or patches will be allowed.
8. Bundle circuits together and terminate in each unit:
    a. Tie with nylon wire ties. As specified in the 600-Volt or Less Wires and Cables section.
    b. Label all wires at each end with wire numbers shown on the approved Control Drawings.
    c. All connections to and from the VFD (free-standing or within motor control center) enclosure must be made via terminal blocks.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Factory testing:
1. Owner and Engineer will witness the factory acceptance test as specified in the Common Work Results for Electrical section.
2. General:
    a. All VFDs furnished under this Section shall be tested and inspected as specified below.
    b. The testing procedures specified are the minimum acceptable requirements. The manufacturer may perform additional tests at its discretion.
3. Failure of any component during testing requires replacement of the faulted component and a complete retest.
4. Testing sequence:
    a. Submit a detailed test procedure for the VFD factory test:
        1) A minimum of 8 weeks in advance of the proposed testing date.
        2) No tests shall be performed until the test procedure is reviewed and accepted by the Engineer.
5. Component tests:
    a. Preliminary inspection:
        1) Verify that all components are correct.
        2) Verify that all connections are properly torqued.
    b. Printed circuit boards:
        1) Test each printed circuit board per the manufacturer's standard testing procedure.
    c. Wiring:
        1) Control and power wiring continuity verified point-to-point.
        2) Hi-pot power and control wiring at manufacturer's recommended levels.
        3) Verify ground bond resistance.
    d. Load testing:
        1) No load testing in accordance with the manufacturer's standard factory test procedure.
        2) Full load testing:

a) Test each VFD and all control logic with a representative motor or dynamometer load to simulate field operation conditions at 25 percent, 50 percent, and 100 percent full load current.
b) Tests shall be conducted in a manner in which the inverter (IGBT) section supplies all the output power (kw) of the VFD system. Control strategies using a contactor or other means of bypassing the VFD when operating at the line frequency shall not be permitted.
c) Tests shall be conducted using a minimum output frequency of 60 hertz, and a minimum switching frequency of 2.5 kHz.

B. Owner training:
1. As specified in the Commissioning section and the Common Work Results for Electrical section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Provide the services of a VFD manufacturer representative for start-up assistance and training:
1. Inspection and field adjustment:
a. Supervise the following and submit written certification that the equipment and controls have been properly installed, aligned, adjusted, and readied for operation.
2. Start-up field testing:
a. Provide technical direction for testing, checkout, and startup of the VFD equipment in the field.
b. Under no circumstances are any portions of the drive system to be energized without authorization from the manufacturer's representative.
c. Compliance with the following specified parameters shall be verified by the VFD manufacturer:
1) Motor terminal voltage:
a) Make field measurements at the motor connection box.
b) Make measurements of the full speed range of the VFD.
c) Make measurements with a recording type oscilloscope.
2) Harmonics:
a) Make field measurements at the input terminals of the VFD with and without the VFD in operation.
b) Make measurements with a recording type harmonic analyzer displaying individual and total harmonic currents and voltages:
(1) Record currents and voltages for a minimum of 10 minutes.
(2) Analyzers using snapshots are not acceptable.
d. All utility sources and on-site generation shall be operational for start-up field testing.

3.9 ADJUSTING

A. Make all adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

B. Provide the services of a VFD manufacturer factory technician to make all drive parameter and protective device settings:
1. Protective device settings provided by the VFD manufacturer in accordance with the manufacturer of the driven equipment requirements.
2. Provide documentation of VFD settings included but not limited to:
a. Minimum speed.

b. Maximum speed.
c. Skip speeds.
d. Current limit.
e. Acceleration time.
f. Deceleration time.
g. Carrier frequency.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

SECTION 262720

DRY-TYPE TRANSFORMERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Enclosed dry-type transformers:
      a. Rated 1 to 1,000 kilovolt-amperes, single and 3-phase.
      b. Primary voltage 600 volts and below.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Institute of Electrical and Electronics Engineers (IEEE):
   1. 389 - IEEE Recommended Practice for Testing Electronics Transformers and Inductors.
   2. C57.12.01 - IEEE Standard General Requirements for Dry-Type Distribution and Power Transformers Including Those with Solid Cast and/or Resin Encapsulated Windings.
   3. C57.96 - IEEE Guide for Loading Dry-Type Distribution and Power Transformers.

C. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

D. Underwriters Laboratory (UL):
   1. 1561 - Standard for Dry-Type General Purpose and Power Transformers.

E. U.S. Department of Energy (DOE):
   1. 10 CFR Part 431 - Energy Efficiency Program for Certain Commercial and Industrial Equipment.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. NEMA:
   1. Type 2 enclosure in accordance with NEMA 250.
   2. Type 3R enclosure in accordance with NEMA 250.

1.4 SYSTEM DESCRIPTIONS

A. Provide 3-phase or 1-phase, 60 hertz dry-type with voltage ratings, kilovolt-ampere capacities, and connections as indicated on the Drawings:
   1. Transformers shall provide full capacity at the Project elevation and environmental conditions as specified in the Common Work Results for Electrical section after all derating factors have been applied.
   2. Suitable for continuous operation at full rating with normal life expectancy in accordance with IEEE C57.96.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Catalog cut sheets.
   2. Nameplate data.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.
   4. Inrush current.
   5. Insulation system and temperature constraints.
   6. Number and rating of taps.
   7. Sound levels.
   8. Connection diagrams:
      a. Primary.
      b. Secondary.
   9. BIL rating.
   10. Required clearances.
   11. Percent impedance.
   12. Efficiency.
   13. Certification of full capacity capability at the Project elevation and ambient conditions.
   14. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:
      a. Manufacturer's statement of seismic qualification with substantiating test data.
      b. Manufacturer's special seismic certification with substantiating test data.

C. Installation instructions:
   1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
   2. For equipment installed in structures designated as seismic design category A or B:
      a. Provide manufacturer's installation instructions and anchoring details for connecting equipment to supports and structures.
   3. For equipment installed in structures designated as seismic design category C, D, E, or F:
      a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
      b. Submit anchoring drawings with supporting calculations.
      c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. General Electric.
   2. Jefferson.
   3. Schneider Electric.
   4. Eaton.
   5. ABB.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Cores:
   1. Non-aging, grain-oriented silicon steel.
   2. Magnetic flux densities below the saturation point.

B. Windings:
   1. High-grade magnet wire.
   2. Impregnated assembly with non-hydroscopic, thermo-setting varnish:
      a. Cured to reduce hot-spots and seal out moisture.
   3. Material electrical grade:
      a. Copper.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. General:
   1. 10 kilovolts BIL for 600-volt class windings.
   2. Sound levels, in accordance with IEEE 389 test conditions, not to exceed:

Kilovolt-Amperes Range	Audible Sound Level (db)
1-9	40
10-50	45
51-150	50
151-300	55
301-500	60
501-700	62
701-1000	64

   3. Taps:
      a. 15 kilovolt-amperes and less:
         1) Two 5 percent full capacity primary taps below rated voltage.

b. 25 kilovolt-amperes and larger:
1) Four 2.5 percent full capacity primary taps below rated voltage.
2) Two 2.5 percent full capacity primary taps above rated voltage.
c. Operated by a tap changer handle or tap jumpers accessible through a panel.
4. Terminals:
a. UL listed for either copper or aluminum conductors.
b. Rated for 75 degrees Celsius.
5. Daily overload capacities, at rated voltage and without reduction in life, in accordance with IEEE C57.96.

B. Transformers less than 15 kilovolt-amperes:
1. Insulation class: 185 degrees Celsius.
2. Temperature rise: 115 degrees Celsius.

C. Energy efficient transformers 15 kilovolt-amperes and larger:
1. Insulation class: 220 degrees Celsius.
2. Temperature rise: 80115150 degrees Celsius, except as noted below:
a. 150-degree Celsius rise for dry-type transformers located in motor control centers.
3. Efficiency:
a. In accordance with DOE 10 CFR Part 431.

D. Enclosures:
1. Heavy gauge steel:
a. Outdoor: Moisture and water resistant with rodent screens over all openings and in a weather-protected enclosure, NEMA Type 3R.
b. Indoor: NEMA Type 2.
2. Louvers to limit coil temperature rise to the value stated above, and case temperature rise to 50 degrees Celsius.
3. Built-in vibration dampeners to isolate the core and coils from the enclosure:
a. Neoprene vibration pads and sleeves.

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES

A. Nameplates:
1. Non-corrosive metal or UL listed non-metallic:
a. Stamped, engraved or printed with the following information:
1) Phases.
2) Frequency.
3) Kilovolt-ampere rating.
4) Voltage ratings.
5) Temperature rise.
6) Impedance.
7) Insulation class.
8) BIL rating.
9) Connection diagram.
10) Weight.
11) Manufacturer.
12) The identification “transformer”.
13) Classes of cooling.
14) Tap voltage(s).
15) Vector diagram.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES

A. Finish to consist of de-greasing, phosphate cleaning, and an electrodeposited manufacturer's standard gray enamel rust-inhibiting paint.

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
1. Floor, wall, platform, motor control center, packaged power supply, or roof mounted, as indicated on the Drawings.
2. Install where not in direct contact with building structure.
3. Install on single layer vibration pad under the entire mounting surface.
    a. Manufacturers: The following or equal:
        1) Korfund.
4. Make any necessary connections to the enclosure with liquidtight flexible conduit having neoprene gaskets and insulated ground bushings.
5. Ground the enclosure:
    a. To an equipment ground conductor in the conduit.
    b. To the facility grounding electrode system.
6. Floor mounted transformers:
    a. Install transformers on a housekeeping pads.
    b. Install transformers with adequate space from walls or other enclosures for proper ventilation in accordance with the manufacturer's recommendations.

3.4 ERECTION, INSTALLATION, APPLICATIONS, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

B. Factory tests:
1. Applied voltage test to each winding and from each winding to the core:
    a. 600-volt class winding 4.5 kilovolt.
2. Induced voltage test at 2 times normal voltage and 400 hertz for 1,080 cycles.
3. Voltage ratio and polarity.
4. Sound level, performed in a test room with ambient sound level not exceeding 24 db.
5. Perform all tests in accordance with UL 1561.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Set the transformer taps as required to obtain nominal output voltage on the secondary terminals.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 262850

SURGE PROTECTIVE DEVICES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. High-energy surge protective devices.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Institute of Electrical and Electronics Engineers (IEEE):
1. C62.41.1 - Guide on the Surge Environment in Low-Voltage (1000 V and less) AC Power Circuits.
2. C62.41.2 - Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.
3. C62.45 - Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.
4. C62.62- Standard Test Specifications for Surge Protective Devices (SPDs) for Use on the Load Side of the Service Equipment in Low Voltage (1000 V and less) AC Power Circuits.

C. National Electrical Manufacturers Association (NEMA):
1. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

D. Underwriters Laboratory:
1. 1449, 4th Edition, Standard for Surge Protective Devices.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. NEMA:
1. Type 1 enclosure in accordance with NEMA 250.
2. Type 4 enclosure in accordance with NEMA 250.
3. Type 4X enclosure in accordance with NEMA 250.
4. Type 12 enclosure in accordance with NEMA 250.

C. Specific definitions:
1. SPD: Surge protective device.
2. SAD: Silicon avalanche diode.
3. MOV: Metal oxide varistor.
4. MCOV: Maximum continuous operating voltage.
5. I_n: Nominal discharge current.
6. VPR: Voltage protection rating.
7. SCCR: Short circuit current rating.

1.4 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Furnish complete product data confirming detailed compliance or exception statements to all provisions of this Section.
   2. Manufacturer's catalog cut sheets indicating:
      a. Manufacturer and model numbers.
      b. Ratings of each SPD including but not limited to:
         1) Short circuit current rating.
         2) Nominal discharge current.
         3) Maximum continuous operating voltage.
         4) Voltage protection rating.
         5) System voltage.
         6) System frequency.
         7) Surge current capacity.
   3. Submit independent test data from a nationally recognized testing laboratory verifying the following:
      a. Overcurrent protection.
      b. UL 1449.

C. Shop drawings:
   1. Provide electrical and mechanical drawings by the manufacturer that detail:
      a. Unit dimensions.
      b. Weights.
      c. Components.
      d. Field connection locations.
      e. Mounting provisions.
      f. Connection details.
      g. Wiring diagram.

D. Operation and maintenance manuals:
   1. Provide the manufacturer's manual with installation, start-up, spare parts lists, and operating instructions for the specified system.

1.5 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Provide SPD units that are designed, manufactured, tested and installed in compliance with the following codes and standards:
   1. Institute of Electrical and Electronics Engineers (IEEE C62.41.1, C62.41.2, C62.45, C62.62).
   2. Federal Information Processing Standards Publication 94 (FIBS PUB 94).
   3. National Electrical Manufacturer Association.
   4. National Fire Protection Association (NFPA 20, 75 and 780).
   5. National Electric Code (NFPA 70).
   6. Underwriters Laboratories (UL 1449 4th Edition and UL 1283).
   7. International Electrotechnical Commission (IEC 801).

1.6 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.7 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.8 SEQUENCING

A. Coordinate with and provide SPD equipment to the electrical equipment manufacturer before final assembly and factory testing.

1.9 SCHEDULING (NOT USED)

1.10 WARRANTY

A. As specified in the Common Work Results for Electrical section.

B. Extended warranty:
   1. Furnish a manufacturer’s full 5-year parts and labor warranty from date of shipment against any part failure when installed in compliance with manufacturer's written instructions, UL listing requirements, and any applicable national, state, or local electrical codes.
   2. Warranty shall include:
      a. Direct, factory trained employees must be available within 48 hours for assessment of the problem.
      b. A 24-hour toll-free 800-number for warranty support.

1.11 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.12 OWNER'S INSTRUCTIONS (NOT USED)

1.13 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Liebert.
   2. Eaton.
   3. Schneider Electric.
   4. General Electric.

2.2 SYSTEM DESCRIPTION

A. Surge protective devices as an integral component of the electrical equipment or externally mounted as indicated on the Drawings.

2.3 EXISTING PRODUCTS (NOT USED)

2.4 MATERIALS (NOT USED)

2.5 MANUFACTURED UNITS

A. Provide Type 1 or Type 2 SPD units as required for the locations indicated on the Drawings.

B. Electrical requirements:
   1. SPD ratings are to be consistent with the nominal system operating voltage, phase, and configuration as indicated on the Drawings.
   2. MCOV:

a. For the SPD and all components in the suppression path (including all MOVs, SADs, and selenium cells): Greater than 115 percent of the nominal system operating voltage.

3. Operating frequency:
   a. 47 to 63 hertz.
4. SCCR:
   a. 65 kAIC minimum, but not less than the equipment it is connected to as indicated on the Drawings.
   b. The SCCR shall be marked on the SPD in accordance with UL 1449 and the NEC.
5. Nominal discharge current I_n:
   a. 20 kA.
6. Maximum VPR:

Modes	240/120	208Y/120	480Y/277	480V
L-N, L-G, N-G	900	900	1,500	1,500
L-L	1,200	1,200	2000	2,000

7. Peak surge current:
   a. Service entrance locations:
      1) 240 kA per phase minimum.
      2) 120 kA per mode minimum.
   b. Branch locations:
      1) 120 kA per phase, minimum.
      2) 60 kA per mode minimum.

C. Protection modes:
1. Provide SPD protection modes as follows:
   a. Line to Neutral (L-N) where applicable.
   b. Line to Ground (L-G).
   c. Neutral to Ground (N-G), where applicable.

D. Environmental requirements:
1. Storage temperature:
   a. -40 degrees to 122 degrees Fahrenheit.
2. Operating temperature:
   a. 32 degrees to 140 Fahrenheit.
3. Relative humidity:
   a. 5 percent to 95 percent.
4. Audible noise:
   a. Less than 45 dBa at 5 feet (1.5 m).
5. Operating altitude:
   a. Zero to 12,000 feet above sea level.

E. Provide surge protective devices that are suitable for application in IEEE C62.41.1, C62.41.2 Category A, B and C3 environments, as tested to IEEE C62.45.

2.6 EQUIPMENT (NOT USED)

2.7 COMPONENTS

A. Enclosure:
1. Located in electrical equipment as indicated on the Drawings.
2. External mounting:
   a. NEMA Type 4X enclosure:
      1) No ventilation openings.

b. Hinged cover requiring a tool for internal access.
c. Internal drawing pocket.
d. All monitoring indications must be visible without opening the door.

B. Internal connections:
1. Provide low impedance copper plates for intra-unit connections:
a. Attach surge modules using bolted connections to the plates for low impedance connections.
2. Size all connections, conductors, and terminals for the specified surge current capacity.

C. Surge diversion modules:
1. MOV:
a. Where multiple MOVs are used in parallel, utilize computer matched MOVs to within 1 volt variance and tested for manufacturer's defects.

D. Overcurrent protection:
1. Individually fuse all components, including suppression, filtering, and monitoring components:
a. Rated to allow maximum specified nominal discharge current capacity.
b. Overcurrent protection that limits specified surge currents is not acceptable.

E. Connections:
1. Provide terminals to accommodate wire sizes up to #2 AWG.

2.8 ACCESSORIES

A. Unit status indicators:
1. Provide red and green solid-state indicators, with printed labels, on the front cover to redundantly indicate on-line unit status:
a. The absence of the green light and the presence of the red light indicate that surge protection is reduced and service is needed to restore full operation.
b. Indicates the status of protection on each mode or phase.

B. Dry contacts for remote monitoring:
1. Electrically isolated Form C dry contacts (1 A/125 VAC) for remote monitoring of system integrity, and indication of under voltage, phase and/or power loss.

C. Provide an audible alarm which activates under any fault condition.
1. Provide an alarm On/Off switch to silence the alarm.
2. A visible LED will confirm whether alarm is On or Disabled.
3. Locate both switches and the audible alarm on the unit’s front cover.

D. Provide an integral disconnect switch located in-line with the SPD enclosure:
1. External manual operator.
2. The switch shall disconnect all ungrounded circuit conductors from the SPD.
3. The integral disconnect switch shall be capable of withstanding, without failure, the maximum published surge current magnitude and short circuit current without failure or damage to the switch.

E. Interconnection cable:
1. Interconnect the SPD to the power system using a manufacturer furnished assembly of low impedance coaxial cables installed in flexible conduit.
2. Cable designed to transmit transients with minimal voltage drop.
3. UL listed.

2.9 MIXES (NOT USED)

2.10 FABRICATION (NOT USED)

2.11 FINISHES (NOT USED)

2.12 SOURCE QUALITY CONTROL

A. Permanently affix surge rating to the SPD.

B. Perform manufacturer’s standard factory test:
   1. Perform testing in accordance with UL 1449.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Follow the manufacturer's recommended installation practices and comply with all applicable codes.

C. Special techniques:
   1. Install the SPD with as short and straight conductors including ground conductor as practically possible:
      a. Twist the input conductors together to reduce input conductor inductance.
   2. Interconnect the SPD to the power system using a manufacturer supplied interconnection cable consisting of low impedance coaxial cables installed in a flexible conduit.
   3. Do not subject SPD to insulation resistance testing.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Field Electrical Acceptance Tests section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

ELECTRICAL POWER MONITORING

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Power meters.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. American National Standard Institute (ANSI):
   1. C12.20 - Electricity Meters - 0.2 and 0.5 Accuracy Classes.

C. Institute of Electrical and Electronics Engineers (IEEE):
   1. C57.13.6 - Standard for High Accuracy Instrument Transformers.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. FS - Full Scale.
   2. RDG - Of Reading.
   3. SSM - Solid State Multifunction Power Meter.
   4. THD - Total Harmonic Distortion.

1.4 SYSTEM DESCRIPTION (NOT USED)

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Power meter data including but not limited to:
      a. Power requirements.
      b. Communications protocols.
      c. Input/outputs.
      d. Dimensions.
      e. Measurement functions.
      f. Front panel controls.
      g. Display characteristics.

C. Operation and maintenance manuals:
   1. Descriptive and technical bulletins and sales aids edited to reflect only the equipment to be provided and covering each of the components in the system.
   2. A maintenance section including all instruction leaflets and technical data necessary to setup, change setup and maintain the power meters.
   3. Original licensed copies of all software and software manuals.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

   1. Allen-Bradley.
   2. Eaton.
   3. General Electric.
   4. Schneider Electric.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Power meters:
   1. Power meter type 1 (SSM1) device which shall include at a minimum:
      a. Individual phase currents, plus or minus 0.5 percent FS.
      b. Phase-to-phase and phase-to-neutral voltages, plus or minus 0.5 percent FS.
      c. Watts, VARs, VA, plus or minus 1 percent FS.
      d. Watt-hours, VAR-hours, VA-hours, plus or minus 1 percent FS.

e. PF (apparent and displacement), plus or minus 2 percent FS.
f. Frequency, plus or minus 1 percent hertz.
g. Demand:
    1) Ampere, plus or minus 0.5 percent full scale.
    2) Watt, VAR, VA, plus or minus 1 percent full scale.
h. Minimum and maximum values:
    1) Volts (L-L), volts (L-N), current, watts, VARS, VA.
    2) Power factor:
        a) Apparent.
        b) Displacement.
        c) Frequency.
i. Synch-input kilowatts utility.
j. LCD with LED backlight.

2.7 ACCESSORIES

A. Current transformers:
1. Ring type current transformers:
    a. Suitable for service within low or medium voltage equipment as indicated on the Drawings.
    b. Designed to have a mechanical and thermal rating to withstand short-circuit current, stresses, and heating effects equal to the rating of the equipment of the application.
2. Current ratio: As indicated on the Drawings, for use as a guideline:
3. Rated in accordance with IEEE C57.13.6 with accuracy of the current transformers suitable for relay accuracy class and rated for 200 percent burden for the required connected devices.
4. Identify polarity with standard marking or symbols.
5. Capable of carrying rated primary current continuously without damage.
6. Install secondary wiring from current transformers in a suitable wiring trough, or conduit to proper short-circuiting type terminal blocks for connection to relays, instruments, and other devices.

B. Potential transformers:
1. Indoor dry type, single-phase, 60 hertz, with a minimum thermal capacity of not less than 400 volt-amperes at 55 Celsius rise above 40 Celsius ambient.
2. Accuracy classification determined in accordance with IEEE C57.13.6, suitable for relay accuracy class, and 200 percent burden, for the required connected devices, with the secondary voltage 120 volts.
3. Insulation levels as required for the equipment system voltage but not less than:
    a. 600 VAC, 10 kV BIL for 480 VAC systems.
    b. 5.6 KV, 60 kV BIL for 2300 and 4160 VAC systems.
    c. 15.5 KV, 110 kV BIL for 12.47 kV and 13.2 kV systems.
4. Identify polarity with standard markings or symbols.
5. Connect transformer secondary to potential buses as required.
6. Protect medium voltage potential transformers on the primary side with medium voltage current-limiting fuses.
7. Protect low voltage potential transformers on the primary side and secondary side with current-limiting fuses.
8. Mount medium voltage potential transformers in a separate compartment on a drawout device which, when in the FULLY WITHDRAWN position, disconnects both primary and secondary terminals of the transformer and grounds the primary potential fuses.

ELECTRICAL SYSTEM STUDIES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Short-circuit fault analysis study.
2. Protective device coordination study.
3. Arc-flash hazard study.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Institute of Electrical and Electronics Engineers (IEEE):
1. 1584 - IEEE Guide for Specification of Scope and Deliverable Requirements for an Arc-Flash Hazard Calculations Study in Accordance with IEEE Std 1584(TM).

C. National Fire Protection Association (NFPA).

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. General study requirements:
1. Scope:
a. The short-circuit fault analysis, protective device coordination, and arc-flash hazard studies shall include all new and existing equipment in the power distribution system including, but not limited to:
1) Utility equipment.
2) Switchgear.
3) Switchboards.
4) Generators.
5) Transformers:
a) Including all dry-type transformers.
6) Motor control centers.
7) Freestanding variable frequency drives and starters.
8) Disconnect switches.
9) Motors.
10) Panelboards:
a) Including all 240- and 208-volt systems.
11) Vendor control panels.
12) HVAC equipment.
b. Study scenarios:
1) The studies shall include all possible electrical system configurations, for example:
a) Operation on normal (utility) source.
b) Operation on generator source.

c) Main-breakers closed, tie-breaker open.
d) Either main-breaker open, tie-breaker closed.

2. Obtain, for all equipment, the required data for preparation of the study including, but not limited to:
   a. Transformer kilovolt-ampere (kVA) and impedances.
   b. Generator impedances.
   c. Generator decrement curves.
   d. Bus withstand ratings.
   e. Cable and bus data.
   f. Protective device taps, time dials, instantaneous pickups, and time-delay settings.
3. Obtain the Electric Utility information on the minimum and maximum available fault current, minimum and maximum utility impedances, utility protective device settings including manufacturer and model number, interrupting ratings, X/R ratios, and model information one level above the point of connection:
   a. Utility tolerances and voltage variations.
4. The individual performing the studies shall visit the site and collect all necessary field data in order to perform and complete comprehensive electrical system studies.
5. Obtain equipment layouts and configurations from the manufacturer's final submittal requirements and project layout drawings as required.
6. Bus and conductor data:
   a. Use impedances of the actual installed or specified conductors, unless otherwise indicated.
   b. Use cable and bus impedances calculated at 25 degrees Celsius, unless otherwise indicated.
   c. Use 600-volt cable reactance based on typical dimensions of actual installed or specified conductors, unless otherwise indicated.
   d. Use bus withstand values for all equipment having buses.
   e. Use medium-voltage cable reactances based on typical dimensions of shielded cables with 133-percent insulation levels, unless otherwise indicated.
7. Motors:
   a. Each motor shall be individually modeled:
      1) Grouping of motors for fault contribution current is not acceptable.
   b. Motors with variable frequency drives may be assumed to have no contribution to fault current.
8. Use the equipment, bus, and device designations as indicated on the Drawings for all studies.

B. Short-circuit fault analysis study additional requirements:
   1. The short-circuit fault analysis shall be performed and submitted in 2 phases:
      a. Initial short-circuit fault analysis:
         1) Based on the Contract Documents and Electric Utility information.
         2) The initial short-circuit fault analysis study shall indicate the estimated available short-circuit current at the line side terminals of each piece of equipment covered by the scope of the study.
         3) Provide a list of assumptions used in the initial study.
      b. Final short-circuit fault analysis:
         1) The final short-circuit fault analysis shall modify the initial analysis as follows:
            a) Utilize the actual equipment provided on the project.
            b) Utilize conductor lengths based on installation.
   2. Calculate 3-phase bolted fault, line-to-line fault, line-to-ground fault, double line-to-ground fault, short-circuit 1/2 cycle momentary symmetrical and asymmetrical RMS, 1-1/2 to 4 cycle interrupting symmetrical RMS, and 30-cycle steady-state short-circuit current values at each piece of equipment in the distribution system.

3. Evaluate bus bracing, short-circuit ratings, fuse interrupting capacity and circuit-breaker-adjusted interrupting capacities against the fault currents, and calculate X/R values:
    a. Identify and document all devices and equipment as either inadequate or acceptable.
4. Calculate line-to-ground and double line-to-ground momentary short-circuit values at all buses having ground-fault devices.
5. Provide calculation methods, assumptions, one-line diagrams, and source impedance data, including utility X/R ratios, typical values, recommendations, and areas of concern.

C. Protective device coordination study additional requirements:
1. Furnish protective device settings for all functions indicated on the Drawings including, but not limited to:
    a. Current.
    b. Voltage:
        1) Provide settings for all voltage relays based upon actual utility and generator tolerances and specifications.
    c. Frequency:
        1) Provide settings for all frequency relays based upon actual utility and generator tolerances and specifications.
    d. Negative sequence.
    e. Reverse power.
    f. Machine protection functions:
        1) Provide settings for all motor and generator protective relays based on the manufacturer's recommended protection requirements.
2. Provide log-log form time-current curves (TCCs) graphically indicating the coordination proposed for the system:
    a. Include with each TCC a complete title and one-line diagram with legend identifying the specific portion of the system covered by the particular TCC:
        1) Typical TCCs for identical portions of the system, such as motor circuits, are acceptable as allowed by the Engineer.
    b. Include a detailed description of each protective device identifying its type, function, manufacturer, and time-current characteristics:
        1) These details can be included on the TCC.
    c. Include a detailed description of each protective device tap, time dial, pickup, instantaneous, and time delay settings:
        1) These details can be included on the TCC.
3. TCCs shall include all equipment in the power distribution system where required to demonstrate coordination. Include utility relay and fuse characteristics, medium-voltage equipment protective relay and fuse characteristics, low-voltage equipment circuit breaker trip device characteristics, transformer characteristics, motor and generator characteristics, and characteristics of other system load protective devices:
    a. Include all devices down to the largest branch circuit and largest feeder circuit breaker in each motor control center, main breaker in branch panelboards, and fused disconnect switches.
    b. Provide ground fault TCCs with all adjustable settings for ground fault protective devices.
    c. Include manufacturing tolerances and damage bands in plotted fuse and circuit breaker characteristics.
    d. On the TCCs, show transformer full load currents, transformer magnetizing inrush, ANSI transformer withstand parameters, and transformer damage curves.
    e. Cable damage curves.
    f. Terminate device characteristic curves at a point reflecting the maximum symmetrical or asymmetrical fault current to which the device is exposed based on the short-circuit fault analysis study.

g. Coordinate time interval medium-voltage relay characteristics with upstream and downstream devices to avoid nuisance tripping.

4. Site generation: When site generation (including cogeneration, standby, and emergency generators) is part of the electrical system, include phase and ground coordination of the generator protective devices:
   a. Show the generator decrement curve and damage curve along with the operating characteristic of the protective devices.
5. Suggest modifications or additions to equipment rating or settings in a tabulated form.

D. Arc-flash hazard study additional requirements:
1. Include the calculated arc-flash boundary and incident energy (calories/square centimeter) at each piece of equipment in the distribution system:
   a. Perform study with 15 percent arcing fault variation as defined by IEEE 1584.
   b. Perform arc-flash calculations at minimum and maximum utility fault contributions.
   c. Perform arc-flash calculations for both the line side and load side of the switchgear, switchboard, motor control center, and panelboard main breakers.
   d. Perform arc-flash calculations for all short-circuit scenarios with all motors on for 3 to 5 cycles and with all motors off.
   e. Protective device clearing time shall be limited to 2 seconds, maximum.
2. Provide executive summary of the study results:
   a. Provide summary based upon worst case results.
3. Provide a detailed written discussion and explanation of the tabulated outputs:
   a. Include all scenarios.
4. Provide alternative device settings to allow the Owner to select the desired functionality of the system:
   a. Minimize the arc-flash energy by selective trip and time settings for equipment maintenance purposes.
   b. Identify the arc-flash energy based upon the criteria of maintaining coordination and selectivity of the protective devices.

E. By virtue of the fact that this is a professional study, the Owner reserves the right to modify the requirements of the study to comply with its operational requirements. The protective device coordination study and the arc-flash hazard study shall be modified based on the results of the meetings with the Owner.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Initial studies and reports:
1. Include the following in the initial short-circuit current report:
   a. List of all devices included in the studies.
   b. A description of all operating scenarios.
   c. Form and format of arc-flash labels.

C. Final studies and reports:
1. Format and quantity:
   a. Provide 6 bound copies of all final reports.
   b. Provide 3 complete sets of electronic files on CD or DVD media, including the electrical system model(s), configuration files, custom libraries, and any other files used to perform the studies and produce the reports. Also provide an electronic version of the bound reports in PDF format.
2. Include the sections below in the final report:
   a. Copies of correspondence and data obtained from the electric utility company.
   b. Letter certifying the inspection and verification of existing equipment.
   c. One-line diagrams:

1) The following information shall be included at a minimum:
    a) Motor horsepower.
    b) Transformer data:
        (1) kVA.
        (2) Configuration.
    c) Cable data:
        (1) Insulation.
        (2) Size.
        (3) Length.
2) One-line diagrams shall be fully legible at 11-inch by 17-inch size.

d. Include in the short-circuit fault analysis study:
1) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
2) Normal system connections and those that result in maximum fault conditions.
3) Tabulation of circuit breaker, fuse, and other protective device ratings compared to maximum calculated short-circuit duties.
4) Fault current calculations for the cases run including a definition of terms and guide for interpretation of computer software printouts.

e. Protective device coordination study shall include:
1) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
2) List all requirements used in the selection and setting criteria for any protective devices.
3) TCCs graphically indicating the coordination proposed for the system on log-log graphs.
4) Tabulation of relay, fuse, circuit breaker, and other protective devices in graphical form with a one-line diagram to display area coordination.
5) Where coordination could not be achieved, an explanation shall be included in the report to support the statement along with recommendations to improve coordination. Recommended equipment modifications or settings shall be in a tabulated form.

f. Include in the arc-flash hazard study:
1) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
2) Normal system connections and those that result in maximum arc-flash conditions.
3) Arc-flash raw data, calculations, and assumptions.
4) Arc-flash label data:
    a) Identifying the content of each label.
    b) Identifying the location of each label.

D. Certification:
1. Submit written certification, sealed and signed by the professional engineer conducting the study, equipment supplier, and electrical subcontractor stating that the data used in the study is correct.

E. Submit the credentials of the individual(s) performing the study and the individual in responsible charge of the study.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Qualifications of the entity responsible for electrical system studies:

1. The studies shall be performed, stamped, and signed by a professional engineer registered in the state where the project is located.
2. A minimum of 5 years of experience in power system analysis is required for the individual in responsible charge of the studies.
3. The short-circuit fault analysis, protective device coordination, and arc-flash hazard studies shall be performed with the aid of a digital computer program:
    a. Point-to-point calculations are not acceptable.

1.7 DELIVERY, STORAGE, AND HANDLING (NOT USED)

1.8 PROJECT/SITE CONDITIONS (NOT USED)

1.9 SEQUENCING

A. Site visit to gather data on the existing facility systems for all studies:
    1. Make multiple trips as required to obtain all data for the short-circuit fault analysis, protection device coordination, and arc flash hazard studies.

B. Submit the initial short-circuit fault analysis study before submittal of any electrical equipment.

C. Initial electrical system study meeting.

D. Submit the preliminary short-circuit fault analysis, protective device coordination, and arc-flash hazard studies.

E. Second electrical system study meeting for preliminary results.

F. Final arc-flash meeting and final short-circuit fault analysis, protective device coordination, and arc-flash hazard studies.

G. Label equipment with approved arc-flash labels.

H. Owner’s training.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY (NOT USED)

1.12 SYSTEM START-UP (NOT USED)

1.13 OWNER’S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Electrical system study software: One of the following or equal:
    1. Operation Technology, Inc., ETAP.
    2. SKM Systems Analysis, Powertools.
    3. Power Analytics Corp., Paladin DesignBase.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Arc-flash hazard labels:
   1. Dimensions:
      a. Minimum 5 inches by 3.5 inches.
   2. Materials:
      a. Polyester with polyvinyl polymer over-laminate.
      b. Self-adhesive.
      c. Resistant to:
         1) UV.
         2) Chemicals and common cleaning solvents.
         3) Scuffing.
         4) Wide temperature changes.
   3. Contents:
      a. Short-circuit bus identification.
      b. Calculated incident energy (calories/square centimeter) range:
         1) Based on worst-case study results.
      c. Arc-flash protection boundary.
      d. Shock hazard boundary:
         1) The Contractor may provide separate labels for indication of the shock hazard boundary.
   4. Color scheme:
      a. For locations above 40 calories/square centimeter:
         1) White label with red “DANGER” strip across the top.
         2) Black lettering.
      b. For locations below 40 calories/square centimeter:
         1) White label with orange “WARNING” strip across the top.
         2) Black lettering.

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install all arc-flash hazard labels:
   1. Install labels at all locations required by NFPA, ANSI, or IEEE standards.
   2. At a minimum, install labels in the following locations:
      a. The front of each main or incoming service compartment.
      b. The front of each low-voltage switchgear section.
      c. The front of each medium-voltage circuit breaker door.
      d. The front of each accessible auxiliary or conductor compartment.
      e. Each accessible rear or side vertical section.
      f. Each motor control center vertical section.
      g. Each panelboard covered by the study.
      h. Each control panel, individual starter or VFD, or other equipment covered by the scope of the study.
   3. Install labels prior to equipment energization.

C. Adjust protective device settings per final study prior to equipment energization.
   1. Devices that require power for configuration may be set during energization, but before any subfed loads are energized.
   2. Ensure that settings for upstream equipment are set prior to energizing downstream devices.

3.4 ERECTION, INSTALLATION, APPLICATION, AND CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. The individual performing the arc-flash hazard study shall direct the installation of the arc-flash hazard labels:
   1. Remove and replace any improperly applied labels.
   2. Repair the equipment finish damaged by removal of any label.
   3. Install labels level or plumb across the entire dimension of the label.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION (NOT USED)

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 263213.5

ENGINE GENERATOR

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Engine Generator Set.
2. Enclosure
3. Related Accessories as specified

B Related Requirements
1. It is the intent of this specification to secure an engine-driven generator set that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure a generator set system that has been tested during design verification, in production, and at the final job site. The generator set will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include prototype test certification and specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.

B Informational Submittal
1. Certificates
   a The generator set shall be listed to UL 2200 or submitted to an independent third-party certification process to verify compliance as installed.

C Closeout Submittal
1. Maintenance Contracts
2. Operation and Maintenance Data
3. Warranty Documentation
4. Record Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The generator set shall conform to the requirements of the following codes and standards:

   a CSA C22.2, No. 14-M91 Industrial Control Equipment.
   b EN50082-2, Electromagnetic Compatibility-Generic Immunity Requirements, Part 2: Industrial.

c EN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
d IEC8528 part 4, Control Systems for Generator Sets.
e IEC Std 61000-2 and 61000-3 for susceptibility, 61000-6 radiated and conducted electromagnetic emissions.
f IEEE446 Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications.
g NFPA 70, National Electrical Code, Equipment shall be suitable for use in systems in compliance to Article 700, 701, and 702.
h NFPA 99, Essential Electrical Systems for Health Care Facilities.
i NFPA 110, Emergency and Standby Power Systems. The generator set shall meet all requirements for Level 1 systems. Level 1 prototype tests required by this standard shall have been performed on a complete and functional unit. Component level type tests will not substitute for this requirement.

2. Qualifications
a The equipment shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
b The power system shall be produced by a manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year.

3. Manufacturers
a The power system shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
b The basis of design is a Kohler model 600REOZVB. If the supplier wishes to propose equivalent equipment, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:
- A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply
- The weight & outline dimensions of the proposed equipment.

Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. The certification shall identify, by serial number(s), the equipment involved. No exceptions to the specifications shall be allowed or included in the certification.

1.4 Warranty

A Manufacturer's Warranty

1. The generator set shall include a standard warranty covering one (1) year or 2000 hours, whichever occurs first, to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The generator set manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment
1. The generator set shall be a Kohler model 600REOZVB with a 5M4030 alternator (or Cummins/CAT equal). It shall provide 750 kVA and 600 kW when operating at 277/480 volts, 60

Hz, 0.80 power factor. The generator set shall be capable of a 130°C Standby rating while operating in an ambient condition of less than or equal to 77 °F and a maximum elevation of 500 ft above sea level. The standby rating shall be available for the duration of the outage.

B Engine
1. The minimum 16.12 liter displacement engine shall deliver a minimum of 903 HP at a governed engine speed of 1800 rpm, and shall be equipped with the following:
   a. Electronic isochronous governor capable of 0.25% steady-state frequency regulation
   b. 24-volt positive-engagement solenoid shift-starting motors
   c. 80-ampere automatic battery charging alternator with a solid-state voltage regulation
   d. Positive displacement, full-pressure lubrication oil pump, cartridge oil filters, dipstick, and oil drain
   e. Dry-type replaceable air cleaner elements for normal applications
   f. Engine-driven or electric fuel-transfer pump including fuel filter and electric solenoid fuel shutoff valve capable of lifting fuel
   g. The turbocharged engine shall be fueled by diesel
   h. The engine shall have a minimum of 6 cylinders and be liquid-cooled
2. The engine shall be EPA certified from the factory
3. The generator must accept rated load in one-step.

C Cooling System
1. The engine shall be liquid-cooled by a closed loop, unit mounted radiator rated to operate the generator set at full load at an ambient temperature of 50 degrees C (122 degrees F). The radiator fan and other rotating engine parts shall be guarded against accidental contact.

D Standard Air Cleaner
1. The air cleaner shall provide engine air filtration which meets the engine manufacturer's specifications under typical operating conditions.

E Battery
1. Each genset requires a quantity of two BCI group 8D batteries which must meet the engine manufactures' specifications for the ambient conditions specified in Part 1 Project Conditions and shall comply with the NFPA requirements for engine cranking cycles. Each battery shall be rated according to SAE Standards J-537 with a minimum cold cranking amp of 950 amps and a minimum reserve capacity of 430 Minutes at 80F. The battery must contain two handles to aid in lifting and the case must be constructed of polypropylene to resist breakage and extend service life. Removable cell covers shall be provided to allow for checking of electrolyte specific gravity.
2. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.

F Housing
1. Level 2 Sound Attenuated Enclosure
   a The generator set shall be supplied with a Level 2 Sound Attenuated Enclosure, providing a sound level of 76 dB(A) while the generator is operating at 100% load at 7 meters (23 feet) using acoustic insulation and acoustic-lined inlet hoods, and using acoustic insulation and acoustic-lined inlet hoods, constructed from a minimum of 0.125 inch thick formed heavy duty aluminum panels. The acoustic insulation used shall meet UL 94 HF1 flammability classification. The enclosure shall be manufactured from bolted panels to facilitate service, future modifications, or field replacement. The enclosure shall use external vertical air inlet and outlet hoods with 90 degree angles to discharge air up and reduce noise. The enclosure shall have an integral rodent guard and skid end caps and shall have bracing to meet 241 kph (150 mph) wind loading.
   b The enclosure components and skid shall be cleaned with a two-stage alkaline cleaning process to remove grease, grit, and grime from parts. Components shall then be subjected to a Zirconium-based conversion coating process to prepare the metal for electrocoat (e-coat) adhesion. All enclosure parts shall receive an 100% epoxy primer electrocoat (e-coat) with high-edge protection. Following the e-coat process, the parts shall be finish coated with powder baked paint for superior finish, durability, and appearance with a Power ArmorTM industrial finish that provides heavy duty durability in harsh conditions, and is fade-, scratch- and corrosion-resistant.
   c The enclosure must surpass a 3,000 hour salt spray corrosion test per ASTM B-1117.
   d Enclosures will be finished in the manufacturer's standard color.

e The enclosures shall allow the generator set to operate at full load in an ambient temperature of 50°C with no additional derating of the electrical output of the generator set.
f Enclosures shall be equipped with sufficient side and end doors to allow access for operation, inspection, and service of the unit and all options. Minimum requirements are two doors per side. When the generator set controller faces the rear of the generator set, an additional rear facing door is required. Access to the controller and main line circuit breaker shall meet the requirements of the National Electric Code.
g Doors shall be fitted with hinges, hardware, and the doors shall be removable.
h Doors shall be equipped with lockable latches. Locks shall be keyed alike. Door locks shall be recessed to minimize potential of damage to door/enclosure.
i A duct between the radiator and air outlet shall be provided to prevent re-circulation of hot air.
j The complete exhaust system shall be internal to the enclosure.
k The critical silencer shall be fitted with a tailpipe and rain cap.

G Fuel oil storage
1. Double Wall Secondary Containment Sub-base Fuel Tank
a The generator set shall be supplied with a sub-base fuel tank of sufficient capacity to hold a minimum of 25 hours of fuel at 100% loading. No less than 1033 gallons of diesel fuel.
b The sub-base fuel system shall be listed under UL 142, subsection entitled Special Purpose Tanks EFVT category, and will bear their mark of UL Approval according to their particular classification.
c The above ground steel secondary containment rectangular tank for use as a sub base for diesel generators is manufactured and intended to be installed in accordance with the Flammable and Combustible Liquids Code—NFPA 30, the Standard for Installation and Use of Stationary Combustible Engine and Gas Turbines—NFPA 37, and Emergency and Standby Power Systems—NFPA 110.
d The primary tank shall be rectangular in shape and constructed in clam shell fashion to ensure maximum structural integrity and allow the use of a full throat fillet weld.
e Steel Channel Support System. Reinforced steel box channel for generator support, with a load rating of 5,000 lbs. per generator mounting hole location. Full height gussets at either end of channel and at generator mounting holes shall be utilized.
f Exterior Finish. The sub-base tank exterior finish shall be Power Armor PlusTM, a polyurea-textured rubberized coating.
g Normal venting shall be sized in accordance with the American Petroleum Institute Standard No 2000, Venting Atmospheric and Low Pressure Storage Tanks not less than 1-1/4" (3 cm.) nominal inside diameter.
h The emergency vent opening shall be sized to accommodate the total capacity of both normal and emergency venting and shall be not less than that derived from NFPA 30, table 2-8, and based on the wetted surface area of the tank. The wetted area of the tank shall be calculated on the basis of 100 percent of the primary tank. The vent is to be spring-pressure operated: opening pressure is 0.5/psig and full opening pressure is 2.5 psig. The emergency relief vent is to be sized to accommodate the total venting capacity of both normal and emergency vents.
i There shall be a 2" NPT opening within the primary tank and lockable manual fill cap.
j A direct reading, UL listed, magnetic fuel level gauge with a hermetically sealed, vacuum tested dial, to eliminate fogging, shall be provided.
k A float switch for remote or local annunciation of a (50% standard) low fuel level condition shall be supplied.

H Controller
1. APM402 Generator Set Controller

a. The generator set controller shall be a microprocessor based control system that will provide automatic starting, system monitoring, and protection. The controller system shall also provide local monitoring and remote monitoring. The control system shall be capable of PC based updating of all necessary parameters, firmware, and software.
b. The controller shall be mounted on the generator set and shall have integral vibration isolation. The controller shall be prototype and reliability tested to ensure operation in the conditions encountered.

2. Codes and Standards

    a. The generator set controller shall meet NFPA 110 Level 1 requirements and shall include an integral alarm horn as required by NFPA.
    b. The controller shall meet NFPA 99 and NEC requirements.
    c. The controller shall be UL 508 listed.

3. Applicability

    a. The controller shall be a standard offering in the manufacturer's controller product line.
    b. The controller shall support 12-volt and 24volt starting systems.
    c. The controller's environmental specification shall be: -40°C to 70°C operating temperature range and 5-95% humidity, non-condensing.
    d. The controller shall mount on the generator or remotely within 40 feet with viewable access.

4. Controller Buttons, Display and Components

    a. The generator set controller shall include the following features and functions:
        1. Push button Master Control buttons. The buttons shall be tactile-feel membrane with an indicator light to initiate the following functions:
            a. Run Mode: When in the run mode the generator set shall start as directed by the operator.
            b. Off/Reset Mode: When in the Off/Reset mode the generator set shall stop, the reset shall reset all faults, allowing for the restarting of the generator set after a shutdown.
            c. Auto Mode: When in Auto the mode the generator set shall be ready to accept a signal from a remote device.
        2. Emergency Stop Switch. The remote stop switch shall be red in color with a "mushroom" type head. Depressing the stop button will immediately stop the generator set and lockout the generator set for any automatic remote starting.
        3. Push Button/Rotary Selector dial. This dial shall be used for selection of all Menus and sub-menus. Rotating the dial moves you through the menus, pushing the dial selects the menu and function/features in that menu. Pushing the button selects the feature/function and sub-menus.
        4. Digital Display. The digital display shall be alphanumeric, with 2 lines of data and approximately 24 charters. The display shall have back lighting for ease of operator use in high and low light conditions. The display shall display status of all faults and warnings. The display shall also display any engine faults. While the generator set is running, the display shall scroll all-important information across the screen for ease of operator use. The scroll can be stopped by pushing the rotary dial. The display shall fall asleep when the generator set is not running and will wake-up when the generator set starts or the rotary dial is depressed.
        5. Fault Light. The controller shall have an annunciator fault light that glows red for faults and yellow for warnings. These faults and warnings shall be displayed in the digital display. The fault light will also glow yellow when not in AUTO.
        6. Alarm Horn. The controller shall provide an alarm horn that sounds when any faults or warnings are present. The horn shall also sound when the controller is not in the AUTO mode.
        7. Alarm Silence/Lamp Test Button. When this button is depressed, it shall test all controller lamps. This button will also silence the alarm horn when the unit is not AUTO.
        8. USB Connection. The controller shall have a USB connection on the face of the controller. This connection shall allow for updating of all software and firmware. This port shall also allow for all servicing of generator set parameters, fault diagnostics and viewing of all controller information via use a laptop computer.
        9. Dedicated user inputs. The controller shall have dedicated inputs for remote emergency stop switch, remote 2-wire star for transfer switch and auxiliary

shutdown.

10. The controller shall have auto resettable circuit protection integral on the circuit board.

5. System Controller Monitoring and Status Features and Functions

a. The generator controller shall display and monitor the following engine and alternator functions and allow adjustments of certain parameters at the controller:
    1. Overview menu
        a. Active shutdowns and warnings shall be displayed if present and without the need of operator interface
        b. Engine runtime with total hours
        c. Average line to line voltage
        d. Coolant temperature
        e. Fuel level or pressure
        f. Oil pressure
        g. Battery voltage
        h. Software version
        i. Frequency
        j. Average current
    2. Engine metering menu.
        a. Engine speed
        b. Oil pressure
        c. Coolant temperature
        d. Battery voltage
    3. Generator metering menu.
        a. Total power in VA
        b. Total power in W
        c. Rated power % used
        d. Voltage L-L and L-N for all phases
        e. Current L1, L2, L3
        f. Frequency
    4. Generator set information.
        a. Generator set model number
        b. Generator set serial number
        c. Controller set number
    5. Generator set run time.
        a. Engine run time total hours
        b. Engine loaded total hours
        c. Number of engine starts
        d. Total energy in kW
    6. Generator set system
        a. System voltage
        b. System frequency 50/60Hz
        c. System phase, single/three phase
        d. Power rating kW
        e. Amperage rating
        f. Power type standby/prime
        g. Measurement units, metric/English units adjustable
        h. Alarm silence, always or auto only
    7. Generator set calibration, the following are adjustable at the controller.
        a. Voltage L-L and L-N all phases
        b. Current L1, L2, L3
        c. Reset all calibrations
    8. Voltage regulation, +/-0.5% regulation, the following is adjustable at the controller.
        a. Voltage Adjustable +/- 10%
    9. Digital and Analog Inputs and outputs
        a. Displays settings and status
    10. Event Log

a. Stores event history, up to 1000 events

6. Controller Engine control features and functions

   a. Automatic restart - the controller has automatic restart feature that initiates the start routine and re-crank after a failed start attempt.
   b. Cyclic cranking - the controller shall have programmable cyclic cranking
   c. Engine starting aid - the controller shall have the capability of providing control for an optional engine starting aid.
   d. The control system shall include time delays for engine start and cool down.
   e. The control system shall interface with the engine ECM and display engine fault codes and warnings. The ECM shall also include sender failure monitoring to help distinguish between failed senders and actual failure conditions.
   f. The controller shall monitor and display engine governor functions with include steady state and transient frequency monitoring

7. Controller Alternator control features and functions

   a. Integrated hybrid voltage regulator. The system shall have integral microprocessor based voltage regulator system that provides +/- 5% voltage regulation, no-load to full load with three phase sensing. The system is prototype tested and control variation of voltage to frequency. The voltage regulator shall be adjustable at the controller with maximum +/- 10% adjustable of nominal voltage.
   b. AC output voltage regulator adjustment. The system shall allow for adjustment of the integral voltage regulator with maximum of +/- 10% adjustment of the system voltage.
   c. Alternator thermal overload protection. The system shall have integral alternator overload and short circuit protection matched to each alternator for the particular voltage and phase configuration.
   d. Power metering. The controller digitally displays power metering of kW and kVA.

8. Other control features and functions

   a. Event logging. The controller keeps a record of up to 1000 events, for warning and shutdown faults. This fault information becomes a stored record of systems events and can be reset.
   b. Historical data logging. The controller total number of generator set successful start shall be recorded and displayed.
   c. Programmable access. The control system shall include a USB port that gives service technicians the ability to provide software and firmware upgrades. The system shall also be capable of allowing setting of all critical parameters using the service software and a laptop computer. All parameters and setting should be capable to being stored on a laptop for future upgrades of printing for analysis.

9. Generator Set Warning, Shutdown Alarm and Status

   a. The generator set shall have alarms and status indication lamps that show non-automatic status and warning and shutdown conditions. The controller shall indicate with a warning lamp and or alarm and on the digital display screen any shutdown, warning or engine fault condition that exists in the generator set system. The following alarms and shutdowns shall exist as a minimum:
      1. Engine functions
         a. Critical high fuel level (alarm)
         b. ECM communication loss (shutdown)
         c. ECM diagnostics (alarm & shutdown)
         d. Engine overspeed (shutdown)
         e. Engine start aid active
         f. Engine under speed (shutdown)
         g. Fuel tank leak (alarm & shutdown)
         h. High DC battery voltage (alarm)

i. High coolant temperature (alarm & shutdown)
j. High fuel level (alarm)
k. Low DC battery voltage (alarm)
l. Low coolant level (shutdown)
m. Low coolant temperature (alarm)
n. Low cranking voltage (alarm)
o. Low engine oil level (alarm & shutdown)
p. Low fuel level (alarm & shutdown)
q. Low fuel pressure (alarm)
r. Low oil pressure (alarm & shutdown)
s. No coolant temperature signal (shutdown)
t. No oil pressure signal (shutdown)
u. Overcrank (shutdown)
v. Speed sensor fault (alarm)

2. Generator functions
   a. AC sensing loss over & under current (alarm & shutdown)
   b. Alternator protection (shutdown)
   c. Ground fault input (alarm)
   d. kW overload (shutdown)
   e. Locked rotor (shutdown)
   f. Over-frequency (shutdown)
   g. Over AC voltage (shutdown)
   h. Under-frequency (shutdown)
   i. Under AC voltage (shutdown)
   j. Emergency stop (shutdown)
3. Other General functions
   a. Battery charger fault (alarm)
   b. Common fault (shutdown)
   c. Common warning (alarm)
   d. Master switch not in auto (alarm)
   e. Generator running
   f. Input/Output fault (alarm)
4. The generator set controller shall also be capable of meeting all necessary NFPA 110 level 1 requirements that include several of the above along with; EPS supplying load, Master switch “not in auto”, and contacts for local and remote common alarm.

10. Communications

a. The controller shall communicate with the ECM for control, monitoring, diagnosis, and meet SAE J1939 standards
b. Kohler proprietary RBUS communication shall be available.
c. A RBUS shall be able to monitor and alter parameters, and start or stop a generator.
d. The controller shall have the capability to communicate to a personal computer (IBM or compatible) and appropriate application software
e. A variety of connections shall be available based on requirements:
   1. A single control connection to a PC via USB
   2. Internet connection via Ethernet
f. Generator and transfer switch controls shall be equipped with communications modules capable of connecting to the same communication network.

I Generator Overcurrent and Fault Protection

1. The generator shall be provided with a factory installed, 100% rated line circuit breaker rated at 1000 amperes that is UL489 listed. Line circuit breakers shall be sized for the rated ampacity of the loads served by the breaker per the NEC.
2. The circuit breaker(s) shall incorporate an electronic trip unit
3. Load side lugs shall be provided from the factory.

J Alternator

1. The alternator shall be salient-pole, brushless, 2/3-pitch, with 4 bus bar provision for external connections, self-ventilated, with drip-proof construction and amortisseur rotor windings, and skewed for smooth voltage waveform. The ratings shall meet the NEMA standard (MG1-32.40) temperature rise limits. The insulation shall be class H per UL1446 and the varnish shall be a vacuum pressure impregnated, fungus resistant epoxy. Temperature rise of the rotor and stator shall be limited to 130°C Standby. The PMG based excitation system shall be of brushless construction controlled by a digital, three phase sensing, solid- state, voltage regulator. The AVR shall be capable of proper operation under severe nonlinear loads and provide individual adjustments for voltage range, stability and volts-per-hertz operations. The AVR shall be protected from the environment by conformal coating. The waveform harmonic distortion shall not exceed 5% total RMS measured line-to-line at full rated load. The TIF factor shall not exceed 50.
2. The alternator shall have a maintenance-free bearing, designed for 40000 hour B10 life. The alternator shall be directly connected to the flywheel housing with a semi-flexible coupling between the rotor and the flywheel.
3. The generator shall be inherently capable of sustaining at least 300% of rated current for at least 10 seconds under a 3-phase symmetrical short circuit without the addition of separate current-support devices.
4. Motor starting performance and voltage dip determinations shall be based on the complete generator set. The generator set shall be capable of supplying 2200 LRKVA for starting motor loads with a maximum instantaneous voltage dip of 35%, as measured by a digital RMS transient recorder in accordance with IEEE Standard 115. Motor starting performance and voltage dip determination that does not account for all components affecting total voltage dip, i.e., engine, alternator, voltage regulator, and governor will not be acceptable. As such, the generator set shall be prototype tested to optimize and determine performance as a generator set system.

K Vibration Isolation
1. Vibration isolators shall be provided between the engine-alternator and heavy-duty steel base.

2.2 Accessories

A. The generator set shall be supplied with a 10-ampere automatic float/equalize battery charger capable of charging both lead-acid and ni-cad type batteries, with the following features:
   i. Automatic 3-stage float to equalization charge
   ii. Voltage regulation of 1% from no to full load over 10% AC input line voltage variations
   iii. Battery charging current Ammeter and battery voltage voltmeter with 5% full-scale accuracy
   iv. LED lamp for power ON indication
   v. Current limited during engine cranking, short circuit, and reverse polarity conditions
   vi. Temperature compensated for ambient temperatures for -40°C to 60°C
   vii. Alarm circuit board featuring alarm contacts for low battery voltage, high battery voltage, and battery charger malfunction.
   viii. UL 1012 Listed
   ix. CSA Certified
B. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.
C. The air cleaner restriction indicator shall indicate the need for maintenance of the air cleaners.
D. The exhaust piping shall be gas proof, seamless, stainless steel, flexible exhaust bellows and includes the flex exhaust tube and the mounting hardware.
E. Block Heater - The block heater shall be thermostatically controlled, 4,000 watt, 208 VAC, to maintain manufacturers recommended engine coolant temperature to meet the start-up requirements of NFPA 99 and NFPA 110, Level 1.
F. Supply flexible fuel lines to provide a flexible connection between the engine fuel fittings and the fuel supply tank piping and for the fuel return lines from the injector pump per engine manufacturer’s recommendations. Flex line shall have a protective steel wire braid to protect the hose from abrasion.
G. Input/Output Module Board -- Generator controller shall be provided with board providing two analog or digital inputs and 5 digital outputs.

2.3 Source Quality Control

A. Non-Conforming Work

1. To ensure that the equipment has been designed and built to the highest reliability and quality standards, the manufacturer and/or local representative shall be responsible for three separate tests: design prototype tests, final production tests, and site tests.

a. **Design Prototype Tests.** Components of the emergency system, such as the engine/generator set, transfer switch, and accessories, shall not be subjected to prototype tests because the tests are potentially damaging. Rather, similar design prototypes and preproduction models shall be subject to the following tests:
   i. Maximum power (kW)
   ii. Maximum motor starting (kVA) at 35% instantaneous voltage dip.
   iii. Alternator temperature rise by embedded thermocouple and/or by resistance method per NEMA MG1-32.6.
   iv. Governor speed regulation under steady-state and transient conditions.
   v. Voltage regulation and generator transient response.
   vi. Harmonic analysis, voltage waveform deviation, and telephone influence factor.
   vii. Three-phase short circuit tests.
   viii. Alternator cooling air flow.
   ix. Torsional analysis to verify that the generator set is free of harmful torsional stresses.
   x. Endurance testing.

b. **Final Production Tests.** Each generator set shall be tested under varying loads with guards and exhaust system in place. Tests shall include:
   i. Single-step load pickup
   ii. Safety shutdown device testing
   iii. Rated Power @ 0.8 PF
   iv. Maximum power
   v. Upon request, a witness test, or a certified test record sent prior to shipment.

c. **Site Tests.** The manufacturer's distribution representative shall perform an installation check, startup, and building load test. The engineer, regular operators, and the maintenance staff shall be notified of the time and date of the site test. The tests shall include:
   i. Fuel, lubricating oil, and antifreeze shall be checked for conformity to the manufacturer's recommendations, under the environmental conditions present and expected.
   ii. Accessories that normally function while the set is standing by shall be checked prior to cranking the engine. These shall include: block heaters, battery chargers, alternator strip heaters, remote annunciators, etc.
   iii. Generator set startup under test mode to check for exhaust leaks, path of exhaust gases outside the building, cooling air flow, movement during starting and stopping, vibration during operation, normal and emergency line-to-line voltage and frequency, and phase rotation.
   iv. Automatic start by means of a simulated power outage to test remote-automatic starting, transfer of the load, and automatic shutdown. Prior to this test, all transfer switch timers shall be adjusted for proper system coordination. Engine coolant temperature, oil pressure, and battery charge level along with generator set voltage, amperes, and frequency shall be monitored throughout the test.
   v. Load bank testing. The test shall consist of four hours of continuous operation using a portable resistive load bank. Adjust the load bank load to provide one half hour each at zero load, 25 percent, 50 percent, and 75 percent of full load. Followed by two hours of operation at rated standby load. Furnish the portable load bank, all connecting cables, metering equipment, and other equipment or devices required to perform the on-site testing. During the test, readings shall be taken every 15 minutes showing % load, voltage, amps, oil pressure, water temperature, and battery charge.

END OF SECTION

SECTION 263213.6

AUTOMATIC TRANSFER SWITCH

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Automatic transfer switch

B Related Requirements
1. It is the intent of this specification to secure an automatic transfer switch that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure an automatic transfer switch that has been tested during design verification, in production, and at the final job site. The automatic transfer switch will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.
2. Shop Drawings

B Closeout Submittals
1. Operation And Maintenance Data
2. Warranty Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The automatic transfer switch shall conform to the requirements of the following codes and standards:
   a UL 1008 - Standard for Transfer Switch Equipment
   b IEC 947-6-1 Low-voltage Switchgear and Control gear; Multifunction equipment; Automatic Transfer Switching EquipmentEN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
   c NFPA 70 - National Electrical Code
   d NFPA 99 - Essential Electrical Systems for Health Care Facilities

e NFPA 110 - Emergency and Standby Power Systems
f IEEE Standard 446 - IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications
g NEMA Standard ICS 10-2005, Electromechanical AC Transfer Switch Equipment.
h EN61000-4-4 Fast Transient Immunity Severity Level 4
i EN61000-4-5 Surge Immunity Class 4 (voltage sensing and programmable inputs only)
j IEEE 472 (ANSI C37.90A) Ring Wave Test
k IEC Specifications for EMI/EMC Immunity (CISPR 11, IEC 1000-4-2, IEC 1000-4-3, IEC 1000-4-4, IEC 1000-4-5, IEC 1000-4-6, IEC 1000-4-8, IEC 1000-4-11)
l CSA C22.2 No. 178 certification

2. Qualifications
   a The automatic transfer switch shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
   b A manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year shall produce the automatic transfer switch.

3. Manufacturers
   a The automatic transfer switch shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
   b The manufacturer shall maintain a national service organization of employing personnel located throughout the contiguous United States. The Service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.
   c The manufacturer shall maintain records of each switch, by serial number, for a minimum of 20 years.

1.4 Field or Site Conditions

A Ambient Conditions
1. Automatic transfer switch shall operate in the following conditions without any damage to the unit or its loads.
   a Ambient Temperature: -4 to 158 Degrees F
   b Relative Humidity: 5% to 95% noncondensing

1.5 Warranty or Bond

A Manufacturer's Warranty
1. The ATS shall include a standard warranty covering one (1) year to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The ATS manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment
1. Furnish and install an automatic transfer switches system(s) with 3-Pole / 4-Wire, Solid Neutral, 2000 Amps, 480V/60Hz. The transfer switch shall have a withstand current rating of 65kAIC. Each automatic transfer shall consist of an inherently double throw power transfer switch

mechanism and a microprocessor controller to provide automatic operation. ATS shall be able to completely disconnect power from the site with the single push of a single button or a single throw of a single switch. All transfer switches and controllers shall be the products of the same manufacturer.

B Manufacturer

1. The basis of design is a Kohler model KEP-DMTC-2000S-TQ. If the supplier wishes to propose equivalent equipment as manufactured by Russelectric, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:
    - A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply.
    - The weight & outline dimensions of the proposed equipment.
2. Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. No exceptions to the specifications shall be allowed or included in the certification.

C Construction

1. The transfer switch shall be electrically operated and mechanically held with double throw construction, and operated by a momentarily energized solenoid-driven mechanism.
2. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.
3. The switch shall be positively locked and unaffected by momentarily outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.
4. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand and close-on capability and be protected by separate arcing contacts.
5. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. Switches rated 800 amperes and higher shall have front removable and replaceable contacts. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.
6. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources, are not acceptable.
7. For two and three pole switches, where neutral conductors are to be solidly connected as shown on the plans, a neutral conductor plate with fully rated AL-CU pressure connectors shall be provided.
8. For four pole switches with a switching neutral, where neutral conductors must be switched as shown on the plans, the contactor shall be provided with fully rated switched neutral transfer contacts. Overlapping neutral contacts may be used as an alternative.

D Enclosure

3. The ATS shall be furnished in a NEMA 3R enclosure.
4. All standard door mounted switches and indicating LEDs shall be integrated into a flush-mounted, interface membrane or equivalent in the enclosure door for easy viewing & replacement. The panel shall be capable of having a manual locking feature to allow the user to lockout all membrane mounted control switches to prevent unauthorized tampering. This cover shall be mounted with hinges and have a latch that may be padlocked. The membrane panel shall be suitable for mounting by others when furnished on open type units.

2.2 Operation

A Controls

1. A four line, 20 character LCD display and dynamic 4 button keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters. Operational parameters shall also be available for viewing and control through the communications interface port or USB. The following parameters shall only be adjustable via a password protected programming on the controller:

a Nominal line voltage and frequency
b Single or three phase sensing
c Operating parameter protection
d Transfer operating mode configuration (Standard transition, Programmed transition, or Closed transition)

B Voltage and Frequency

1. Voltage (all phases) and frequency on both the normal and emergency sources shall be continuously monitored, with the following pickup, dropout, and trip setting capabilities (values shown as % of nominal unless otherwise specified):

	Parameter	Dropout/Trip	Pickup/Reset
a	Under voltage	75 to 98%	85 to 100%
b	Over voltage	106 to 135%	95 to 100% of trip
c	Under frequency	95 to 99%	80 to 95%
d	Over frequency	01 to 115%	105 to 120%
e	Voltage unbalance	5 to 20%	3 to 18%

2. Repetitive accuracy of all settings shall be within ± 0.5% over an operating temperature range of -20°C to 70°C.
3. An adjustable dropout time for transient voltage and frequency excursions shall be provided. The time delays shall be 0.1 to 9.9 seconds for voltage and .1 to 15 seconds for frequency.
4. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad, remotely via the communications interface port or USB.
5. The controller shall be capable of sensing the phase rotation of both the normal and emergency sources. The source shall be considered unacceptable if the phase rotation is not the preferred rotation selected (ABC or BAC). Unacceptable phase rotation shall be indicated on the LCD; the service required LED and the annunciation through the communication protocol and dry contacts. In addition, the phase rotation sensing shall be capable of being disabled, if required.
6. The controller shall be capable of detecting a single phasing condition of a source, even though a voltage may be regenerated by the load. This condition is a loss of phase and shall be considered a failed source.
7. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage on all 3 phases (phase to phase and phase to neutral), frequency, and phase rotation.

C Time Delays

1. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals. Capability shall be provided to extend this time delay to 60 minutes by providing an external 12 or 24 VDC power supply.
2. A time delay shall be provided on transfer to the emergency source, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.
3. A time delay shall be provided on re-transfer to normal. The time delays shall be adjustable from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.
4. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.
5. A time delay activated output signal shall also be provided to drive external relay(s) for selective load disconnect and reconnect control. The controller shall be capable of controlling a maximum of 9 individual output time delays to step loads on after a transfer occurs. Each output may be individually programmed for their own time delay of up to 60 minutes. Each sequence shall be independently programmed for transferring from normal to emergency and transferring from emergency to normal.
6. All time delays shall be adjustable in 1 second increments.
7. All time delays shall be adjustable by using the display and keypad, with a remote device connected to the communications interface port or USB.
8. Each time delay shall be identified and a dynamic countdown shall be shown on the display. Active time delays can be viewed with a remote device connected to the communications interface port or USB.

D Additional Features

1. The controller shall have 3 levels of security. Level 1 shall allow monitoring of settings and parameters only. The Level 1 shall be capable of restricted with the use of a lockable cover. Level 2 shall allow test functions to be performed and Level 3 shall allow setting of all parameters.
2. The display shall provide for the test functions, allowed through password security. The test function shall be load, no load or auto test. The auto test function shall request an elapsed time for test. At the completion of this time delay the test shall be automatically ended and a retransfer sequence shall commence. All loaded tests shall be immediately ended and retransfer shall occur if the emergency source fails and the normal source is acceptable.
3. A contact closure shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.
4. Auxiliary contacts shall be provided consisting of a minimum of two contacts, closed when the ATS is connected to the normal source and two contacts closed, when the ATS is connected to the emergency source.
5. LED indicating lights shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).
6. LED indicating lights shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal (green) and emergency sources (red), as determined by the voltage, frequency and phase rotation sensing trip and reset settings for each source.
7. A membrane switch shall be provided on the membrane panel to test all indicating lights and display when pressed.
8. Provide the ability to select “commit/no commit to transfer" to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
9. Terminals shall be provided for a remote contact which opens to signal the ATS to transfer to emergency and for remote contacts which closes to inhibit transfer to emergency and/or retransfer to normal. Both of these inhibit signals can be activated through the keypad, communications interface port or USB. A “not-in-auto" LED shall indicate anytime the controller is inhibiting transfer from occurring.
10. The programmed transition feature shall control the transfer so that mechanism is placed in a load disconnect position for an adjustable period of time, giving motor and transformer loads and opportunity to decay to acceptable levels. The programmed transition feature shall be specifically designed for and be the product of the ATS manufacturer. The programmed transition setting shall be capable of being enabled or disabled from the user interface, communications interface port of USB. The controller shall include a built-in time delay for programmed transition operation. This time shall be adjustable from the user interface. The default value shall be 1 second and shall be adjustable from 0 to 60 minutes.
11. A time based load control feature shall be available to allow the prioritized addition and removal of loads based during transfer. This feature may be enabled for either or both sources. The user shall be able to control up to nine loads with independent timing sequences for pre and post transfer delays in either direction of transfer.
12. The controller shall provide 2 inputs for external controls that can be programmed from the following values:
    a Common fault, Remote test, Inhibit transfer, Low battery voltage, Peak shave, Time delay bypass, Load shed forced to OFF position (Programmed transition only)
13. The controller shall provide two form "C" contact outputs rated for up to 12A @ 240VAC or 2A @ 480VAC that can be programmed from the following values:
    a Aux switch open, Transfer switch aux contact fault, Alarm silenced, Alarm active, I/O communication loss, Contactor position, Exercise active, Test mode active, Fail to transfer, Fail to acquire standby source, Source available, Phase rotation error, Not in automatic mode, Common alarm, In phase monitor sync, Load bank control active, Load control active, Maintenance mode active, Non-emergency transfer, Fail to open/close, Loss of phase, Over/under voltage, Over/under frequency, Voltage unbalance, Start signal, Peak shave active, Preferred source supplying load, Standby source supplying load
14. The controller shall be capable of expanding the number of inputs and outputs with additional modules.
15. Optional input/output modules shall be furnished which mount on the inside of the enclosure to facilitate ease of connections.

16. Engine Exerciser - The controller shall provide an internal engine exerciser. The engine exerciser shall allow the user to program up to 21 different exercise routines based on a calendar mode. For each routine, the user shall be able to:
    a. Enable or disable the routine
    b. Enable or disable transfer of the load during routine.
    c. Set the start time, time of day, day of week, week of month (1st, 2nd, 3rd, 4th, alternate or every)
    d. Set the duration of the run.
    e. At the end of the specified loaded exercise duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. All loaded exercises shall be immediately ended and retransfer shall occur if the standby source fails. The next exercise period shall be displayed on the main screen with the type of exercise, time and date. The type of exercise and the time remaining shall be display when the exercise is active. It shall be possible of ending the exercise event with a single button push.
17. Date and time - The date shall automatically adjust for leap year and the time shall have the capability of automatically adjusting for daylight saving and standard times.
18. System Status - The controller shall have a default display the following on:
    a. System status
    b. Date, time and type of the next exercise event
    c. Average voltage of the preferred and standby sources
    d. Scrolling through the displays shall indicate the following:
        1) Line to line and line to neutral voltages for both sources
        2) Frequency of each source
        3) Single or three phase operation
        4) Type of transition
        5) Preferred source
        6) Commit or no commit modes of operation
        7) Source/source mode
        8) In phase monitor enable/disable
        9) Phase rotation
        10) Date and time
19. Controllers that require multiple screens to determine system status or display “coded" system status messages, which must be explained by references in the operator’s manual, are not permissible.
20. Self-Diagnostics - The controller shall contain a diagnostic screen for the purpose of detecting system errors. This screen shall provide information on the status input signals to the controller which may be preventing load transfer commands from being completed.
21. Communications Interface - The controller shall be capable of interfacing, through a standard communication with a network of transfer switches and generators. It shall be able to be connected via an RS-485 serial communication (up to 4000 ft. direct connect or multi-drop configuration). This module shall allow for seamless integration of existing or new communication transfer devices and generators.
22. The transfer switch shall also be able to interface to 3rd party applications using Modbus RTU open standard protocols utilizing Modbus register maps. Proprietary protocols shall not be acceptable.
23. The controller shall contain a USB port for use with a software diagnostic application available to factory authorized personnel for downloading the controller’s parameters and settings; exercise event schedules; maintenance records and event history. The application can also adjust parameters on the controller.
24. Data Logging - The controller shall have the ability to log data and to maintain the last 2000 events, even in the event of total power loss. The following events shall be time and date stamped and maintained in a non-volatile memory. The controller shall be able to display up to the last 99 events. The remaining events shall be accessible via the communications interface port or USB.
    a. Event Logging
        1) Data, date and time indication of any event
    b. Statistical Data
        1) Total number of transfers*
        2) Total number of fail to transfers*
        3) Total number of transfers due to preferred source failure*

4) Total number of minutes of operation*
5) Total number of minutes in the standby source*
6) Total number of minutes not in the preferred source*
7) Normal to emergency transfer time
8) Emergency to normal transfer time
9) System start date
10) Last maintenance date
11) * The statistical data shall be held in two registers. One register shall contain data since start up and the second register shall contain data from the last maintenance reset.

25. External DC Power Supply - An optional provision shall be available to connect up to two external 12/24 VDC power supply to allow the LCD and the door mounted control indicators to remain functional when both power sources are dead for extended periods of time. This module shall contain reverse battery connection indication and circuit protection.

2.3 Service Entrance Switch

A. A two position disconnect switch shall be provided to disconnect the normal source and inhibit during maintenance or emergency.
   i. The controller shall display SERVICE DISCONNECT
   ii. Further transfer in inhibited after transfer to Emergency
B. Molded case circuit breakers (MCCB) shall be 80% rated. Molded case switches (MCSW) shall be 100% rated. Insulated case circuit breakers and insulated case switches shall be 100% rated.
C. The transfer switch mechanism shall provide a simple means of manual operation using only components, which are permanently affixed, in the operating position.
D. The unit shall permit manual operation of the transfer switch while the system is energized and carrying rated load. Transfer switches, which require all sources of power to be de-energized prior to manual load transferring, shall not be acceptable.
E. A control circuit isolation plug shall be provided to isolate all control circuitry inside the transfer switch to facilitate maintenance procedures. When isolated, there shall be no voltage present on the control circuitry.
F. Cable Connections: Provision shall be made to terminate all incoming and outgoing power cables and grounding conductors. Connections shall be via screw type cable lugs.
G. The Power Switching units shall be fix-mounted, utilize fully enclosed contacts and their withstand/closing rating shall be equal to or exceed the required withstand rating of the complete mechanism.
H. The service entrance rated automatic transfer switch shall automatically transfer the load to the generator supply in the event of a utility supply failure and return the load to the utility supply upon restoration. The transfer switch shall incorporate and isolating mechanism and over current protection on the utility supply to allow operation s the main services disconnect in accordance with NEC requirements. The transfer switch power switching devices shall be mechanically and electrically interlocked to prevent the utility and generator supplies from being interconnected.
I. Insulated Case Circuit Breaker Service Entrance Rated Transfer Switches
   i. The normal connection shall be provided with an electronic trip, 100% rated insulated case breaker with a 2000 amp current rating.

2.4 Accessories

A. Padlockable User Interface Cover. The user interface cover shall protect the controller user interface from the environment.
B. Controller Disconnect Switch. A Logic disconnect switch shall be mounted inside the enclosure, and shall disconnect power to controller without disconnecting the load. The logic disconnect switch shall disconnect utility power to the controller during maintenance and service without disconnecting power to the load. The switch has two positions, auto and disconnect. The disconnect position shall disconnect the voltage sensing leads for the utility source (A, B, C, N). It is assumed that the user shall disable the generator by placing the controller in the OFF position.
C. Programmable Exerciser. A programmable exerciser shall be supplied to allow programming of up to 56 on/off events.
D. Standard I/O Module. The standard I/O Module shall have two programmable inputs and six programmable outputs.

a. Inputs Available 2
   i. Contact Closure
   ii. Current 5mA Max.
   iii. Connection Type Terminal Strip
   iv. Wire Size #14-24 AWG
   v. Max Distance 700 feet
b. Outputs Available 6
   i. Contact Type Form C (SPDT)
   ii. Contact Rating 2A @ 30VDC, 500mA @ 125VAC
   iii. Connection Type Terminal Strip
   iv. Wire Size #14-24

E. Alarm Module. The alarm module shall be 90dB audible alarm; any alarm function can be programmed to trigger the audible alarm, with external alarm connection. The audible alarm can be set to sound under selected fault conditions through setup on the user interface. The other options that can be activated with the alarm board are the Chicago alarm option, Preferred Source selection and the Supervised Transfer Control Switch.

2.5 Source Quality Control

A Test and Inspection

1. Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification including compliance with the above codes and standards. The certification shall identify, by serial number(s), the equipment involved. No exceptions to the specifications, other than those stipulated at the time of the submittal, shall be included in the certification.
2. The ATS manufacturer shall be certified to ISO 9001 International Quality Standard and the manufacturer shall have third party certification verifying quality assurance in design/development, production, installation and servicing in accordance with ISO 9001.

END OF SECTION

SECTION 26 32 13.1

ENGINE GENERATOR

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Engine Generator Set.
2. Enclosure
3. Related Accessories as specified

B Related Requirements
1. It is the intent of this specification to secure an engine-driven generator set that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure a generator set system that has been tested during design verification, in production, and at the final job site. The generator set will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include prototype test certification and specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.

B Informational Submittal
1. Certificates
   a The generator set shall be listed to UL 2200 or submitted to an independent third-party certification process to verify compliance as installed.

C Closeout Submittal
1. Maintenance Contracts
2. Operation and Maintenance Data
3. Warranty Documentation
4. Record Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The generator set shall conform to the requirements of the following codes and standards:

   a CSA C22.2, No. 14-M91 Industrial Control Equipment.
   b EN50082-2, Electromagnetic Compatibility-Generic Immunity Requirements, Part 2: Industrial.

c EN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
d IEC8528 part 4, Control Systems for Generator Sets.
e IEC Std 61000-2 and 61000-3 for susceptibility, 61000-6 radiated and conducted electromagnetic emissions.
f IEEE446 Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications.
g NFPA 70, National Electrical Code, Equipment shall be suitable for use in systems in compliance to Article 700, 701, and 702.
h NFPA 99, Essential Electrical Systems for Health Care Facilities.
i NFPA 110, Emergency and Standby Power Systems. The generator set shall meet all requirements for Level 1 systems. Level 1 prototype tests required by this standard shall have been performed on a complete and functional unit. Component level type tests will not substitute for this requirement.

2. Qualifications
a The equipment shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
b The power system shall be produced by a manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year.

3. Manufacturers
a The power system shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
b The basis of design is a Kohler model 15REOZK. If the supplier wishes to propose equivalent equipment as manufactured by Caterpillar, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:

- A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply.
- The weight & outline dimensions of the proposed equipment.

Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. No exceptions to the specifications shall be allowed or included in the certification.

1.4 Warranty

A Manufacturer's Warranty

1. The generator set shall include a standard warranty covering one (1) year or 2000 hours, whichever occurs first, to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The generator set manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment

1. The generator set shall be a Kohler model 15REOZK with a 4D5.6 alternator. It shall provide 18.8 kVA and 15 kW when operating at 277/480 volts, 60 Hz, 0.80 power factor. The generator set shall be capable of a 130°C Standby rating while operating in an ambient condition of less than or equal to 77 °F and a maximum elevation of 500 ft above sea level. The standby rating shall be available for the duration of the outage.

B Engine
1. The minimum 1.9 liter displacement engine shall deliver a minimum of 28 HP at a governed engine speed of 1800 rpm, and shall be equipped with the following:
    a. Electronic isochronous governor capable of 0.25% steady-state frequency regulation
    b. 12-volt positive-engagement solenoid shift-starting motors
    c. 50-ampere automatic battery charging alternator with a solid-state voltage regulation
    d. Positive displacement, full-pressure lubrication oil pump, cartridge oil filters, dipstick, and oil drain
    e. Dry-type replaceable air cleaner elements for normal applications
    f. Engine-driven or electric fuel-transfer pump including fuel filter and electric solenoid fuel shutoff valve capable of lifting fuel
    g. The turbocharged engine shall be fueled by diesel
    h. The engine shall have a minimum of 4 cylinders and be liquid-cooled
2. The engine shall be EPA certified from the factory
3. The generator must accept rated load in one-step.

C Cooling System
1. The engine shall be liquid-cooled by a closed loop, unit mounted radiator rated to operate the generator set at full load at an ambient temperature of 50 degrees C (122 degrees F). The radiator fan and other rotating engine parts shall be guarded against accidental contact.

D Standard Air Cleaner
1. The air cleaner shall provide engine air filtration which meets the engine manufacturer's specifications under typical operating conditions.

E Battery
1. Each genset requires a quantity of one group 24 batteries which must meet the engine manufactures' specifications for the ambient conditions specified in Part 1 Project Conditions and shall comply with the NFPA requirements for engine cranking cycles. Each battery shall be rated according to SAE Standards J-537 with a minimum cold cranking amp of 650 amps and a minimum reserve capacity of 430 Minutes at 80F. The battery must contain two handles to aid in lifting and the case must be constructed of polypropylene to resist breakage and extend service life. Removable cell covers shall be provided to allow for checking of electrolyte specific gravity.
2. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.

F Housing
1. Level 2 Sound Attenuated Enclosure
a The generator set shall be supplied with a Level 2 Sound Attenuated Enclosure, providing a sound level of 64.4 dB(A) while the generator is operating at 100% load at 7 meters (23 feet) using acoustic insulation and acoustic-lined inlet hoods, and using acoustic insulation and acoustic-lined inlet hoods, constructed from a minimum of 0.125 inch thick formed heavy duty aluminum panels. The acoustic insulation used shall meet UL 94 HF1 flammability classification. The enclosure shall be manufactured from bolted panels to facilitate service, future modifications, or field replacement. The enclosure shall use external vertical air inlet and outlet hoods with 90 degree angles to discharge air up and reduce noise. The enclosure shall have an integral rodent guard and skid end caps and shall have bracing to meet 241 kph (150 mph) wind loading.
b The enclosure components and skid shall be cleaned with a two-stage alkaline cleaning process to remove grease, grit, and grime from parts. Components shall then be subjected to a Zirconium-based conversion coating process to prepare the metal for electrocoat (e-coat) adhesion. All enclosure parts shall receive an 100% epoxy primer electrocoat (e-coat) with high-edge protection. Following the e-coat process, the parts shall be finish coated with powder baked paint for superior finish, durability, and appearance with a Power ArmorTM industrial finish that provides heavy duty durability in harsh conditions, and is fade-, scratch- and corrosion-resistant.

c The enclosure must surpass a 3,000 hour salt spray corrosion test per ASTM B-1117.
d Enclosures will be finished in the manufacturer's standard color.
e The enclosures shall allow the generator set to operate at full load in an ambient temperature of 50°C with no additional derating of the electrical output of the generator set.
f Enclosures shall be equipped with sufficient side and end doors to allow access for operation, inspection, and service of the unit and all options. Minimum requirements are two doors per side. When the generator set controller faces the rear of the generator set, an additional rear facing door is required. Access to the controller and main line circuit breaker shall meet the requirements of the National Electric Code.
g Doors shall be fitted with hinges, hardware, and the doors shall be removable.
h Doors shall be equipped with lockable latches. Locks shall be keyed alike. Door locks shall be recessed to minimize potential of damage to door/enclosure.
i A duct between the radiator and air outlet shall be provided to prevent re-circulation of hot air.
j The complete exhaust system shall be internal to the enclosure.
k The critical silencer shall be fitted with a tailpipe and rain cap.

G Fuel oil storage
1. Double Wall Secondary Containment Sub-base Fuel Tank
a The generator set shall be supplied with a sub-base fuel tank of sufficient capacity to hold a minimum of 24 hours of fuel at 100% loading.
b The sub-base fuel system shall be listed under UL 142, subsection entitled Special Purpose Tanks EFVT category, and will bear their mark of UL Approval according to their particular classification.
c The above ground steel secondary containment rectangular tank for use as a sub base for diesel generators is manufactured and intended to be installed in accordance with the Flammable and Combustible Liquids Code—NFPA 30, the Standard for Installation and Use of Stationary Combustible Engine and Gas Turbines—NFPA 37, and Emergency and Standby Power Systems—NFPA 110.
d The primary tank shall be rectangular in shape and constructed in clam shell fashion to ensure maximum structural integrity and allow the use of a full throat fillet weld.
e Steel Channel Support System. Reinforced steel box channel for generator support, with a load rating of 5,000 lbs. per generator mounting hole location. Full height gussets at either end of channel and at generator mounting holes shall be utilized.
f Exterior Finish. The sub-base tank exterior finish shall be Power Armor PlusTM, a polyurea-textured rubberized coating.
g Normal venting shall be sized in accordance with the American Petroleum Institute Standard No 2000, Venting Atmospheric and Low Pressure Storage Tanks not less than 1-1/4" (3 cm.) nominal inside diameter.
h The emergency vent opening shall be sized to accommodate the total capacity of both normal and emergency venting and shall be not less than that derived from NFPA 30, table 2-8, and based on the wetted surface area of the tank. The wetted area of the tank shall be calculated on the basis of 100 percent of the primary tank. The vent is to be spring-pressure operated: opening pressure is 0.5/psig and full opening pressure is 2.5 psig. The emergency relief vent is to be sized to accommodate the total venting capacity of both normal and emergency vents.
i There shall be a 2" NPT opening within the primary tank and lockable manual fill cap.
j A direct reading, UL listed, magnetic fuel level gauge with a hermetically sealed, vacuum tested dial, to eliminate fogging, shall be provided.
k A float switch for remote or local annunciation of a (50% standard) low fuel level condition shall be supplied.

H Controller
1. APM402 Generator Set Controller

a. The generator set controller shall be a microprocessor based control system that will provide automatic starting, system monitoring, and protection. The controller system shall also provide local monitoring and remote monitoring. The control system shall be capable of PC based updating of all necessary parameters, firmware, and software.
b. The controller shall be mounted on the generator set and shall have integral vibration isolation. The controller shall be prototype and reliability tested to ensure operation in

the conditions encountered.

2. Codes and Standards

    a. The generator set controller shall meet NFPA 110 Level 1 requirements and shall include an integral alarm horn as required by NFPA.
    b. The controller shall meet NFPA 99 and NEC requirements.
    c. The controller shall be UL 508 listed.

3. Applicability

    a. The controller shall be a standard offering in the manufacturer's controller product line.
    b. The controller shall support 12-volt and 24volt starting systems.
    c. The controller's environmental specification shall be: -40°C to 70°C operating temperature range and 5-95% humidity, non-condensing.
    d. The controller shall mount on the generator or remotely within 40 feet with viewable access.

4. Controller Buttons, Display and Components

    a. The generator set controller shall include the following features and functions:
        1. Push button Master Control buttons. The buttons shall be tactile-feel membrane with an indicator light to initiate the following functions:
            a. Run Mode: When in the run mode the generator set shall start as directed by the operator.
            b. Off/Reset Mode: When in the Off/Reset mode the generator set shall stop, the reset shall reset all faults, allowing for the restarting of the generator set after a shutdown.
            c. Auto Mode: When in Auto the mode the generator set shall be ready to accept a signal from a remote device.
        2. Emergency Stop Switch. The remote stop switch shall be red in color with a "mushroom" type head. Depressing the stop button will immediately stop the generator set and lockout the generator set for any automatic remote starting.
        3. Push Button/Rotary Selector dial. This dial shall be used for selection of all Menus and sub-menus. Rotating the dial moves you through the menus, pushing the dial selects the menu and function/features in that menu. Pushing the button selects the feature/function and sub-menus.
        4. Digital Display. The digital display shall be alphanumeric, with 2 lines of data and approximately 24 charters. The display shall have back lighting for ease of operator use in high and low light conditions. The display shall display status of all faults and warnings. The display shall also display any engine faults. While the generator set is running, the display shall scroll all-important information across the screen for ease of operator use. The scroll can be stopped by pushing the rotary dial. The display shall fall asleep when the generator set is not running and will wake-up when the generator set starts or the rotary dial is depressed.
        5. Fault Light. The controller shall have an annunciator fault light that glows red for faults and yellow for warnings. These faults and warnings shall be displayed in the digital display. The fault light will also glow yellow when not in AUTO.
        6. Alarm Horn. The controller shall provide an alarm horn that sounds when any faults or warnings are present. The horn shall also sound when the controller is not in the AUTO mode.
        7. Alarm Silence/Lamp Test Button. When this button is depressed, it shall test all controller lamps. This button will also silence the alarm horn when the unit is not AUTO.
        8. USB Connection. The controller shall have a USB connection on the face of the controller. This connection shall allow for updating of all software and firmware. This port shall also allow for all servicing of generator set parameters, fault diagnostics and viewing of all controller information via use a laptop computer.
        9. Dedicated user inputs. The controller shall have dedicated inputs for remote

emergency stop switch, remote 2-wire star for transfer switch and auxiliary shutdown.

10. The controller shall have auto resettable circuit protection integral on the circuit board.

5. System Controller Monitoring and Status Features and Functions

a. The generator controller shall display and monitor the following engine and alternator functions and allow adjustments of certain parameters at the controller:
    1. Overview menu
        a. Active shutdowns and warnings shall be displayed if present and without the need of operator interface
        b. Engine runtime with total hours
        c. Average line to line voltage
        d. Coolant temperature
        e. Fuel level or pressure
        f. Oil pressure
        g. Battery voltage
        h. Software version
        i. Frequency
        j. Average current
    2. Engine metering menu.
        a. Engine speed
        b. Oil pressure
        c. Coolant temperature
        d. Battery voltage
    3. Generator metering menu.
        a. Total power in VA
        b. Total power in W
        c. Rated power % used
        d. Voltage L-L and L-N for all phases
        e. Current L1, L2, L3
        f. Frequency
    4. Generator set information.
        a. Generator set model number
        b. Generator set serial number
        c. Controller set number
    5. Generator set run time.
        a. Engine run time total hours
        b. Engine loaded total hours
        c. Number of engine starts
        d. Total energy in kW
    6. Generator set system
        a. System voltage
        b. System frequency 50/60Hz
        c. System phase, single/three phase
        d. Power rating kW
        e. Amperage rating
        f. Power type standby/prime
        g. Measurement units, metric/English units adjustable
        h. Alarm silence, always or auto only
    7. Generator set calibration, the following are adjustable at the controller.
        a. Voltage L-L and L-N all phases
        b. Current L1, L2, L3
        c. Reset all calibrations
    8. Voltage regulation, +/-0.5% regulation, the following is adjustable at the controller.
        a. Voltage Adjustable +/- 10%
    9. Digital and Analog Inputs and outputs
        a. Displays settings and status

10. Event Log
    a. Stores event history, up to 1000 events

6. Controller Engine control features and functions

    a. Automatic restart - the controller has automatic restart feature that initiates the start routine and re-crank after a failed start attempt.
    b. Cyclic cranking - the controller shall have programmable cyclic cranking
    c. Engine starting aid - the controller shall have the capability of providing control for an optional engine starting aid.
    d. The control system shall include time delays for engine start and cool down.
    e. The control system shall interface with the engine ECM and display engine fault codes and warnings. The ECM shall also include sender failure monitoring to help distinguish between failed senders and actual failure conditions.
    f. The controller shall monitor and display engine governor functions with include steady state and transient frequency monitoring

7. Controller Alternator control features and functions

    a. Integrated hybrid voltage regulator. The system shall have integral microprocessor based voltage regulator system that provides +/- 5% voltage regulation, no-load to full load with three phase sensing. The system is prototype tested and control variation of voltage to frequency. The voltage regulator shall be adjustable at the controller with maximum +/- 10% adjustable of nominal voltage.
    b. AC output voltage regulator adjustment. The system shall allow for adjustment of the integral voltage regulator with maximum of +/- 10% adjustment of the system voltage.
    c. Alternator thermal overload protection. The system shall have integral alternator overload and short circuit protection matched to each alternator for the particular voltage and phase configuration.
    d. Power metering. The controller digitally displays power metering of kW and kVA.

8. Other control features and functions

    a. Event logging. The controller keeps a record of up to 1000 events, for warning and shutdown faults. This fault information becomes a stored record of systems events and can be reset.
    b. Historical data logging. The controller total number of generator set successful start shall be recorded and displayed.
    c. Programmable access. The control system shall include a USB port that gives service technicians the ability to provide software and firmware upgrades. The system shall also be capable of allowing setting of all critical parameters using the service software and a laptop computer. All parameters and setting should be capable to being stored on a laptop for future upgrades of printing for analysis.

9. Generator Set Warning, Shutdown Alarm and Status

    a. The generator set shall have alarms and status indication lamps that show non-automatic status and warning and shutdown conditions. The controller shall indicate with a warning lamp and or alarm and on the digital display screen any shutdown, warning or engine fault condition that exists in the generator set system. The following alarms and shutdowns shall exist as a minimum:
        1. Engine functions
            a. Critical high fuel level (alarm)
            b. ECM communication loss (shutdown)
            c. ECM diagnostics (alarm & shutdown)
            d. Engine overspeed (shutdown)
            e. Engine start aid active
            f. Engine under speed (shutdown)
            g. Fuel tank leak (alarm & shutdown)

h. High DC battery voltage (alarm)
i. High coolant temperature (alarm & shutdown)
j. High fuel level (alarm)
k. Low DC battery voltage (alarm)
l. Low coolant level (shutdown)
m. Low coolant temperature (alarm)
n. Low cranking voltage (alarm)
o. Low engine oil level (alarm & shutdown)
p. Low fuel level (alarm & shutdown)
q. Low fuel pressure (alarm)
r. Low oil pressure (alarm & shutdown)
s. No coolant temperature signal (shutdown)
t. No oil pressure signal (shutdown)
u. Overcrank (shutdown)
v. Speed sensor fault (alarm)

2. Generator functions
   a. AC sensing loss over & under current (alarm & shutdown)
   b. Alternator protection (shutdown)
   c. Ground fault input (alarm)
   d. kW overload (shutdown)
   e. Locked rotor (shutdown)
   f. Over-frequency (shutdown)
   g. Over AC voltage (shutdown)
   h. Under-frequency (shutdown)
   i. Under AC voltage (shutdown)
   j. Emergency stop (shutdown)
3. Other General functions
   a. Battery charger fault (alarm)
   b. Common fault (shutdown)
   c. Common warning (alarm)
   d. Master switch not in auto (alarm)
   e. Generator running
   f. Input/Output fault (alarm)
4. The generator set controller shall also be capable of meeting all necessary NFPA 110 level 1 requirements that include several of the above along with; EPS supplying load, Master switch “not in auto”, and contacts for local and remote common alarm.

10. Communications

a. The controller shall communicate with the ECM for control, monitoring, diagnosis, and meet SAE J1939 standards
b. Kohler proprietary RBUS communication shall be available.
c. A RBUS shall be able to monitor and alter parameters, and start or stop a generator.
d. The controller shall have the capability to communicate to a personal computer (IBM or compatible) and appropriate application software
e. A variety of connections shall be available based on requirements:
   1. A single control connection to a PC via USB
   2. Internet connection via Ethernet
f. Generator and transfer switch controls shall be equipped with communications modules capable of connecting to the same communication network.

I Generator Overcurrent and Fault Protection

1. The generator shall be provided with a factory installed, 80% rated line circuit breaker rated at 30 amperes that is UL489 listed. Line circuit breakers shall be sized for the rated ampacity of the loads served by the breaker per the NEC.
2. The circuit breaker(s) shall incorporate a thermo-magnetic trip unit.
3. When GFI is required per the NEC, additional neutrals shall be factory installed, and the alarm indication shall be integrated with the other generator set alarms.

4. Barriers to provide segregation of wiring from an emergency source to emergency loads from all other wiring and equipment, if required by the NEC, shall be provided.

J Alternator

1. The alternator shall be salient-pole, brushless, 2/3-pitch, with 4 bus bar provision for external connections, self-ventilated, with drip-proof construction and amortisseur rotor windings, and skewed for smooth voltage waveform. The ratings shall meet the NEMA standard (MG1-32.40) temperature rise limits. The insulation shall be class H per UL1446 and the varnish shall be a vacuum pressure impregnated, fungus resistant epoxy. Temperature rise of the rotor and stator shall be limited to 130°C Standby. The PMG based excitation system shall be of brushless construction controlled by a digital, three phase sensing, solid- state, voltage regulator. The AVR shall be capable of proper operation under severe nonlinear loads and provide individual adjustments for voltage range, stability and volts-per-hertz operations. The AVR shall be protected from the environment by conformal coating. The waveform harmonic distortion shall not exceed 5% total RMS measured line-to-line at full rated load. The TIF factor shall not exceed 50.
2. The alternator shall have a maintenance-free bearing, designed for 40000 hour B10 life. The alternator shall be directly connected to the flywheel housing with a semi-flexible coupling between the rotor and the flywheel.
3. The generator shall be inherently capable of sustaining at least 300% of rated current for at least 10 seconds under a 3-phase symmetrical short circuit without the addition of separate current-support devices.
4. Motor starting performance and voltage dip determinations shall be based on the complete generator set. The generator set shall be capable of supplying 75 LRKVA for starting motor loads with a maximum instantaneous voltage dip of 35%, as measured by a digital RMS transient recorder in accordance with IEEE Standard 115. Motor starting performance and voltage dip determination that does not account for all components affecting total voltage dip, i.e., engine, alternator, voltage regulator, and governor will not be acceptable. As such, the generator set shall be prototype tested to optimize and determine performance as a generator set system.

K Vibration Isolation

1. Vibration isolators shall be provided between the engine-alternator and heavy-duty steel base.

2.2 Accessories

A. The generator set shall be supplied with a 6-ampere automatic float/equalize battery charger capable of charging both lead-acid and gel-cell type batteries, with the following features:
   i. Automatic 3-stage float to equalization charge
   ii. 1% steady-state voltage regulation from no load to full load over 10% AC input line voltage variation
   iii. Indicator LED lamps for charge state indication (bulk charge/absorption/float)
   iv. Ambient temperature operating range: -40°C to 70°C
   v. Potting for durability and waterproofing
   vi. Short-circuit and reverse polarity protection
   vii. UL 1236 listed
   viii. UL 2200 compliant
   ix. CSA certified
   x. Ring terminals for battery connection
B. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.
C. The air cleaner restriction indicator shall indicate the need for maintenance of the air cleaners.
D. The exhaust piping shall be gas proof, seamless, stainless steel, flexible exhaust bellows and includes the flex exhaust tube and the mounting hardware.
E. Block Heater - The block heater shall be thermostatically controlled, 600 watt, 110-120 VAC, to maintain manufacturers recommended engine coolant temperature to meet the start-up requirements of NFPA 99 and NFPA 110, Level 1.
F. Supply flexible fuel lines to provide a flexible connection between the engine fuel fittings and the fuel supply tank piping and for the fuel return lines from the injector pump per engine manufacturer’s recommendations. Flex line shall have a protective steel wire braid to protect the hose from abrasion.

G. Input/Output Module Board -- Generator controller shall be provided with board providing two analog or digital inputs and 5 digital outputs.
H. The generator set shall be provided with a run relay which shall provide a three-pole, double-throw relay with 10-amp/ 250 VAC contacts to indicate that the generator is running. The run relay dry contacts can be used for energizing or de-energizing customer devices while the generator is running (e.g. louvers, indicator lamps, etc.)

2.3 Source Quality Control

A. Non-Conforming Work

1. To ensure that the equipment has been designed and built to the highest reliability and quality standards, the manufacturer and/or local representative shall be responsible for three separate tests: design prototype tests, final production tests, and site tests.

a. **Design Prototype Tests.** Components of the emergency system, such as the engine/generator set, transfer switch, and accessories, shall not be subjected to prototype tests because the tests are potentially damaging. Rather, similar design prototypes and preproduction models shall be subject to the following tests:
   i. Maximum power (kW)
   ii. Maximum motor starting (kVA) at 35% instantaneous voltage dip.
   iii. Alternator temperature rise by embedded thermocouple and/or by resistance method per NEMA MG1-32.6.
   iv. Governor speed regulation under steady-state and transient conditions.
   v. Voltage regulation and generator transient response.
   vi. Harmonic analysis, voltage waveform deviation, and telephone influence factor.
   vii. Three-phase short circuit tests.
   viii. Alternator cooling air flow.
   ix. Torsional analysis to verify that the generator set is free of harmful torsional stresses.
   x. Endurance testing.

b. **Final Production Tests.** Each generator set shall be tested under varying loads with guards and exhaust system in place. Tests shall include:
   i. Single-step load pickup
   ii. Safety shutdown device testing
   iii. Rated Power @ 0.8 PF
   iv. Maximum power
   v. Upon request, a witness test, or a certified test record sent prior to shipment.

c. **Site Tests.** The manufacturer's distribution representative shall perform an installation check, startup, and building load test. The engineer, regular operators, and the maintenance staff shall be notified of the time and date of the site test. The tests shall include:
   i. Fuel, lubricating oil, and antifreeze shall be checked for conformity to the manufacturer's recommendations, under the environmental conditions present and expected.
   ii. Accessories that normally function while the set is standing by shall be checked prior to cranking the engine. These shall include: block heaters, battery chargers, alternator strip heaters, remote annunciators, etc.
   iii. Generator set startup under test mode to check for exhaust leaks, path of exhaust gases outside the building, cooling air flow, movement during starting and stopping, vibration during operation, normal and emergency line-to-line voltage and frequency, and phase rotation.
   iv. Automatic start by means of a simulated power outage to test remote-automatic starting, transfer of the load, and automatic shutdown. Prior to this test, all transfer switch timers shall be adjusted for proper system coordination. Engine coolant temperature, oil pressure, and battery charge level along with generator set voltage, amperes, and frequency shall be monitored throughout the test.
   v. Load bank testing. The test shall consist of four hours of continuous operation using a portable resistive load bank. Adjust the load bank load to provide one half hour each at zero load, 25 percent, 50 percent, and 75

percent of full load. Followed by two hours of operation at rated standby load. Furnish the portable load bank, all connecting cables, metering equipment, and other equipment or devices required to perform the on-site testing. During the test, readings shall be taken every 15 minutes showing % load, voltage, amps, oil pressure, water temperature, and battery charge.

END OF SECTION

SECTION 263213.2
ENGINE GENERATOR

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Engine Generator Set.
2. Enclosure
3. Related Accessories as specified

B Related Requirements
1. It is the intent of this specification to secure an engine-driven generator set that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure a generator set system that has been tested during design verification, in production, and at the final job site. The generator set will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include prototype test certification and specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.

B Informational Submittal
1. Certificates
   a The generator set shall be listed to UL 2200 or submitted to an independent third party certification process to verify compliance as installed.
2. Test and Evaluation Reports

C Closeout Submittal
1. Maintenance Contracts
2. Operation And Maintenance Data
3. Warranty Documentation
4. Record Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The generator set shall conform to the requirements of the following codes and standards:

a CSA C22.2, No. 14-M91 Industrial Control Equipment.
b EN50082-2, Electromagnetic Compatibility-Generic Immunity Requirements, Part 2: Industrial.
c EN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
d IEC8528 part 4, Control Systems for Generator Sets.
e IEC Std 61000-2 and 61000-3 for susceptibility, 61000-6 radiated and conducted electromagnetic emissions.
f IEEE446 Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications.
g NFPA 70, National Electrical Code, Equipment shall be suitable for use in systems in compliance to Article 700, 701, and 702.
h NFPA 99, Essential Electrical Systems for Health Care Facilities.
i NFPA 110, Emergency and Standby Power Systems. The generator set shall meet all requirements for Level 1 systems. Level 1 prototype tests required by this standard shall have been performed on a complete and functional unit. Component level type tests will not substitute for this requirement.

2. Qualifications
   a The equipment shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
   b The power system shall be produced by a manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year.
3. Manufacturers
   a The power system shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
   b The basis of design is a Kohler model 1750REOZMD. If the supplier wishes to propose equivalent equipment as manufactured by Caterpillar, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:

- • A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply.
- • The weight & outline dimensions of the proposed equipment.

Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. No exceptions to the specifications shall be allowed or included in the certification.

1.4 Warranty

A. Manufacturer's Warranty
1. The generator set shall include a standard warranty covering one (1) year or 2000 hours, whichever occurs first, to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The generator set manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment

1. The generator set shall be a Kohler model 1750REOZMD with a 7M4056 alternator. It shall provide 2188 kVA and 1750 kW when operating at 277/480 volts, 60 Hz, 0.80 power factor. The generator set shall be capable of a 130°C Standby rating while operating in an ambient condition of less than or equal to 77 °F and a maximum elevation of 500 ft above sea level. The standby rating shall be available for the duration of the outage.

B Engine

1. The minimum 65.4 liter displacement engine shall deliver a minimum of 2923 HP at a governed engine speed of 1800 rpm, and shall be equipped with the following:
    a. Electronic isochronous governor capable of 0.25% steady-state frequency regulation
    b. 24-volt positive-engagement solenoid shift-starting motor
    c. 30-ampere automatic battery charging alternator with a solid-state voltage regulation
    d. Positive displacement, full-pressure lubrication oil pump, cartridge oil filters, dipstick, and oil drain
    e. Dry-type replaceable air cleaner elements for normal applications
    f. Engine-driven or electric fuel-transfer pump including fuel filter and electric solenoid fuel shutoff valve capable of lifting fuel
    g. The turbocharged engine shall be fueled by diesel
    h. The engine shall have a minimum of 4 cylinders and be liquid-cooled
2. The engine shall be EPA certified from the factory
3. The generator must accept rated load in one-step.

C Cooling System

1. The engine shall be liquid-cooled by a closed loop, unit mounted radiator rated to operate the generator set at full load at an ambient temperature of 50 degrees C (122 degrees F). The radiator fan and other rotating engine parts shall be guarded against accidental contact.

D Standard Air Cleaner

1. The air cleaner shall provide engine air filtration which meets the engine manufacturer's specifications under typical operating conditions.

E Battery

1. Each genset requires a maintenance free battery which must meet the engine manufactures' specifications for the ambient conditions specified in Part 1 Project Conditions and shall comply with the NFPA requirements for engine cranking cycles. This battery shall be rated according to SAE Standards J-537 with a minimum cold cranking amp of 1150 amps and a minimum reserve capacity of 120 Minutes at 80F. The battery plates shall be constructed of a Calcium-Lead alloy to provide long waterless operation and extended battery life. The battery must contain a handle to aid in lifting and the case must be constructed of polypropylene to resist breakage and extend service life.
2. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.

F Housing

1. Level 2 Sound Attenuated Enclosure

a The generator set shall be supplied with a Sound Attenuated Enclosure, providing a sound pressure of 80.5 dB(A) while the generator is operating at 100% load at 7 meters (23 feet) – free field – using acoustic insulation and acoustic-lined inlet hoods, constructed from a minimum of 0.125 inch thick formed heavy duty aluminum panels. The acoustic insulation used shall meet

UL 94 HF1 flammability classification. The enclosure shall be manufactured from bolted panels to facilitate service, future modifications, or field replacement. The enclosure shall use external vertical air inlet and outlet hoods with 90 degree angles to discharge air up and reduce noise. The enclosure shall have an integral rodent guard and skid end caps and shall have bracing to meet 241 kph (150 mph) wind loading.

b The enclosure components and skid shall be cleaned with a two-stage alkaline cleaning process to remove grease, grit, and grime from parts. Components shall then be subjected to a Zirconium-based conversion coating process to prepare the metal for electrocoat (e-coat) adhesion. All enclosure parts shall receive an 100% epoxy primer electrocoat (e-coat) with high-edge protection. Following the e-coat process, the parts shall be finish coated with powder baked paint for superior finish, durability, and appearance with a Power ArmorTM industrial finish that provides heavy duty durability in harsh conditions, and is fade-, scratch- and corrosion-resistant.

c The enclosure must surpass a 3,000 hour salt spray corrosion test per ASTM B-1117.

d Enclosures will be finished in the manufacturer's standard color.

e The enclosures shall allow the generator set to operate at full load in an ambient temperature of 50°C with no additional derating of the electrical output of the generator set.

f Enclosures shall be equipped with sufficient side and end doors to allow access for operation, inspection, and service of the unit and all options. Minimum requirements are two doors per side. When the generator set controller faces the rear of the generator set, an additional rear facing door is required. Access to the controller and main line circuit breaker shall meet the requirements of the National Electric Code.

g Doors shall be fitted with hinges, hardware, and the doors shall be removable.

h Doors shall be equipped with lockable latches. Locks shall be keyed alike. Door locks shall be recessed to minimize potential of damage to door/enclosure.

i A duct between the radiator and air outlet shall be provided to prevent re-circulation of hot air.

j The complete exhaust system shall be internal to the enclosure.

k The critical silencer shall be fitted with a tailpipe and rain cap.

l The generator set enclosure shall be furnished with the battery charger wired into the load center.

m Basic Electrical Panel –The generator set enclosure shall be furnished with a load center 120/208VAC single phase, 100 amp max w/ main and 12 branch circuits. (1) switch control, (3) AC lights vapor tight and gasketed, and (2) duplex GFI receptacles.

n The generator set enclosure shall be furnished with the block heater wired into the load center.

G Fuel oil storage

1. Double Wall Secondary Containment Sub-base Fuel Tank

a The generator set shall be supplied with a sub-base fuel tank of sufficient capacity to hold a minimum of 24 hours of fuel at 100% loading. No less than 4150 gallons of diesel fuel.

b The sub-base fuel system shall be listed under UL 142, subsection entitled Special Purpose Tanks EFVT category, and will bear their mark of UL Approval according to their particular classification.

c The above ground steel secondary containment rectangular tank for use as a sub base for diesel generators is manufactured and intended to be installed in accordance with the Flammable and Combustible Liquids Code—NFPA 30, the Standard for Installation and Use of Stationary Combustible Engine and Gas Turbines—NFPA 37, and Emergency and Standby Power Systems—NFPA 110.

d The primary tank shall be rectangular in shape and constructed in clam shell fashion to ensure maximum structural integrity and allow the use of a full throat fillet weld.

e Steel Channel Support System. Reinforced steel box channel for generator support, with a load rating of 5,000 Ibs. per generator mounting hole location. Full height gussets at either end of channel and at generator mounting holes shall be utilized.

f Exterior Finish. The sub-base tank exterior finish shall be Power Armor PlusTM, a polyurea-textured rubberized coating.

g Normal venting shall be sized in accordance with the American Petroleum Institute Standard No 2000, Venting Atmospheric and Low Pressure Storage Tanks not less than 1-1/4" (3 cm.) nominal inside diameter.

h The emergency vent opening shall be sized to accommodate the total capacity of both normal and emergency venting and shall be not less than that derived from NFPA 30, table 2-8, and based on the wetted surface area of the tank. The wetted area of the tank shall be calculated on the basis of 100 percent of the primary tank. The vent is to be spring-pressure operated: opening pressure is 0.5/psig and full opening pressure is 2.5 psig. The emergency relief vent is to be sized to accommodate the total venting capacity of both normal and emergency vents.

i There shall be a 2" NPT opening within the primary tank and lockable manual fill cap.

j A direct reading, UL listed, magnetic fuel level gauge with a hermetically sealed, vacuum tested dial, to eliminate fogging, shall be provided.

k A float switch for remote or local annunciation of a (50% standard) low fuel level condition shall be supplied.

H Controller

1. Advanced Power Management 603 (APM603) Generator Set Controller
   a. The generator set controller shall be a microprocessor-based control system that will provide automatic starting, system monitoring, and protection.
   b. The controller shall be mounted on the generator set and shall have integral vibration isolation. The controller shall be prototype and reliability tested to ensure operation in the conditions encountered.
2. Codes and Standards
   a. The generator set controller shall meet NFPA 110 Level 1 requirements and shall include an integral alarm horn as required by NFPA.
   b. The controller shall meet NFPA 99 and NEC requirements.
   c. The controller shall be UL 6200 recognized.
   d. The controller shall meet ASTM B117 (salt spray test).
3. Applicability
   a. The controller shall be a standard offering in the manufacturer's controller product line.
   b. The controller's environmental specification shall be: -40°C to 70°C operating temperature range and 5-95% humidity, non-condensing.
   c. The controller front face shall meet an environmental rating of IP65 when mounted properly on the generator.
4. Controller Buttons, Display, and Components
   a. The generator set controller shall include the following features and functions:
      1 Master Control Push Buttons – the buttons shall be tactile-feel membrane with an indicator light to initiate the following functions:
         1. Run Mode – when in Run mode the generator set shall start.
         2. Off/Reset Mode – when in Off/Reset mode, the generator set shall not accept any remote start commands and shall be capable of resetting all faults, allowing for the restarting of the generator set after a shutdown.
         3. Auto Mode – when in Auto mode, the generator set shall be ready to accept a signal from a remote device.
      2 Control Panel shall include:
         1. Emergency Stop Switch – the latch type stop switch shall be red in color with a “mushroom” type head. Depressing the stop button will immediately stop the generator set and lockout the generator set for any automatic remote starting.
      3 Display – the display shall be a 7.5” TFT color touchscreen.
      4 Fault Light – the controller shall have an annunciator fault light that glows red for

faults and yellow for warnings. The warning light will also illuminate when not in Auto.

5 Alarm Horn – the controller shall provide an alarm horn that sounds when any faults or warnings are present. The horn shall also sound when the controller is not in the Auto mode.

6 Alarm Silence/Lamp Test Button – when this button is held, it shall test all controller lamps. This button will also silence the alarm horn when the unit is not Auto or has a fault.

7 USB Connection – the controller shall have a USB connection port for a storage device that is accessible on the front of the control panel without having to open any electrical enclosure panels on the generator. This connection shall allow for updating of all software and firmware. This connection shall allow for downloading of controller parameter settings and the event log. This connection shall allow for data logging storage. This connection shall allow the ability to capture screenshots.

8 Mini-USB Connection – the controller shall have a mini-USB connection port for a PC connection that is accessible on the front of the control panel without having to open any electrical enclosure panels on the generator. This connection shall allow a certified technician to service the generator controller using a dedicated PC program. The program shall allow for servicing of generator set parameters, faults diagnostics and viewing of controller information. The program shall allow for uploading of software and firmware as well as downloading of parameter settings and the event log.

5. The controller shall have three user level access
    a. User Level – no password required, and user can view all metered values and settings
    b. Operator Level – password required to adjust settings that do not impact the generator
    c. Technician Level – password required to adjust all settings
6. Overview and Favorites
    a. Overview – User shall be able to customize up to 16 gauges for a personalized Home screen that will allow for immediate access to site specific critical data.
    b. Favorites – User shall be able to create their own menu set up with parameters for easy viewing.
7. Load Management
    a. Programmable outputs included to command the connect and disconnect of loads based on generator or paralleling system state:
        1 Under frequency
        2 Start up
        3 Generators online
        4 Priority demands
    b. Supports up to 16 loads per system
        1 Can be used on a single generator system
        2 Can be combined in a paralleling system for a total system load control capability
    c. Simplified load management system view from any generator controller in the system
    d. Load control requires the 4 input/15output module (see available options)
8. Controller Engine Control Features and Functions
    a. User-programmable time delay for engine start.
    b. User-programmable time delay engine cool down.
    c. Capability to start and run at user-adjustable idle speed during warm-up for a selectable time-period until engine reaches preprogrammed temperature, or as supported by ECM (Engine Control Module) equipped engine.
    d. The idle function including engine cooldown at idle speed.
    e. Real-time clock and calendar for time stamping of events.
    f. Output with adjustable timer for an ether injection starting system.
    g. Programmable cyclic cranking that can adjust on time, off time, and number of cycles.
9. Controller Alternator Control Features and Functions

a. Patented High-speed RMS Digital Voltage Regulation – the system shall have integral microprocessor-based voltage regulator system that provides +/- 0.25% voltage regulation no-load to full load with three phase sensing. A separate voltage regulator is not acceptable. The digital voltage regulator shall be applicable to single- or three-phase systems. The system shall be prototype tested and control variation of voltage to frequency. The voltage regulator shall be adjustable at the controller with maximum +/-10% adjustable of nominal voltage.
b. Alternator Thermal Overload Protection – the system shall have integral alternator overload and short circuit protection matched to each alternator for the particular voltage and phase configuration.
c. Overcurrent Protective Device– the system shall have a thermal trip, instantaneous trip and maintenance mode per NEC240.87.

10. Other Control Features and Functions
    a. Event Logging – the controller keeps a record of up to 3,000 events with date and time locally for warning and shutdown faults. This event log can be downloaded onto a USB storage device or onto a PC through the service program.
        1 Event Snapshot – the control system shall capture 15 seconds of critical data around the time a fault or warning. This data shall be viewable on the controller and downloadable.
    b. Data Logging – the controller shall allow customized parameters to be logged based on a start trigger from the controller interface.
        1 The parameters are selectable from all monitored parameters.
        2 The sample period shall be configurable from 1 second to 2 hours.
        3 The collected data shall be stored on the controller or on a USB storage device plugged into the control panel.
        4 The collected data shall be displayed on the screen and available for analysis.
11. Control Monitoring Requirements
    a. The generator set shall have alarms and status indication lamps that show non-automatic status, warning, and shutdown conditions. The controller shall indicate with a warning lamp and or alarm and on the digital display screen any shutdown, warning, or engine fault condition that exists in the generator set system. The following alarms and shutdowns shall exist as a minimum:
        1 All monitored functions must be viewable on the control panel display
        2 The following generator set functions shall be monitored:
            1. All output voltages - single phase, three phase, line to line, and line to neutral, 0.25% accuracy
            2. All single phase and three phase currents, 0.25% accuracy
            3. Output frequency, 0.25% accuracy
            4. Power factor by phase with leading/lagging indication
            5. Total instantaneous kilowatt loading and kilowatts per phase, 0.5% accuracy
            6. kVARS total and per phase, 0.5% accuracy
            7. kVA total and per phase, 0.5% accuracy
            8. kW hours
            9. A display of percent generator set duty level (actual kW loading divided by the kW rating)
        3 Engine parameters listed below shall be monitored: (*are adjustable)
            1. Engine Speed*
            2. Oil Pressure
            3. Coolant Temperature
            4. Runtime Hours
            5. Fuel Pressure
            6. Fuel Consumption Rate
        4 Operational records shall be stored in the control beginning at system startup
            1. Total Run Time Hours

2. Total Loaded Hours
3. Total Unloaded Hours
4. Total kW Hours
5. Controller Hours
6. Controller Run Time Hours
7. ECM Run Time Hours
8. Number of Starts
9. Number of Crank Attempts
10. Last Crank Duration
11. Last Start Runtime Duration
12. Last Start Time of Day
13. Last Start Date (Day)
14. Last Start Date (Month)
15. Last Start Date (Year)
16. Last Stop Time of Day
17. Last Stop Date (Day)
18. Last Stop Date (Month)
19. Last Stop Date (Year)

5 The following operational records shall be resettable for maintenance purposes:
1. Total Run Time Since Maintenance
2. Loaded Hours Since Maintenance
3. Unloaded Hours Since Maintenance
4. kW Hours Since Maintenance
5. Reset Maintenance Records

6 For maintenance and service purposes, the controller shall store and display on demand the information:
1. Generator Model
2. Generator Serial Number
3. ECM Serial Number
4. Alternator Part Number
5. Engine Model Number
6. Engine Serial Number
7. Controller Serial Number
8. Firmware Version

7 The controller shall support a variety of maintenance parameters including:
1. Last Start Time o Day
2. ScreenshotCount
3. ECM Runtime Hours
4. Controller Runtime Hours
5. Last Stop Date (Month)
6. Last Start Time of Day
7. Last Stop Date (Day)
8. Last Start Date (Day)
9. Number of Starts
10. Last Stop Time of Day
11. Last Stop Time of Day
12. Controller Hours
13. Number of Crank Attempts
14. Last Crank Duration
15. Last Start Runtime Duration
16. Last Start Time of Day
17. Last Start Time of Day
18. Last Start Date (Month)
19. Last Start Date (Year)

20. Last Stop Time of Day
21. Last Stop Time of Day
22. Last Stop Date (Year)

12. Generator Set Warning, Shutdown Alarm and Status
    a. The generator set shall have alarms and status indication lamps that show Non-Automatic Status, Warning, and Shutdown conditions. The controller shall indicate with a warning lamp and/or alarm, and on the digital display screen any shutdown, warning, or engine fault condition that exists in the generator set system. The following alarms and shutdowns shall exist as a minimum:
        1 OverCrank Shutdown
        2 UnderFrequency Shutdown
        3 OverFrequency Shutdown
        4 OverPower Shutdown
        5 Low Oil Pressure Shutdown
        6 High Coolant Temperature Shutdown
        7 Local Emergency Stop Shutdown
        8 Remote Emergency Stop Shutdown
        9 OverSpeed Shutdown
        10 Loss ECM Comms Shutdown
        11 ECM Mismatch Shutdown
        12 High Oil Temperature Shutdown
        13 Alternator Protection Shutdown
        14 Protective Relay Shutdown OverPower
        15 Protective Relay Shutdown OverCurrent
        16 Protective Relay Shutdown Reverse VAR
        17 Protective Relay Shutdown ReversePower
        18 UnderVoltage Shutdown (L-L, L-N, each phase)
        19 OverVoltage Shutdown (L-L, L-N, each phase)
        20 OverCurrent Shutdown
        21 Excitation Overvoltage Shutdown
        22 Low Fuel Level Shutdown
        23 Low Coolant Level Shutdown
        24 Generator Over Power Shutdown
    b. Conditions resulting in generator warning (generator will continue to operate):
        1 UnderFrequency Warning
        2 OverFrequency Warning
        3 OverPower Warning
        4 Low Oil Pressure Warning
        5 Low Coolant Temperature Warning
        6 High Coolant Temperature Warning
        7 Low Battery Voltage Warning
        8 High Battery Voltage Warning
        9 Battery Charger Fault Warning
        10 High Oil Temperature Warning
        11 GFCI Warning
        12 UnderVoltage Warning (L-L, L-N, each phase)
        13 Overvoltage Warning (L-L, L-N, each phase)
        14 OverCurrent Warning
        15 High Fuel Level Warning
        16 Low Fuel Level Warning
        17 Critically Low Fuel Level Warning
        18 Generator Over Power Warning

13. Inputs and Outputs
    a. Standard Dedicated User Inputs – the controller shall have dedicated inputs for:

1 Two-Wire Input
1. Remote Engine Start
2 Digital Input
1. Auxiliary Fault (Shutdown)
2. Auxiliary Warning
3. Battery Charger Fault
4. Breaker Close
5. Breaker Trip
6. Coolant Temperature
7. Excitation Over Voltage
8. Fuel Level
9. Fuel Leak Alarm
10. Low Fuel Level Switch
11. Ground Fault Relay
12. Remote Emergency Stop
13. Local Emergency Stop
3 Analog Voltage Input – Scalable Up To +- 10 VDC
1. Speed Bias
2. Voltage Bias

b. Standard Dedicated User Outputs – the controller shall have dedicated inputs for:
1 Relay Driver Output
1. Run
2. Crank
3. Horn
4. Common Failure
5. Common Warning
6. High Coolant Temperature
7. Close Breaker
8. Trip Breaker

c. Optional Configurable User Inputs and Outputs
1 User Configurable Inputs
1. 2 Analog, 0-5 VDC
2. 4 Dry Contact Digital
2 User Configurable Relay Outputs
1. 14 NO/NC Relays
2. 1 Common Fault Relay

d. PLC-like capability for applying logic to customize generator system behavior.

14. Communications
a. CAN
1 If the generator set engine is equipped with an ECM, the controller shall communicate with the ECM for control, monitoring, diagnosis, and meet SAE J1939 standards.

b. Modbus®
1 Non-isolated for RSA III
2 Isolated for Modbus devices
3 Isolated for paralleling communication
4 RJ45 for Modbus TCP, SNMP, and BACnet

c. Simple Network Management Protocol (SNMP)
1 Industry standard SNMP communication shall be available.
2 The controller shall support SNMP communication via an RJ-45 Ethernet connection.

d. BACnet®
1 Industry standard BACnet® communication shall be available.
2 The controller shall support BACnet® communication via an RJ-45 Ethernet

connection.

e. Communication Connections
    1 All communication connections shall be accessible in a dedicated customer connection area that is separated from factory wiring into the controller to prevent field connections from interfering with factory wiring.
    2 The controller shall not require any additional hardware to support Modbus®, SNMP or BACnet® communication.

15. Paralleling
    a. The controller shall be capable of paralleling with other generators with the same controller through a dedicated communication network between the controllers and onboard paralleling capabilities.
    b. The controller shall support paralleling up to eight generators on a common bus.
    c. The controller shall support paralleling a single generator with utility using kW, kVAR, and Power Factor settings.
    d. Synchronization
        1 The controller shall support onboard synchronization to allow matching of voltage, frequency and phase before closing a circuit breaker or contactor to connect the generator to the bus.
        2 The controller shall use first-on logic to determine which generator will close to the dead bus first.
        3 The controller shall support 3 common forms of synchronizing, Automatic (synch and close breaker), Sync-check (synch-no closure) and Permissive (no active synch, allow manual close if in synch).
        4 The controller shall announce a fail to synch fault when synchronization is not achieved within the programmed time delay.
        5 The controller shall actively maintain synchronizing efforts to achieve synchronization even after the time delay has expired.
        6 The controller shall be capable of actively displaying the synchronizing parameter values for both the generator and the bus when synchronizing; voltage, frequency and phase.
        7 The controller shall be capable of displaying the phase rotation (ABC or CBA) for both the generator and the bus and prevent closure to the bus when phase rotation does not match the generator.
    e. Load Sharing
        1 The controller shall actively share real and reactive power amongst all generators on the common bus, on a per-unit or percentage basis.
        2 The controller shall support soft load and unload of the generator.
        3 The controller shall be capable of operating with droop control.
    f. Circuit Breaker/Contactor Control
        1 The controller shall be capable of operating a circuit breaker or contactor to apply electricity to the parallel electrical bus.
        2 The controller system shall have a normally closed contact (fail safe) that will keep the breaker tripped until such conditions are met to allow closure.
        3 The controller system shall have a normally open contact to provide an energizing signal to close the circuit breaker.
        4 The controller system shall have normally open contact for control of a contactor.
        5 The controller will announce a Fail to Close warning when closure is not detected after 1 closure attempt.
        6 The controller will announce a First on Fail warning when closure is not detected after 1 closure attempt when closing to a dead bus.
        7 The controller will announce a Close Attempts Fault when the number of attempts exceeds the setting (max attempts).
        8 The controller will monitor current to detect a failure to open the generator circuit breaker.

9 The controller will keep the generator running until the generator circuit breaker is seen open in order to keep the bus live to prevent other devices from closing to this bus without synchronizing.

16. Generator Management
    a. Allows the start and stop of generators based on load demand or state of other generators including:
        1. Start Power
        2. Stop Power
        3. Start Accumulator
        4. Stop Accumulator
        5. Total Online Capacity
        6. Total Available Capacity
        7. Total Bus Power
        8. Total Bus Capacity
        9. Negotiated Order
        10. Stopped by Gen Management
        11. Start Command
    b. The controller shall have a programmable disconnect point (kW) below which point the controller shall automatically trip the generator circuit breaker.
17. Protective Relays
    a. The controller shall provide a standard set of protective relay functions with programmable limits and time delays
        1 Over Voltage (59)
            1. User adjustable range – 100% to 130%
            2. User adjustable range time delay – 0 to 120 seconds
        2 Under Voltage (27)
            1. User adjustable range – 70% to 100%
            2. User adjustable time delay – 0 to 120 seconds
        3 Over Frequency (81O)
            1. User adjustable range – 100% to 140%
            2. User adjustable time delay – 0 to 120 seconds
        4 Reverse Power (32R)
            1. User adjustable range – 0% to 50%
            2. User adjustable time delay – 0 to 120 seconds
        5 Over Power (32O)
            1. User adjustable range – 90% to 150%
            2. User adjustable time delay – 0 to 120 seconds
        6 Loss of Field (40 Reverse VARS)
            1. User adjustable range – 10% to 100%
            2. User adjustable time delays – 0 to 120 seconds
        7 Over Current with Voltage Range
            1. User adjustable range – 100% to 200%
            2. User adjustable time delay – 0 to 120 seconds

I Generator Overcurrent and Fault Protection

1. The generator shall be provided with a factory installed, 100% rated line circuit breaker rated at 3000 amperes that is UL489 listed. Line circuit breakers shall be sized for the rated ampacity of the loads served by the breaker per the NEC.
2. The circuit breaker(s) shall incorporate an electronic trip unit.
3. When GFI is required per the NEC, additional neutrals shall be factory installed, and the alarm indication shall be integrated with the other generator-set alarms.
4. Barriers to provide segregation of wiring from an emergency source to emergency loads from all other wiring and equipment, if required by the NEC, shall be provided.

J Alternator

1. The alternator shall be salient-pole, brushless, 2/3-pitch, with 4 bus bar provision for external connections, self-ventilated, with drip-proof construction and amortisseur rotor windings, and skewed for smooth voltage waveform. The ratings shall meet the NEMA standard (MG1-32.40) temperature rise limits. The insulation shall be class H per UL1446 and the varnish shall be a vacuum pressure impregnated, fungus resistant epoxy. Temperature rise of the rotor and stator shall be limited to 130°C Standby. The PMG based excitation system shall be of brushless construction controlled by a digital, three phase sensing, solid- state, voltage regulator. The AVR shall be capable of proper operation under severe nonlinear loads and provide individual adjustments for voltage range, stability and volts-per-hertz operations. The AVR shall be protected from the environment by conformal coating. The waveform harmonic distortion shall not exceed 5% total RMS measured line-to-line at full rated load. The TIF factor shall not exceed 50.
2. The alternator shall have a maintenance-free bearing, designed for 40000 hour B10 life. The alternator shall be directly connected to the flywheel housing with a semi-flexible coupling between the rotor and the flywheel.
3. The generator shall be inherently capable of sustaining at least 300% of rated current for at least 10 seconds under a 3-phase symmetrical short circuit without the addition of separate current-support devices.
4. Motor starting performance and voltage dip determinations shall be based on the complete generator set. The generator set shall be capable of supplying 7200 LRKVA for starting motor loads with a maximum instantaneous voltage dip of 35%, as measured by a digital RMS transient recorder in accordance with IEEE Standard 115. Motor starting performance and voltage dip determination that does not account for all components affecting total voltage dip, i.e., engine, alternator, voltage regulator, and governor will not be acceptable. As such, the generator set shall be prototype tested to optimize and determine performance as a generator set system.

K Vibration Isolation

1. Vibration isolators shall be provided between the engine-alternator and heavy-duty steel base.

2.2 Accessories

A. The generator set shall be supplied with a 10-ampere automatic float/equalize battery charger capable of charging both lead-acid and ni-cad type batteries, with the following features:
   i. Automatic 3-stage float to equalization charge
   ii. Voltage regulation of 1% from no to full load over 10% AC input line voltage variations
   iii. Battery charging current Ammeter and battery voltage voltmeter with 5% full-scale accuracy
   iv. LED lamp for power ON indication
   v. Current limited during engine cranking, short circuit, and reverse polarity conditions
   vi. Temperature compensated for ambient temperatures for -40°C to 60°C
   vii. Alarm circuit board featuring alarm contacts for low battery voltage, high battery voltage, and battery charger malfunction.
   viii. UL 1012 Listed
   ix. CSA Certified
B. Battery rack and battery cables capable of holding the manufacturer's recommended batteries shall be supplied.
C. The air cleaner restriction indicator shall indicate the need for maintenance of the air cleaners.
D. The generator set shall be furnished with rodent guards to prevent rodent intrusion and protect internal components.
E. The generator set shall be supplied with a common failure relay to provide means of signaling fault and/or shutdown conditions.
   i. The common failure relay shall remotely signal auxiliary faults, emergency stop, high engine temperature, low oil pressure, overcrank, and over speed via one single-pole, double-throw relay with 10 amps at 120 VAC contacts.

ii. The relay contacts shall be gold flashed to allow use of low current draw devices (100ma @ 28VDC min.).
iii. Once energized the relay shall remain latched until the system is reset by the main controller switch.

F. The generator set shall be provided with a run relay which shall provide a three-pole, double-throw relay with 10-amp/ 250 VAC contacts to indicate that the generator is running. The run relay dry contacts can be used for energizing or de-energizing customer devices while the generator is running (e.g. louvers, indicator lamps, etc.)

G. 10-Relay Dry Contact Kit. The controller shall be provided with a 10-Relay dry contact kit with ten programmable for-C contact for remote indication of digital conditions and alarms.

H. The exhaust piping shall be gas proof, seamless, stainless steel, flexible exhaust bellows and includes the flex exhaust tube and the mounting hardware.

I. Block Heater - The block heater shall be thermostatically controlled, 9,000 watt, 208 VAC - single phase, to maintain manufacturers recommended engine coolant temperature to meet the start-up requirements of NFPA 99 and NFPA 110, Level 1.

J. Supply flexible fuel lines to provide a flexible connection between the engine fuel fittings and the fuel supply tank piping and for the fuel return lines from the injector pump per engine manufacturer's recommendations. Flex line shall have a protective steel wire braid to protect the hose from abrasion.

2.3 Source Quality Control

A. Non-Conforming Work

1. To ensure that the equipment has been designed and built to the highest reliability and quality standards, the manufacturer and/or local representative shall be responsible for three separate tests: design prototype tests, final production tests, and site tests.

a. **Design Prototype Tests.** Components of the emergency system, such as the engine/generator set, transfer switch, and accessories, shall not be subjected to prototype tests because the tests are potentially damaging. Rather, similar design prototypes and preproduction models shall be subject to the following tests:

i. Maximum power (kW)
ii. Maximum motor starting (kVA) at 35% instantaneous voltage dip.
iii. Alternator temperature rise by embedded thermocouple and/or by resistance method per NEMA MG1-32.6.
iv. Governor speed regulation under steady-state and transient conditions.
v. Voltage regulation and generator transient response.
vi. Harmonic analysis, voltage waveform deviation, and telephone influence factor.
vii. Three-phase short circuit tests.
viii. Alternator cooling air flow.
ix. Torsional analysis to verify that the generator set is free of harmful torsional stresses.
x. Endurance testing.

b. **Final Production Tests.** Each generator set shall be tested under varying loads with guards and exhaust system in place. Tests shall include:

i. Single-step load pickup
ii. Safety shutdown device testing
iii. Rated Power @ 0.8 PF
iv. Maximum power
v. Upon request, a witness test, or a certified test record sent prior to shipment.

c. **Site Tests.** The manufacturer's distribution representative shall perform an installation check, startup, and building load test. The engineer, regular operators, and the maintenance staff shall

be notified of the time and date of the site test. The tests shall include:

i. Fuel, lubricating oil, and antifreeze shall be checked for conformity to the manufacturer's recommendations, under the environmental conditions present and expected.

ii. Accessories that normally function while the set is standing by shall be checked prior to cranking the engine. These shall include: block heaters, battery chargers, alternator strip heaters, remote annunciators, etc.

iii. Generator set startup under test mode to check for exhaust leaks, path of exhaust gases outside the building, cooling air flow, movement during starting and stopping, vibration during operation, normal and emergency line-to-line voltage and frequency, and phase rotation.

iv. Automatic start by means of a simulated power outage to test remote-automatic starting, transfer of the load, and automatic shutdown. Prior to this test, all transfer switch timers shall be adjusted for proper system coordination. Engine coolant temperature, oil pressure, and battery charge level along with generator set voltage, amperes, and frequency shall be monitored throughout the test.

v. Load bank testing. The test shall consist of four hours of continuous operation using a portable resistive load bank. Adjust the load bank load to provide one half hour each at zero load, 25 percent, 50 percent, and 75 percent of full load. Followed by two hours of operation at rated standby load. Furnish the portable load bank, all connecting cables, metering equipment, and other equipment or devices required to perform the on-site testing. During the test, readings shall be taken every 15 minutes showing % load, voltage, amps, oil pressure, water temperature, and battery charge.

SECTION 263213.3
AUTOMATIC TRANSFER SWITCH

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Automatic transfer switch
2. Related Accessories as specified

B Related Requirements
1. It is the intent of this specification to secure an automatic transfer switch that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure an automatic transfer switch that has been tested during design verification, in production, and at the final job site. The automatic transfer switch will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.

B Closeout Submittals
1. Operation And Maintenance Data
2. Warranty Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The automatic transfer switch shall conform to the requirements of the following codes and standards:
   a UL 1008 - Standard for Transfer Switch Equipment
   b IEC 947-6-1 Low-voltage Switchgear and Control gear; Multifunction equipment; Automatic Transfer Switching EquipmentEN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
   c NFPA 70 - National Electrical Code

d NFPA 99 - Essential Electrical Systems for Health Care Facilities
e NFPA 110 - Emergency and Standby Power Systems
f IEEE Standard 446 - IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications
g NEMA Standard ICS 10-2005, Electromechanical AC Transfer Switch Equipment.
h EN61000-4-4 Fast Transient Immunity Severity Level 4
i EN61000-4-5 Surge Immunity Class 4 (voltage sensing and programmable inputs only)

k IEC Specifications for EMI/EMC Immunity (CISPR 11, IEC 1000-4-2, IEC 1000-4-3, IEC 1000-4-4, IEC 1000-4-5, IEC 1000-4-6, IEC 1000-4-8, IEC 1000-4-11)
l CSA C22.2 No. 178 certification

2. Qualifications
   a The automatic transfer switch shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
   b A manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year shall produce the automatic transfer switch.

3. Manufacturers
   a The automatic transfer switch shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
   b The manufacturer shall maintain a national service organization of employing personnel located throughout the contiguous United States. The Service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.
   c The manufacturer shall maintain records of each switch, by serial number, for a minimum of 20 years.
   d The basis of design is a Kohler model KCP-AMTC-0150S. If the supplier wishes to propose equivalent equipment as manufactured by Russelectric, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:
      - A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply.
      - The weight & outline dimensions of the proposed equipment.
   e Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. No exceptions to the specifications shall be allowed or included in the certification.

1.4 Warranty or Bond

A Manufacturer's Warranty

1. The ATS shall include a standard warranty covering one (1) year, to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The ATS manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed

on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment

1. Furnish and install an automatic transfer switches system(s) with 3-Pole/4-Wire, Solid Neutral, 150 Amps, 480V/60Hz. Each automatic transfer shall consist of an inherently double throw power transfer switch mechanism and a microprocessor controller to provide automatic operation. All transfer switches and controllers shall be the products of the same manufacturer.

B Manufacturer

1. Automatic transfer switches shall be Kohler Any Breaker Rated - Programmed Transition KCP-AMTC-0150S. Any alternate shall be submitted for approval to the consulting engineer at least 10 days prior to bid date.

C Construction

1. The transfer switch shall be electrically operated and mechanically held with double throw construction, and operated by a momentarily energized solenoid-driven mechanism.
2. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.
3. The switch shall be positively locked and unaffected by momentarily outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.
4. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand and close-on capability and be protected by separate arcing contacts.
5. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. Switches rated 800 amperes and higher shall have front removable and replaceable contacts. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.
6. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources, are not acceptable.
7. For two and three pole switches, where neutral conductors are to be solidly connected as shown on the plans, a neutral conductor plate with fully rated AL-CU pressure connectors shall be provided.
8. For four pole switches with a switching neutral, where neutral conductors must be switched as shown on the plans, the contactor shall be provided with fully rated switched neutral transfer contacts. Overlapping neutral contacts may be used as an alternative.

D Enclosure

3. The ATS shall be furnished in a NEMA 3R enclosure.
4. All standard door mounted switches and indicating LEDs shall be integrated into a flush-mounted, interface membrane or equivalent in the enclosure door for easy viewing & replacement. The panel shall be capable of having a manual locking feature to allow the user to lockout all membrane mounted control switches to prevent unauthorized tampering. This cover shall be mounted with hinges and have a latch that may be padlocked. The membrane panel shall be suitable for mounting by others when furnished on open type units.

2.2 Operation

A Controls

1. A four line, 20 character LCD display and dynamic 4 button keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters. Operational parameters shall also be available for viewing and control through the communications interface port or USB. The following parameters shall only be adjustable via a password protected programming on the controller:
   a Nominal line voltage and frequency
   b Single or three phase sensing
   c Operating parameter protection
   d Transfer operating mode configuration (Standard transition, Programmed transition, or Closed transition)

B Voltage and Frequency

1. Voltage (all phases) and frequency on both the normal and emergency sources shall be continuously monitored. Voltage on both normal and emergency sources and frequency on the emergency sources shall be adjustable with the following pickup, dropout, and trip setting capabilities (values shown as % of nominal unless otherwise specified):

	Parameter	Dropout/Trip	Pickup/Reset
a	Under voltage	75 to 98%	85 to 100%
b	Over voltage	06 to 135%	95 to 100% of trip
c	Under frequency	95 to 99%	80 to 95%
d	Over frequency	01 to 115%	105 to 120%
e	Voltage unbalance	5 to 20%	3 to 18%

2. Repetitive accuracy of all settings shall be within ± 0.5% over an operating temperature range of -20°C to 70°C.
3. An adjustable dropout time for transient voltage and frequency excursions shall be provided. The time delays shall be 0.1 to 9.9 seconds for voltage and .1 to 15 seconds for frequency.
4. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad, remotely via the communications interface port or USB.
5. The controller shall be capable of sensing the phase rotation of both the normal and emergency sources. The source shall be considered unacceptable if the phase rotation is not the preferred rotation selected (ABC or BAC). Unacceptable phase rotation shall be indicated on the LCD; the service required LED and the annunciation through the communication protocol and dry contacts. In addition, the phase rotation sensing shall be capable of being disabled, if required.
6. The controller shall be capable of detecting a single phasing condition of a source, even though a voltage may be regenerated by the load. This condition is a loss of phase and shall be considered a failed source.
7. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage on all 3 phases (phase to phase and phase to neutral), frequency, and phase rotation.

C Time Delays

1. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals. Capability shall be provided to extend this time delay to 60 minutes by providing an external 12 or 24 VDC power supply.
2. A time delay shall be provided on transfer to the emergency source, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.
3. A time delay shall be provided on re-transfer to normal. The time delays shall be adjustable from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.
4. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.
5. A time delay activated output signal shall also be provided to drive external relay(s) for selective load disconnect and reconnect control. The controller shall be capable of controlling a maximum of 9 individual output time delays to step loads on after a transfer occurs. Each output may be

individually programmed for their own time delay of up to 60 minutes. Each sequence shall be independently programmed for transferring from normal to emergency and transferring from emergency to normal.

6. All time delays shall be adjustable in 1 second increments.
7. All time delays shall be adjustable by using the display and keypad, with a remote device connected to the communications interface port or USB.
8. Each time delay shall be identified and a dynamic countdown shall be shown on the display. Active time delays can be viewed with a remote device connected to the communications interface port or USB.

D Additional Features

1. The controller shall have 3 levels of security. Level 1 shall allow monitoring of settings and parameters only. The Level 1 shall be capable of restricted with the use of a lockable cover. Level 2 shall allow test functions to be performed and Level 3 shall allow setting of all parameters.
2. The display shall provide for the test functions, allowed through password security. The test function shall be load, no load or auto test. The auto test function shall request an elapsed time for test. At the completion of this time delay the test shall be automatically ended and a retransfer sequence shall commence. All loaded tests shall be immediately ended and retransfer shall occur if the emergency source fails and the normal source is acceptable.
3. A contact closure shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.
4. Auxiliary contacts shall be provided consisting of a minimum of two contacts, closed when the ATS is connected to the normal source and two contacts closed, when the ATS is connected to the emergency source.
5. LED indicating lights shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).
6. LED indicating lights shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal (green) and emergency sources (red), as determined by the voltage, frequency and phase rotation sensing trip and reset settings for each source.
7. A membrane switch shall be provided on the membrane panel to test all indicating lights and display when pressed.
8. Provide the ability to select “commit/no commit to transfer" to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
9. Terminals shall be provided for a remote contact which opens to signal the ATS to transfer to emergency and for remote contacts which closes to inhibit transfer to emergency and/or retransfer to normal. Both of these inhibit signals can be activated through the keypad, communications interface port or USB. A “not-in-auto" LED shall indicate anytime the controller is inhibiting transfer from occurring.
10. The programmed transition feature shall control the transfer so that mechanism is placed in a load disconnect position for an adjustable period of time, giving motor and transformer loads an opportunity to decay to acceptable levels. The programmed transition feature shall be specifically designed for and be the product of the ATS manufacturer. The programmed transition setting shall be capable of being enabled or disabled from the user interface, communications interface port or USB. The controller shall include a built-in time delay for programmed transition operation. This time shall be adjustable from the user interface. The default value shall be 1 second and shall be adjustable from 0 to 60 minutes.
11. A time based load control feature shall be available to allow the prioritized addition and removal of loads based during transfer. This feature may be enabled for either or both sources. The user shall be able to control up to nine loads with independent timing sequences for pre and post transfer delays in either direction of transfer.

12. The controller shall provide 2 inputs for external controls that can be programmed from the following values:
    a Common fault, Remote test, Inhibit transfer, Low battery voltage, Peak shave, Time delay bypass, Load shed forced to OFF position (Programmed transition only)
13. The controller shall provide two form "C" contact outputs rated for up to 12A @ 240VAC or 2A @ 480VAC that can be programmed from the following values:
    a Aux switch open, Transfer switch aux contact fault, Alarm silenced, Alarm active, I/O communication loss, Contactor position, Exercise active, Test mode active, Fail to transfer, Fail to acquire standby source, Source available, Phase rotation error, Not in automatic mode, Common alarm, In phase monitor sync, Load bank control active, Load control active, Maintenance mode active, Non-emergency transfer, Fail to open/close, Loss of phase, Over/under voltage, Over/under frequency, Voltage unbalance, Start signal, Peak shave active, Preferred source supplying load, Standby source supplying load
14. The controller shall be capable of expanding the number of inputs and outputs with additional modules.
15. Optional input/output modules shall be furnished which mount on the inside of the enclosure to facilitate ease of connections.
16. Engine Exerciser - The controller shall provide an internal engine exerciser. The engine exerciser shall allow the user to program up to 21 different exercise routines based on a calendar mode. For each routine, the user shall be able to:
    a Enable or disable the routine
    b Enable or disable transfer of the load during routine.
    c Set the start time, time of day, day of week, week of month (1st, 2nd, 3rd, 4th, alternate or every)
    d Set the duration of the run.
    e At the end of the specified loaded exercise duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. All loaded exercises shall be immediately ended and retransfer shall occur if the standby source fails. The next exercise period shall be displayed on the main screen with the type of exercise, time and date. The type of exercise and the time remaining shall be display when the exercise is active. It shall be possible of ending the exercise event with a single button push.
17. Date and time - The date shall automatically adjust for leap year and the time shall have the capability of automatically adjusting for daylight saving and standard times.
18. System Status - The controller shall have a default display the following on:
    a System status
    b Date, time and type of the next exercise event
    c Average voltage of the preferred and standby sources
    d Scrolling through the displays shall indicate the following:
        i) Line to line and line to neutral voltages for both sources
        ii) Frequency of each source
        iii) Load current for each phase
        iv) Single or three phase operation
        v) Type of transition
        vi) Preferred source
        vii) Commit or no commit modes of operation
        viii) Source/source mode
        ix) In phase monitor enable/disable
        x) Phase rotation
        xi) Date and time
19. Controllers that require multiple screens to determine system status or display “coded" system status messages, which must be explained by references in the operator’s manual, are not permissible.
20. Self-Diagnostics - The controller shall contain a diagnostic screen for the purpose of detecting system errors. This screen shall provide information on the status input signals to the controller which may be preventing load transfer commands from being completed.

21. Communications Interface - The controller shall be capable of interfacing, through a standard communication with a network of transfer switches and generators. It shall be able to be connected via an RS-485 serial communication (up to 4000 ft. direct connect or multi-drop configuration). This module shall allow for seamless integration of existing or new communication transfer devices and generators.
22. The transfer switch shall also be able to interface to 3rd party applications using Modbus RTU open standard protocols utilizing Modbus register maps. Proprietary protocols shall not be acceptable.
23. The controller shall contain a USB port for use with a software diagnostic application available to factory authorized personnel for downloading the controller's parameters and settings; exercise event schedules; maintenance records and event history. The application can also adjust parameters on the controller.
24. Data Logging - The controller shall have the ability to log data and to maintain the last 2000 events, even in the event of total power loss. The following events shall be time and date stamped and maintained in a non-volatile memory. The controller shall be able to display up to the last 99 events. The remaining events shall be accessible via the communications interface port or USB.
    a Event Logging
        i) Data, date and time indication of any event
    b Statistical Data
        i) Total number of transfers*
        ii) Total number of fail to transfers*
        iii) Total number of transfers due to preferred source failure*
        iv) Total number of minutes of operation*
        v) Total number of minutes in the standby source*
        vi) Total number of minutes not in the preferred source*
        vii) Normal to emergency transfer time
        viii) Emergency to normal transfer time
        ix) System start date
        x) Last maintenance date
        xi) * The statistical data shall be held in two registers. One register shall contain data since start up and the second register shall contain data from the last maintenance reset.
25. External DC Power Supply - An optional provision shall be available to connect up to two external 12/24 VDC power supply to allow the LCD and the door mounted control indicators to remain functional when both power sources are dead for extended periods of time. This module shall contain reverse battery connection indication and circuit protection.

2.3 Accessories

A. Padlockable User Interface Cover. The user interface cover shall protect the controller user interface from the environment.
B. Controller Disconnect Switch. A Logic disconnect switch shall be mounted inside the enclosure, and shall disconnect power to controller without disconnecting the load. The logic disconnect switch shall disconnect utility power to the controller during maintenance and service without disconnecting power to the load. The switch has two positions, auto and disconnect. The disconnect position shall disconnect the voltage sensing leads for the utility source (A, B, C, N). It is assumed that the user shall disable the generator by placing the controller in the OFF position.
C. Standard I/O Module. The standard I/O Module shall have two programmable inputs and six programmable outputs.
    i. Inputs Available 2
        1. Contact Closure
        2. Current 5mA Max.
        3. Connection Type Terminal Strip
        4. Wire Size #14-24 AWG

5. Max Distance 700 feet

ii. Outputs Available 6

1. Contact Type Form C (SPDT)
2. Contact Rating 2A @ 30VDC, 500mA @ 125VAC
3. Connection Type Terminal Strip
4. Wire Size #14-24

2.4 Source Quality Control

A Test and Inspection

1. Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification including compliance with the above codes and standards. The certification shall identify, by serial number(s), the equipment involved. No exceptions to the specifications, other than those stipulated at the time of the submittal, shall be included in the certification.
2. The ATS manufacturer shall be certified to ISO 9001 International Quality Standard and the manufacturer shall have third party certification verifying quality assurance in design/development, production, installation and servicing in accordance with ISO 9001.

END OF SECTION

SECTION 263213.4
AUTOMATIC TRANSFER SWITCH

PART 1 GENERAL

1.1 Summary

A This section includes the following items from a single supplier:
1. Automatic transfer switch

B Related Requirements
1. It is the intent of this specification to secure an automatic transfer switch that has been prototype tested, factory built, production-tested, and site-tested together with all accessories necessary for a complete installation as shown on the plans and drawings and specified herein.
2. Any exceptions to the published specifications shall be subject to the approval of the engineer and submitted minimum 10 days prior to the closing of the bid with a line by line summary description of all the items of compliance, any items that have been are omitted or have been taken exception to, and a complete description of all deviations.
3. It is the intent of this specification to secure an automatic transfer switch that has been tested during design verification, in production, and at the final job site. The automatic transfer switch will be a commercial design and will be complete with all of the necessary accessories for complete installation as shown on the plans, drawings, and specifications herein. The equipment supplied shall meet the requirements of the National Electrical Code and applicable local codes and regulations.
4. All equipment shall be new and of current production by an international, power system manufacturer of generators, transfer switches, and paralleling switchgear. The manufacturer shall be a supplier of a complete and coordinated system. There will be single-source responsibility for warranty, parts, and service through a factory-authorized representative with factory-trained technicians.

1.2 Submittals

A Action Submittals
1. Product Data
   a The submittal shall include specification sheets showing all standard and optional accessories to be supplied; schematic wiring diagrams, dimension drawings, and interconnection diagrams identifying by terminal number each required interconnection between the generator set, the transfer switch, and the remote annunciator panel if it is included elsewhere in these specifications.
2. Shop Drawings

B Closeout Submittals
1. Operation And Maintenance Data
2. Warranty Documentation

1.3 Quality Assurance

A Regulatory Agency
1. The automatic transfer switch shall conform to the requirements of the following codes and standards:
   a UL 1008 - Standard for Transfer Switch Equipment

b IEC 947-6-1 Low-voltage Switchgear and Control gear; Multifunction equipment; Automatic Transfer Switching EquipmentEN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
c NFPA 70 - National Electrical Code
d NFPA 99 - Essential Electrical Systems for Health Care Facilities
e NFPA 110 - Emergency and Standby Power Systems
f IEEE Standard 446 - IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications
g NEMA Standard ICS 10-2005, Electromechanical AC Transfer Switch Equipment.
h EN61000-4-4 Fast Transient Immunity Severity Level 4
i EN61000-4-5 Surge Immunity Class 4 (voltage sensing and programmable inputs only)
j IEEE 472 (ANSI C37.90A) Ring Wave Test
k IEC Specifications for EMI/EMC Immunity (CISPR 11, IEC 1000-4-2, IEC 1000-4-3, IEC 1000-4-4, IEC 1000-4-5, IEC 1000-4-6, IEC 1000-4-8, IEC 1000-4-11)
l CSA C22.2 No. 178 certification

2. Qualifications
   a The automatic transfer switch shall be produced by a manufacturer who is ISO 9001 certified for the design, development, production and service of its complete product line.
   b A manufacturer who has produced this type of equipment for a period of at least 10 years and who maintains a service organization available twenty-four hours a day throughout the year shall produce the automatic transfer switch.

3. Manufacturers
   a The automatic transfer switch shall be furnished by a single manufacturer who shall be responsible for the design, coordination, and testing of the complete system. The entire system shall be installed as shown on the plans, drawings, and specifications herein.
   b The manufacturer shall maintain a national service organization of employing personnel located throughout the contiguous United States. The Service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.
   c The manufacturer shall maintain records of each switch, by serial number, for a minimum of 20 years.
   d The basis of design is a Kohler model KEP-DMTC-4000S-TQ. If the supplier wishes to propose equivalent equipment as manufactured by Russelectric, all additional costs associated with re-engineering and mechanical & electrical modifications to the installation will be at the contractor's expense. The contractor must also supply the details below with his proposal:
      - A line-by-line clarification of the specification marked with "D" for deviation; "E" for exception, and "C" for comply.
      - The weight & outline dimensions of the proposed equipment.
   e Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification. No exceptions to the specifications shall be allowed or included in the certification

1.4 Field or Site Conditions

A Ambient Conditions
1. Automatic transfer switch shall operate in the following conditions without any damage to the unit or its loads.
   a Ambient Temperature: -4 to 158 Degrees F
   b Relative Humidity: 5% to 95% noncondensing

1.5 Warranty or Bond

A Manufacturer’s Warranty

1. The ATS shall include a standard warranty covering one (1) year to guarantee against defective material and workmanship in accordance with the manufacturer's published warranty from the date of initial startup.
2. The ATS manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly engage in maintenance contract programs to perform preventive maintenance and service on equipment similar to that specified. A service agreement shall be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the owner's maintenance log of repairs made and functional tests performed on all systems.

PART 2 PRODUCTS

2.1 Equipment

A Equipment

1. Furnish and install an automatic transfer switches system(s) with 3-Pole / 4-Wire, Solid Neutral, 4000 Amps, 480V/60Hz. Each automatic transfer shall consist of an inherently double throw power transfer switch mechanism and a microprocessor controller to provide automatic operation. All transfer switches and controllers shall be the products of the same manufacturer.

B Manufacturer

1. Automatic transfer switches shall be Kohler Service Entrance Rated - Programmed Transition KEP-DMTC-4000S-TQ. Any alternate shall be submitted for approval to the consulting engineer at least 10 days prior to bid date.

C Construction

1. The transfer switch shall be electrically operated and mechanically held with double throw construction, and operated by a momentarily energized solenoid-driven mechanism.
2. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.
3. The switch shall be positively locked and unaffected by momentarily outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.
4. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand and close-on capability and be protected by separate arcing contacts.
5. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. Switches rated 800 amperes and higher shall have front removable and replaceable contacts. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.
6. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources, are not acceptable.
7. For two and three pole switches, where neutral conductors are to be solidly connected as shown on the plans, a neutral conductor plate with fully rated AL-CU pressure connectors shall be provided.
8. For four pole switches with a switching neutral, where neutral conductors must be switched as shown on the plans, the contactor shall be provided with fully rated switched neutral transfer contacts. Overlapping neutral contacts may be used as an alternative.

D Enclosure

1. The ATS shall be furnished in a NEMA 3R enclosure.
2. All standard door mounted switches and indicating LEDs shall be integrated into a flush-mounted, interface membrane or equivalent in the enclosure door for easy viewing & replacement. The panel shall be capable of having a manual locking feature to allow the user to lockout all membrane mounted control switches to prevent unauthorized tampering. This cover shall be mounted with hinges and have a latch that may be padlocked. The membrane panel shall be suitable for mounting by others when furnished on open type units.

2.2 Operation

A Controls

1. A four line, 20 character LCD display and dynamic 4 button keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters. Operational parameters shall also be available for viewing and control through the communications interface port or USB. The following parameters shall only be adjustable via a password protected programming on the controller:
   a Nominal line voltage and frequency
   b Single or three phase sensing
   c Operating parameter protection
   d Transfer operating mode configuration (Standard transition, Programmed transition, or Closed transition)

B Voltage and Frequency

1. Voltage (all phases) and frequency on both the normal and emergency sources shall be continuously monitored, with the following pickup, dropout, and trip setting capabilities (values shown as % of nominal unless otherwise specified):

	Parameter	Dropout/Trip	Pickup/Reset
a	Under voltage	75 to 98%	85 to 100%
b	Over voltage	106 to 135%	95 to 100% of trip
c	Under frequency	95 to 99%	80 to 95%
d	Over frequency	01 to 115%	105 to 120%
e	Voltage unbalance	5 to 20%	3 to 18%

2. Repetitive accuracy of all settings shall be within ± 0.5% over an operating temperature range of -20°C to 70°C.
3. An adjustable dropout time for transient voltage and frequency excursions shall be provided. The time delays shall be 0.1 to 9.9 seconds for voltage and .1 to 15 seconds for frequency.
4. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad, remotely via the communications interface port or USB.
5. The controller shall be capable of sensing the phase rotation of both the normal and emergency sources. The source shall be considered unacceptable if the phase rotation is not the preferred rotation selected (ABC or BAC). Unacceptable phase rotation shall be indicated on the LCD; the service required LED and the annunciation through the communication protocol and dry contacts. In addition, the phase rotation sensing shall be capable of being disabled, if required.
6. The controller shall be capable of detecting a single phasing condition of a source, even though a voltage may be regenerated by the load. This condition is a loss of phase and shall be considered a failed source.
7. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage on all 3 phases (phase to phase and phase to neutral), frequency, and phase rotation.

C Time Delays

1. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals. Capability shall be provided to extend this time delay to 60 minutes by providing an external 12 or 24 VDC power supply.

2. A time delay shall be provided on transfer to the emergency source, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.
3. A time delay shall be provided on re-transfer to normal. The time delays shall be adjustable from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.
4. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.
5. A time delay activated output signal shall also be provided to drive external relay(s) for selective load disconnect and reconnect control. The controller shall be capable of controlling a maximum of 9 individual output time delays to step loads on after a transfer occurs. Each output may be individually programmed for their own time delay of up to 60 minutes. Each sequence shall be independently programmed for transferring from normal to emergency and transferring from emergency to normal.
6. All time delays shall be adjustable in 1 second increments.
7. All time delays shall be adjustable by using the display and keypad, with a remote device connected to the communications interface port or USB.
8. Each time delay shall be identified and a dynamic countdown shall be shown on the display. Active time delays can be viewed with a remote device connected to the communications interface port or USB.

D Additional Features

1. The controller shall have 3 levels of security. Level 1 shall allow monitoring of settings and parameters only. The Level 1 shall be capable of restricted with the use of a lockable cover. Level 2 shall allow test functions to be performed and Level 3 shall allow setting of all parameters.
2. The display shall provide for the test functions, allowed through password security. The test function shall be load, no load or auto test. The auto test function shall request an elapsed time for test. At the completion of this time delay the test shall be automatically ended and a retransfer sequence shall commence. All loaded tests shall be immediately ended and retransfer shall occur if the emergency source fails and the normal source is acceptable.
3. A contact closure shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.
4. Auxiliary contacts shall be provided consisting of a minimum of two contacts, closed when the ATS is connected to the normal source and two contacts closed, when the ATS is connected to the emergency source.
5. LED indicating lights shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).
6. LED indicating lights shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal (green) and emergency sources (red), as determined by the voltage, frequency and phase rotation sensing trip and reset settings for each source.
7. A membrane switch shall be provided on the membrane panel to test all indicating lights and display when pressed.
8. Provide the ability to select “commit/no commit to transfer" to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
9. Terminals shall be provided for a remote contact which opens to signal the ATS to transfer to emergency and for remote contacts which closes to inhibit transfer to emergency and/or retransfer to normal. Both of these inhibit signals can be activated through the keypad, communications interface port or USB. A “not-in-auto" LED shall indicate anytime the controller is inhibiting transfer from occurring.
10. The programmed transition feature shall control the transfer so that mechanism is placed in a load disconnect position for an adjustable period of time, giving motor and transformer loads and

opportunity to decay to acceptable levels. The programmed transition feature shall be specifically designed for and be the product of the ATS manufacturer. The programmed transition setting shall be capable of being enabled or disabled from the user interface, communications interface port of USB. The controller shall include a built-in time delay for programmed transition operation. This time shall be adjustable from the user interface. The default value shall be 1 second and shall be adjustable from 0 to 60 minutes.

11. A time based load control feature shall be available to allow the prioritized addition and removal of loads based during transfer. This feature may be enabled for either or both sources. The user shall be able to control up to nine loads with independent timing sequences for pre and post transfer delays in either direction of transfer.
12. The controller shall provide 2 inputs for external controls that can be programmed from the following values:
    a. Common fault, Remote test, Inhibit transfer, Low battery voltage, Peak shave, Time delay bypass, Load shed forced to OFF position (Programmed transition only)
13. The controller shall provide two form "C" contact outputs rated for up to 12A @ 240VAC or 2A @ 480VAC that can be programmed from the following values:
    a. Aux switch open, Transfer switch aux contact fault, Alarm silenced, Alarm active, I/O communication loss, Contactor position, Exercise active, Test mode active, Fail to transfer, Fail to acquire standby source, Source available, Phase rotation error, Not in automatic mode, Common alarm, In phase monitor sync, Load bank control active, Load control active, Maintenance mode active, Non-emergency transfer, Fail to open/close, Loss of phase, Over/under voltage, Over/under frequency, Voltage unbalance, Start signal, Peak shave active, Preferred source supplying load, Standby source supplying load
14. The controller shall be capable of expanding the number of inputs and outputs with additional modules.
15. Optional input/output modules shall be furnished which mount on the inside of the enclosure to facilitate ease of connections.
16. Engine Exerciser - The controller shall provide an internal engine exerciser. The engine exerciser shall allow the user to program up to 21 different exercise routines based on a calendar mode. For each routine, the user shall be able to:
    a. Enable or disable the routine
    b. Enable or disable transfer of the load during routine.
    c. Set the start time, time of day, day of week, week of month (1st, 2nd, 3rd, 4th, alternate or every)
    d. Set the duration of the run.
    e. At the end of the specified loaded exercise duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. All loaded exercises shall be immediately ended and retransfer shall occur if the standby source fails. The next exercise period shall be displayed on the main screen with the type of exercise, time and date. The type of exercise and the time remaining shall be display when the exercise is active. It shall be possible of ending the exercise event with a single button push.
17. Date and time - The date shall automatically adjust for leap year and the time shall have the capability of automatically adjusting for daylight saving and standard times.
18. System Status - The controller shall have a default display the following on:
    a. System status
    b. Date, time and type of the next exercise event
    c. Average voltage of the preferred and standby sources
    d. Scrolling through the displays shall indicate the following:
        1) Line to line and line to neutral voltages for both sources
        2) Frequency of each source
        3) Single or three phase operation
        4) Type of transition
        5) Preferred source
        6) Commit or no commit modes of operation

7) Source/source mode
8) In phase monitor enable/disable
9) Phase rotation
10) Date and time

19. Controllers that require multiple screens to determine system status or display “coded" system status messages, which must be explained by references in the operator’s manual, are not permissible.
20. Self-Diagnostics - The controller shall contain a diagnostic screen for the purpose of detecting system errors. This screen shall provide information on the status input signals to the controller which may be preventing load transfer commands from being completed.
21. Communications Interface - The controller shall be capable of interfacing, through a standard communication with a network of transfer switches and generators. It shall be able to be connected via an RS-485 serial communication (up to 4000 ft. direct connect or multi-drop configuration). This module shall allow for seamless integration of existing or new communication transfer devices and generators.
22. The transfer switch shall also be able to interface to 3rd party applications using Modbus RTU open standard protocols utilizing Modbus register maps. Proprietary protocols shall not be acceptable.
23. The controller shall contain a USB port for use with a software diagnostic application available to factory authorized personnel for downloading the controller’s parameters and settings; exercise event schedules; maintenance records and event history. The application can also adjust parameters on the controller.
24. Data Logging - The controller shall have the ability to log data and to maintain the last 2000 events, even in the event of total power loss. The following events shall be time and date stamped and maintained in a non-volatile memory. The controller shall be able to display up to the last 99 events. The remaining events shall be accessible via the communications interface port or USB.

a Event Logging
1) Data, date and time indication of any event

b Statistical Data
1) Total number of transfers*
2) Total number of fail to transfers*
3) Total number of transfers due to preferred source failure*
4) Total number of minutes of operation*
5) Total number of minutes in the standby source*
6) Total number of minutes not in the preferred source*
7) Normal to emergency transfer time
8) Emergency to normal transfer time
9) System start date
10) Last maintenance date
11) * The statistical data shall be held in two registers. One register shall contain data since start up and the second register shall contain data from the last maintenance reset.

25. External DC Power Supply - An optional provision shall be available to connect up to two external 12/24 VDC power supply to allow the LCD and the door mounted control indicators to remain functional when both power sources are dead for extended periods of time. This module shall contain reverse battery connection indication and circuit protection.

2.3 Service Entrance Switch

A. A two position disconnect switch shall be provided to disconnect the normal source and inhibit during maintenance or emergency.
   i. The controller shall display SERVICE DISCONNECT
   ii. Further transfer in inhibited after transfer to Emergency

B. Molded case circuit breakers (MCCB) shall be 80% rated. Molded case switches (MCSW) shall be 100% rated. Insulated case circuit breakers and insulated case switches shall be 100% rated.
C. The transfer switch mechanism shall provide a simple means of manual operation using only components, which are permanently affixed, in the operating position.
D. The unit shall permit manual operation of the transfer switch while the system is energized and carrying rated load. Transfer switches, which require all sources of power to be de-energized prior to manual load transferring, shall not be acceptable.
E. A control circuit isolation plug shall be provided to isolate all control circuitry inside the transfer switch to facilitate maintenance procedures. When isolated, there shall be no voltage present on the control circuitry.
F. Cable Connections: Provision shall be made to terminate all incoming and outgoing power cables and grounding conductors. Connections shall be via screw type cable lugs.
G. The Power Switching units shall be fix-mounted, utilize fully enclosed contacts and their withstand/closing rating shall be equal to or exceed the required withstand rating of the complete mechanism.
H. The service entrance rated automatic transfer switch shall automatically transfer the load to the generator supply in the event of a utility supply failure and return the load to the utility supply upon restoration. The transfer switch shall incorporate and isolating mechanism and over current protection on the utility supply to allow operation s the main services disconnect in accordance with NEC requirements. The transfer switch power switching devices shall be mechanically and electrically interlocked to prevent the utility and generator supplies from being interconnected.
I. Insulated Case Circuit Breaker Service Entrance Rated Transfer Switches
    i. The normal connection shall be provided with an electronic trip, 100% rated insulated case breaker with a 4000 amp current rating.
J. The ATS shall be able to completely disconnect power from the site with the single push of a single button or a single throw of a single switch.

2.4 Accessories

A. Padlockable User Interface Cover. The user interface cover shall protect the controller user interface from the environment.
B. Controller Disconnect Switch. A Logic disconnect switch shall be mounted inside the enclosure, and shall disconnect power to controller without disconnecting the load. The logic disconnect switch shall disconnect utility power to the controller during maintenance and service without disconnecting power to the load. The switch has two positions, auto and disconnect. The disconnect position shall disconnect the voltage sensing leads for the utility source (A, B, C, N). It is assumed that the user shall disable the generator by placing the controller in the OFF position.
C. Programmable Exerciser. A programmable exerciser shall be supplied to allow programming of up to 56 on/off events.
D. Surge Protection Device (SPD). A SPD shall be provided for protection of the normal source supply. The SPD shall be provided with replaceable cartridges to allow replacement of components without disconnecting the normal source supply. A 90dB audible alarm shall be provided as standard. A terminal block for remote contacts shall be provided. The SPD shall provide L-L, L-N, L-G, and N-G lines protection. LED status indicators shall be available on the face of the device to indicate operational state. The SPD device shall be listed to UL 1449, Edition 3.
E. Standard I/O Module. The standard I/O Module shall have two programmable inputs and six programmable outputs.
    a. Inputs Available 2
        i. Contact Closure
        ii. Current 5mA Max.
        iii. Connection Type Terminal Strip
        iv. Wire Size #14-24 AWG
        v. Max Distance 700 feet
    b. Outputs Available 6

i. Contact Type Form C (SPDT)
ii. Contact Rating 2A @ 30VDC, 500mA @ 125VAC
iii. Connection Type Terminal Strip
iv. Wire Size #14-24

2.5 Source Quality Control

A Test and Inspection

1. Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification including compliance with the above codes and standards. The certification shall identify, by serial number(s), the equipment involved. No exceptions to the specifications, other than those stipulated at the time of the submittal, shall be included in the certification.
2. The ATS manufacturer shall be certified to ISO 9001 International Quality Standard and the manufacturer shall have third party certification verifying quality assurance in design/development, production, installation and servicing in accordance with ISO 9001.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 264110

DISCONNECT SWITCHES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Fusible and non-fusible disconnect switches.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. National Electric Manufacturer's Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment.
   2. KS 1-2001 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).

C. Underwriters Laboratories Inc. (UL):
   1. 20 - General-Use Snap Switches.
   2. 98 - Enclosed and Dead-Front Switches.
   3. 508 - Standard for Industrial Control Equipment.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. Safety switches and disconnect switches are to be considered synonymous.

1.4 SYSTEM DESCRIPTION

A. Provide heavy-duty type disconnect switches as indicated on the Drawings and specified in the Contract Documents.

B. Provide disconnect switches with the number of poles, voltage, current, short circuit, and horsepower ratings as required by the load and the power system.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Manufacturer.
   2. Manufacturer's specifications and description.
   3. Ratings:
      a. Voltage.
      b. Current.
      c. Horsepower.
      d. Short circuit rating.
   4. Fused or non-fused.
   5. NEMA enclosure type.

6. Dimensions:
    a. Height.
    b. Width.
    c. Depth.
7. Weight.
8. Cross-referenced to the disconnect schedule indicated on the Drawings.

C. Shop drawings:
1. Manufacturer's installation instructions:
    a. Indicate application conditions and limitations of use stipulated by product testing agency specified under Quality Assurance, Regulatory Requirements below.
    b. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.
2. Identify motor or equipment served by each switch; indicate nameplate inscription.

D. Installation instructions:
1. Provide anchorage instructions and requirement based on the seismic requirements at the Project Site as specified in the Common Work Results for Electrical section and calculations:
    a. Stamped by a professional engineer registered in the state where the Project is being constructed.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Regulatory requirements:
1. NEMA KS1- Enclosed and Miscellaneous Distribution Switches (600 V Maximum).
2. UL 98 - Enclosed and Dead-Front Switches.

C. Disconnect switches shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. After successful review of the initial fault current study, submit complete equipment submittal.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Schneider Electric.
   2. Eaton.
   3. General Electric.
   4. Siemens.
   5. Appleton.
   6. Crouse-Hinds.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Switch mechanism:
   1. Quick-make, quick-break heavy-duty operating mechanisms:
      a. Provisions for padlocking the switch in the Off position.
      b. A minimum of 90-degree handle travel position between Off and On positions:
         1) Provide handle position indicators to identify the handle position.
      c. Full cover interlock to prevent opening of the switch door in the On position and to prevent closing the switch mechanism with the door open:
         1) With an externally operated override.

B. Switch interior:
   1. Switch blades visible when the switch is Off and the cover is open.
   2. Lugs:
      a. Front accessible.
      b. Removable.
      c. UL listed for 60/75-degree Celsius copper conductors.
   3. Current carrying parts completely plated to resist corrosion.
   4. Removable arc suppressors to facilitate easy access to line side lugs.
   5. Furnish equipment ground kits for every switch.

C. Fused switches:
   1. UL approved for field conversion from standard Class H fuse spacing to Class J fuse spacing:
      a. Ratings 100 amperes through 600 amperes at 240 volts.
      b. Ratings 30 amperes through 600 amperes at 600 volts.
      c. Provide spring reinforced and plated fuse clips.

D. Ratings:
   1. UL horsepower rated for AC or DC with the rating not less than the load served.
   2. Current:
      a. 30 to 1,200 amperes.
   3. Voltage:

a. 250 volts AC, DC.
b. 600 volts (30 A to 200 A, 600 volts DC).

4. Poles:
   a. 2, 3, 4, and 6 poles.
5. UL listed short circuit ratings:
   a. 10,000 RMS symmetrical amperes when used with or protected by Class H or K fuses (30-600 amperes).
   b. 200,000 RMS symmetrical amperes when used with or protected by Class R or J fuses (30-600 amperes employing appropriate fuse rejection).
   c. 200,000 RMS symmetrical amperes when used with or protected by Class L fuses (800-1,200 amperes).
6. Where not indicated on the Drawings, provide switches with the NEMA ratings specified in Section 16050 - Common Work Results for Electrical for the installed location.

E. Size, fusing and number poles as indicated on the Drawings or as required:
   1. Provide solid neutral where indicated on the Drawings.

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES

A. Disconnect switches to have provisions for a field installable “B” type electrical interlock for position indication as indicated on the Drawings.

B. Disconnect switches to have provisions for a field installed insulated groundable neutral kit as indicated on the Drawings.

C. NEMA Type 7 and 9 enclosures furnished with drain and breather kit when used in outdoor applications.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
   1. Use Myers hubs or bolt-on hubs for all conduit penetrations on NEMA Type 12, Type 4, and Type 4X enclosures.

2. Provide all mounting brackets, stands, supports and hardware as required:
    a. Match finish and materials for all brackets, stands, and hardware with the switch installed.
    b. Provide adequate supporting pillar(s) for disconnect switches in accordance with the approved seismic calculations, and locate aboveground or above decks, where there is no structural wall or surface for box.
3. When possible, mount switches rigidly to exposed building structure or equipment structural members:
    a. For NEMA Type 4 and Type 4X locations, maintain a minimum of 7/8 inch air space between the enclosure and supporting surface.
    b. When mounting on preformed channel, position channel vertically so that water may freely run behind the enclosure.
4. Provide a nameplate for each disconnect switch:
    a. Provide per requirements specified in the Identification for Electrical Systems section.
    b. Identify voltage, circuit, fuse size, and equipment served on the nameplate.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 26412

LOW VOLTAGE MOLDED CASE CIRCUIT BREAKERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Low voltage molded case circuit breakers.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. National Electrical Manufacturers Association (NEMA):
   1. AB 3. - Molded Case Circuit Breakers and Their Application.

C. Underwriter's Laboratories (UL):
   1. 489 - Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures.
   2. 943 - Ground Fault Circuit Interrupters.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. In accordance with UL 489.

1.4 SYSTEM DESCRIPTION

A. Molded case thermal magnetic or motor circuit protector type circuit breakers as indicated on the Drawings and connected to form a completed system.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Catalog cut sheets.
   2. Manufacturer's time-current curves for all molded case circuit breakers furnished.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Low voltage molded case circuit breakers shall be UL listed and labeled.

1.7 DELIVERY, STORAGE AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton.
   2. General Electric Co.
   3. Schneider Electric.
   4. ABB.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. General:
   1. Conforming to UL 489.
   2. Operating mechanism:
      a. Quick-make, quick-break, non-welding silver alloy contacts.
      b. Common Trip, Open and Close for multi-pole breakers such that all poles open and close simultaneously.
      c. Mechanically trip free from the handle.
      d. Trip indicating handle - automatically assumes a position midway between the manual ON and OFF positions to clearly indicate the circuit breaker has tripped.
      e. Lockable in the "OFF" position.
   3. Arc extinction:
      a. In arc chutes.
   4. Voltage and current ratings:
      a. Minimum ratings as indicated on the Drawings.
      b. Minimum frame size 100A.
   5. Interrupting ratings:
      a. Minimum ratings as indicated on the Drawings.
      b. Not less than the rating of the assembly (panelboard, switchboard, motor control center, etc.).

B. Motor circuit protectors:
   1. Instantaneous only circuit breaker as part of a listed combination motor controller.
   2. Each pole continuously adjustable in a linear scale with ‘LO’ and ‘HI’ settings factory calibrated.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Terminals:
   1. Line and load terminals suitable for the conductor type, size, and number of conductors in accordance with UL 489.

B. Case:
   1. Molded polyester glass reinforced.
   2. Ratings clearly marked.

C. Trip units:
   1. Provide thermal magnetic or solid-state trip units as indicated on the Drawings.
   2. Thermal magnetic:
      a. Instantaneous short circuit protection.
      b. Inverse time delay overload.
      c. Ambient or enclosure compensated by means of a bimetallic element.
   3. Solid state:
      a. With the following settings as indicated on the Drawings.
         1) Adjustable long time current setting.
         2) Adjustable long time delay.
         3) Adjustable short time pickup.
         4) Adjustable short time delay.
         5) Adjustable instantaneous pickup.
         6) Adjustable ground fault pickup as indicated on the Drawings.
         7) Adjustable ground fault delay as indicated on the Drawings.

D. Molded case circuit breakers for use in panelboards:
   1. Bolt-on type:
      a. Plug-in type breakers are not acceptable.
   2. Ground fault trip devices as indicated on the Drawings.

2.7 ACCESSORIES(NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Test breakers in accordance with:
   1. UL 489.
   2. Manufacturer’s standard testing procedures.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. Install breakers to correspond to the accepted shop drawings.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Adjust trip settings in accordance with Protective Device Coordination Study as accepted by the Engineer and in accordance with manufacturer's recommendations.

B. Adjust motor circuit protectors in accordance with NEC and the manufacturer's recommendation based on the nameplate values of the installed motor.

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 264130

LOW VOLTAGE INSULATED CASE CIRCUIT BREAKERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Low voltage insulated case circuit breakers.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. American National Standards Institute (ANSI):
   1. C37.13 - Standard for Low Voltage AC Power Circuit Breakers Used in Enclosures.
   2. C37.16 - Low Voltage Power Circuit Breakers and AC Power Circuit Breakers - Preferred Ratings, Related Requirements, and Application Recommendations.
   3. C37.17 - Standard for Trip Devices for AC and General Purpose DC Low Voltage Power Circuit Breakers.
   4. C37.50 - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures.

C. National Electrical Manufacturers Association (NEMA):
   1. Standard No. AB 1. - Molded Case Circuit Breakers, Molded Case Switches, and Circuit Breaker Enclosures. (Adopted as UL 489).

D. Underwriter’s Laboratories (UL):
   1. UL 1066 - Standard for Safety for Low Voltage AC and DC Power Circuit Breakers Used in Enclosures.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Insulated case circuit breakers as indicated on the Drawings and connect to form a completed system:
   1. Used to open and close a circuit, and to open a circuit automatically on a predetermined overload or overcurrent, without damage to itself when properly applied within its ratings.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Catalog cut sheets.
   2. Manufacturer’s time-current curves for all trip devices furnished.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Insulated case circuit breakers shall be UL listed and labeled.

1.7 DELIVERY, STORAGE AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton.
   2. General Electric Co.
   3. Schneider Electric.
   4. ABB.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. Operating mechanism:
   1. Manual or electric as indicated on the Drawings:
      a. Manual operation:
         1) The circuit breaker closing spring is energized by no more than 6 operations of the constant-force charging handle.
         2) Pushing the "CLOSE (ON)" button will close the breaker's contacts and pushing the "OPEN (OFF)" button will open the breaker's contacts.
         3) The opening springs are automatically charged when the breaker is closed.
      b. Quick-make, quick-break, non-welding silver alloy contacts.
      c. Common trip, open and close for multi-pole breakers such that all poles open and close simultaneously.
      d. Mechanically trip free from the handle.

e. Trip indicating handles - automatically assumes a position midway between the manual ON and OFF positions to clearly indicate the circuit breaker has tripped.
f. Lockable in the "OFF" position.

B. Arc extinction:
1. In arc chutes.

C. Voltage and current ratings:
1. Minimum ratings as indicated on the Drawings.

D. Interrupting ratings:
1. Minimum ratings as indicated on the Drawings.
a. Modify as required to meet requirements of Contractor’s Short Circuit Fault Analysis as specified in the Electrical System Studies section.
2. Matching the rating of the assembly.

E. Circuit breaker mounting shall be as indicated on the Drawings and consist of one of the following configurations:
1. Draw out type capable of being racked to the disconnect position with the door closed:
a. Interlocks shall be provided to prevent connecting or disconnecting the circuit breaker unless the breaker is in the open position.
b. The breaker shall be prevented from being closed during any racking operation.
c. A test position shall be provided to permit operating the breaker while it is disconnected from the power circuit.
d. Equipped with interlocks to discharge stored energy spring before the circuit breaker is withdrawn from the cell.
2. Plug-in (stationary) type capable of being removed with the main bus power off.
3. Individually mounted in a separate enclosure.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Terminals:
1. Line and load terminals suitable for the conductor type, size, and number of conductors in accordance with UL 489.

B. Case:
1. Molded polyester glass reinforced.
2. Double level of insulation between primary current-carrying parts and operating personnel.
3. Ratings clearly marked.
4. Open contact indication.
5. Closed contact indication.
6. Charging spring charged indication.
7. Charging spring discharged indication.
8. Open pushbutton.
9. Close pushbutton.
10. Retractable charging handle.

C. Trip units:
1. Microprocessor based with positive action flux-shifting trip device and a solid-state type with the following functions:
a. Adjustable ampere setting:
1) To determine the value of current that the breaker will carry indefinitely.

b. Adjustable long time delay:
    1) Varies the time it will take the breakers to trip under sustained overload.
c. Adjustable short time pickup:
    1) Controls the level of high current the breaker will carry for short periods.
d. Adjustable short time delay:
    1) Controls the length of time the breaker will carry a high current without tripping.
e. Adjustable instantaneous pickup:
    1) Controls level at which immediate tripping of breaker occurs.
f. Adjustable ground fault pickup:
    1) Controls the level at which the breaker will trip under a ground fault condition.
g. Adjustable ground fault delay:
    1) Controls the time that a ground fault can exist without tripping the breaker.
h. Long time pickup indicator:
    1) Provides a visual indication that the breaker is experiencing an overload condition.

D. Fault indicators:
    1. Powered from a lithium battery.
    2. LED indicators for:
        a. Short circuit fault trip on the instantaneous feature.
        b. Ground fault trip.

2.7 ACCESSORIES

A. Provide circuit breakers with the following accessories as indicated on the Drawings and required for proper operation of the control system:
    1. Electrical operator (field convertible by adding a plug-in motor operator):
        a. The circuit breaker closing spring is energized by an electric motor-driven charging mechanism.
    2. Neutral current sensor for use when the ground-fault option is selected on 3-phase, 4-wire 480Y/277 VAC power systems.
    3. Anti-pump provision to prevent closing or reclosing operations when used with a normally closed contact in the ‘close’ circuit.
    4. Auxiliary switch to signal the breaker’s opened or closed status.
    5. Terminal blocks.
    6. Operations counter.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL

A. Test breakers in accordance with:
    1. UL 489.
    2. Manufacturer’s standard testing procedures.

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. Install breakers to correspond to the accepted shop drawings.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Adjust trip settings in accordance with Protective Device Coordination Study as accepted by the Engineer and in accordance with the manufacturer’s recommendations.

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 264220

MOTOR STARTERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Motor starters and contactors.

1.2 REFERENCES

A. As specified in Section the Common Work Results for Electrical section.

B. International Electrotechnical Commission (IEC):
   1. 60 947-4 - Low-Voltage Switchgear and Control Gear.
   2. 801-1 - Electromagnetic Compatibility for Industrial-Process Measurement and Control Equipment - Part 1: General Information.

C. National Electrical Manufacturer's Association (NEMA):
   1. ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays Rated 600 V.

D. Underwriters Laboratories (UL):
   1. 508 - Standard for Industrial Control Equipment.
   2. 508A - Standard for Industrial Control Panels.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions and abbreviations:
   1. FVNR: Full voltage non-reversing.
   2. Overload relay class: A classification of an overload relay time current characteristic by means of a number which designates the maximum time in seconds at which it will operate when carrying a current equal to 600 percent of its current rating.

1.4 SYSTEM DESCRIPTION

A. General requirements:
   1. Starters for motor control centers, individual enclosed starters, or control panels.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section:
   1. Submit motor starter data with equipment submittal.

B. Product data:
   1. Manufacturer.
   2. Catalog cut sheets.
   3. Technical information.
   4. Complete nameplate schedule.
   5. Complete bill of material.

6. List of recommended spare parts.
7. Confirmation that the overload relay class for each starter meets the requirements of the equipment and motor supplier.
8. Electrical ratings:
    a. Phase.
    b. Wire.
    c. Voltage.
    d. Ampacity.
    e. Horsepower.
9. Furnish circuit breaker submittals as specified in the Low Voltage Molded Case Circuit Breakers section.

C. Shop drawings:
1. Elementary and schematic diagrams:
    a. Provide 1 diagram for every starter and contactor.
    b. Indicate wire numbers for all control wires on the diagrams:
        1) Wire numbering as specified in the Identification for Electrical Systems section.
    c. Indicate interfaces with other equipment on the drawings.

D. Operation and maintenance manuals:
1. Submit complete operating and maintenance instructions presenting full details for care and maintenance of equipment furnished or installed under this Section. Including but not limited to:
    a. Electrical ratings:
        1) Phase.
        2) Wire.
        3) Voltage.
        4) Ampacity.
    b. Complete bill of material.
    c. Manufacturer’s operating and maintenance instructions starter and/or contactor component parts, including:
        1) Protective devices (fuses, breakers, overload relays, heater elements, etc.).
        2) Pilot devices.
    d. Complete renewal parts list.
    e. As-built drawings:
        1) Furnish as-built drawings for each starter and contactor indicating final:
            a) Wire numbers.
            b) Interfaces with other equipment.
        2) 11-inch by 17-inch format.

E. Certifications.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Regulatory requirements:
1. All starters and components shall be UL listed and labeled:
    a. UL 508 - Industrial Control Equipment.
    b. UL 508A - Industrial Control Panels.
2. NEMA ICS 2 - Industrial Control and System Controllers; Contactors and Overload Relays Rated: 600 Volts.
3. Combination starters shall be UL listed and labeled.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE

A. Spare parts:
   1. Provide the following spare parts, suitably packaged and labeled with the corresponding equipment number:
      a. 1 spare fuse of each size and type per starter.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. NEMA starters and contactors:
      a. Allen-Bradley.
      b. Schneider Electric.
      c. General Electric.
      d. Eaton.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS

A. General:
   1. Provide combination type starters with motor circuit protector or thermal-magnetic circuit breaker and control power transformer with ratings as indicated on the Drawings.
   2. NEMA size, design, and rated:
      a. NEMA Size 1 minimum.
   3. Coordinate motor circuit protector, thermal magnetic circuit breaker, or fusible disconnect, and overload trip ratings with nameplate horsepower and current ratings of the installed motor:

a. If motors provided are different in horsepower rating than those specified or indicated on the Drawings, provide starters coordinated to the actual motors furnished.

4. Provide starters NEMA Size 2 and larger with arc quenchers on load breaking contacts.
5. Mount extended overload reset buttons to be accessible for operation without opening starter enclosure door.

B. Full voltage starters (FVNR):
1. Across-the-line full voltage magnetic starters.
2. Rated for 600 volts.
3. Electrical characteristics as indicated on the Drawings.
4. Provide positive, quick-make, quick-break mechanisms, pad lockable enclosure doors.
5. Furnish starter with bi-metallic solid state electronic overload relays.
6. Double-break silver alloy contacts.
7. Reversing starters provided with both mechanical and electrical interlocks to prevent line shorts and energizing both contactors simultaneously.

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS

A. Molded case circuit breakers:
1. Circuit breaker type and ratings as indicated on the Drawings.
2. Provide as specified in the Low Voltage Molded Case Circuit Breakers section.

B. Contactors:
1. NEMA size as indicated on the Drawings.
2. Electrically held:
a. For lighting loads designed to withstand the initial inrush currents of ballast and lamp loads.
3. Factory adjusted and chatter free.
4. Auxiliary contacts:
a. Contact ratings as per NEMA A 600 rating:
1) Auxiliary contacts rated 10 amps at 600 volts.
b. Provide all contacts indicated on the Drawings, and any additional contacts required for proper operation.
c. Provide at least 1 normally open and 1 normally closed spare auxiliary contact.
5. Constructed in accordance with the following standards:
a. UL 508.
b. IEC 947-4:
1) Type 1 coordination when protected by a circuit breaker.
2) Type 2 coordination when protected by a suitable UL listed fuse.
c. IEC 801-1 parts 2 through 6.

C. Overloads:
1. Solid state electronic:
a. Selectable Class 10, 20, 30 protection.
b. Ambient insensitive:
1) Operating temperature: -20 to 70 degrees Celsius.
c. Thermal memory.
d. Protective functions:
1) Motor overcurrent.
2) Phase unbalance (adjustable.)
3) Phase loss.
4) Ground fault protection.

e. Self-powered.
f. Provide current transformers for metering of motor current.
g. Visible trip indicator.
h. Push-to-trip test.
i. Isolated normally open alarm contact.
j. Normally closed trip contact.
k. Manual/Automatic reset.

D. Control power transformer:
1. Furnish integral control power transformer capacity to power:
a. All motor controls; Motor and starter accessories indicated on the Drawings or specified.
2. Primary and secondary fusing as indicated on the Drawings:
a. Fusing sized by the manufacturer for the rating of the transformer furnished.
3. Control power transformer secondary voltage:
a. As indicated on the Drawings.

2.7 ACCESSORIES

A. Lugs and terminals:
1. For all external connections of No. 6 AWG and larger.
2. UL listed for either copper or aluminum conductors.

B. Surge protective devices:
1. Furnish surge protection devices across the coil of each starter, contactor, and relay.

C. Pilot devices:
1. Provide pilot lights, switches, elapsed time meters, and other devices as specified or as indicated on the Drawings.
2. As specified in the Control Systems: Panels, Enclosures, and Panel Components section.

D. Nameplates and wire markers:
1. As specified in the Identification for Electrical Systems section.

E. Conformal coating:
1. Provide conformal coating material applied to electronic circuitry and printed circuit boards to act as protection against moisture, dust, temperature extremes, and chemicals such as H_2S and chlorine.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. Starters in motor control centers:
   1. Install as specified in the Low Voltage Motor Control Centers section.

D. Starters in control panels:
   1. Install as specified in the Control Systems: Panels, Enclosures, and Panel Components section.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Factory testing:
   1. Owner and Engineer will witness the factory acceptance test as specified in the Common Work Results for Electrical section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Make all adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

B. Set all overloads and motor circuit protectors based on the nameplate values of the installed motor.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 264410

GROUP-MOUNTED CIRCUIT BREAKER SWITCHBOARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Free standing, dead-front type metal-enclosed distribution, low voltage switchboards, utilizing group mounted circuit protective devices.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. National Electrical Manufacturers' Association (NEMA):
1. PB-2 - Dead-front Distribution Switchboards.

C. Underwriters' Laboratories, Inc. (UL):
1. 50 - Standard for Enclosures for Electrical Equipment.
2. 891 - Switchboards.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Factory assembled, wired, and tested switchboards, with major components being products of a single manufacturer, including but not limited to, circuit breakers, bus and enclosure with accessories and features specified in this Section and indicated on the Drawings.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
1. Manufacturer of switchboard.
2. Manufacturer of all component parts of switchboard.
3. Weight of switchboard.
4. Dimensions:
   a. Height.
   b. Length.
   c. Width.
5. Nameplate schedule.
6. Bill of material.
7. Ratings:
   a. Voltage.
   b. Phase.
   c. Current.
   d. Interrupting rating (circuit breakers and fuses).
   e. Momentary current rating.
8. List of recommended spare parts.
9. Name and telephone number of manufacturer’s authorized parts and repair provider.

10. Furnish circuit breaker submittals as specified in:
    a. Low Voltage Molded Case Circuit Breakers section.
    b. Low Voltage Insulated Case Circuit Breakers section.
11. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:
    a. Manufacturer's statement of seismic qualification with substantiating test data.
    b. Manufacturer's special seismic certification with substantiating test data.

C. Shop drawings:
1. Layout drawings:
    a. Complete, detailed, and scaled switchboard layout:
        1) Front panel.
        2) Sub-panels.
        3) Interior panels.
        4) Top and bottom conduit windows.

D. Installation instructions:
1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. For equipment installed in structures designated as seismic design category A or B:
    a. Provide manufacturer's installation instructions and anchoring details for connecting equipment to supports and structures.
3. For equipment installed in structures designated as seismic design category C, D, E, or F:
    a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
    b. Submit anchoring drawings with supporting calculations.
    c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

E. Operating and maintenance manuals:
1. Submit operating instructions and a maintenance manual for the switchboard(s) furnished and/or installed under this Contract.
2. Maintenance manual:
    a. Furnish maintenance manuals with instructions covering all details pertaining to care and maintenance of all equipment as well as data identifying all parts.
    b. Manuals to include but are not limited to the following:
        1) Adjustment and test instructions covering the steps involved in the initial test, adjustment, and start-up procedures.

F. Test forms and reports:
1. Submit complete factory acceptance test procedures and all forms used during the test.
2. Manufacturer to furnish a certified report after the shop tests.
3. Manufacturer to furnish a certified report after the start-up:
    a. Report must state that the installation is complete and satisfactory, or list items requiring additional work and a proposal for the corrective actions.

G. Certification letters:
1. Provide a letter from the switchboard manufacturer that lists every paragraph, subparagraph etc. of this Section and states compliance or non-compliance with said paragraph. If non-compliance is indicated, provide an explanation for the deviation and alternative method to address the non-compliance.

H. Calculations:

1. Detailed calculations or details of the actual physical testing performed on the switchboard to prove the switchboard is suitable for the seismic requirements at the Project Site.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Where indicated on the Drawings as service entrance equipment, the switchboard shall be UL labeled and listed “Suitable for Service Entrance.”

C. Sections and devices shall be UL listed and labeled.

D. The manufacturer of this equipment shall have produced similar electrical equipment for a minimum period of 5 years. When requested by the Engineer, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

1.7 DELIVERY STORAGE AND HANDLING

A. As specified in the Common Work Results for Electrical section.

B. Ship the switchboard to the job site on a dedicated air ride vehicle that will allow the Contractor to utilize onsite off-loading equipment:
1. Energize space heaters in NEMA 3R switchboards.

C. Furnish temporary equipment heaters within the switchboard to prevent condensation from forming.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. Conduct the initial fault current study as specified in the Electrical System Studies section and submit results for Engineer’s review.

B. After successful review of the initial fault current study, submit complete equipment submittal.

C. Conduct factory acceptance test and submit certified test results for Engineer’s review.

D. Ship equipment to Project Site after successful completion of factory acceptance test.

E. Assemble equipment in the field.

F. Conduct field acceptance test and submit results for Engineer’s review.

G. Submit manufacturer’s certification that equipment has been properly installed and is fully functional for Engineer’s review.

H. Conduct Owner’s training sessions.

I. Commissioning as specified in the Commissioning section.

1.10 SCHEDULING

A. As specified in the Common Work Results for Electrical section.

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton, "Pow-R-Line C."
   2. General Electric Co., "Spectra Series."
   3. Schneider Electric, "Power-Style QED."

B. Circuit breakers: Same manufacturer as the switchboard.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Switchboard:
   1. Furnish low voltage switchboards as specified and indicated on the Drawings.
   2. Provide complete and functional switchboards with required controls.
   3. Furnish and install devices or accessories not described in this Section but necessary for the proper installation and operation of the equipment.

B. Voltage ratings:
   1. Voltage level and configuration: As indicated on the Drawings.
   2. Frequency: 60 hertz.

C. Bus:
   1. General:
      a. Tin-plated copper.
      b. Bus cross-section in accordance with UL heat rise requirements.
      c. Current density of 1,000 amperes per square inch.
      d. Mounted on supports of high-impact, non-tracking insulators.
      e. Phase A-B-C bus arrangement:
         1) Top-to-bottom, left-to-right, front-to-back throughout the switchboard.
      f. Symmetrical short circuit current bracing of as indicated on the Drawings.
      g. Continuous current rating as indicated on the Drawings.
   2. Horizontal bus:

a. Provisions for future connections to additional switchboard sections.
3. Ground bus:
a. Sized per UL 891.
4. Neutral bus:
a. Sized for 100 percent.

D. Enclosure:
1. General:
a. Self-supporting structures bolted together to form the required line-up.
b. All sections rear aligned.
c. Dead-front.
d. Conduit entry:
1) Open-bottom.
2) Removable top cover.
2. Frame:
a. Die-formed 12 gauge steel.
3. Covers:
a. Bolt-on.
b. Code gauge steel.
c. Removable front covers.
1) Held in place by captive screws.
4. Rating:
a. NEMA Type 1.

2.6 COMPONENTS

A. Circuit breakers:
1. General:
a. Molded case circuit breakers as specified in the Low Voltage Molded Case Circuit Breakers section.
b. Insulated case circuit breakers as specified in the Low Voltage Insulated Case Circuit Breakers section.
2. Main circuit breaker:
a. Frame, trip and short circuit ratings as indicated on the Drawings.
b. 100 percent rated.
c. Fixed mounted insulated case.
3. Feeder breakers:
a. Frame, trip and short circuit ratings as indicated on the Drawings.

B. Wiring:
1. Provide all necessary internal wiring, fuse blocks, and terminal blocks as required.
2. Number all wires at each end and indicate wire numbers on shop drawings.
3. Type SIS switchboard wire with at least 26 strands.
4. Minimum wire size:
a. No. 14 for control circuits.
b. No. 12 for potential and current transformer circuits.
5. Numbered and labeled in accordance with the Identification for Electrical Systems section.

2.7 ACCESSORIES

A. Metering system:
1. Include metering as indicated on the Drawings.
2. Provide microprocessor based power meters as specified in the Electrical Power Monitoring section.

B. Surge protective devices:
   1. Provide surge protective devices as indicated on the Drawings and as specified in the Surge Protective Devices section.

C. Nameplates:
   1. Provide engraved plastic nameplates to identify:
      a. Switchboard units.
      b. Door mounted components.
      c. Interior mounted devices.
   2. As specified in the Identification for Electrical Systems section.
   3. Engraved with the circuit number and circuit name as indicated on the Drawings.
   4. Manufacturers labels:
      a. Each vertical section shall have a label identifying:
         1) Serial number.
         2) Shop order number.
         3) Bus rating.
         4) Vertical section reference number.
         5) Date of manufacture.

D. Warning signs:
   1. Voltage:
      a. Provide a minimum of 2 warning signs on the front of the switchboard lineup and 2 on the back.
      b. Red laminated plastic engraved with white letters approximately 1/2 inch high.
      c. Signs shall read:
         1) "WARNING-HIGH VOLTAGE-KEEP OUT".
   2. Arc flash:
      a. Provide one warning sign for each switchboard compartment.
      b. Signs shall have read a minimum of:
         1) “DANGER ELECTRIC ARC FLASH HAZARD.”
         2) Signs shall meet the requirements of NFPA 70E and NEC Article 110.16.

E. Lugs:
   1. For all external connections of No. 6 AWG or larger.
   2. UL listed for copper or aluminum conductors.
   3. Rated for 75-degree Celsius conductors.
   4. Lugs shall be of the compression type in design requiring a hydraulic press and die for installation.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES

A. Chemically clean all steel surfaces before painting.

B. Exterior color manufacturer’s standard gray over phosphate-type rust inhibitor.

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
   1. Furnish all cables, conduit, lugs, bolts, expansion anchors, sealants, and other accessories needed to complete the installation of the switchboard.
   2. Assemble and install the switchboard in the location and layout indicated on the Drawings.
   3. Perform work in accordance with manufacturer's instructions and shop drawings.
   4. Furnish components and equipment as required to complete the installation.
   5. Replace any hardware lost or damaged during the installation or handling to provide a complete installation.
   6. Install the switchboard on a raised concrete housekeeping pad:
      a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units.
      b. Weld and/or bolt the switchboard frame to be to the leveling channels.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 REINSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Factory tests:
   1. Completely assemble, wire and test the switchboard:
      a. Provide groups of wires leaving the shipping-assembled equipment with terminal blocks with suitable numbering strips.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Make all adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 264450

PANELBOARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. Panelboards serving feeder circuits and branch circuits.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Underwriter's Laboratories, Inc. (UL):
1. 67 - Standard for Panelboards.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTION

A. Circuit breaker panelboards as indicated in the panelboard schedules, one-lines, and where indicated on the Drawings:
1. Service voltage and configuration as indicated on the panel schedules.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
1. Manufacturer of panelboard.
2. Bill of material.
3. Assembly ratings including:
   a. Voltage.
   b. Phase.
   c. Continuous current.
   d. Short circuit interrupting rating.
4. NEMA enclosure type.
5. Cable terminal sizes based upon actual feeder and sub-feeder conductors used.
6. Furnish circuit breaker submittals as specified in the Low Voltage Molded Case Circuit Breakers section.
7. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:
   a. Manufacturer’s statement of seismic qualification with substantiating test data.
   b. Manufacturer’s special seismic certification with substantiating test data.

C. Shop drawings:
1. Drawings to contain:
   a. Overall panelboard dimensions, interior panel dimensions, and wiring gutter dimensions:
      1) Height.
      2) Length.

3) Width.
b. Weight.
c. Anchoring locations.
d. Breaker layout drawing with dimensions:
1) Location of the main, branches, solid neutral, and ground.
e. Conduit entry/exit locations:
1) Identify all conduit entry/exit locations and restrictions.
f. Individual panel schedules identifying breaker locations, ratings, and nameplate designations within the panelboard, for every panelboard.

D. Installation instructions:
1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. For equipment installed in structures designated as seismic design category A or B:
a. Provide manufacturer's installation instructions and anchoring details for connecting equipment to supports and structures.
3. For equipment installed in structures designated as seismic design category C, D, E, or F:
a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
b. Submit anchoring drawings with supporting calculations.
c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

E. Operations and maintenance manual:
1. Provide a complete manual for the operation and maintenance of the panelboard, circuit breakers, devices, and accessories:
a. Including but not limited to:
1) Instruction narratives and bulletins.
2) Renewal parts lists.
3) Time-current curves for all devices.

F. Calculations:
1. Detailed calculations or details of the actual physical testing performed on the panelboard to prove the panelboard is suitable for the seismic requirements at the Project Site.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Panelboards shall be UL listed and labeled.
1. Where indicated as service entrance equipment, panelboards shall be UL labeled and listed "Suitable for Service Entrance."

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton.
   2. General Electric Co.
   3. Schneider Electric.

B. Circuit breakers:
   1. Same manufacturer as the panelboard.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Provide panelboards with:
   1. Molded-case circuit breakers with trip ratings as shown on the panel schedules.
   2. Spares and spaces for future circuit breakers in panels as shown on the panel schedules.

B. Short circuit rating:
   1. Provide panelboards with short-circuit ratings as indicated on the Drawings:
   2. Testing method in accordance with UL 67.
   3. Mark each panelboard with its maximum short circuit rating at the supply voltage.
   4. Panelboards shall be fully rated.

2.6 COMPONENTS

A. Enclosure:

   1. NEMA enclosure type as indicated on the Drawings.
      a. Where not indicated on the Drawings, as specified in the Common Work Results for Electrical section for the installed location.
   2. Minimum width: 20 inches.
   3. Gutter space in accordance with the NEC:
      a. Minimum of 4 inches of gutter space.
   4. Dead-front, no live parts when the panelboard is in service.
   5. Enclose entire panelboard bus assembly in a corrosion resistant galvanized steel cabinet.

6. 4-piece front to provide ease of wiring access.
7. Lockable, hinged door over the protective devices with a flush, cylinder tumbler-type lock with catch and door pull.
    a. Minimum 2 keys per panelboard.
    b. Key all panelboard locks alike.
8. Circuit directory frame and card on the inside of the door.
9. Interior design such that replacement of circuit breakers does not require disturbing adjacent units or removal of the main bus connectors.
10. Outdoor locations: Provide NEMA Type 3R enclosures with a NEMA Type 3R outer enclosure (with a hinged door) and a NEMA Type 1 interior panelboard, unless otherwise indicated.

B. Bus:
1. General:
    a. Tin-plated copper.
2. Phase bus:
    a. Full size and height without reduction.
    b. Dimensions and temperature rise in accordance with UL 67:
        1) Limit current density to less than 1,000 amps per square inch.
    c. Insulate all current carrying parts from ground and phase-to-phase with a high dielectric strength insulator.
3. Ground bus:
    a. Copper, solidly bonded.
4. Neutral bus:
    a. Provide where indicated on the Drawings.
    b. 100 percent rated.
    c. Provide lugs for each outgoing feeder requiring a neutral connection.
5. Provide insulation barriers over the vertical bus behind the dead front shield to provide increased safety during field service.

C. Lugs:
1. UL listed for copper and aluminum wire:
    a. Provide lugs rated for 75-degree Celsius terminations.
    b. Provide bolted or compression main lug terminations as required for the incoming cable size.

D. Circuit breakers: As specified in the Low Voltage Molded Case Circuit Breakers section and as indicated on the Drawings:
1. Provide all circuit breakers with bolt-on connections:
    a. Plug-in circuit breakers are not allowed.

2.7 ACCESSORIES

A. Surge protective devices:
1. Furnish panelboards with surge protective devices as indicated on the Drawings.
2. As specified in the Surge Protective Devices section.

B. Nameplates:
1. As specified in the Identification for Electrical Systems section.
2. Install on outside of door.
3. Indicating:
    a. Panel designation.
    b. Voltage.
    c. Number of phases and configuration.

C. Circuit identification labels:

1. Provide index cards behind heavy clear plastic in cardholders on the inside of the doors.
2. Type all information on the cards using designations in the panel schedules.
3. Laminated on both sides.

D. Pad locking mechanism:
1. Provide a pad locking attachment to allow circuit breakers to be locked in the off position.
2. At a minimum, provide 1 mechanism per panelboard:
a. Provide multiple mechanisms if required to accommodate all circuit breaker frame sizes in the panelboard.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES

A. Finish stand-alone panelboards with a primer, rust-resistant phosphate undercoat, and 2 coats of oven-baked enamel with manufacturer's standard gray.

B. Finish panelboards mounted in motor control centers to match the motor control center finish and color.

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. General:
1. Surface, flush or MCC mounted as indicated on the Drawings.
2. Mount rigidly to structural members with exposed surfaces plumb and level to within 1/32 inch.
3. Perform work in accordance with the manufacturer's instructions and shop drawings.
4. Provide all brackets, hangers, supports, and hardware for mounting as required.
5. In all NEMA Type 4 and NEMA Type 4X locations, mount panelboards on 7/8-inch deep stainless steel preformed channel, with channel running vertically from top to bottom of panelboard:
a. Use only stainless steel mounting hardware.
6. Mount panelboard so that top operating handle is not more than 6 feet-7 inches above the operating floor.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Factory testing:
   1. Perform standard factory tests on the panelboards:
   2. Test in accordance with the latest version of NEMA and UL standards.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES

A. Circuiting within the panelboard shall match the panel schedules as indicated on the Drawings.

B. Provide typewritten schedule in each panelboard.

END OF SECTION

SECTION 264720

PACKAGED POWER SUPPLY CENTER

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Packaged power supply centers, a single integrated unit composed of:
      a. Primary main breaker.
      b. Dry-type transformer.
      c. Branch circuit panelboard with main breaker.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Underwriter's Laboratories, Inc. (UL):
   1. 50 - Standard for Enclosures for Electrical Equipment.
   2. 67 - Standards for Panelboards.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

1.4 SYSTEM DESCRIPTIONS

A. Packaged power supplies centers are an integral unit that provides a means for:
   1. Transforming the distribution voltage level to the utilization voltage level.
   2. Primary and secondary protection for the transformer.
   3. Distribution of secondary power.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Manufacturer.
   2. Bill of material.
   3. Assembly ratings including:
      a. Voltage.
      b. Phase/wire.
      c. Continuous current.
      d. Short circuit interrupting rating.
      e. Transformer kVA rating.
   4. NEMA enclosure type.
   5. Catalog sheets for circuit breakers contained within the panelboard.
   6. Cable terminal sizes based upon actual feeder and branch circuit conductors used.
   7. Furnish circuit breaker submittals as specified in the Low Voltage Molded Case Circuit Breakers section.
   8. For equipment installed in structures designated as seismic design category C, D, E, or F submit the following as specified in the Common Work Results for Electrical section:

a. Manufacturer’s statement of seismic qualification with substantiating test data.
b. Manufacturer’s special seismic certification with substantiating test data.

C. Shop drawings:
1. Including but not limited to:
a. Overall dimensions, interior panel dimensions, and wiring gutter dimensions:
1) Height.
2) Length.
3) Width.
b. Weight.
c. Anchoring locations.
d. Breaker layout drawing with dimensions:
1) Location of the main, branches, solid neutral, and ground.
e. Conduit entry/exit locations.
f. Individual panel schedules identifying breaker locations, ratings, and nameplate designations within the panelboard, for each and every panelboard.

D. Operations and maintenance manual:
1. Provide a complete manual for the operation and maintenance of the panelboard, circuit breakers, devices, and accessories including but not limited to:
a. Instruction narratives and bulletins.
b. Renewal parts lists.

E. Calculations:
1. Detailed calculations or details of the actual physical testing performed on the packaged power supply center to prove suitability for the seismic requirements at the Project Site as specified in the Common Work Results for Electrical section.

F. Installation instructions:
1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. For equipment installed in structures designated as seismic design category A or B:
a. Provide manufacturer’s installation instructions and anchoring details for connecting equipment to supports and structures.
3. For equipment installed in structures designated as seismic design category C, D, E, or F:
a. Provide project-specific installation instructions and anchoring details based on support conditions and requirements to resist seismic and wind loads as specified in the Common Work Results for Electrical section.
b. Submit anchoring drawings with supporting calculations.
c. Drawings and calculations shall be stamped by a professional engineer registered in the state where the Project is being constructed.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Packaged power supply centers shall be UL listed and labeled.
1. Where indicated as service entrance equipment, packaged power supply centers shall be UL labeled and listed “Suitable for Service Entrance.”

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING (NOT USED)

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Eaton.
   2. Schneider Electric.
   3. General Electric Co.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS (NOT USED)

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT

A. Enclosure:
   1. Enclose entire unit including panelboard bus assembly, main breakers, and transformer in a galvanized steel cabinet:
      a. Rated NEMA Type 3R, suitable for outdoor use.
      b. Steel gauge in accordance with UL 50.
      c. Wire gutter space in accordance with UL 67.
   2. Hinged access door:
      a. Maintained in open position when desired.
      b. With padlock provisions to prevent unauthorized entry.
   3. Dead-front panelboard construction.

B. Panelboard:
   1. Bus:
      a. General:
         1) Tin-plated copper.
      b. Phase bus:
         1) Fully rated for the associated transformer.

2) Full size without reduction.
c. Neutral bus:
1) Ampere rating to match phase bus.
2) Provide with suitable lugs for the maximum number of circuits that can be connected to the panel.
d. Ground bus:
1) Provide suitable lug space to provide a lug for each circuit including spaces.
2. Label panelboards with UL short circuit current rating.

2.6 COMPONENTS

A. Primary and secondary main breakers:
1. Sized to protect the transformer.
2. Integrally mounted and wired.
3. Provide as specified in the Low Voltage Molded Case Circuit Breakers section.
4. Minimum interrupting rating as indicated on the Drawings, but not less than:
a. Primary main breaker: 480 VAC, 65,000 AIC.
b. Secondary main breaker: As shown on the drawings, 10,000 AIC.

B. Branch circuit breakers:
1. As specified in the Low Voltage Molded Case Circuit Breakers section.
2. Match circuit breaker arrangement to the panel schedules as indicated on the Drawings.
3. Circuit breakers shall not be restricted to any mounting location due to their physical size.
4. Install circuit breakers such that they can be replaced without disturbing adjacent units.
a. Provide wire connectors suitable for wire sizes indicated on the Drawings.

C. Transformer:
1. General:
a. Minimum of two 5 percent full capacity primary taps below normal.
b. Insulation:
1) Insulating materials for a 185-degree Celsius UL component recognized insulation system.
2) 115 degrees Celsius temperature rise above 40 degrees Celsius maximum ambient.
c. Fully encapsulated using a sand-epoxy resin mixture to provide maximum protection against moisture, dust, and corrosive environments.
2. Configuration:
a. Single- or 3-phase, as indicated on the Drawings.
b. kVA rating as indicated on the Drawings.
c. Primary voltage: 480 VAC.
d. Secondary voltage: As indicated on the Drawings.

2.7 ACCESSORIES

A. Provide nameplates as specified in the Identification for Electrical Systems section.

B. Circuit identification labels:
1. Index cards behind heavy clear plastic in card holders on inside of doors:
a. Type all information on cards.
2. Laminated on both sides.
3. Circuit identification to follow panel schedules as indicated on the Drawings.

C. Device locking mechanisms:

1. Provide a handle lock-off device for each circuit breaker that acts as an equipment or control panel disconnect.
2. Provide a handle lock-on device for each circuit breaker that acts as critical power systems breakers.

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details to meet the seismic and wind load requirements at the Project site.

C. Provide any and all necessary brackets, hangers, supports, and hardware for mounting in the location as indicated on the Drawings.

D. In all wet and damp locations, mount assembly on 7/8-inch deep stainless steel preformed mounting channel:
1. The channel shall run vertically from top to bottom of unit.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Set transformer taps as required.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

SECTION 265100

LIGHTING: LED LUMINAIRES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes: LED luminaires, drivers, poles, and accessories.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Illuminating Engineering Society of North America (IESNA):
   1. LM-79 - IES Approved Method for the Electrical and Photometric Measurements of Solid-State Lighting Products.
   2. LM-80 - IES Approved Method: Measuring Lumen Maintenance of LED Light Sources.
   3. TM-21 - Projecting Long Term Lumen Maintenance of LED Light Sources.

C. Institute of Electrical and Electronics Engineers (IEEE):
   1. C62.41 - IEEE Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits.

D. National Electrical Manufacturers Association (NEMA):
   1. 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts.

E. Underwriters Laboratories (UL):
   1. 1598 - Luminaires.
   2. 8750 - Light Emitting Diode (LED) Equipment For Use In Lighting Products.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions and abbreviations:
   1. CCT: Correlated color temperature - Scientific scale to describe how “warm” or how “cool” the light source is, measured in Kelvin. The lower the Kelvin temperature, the warmer the light feels, or appears.
   2. CRI: Color Rendering Index - A quantitative measure of the ability of a light source to reveal the colors of various objects faithfully in comparison with an ideal or natural light source.
   3. Driver - Device that manages power and controls the current flow from AC to DC for an LED lighting product.
   4. Efficacy - Lumen output of a light source per unit of power supplied to that source (lumens per watt).
   5. EMI: Electromagnetic Interference - Electrical interference (noise) generated by electrical and electronic devices.
   6. FC: Foot Candles - Measure of light level on a surface being illuminated.
   7. L70 - The extrapolated life in hours of the luminaire when the luminous output depreciates 30 percent from initial values.
   8. LED: Light emitting diode - A solid-state semiconductor device that produces light when electrical current flows through it.

9. LED light source - See LED luminaire.
10. LED luminaire - A complete lighting unit consisting of LED-based light emitting elements and a matched driver together with parts to distribute light, to position and protect the light emitting elements, and to connect the unit to a branch circuit.
11. Lumen - The international (SI) unit of luminous flux or quantity of light. The amount of light that is spread over a square foot of surface by one candle power when all parts of the surface are exactly one foot from the light source.
12. Lumen ambient temperature multiplier - LED light source relative lumen output when compared to a standard ambient temperature.
13. Lumen maintenance factor - How well an LED light source is able to retain its intensity when compared to new.
14. Luminaire - Lighting unit.
15. THD: Total harmonic distortion - The combined effect of harmonic Distortion on the AC waveform produced by a driver or other device.

1.4 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. LED Luminaires:
      a. Catalog literature for each luminaire specified, cross-referenced to the luminaire type on the Luminaire Schedule in the Drawings.
      b. Provide for each luminaire type:
         1) Materials.
         2) Type of diffuser.
         3) Hardware.
         4) Gasketing.
         5) Reflector.
         6) Chassis.
         7) Finish and color.
         8) Driver type and protection.
         9) LED luminaire:
            a) Initial lumen output at 40 degrees Celsius ambient.
            b) Correlated color temperature.
            c) Lumen maintenance factors.
            d) Lumen ambient temperature multipliers.
            e) Drive current.
            f) Efficacy.
         10) Picture of luminaire.
         11) IES optical distributions.
         12) Dimensioned drawings:
            a) Effective projected area rating for pole mounted luminaires.
         13) Weight.
         14) Photometric data:
            a) Coefficient of utilization tables based on the IES zonal cavity system by an approved testing laboratory.
            b) Luminaire dirt depreciation factor.
            c) Candlepower distribution curves.
            d) Average luminaire brightness.
            e) Lumen output charts.
         15) Furnish support method for interior luminaires weighing more than 30 pounds and all wall-mounted luminaires:
            a) Support methods shall be based on seismic requirements at the project site as specified in the Common Work Results for Electrical section.

c. Luminaire substitutions:
    1) Provide complete literature for each luminaire substitution:
    2) Submittals for substituted luminaires shall be sufficient for competent comparison of the proposed luminaire to the originally specified luminaire:
        a) Photometric data:
            (1) IES file in standard IES format.
            (2) Coefficient of utilization tables based on the IES zonal cavity system by an approved testing laboratory.
            (3) Candlepower distribution curves.
            (4) Average luminaire brightness.
            (5) Lumen output charts.
            (6) Power requirements in watts and volt-amperes.
        b) Calculations:
            (1) Provide software generated calculations showing illuminance levels in footcandles and power usage in watts per square foot for each of the areas in which substitutions are proposed:
                (a) Use surface reflectance values and luminaire light loss factors approved by the Engineer to perform all calculations.
        c) Specification sheets:
            (1) If lacking sufficient detail to indicate compliance with contract documents, standard specification sheets will not be accepted. This includes, but is not limited to, luminaire type designation, manufacturer's complete catalog number, voltage, LED type, CCT, CRI, specific driver information, system efficacy, L70 life rating, and any modifications necessary to meet the requirements of the contract documents.
    3) Substitutions for specified luminaires will be evaluated upon quality of construction, light distribution, energy use, appearance, and maintenance.
    4) Substitutions shall comply with all applicable building and energy codes.
2. Driver: Provide for each driver type:
    a. Catalog number.
    b. Type of driver.
    c. Output wattage.
    d. Input voltage.
    e. Operating voltage range.
    f. Maximum input power.
    g. Efficiency.
    h. Operating line current.
    i. Power factor.
    j. Operating temperature range.
    k. Current output range in ambient temperatures of 30 to 55 degrees Celsius.
    l. Surge suppression data.

C. Record documents:
    1. Update the Luminaire Schedule in the Drawings to reflect the acceptable substitutions, after the substitution has been reviewed and accepted by the Engineer.

1.5 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.7 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.8 SEQUENCING (NOT USED)

1.9 SCHEDULING

A. Exterior and outdoor lighting system operation shall be demonstrated during the hours of darkness.

B. Lighting demonstration shall occur within 2 weeks before substantial completion.

1.10 WARRANTY

A. As specified in the Common Work Results for Electrical section.

B. LED luminaire:
   1. 5 year warranty from the date of installation including material, workmanship, photometrics, driver, and LED modules.

1.11 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.12 OWNER'S INSTRUCTIONS (NOT USED)

1.13 MAINTENANCE

A. Furnish 1 complete spare LED luminaire, with driver, of each type used.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Luminaires:
   1. The following or equal:
      a. As noted on the Luminaire Schedule.

B. Drivers:
   1. One of the following or equal:
      a. Philips Advance.
      b. Thomas Research.
      c. eldoLED.

C. Substitutions:
   1. The lighting design and luminaire selection has been based upon the photometric data of the identified luminaire. It is the Contractor's responsibility to ensure and prove to the Engineer at time of submittal the substitutions meet the quality and photometric requirements of the original design.

2.2 SYSTEM DESCRIPTION

A. Provide luminaires, and accessories for all lighting systems, complete and operable, in accordance with the requirements of the Contract Documents.

B. Individual luminaire types are indicated on the Drawings and on the Luminaire Schedule.

2.3 EXISTING PRODUCTS (NOT USED)

2.4 MATERIALS (NOT USED)

2.5 MANUFACTURED UNITS (NOT USED)

2.6 EQUIPMENT

A. LED Luminaires:
   1. General:
      a. Pre-wired with leads of 18-AWG, minimum, for connection to building circuits.
      b. Provide the luminaires furnished per the Luminaire Schedule in the Drawings:
         1) The Specifications noted in this Section are an addition or supplement to the Luminaire Schedule.
      c. Individual LEDs connected such that a catastrophic loss or the failure of 1 LED will not result in the loss of the entire luminaire.
   2. Minimum ambient temperature range of 0 degrees Celsius to 40 degrees Celsius.
   3. Minimum rated life:
      a. Office Areas: 70,000 hours when operated at 25 degrees Celsius.
      b. Process Areas: 60,000 hours when operated at 40 degrees Celsius.
      c. Hazardous Areas: 50,000 hours when operated at 40 degrees Celsius.
   4. Minimum efficacy of 70 lumens/watt.
      a. Hazardous Areas: Minimum 60 lumens/watt.
   5. Minimum Color Rendering Index of 70.
   6. Tested according to IESNA LM-79 and LM-80.
   7. Lumen maintenance projection in accordance with IESNA TM-21.
   8. RoHS compliant.
   9. Integral driver.
   10. Suitable for dry, damp, or wet locations as indicated on the Drawings or on the Luminaire Schedule.
      a. Wet or damp locations: UL 1598 listed.
   11. Designed as a complete LED assembly. Retrofit LED lamps in luminaires not designed specifically for LED light sources shall not be used.
   12. Exterior/outdoor luminaires:
      a. Luminaires in combination with their mounting pole and bracket shall be capable of withstanding:
         1) Wind levels at the project site without damage.
         2) Seismic levels at the project site.
      b. Corrosion-resistant hardware and hinged doors or lens retainer.
      c. Luminaires furnished with integral photoelectrical control shall be of the luminaire manufacturer's standard design.

B. Drivers:
   1. Dimmable, with dimming signal protocol of 0-10 VDC or DALI.
   2. Input power source:
      a. As indicated on the Drawings.
   3. Drive current:
      a. As indicated in the Luminaire Schedule.
   4. Power factor: greater than 0.90.

5. Efficiency: greater than 80 percent.
6. Total harmonic distortion (THD) of the input current less than 20 percent.
7. Rated life of 60,000 hours in an LED luminaire operated at an ambient temperature of 40 degrees Celsius.
8. Minimum operating temperature of 0 degrees Celsius.
9. Sound rating: Class A+ or quieter.
10. UL listed Class 2 Outdoor in accordance with UL 8750.
11. In accordance with IEEE C62.41 Category A for transient protection.
12. Driver must limit inrush current:
    a. Meet or exceed NEMA 410 driver inrush standard:
        1) 230 Amps per 10 Amp load with a maximum of 106 Amps squared-seconds at 120V.
        2) 430 Amps per 10 Amp load with a maximum of 370 Amps squared-seconds at 277V.

2.7 COMPONENTS

2.8 ACCESSORIES (NOT USED)

2.9 MIXES (NOT USED)

2.10 FABRICATION (NOT USED)

2.11 FINISHES (NOT USED)

2.12 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install luminaires per the manufacturer's guidelines and submitted installation calculations to meet seismic and wind requirements at the project site.

C. Special techniques:
1. Support luminaires from structural elements capable of carrying the total weight.
2. Install luminaires plumb and square with building and wall intersections:
    a. Suspend pendant-mounted luminaries that are mounted from sloping ceilings with ball hangers, unless otherwise indicated on the Drawings.
    b. Install luminaires in machinery rooms after machines have been installed, so as to ensure no conflict with machinery, piping, or ductwork.
3. In all cases, coordinate luminaire locations with work of other trades to prevent obstruction of light from the fixtures:
    a. Locate bottom of luminaire approximately at the bottom of ductwork, unless otherwise specified or indicated on the Drawings.
4. Support luminaires weighing more than 25 pounds independently of the outlet box and the conduit.

5. Provide ceiling or pendent mounted luminaires with a safety chain connecting the lens, driver, and other components to the building structure.
6. Provide recessed luminaires with auxiliary safety supports attached directly to the building structure:
    a. The safety supports shall consist of number 12 AWG soft drawn galvanized wires.
7. Install luminaires in accordance with the architectural reflected ceiling Drawings:
    a. Center luminaires on ceiling tiles unless otherwise indicated.
8. Support luminaires installed in suspended grid ceilings, independently of the grid:
    a. Provide seismic restraint clips for all luminaires installed in suspended grid ceilings.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING (NOT USED)

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

3.9 ADJUSTING

A. Aim and verify all exterior and outdoor luminaires alignment, during dark evening hours, as directed by Owner or the Engineer.

3.10 CLEANING

A. As specified in the Common Work Results for Electrical section.

B. Clean all lenses, diffusers, and reflectors.

C. Refinish all luminaires' trim, poles, and support brackets, where finish has been damaged.

D. Clean all LED luminaires (new and old), used during construction for construction lighting, before substantial completion.

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES

A. Refer to the Luminaire Schedule in the Drawings.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 266700

LIGHTNING PROTECTION

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
   1. Design and installation of a complete lightning protection system.
   2. Materials and components for the lightning protection system.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. Lightning Protection Institute (LPI).
   1. 175 - Standard for the Design - Installation - Inspection of Lightning Protection Systems.
   2. 177 - Inspection Guide for Certified Systems.

C. National Electrical Code (NEC).

D. National Fire Protection Association (NFPA):
   1. 780 - Standard for the Installation of Lightning Protection Systems.

E. Underwriters Laboratories, Inc. (UL):
   1. 96 - Standard for Lightning Protection Components.
   2. 96A - Standard for Installation Requirements for Lightning Protection Systems.

1.3 DEFINITIONS

A. As specified in the Common Work Results for Electrical section.

B. Specific definitions:
   1. LPI: Lightning Protection Institute.

1.4 SYSTEM DESCRIPTION

A. Retain the services of a lightning protection contractor to design, furnish, and install a complete lightning protection system, connected to the facility grounding system.

B. Lightning protection system: NFPA 780; UL 96A master labeled or LPI certified system(s) consisting of:
   1. Air terminals on roof(s).
   2. Bonding.
   3. Grounding electrodes.
   4. Interconnecting conductors.

C. Connect the lightning protection system to the facility grounding electrode:
   1. Provide common ground connections as necessary to the electric and telephone service conductors.

D. The installing contractor is responsible for all costs associated with UL or LPI application/inspection of the lightning protection system, including any costs associated with re-inspection necessary to obtain the UL 96A Master Label or LPI 177 Certification.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. Product data:
   1. Provide samples and pertinent catalog data for:
      a. Air terminals.
      b. Conductors.
      c. Connectors.
      d. Accessories.
      e. Include dimensions and materials of each component, and include indication of listing in accordance with UL 96.

C. Shop drawings:
   1. Including but not limited to:
      a. Layout of air terminals with the respective configuration of the zone of protection.
      b. Grounding electrodes, and bonding connections to structure and other metal objects.
      c. Type, size and locations for:
         1) Terminal.
         2) Electrode.
         3) Conductor.
      d. Conductor routing details.
      e. Connection details.
      f. Termination details.
      g. Applicable air terminal and other calculations.
   2. Details showing installation of air terminals, conductors, and connectors.

D. Certificates:
   1. Submit written confirmation of having obtained UL Master Label or LPI certification for each lightning protection system.
   2. Photocopy of UL or LPI Installers' Certificate(s) for installation of lightning protection systems.
   3. Proof of the manufacturer has been UL-listed for at least 5 years.
   4. Proof of the installer has been UL-listed or LPI-certified for at least 5 years.

E. Record Documents:
   1. Provide Record Documents as specified in the Closeout Procedures section and the Common Work Results for Electrical section.
   2. Accurately record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors.
   3. Manufacturer's installation instructions.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Conform to the requirements of the UL or LPI and NFPA standards for lightning protection systems:
   1. Components shall be listed in accordance with UL 96.

C. Manufacturer’s qualifications:
   1. Company specializing in lightning protection equipment with minimum 5 years of experience:
      a. Listed in section "Lightning Conductor, Air Terminals and Fittings" of the UL "Electrical Construction Materials Directory" for at least 5 years previous to this Contract's bid opening date.

D. Installers qualifications: Member of the UL quality control program listed in section "Lightning Protection Installation" of the UL "Electrical Construction Materials Directory" or LPI-certified installer for installation of lightning protection systems for at least 5 years previous to this Contract's bid opening date. The lightning protection system shall meet the applicable requirements of NFPA 780 and UL 96 and 96A or LPI 175 and 177.

E. Upon completion of installation the lightning protection contractor to have the building lightning system physically inspected by UL or in accordance with LPI requirements:
   1. Furnish a UL Master Label or LPI Installer Certified for the building:
      a. Application for the UL Master Label without a physical inspection by UL is unacceptable.

1.7 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Common Work Results for Electrical section.

1.8 PROJECT OR SITE CONDITIONS (NOT USED)

1.9 SEQUENCING

A. Pre-installation conference:
   1. Convene a pre-installation conference before commencing the Work of this Section.

B. Coordinate Work with other trades to ensure neat, correct, and unobtrusive installation.

C. Coordinate the Work of this Section with roofing and exterior and interior finish installations.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP

A. As specified in the Common Work Results for Electrical section.

1.13 OWNER’S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. One of the following or equal:
   1. Erico.
   2. Thompson Lightning Protection, Inc.

3. Harger Lightning and Grounding.
4. VFC, Inc.

2.2 EXISTING PRODUCTS (NOT USED)

2.3 MATERIALS

A. Air terminals:
   1. Material: Aluminum.
      a. Aluminum components for aluminum roofing, compatible with aluminum roofing materials.
   2. Size: 3/8-inch by 18-inch minimum extending a minimum of 12 inches above the object to be protected.
   3. On flat or walkable roofs, provide air terminals with:
      a. Mushroom type blunt tip incapable of impalement if fallen upon.
      b. Spring mounted and capable of being pushed flush to the roof.
   4. Air terminals on stacks and chimneys:
      a. Protected from corrosion.
      b. Sized in accordance with UL and NFPA requirements.
      c. Lead-coated copper.
   5. Air terminal bases:
      a. Cast bronze with bolt pressure cable connections securely mounted with stainless steel screws and bolts.

B. Ground rods and below grade connectors:
   1. As specified in the Grounding and Bonding section.

C. Ground plate: Copper.

D. Conductors:
   1. Perimeters:
      a. Aluminum.
         1) Aluminum components for aluminum roofing, compatible with aluminum roofing materials.
   2. Down conductors:
      a. Copper.
   3. Sized in accordance with UL or LPI and NFPA requirements.
   4. UL listed for the application.

E. Cable fasteners:
   1. Electrolytically compatible with conductors and mounting surface:
      a. Spaced in accordance with LPI or NFPA requirements.

F. Above grade connectors:
   1. Make connections between dissimilar metals with approved bimetallic connectors.
   2. Installed by trained personnel.
   3. UL listed for the application.

G. Miscellaneous materials:
   1. Copper of type and size recommended by the manufacturer of the lightning protection system.
   2. Stainless steel bolts, screws, and other threaded fasteners.

2.4 MANUFACTURED UNITS (NOT USED)

2.5 EQUIPMENT (NOT USED)

2.6 COMPONENTS (NOT USED)

2.7 ACCESSORIES (NOT USED)

2.8 MIXES (NOT USED)

2.9 FABRICATION (NOT USED)

2.10 FINISHES (NOT USED)

2.11 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION

A. It is the responsibility of the lightning protection subcontractor to review the electrical system design, and provide any and all additional equipment and materials needed in order to construct a master labeled UL or LPI certified lightning protection system.

B. Verify that surfaces are ready to receive work.

C. Protect elements surrounding Work of this Section from damage or disfiguration.

3.2 PREPARATION (NOT USED)

3.3 INSTALLATION

A. As specified in the Common Work Results for Electrical section.

B. Install systems in accordance with manufacturer's instructions unless otherwise specified in this Section.

C. Installation must be made by a LPI certified master installer or an UL certified installer.

D. Conductor installations:
1. Install the lightning protection roof system(s) grounding and bending conductors exposed on flat roof areas and concealed at ridge roof areas.
2. Install main downleads completely concealed and sleeved.
3. Other than for the purpose of protecting downlead conductors from damage up to 6 feet above grade level, do not use exposed conduits to conceal the downleads on the exterior of the outside walls.
4. Use minimum 1-inch PVC conduits to protect lightning system conductors from damage.

E. Clearances: Ensure 6-foot minimum distance required by NEC:
1. From lightning rod conductors to non-current-carrying metal parts of electrical equipment unless they are bonded to the rods.
2. From lightning system conductors to open conductors of communication systems.
3. From lightning protection grounding electrodes to electrodes of other grounding systems.

F. Extend air terminals a minimum of 12 inches above object to be protected.

G. Maintain horizontal or downward coursing of main conductor and ensure that bends have at least an 8-inch radius and that no bend of a conductor forms an included angle of less than 90 degrees.

H. Grounding electrode system:
   1. Where a grounding electrode system is indicated on the Drawings, modify the installation to meet the applicable lightning protection standards.
      a. Provide additional electrodes where required.
   2. Where a grounding electrode system is not indicated on the Drawings, install grounding electrodes per the applicable UL or LPI standards.

I. Interconnection of metals:
   1. Bond all metal bodies within 6 feet of the conductor to the system with approved fittings and conductor.
   2. Connections between dissimilar metals shall be made with approved bimetallic connections.
   3. Bond metal bodies of inductance located within 6 feet of a conductor or object with secondary bonds.

J. Bond all isolated metallic bodies at or below the roof subject to inductance and within 6 feet of lightning protection system conductors.

K. Provide necessary common grounds between the lightning protections system and the electric and telephone service entrance wires, TV and radio antenna grounds.

L. Ensure that air terminals are installed to withstand calculated wind force due to 100 miles per hour winds or as specified in the Wind Design Criteria section, whichever is greater with a 1.3 gust factor without structural damage and without damage to integrity of the lightning protection system.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 REINSTALLATION (NOT USED)

3.7 COMMISSIONING

A. As specified in the Commissioning section.

3.8 FIELD QUALITY CONTROL

A. As specified in the Common Work Results for Electrical section.

B. Provide one of the following:
   1. The services of UL to physically inspect the entire lightning protection system and issue the UL Master Label:
      a. Furnish UL Master Label as evidence that the installation has met with UL 96A code requirements.
   2. Obtain LPI system certification reports and LPI system certification.

3.9 ADJUSTING (NOT USED)

3.10 CLEANING (NOT USED)

3.11 PROTECTION

A. As specified in the Common Work Results for Electrical section.

3.12 SCHEDULES (NOT USED)

END OF SECTION

FIELD ELECTRICAL ACCEPTANCE TESTS

PART 1- GENERAL

1.1 SUMMARY

A. Section includes:
1. Responsibilities for testing the electrical installation.
2. Adjusting and calibration.
3. Acceptance tests.

B. Copyright information:
1. Some portions of this Section are copyrighted by the InterNational Electrical Testing Association, Inc. (NETA). See NETA publication ATS for details.

1.2 REFERENCES

A. As specified in the Common Work Results for Electrical section.

B. American National Standards Institute (ANSI).

C. ASTM International (ASTM):
1. D877 - Standard Test Method for Dielectric Breakdown Voltage of Insulating Liquids Using Disk Electrodes.
2. D923 - Standard Practices for Sampling Electrical Insulating Liquids.
3. D924 - Standard Test Method for Dissipation Factor (or Power Factor) and Relative Permittivity (Dielectric Constant) of Electrical Insulating Liquids.
4. D971 - Standard Test Method for Interfacial Tension of Oil Against Water by the Ring Method.
5. D974 - Standard Test Method for Acid and Base Number by Color-Indicator Titration.
6. D1298 - Standard Test Method for Density, Relative Density, or API Gravity of Crude Petroleum and Liquid Petroleum Products by Hydrometer Method.
7. D1500 - Standard Test Method for ASTM Color of Petroleum Products (ASTM Color Scale).
8. D1524 - Standard Test Method for Visual Examination of Used Electrical Insulating Liquids in the Field.
9. D1816 - Standard Test Method for Dielectric Breakdown Voltage of Insulating Liquids Using VDE Electrodes.
10. D2285 - Standard Test Method for Interfacial Tension of Electrical Insulating Oils of Petroleum Origin Against Water by the Drop Weight Method.
11. D3612 - Standard Test Method for Analysis of Gases Dissolved in Electrical Insulating Oil by Gas Chromatography.

D. Institute of Electrical and Electronics Engineers (IEEE):
1. 43 - IEEE Recommended Practice for Testing Insulation Resistance of Rotating Machinery.

11. C57.104 - IEEE Guide for the Interpretation of Gases Generated in Oil-Immersed Transformers.

E. Insulated Cable Engineer's Association (ICEA).

F. InterNational Electrical Testing Association (NETA).
1. ATS- Standard for Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.

G. International Electrotechnical Commission (IEC).

H. Manufacturer's testing recommendations and instruction manuals.

I. National Fire Protection Association (NFPA):
1. 70 - National Electrical Code (NEC).
2. 110 - Standard for Emergency and Standby Power Systems.

J. National Institute of Standards and Technology (NIST).

K. Specification sections for the electrical equipment being tested.

L. Shop drawings.

1.3 DEFINITIONS

A. As specified in the Commissioning section and the Common Work Results for Electrical section.

B. Specific definitions:
1. Testing laboratory: The organization performing acceptance tests.

1.4 SYSTEM DESCRIPTION

A. Testing of all electrical equipment installed under this Contract in accordance with the manufacturer's requirements and as specified in this Section.

B. The testing and inspections shall verify that the equipment is operational within the tolerances required and expected by the manufacturer, and these Specifications.

C. Responsibilities:
1. Contractor responsibilities:
a. Ensure that all resources are made available for testing, and that all testing requirements are met.
2. Electrical subcontractor responsibilities:
a. Perform routine tests during installation.

b. Demonstrate operation of electrical equipment.
c. Commission the electrical installation.
d. Provide the necessary services during testing, and provide these services to the testing laboratory, Contractor, and other subcontractors, including but not limited to:
    1) Providing electrical power as required.
    2) Operating of electrical equipment in conjunction with testing of other equipment.
    3) Activating and shutting down electrical circuits.
    4) Making and recording electrical measurements.
    5) Replacing blown fuses.
    6) Installing temporary jumpers.

3. Testing laboratory responsibilities:
    a. Perform all acceptance tests specified in this Section.
    b. Provide all required equipment, materials, labor, and technical support during acceptance tests.

1.5 SUBMITTALS

A. Furnish submittals as specified in the Common Work Results for Electrical section.

B. LAN cable test form:
1. LAN cable test reports:
    a. Submit 3 copies of test reports showing the results of all tests specified in this Section:
        1) Test type.
        2) Test location.
        3) Test date.
        4) Cable number.
        5) Cable length.
        6) Certification that the cable meets or exceeds the specified standard.
    b. Furnish hard copy and electronic copy for all traces.

C. Manufacturers' testing procedures:
1. Submit manufacturers' recommended testing procedures and acceptable test results for review by the Engineer prior to beginning testing.

D. Test report:
1. Include the following:
    a. Summary of Project.
    b. Description of equipment tested.
    c. Description of tests performed.
    d. Test results.
    e. Conclusions and recommendations.
    f. Completed test forms.
    g. List of test equipment used and calibration dates.
    h. LAN cable test reports.

E. Test data records:
1. Include the following:
    a. Identification of the testing organization.
    b. Equipment identification.
    c. Nameplate data.
    d. Humidity, temperature and or other conditions that may affect the results of the tests and or calibrations.
    e. Dates of inspections, tests, maintenance and or calibrations.

f. Indication of the inspections, tests, maintenance, and or calibrations to be performed and recorded.
g. Expected results when calibrations are to be performed.
h. Indication of as-found and as-left results as applicable.
i. Indication of all test results outside specified tolerances.

F. Testing laboratory qualifications:
1. Submit a complete resume and statement of qualifications from the proposed testing laboratory detailing their experiences in performing the tests specified:
a. This statement will be used to determine whether the laboratory is acceptable, and shall include:
1) Corporate history and references.
2) Resume of individual performing test.
3) Equipment list and test calibration data.

G. Division of responsibilities:
1. Submit a list identifying who is responsible for performing each portion of the testing.

1.6 QUALITY ASSURANCE

A. As specified in the Common Work Results for Electrical section.

B. Testing laboratory qualifications:
1. The testing laboratory may be qualified testing personnel from the electrical subcontractor's staff or an independent testing company.
2. NETA certification required.
3. Selection of the testing laboratory and testing personnel is subject to approval by the Engineer based on testing experience and certifications of the individuals and testing capabilities of the organization.

1.7 DELIVERY, STORAGE, AND PROTECTION (NOT USED)

1.8 PROJECT OR SITE CONDITIONS

A. As specified in the Common Work Results for Electrical section.

1.9 SEQUENCING

A. At least 30 days before commencement of the acceptance tests, submit the manufacturer's complete field testing procedures to the Engineer and to the testing laboratory, complete with expected test results and tolerances for all equipment to be tested.

B. Perform testing in the following sequence:
1. Perform routine tests as the equipment is installed including:
a. Insulation-resistance tests.
b. Continuity tests.
c. Rotational tests.
2. Adjusting and preliminary calibration.
3. Acceptance tests.
4. Demonstration.
5. Commissioning and plant start-up.

1.10 SCHEDULING (NOT USED)

1.11 WARRANTY

A. As specified in the Common Work Results for Electrical section.

1.12 SYSTEM START-UP (NOT USED)

1.13 OWNER'S INSTRUCTIONS (NOT USED)

1.14 MAINTENANCE (NOT USED)

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 EXAMINATION (NOT USED)

3.2 PREPARATION

A. Test instrument calibration:
   1. Utilize a testing laboratory with a calibration program which maintains all applicable test instrumentation within rated accuracy.
      a. The calibrating standard shall be of better accuracy than that of the equipment tested.
   2. The accuracy shall be traceable to the NIST in an unbroken chain.
   3. Calibrate instruments in accordance with the following frequency schedule:
      a. Field instruments: 6 months maximum.
      b. Laboratory instruments: 12 months maximum.
      c. Leased specialty equipment where the accuracy is guaranteed by the lessor (such as Doble): 12 months maximum.
   4. Dated calibration labels shall be visible on all test equipment.
   5. Maintain an up-to-date instrument calibration record for each test instrument:
      a. The records shall show the date and results of each calibration or test.
   6. Maintain an up-to-date instrument calibration instruction and procedure for each test instrument.

B. Do not begin testing until the following conditions have been met:
   1. All instruments required are available and in proper operating condition.
   2. All required dispensable materials such as solvents, rags, and brushes are available.
   3. All equipment handling devices such as cranes, vehicles, chain falls and other lifting equipment are available or scheduled.
   4. All instruction books, calibration curves, or other printed material to cover the electrical devices are available.
   5. Data sheets to record all test results are available.

3.3 INSTALLATION

A. Test decal:
   1. The testing laboratory shall affix a test decal on the exterior of equipment or equipment enclosure of protective devices after performing electrical tests.
   2. The test decal shall be color coded to communicate the condition of maintenance of the protective. The color scheme for condition of maintenance of overcurrent protective devices shall be:
      a. White: electrically and mechanically acceptable.

b. Yellow; minor deficiency not affecting fault detection and operation, but minor electrical or mechanical condition exists.

3. The decal shall include the following information at a minimum:
   a. Testing organization.
   b. Project identifier.
   c. Test date.
   d. Technician identifier.

3.4 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION (NOT USED)

3.5 REPAIR/RESTORATION (NOT USED)

3.6 RE-INSTALLATION (NOT USED)

3.7 COMMISSIONING

A. Testing and Training Phase: Installation Testing:
   1. Also called "Field Acceptance Testing".
   2. Panelboards:
      a. Cleaning:
