	EXISTING DUCT TO REMAIN
	DEMOLISH EXISTING DUCT BACK TO POINT.
	CONNECT TO EXISTING DUCT.

C/350 — AIR DEVICE DESIGNATION

AIR DEVICE "MARK" — AIRFLOW CFM

* NOT ALL SYMBOLS MAY APPLY TO THIS PROJECT

MECHANICAL GENERAL NOTES

1. ALL MECHANICAL WORK SHALL COMPLY WITH ALL LOCAL CODES, DRAWINGS, SPECIFICATIONS, AND AUTHORITIES HAVING JURISDICTION. IF DISCREPANCIES ARE FOUND, THE MOST STRINGENT REQUIREMENT SHALL GOVERN WORK. WHERE INSPECTIONS ARE REQUIRED BY AUTHORITIES HAVING JURISDICTION, WORK MUST NOT BE CONCEALED UNTIL INSPECTIONS AND TESTING ARE COMPLETE AND WORK IS ACCEPTED.
2. REFER TO SPECIFICATIONS AND PROJECT MANUAL FOR ADDITIONAL INFORMATION AND REQUIREMENTS.
3. REFER TO ALL PROJECT DRAWINGS FOR DETAILS OF CONSTRUCTION AND INSTALLATION REQUIREMENTS.
4. PRIOR TO BID, CONTRACTOR SHALL BECOME THOROUGHLY FAMILIAR WITH THE REQUIREMENTS OF THESE NOTES AS WELL AS OTHER NOTES SHOWN ON THE CONTRACT DOCUMENTS.
5. THESE DRAWINGS REFLECT A SYSTEM DESIGNED AROUND SPECIFIED REFERENCE PRODUCTS. THE SELECTION OF WHICH HAS INFLUENCED THE DESIGNS OF OTHER TRADES. IF SUBSTITUTE MANUFACTURERS, SIZES, OR MODEL NUMBERS ARE BID OR SUBMITTED, IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO COORDINATE ALL DIFFERENCES PRIOR TO BID. ALL COSTS OF ALL TRADES ASSOCIATED WITH THE SUBSTITUTION SHALL BE INCLUDED IN THE BID
6. COORDINATION OF ALL MODIFICATIONS TO EACH DISCIPLINE WHICH RESULT FROM SUBSTITUTION OF EQUIPMENT OR MATERIALS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. SUBSTITUTIONS WHICH ARE INSTALLED AND SUBSEQUENTLY ARE PROVEN UNSATISFACTORY BY OWNER, SHALL BE REMOVED COMPLETELY BY THE CONTRACTOR AND REPLACED WITH THE ORIGINAL DESIGN OR CORRECTED AS DIRECTED BY THE ENGINEER WITHOUT ADDITIONAL COST TO THE OWNER.
7. ALL DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL ARRANGEMENTS OR GEOMETRICAL RELATIONSHIPS OF EQUIPMENT AND SERVICES. THEY ARE NOT INTENDED TO SPECIFY OR SHOW EVERY OFFSET, SEQUENCE, DEVICE, OPTION, FITTING, OR COMPONENT.
8. INFORMATION AND COMPONENTS ON DETAILS OR IN SPECIFICATIONS, BUT NOT SHOWN ON PLANS, AND VICE VERSA, SHALL BE PROVIDED AS IF EXPRESSLY REQUIRED BY BOTH.
9. CONTRACTOR SHALL NOT SCALE DRAWINGS. DRAWINGS SPECIFIC TO THIS DISCIPLINE DO NOT LIMIT THE RESPONSIBILITY OF WORK REQUIRED BY THE CONTRACT DOCUMENTS.
10. EXACT LOCATIONS OF ALL EQUIPMENT, ROOF CURBS, DUCTS, DIFFUSERS, AND PIPING SHALL BE COORDINATED WITH OTHER TRADES. CEILING MOUNTED SPRINKLER, LIGHTING, AND ELECTRICAL REQUIREMENTS TAKE PRECEDENCE OVER CEILING MOUNTED MECHANICAL REQUIREMENTS. SEE ARCHITECTURAL REFLECTED CEILING PLANS FOR CEILING GRID AND LIGHTING LAYOUT FOR COORDINATION OF FINAL DIFFUSER LOCATIC NS.
11. SEE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR BUILDING DETAILS AND DIMENSIONS. COORDINATE PLACEMENT OF MECHANICAL SYSTEMS WITH ARCHITECTURAL AND STRUCTURAL TRADES.
12. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ALL WORK WITH THAT OF OTHER TRADES. REFER TO ALL CONSTRUCTION DOCUMENTS FOR COMPLETE INFORMATION PRIOR TO BID.
13. ALL MECHANICAL CONSTRUCTION DETAILS SHALL BE AS SHOWN AND AS REQUIRED TO MAINTAIN "UL" ASSEMBLY RATINGS AS SHOWN ON ARCHITECTURAL SHEETS. SEAL AROUND ALL PENETRATIONS THOROUGH UL RATED ASSEMBLIES, FIRE AND SMOKE WALLS. COORDINATE WITH GENERAL CONTRACTOR.
14. NO OTHER TRADES, I.E., ELECTRICAL, CEILING, PLUMBING, OR OTHER SYSTEMS SHALL BE SUSPENDED, HUNG, OR SUPPORTED FROM DUCTWORK OR PIPING.
15. SPECIAL CARE SHALL BE TAKEN O|EXISTING |ROOFS TO PREVENT DAMAGE. ANY DAMAGE SHALL BE PROMPTLY REPAIRED AT NO EXPENSE TO THE OWNER. COMPLY WITH BONDING REQUIREMENTS O|EXISTING |ROOF.
16. CONTRACTOR SHALL BE RESPONSIBLE FOR FLASHING AND SEALING OF ALL ROOF PENETRATIONS AIR AND WATER TIGHT.
17. CLOSELY COORDINATE FINAL LOCATIONS OF INSTALLED EQUIPMENT TO ACHIEVE THE GREATEST ACCESSIBILITY FOR MAINTENANCE PURPOSES.
18. CONTRATCTOR SHALL VISIT THE SITE TO ESTABLISH THE EXISTING CONDITIONS PRIOR TO DUCT, PIPE OR EQUIPMENT FABRICATION. SYSTEMS SHALL BE ERECTED USING FIELD MEASUREMENTS FOR COORDINATION WITH THE EXISTING EQUIPMENT, STRUCTURE, FIRE PROTECTION AND ELECTRICAL IN THE SPACE.
19. MAINTAIN THE SECURITY OF THE BUILDING AT ALL TIMES.
20. CORE DRILL ALL PIPING PENETRATIONS OF CONCRETE WALLS AND FLOORS.
21. ALL HVAC WORK TO BE PER SMACNA AND ALL APPLICABLE CODES. DUCT SIZES REPRESENT FREE AREA.
22. ALL LOW PRESSURE DUCTWORK THAT HAS TO BE OFFSET DUE TO AN OBSTRUCTION SHALL BE OFFSET WITH TWO - 45 DEGREE, 1.5 RADIUS ELBOWS UNLESS OTHERWISE NOTED.
23. PROVIDE ACCESS DOORS IN WALLS, FLOORS, OR CEILINGS FOR ACCESS TO ALL FIRE DAMPERS, SMOKE DAMPERS, EQUIPMENT, COILS, VALVES, AND BALANCING DAMPERS. ACCESS DOORS ARE NOT REQUIRED WHERE DEVICES ARE DIRECTLY ACCESSIBLE THROUGH AIR DEVICES.
24. ALL DUCTWORK UPSTREAM OF VAV BOXES SHALL BE CONSIDERED "MEDIUM-PRESSURE DUCT".
25. DUCT FITTINGS ARE AS FOLLOWS: 1) FLEX DUCT IS ONLY PERMITTED IN LINEAR DUCT RUNS. FLEX DUCT SHALL NOT BE USED WHERE DUCTWORK CHANGES DIRECTION. ALL ELBOWS SHALL BE HARD DUCTED. 2) ALL 90 DEGREE ELBOWS TO HAVE R/D = 1.5, UNLESS OTHERWISE NOTED. 3) ALL MITERED RECTANGULAR ELBOWS GREATER THAN 90 DEGREES NOTED ARE TO HAVE TURNING VANES. 4) SIDE TAKE-OFF FITTINGS SHALL BE EQUAL TO FLEXMASTER STODB03. 5) DAMPERS SHALL BE EQUAL TO FLEXMASTER SLDB03
26. PROVIDE BRANCH TAKEOFF AND DAMPER AT EACH CONNECTION OF ROUND OR RECTANGULAR BRANCH DUCTS TO A RECTANGULAR DUCT, SEE DETAILS.
27. REFER TO ARCHITECTURAL PLANS FOR LOCATION OF FIRE AND SMOKE WALLS.
28. MAINTAIN A MINIMUM OF 10'-0" BETWEEN ALL FRESH AIR INTAKES AND PLUMBING VENTS, EXHAUST FAN DISCHARGE, AND FLUES. MAINTAIN MINIMUM CLEAR DISTANCE OF 5'0" BETWEEN PARAPET WALL AND ALL ROOF MOUNTED MECHANICAL EQUIPMENT.
29. ALL ROOF MOUNTED EQUIPMENT SHALL BE PROVIDED WITH MANUFACTURER'S FABRICATED CURBS WHICH FACILITATE LEVEL MOUNTING OF THE EQUIPMENT (I.E. FACTORY FABRICATED TO COMPENSATE FOR ROOF SLOPE). OBTAIN ROOF SLOPES AND DIRECTION OF SLOPE FROM ARCHITECTURAL AND/OR STRUCTURAL PLANS. ALL ROOF CURBS SHALL BE A MINIMUM OF 8" HIGH. SHIMMING OF CURBS IS NOT ACCEPTABLE.
30. ROOF PENETRATIONS AND FLASHING OR SEALING MUST COMPLY WITH ROOF MANUFACTUF S RECCOMMENDATIONS AND WARRANTY REQUIREMENTS.
31. ALL DUCTS SHALL BE MOUNTED HIGH AS POSSIBLE AGAINST BOTTOM OF STRUCTURE EXCEPT AS REQUIRED TO AVOID CONFLICTS WITH INTERSECTING SYSTEMS. DIAGONALLY OFFSET DUCTS IMMEDIATELY BEFORE AND AFTER PASSING UNDER INTERSECTING SYSTEMS TO MAINTAIN DUCT TIGHT TO STRUCTURE.
32. CONTRACTOR SHALL FIELD VERIFY ALL PIPE ROUTING AND ADJUST ELEVATIONS AS REQUIRED TO AVOID CONFLICTS. FINAL PLACEMENT OF PIPING SHALL BE DETERMINED BY FIELD MEASUREMENT AND VERIFICATION. ELEVATIONS ARE REFERENCED TO PIPE CENTERLINE UNLESS OTHERWISE NOTED.
33. DUCTWORK SHALL CONFORM TO THE FOLLOWING PRESSURE CLASSES: SUPPLY: 2" SP; RETURN/RELIEF/OUTSIDE AIR/EXHAUST: 2" SP. ALL DUCTWORK IS REQUIRED TO BE TESTED IN ACCORDANCE WITH THE SPECIFICATIONS.
34. ALL EQUIPMENT, DEVICES, AND FIXTURES SHALL BE INSTALLED AS PER MANUFACTURER'S RECOMMENDATION.
35. CONTRACTOR SHALL VERIFY CLOSELY AT SITE TRANSPORTATION OF NEW HVAC EQUIPMENT INTO MECHANICAL AREAS BEFORE BIDDING. PROVIDE COMPLETE DISASSEMBLY AND RE-ASSEMBLY OF NEW EQUIPMENT AS REQUIRED FOR A COMPLETE INSTALLATION.
36. PROVIDE FLEXIBLE CONNECTIONS AND TRANSITIONS ON DUCT INLET AND OUTLET CONNECTIONS TO ALL EQUIPMENT WITH MOVING PARTS.
37. DUCTWORK VISIBLE THROUGH RETURN AIR OPENINGS SHALL BE PAINTED FLAT BLACK TO REDUCE VISIBILITY.
38. EXPOSED DUCTWORK AND PIPING SHALL BE FURNISHED SUITABLE FOR PAINTING, AND SHALL BE PAINTED AS REQUIRED BY ARCHITECTURAL SPECIFICATIONS.
39. NOT ALL REQUIRED PIPING, VALVES, OR FITTINGS ARE SHOWN ON DRAWINGS FOR CLARITY. COORDINATE PLAN DETAILS WITH SPECIFICATIONS, SCHEMATICS, FLOW DIAGRAMS, AND OTHER DETAILS TO PROVIDE COMPLETE PIPING SYSTEMS.
40. COORDINATE WORK CLOSELY WITH CONTROL REQUIREMENTS. PROVIDE ALL NECESSARY DUCT TAPS, PIPE TAPS, WELLS, AND OTHER APPURTENANCES REQUIRED BY CONTROL SYSTEM. PROVIDE SPARE PIPE WELL ADJACENT TO EACH TEMPERATURE SENSOR IN PIPING.
41. REFER TO ARCHITECTURAL PLANS FOR CEILING TYPE, AND FOR MOUNTING REQUIREMENTS. CONTRACTOR SHALL PROVIDE AND INSTALL ALL AIR DEVICES WITH MOUNTING SYSTEM DESIGNED FOR MOUNTING SURFACE TYPE.
42. COORDINATE FINAL PLACEMENT OF ALL THERMOSTATS WITH WALL-MOUNTED DEVICES AND OWN S REPRESENTATIVE. MOUNT PER A.D.A. REQUIREMENTS. ANY THERMOSTAT THAT IS REQUIRED TO BE MOUNTED ON AN EXTERIOR WALL SHALL BE MOUNTED ON AN INSULATED PAD.
43. INSTALL SMOKE DETECTOR IN SUPPLY AND RETURN DUCT OF ALL AIR HANDLERS SUPPLYING GREATER THAN 2,000 CFM.
44. PROVIDE CONCRETE PADS FOR ALL GROUND MOUNTED EQUIPMENT.
45. REPLACE ALL ARCHITECTURAL FEATURES REMOVED OR DAMAGED DURING THE COURSE OF THE WORK.
46. CONTRACTOR SHALL PATCH ALL WALLS, FLOORS, AND CEILINGS TO MATCH NEW FOR ALL OPENINGS CREATED BY INSTALLATION OF EQUIPMENT AND HVAC SERVICE PENETRATIONS.
47. ALL SUPPLY, RETURN, RELIEF, AND OUTSIDE AIR DUCTWORK SHALL BE EXTERNALLY INSULATED EXCEPT WHERE LINER, DOUBLE WALL LINED DUCT, OR FABRIC DUCT IS INDICATED. INSULATE TOPS OF SUPPLY AIR DIFFUSERS WITI' THICK FIBERGLASS DUCT WRAP. DO NOT INSULATE EXHAUST DUCTWORK EXCEPT FOR FIRE WRAP ON KITCHEN HOOD EXHAUST AND ON EXHAUST ASSOCIATED WITH DEDICATED OUTSIDE AIR UNITS (DOAS).
48. REFER TO SPECIFICATONS FOR INSULATION AND R-VALUES FOR MECHANICAL PIPING AND DUCTWORK INSULATION.
49. SEE ARCHITECTURAL PLANS FOR ROOF PENETRATION DETAILS.
50. ALL HVAC COMPONENTS WITH ELECTRICAL REQUIREMENTS SHALL BE INSTALLED WITH ELECTRICAL INFRASTRUCTURE NECESSARY TO PROVIDE A FULLY FUNCTIONING SYSTEM. IF NOT SPECIFICALLY SHOWN ON ELECTRICAL SCHEDULE, HVAC FIXTURES REQUIRING ELECTRICAL SERVICE SHALL BE FED FROM BREAKER OF ADEQUATE CAPACITY.
51. ALL CONTROL WIRING SHALL BE INSTALLED IN CONDUIT.
52. PLENUM CABLING SHALL HAVE ITS OWN SYSTEM OF SUPPORT AND BE STRUCTURALLY SOUND. ATTACHMENT TO CEILING GRID AND HANGER WIRES IS PROHIBITED. WHERE NOT INSTALLED IN CONDUIT, CABLING SHALL BE RUN IN CABLE HOOKS. CABLING LAYING ON CEILING TILES IS PROHIBITED.
53. CONTRACTOR SHALL PROVIDE FURR DOWN AND ANY OTHER CEILING MODIFICATIONS NEEDED TO ACCOMMODATE DUCTWORK PENETRATIONS.
54. PROVIDE ALL HVAC UNITS WITH AN EXTRA SET OF MANUFACTURI S RECOMMENDED FILTERS AFTER PROJECT COMPLETION.
55.

HVAC THERMOSTAT SETTINGS:

ALL THERMOSTATS WHICH ARE NOT UNIT–MOUNTED SHALL BE AT APPROXIMATELY 44" PER ADA REQUIREMENTS. SET ALL THERMOSTATS ASSOCIATED WITH HVAC EQUIPMENT PER THE FOLLOWING:

1. EXHAUST FANS WEF–1,2,3 : FAN SHALL ENERGIZE AT 85°F AND DE–ENERGIZE AT 80°F (ADJUSTABLE).
2. UNIT HEATERS EUH–1 THROUGH 12 , WEUH–1,2,3,4 : UNIT HEATER SHALL ENERGIZE AT 55°F AND DE–ENERGIZE AT 60°F (ADJUSTABLE).
3. SPLIT SYSTEM AIR HANDLERS AHU–1,2 : A. COOLING MODE: SETPOINT SHALL BE 75°F (ADJUSTABLE) B. HEATING MODE: SETPOINT SHALL BE 72°F (ADJUSTABLE) C. AHU–1 AND AHU–2 SHALL HAVE THE SAME HEATING AND COOLING SETPOINTS.
4. SPLIT SYSTEM AIR HANDLER AHU–3 : A. COOLING MODE: SETPOINT SHALL BE 80°F (ADJUSTABLE) B. HEATING MODE: SETPOINT SHALL BE 65°F (ADJUSTABLE)

KEYED NOTES:

1. PROVIDE SINGLE TIMER SWITCH ON WALL FOR MANUAL ACTIVATION OF HEATER FANS FOR CIRCULATION. SWITCH SHALL HAVE MAXIMUM DURATION OF 6 HOURS OR MORE.

1 AIR HANDLING UNITS SHALL BE PROVIDED WITH FILTER BASE EQUAL TO EZ FILTER EASY ACCESS FURNACE UNIT FILTER BASE. FILTER BASE SHALL ACCOMMODATE 2" FILTER. UNITS SHALL BE PROVIDED WITH MINIMUM MERV 8 FILTERS. PROVIDE WITH EXTRA SET OF FILTERS.
2 INDOOR UNIT SHALL BE INSTALLED WITH DRAIN PAN. DRAIN FROM PAN SHALL BE ROUTED FULL SIZE TO SANITARY WASTE.
3 INDOOR UNIT SHALL BE INSTALLED WITH ELASTOMERIC VIBRATION ISOLATION PADS EQUAL TO AMBER BOOTH. PADS BE INSTALLED AS PER PAD MANUFACTURER'S RECOMMENDATION. UNIT SHALL BE SUPPORTED AT ALL FOUR CORNERS.
4 INDOOR UNIT SHALL BE PROVIDED WITH DISCONNECT SWITCH, SEE ELECTRICAL. INDOOR UNIT SHALL BE PROVIDED WITH CIRCUIT BREAKER FOR STRIP HEAT.
5 AHU CONDENSATE SHALL BE RUN FULL SIZE AND DISCHARGE TO EXTERIOR OF BUILDING, AS PER MANUFACTURER'S RECOMMENDATION.
6 AHU SHALL BE PROVIDED WITH LOW AMBIENT CONTROL.
7 UNIT SHALL OPERATE ON R-410A. 12 EER, 14 SEER @ AHRI CONDITIONS

HVAC -- CONDENSER SCHEDULE

1 EXHAUST FANS SHALL BE PROVIDED WITH SOLID STATE SPEED CONTROLLER, DISCHARGE BACKDRAFT DAMPER AND DISCONNECT SWITCH.
2 EXHAUST FANS SHALL BE PROVIDED WITH MANUFACTURER'S 45° WEATHER HOOD, OSHA FAN GUARD, BIRD SCREEN, AND ANTI-CORROSION EPOXY COATING.
3 EXHAUST FANS SHALL BE PROVIDED WITH MANUFACTURER'S VIBRATION ISOLATOR KIT AND BELT TENSIONER.
4 EXHAUST FANS SHALL BE SUPPORTED BY STRUCTURE BY MEANS OF WALL COLLAR KIT AND MANUFACTURER'S MOUNTING BRACKETS.
5 EXHAUST FANS SHALL BE CONTROLLED BY 7-DAY PROGRAMMABLE THERMOSTAT WITH HAND-OFF-AUTO CONTROL TO ALLOW FOR MANUAL OVERRIDE.

1 STANDARD HEATERS SHALL BE PROVIDED WITH MANUFACTURER'S DISCONNECT AND BUILT-IN 120V THERMOSTAT.
2 STANDARD HEATERS SHALL BE PROVIDED WITH MANUFACTURER'S SUMMER FAN SWITCH OVERRIDE.
3 STANDARD HEATERS SHALL BE PROVIDED WITH MANUFACTURER'S EPOXY COATING.
4 WASHDOWN HEATERS SHALL BE PROVIDED WITH MANUFACTURER'S DISCONNECT, WATERPROOF REMOTE THERMOSTAT, NEMA 4X WATERPROOF CONTROL BOX, AND HAND-OFF-AUTO SWITCH.
5 WASHDOWN HEATERS SHALL HAVE STAINLESS STEEL SHROUD, GRILLES, AND HEATING ELEMENTS. FAN SHALL BE EPOXY COATED.
6 WASHDOWN HEATERS SHALL BE MOUNTED USING MANUFACTURER'S STAINLESS STEEL MOUNTING BRACKET. MOUNTING SHALL BE WALL-MOUNT OR SUSPENDED FROM STRUCTURE.
7 WASHDOWN HEATERS SHALL BE MOUNTED USING MANUFACTURER'S STAINLESS STEEL MOUNTING BRACKET. MOUNTING SHALL BE WALL-MOUNT OR SUSPENDED FROM STRUCTURE.

HVAC -- LOUVER SCHEDULE

DESIGNATION				AIRFLOW DATA						FACE SIZE			
TYPE	MANUFACTURER	MODEL	STYLE	STATIC PRESSURE	DESIGN AIRFLOW	FREE AREA	DESIGN INLET VELOCITY (FPM)	MAX INLET VELOCITY (FPM)	SAFETY FACTOR	W	H	FINISH	REMARKS
L1	POTTORFF	EFD-645	STATIONARY BLADE DRAINABLE INTAKE LOUVER	0.10 in-wg	6,000 CFM	6.6 SF	909	1,009	9.9%	42"	42"	EPOXY COATED	PROVIDE WITH MOTORIZED DAMPER. INTERLOCK WITH ASSOCIATED EXHAUST FAN. DAMPER SHALL OPEN FULLY BEFORE FAN ENERGIZES.
L2	POTTORFF	EFD-645	STATIONARY BLADE DRAINABLE INTAKE LOUVER	0.10 in-wg	6,600 CFM	7.6 SF	868	1,009	13.9%	48"	42"	EPOXY COATED	PROVIDE WITH MOTORIZED DAMPER. INTERLOCK WITH ASSOCIATED EXHAUST FAN. DAMPER SHALL OPEN FULLY BEFORE FAN ENERGIZES.
L3	POTTORFF	EFD-645	STATIONARY BLADE DRAINABLE INTAKE LOUVER	0.10 in-wg	200 CFM	0.5 SF	400	1,009	60.4%	18"	12"	EPOXY COATED	PROVIDE WITH MANUAL BALANCING DAMPER. BALANCE TO OSA AIRFLOW OF ASSOCIATED AIR HANDLER.

1 CONTRACTOR SHALL COORDINATE COLOR AND FINISH WITH ARCHITECT. CONTRACTOR SHALL SUBMIT MANUFACTURER'S COLOR OPTIONS TO ARCHITECT BEFORE ORDERING ALL LOUVERS.
2 INTAKE LOUVERS SHALL BE INSTALLED WITH INSECT SCREEN. LOUVERS SHALL BE PROVIDED WITH MANUFACTURER'S ANTI-CORROSION EPOXY COATING.
3 FINAL HEIGHT AND LOCATION OF LOUVER SHALL BE COORDINATED WITH ELECTRICAL AND WASTEWATER EQUIPMENT LOCATIONS.
4 LOUVER SHALL, AT A MINIMUM, HAVE TWO FULL HORIZONTAL BLADES.
5 INSTALL BOTTOM OF LOUVERS AT 8" ABOVE FINISH FLOOR.

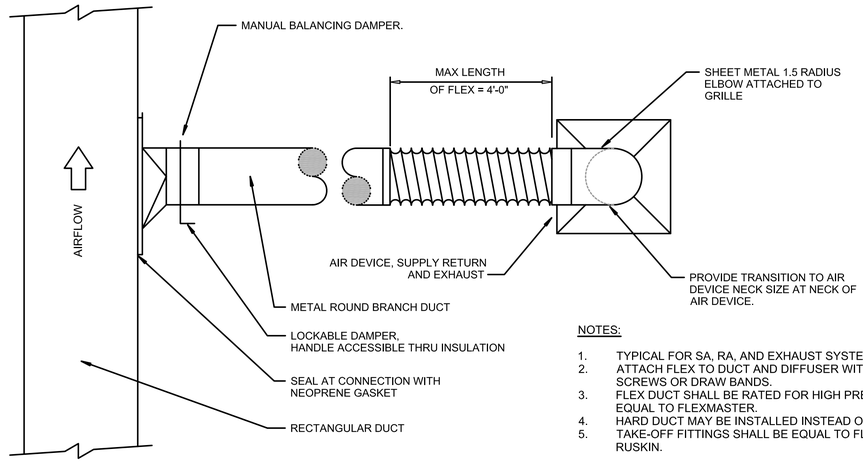
NOTE:

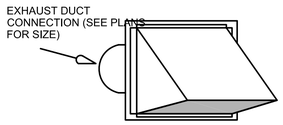
1. DAMPER SHALL BE EQUAL TO RUSKIN MD35.



1 BRANCH DUCT FITTING–RECTANGULAR
SCALE: NONE

NOTE:

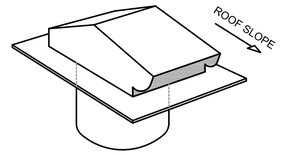
1. SIDE TAKE-OFF FITTINGS SHALL BE EQUAL TO FLEXMASTER STOD.



2 BRANCH DUCT FITTING–ROUND
SCALE: NONE

NOTES:

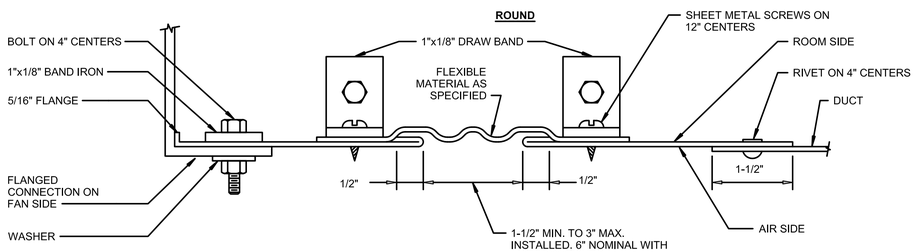
1. TYPICAL FOR SA, RA, AND EXHAUST SYSTEMS.
2. ATTACH FLEX TO DUCT AND DIFFUSER WITH SHEET METAL SCREWS OR DRAW BANDS.
3. FLEX DUCT SHALL BE RATED FOR HIGH PRESSURE AND EQUAL TO FLEXMASTER.
4. HARD DUCT MAY BE INSTALLED INSTEAD OF FLEX DUCT.
5. TAKE-OFF FITTINGS SHALL BE EQUAL TO FLEXMASTER OR RUSKIN.



3 BRANCH DUCT TAKE OFF
SCALE: NONE

NOTES :

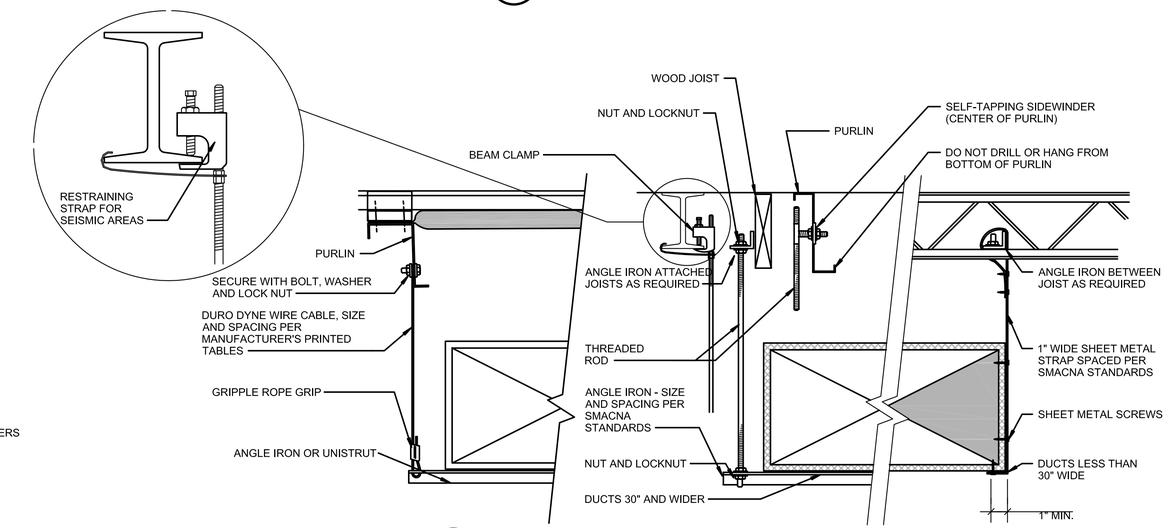
1. *WALL CAP SHALL BE EQUAL TO GREENHECK MODEL WC. FOR USE IN LOW-VOLUME EXHAUST APPLICATIONS (300 CFM OR LESS).*
2. *WALL CAP SHALL HAVE BIRDSCREEN AND BACKDRAFT DAMPER.*
3. *PAINT WALL CAP TO MATCH WALL.*
4. *MAINTAIN ALL CODE REQUIRED CLEARANCES FROM OUTSIDE AIR INTAKES, DOORS, AND OPERABLE WINDOWS.*



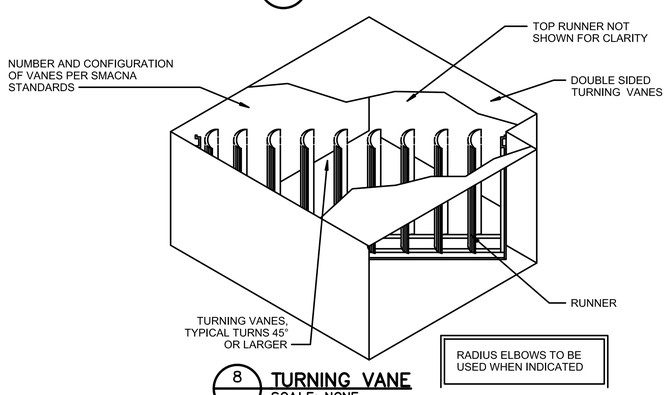
4 EXHAUST WALL CAP
SCALE: NONE

NOTES :

1. *ROOF JACK SHALL BE EQUAL TO GREENHECK MODEL RJ. FOR USE IN LOW-VOLUME EXHAUST APPLICATIONS (300 CFM OR LESS).*
2. *ROOF JACK SHALL HAVE BIRDSCREEN AND BACKDRAFT DAMPER.*
3. *WHERE ROOF JACK IS VISIBLE FROM GROUND LEVEL, COORDINATE FINISH WITH ARCHITECT.*
4. *PROVIDE NECK ADAPTOR AS REQUIRED FOR CONNECTION TO ROUND DUCT.*



5 EXHAUST ROOF JACK
SCALE: NONE



NOTES:

1. FLEXIBLE CONNECTIONS SHALL BE MADE AT ALL SUPPLY AND RETURN CONNECTIONS OF DUCTWORK TO AIR HANDLING UNITS. ALL CONNECTIONS SHALL BE AS PER SMACNA.

6 FLEXIBLE CONNECTION
SCALE: NONE

7 DUCT SUPPORT
SCALE: NONE

RADIUS ELBOWS TO BE USED WHEN INDICATED

PLUMBING GENERAL NOTES:

1. ALL PLUMBING WORK SHALL COMPLY WITH ALL LOCAL CODES, AUTHORITIES HAVING JURISDICTION, DRAWINGS AND SPECIFICATIONS. IF DISCREPANCIES ARE FOUND – THE MOST STRINGENT REQUIREMENT SHALL GOVERN WORK.
2. ALL DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL ARRANGEMENTS OR GEOMETRIC RELATIONSHIPS OF EQUIPMENT AND SERVICES. THEY ARE NOT INTENDED TO SPECIFY OR SHOW EVERY OFFSET, FITTING, OR COMPONENT. CONTRACTOR SHALL NOT SCALE DRAWINGS. EQUIPMENT SCHEDULES SHALL TAKE PRECEDENCE OVER CONFLICTING DRAWING INFORMATION. DRAWINGS SPECIFIC TO THIS DISCIPLINE DO NOT LIMIT THE RESPONSIBILITY OF WORK REQUIRED BY CONTRACT DOCUMENTS. REFER TO COMPLETE PROJECT DOCUMENTS FOR COORDINATION WITH OTHER DISCIPLINES.
3. EXCEPT WHERE MODIFIED BY SPECIFIC NOTATION TO THE CONTRARY, IT SHALL BE UNDERSTOOD THAT THE INDICATION AND/OR DESCRIPTION OF ANY ITEM IN THE DRAWINGS OR SPECIFICATIONS CARRIES WITH IT THE INSTRUCTION TO PROVIDE THE ITEM, REGARDLESS OF WHETHER OR NOT THIS INSTRUCTION IS EXPLICITLY STATED AS PART OF THE INDICATION OR DESCRIPTION.
4. REFER TO PLUMBING SCHEDULES AND SPECIFICATIONS FOR BASIS OF DESIGN, ACCEPTABLE MANUFACTURERS, AND MODELS OF PLUMBING FIXTURES AND EQUIPMENT.
5. PROVIDE CLEANOUTS IN ALL SANITARY LINES, WHETHER SHOWN OR NOT, AT INTERVALS NOT TO EXCEED 100' AND AT EACH CHANGE IN DIRECTION GREATER THAN 45 DEGREES.
6. PROVIDE A TWO–WAY CLEANOUT AT THE JUNCTION OF ALL BUILDING DRAINS AND BUILDING SEWERS.
7. REFER TO SPECIFICATIONS FOR INSULATION REQUIREMENTS.
8. ALL SANITARY LINES 2 1/2" AND SMALLER SHALL HAVE A MINIMUM SLOPE OF 1/4" PER FOOT. ALL SANITARY LINES 3" AND LARGER SHALL HAVE A MINIMUM SLOPE OF 1/8" PER FOOT. VERIFY EXISTING SANITARY LINE ELEVATIONS AND COORDINATE INSTALLATION TO ASSURE PROPER FLOW.
9. SEAL ALL PIPE PENETRATIONS THROUGH WALLS, ROOF, AND FLOOR AIR AND WATER TIGHT.
10. ALL FLOOR DRAINS SHALL HAVE DEEP SEAL TRAPS, 4" DEEP SEAL MINIMUM UNLESS NOTED OTHERWISE. PROVIDE A TRAP GUARD EQUAL TO PROSET OR SURE SEAL SIZED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS FOR ALL FLOOR DRAINS.
11. ALL PIPE DROPS FROM CEILING PLENUM TO BELOW FLOOR SHALL BE MADE IN FURR–OUTS AT COLUMNS, IN WEBB OF BEAMS AT COLUMNS, OR IN WALLS UNLESS SHOWN OTHERWISE.
12. ALL EXPOSED OR ACCESSIBLE P–TRAPS SHALL BE CHROME PLATED AND PROVIDED WITH BOTTOM CLEANOUT PLUGS. ALL EXPOSED PLUMBING TRIM SHALL BE CHROME PLATED.
13. PROVIDE TIGHT–FITTED MOLDED PLASTIC INSULATION AT ALL EXPOSED WATER AND DRAIN PIPING FOR ADA FIXTURES PER ANSI A117.1 AND ADA REQUIREMENTS. FINISH SHALL BE WHITE.
14. ALL DOMESTIC WATER SHALL BE ROUTED ABOVE CEILING. ALL DOMESTIC WATER ROUTED IN EXTERIOR WALLS SHALL BE INSTALLED ON CONDITIONED SIDE OF ROOM INSULATION.
15. MAINTAIN A MINIMUM OF 10 ' BETWEEN ALL HVAC FRESH AIR INTAKES AND PLUMBING VENTS. COORDINATE WITH MECHANICAL BEFORE INSTALLATION OF VTRs.
16. CONTRACTOR SHALL VISIT SITE AND VERIFY CONDITIONS PRIOR TO BIDDING.
17. CONTRACTOR SHALL VERIFY EXACT LOCATIONS OF UTILITIES AND INVERTS PRIOR TO ROUTING SERVICES. CONTRACTOR SHALL COORDINATE ALL SANITARY SEWER, FIRE, GAS AND DOMESTIC WATER LINES WITH CIVIL DRAWINGS. SEE CIVIL DRAWINGS FOR CONTINUATION OF ALL UTILITY LINES.
18. CONTRACTOR SHALL PAY ALL UTILITY FEES AND CHARGES IN THE CONTRACT.
19. PROVIDE ALL FITTINGS, TRANSITIONS, COUPLINGS, ADAPTORS, UNIONS, AND OTHER ACCESSORIES NEEDED TO COMPLETE CONNECTIONS AND PROVIDE FOR PROPER OPERATION OF PLUMBING FIXTURES AND PLUMBING EQUIPMENT.
20. FIRE STOP ALL PIPE PENETRATIONS THROUGH RATED WALLS. REFER TO SPECIFICATIONS.
21. PIPING SHALL NOT BE ROUTED OVER ELECTRICAL ROOMS, COMPUTER ROOMS, ELECTRICAL PANELS, OR ELECTRICAL EQUIPMENT UNLESS OTHERWISE NOTED.
22. PROVIDE LEAD–FREE PRESSURE REDUCING VALVE AT DOMESTIC ENTRANCE TO PROVIDE ADEQUATE PRESSURE AT ALL OUTLETS IN ACCORDANCE WITH THE SYSTEM REQUIREMENTS.
23. EACH FIXTURE GROUP OR BATTERY OF FIXTURES SHALL BE PROVIDED WITH A SHUTOFF VALVE IN THE DOMESTIC HOT AND COLD WATER SUPPLY LINES ABOVE CEILING. VALVES SHALL BE ACCESSIBLE FROM ROOM BELOW.
24. PAINT EXPOSED PIPING AND PIPE INSULATION. COORDINATE WITH OWNER FOR FINAL COLOR.
25. ALL UNDER FLOOR WATER PIPING SHALL BE PROVIDED WITH A POLYETHYLENE SLEEVE. EXTEND SLEEVE UP THROUGH FLOOR SLAB AND SEAL AIR AND WATER TIGHT.
26. PIPING THROUGH FOUNDATION WALLS AND FOOTINGS SHALL BE SLEEVED AS PER STRUCTURAL DETAILS.
27. ALL PIPE CONNECTIONS BETWEEN DISSIMILAR METALS SHALL BE MADE THROUGH DIELECTRIC UNIONS.
28. ALL PLUMBING COMPONENTS WITH ELECTRICAL REQUIREMENTS SHALL BE INSTALLED WITH THE ELECTRICAL INFRASTRUCTURE NECESSARY TO PROVIDE A FULLY FUNCTIONING SYSTEM. IF NOT SPECIFICALLY SHOWN ON ELECTRICAL SCHEDULE, PLUMBING FIXTURES REQUIRING ELECTRICAL SERVICE SHALL BE FED FROM BREAKER OF ADEQUATE CAPACITY.
29. REFER TO PLUMBING SPECIFICATIONS FOR PIPE MATERIAL AND INSULATION REQUIREMENTS.
30. EXACT LOCATION OF ALL EQUIPMENT AND PIPING SHALL BE COORDINATED WITH OTHER TRADES. CEILING MOUNTED SPRINKLER AND LIGHTING SHALL TAKE PRECEDENCE OVER CEILING MOUNTED MECHANICAL REQUIREMENTS.
31. PROVIDE FABRICATED EXPANSION LOOP OR MANUFACTURED EXPANSION DEVICE ON ALL PIPING SYSTEMS CROSSING BUILDING EXPANSION JOINTS.

DOMESTIC WATER GENERAL NOTES:

1. PROVIDE LEAD–FREE ISOLATION VALVE FOR EACH RESTROOM MAIN AND EACH BRANCH MAIN SERVING A BATTERY OF FIXTURES.
2. PERMANENTLY LABEL ALL VALVES TO INDICATED AREA THAT VALVE SERVES.
3. PROVIDE WATER HAMMER ARRESTOR AT END OF ALL DCW AND DHW BRANCH LINES BEFORE LAST FIXTURE. REFER TO DETAILS FOR WATER HAMMER ARRESTOR SCHEDULE.
4. ROUTE ALL DOMESTIC WATER LINES IN ADMIN/LAB SPACES CONCEALED ABOVE CEILING. WHERE DOMESTIC WATER LINES MUST BE ROUTED EXPOSED, PAINT EXPOSED PIPE AND COORDINATE WITH ARCHITECT FOR COLOR.

(#) KEYED NOTES:

1. RPZAs FOR FILTER PRESS SYSTEM AND DOMESTIC WATER SYSTEM AT THIS LOCATION. REFER TO CIVIL FOR SPECIFICATION OF RPZA SERVING FILTER PRESS WATER SYSTEM.
2. UTILITY WASH STATION. REFER TO CIVIL FOR SPECIFICATION AND DETAILING OF ALL WATER PIPING IN CHEMICAL ROOM AND FILTER PRESS ROOM NOT EXPLICITLY NOTED AS IN PLUMBING SCOPE.
3. ROUTE DOMESTIC WATER PIPING FROM RPZA HIGH AT PERIMETER AROUND CHEMICAL ROOM. COORDINATE LOCATION WITH CHEMICAL ROOM WATER SUPPLY PIPING. ALL PIPING WITHIN CHEMICAL ROOM AND BELT PRESS ROOM SHALL BE STAINLESS STEEL.
4. SLEEVE WATER PIPING ACROSS ELECTRICAL ROOM. SLEEVE SHALL BE HIGH AND TIGHT TO STRUCTURE AND LABELED ON EXTERIOR. FIRE CAULK BETWEEN SLEEVE AND PIPING AT BELT PRESS WALL TO MATCH WALL FIRE RATING.

SANITARY WASTE AND VENT RISER GENERAL NOTES:

1. SANITARY RISERS ARE DIAGRAMMATIC. RISERS INDICATE GENERAL PIPE ROUTES AND SIZES FOR SYSTEM. CONTRACTOR SHALL PROVIDE ALL NECESSARY OFFSETS TO PROVIDE A FULLY FUNCTIONING SYSTEM.
2. SOME P-TRAPS FOR FIXTURES ARE NOT SHOWN FOR CLARITY OF RISER. ALL PLUMBING FIXTURES WITH SANITARY CONNECTIONS SHALL BE PROVIDED WITH EITHER INTEGRAL OR ANCILLARY P-TRAPS.
3. CONTRACTOR SHALL INSTALL ALL PLUMBING FIXTURES IN ACCORDANCE WITH ALL APPLICABLE CODES AND AUTHORITIES HAVING JURISDICTION.
4. CLOSELY COORDINATE ALL VTR ROOF PENETRATIONS WITH ABOVE CEILING DUCTWORK AND STRUCTURE. COORDINATE WITH ARCHITECT FOR FINAL LOCATION.

DOMESTIC WATER GENERAL NOTES:

1. PROVIDE LEAD–FREE ISOLATION VALVE FOR EACH RESTROOM MAIN AND EACH BRANCH MAIN SERVING A BATTERY OF FIXTURES.
2. PERMANENTLY LABEL ALL VALVES TO INDICATED AREA THAT VALVE SERVES.
3. PROVIDE WATER HAMMER ARRESTOR AT END OF ALL DCW AND DHW BRANCH LINES BEFORE LAST FIXTURE. REFER TO DETAILS FOR WATER HAMMER ARRESTOR SCHEDULE.
4. ROUTE ALL DOMESTIC WATER LINES IN ADMIN/LAB SPACES CONCEALED ABOVE CEILING. WHERE DOMESTIC WATER LINES MUST BE ROUTED EXPOSED, PAINT EXPOSED PIPE AND COORDINATE WITH ARCHITECT FOR COLOR.

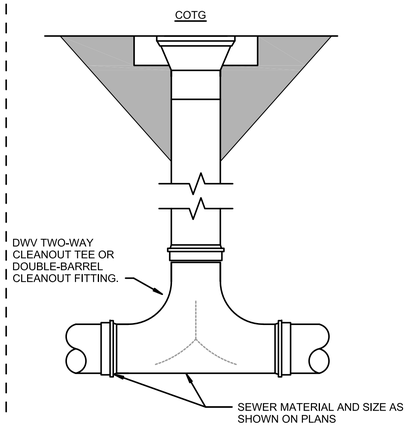
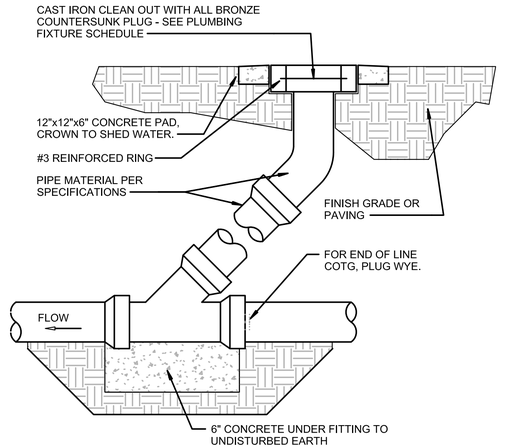
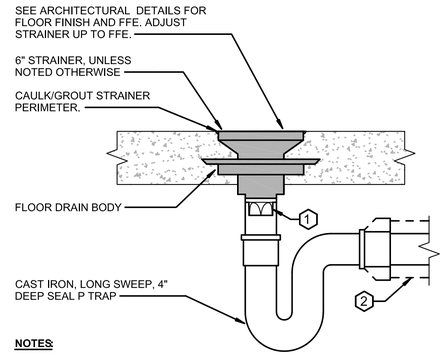
P:\PRODUCTION\PROJECTS\WALL ENGINEERING (WE)\WE-055 SHAWNEE NORTHSIDE WASTEWATER TREATMENT PLANT\DWG\PL5.DWG
5/20/2022 2:40 PM



GENERAL NOTE WHERE POSSIBLE, OFFSET COTG FITTINGS AWAY FROM BUILDING PERIMETER TO AVOID SIDEWALKS. ALL DCOTG LOCATIONS SHALL BE ACCESSIBLE FOR USE.

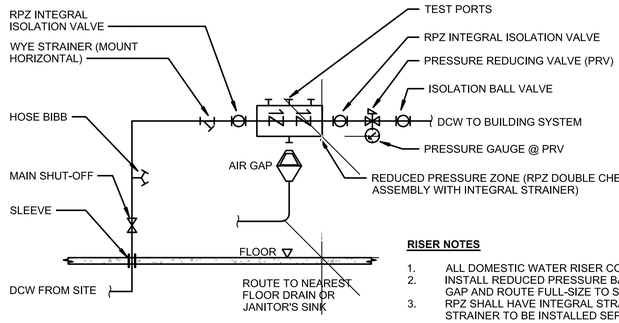


1 DOUBLE CLEANOUT TO GRADE
SCALE: NONE



COMBINED DOUBLE CLEANOUT FITTING OPTION.

MATCH DCOTG STYLE SHOWN ON PLANS



2 CLEANOUT TO GRADE
SCALE: NONE

NOTES

1. PROVIDE TRAP SEAL PROTECTION DEVICE.
2. FOR COMBINATION WASTE AND VENT, UPSIZE PIPE BY TWO NOMINAL SIZES.

3 FLOOR DRAIN
SCALE: NONE

RPZ SIZE	MAKE	MODEL
1/4" - 2"	WATTS	ULF009QTS
2 1/2" - 3"	WATTS	LF009QT-FDA
4" - 10"	WATTS	LF909OSYS-FDA

RISER NOTES

1. ALL DOMESTIC WATER RISER COMPONENTS SHALL BE LEAD-FREE.
2. INSTALL REDUCED PRESSURE BACKFLOW PREVENTER WITH MANUFACTURER'S AIR GAP AND ROUTE FULL-SIZE TO SANITARY.
3. RPZ SHALL HAVE INTEGRAL STRAINER UNLESS SPATIAL CONSTRAINTS REQUIRE STRAINER TO BE INSTALLED SEPARATELY.
4. INSTALL PIPE STANDS TO SUPPORT THE COMPONENTS. DO NOT SUPPORT ASSEMBLIES FROM PIPING. INSTALL BEARING PLATES ON CONCRETE FLOOR UNDEF EACH SUPPORT.
5. COORDINATE FINAL LOCATION OF DOMESTIC RISER WITH ALL OTHER SYSTEMS AND EQUIPMENT IN ASSOCIATED ROOM. RISER SHALL NOT INTERFERE WITH OR IMPEDE OPERATIONS OF OTHER SYSTEMS OR FACILITY PERSONNEL.
6. INSTALL ALL VALVES SO THAT VALVE HANDLES ARE NOT IMPEDED IN ANY MANNER AND ARE EASILY OPERATED FROM INTERIOR OF ROOM.

PRV NOTES

1. IF INCOMING PRESSURE IS 70PSI OR GREATER, PROVIDE PRV EQUAL TO WATTS LF223 FOR 2 1/2" AND BELOW. PRV SHALL BE EQUAL TO WATTS LFN223B FOR 3".
2. SIZE PRV PER PLANS OR MATCH RPZ SIZE, DO NOT SIZE BASED ON DISTRIBUTION PIPE SIZE.
3. ENGINEER SHALL BE INFORMED IF INCOMING PRESSURE AT BUILDING IS 150PSI OR GREATER.

4 RPZ DOMESTIC WATER RISER
SCALE: NONE

KEYED NOTES

1. TAP HOT WATER SUPPLY AT SINK FOR DISHWASHER. PROVIDE BRASS INLINE ISOLATION VALVE FOR DISHWASHER SUPPLY LINE.
2. ROUTE DISHWASHER DRAIN THROUGH HIGH LOOP SECURED TO BOTTOM OF COUNTERTOP WITH NON-METALLIC FASTENER OR CONNECT TO SINK-TOP AIR GAP FITTING BEFORE CONNECTING TO SINK DRAIN.
3. CONNECT DISHWASHER DRAIN TO GARBAGE DISPOSAL INLET PORT. FOR SINKS WITHOUT GARBAGE DISPOSAL, CONNECT DRAIN TO WYE FITTING IN VERTICAL PIPE UPSTREAM OF P-TRAP. TRIM DISHWASHER DRAIN HOSE TO ELIMINATE EXCESS LENGTH. DRAIN SHALL BE SLOPED TO DRAIN DOWNSTREAM OF HIGH LOOP OR AIR GAP.

5 RESIDENTIAL STYLE DISHWASHER PLUMBING

3 TLT, 3 LAV	19.5	34.5
2 TLT, 1 UR, 3 LAV	19.5	29.5
4 TLT, 4 LAV	26	46

NOTES

1. ALL BATHROOM GROUPS SHALL INCLUDE A MINIMUM OF ONE DCW ARRESTOR AND ONE DHW ARRESTOR SIZED PER HAMMER ARRESTOR SCHEDULE. ADDITIONAL ARRESTORS SHALL BE INSTALLED WHERE INDICATED.
2. ARRESTORS SHALL BE P.D.I.-WH201 APPROVED AND CERTIFIED.
3. ARRESTORS SHALL HAVE WROUGHT COPPER SHELL WITH THREADED CONNECTIONS ANI HYDRO-PNEUMATIC AIR CUSHION.
4. PROVIDE ACCESS TO ARRESTORS.
5. FURNISH AND INSTALL WITH ISOLATION VALVES INDEPENDENT OF ASSEMBLY.

6 WATER HAMMER ARRESTOR SCHEDULE
SCALE: NONE

NOTES

1. VENT ABOVE ROOF SHALL BE PAINTED TO MATCH ROOF. COORDINATE WITH ARCHITECT.
2. IF ARCHITECTURAL PIPE PENETRATION DETAIL IS AVAILABLE, IT SHALL SUPERCEDE THIS DETAIL.

6 VENT THROUGH ROOF
SCALE: NONE

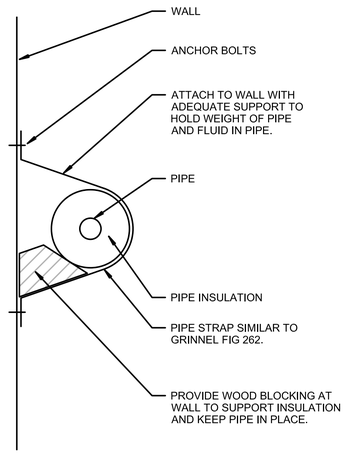
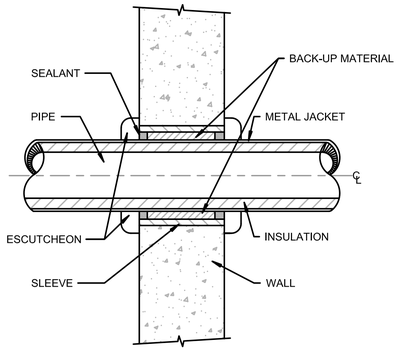
1 **INSULATED PIPE HANGER**
SCALE: NONE



2 **FLOOR ON GRADE PENETRATION**
SCALE: NONE

NOTES:



1. PROVIDE THERMAL EXPANSION TANK ON COLD WATER INLET. SIZE PER MANUFACTURER'S RECOMMENDATION.
2. T & P RELIEF VALVE SHALL DISCHARGE FULL SIZE TO SANITARY. T&P DISCHARGE SHALL NOT CAUSE A THREAT TO OR INTERFERE WITH FACILITY OPERATIONS, FACILITY ITSELF, EQUIPMENT OR PERSONNEL. THE DISCHARGE PIPE SHALL NOT HAVE ANY TRAPPED SECTIONS.
3. PAN DRAIN SHALL EXTEND FULL SIZE TO SANITARY.
4. T & P RELIEF VALVE AND DRAIN PAN DISCHARGE SHALL CONFORM TO ALL LOCAL CODES AND AUTHORITIES HAVING JURISDICTION.
5. FOR SUSPENDED WATER HEATERS, PROVIDE PRE-MANUFACTURED PLATFORM EQUAL TO 'HOLD-RITE'. PLATFORM SHALL BE RATED FOR FULL WEIGHT OF WATER HEATER AND ACCESSORIES WHEN FILLED. PROVIDE SECONDARY SEISMIC STRAP AROUND WATER HEATER AND SECURED TO STRUCTURE.
6. PROVIDE BOTTOM FED WATER HEATERS WITH VACUUM RELIEF VALVE WHICH MEETS ANSI Z21.22.
7. SET PUMP TIMER SO THAT RECIRCULATION PUMP OPERATES ONLY DURING OCCUPIED HOURS.

3 **WATER HEATER – SINGLE TEMP. W/RECIRC**
SCALE: NONE

PRELIMINARY

THIS DOCUMENT IS PRELIMINARY IN NATURE AND IS NOT A FINAL, SIGNED AND SEALED DOCUMENT

SHEET OF

ABBREVIATIONS AND SYMBOLS

XG1-02

GENERAL

G1. SCOPE
THE NOTES ON THIS SHEET AND THE STANDARD STRUCTURAL DETAILS ARE GENERAL AND APPLY TO THE ENTIRE PROJECT WHETHER SPECIFICALLY CALLED OUT OR NOT, EXCEPT WHERE THERE ARE SPECIFIC INDICATIONS TO THE CONTRARY ON STRUCTURAL SHEETS. IF THERE ARE QUESTIONS, THEY SHALL BE SUBMITTED TO THE STRUCTURAL ENGINEER AND ANSWERED IN WRITING PRIOR TO CONSTRUCTION.

G2. APPLICABLE SPECIFICATIONS AND CODES
A. INTERNATIONAL BUILDING CODE (IBC) 2012 WITH APPLICABLE EDITIONS OF THE CODE REFERENCED STANDARDS.
B. ACI 350-{01},{06}
C. ASCE 7-16
D. AISC 14th EDITION
E. LOCAL JURISDICTION AMENDMENTS

G3. DESIGN CRITERIA
1. APPLIES TO ALL STRUCTURES
A. DEAD LOAD:
1. ACTUAL TRIBUTARY STRUCTURE WEIGHT
2. SUPERIMPOSED DEAD LOAD:
B. LIVE LOAD:

1. ELEVATED FLOORS:	40 PSF
2. WALKWAYS, STAIRS, GRATING:	100 PSF
3. SLAB ON GRADE:	250 PSF
4. ROOF:	20 PSF (NOT REDUCIBLE)

C. WIND:
1. BASIC WIND SPEED: 120 MPH
2. EXPOSURE: C
3. RISK CATEGORY: III
4. ALL STRUCTURES ARE ENCLOSED EXCEPT AS FOLLOWS: OVERHEAD CRANE
D. SNOW LOAD:
1. GROUND SNOW LOAD = 10 PSF

G4. GEOTECH
THE FOLLOWING NON-CONTRACTUAL GEOTECHNICAL REPORT DEVELOPED FOR THIS PROJECT AND IS THE BASIS OF THIS STRUCTURAL DESIGN:
CONTRACTOR IS TO READ AND BECOME FAMILIAR WITH THE GEOTECHNICAL REPORT.
GEOTECHNICAL FIRM NAME: HINDERLIGHTER GEOTECHNICAL ENGINEERING
ADDRESS: 4071 NW 3rd St., OKLAHOMA CITY, OK
PROJECT NUMBER: WE-20-03
REPORT DATE: JUNE 2020
ALLOWABLE [NET] SOIL BEARING = 2000 / 5000 PSF
PRIOR TO REACHING THE EXCAVATIONS DEPTHS OF 15 FEET TO 50 FEET, EXCAVATIONS ARE EXPECTED TO ENCOUNTER HARD SHALEY CLAYS, WEATHERED SHALE AND/OR WEATHERED SANDSTONE. BEDROCK REFLECTING AN SPT "N" VALUE OF 50 BLOWS PER 4 INCHES OR MORE OF PENETRATION CAN BE SUCCESSFULLY REMOVED USING EXCAVATION EQUIPMENT OUTFITTED WITH ROCK-RIPPING TEETH. BEDROCK DISPLAYING N-VALUES OF 50 BLOWS PER 3 INCHES OR LESS OF PENETRATION COULD REQUIRE PNEUMATIC HAMMERS OR BLASTING FOR REMOVAL.

G5. SAFETY
SAFETY AND STRUCTURE STABILITY DURING CONSTRUCTION ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. STRUCTURES HAVE BEEN DESIGNED TO RESIST THE DESIGN LIVE LOADS ONLY AS A COMPLETED STRUCTURE.

G6. OPENINGS
OPENINGS FOR PIPES, DUCTS, CONDUITS, ETC. ARE NOT ALL SHOWN ON THE STRUCTURAL DRAWINGS. COORDINATE AND PROVIDE OPENINGS AS REQUIRED TO ACCOMMODATE ALL WORK SHOWN OR SPECIFIED IN THE CONTRACT DOCUMENTS AND OTHERWISE REQUIRED FOR THE FURNISHING OF A FUNCTIONALLY COMPLETE PROJECT. REINFORCE AROUND OPENINGS PER STANDARD STRUCTURAL DETAILS UNLESS OTHERWISE SHOWN.

G7. STANDARD DETAILS
THE STANDARD DETAILS DEPICT TYPICAL DETAILING TO BE USED ON THIS PROJECT. IF CONDITIONS ARE NOT EXPLICITLY SHOWN ON THE DRAWINGS THEY SHALL BE MADE SIMILAR TO THE STANDARD DETAILS. OBTAIN APPROVAL OF ENGINEER IN WRITING FOR SIMILAR CONDITIONS PRIOR TO CONSTRUCTION.

G8. THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS AND ELEVATIONS OF EXISTING CONSTRUCTION AS REQUIRED TO COORDINATE NEW CONSTRUCTION. SUBMIT REQUIRED CHANGES FOR APPROVAL.

G9. CONTRACTOR TO SUBMIT FOR REVIEW ALL EQUIPMENT SIZES, OPERATING WEIGHTS, VIBRATION FORCES, SUPPORT LOCATIONS, ALONG WITH ANY FLOOR OPENINGS, NOTCHES, AND RECESSES REQUIRED BY SUCH EQUIPMENT. CONCRETE SUPPORT PADS AND/OR FRAMING REQUIRED TO SUPPORT SAID EQUIPMENT SHALL NOT BE FABRICATED AND PLACED UNTIL THE CONCRETE SUPPORT PADS AND/OR FRAMING IS APPROVED TO SUPPORT THE EQUIPMENT.

G10 SPECIAL INSPECTIONS
SPECIAL INSPECTIONS ARE REQUIRED IN ACCORDANCE WITH CHAPTER 1 AND CHAPTER 17 OF THE CONTRACTOR SHALL PROVIDE FOR FULL ACCESS TO THE WORK BY THE SPECIAL INSPECTOR & SHALL PROVIDE FOR THESE INSPECTIONS IN HIS CONSTRUCTION SCHEDULE IN ACCORDANCE WITH THE SPECIFICATIONS. A SPECIAL INSPECTION PLAN WILL BE SUBMITTED UNDER SEPARATE COVER WITH THE PERMIT APPLICATION.

G11 UNLESS SPECIFICALLY NOTED, THERE ARE NOT PROVISIONS MADE FOR FUTURE FLOORS, ROOFS, OR OTHER LOADS.

CONCRETE

C1. DESIGN STRENGTHS: (28 DAY COMPRESSIVE STRENGTH)

NORMAL WEIGHT CONCRETE FILL, UTILITY ENCASEMENT CONCRETE:	3000 PSI
NORMAL WEIGHT CONCRETE TOPPING:	4000 PSI
NORMAL WEIGHT CONCRETE INTEGRAL WEARING COURSE:	6000 PSI
NORMAL WEIGHT CONCRETE W/ POWER TROWEL FINISH:	4000 PSI
NORMAL WEIGHT WATER-BEARING CONCRETE:	4500 PSI

C2. CONCRETE COVER
UNLESS OTHERWISE NOTED, PROVIDE CONCRETE COVER FOR REINFORCING AS FOLLOWS:

CONCRETE DEPOSITED AGAINST EARTH:	3"
ALL OTHER:	2"

SEE DRAWINGS FOR EXCEPTIONS

C3. SEE SPECIFICATIONS FOR REINFORCING PLACEMENT REQUIREMENTS.

C4. REFER TO OTHER DISCIPLINE DRAWINGS PRIOR TO CONSTRUCTION FOR EMBEDDED ITEMS AND PENETRATIONS NOT SHOWN ON STRUCTURAL DRAWINGS. AS REQUIRED TO ACCOMMODATE ALL WORK SHOWN OR SPECIFIED IN THE CONTRACT DOCUMENTS AND OTHERWISE REQUIRED FOR THE FURNISHING OF A FUNCTIONALLY COMPLETE PROJECT. REINFORCE AROUND OPENINGS PER STANDARD STRUCTURAL DETAILS UNLESS OTHERWISE SHOWN.

C5. PROVIDE 3/4" CHAMFERS AT ALL EXPOSED EDGES {AND 1/2" CHAMFERS AT JOINTS AS SHOWN.} NOT ALL CHAMFERS MAY BE SHOWN ON DRAWINGS.

C6. FIELD ADJUST REINFORCING AT OPENINGS AND EMBEDDED ITEMS AS INDICATED.

C7. ANCHOR BOLTS NOT SPECIFIED BY ENGINEER SHALL BE DESIGNED AND CERTIFIED BY A REGISTERED PROFESSIONAL ENGINEER, RETAINED BY THE CONTRACTOR, IN ACCORDANCE WITH APPLICABLE PROJECT AND CODE REQUIREMENTS. SUBMIT AS A SHOP DRAWING FOR REVIEW AND APPROVAL BY THE ENGINEER. COORDINATE LOCATION, SIZE AND EMBEDMENT PRIOR TO CASTING CONCRETE.

C8. CONTINUOUS WATERSTOP SHALL BE INSTALLED IN JOINTS SUBJECT TO STATIC WATER PRESSURE AND IN LOCATIONS SHOWN ON THE DRAWINGS.

C9. ABSOLUTELY NO WELDING OF REINFORCING BARS OR TORCHING TO BEND REINFORCING BARS SHALL BE ALLOWED WITHOUT SPECIFIC APPROVAL FROM THE STRUCTURAL ENGINEER.

C10. CONTRACTOR SHALL SUBMIT A CONCRETE PLACEMENT PLAN IDENTIFYING JOINT TYPES, JOINT LOCATIONS AND CONCRETE PLACEMENT SEQUENCE.

C11. ALL CAST IN PLACE AND POST-INSTALLED ANCHORS INDICATED IN THE STRUCTURAL DOCUMENTS SHALL COMPLY WITH APPENDIX D OF ACI 318 AND CHAPTER 19 OF THE IBC. ALL EXPANSION AND ADHESIVE ANCHORS SHALL HAVE THE ICC REPORT SHOWING EQUIVALENT LOAD CAPACITY. SUBMIT AND INSTALL PER THE ICC EVALUATION REPORT.

C12. PROVIDE ACI STANDARD HOOKS WHERE INDICATED ON DRAWINGS.

C13. FORMED CONSTRUCTION JOINTS SHALL BE KEYED. CONSTRUCTION JOINTS AT UNFORMED SURFACE SHALL BE ROUGHENED.

C14. A MINIMUM OF 48 HOURS SHALL ELAPSE BETWEEN PLACEMENT OF ADJACENT CONCRETE CONSTRUCTION AT JOINTS WHERE PLACEMENT IS INTERRUPTED.

C15. SEE SPECIFICATIONS FOR REQUIREMENTS RELATED TO MASS CONCRETE, INCLUDING MIX DESIGN, JOINING AND TEMPERATURE CONTROL.

C16. ALL CONCRETE SHALL BE WSI CURED FOR A MINIMUM 7 DAYS. SEE SPECIFICATIONS.

C17. UNLESS OTHERWISE NOTED, LAPS FOR REINFORCING SHALL BE 40 BAR DIAMETERS OR 1'-8" WHICHEVER IS GREATER.

C18. ALL GROUTED AREAS OVER 8" THICK SHALL BE REINFORCED WITH WELDED WIER MESH, 6x6-W2.0xW2.0 MATTS AT 8'-0" CIRS MAX.

MASONRY

M1. DESIGN STRENGTHS:
F'm= 1500 PSI
Fy= 60,000 PSI

M2. GROUT FOR FILLING MASONRY CAVITIES TO BE COARSE GROUT UNO, MAXIMUM COARSE AGGREGATE SIZE IS 3/8 INCH.

M3. GROUT POURS SHALL NOT EXCEED 4 FEET IN HEIGHT UNLESS CLEANOUTS ARE PROVIDED IN THE BOTTOM COURSE OF THE CELL(S) TO BE GROUTED, AND WRITTEN PERMISSION IS OBTAINED FOR HIGH LIFT GROUTING.

M4. RESTRICTED BAR ANCHORAGE:
IN CASES WHERE REINFORCING BARS CANNOT BE EXTENDED AS FAR AS REQUIRED, THE BARS SHALL EXTEND AS FAR AS POSSIBLE AND END IN STANDARD HOOK. SHOW ON SHOP DRAWINGS AND HIGHLIGHT WITH A BOX TO BRING TO ENGINEER'S ATTENTION.

M5. ANCHOR BOLTS:
ALL EXPANSION AND ADHESIVE ANCHORS SHALL HAVE THE ICC REPORT SHOWING EQUIVALENT LOAD CAPACITY. SUBMIT AND INSTALL PER THE ICC EVALUATION REPORT.

M6. IF BOND BEAMS AT INTERSECTING WALLS ARE SHOWN ON THE DRAWINGS TO MEET AT DIFFERENT ELEVATIONS, EXTEND REINFORCING OF BOTH BOND BEAMS AROUND INTERSECTING CORNER NOT LESS THAN 4 FEET IN EACH DIRECTION.

M7. LINTEL BLOCKS SHALL NOT BE USED AS BOND BEAM BLOCKS EXCEPT AT OPENINGS WHERE BOND BEAMS AND LINTELS COINCIDE.

STEEL

S1. DESIGN STRENGTHS:

WIDE FLANGE AND TEES:	Fy=50 KSI
PIPES:	Fy=35 KSI
STAINLESS STEEL	Fy=33 KSI
HSS SECTIONS	Fy=46 KSI
ALL OTHER PLATES AND SHAPES:	Fy=36 KSI

S2. DIMENSIONS:
TO CENTERLINES OF COLUMNS AND BEAMS, TOP SURFACES OF BEAMS AND TUBES AND BACKS OF CHANNELS AND ANGLES UNO.

S3. ELEVATIONS:
TOP OF STEEL REFERS TO TOP SURFACE OF MEMBER OR FLANGE UNO.

S4. WHEN FILLET WELD SIZE IS NOT INDICATED, PROVIDE MAXIMUM WELD SIZE BASED ON MATERIAL THICKNESS IN ACCORDANCE WITH AISC SPECIFICATIONS.

S5. ALL BOLTED STRUCTURAL CONNECTIONS ARE BEARING TYPE CONNECTIONS UNLESS OTHERWISE SPECIFIED TO BE SLIP-CRITICAL. PROVIDE LOAD INDICATING WASHERS AT SLIP-CRITICAL CONNECTIONS.

S6. CONFORM TO AISC 360, STEEL CONSTRUCTION MANUAL AND AISC 341, SEISMIC DESIGN MANUAL.

S7. ALL STEEL BEAMS SHALL RECEIVE STANDARD CAMBER PER THE SPECIFICATIONS UNLESS NOTED OTHERWISE ON THE PLANS. BEAMS REQUIRING SPECIAL CAMBER ARE DENOTED ON THE BEAMS SHOWN ON THE FRAMING PLANS. EXAMPLE: (+1/2") INDICATES ½".

S8. WELD ALL STRUCTURAL STEEL CONNECTIONS OR BOLT WITH ASTM A325-N BOLTS. BEAM CONNECTIONS SHALL BE EQUIVALENT TO "FRAMED BEAM CONNECTIONS" (AISC). WELDING SHALL CONFORM TO AWS "WELDING IN BUILDING CONSTRUCTION".

ALUMINUM

A1. STRUCTURAL ALUMINUM YIELD STRENGTHS
STRUCTURAL ALUMINUM: Fy=35 KSI
STRUCTURAL ALUMINUM IS ALLOY 6061-T6 UNO

A2. DIMENSIONS:
TO CENTERLINES OF COLUMNS AND BEAMS, TOP SURFACES OF BEAMS AND TUBES AND BACKS OF CHANNELS AND ANGLES UNO.

A3. ELEVATIONS:
TOP OF ALUMINUM REFERS TO TOP SURFACE OR FLANGE OF MEMBER UNO.

A4. WHEN FILLET WELD SIZE IS NOT INDICATED, PROVIDE MAXIMUM WELD SIZE FOR THE MATERIAL THICKNESS IN ACCORDANCE WITH THE LATEST EDITION OF THE "ALUMINUM DESIGN MANUAL" BY THE ALUMINUM ASSOCIATION.

A5. ALUMINUM IN CONTACT WITH DISSIMILAR MATERIALS OR CONCRETE:
CONTACT SURFACES SHALL BE PROVIDED WITH GALVANIC SEPARATION PER SPECIFICATIONS.

A6. ALUMINUM GRATING:
5.1 SIZE: 2" x 3/16" BEARING BARS AT 1 3/16" ON CENTER, UNO.
5.2 CLIPS AND BOLTS: STAINLESS STEEL, UNO.
5.3 OPENINGS THROUGH GRATING: REINFORCED AND BANDED AS REQUIRED TO MAINTAIN 200 PSF SUPERIMPOSED LIVE LOAD CAPACITY.
5.4 REQUIRED LIVE LOAD CAPACITY 200 PSF, W/ MAX DEFLECTION OF 1/4" WHEN SUPPORTING 100 PSF LIVE LOAD.

A7. ALL OPENINGS AND EDGES OF ALUMINUM GRATING SHALL BE SANDED.

A8. TO FACILITATE PIPE PLACEMENT, ALL CHECKERED PLATE SURROUNDING PIPE SHALL BE SUPPLIED IN TWO PIECES WITH STIFFENERS FOR ATTACHMENT.

PLAN NOTES

P1. SEE PROCESS/MECHANICAL DOCUMENTS FOR ALL PIPE SIZES, LOCATIONS AND PENETRATION DETAILS. SEE PROCESS/MECHANICAL DRAWINGS FOR FLOOR DRAIN LOCATIONS AND DETAILS.

P2. SEE PROCESS/MECHANICAL DRAWINGS FOR EQUIPMENT DETAILS. INCLUDING CONCRETE PAD LOCATIONS AND DIMENSIONS. SEE STRUCTURAL DETAILS FOR CONCRETE DETAILS.

P3. SEE PROCESS/ARCHITECTURAL FOR CONCRETE OPENING DIMENSIONS AND LOCATIONS. INCLUDING LOUVERS AND OTHER WALL PENETRATIONS.

P4. SEE CIVIL DRAWINGS FOR ALL EXTERIOR PAVING AND EARTHWORK.

P5. ALL GRATING AND WALKWAY PLATFORM FRAMING SHALL BE ALUMINUM EXCEPT IN LOCATIONS NOTED IN THE MEMBRANE BUILDING WHERE GRATING AND PLATFORM FRAMING IS FRP. GRATING DEPTH SHALL BE 2" UNLESS OTHERWISE NOTED.

P6. ALL PLATFORM FRAMING AND GRATING, FRAMING CONNECTIONS, AND CONNECTIONS TO CONCRETE SHALL BE PER STANDARD DETAILS.

P7. REFER PROCESS/MECHANICAL DRAWING FOR ALL GUARDRAIL LOCATIONS. REFER STANDARD DETAILS FOR GUARDRAIL DETAILS.

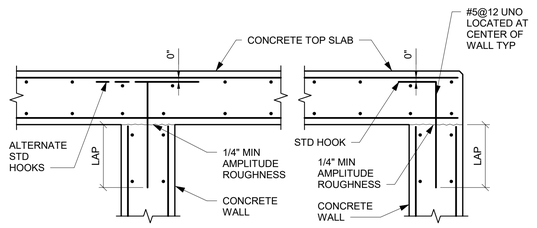
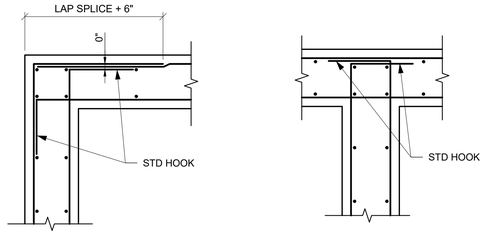
RECTANGULAR OPENING DETAIL



CIRCULAR OPENING DETAIL

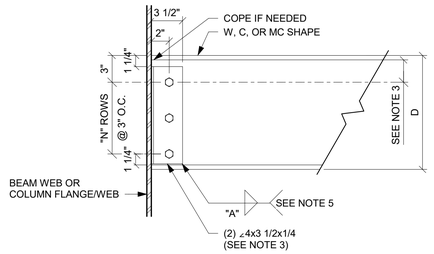
NOTES:

1. PROVIDE ADDITIONAL REINFORCING THE SAME SIZE AS DISCONTINUOUS REINFORCEMENT AT OPENING. QUANTITY OF REINFORCING IN EACH DIRECTION SHALL BE EQUAL TO OR ONE GREATER THAN THE NUMBER OF DISCONTINUOUS BARS. PLACE 1/2 OF ADDITIONAL REINFORCING BARS EACH SIDE OF OPENING, PLACE ADDITIONAL REINFORCEMENT AT 3" OC (TYPICAL BOTH DIRECTIONS AND ALL LAYERS OF REINFORCEMENT). START FIRST BAR 2" CLEAR TO OPENING.
2. EXTEND ADDITIONAL REINFORCING BEYOND EDGE OF OPENING AS SHOWN ABOVE. ADDITIONAL BARS MAY TERMINATE AT THE END OF THE WALL WITH A STANDARD HOOK WHERE THE LENGTH OF THE WALL WILL NOT PERMIT BARS TO EXTEND AS SHOWN ABOVE.
3. TYPICAL WALL OR SLAB REINFORCING NOT SHOWN FOR CLARITY. TERMINATE TYPICAL REINFORCING 2" CLEAR TO OPENING.
4. OPENINGS 12" OR LESS IN SLABS AND WALLS, NO EXTRA REBARS ARE REQUIRED UNLESS SHOWN OTHERWISE. TYPICAL REINFORCING SHALL BE RESPACED (NOT CUT) TO ALLOW FOR OPENINGS TO BE MADE.
5. UNLESS SHOWN OTHERWISE ON DRAWINGS, PROVIDE EXTRA REINFORCING AROUND OPENINGS AS SHOWN AND INDICATED ABOVE.
6. PROVIDE ADDITIONAL DOWELS PER NOTE 1 ABOVE FOR ALL OPENINGS NEAR THE FLOOR SLAB, BASE SLAB, OR CORNERS.



1 EXTRA REINFORCING AROUND OPENINGS

12" = 1'-0"

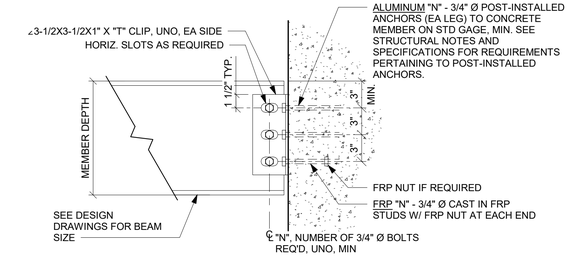


NOTE:

1. ALL HOOKS SHALL BE STD 90 DEGREE HOOKS.

NOTES:

1. ALL HOOKS SHALL BE STD 90 DEGREE HOOKS.
2. SEE DRAWINGS FOR ADDITIONAL HORIZONTAL BARS. STAGGER BETWEEN TYPICAL REINF SPACING, EXTEND TO 1/5 OF DISTANCE TO NEAREST ADJACENT WALL IN EACH DIRECTION, UNO.
3. OPTIONAL LAP LOCATION. APPLIES TO BOTH DOUBLE AND SINGLE LAYER CONDITIONS TYP.



STANDARD BOLTED CONNECTION SCHEDULE		
NOMINAL BEAM SIZE "D"	NUMBER OF BOLT ROWS	WELD SIZE
W8	"N"	3/16"
W10	2	3/16"
W12	2	3/16"
W14	3	3/16"

SHEET
S1-1

GENERAL

1. ALL NOTES LISTED ON THIS SHEET APPLY TO ALL SHEETS OF THE DRAWINGS AS IF THEY WERE WRITTEN ON EACH SHEET.
2. NOTIFY OWNER 48 HOURS PRIOR TO CONSTRUCTION.
3. VERIFY ALL EXISTING CONDITIONS AND OBSTRUCTIONS INCLUDING LOCATION AND DIMENSIONS BEFORE STARTING WORK AND SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES.
4. PRIOR TO INSTALLATION OF RELEVANT FACILITIES CONTRACTOR SHALL, AT HIS OWN EXPENSE, UNCOVER AND OTHERWISE DETERMINE THE DEPTH OF UTILITIES WHICH, IN HIS OPINION, COULD INTERFERE WITH CONSTRUCTION.
5. ALL DIMENSIONS SHOWN WITH ± SHALL BE CONFIRMED BY THE CONTRACTOR ACCORDING TO ACTUAL FIELD CONDITIONS OR EQUIPMENT/STRUCTURE REQUIREMENTS.
6. ALL MISCELLANEOUS REMOVAL ITEMS REQUIRED FOR CONSTRUCTION SHALL BE FIELD LOCATED BY THE CONTRACTOR PRIOR TO BIDDING. THESE ITEMS WILL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
7. TRAFFIC CONTROL DEVICES SHALL BE FURNISHED AND MAINTAINED BY THE CONTRACTOR THROUGHOUT THIS PROJECT IN ACCORDANCE WITH THE LATEST VERSION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES AND/OR AS REQUIRED BY THE DEPARTMENT OF TRANSPORTATION OR COUNTY PERMITS FOR CONSTRUCTION IN RIGHT-OF-WAY.
8. SUBMIT AN EROSION CONTROL PLAN (SWPPP) PRIOR TO CONSTRUCTION AND SHALL MAINTAIN SWPPP THROUGHOUT DURATION OF CONSTRUCTION IN ACCORDANCE WITH SPECIFICATIONS.
9. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS, LOCATES, AND AVAILABLE FILES. NEITHER THE OWNER NOR THE ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIALS, TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF CONSTRUCTION PRIOR TO THE START OF CONSTRUCTION.
10. PERFORM ALL WORK WITHIN DESIGNATED EASEMENTS. CONTRACTOR SHALL NOT ENCROACH OR TRESPASS INTO PRIVATE PROPERTY WITHOUT WRITTEN APPROVAL FROM THE PROPERTY OWNER.
11. MAINTAIN LOCAL AND THROUGH TRAFFIC FOR ALL STREETS AT ALL TIMES WITHOUT CLOSURES OR RESTRICTIONS EXCEPT AS PART OF THE TRAFFIC CONTROL PLAN.
12. MAINTAIN REASONABLE ACCESS TO ALL PROPERTIES AT ALL TIMES. DO NOT RESTRICT DRIVEWAY ACCESS WITHOUT OWNER'S APPROVAL. RESTORE DRIVEWAY ACCESS AT THE END OF EACH DAY. PROVIDE TEMPORARY MEASURES AS NEEDED (SUCH AS GRAVEL) TO MAINTAIN DRIVEWAY ACCESS.
13. KEEP ACCURATE RECORDS OF ALL CONSTRUCTION THAT DEVIATES FROM THE DRAWINGS. THE CONTRACTOR SHALL FURNISH TO THE ENGINEER ACCURATE "AS-BUILT" RED LINE DRAWINGS FOLLOWING COMPLETION OF CONSTRUCTION.
14. TAKE SPEIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD AND UNDERGROUND ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE MOST RECENT NATIONAL ELECTRIC CODE FOR WORKING AROUND OVERHEAD ELECTRIC LINES AS WELL AS OTHER LOCAL, STATE OR FEDERALS LAWS / REQUIREMENTS.
15. CONFORM TO ALL APPLICABLE FEDERAL, STATE AND LOCAL LAWS GOVERNING EXCAVATION. TRENCH SIDE SLOPES SHALL MEET OSHA REQUIREMENTS THAT ARE IN EFFECT AT THE TIME OF CONSTRUCTION. CONTRACTOR SHALL SUBMIT A TRENCH SAFETY PLAN PRIOR TO CONSTRUCTION.
16. THIS PROJECT IS SUBJECT TO AMERICAN IRON AND STEEL (AIS) REQUIREMENTS. ALL IRON AND STEEL PRODUCTS FOR CONSTRUCTION, ALTERATION, MAINTENANCE, OR REPAIRS INCORPORATED MUST BE PRODUCED IN THE UNITED STATES.
17. PROVIDE DUST CONTROL AT ALL TIMES DURING CONSTRUCTION.
18. ANY WORK PERFORMED WITHOUT THE KNOWLEDGE OF THE ENGINEER, INSPECTOR OR OWNER'S REPRESENTATIVE IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.

EARTHWORK

1. ALL COMPACTED SUBGRADE AND BASE NOT ACCESSIBLE TO MECHANICAL COMPACTION EQUIPMENT SHALL BE HAND COMPACTED USING WHACKER PACKERS.
2. SUBGRADE PREPARATION FOR ALL STRUCTURES AND BUILDINGS ON DRAWINGS SHALL BE AS FOLLOWS: OVER-EXCAVATE 30 INCHES BELOW BASE OF CONCRETE, SCARIFY AND COMPACT TOP 12", COMPACT TO 95% STANDARD PROCTOR DENSITY, INSTALL NON-WOVEN NEEDLE PUNCHED GEOTEXTILE FABRIC, INSTALL 30 INCHES OF CRUSHER RUN AGGREGATE BASE IN 10" LIFTS, COMPACT TO 95% MODIFIED PROCTOR DENSITY. BASE OF CONCRETE SHALL BE CONSIDERED THE BOTTOM OF SLAB AND NOT THE BASE OF FOOTINGS/STEM WALLS. OVER EXCAVATION MAY BE DELETED WHERE ROCK IS PRESENT. #57 ROCK SHALL BE SUBSTITUTED FOR AGG BASE WHERE GROUNDWATER IS PRESENT. ALL FILL MATERIAL REQUIRED TO ACHIEVE FINAL GRADE BELOW THE 30" ROCK LAYER SHALL BE CONSTRUCTED WITH ONSITE OR IMPORTED FILL MATERIAL COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. ELEVATIONS GIVEN ARE FINISHED GRADE UNLESS OTHERWISE NOTED.
4. NO FIRES WILL BE ALLOWED UNLESS OTHERWISE NOTED. TREES AND BRUSH SHALL BE REMOVED AND DISPOSED OF OFF SITE.
5. NO BLASTING WILL BE ALLOWED.
6. ALL SURFACE DRAINAGE IMPACTED SHALL BE RESTORED TO AS GOOD OR BETTER CONDITION.
7. ALL DISTURBED AREAS SHALL BE LEFT FREE OF RUTS AND TRACKS AND SHALL BE FULLY GRADED TO DRAIN.

GRASSING

1. ANY AND ALL DISTURBED AREAS OUTSIDE OF PLANT FENCING SHALL BE TOPSOILED, HYDROMULCHED, AND WATERED UNTIL ESTABLISHED. ANY AND ALL DISTURBED AREAS INSIDE PLANT FENCING SHALL BE SOLID SLAB SODDED PER SPECIFICATIONS & WATERED UNTIL ESTABLISHED.
2. FOR PIPELINE CONSTRUCTION EXTERNAL TO THE TREATMENT PLANT, ANY AND ALL DISTURBED AREAS SHALL BE TOPSOILED, HYDROMULCHED, AND FERTILIZED, WITH THE EXCEPTION OF RESIDENTIAL YARDS WHICH SHALL RECEIVE SOLID SLAB SOD IN LIEU OF HYDROMULCHING PER SPECIFICATIONS. THIS WORK WILL NOT BE MEASURED FOR PAYMENT. COST SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.

DUCTILE IRON PIPE & FITTINGS

1. ALL BURIED DUCTILE IRON PIPE AND FITTINGS SHALL BE PROTECTED IN ACCORDANCE WITH ANSI/AWWA C105/A21.5 "POLYETHYLENE ENCASEMENT FOR GRAY AND DUCTILE IRON PIPE FOR WATER AND OTHER LIQUIDS." THIS ITEM SHALL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
2. ALL DUCTILE IRON AIR PIPING SHALL BE UNLINED WITH EPDM GASKETS RATED FOR COMPRESSED AIR USAGE (PRESSURE & TEMPERATURE.)
3. ALL DUCTILE IRON PIPING SHALL BE RESTRAINED JOINT.
4. ALL DUCTILE IRON PIPE CONNECTIONS TO P.V.C. SHALL BE MADE WITH A BOLTED CAST TRANSITION COUPLING.
5. ALL EXPOSED FITTINGS SHALL BE FLANGED FITTINGS W/ XYLAN COATED BOLTS AND APPURTENANCES.
6. ALL MECHANICAL JOINT, FLANGE & MISC. FITTINGS TO HAVE XYLAN COATED BOLTS, NUTS & WASHERS.
7. ALL BURIED FITTINGS SHALL BE D.I. MECHANICAL JOINT (M.J) RESTRAINED (MEGALUG.)
8. WALL PIPES SHALL BE USED WHEREVER PIPING PASSES FROM A STRUCTURE TO EARTHEN BACKFILL.
9. PROVIDE 1/4" ANTI-SEEPAGE RINGS A MINIMUM OF 2" WIDE WELDED TO ALL PIPES PIERCING WATER HOLDING TANKS TO PREVENT SEEPAGE OF WATER BETWEEN PIPE AND CONCRETE. WALL PIPES MAY BE USED IN LIEU OF WELDED RINGS.
10. ALL DUCTILE IRON PIPING LARGER THAN 10" DIAMETER SHALL HAVE CONCRETE SUPPORTS UNLESS OTHERWISE DETAILED. SMALLER PIPING MAY HAVE METAL STAND TYPE SUPPORTS.

CONCRETE

1. CONSTRUCTION JOINTS TO FACILITATE CONSTRUCTION SHALL BE LOCATED AND DETAILED ON THE SHOP DRAWINGS FOR REVIEW. UNLESS INDICATED OTHERWISE, ALL CONSTRUCTION JOINTS SHALL BE KEYED. HORIZONTAL CONSTRUCTION JOINTS SHALL NOT BE PERMITTED IN WALLS AND BEAMS, UNLESS SHOWN ON THE DRAWINGS OR APPROVED BY THE ENGINEER.
2. ALL EXPOSED CORNERS OF CONCRETE STRUCTURES REGARDLESS OF LOCATION SHALL HAVE A 3/4 INCH MINIMUM CHAMFER.
3. ALL EXPOSED EXTERIOR CONCRETE SHALL BE COATED WITH THEROSEAL OR TNEMEC ENVIROCRETE (8MIL THICKNESS). SURFACE PREPARATION AND COATING TO BE PER MANUFACTURER'S REQUIREMENTS.
4. ALL GROUTED AREAS OVER 8" THICK SHALL BE REINFORCED WITH WELDED WIRE MESH, 6x6-W2.0xW2.0 MATTS AT 8'-0" CTRS MAX.
5. ANCHOR BOLTS NOT SPECIFIED BY ENGINEER SHALL BE DESIGNED AND STAMPED BY A REGISTERED PROFESSIONAL ENGINEER, RETAINED BY THE CONTRACTOR IN ACCORDANCE WITH APPLICABLE PROJECT AND CODE REQUIREMENTS. SUBMIT AS A SHOP DRAWING FOR REVIEW AND APPROVAL BY THE ENGINEER. COORDINATE LOCATION, SIZE AND EMBEDMENT PRIOR TO CASTING CONCRETE.
6. EXPANSION JOINTS SHALL BE USED WHERE EXTERIOR OF ALL EXISTING AND PROPOSED STRUCTURES AND BUILDINGS ABUT CONCRETE PAVING WHETHER SHOWN ON THE DRAWINGS OR NOT.
7. NO FLY ASH SHALL BE PERMITTED IN CONCRETE MIX DESIGN.
8. TREMIES REQUIRED ON ALL POURS DEEPER THAN 10 FEET.
9. VAPOR BARRIER (10 MIL) REQUIRED BENEATH ALL SLABS.
10. WALKWAYS AND SIDEWALKS SHALL BE POURED WITH SLIGHT SLOPE AND NO LOW SPOTS SO THEY WILL DRAIN FREELY.
11. ALL STRUCTURAL JOINTS SHALL RECEIVE 6" RUBBER CENTER BULB PVC WATERSTOP PLACED AT ALL WATERTIGHT JOINTS.
12. VERTICAL WATERSTOP SHALL BE FULLY EMBEDDED IN SLAB POUR AND WELDED TO ALL ADJACENT WATERSTOP.
13. WHEN WATERSTOP IS PLACED HORIZONTALLY IN SLABS, THE CONTRACTOR SHALL TEMPORARILY TIE UP OR STAND UP THE WATERSTOP UNTIL THE CONCRETE IS PLACED TO SLIGHTLY ABOVE THE DEPTH OF THE WATERSTOP.
14. ALL CONCRETE SHALL HAVE XYPEX ADMIXTURE PER MANUFACTURE'S SPECIFICATIONS.

BUILDING

1. ALL EXTERIOR DOORS ON ALL BUILDINGS SHALL HAVE R-PANEL AWNING SUPPLIED INTEGRAL WITH METAL BUILDING. AWNING ROOF PANELS SHALL MATCH MAIN BUILDING ROOF. AWNINGS SHALL INCLUDE FULL WIDTH GUTTER WITH DOWNSPOUTS.
2. ALL EXTERIOR EXPOSED CMU SHALL BE SPLIT FACE ARCHITECTURAL BLOCK UNLESS OTHERWISE NOTED.
3. ANY R-PANEL USED IN THE BUILDING CONSTRUCTION WHERE NO GAUGE IS SPECIFIED SHALL BE 24 GA. MINIMUM.

PIPING & APPURTENANCES

1. MANHOLES SHALL BE GROUTED INSIDE AND OUT AT ALL JOINTS.
2. ALL NON-POTABLE WATER LINES SHALL BE IN PURPLE COLORED PIPE AND LABELED "DO NOT DRINK". THE WARNING LABEL SHALL BE LOCATED ON OPPOSITE SIDES OF ALL PIPES AND REPEATED EVERY THREE (3) FEET OR LESS.
3. ALL PIPING THAT CROSS VERTICALLY SHALL HAVE AT LEAST 6" SEPARATION.
4. ALL UNDERGROUND FITTINGS SHALL BE DUCTILE IRON MECHANICAL JOINTS (MEGALUG), UNLESS OTHERWISE NOTED.
5. ALL VALVE ASSEMBLIES, VAULTS, PULLS BOXES AND MANHOLES CONSTRUCTED SHALL BE ADJUSTED TO BE FLUSH WITH FINISHED GRADE UNLESS OTHERWISE NOTED. MANHOLES SET IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SET 6 INCHES ABOUT FINISHED GRADE.
6. ALL VALVE ASSEMBLIES, VAULTS, PULLS BOXES AND MANHOLES CONSTRUCTED SHALL BE ADJUSTED TO BE FLUSH WITH FINISHED GRADE UNLESS OTHERWISE NOTED.
7. ANY BY-PASS PUMPING AND/OR BY-PASS PIPING INSTALLED SHALL BE OPERATED AND MAINTAINED BY THE CONTRACTOR AT CONTRACTOR'S EXPENSE. THE CONTRACTOR IS RESPONSIBLE FOR ANY UNAUTHORIZED DISCHARGES.
8. CONNECTIONS TO EXISTING UTILITIES SHALL BE MADE IN A TIME AND UNDER CONDITIONS WHICH WILL LEAST INTERFERE WITH SERVICE OF THE OWNER, AND AS AUTHORIZED BY THE ENGINEER AND OWNER. FACILITIES SHALL BE PROVIDED FOR PROPER DEWATERING AND FOR DISPOSAL OF ALL WATER/WASTEWATER REMOVED TO ADJACENT PROPERTY FROM DEWATERED LINES WITHOUT DAMAGE.
9. MAINTAIN THE REQUIRED 10 FOOT HORIZONTAL AND 2 FOOT VERTICAL SEPARATION BETWEEN SANITARY SEWER AND POTABLE WATER MAINS. ALL OTHER PIPING SHALL MAINTAIN A MINIMUM OF 5' SEPARATION.
10. ORDER MANHOLES IN PAVEMENT LOWER THAN PROPOSED GRADE AND BRING THEM TO EXACT GRADE WITH LEVEL RINGS.
11. PROVIDE FREEZE PROTECTION FOR ANY EXPOSED PIPING. FREEZE PROTECTION SHALL CONSIST OF WRAPPED PIPE W/ RIGID ALUMINUM COVERS. FREEZE PROTECTION/INSULATION WILL NOT BE REQUIRED FOR PIPING INSIDE BUILDING, AIR PIPING OR SCADA INSTRUMENTATION CONDUIT.
12. CONTRACTOR SHALL SCHEDULE AND CONDUCT OPERATIONS TO LIMIT AMOUNT OF TRENCH OPENED TO INCLUDE ONLY THAT WHICH MAY BE COVERED IN 2 (TWO) DAYS TIME TO A MAXIMUM OF 200'. ANY TRENCH LEFT OPEN OVERNIGHT SHALL BE BARRICADED AND PROTECTED AS DETAILED IN THE MOST CURRENT EDITION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
13. SEWER MAINS SHALL BE CONSTRUCTED UTILIZING A LASER WITH GRADE ESTABLISHED THROUGH SEWER PIPE.
14. WHEN TIE-INS TO EXISTING MANHOLES ARE TO BE MADE, CONTRACTOR SHALL VERIFY MANHOLE FLOW LINE AT AN INTERVAL PRIOR TO MANHOLE TO ENSURE ADEQUATE DEPTH OF NEW LINE. WHEN CONSTRUCTING A MANHOLE OVER AN EXISTING LINE, CONTRACTOR SHALL VERIFY EXISTING LINE DEPTHS PRIOR TO MANHOLE CONSTRUCTION.
15. MATERIAL EXCAVATED FROM TRENCH & PIPE BEDDING MATERIALS SHALL NOT BE PLACED ON ADJACENT ASPHALT OR CONCRETE PAVING.
16. A SILT AND VARMINT CAP AND/OR PLUG SHALL BE IN PLACE ON THE OPEN END OF PIPES AT ALL TIMES.
17. DO NOT EXCEED 75% OF MANUFACTURE'S RECOMMENDED MAXIMUM DEFLECTION FOR PIPE JOINTS UNLESS OTHERWISE NOTED.
18. INSTALL TEMPORARY FENCES TO PROTECT HORSES AND LIVESTOCK WHEN NECESSARY.
19. REMOVAL AND REPLACEMENT OF STREET TRAFFIC SIGNS, MAIL BOXES AND OTHER STRUCTURES BY THE CONTRACTOR TO FACILITATE CONSTRUCTION SHALL BE CONSIDERED INCIDENTAL AND BE INCLUDED IN THE PRICE BID.
20. ALL EXISTING PAYMENT TO REMAIN SHALL BE SAWCUT TO ENSURE A STRAIGHT SMOOTH SURFACE. ALL CUTS MADE IN DRIVEWAYS OR OTHER PAVEMENTS SHALL BE MADE IN STRAIGHT PERPENDICULAR LINES. COST TO BE CONSIDERED SUBSIDIARY TO CONTRACTOR'S BID.
21. INSTALL METAL TRACER WIRE AND TAPE ON ALL PIPING INSTALLED IN ACCORDANCE WITH SPECIFICATIONS.

TREATMENT PLANT

1. ALL EXPOSED COMPONENTS REGARDLESS OF LOCATION TO BE CORROSION RESISTANT (GALVANIZED, ALUMINUM, SST, FRP, ETC).
2. PROPERLY INSULATE, GASKET AND PROTECT TRANSITIONS TO DISSIMILAR METALS (DUCTILE-STAINLESS).
3. ALL EXPOSED VALVES SHALL HAVE HANDWHEELS OR LEVERS. CHAINWHEELS TO BE PROVIDED ON ALL ELEVATED VALVING.
4. ALL PLANT PIPING, CONDUIT, DRAINS, EQUIPMENT, PIPING, ELECTRICAL, COMPONENTS, ETC., SHALL BE PROVIDED WITH PIPE AND EQUIPMENT SUPPORTS. PIPE AND EQUIPMENT HANGERS FOR ALL BRACING AND STABILIZATION FOR A COMPLETE SYSTEM AND PROVIDE WALKING ACCESS AREAS FREE AND CLEAR. ALL PIPE SHALL BE PROPERLY PAINTED OR COATED WITH APPROVED PAINT. CONTRACTOR SHALL LABEL UNITS, PIPING, VALVES, TANKS, ETC., WITH PROPER FLOW DIRECTION AND TYPE. LOCATION AND NUMBER OF PIPE HANGERS AND PIPE SUPPORTS SHOWN IN ONLY APPROX. CONTRACTOR SHALL DESIGN SUPPORTS AS SPECIFIED.
5. ALL PVC/CPVC VALVES AND COMPONENTS FOR USE IN CHEMICAL FEED AND AIR PIPING SHALL HAVE VITON SEALS AND SHALL BE RATED FOR PRODUCT BEING CARRIED.
6. ALL SUSPENDED PIPING SHALL BE SUPPORTED AT NOT LESS THAN EVERY 10 FEET. ALL PIPING LARGER THAN 6" DIAMETER MAY REQUIRE ADDITIONAL SUPPORTS PER SUPPORT SUPPLIERS RECOMMENDATIONS AND/OR SPECIFICATION REQUIREMENTS.
7. ALL WATERTIGHT STRUCTURES CONCRETE SHALL HAVE 72 HOUR WATER TEST FOR LEAKAGE ON STRUCTURE BEFORE BACKFILL.
8. DISSIMILAR METALS IN CONTACT SHALL BE PROVIDED WITH GALVANIC SEPARATION.
9. CONTRACTOR TO COORDINATE WITH SUPPLIERS AND PROVIDE DRAIN CONDUIT (2" MINIMUM) FOR ANY/ALL ANALYZERS, RPZ, AIR/VAC VALVES, SAMPLERS OR ANY OTHER ITEM INSIDE BUILDING WHICH DISCHARGES INTERMITTENT WATER AND ROUTE TO DRAIN. NO SURFACE DRAINAGE WILL BE PERMITTED.
10. SUPPLY ONE SPARE WASHWATER PUMP.
11. SUBMIT FOR REVIEW ALL EQUIPMENT SIZES, OPERATING WEIGHTS, VIBRATION FORCES, SUPPORT LOCATIONS, ALONG WITH ANY FLOOR OPENINGS, NOTCHES, AND RECESSES REQUIRED BY SUCH EQUIPMENT. CONCRETE SUPPORT PADS AND/OR FRAMING REQUIRED TO SUPPORT SAID EQUIPMENT SHALL NOT BE FABRICATED AND PLACED UNTIL THE CONCRETE SUPPORT PADS AND/OR FRAMING IS APPROVED TO SUPPORT THE EQUIPMENT.
12. PROCESS EQUIPMENT DELIVERIES SHALL BE COORDINATED SO THAT EQUIPMENT COMES TO SITE NO MORE THAN 30 DAYS PRIOR TO INSTALLATION, UNLESS STORED INDOORS WITH CLIMATE CONTROL.
13. AT ALL POINTS UNDERGROUND WHERE PIPING EXITS STRUCTURES AND TRANSITIONS TO NATURAL GROUND OR OTHER AREAS SUBJECT TO GROUND SETTLING OR OTHER POTENTIAL INTRODUCED STRESSES AFTER INSTALLATION, A BELL-FLANGE WALL PIPE W/SEEP RING AND RESTRAINED MECHANICAL JOINT SHALL BE PROVIDED TO ALLOW FOR DEFLECTION WHETHER BEING SHOWN ON DRAWINGS OR NOT.
14. ALL PIPING 18" AND LARGER SHALL HAVE A MINIMUM COVER OF 48"; AND PIPE SMALLER THAN 18" SHALL HAVE A MINIMUM COVER OF 36" UNLESS OTHERWISE NOTED. PIPE SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO AVOID EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES. CONTRACTOR SHALL INCLUDE COST IN PRICE BID.
15. WHERE CONFLICTS OCCUR BETWEEN CIVIL AND MEP DRAWINGS SHALL GOVERN. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR VERIFICATION AND ANY MINOR MODIFICATIONS REQUIRED TO FACILITATE INSTALLATION AS OUTLINED ON CIVIL DRAWINGS.
16. REVIEW OF ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS AND SHALL VERIFY ALL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE VERIFIED AGAINST THE DRAWINGS PRIOR TO BID. ANY ADJUSTMENTS AND/OR ADDITIONAL WORK/MATERIALS REQUIRED ARE THE RESPONSIBILITY OF THE CONTRACTOR AND NO ADDITIONAL COMPENSATION WILL BE PROVIDED.
17. MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED SYSTEM.
18. TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE TO THE EXISTING PLANT.
19. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.
20. PRIOR TO FABRICATION OF NEW PIPING, INCLUDING SPECIAL FITTINGS AND EXCAVATIONS FOR NEW STRUCTURES, ELECTRICAL CONDUIT AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE TO VERIFY/TIME THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. AT TIE-IN LOCATIONS, VERIFY THE SIZING OF EXISTING PIPING BEFORE FABRICATION OF NEW PIPING AND FITTINGS. THE CONTRACTOR SHALL INCLUDE THE COST IN HIS BID FOR TEMPORARILY RELOCATING AND REINSTALLING EXISTING UTILITIES AS REQUIRED FOR CONSTRUCTION OF PROPOSED ITEMS.
21. ANY PLANT UTILITY, PIPING, CONDUIT, COMMUNICATION SYSTEM, ELECTRICAL OR INSTRUMENTATION WIRING DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED AND PLACED BACK IN SERVICE BY THE CONTRACTOR ON THE SAME DAY THAT THE DAMAGE OCCURRED. AFTER 24 HOURS OUT OF SERVICE, OWNER WILL HAVE THE OPTION OF HAVING THE REPAIRS MADE BY A SEPARATE CONTRACTOR AND DEDUCTING THE COST OF SAID REPAIRS FROM THE CONTRACT AMOUNT.
22. GALVANIZED STEEL PRODUCTS SHALL NOT BE USED FOR ANY TREATMENT PLANT STRUCTURE / EQUIPMENT CONSTRUCTION UNLESS SPECIFICALLY CALLED OUT / APPROVED.
23. ALL NEW UNISTRUT, ANCHORS, SUPPORT SYSTEMS AND FASTENING HARDWARE TO BE 316 STAINLESS STEEL.
24. BACKFILLING AGAINST STRUCTURES WHICH HAVE A TOP SLAB SHALL BE DONE ONLY AFTER THE TOP SLAB IS IN PLACE AND THE CONCRETE HAS CURED TO 2/3 OF ITS DESIGN STRENGTH, BUT IN NO CASE LESS THAT 4 DAYS.
25. STAGING AREA WILL ONLY BE USED FOR CONSTRUCTION EQUIPMENT AND MATERIALS USED IN THE CONSTRUCTION OF THE PROJECT. CONSTRUCTION DEBRIS SHOULD NOT BE ALLOWED TO ACCUMULATE AND SHOULD BE REMOVED ON A WEEKLY BASIS.
26. INSTALL METAL TRACER WIRE AND COLOR CODE FOR ALL PIPE INSTALLED.
27. IN ACCORDANCE WITH OAC 252:656-5-4(G)(1), SANITARY SEWER MUST BE AT LEAST 10-FEET FROM AN EXISTING OR PROPOSED WATERMAIN AND AT LEAST 5-FEET ELECTRICAL OR PETROLEUM LINES. SANITARY SEWERS MUST CROSS AT LEAST 24 INCHES ABOVE OR BELOW WATERMAINS.
28. THE CONTRACTOR SHALL NOT OPEN OR CLOSE ANY VALVES AT THE TREATMENT PLANT AND SHALL ASK FOR THE OWNER'S ASSISTANCE.

ELECTRICAL/CONTROLS/SCADA

1. ALL ELECTRICAL CONSTRUCTION SHALL BE IN STRICT ACCORDANCE WITH ALL N.E.C. AND LOCAL ELECTRICAL CODES.
2. ALL MECHANICAL EQUIPMENT (INCLUDING MCC & PANELS) SHALL RECEIVE HOUSEKEEPING PADS WITH #4 BARS @ 12" O.C.E.W. MINIMUM THICKNESS SHALL BE 6" OR AS REQUIRED FOR ANCHOR BOLT CLEARANCE. ANCHOR BOLTS SLEEVES MAY BE USED PROVIDED THE SLEEVES ARE NON-SHRINK GROUT FILLED WITH 1-1/2" GROUT UNDER EQUIPMENT BASE. ALL PADS SHALL BE ANCHORED TO CONCRETE SLABS WITH J BARS (#3 @ 12" O.C.) OR EPOXY ANCHORS.
3. ALL SCADA SYSTEM WIRING SHALL BE CONDUIT ENCASED AND IS NOT SHOW FOR CLARITY. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.
4. ALL SURFACE MOUNTED PANELS AND PANEL BOARDS ON THE INTERIOR OF EXTERIOR WALLS OR IN OTHER LOCATIONS CONSIDERED DAMP OR WET AND SHALL BE MOUNTED SO AS TO MAINTAIN A 1/4" MINIMUM AIR SPACE BETWEEN THE ENCLOSURE AND THE WALL.
5. ALL EXTERNAL DISPLAYS SHALL BE PROVIDED WITH A WEATHER SHIELD.
6. REVIEW OF ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS AND SHALL VERIFY ALL ELECTRICAL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE BEEN ACCOMMODATED BY ELECTRICAL CONTRACTOR.
7. THE WIRING DIAGRAMS, QUANTITY AND SIZE OF WIRES AND CONDUITS REPRESENT A SUGGESTED ARRANGEMENT BASED UPON SELECTED STANDARD COMPONENTS OF ELECTRICAL EQUIPMENT. IF EQUIPMENT SUPPLIED BY THE MANUFACTURER HAS A LARGER LOAD THAN THE VALUE SHOWN OR INDICATED, THE CABLE, CONDUIT AND ELECTRICAL EQUIPMENT SHALL BE ENLARGED AS REQUIRED TO ACCOMMODATE THE HIGHER LOADING. HOWEVER, THE BASIC SEQUENCE AND METHOD OF CONTROL MUST BE MAINTAINED AS INDICATED ON THE DRAWINGS AND/OR SPECIFICATIONS. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.

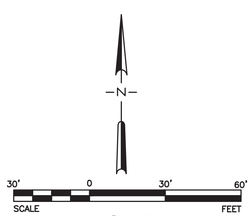
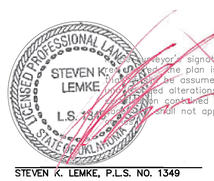
"HARD SURVEY LOCATIONS" REQUESTS:
All information was collected as shown in the drawings excepting:
– Existing Plant Headworks ~ Could not determine size and material of some piping.
– Chlorine Contact Basin ~ Could not determine size and material of piping.
– Treated Flow and Wet Weather Flow Screw Pumps ~ Could not determine size and material of piping.

NOTICE:
All invert elevation, pipe size, and pipe material information was collected in unfavorable conditions. This information was difficult to obtain with absolute certainty of its accuracy.

LOCATION MAP



UTILITY WARNING:
The underground utilities shown have been located from record documents or field locations by the operator. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities in the area either in service or abandoned. The surveyor further does not warrant that the underground utilities shown are in the exact location indicated although the surveyor does certify that they are located as accurately as possible from the information available. The surveyor has not physically located the underground utilities.



Utility elevations and sizes may have been measured under adverse field conditions. Upon exposing the utility, elevations and line sizes should be verified by the contractor prior to construction. Contractor should verify critical elevations using the benchmark provided by the surveyor or engineer. Any discrepancies should be immediately brought to the engineer's and surveyor's attention.

FINAL DEMOLITION WITH SLUDGE REMOVAL/DISPOSAL

DEMOLITION SCOPE OF WORK (AFTER STARTUP ON PROPOSED EQUIPMENT)

1. COMPLETE CONSTRUCTION, STARTUP, TESTING AND INITIAL OPERATION.
2. CLOSE ALL EXISTING VALVES AND RAW WASTEWATER LINES. VERIFY POSITIVE CLOSURE ON VALVES.
3. DISCONNECT ALL INCOMING ELECTRICAL W/POSITIVE VERIFICATION FROM POWER COMPANY. OFFICE/SHOP ELECTRICAL TO REMAIN.
4. CUT AND PLUG W/ CONCRETE EXISTING WATER/WASTEWATER LINES.
5. DEWATER AND DEMOLISH EXISTING STRUCTURES TO A DEPTH OF 4' BELOW FINAL GRADE.
6. BACKFILL STRUCTURES WITH SELECT FILL AND COMPACT. GRADE TO DRAIN.
7. DISPOSE OF DEMOLISHED MATERIALS OFF SITE IN A LOCATION PROVIDED BY THE CONTRACTOR PER STATE AND FEDERAL REGULATIONS. DISPOSAL INSIDE EXISTING BASINS WILL BE ACCEPTABLE PROVIDED 4' SOIL COVER REQUIREMENTS ARE MET.
8. TOPSOIL AND HYDROMULCH DISTURBED AREAS & WATER UNTIL ESTABILISHED.

NOTES:

1. SLUDGE TO BE REMOVED AND DISPOSED OF BY A SLUDGE REMOVAL CONTRACTOR WITH EXPERIENCE REMOVING & DISPOSING OF MUNICIPAL WASTEWATER TREATMENT PLANT SLUDGE. SEE 02_41_00 DEMOLITION.

2. ALL STRUCTURES AND BUILDINGS SCHEDULED TO REMAIN ARE TO HAVE MISCELLANEOUS EQUIPMENT, PUMPS, ETC. REMOVED & DISPOSED OF.

3. CUT/PLUG EXISTING MAINS AT LIMITS OF CONSTRUCTION.

INDEX
FE: EMBEDDED FRAME
HC: HAND CRANK
GS: GALVANIZED STEEL
CW: CHANNEL WALL
SQN: SQUARE NUT

NOTES:
1. ALL ABOVE GRADE PIPING AND FITTINGS 4" AND SMALLER SHALL BE 316 SST (GR).
2. USE VICTAULIC FITTINGS AS REQUIRED.
3. GATE WIDTHS LISTED ARE NOMINAL
4. CONTRACTOR SHALL ADJUST LOCATION OF GRIT WASHER CONVEYER TO ALLOW FOR USE OF ONE DUMPSTER.
5. THERE SHALL NOT BE ANY GRATING OVER GATES WHICH WOULD INTERFERE WITH OPERATION.
6. ALL EXPOSED PIPING SHALL BE FREEZE PROTECTED BY HEAT TRACE AND INSULATED.
7. GRIT PUMPS SHALL BE EQUIPPED WITH CASE HEATING AND FREEZE PROTECTION PER MANUFACTURERS RECOMMENDATIONS.
8. PW WATER CONNECTION TO EQUIPMENT SHALL BE INSTALLED WITH CONNECTION SOLENOID VALVE SUPPLIED BY MANUFACTURER. FIELD ROUTE ELECTRICAL/CONTROLS PER MANUFACTURERS RECOMMENDATIONS.
9. CONTRACTOR SHALL VERIFY WITH OWNER DUMPSTER DIMENSIONING PRIOR TO PLACEMENT OF CLASSIFIER/COMPACTOR DISCHARGE OUTLETS.
10. ALL PIPING AND CONNECTIONS SHALL BE PER MANUFACTURERS RECOMMENDATIONS.
11. ALL ELECTRONICALLY ACTUATED VALVES TO ALSO BE EQUIPPED WHANDWHEEL OPERATORS.
12. SLIDE GATES TO BE MOUNTED PER MANUFACTURERS RECOMMENDATIONS.
13. CONTRACTOR TO INSTALL A 2" RADIUS FILLET BEFORE AND AFTER THE SCREENS TO PREVENT SEDIMENTATION OF SOLIDS. CONTRACTOR SHALL VERIFY WITH MFR. THAT APPROPRIATE CHANNEL VELOCITY WILL BE MAINTAINED.
14. ACTUATED SLIDE GATE EMERGENCY FLOAT TO AUTOMATICALLY CLOSE GATE IN THE EVENT WATER RISES TO HEADWORKS FLOOR.
15. AT CONTRACTORS OPTION, FLOOR OF HEADWORKS MAY BE POURED LEVEL AT ELEVATION GROUTED TO PROPOSED FLOW LINE ELEVATION.
16. COORDINATE LOCATIONS FOR REQUIRED WASH WATER NON POTABLE WATER MAINS WITH HEADWORKS EQUIPMENT SUPPLIER PRIOR TO INSTALLATION.
17. ELECTRONICALLY OPERATED GATE SHALL BE 480 VOLTS/3 PHASE.
18. CONTRACTOR SHALL SUBMIT A COMPLETE PIPING PLAN FOR APPROVAL.
19. CONTRACTOR SHALL PROVIDE PIPING SUPPORTS AS NEEDED REGARDLESS OF BEING SHOWN ON DRAWINGS.
20. ALL OPEN AREAS OF HEADWORKS STRUCTURE ARE TO RECEIVE GRATING. SOME GRATING IS NOT SHOWN FOR CLARITY.
21. COORDINATE WITH EQUIPMENT SUPPLIER FOR EXACT REQUIREMENTS OF INLET WATER PIPING PRIOR TO BID.
22. EQUIPMENT DRAINS NOT SHOWN IN PIPING SHALL BE FIELD ROUTED TO HEADWORKS CHANNELS PER MANUFACTURER RECOMMENDATIONS.
23. ENTIRE SUSTEM SHALL BE EQUIPPED WITH A FACTORY DESIGNED FREEZE PROTECTION SYSTEM CONSISTING OF HEAT TAPE, CASE HEATERS AND INSULATION. FREEZE PROTECTION SYSTEM SHALL BE DESIGNED TO ENSURE PROPER OPERATION INDEFINITELY AT -15 DEGREES FAHRENHEIT. PROVIDE INFORMATION ON FREEZE PROTECTION SYSTEM WITH THE EQUIPMENT SUBMITTAL.
24. ALL EXPOSED PIPING IN HEADWORKS AREA 6" AND SMALLER TO BE GROOVED 316 STAINLESS STEEL. COMPLETE SYSTEM TO BE DESIGNED AND PROVIDED BY VICTAULIC.

02P101, 02P102	3,600 GPM	172'	PRIMARY	VFD	250	65%
02P103, 02P104	6,000 GPM	36'	STORMWATER	VFD	75	65%

PUMP NOTES:

1. PUMPS SHALL BE PROVIDED WITH BASE ELBOWS, S.S. RAILS, AND S.S. LIFTING CHAINS.
2. CONTRACTOR SHALL PROVIDE FITTINGS AS REQUIRED TO CONNECT BASE ELBOWS TO LIFT STATION PIPING.
3. PUMPS SHALL BE 460 VOLT THREE PHASE.
4. EACH PUMP SHALL BE EQUIPPED WITH A VARIABLE FREQUENCY DRIVE.

NOTES:

1. SEAL CONDUITS TO KEEP WET WELL GASSES OUT OF CONTROL PANEL.
2. LOCATE FLOATS AND CABLE HOLDER AWAY FROM INLET PIPE.
3. WETWELL FLOOR SHALL SLOPE TO PUMPS AS SHOWN.
4. ALL COMPONENTS SUBJECT SHALL BE DUCTILE IRON OR STAINLESS STEEL.
5. ALL ELECTRONICALLY ACTUATED VALVES TO ALSO BE EQUIPPED WITH HAND WHEEL OPERATORS.
6. ALL EXPOSED PIPING SHALL BE FULLY INSULATED AND HEAT TRACED TO PREVENT FROM FREEZING.
7. PIPE SUPPORT LOCATIONS ARE FOR REFERENCE ONLY & MORE MAY BE REQUIRED PER SPECIFICATION REQUIREMENTS AND/OR INDUSTRY STANDARD.
8. WETWELL TO BE EQUIPPED WITH A LEVEL TRANSDUCER AND 3 BACKUP FLOATS (LOW LEVEL, ALARM, INFLUENT CLOSE).
9. ALL HYDRANTS TO BE FURNISHED WITH STAINLESS STEEL WALL MOUNTED HOSE RACK AND 50' OF HEAVY DUTY COMMERCIAL HOSE (1").

NOTES:

1. ALL CONCRETE SHALL BE 6" THICK.
2. CONTRACTOR SHALL SUBMIT TO THE ENGINEER FOR APPROVAL A JOINT SEALING METHOD FOR ALL CONSTRUCTION JOINTS REQUIRED IN THE CONCRETE LINER.
3. CONTRACTOR SHALL SUBMIT A JOINTING PLAN AND SLAB POURING SEQUENCE FOR APPROVAL BY THE ENGINEER.
4. JOINTS SHALL BE 20'-0" O.C. MAX.
5. THE SECONDARY FLOW EQUALIZATION BASIN SHALL BE EQUIPPED WITH ONE LEVEL GAUGE. THE LEVEL GAUGE SHALL CONSIST OF A 4" Ø 17-FEET LONG STEEL POST. THE POST SHALL HAVE A 2.5 MIL COAT OF TNEMEC 3TH-71 CHEM-PRIME, 4.0 MIL COAT OF TNEMEC SERIES 66 EPOXOLINE, AND ONE COAT OF TNEMEC SERIES 74 HIGH-BUILD ENDURA SHIELD OR EQUAL PAINT SYSTEM. STEEL POST SHALL BE EMBEDDED 3-FEET IN THE GROUND WITH A MINIMUM OF 12" Ø CONCRETE 3-FEET DEEP. LETTERING SHALL CONSIST OF AN ALTERNATING PATTERN OF WHITE BACKGROUND W/BLACK NUMBERS (EVEN NUMERALS) AND BLACK BACKGROUND W/WHITE NUMBERS AT 1-FOOT INTERVALS IN TENTHS FOR A TOTAL OF 14-FEET. LEVEL GAUGE SHALL BE FIELD LOCATED BY THE OWNER.
6. INFLUENT & EFFLUENT PIPE ENDS SHALL BE CUT TO MATCH BASIN SLOPE.
7. CONTRACTOR TO REMOVE AND DISPOSE OF APPROXIMATELY 10,880 C.Y. OF WASTE SLUDGE DOWN TO ELEVATION 974.00'. PER SECTION 31_01_33.
8. SLOPED WALLS & FLOOR TO BE CUT TO GRADES SHOWN & COMPACTED PRIOR TO CONCRETE PLACEMENT. PER SECTION DETAILS.
9. CROWN ROAD 2" @ ℄ ALONG TOP OF DIKE TO PROVIDE DRAINAGE AND ASSURE WATER DOES NOT POND ON ROADWAY.
10. QUANTITIES ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY PRIOR TO BID.

JIB CRANE FOUNDATION
N.T.S.

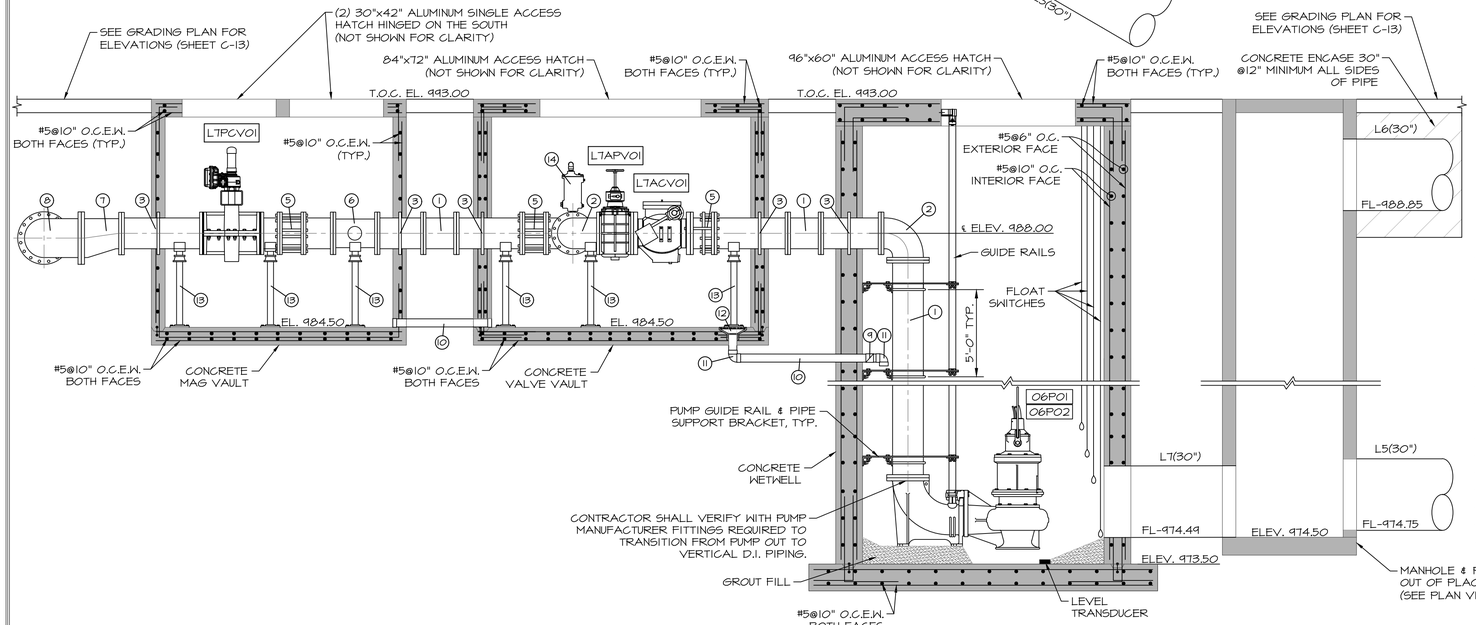
JIB CRANE NOTES:

1. JIB CRANE SHALL BE SPANCO MODEL 100 FREESTANDING JIB CRANE.
2. SPAN LENGTH SHALL BE 15'.
3. FURNISH 2 TON ELECTRIC MONORAIL HOIST W/ PUSH TROLLEY WITH WATERPROOF COVER.
4. CONTRACTOR TO PROVIDE AND INSTALL MECHANISM IN CONCRETE TO PREVENT CRANE FROM FREE ROTATING IF NOT SUPPLIED BY MANUFACTURER.
5. FOOTING DIMENSIONS ARE FOR REFERENCE ONLY AND SHALL BE PER MANUFACTURER REQUIREMENTS/RECOMMENDATIONS.
6. PROVIDE MOTORIZED TROLLEY HOIST CAPABLE OF LIFTING SUBMERSIBLE PUMPS FROM WET WELL FOR MAINTENANCE AND REPAIR.
7. HOIST SUPPLIER SHALL INSPECT AND CERTIFY HOIST INSTALLATION MEETS MINIMUM STANDARDS AND IS APPROPRIATE FOR THIS APPLICATION.
8. FURNISH "J" BOLTS PER MANUFACTURER RECOMMENDATIONS.

VALVE SCHEDULE STRUCTURE #6 & #7

VALVE I.D.	VALVE TYPE	VALVE SIZE	MOTORIZED
L7APV01	PLUG	12"	YES
L7ACV01	CHECK	12"	NA
L7BPV01	PLUG	12"	YES
L7BCV01	CHECK	12"	NA
L7PCV01	PINCH VALVE	12"	YES

NOTES:



1. ROUTE AIR/VAC DRAINS TO FLOOR DRAIN IN PVC.
2. AIR RELEASE VALVES TO BE SUPPLIED WITH ISOLATION BALL VALVE & ½" SAMPLE COCK.

PUMP SCHEDULE STRUCTURE #6

NO.	FLOW	TDH-DES	FUNCTION	CONTROL	HP	EFFICIENCY MIN.
06P01-06P02	3,200 GPM	16'	STORMWATER	VFD	20	65%

PUMP NOTES:

1. PUMPS SHALL PENTAIR OR APPROVED EQUAL.
2. PUMPS SHALL BE PROVIDED WITH BASE ELBOWS, S.S. RAILS, AND S.S. LIFTING CHAINS.
3. PROVIDE FITTINGS AS REQUIRED TO CONNECT BASE ELBOWS TO LIFT STATION PIPING.
4. EACH PUMP SHALL BE EQUIPPED WITH A VARIABLE FREQUENCY DRIVE.
5. HOLD CONDUIT TIGHT TO BOTTOM OF WET WELL SLAB. ONE CONDUIT FOR EACH POWER CABLE, ONE FOR FLOAT SWITCHES.
6. SEAL CONDUITS TO KEEP WET WELL GASSES OUT OF CONTROL PANEL.
7. LOCATED FLOATS AND CABLE HOLDER AWAY FROM INLET PIPE.
8. ALL COMPONENTS SUBJECT TO CONTACT WITH WASTEWATER SHALL BE DUCTILE IRON OR STAINLESS STEEL.
9. PIPE SUPPORT LOCATIONS ARE FOR REFERENCE ONLY & MORE MAY BE REQUIRED PRE SPECIFICATIONS AND/OR INDUSTRY STANDARD.
10. WETWELL TO BE EQUIPPED WITH A LEVEL TRANSDUCER AND 3 BACKUP FLOATS (LOW LEVEL, ALARM, INFLUENT CLOSE).
11. LIFT STATION VAULTS TO RECEIVE AN EXTERIOR COATING OF INDURON RS-2100 APPLIED TO ACHIEVE 12-16 DRY MILLS (COLOR = BLACK) AND AN INTERIOR COATING OF INDURON PERMA-SAFE 100 APPLIED TO ACHIEVE 40 DRY MILLS (COLOR = RED).

DOOR NO.	DESCRIPTION	HARDWARE
D1	6'-0" X 7'-0" STEEL INSULATED DOUBLE DOOR AND STEEL FRAME, DRIP LEDGE, AND THRESHOLD	HARDWARE SET #1

FINISH SCHEDULE	
FIN. NO.	DESCRIPTION
F1	WALL SHALL BE PAINTED PER SPECIFICATIONS. FLOORS SHALL HAVE TWO (2) COATS OF TNEMEC TNEME-GLAZE SERIES 280 WITH ONE (1) FINISH COAT OF TNEMEC CRU SERIES 290.

BUILDING NOTES:

1. ROOF TRUSSES INCLUDING ANCHOR BOLTS, AND CONNECTION FROM CMU TO ROOF SHALL BE PRE-ENGINEERED W/ SUBMITTAL STAMPED BY AN ENGINEER REGISTERED IN THE STATE OF OKLAHOMA. IT IS INTENDED THAT A COMPLETE STRUCTURAL DESIGN SHALL BE SUBMITTED.
2. ALL PRIMARY AND SECONDARY METALS SHALL BE GALVANIZED TO PREVENT CORROSION AND CERTIFIED FOR USE WITH WASTEWATER.
3. CONCRETE SLABS & WALLS SHALL BE 8" MIN., UNLESS OTHERWISE NOTED.
4. ALL FOOTINGS SHALL BE EXCAVATED AND CONCRETE SHALL BE PLACED THE SAME DAY OR THE FOOTING IS TO BE RE-EXCAVATED.
5. SAWCUTS IN CONCRETE SLABS SHALL BE MADE AS SOON AS THE CONCRETE IS OF SUFFICIENT STRENGTH TO SAW WITHOUT RAVELING THE AGGREGATE. ANY TIME LAPSE GREATER THAN 8 HOURS AFTER PLACING THE CONCRETE SHALL BE PERMITTED ONLY IF APPROVED BY THE ENGINEER. FILL ALL JOINTS WITH MM-80 JOINT COMPOUND.
6. ADHESIVE ANCHORS WITH REBAR OR THREADED RODS, SHALL BE HILTI-HIT HY 200. INSTALL ACCORDING TO THE MANUFACTURE'S RECOMMENDATIONS, WHICH INCLUDED CLEANING THE HOLE WITH AIR AND USING A MANUFACTURER APPROVED DISPENSING TOOL WITH MIXING NOZZLE.
7. ALL DOWELS, ANCHOR BOLTS, EMBEDDED STEEL, ELECTRICAL CONDUITS, PIPE SLEEVES, PIPING, WATER STOPS, INSERTS, GROUNDS, AND ALL OTHER EMBEDDED ITEMS AND FORMED DETAILS SHALL BE IN PLACE BEFORE START OF CONCRETE PLACEMENT. VERIFY SIZE AND LOCATION OF ALL OPENINGS.
8. 10 MIL VAPOR RETARDED SHALL BE INSTALLED UNDER ALL FLOOR SLABS AND BE EITHER STEGO 10 MIL CLASS A VAPOR RETARDER OR VAPOR BLOCK 10 BY RAVEN INDUSTRIES. USE STEGO OR RAVEN TAPOE ON ALL LAPS AND AROUND ALL PENETRATIONS.
9. ENTIRETY OF FLOOR SHALL SLOPE TO A FLOOR DRAIN SUCH THAT NO SURFACE REMAINS FLAT. REFER EB-4 FOR CMU DETAILS.
10. FOUNDATION PREPARATION PER GENERAL NOTES.
11. SEE NORTHSIDE FOR ADDITIONAL CMU STANDARD DETAILS.

NOTES ON THRUST BLOCKING

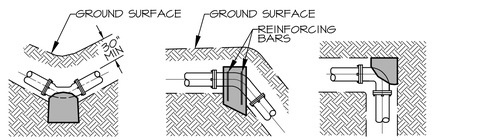
1.) ALL BLOCKING SHALL BE AGAINST UNDISTURBED HAND DUG SOIL AND SHALL BE CONCRETE HAVING A MINIMUM 28 DAY STRENGTH OF 2000 PER SQUARE INCH.

2.) THRUST CALCULATORS TO BE BASED ON THRUST DUE TO WATER PRESSURE AT 100% OF TEST PRESSURE.

THRUST = 2 AP SIN 1/2 Φ

A = AREA OF PIPE
P = WATER PRESSURE
Φ = DEFLECTION ANGLE.

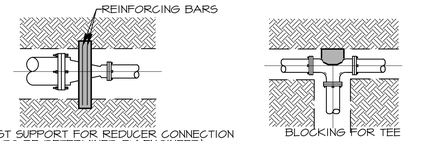
3.) VERTICAL UPLIFT BLOCKS SHALL BE DESIGNED ON THE BASIS OF 150 LBS. PER CU. FT. FOR CONCRETE AND SOIL AT 120 LBS. PER CU. FT. OVER THE AREA OF BLOCK.



4.) VERTICAL DOWN THRUST BLOCKS SHALL BE DESIGNED ON THE BASIS OF 2000 PER SQ. FT. ALLOWABLE SOIL BEARING PRESSURE. DIMENSIONS MAY BE DECREASED WITH APPROVAL OF THE ENGINEER IF MEASURED SOIL CONDITIONS PERMIT. IN POOR SOIL CONDITIONS, BLOCK DIMENSIONS SHALL BE INCREASED IN PROPORTION TO ALLOWABLE BEARING VALUE.

5.) THRUST BLOCKS ON HORIZONTAL BENDS, TEES, CROSSES, AND REDUCERS SHALL BE SIZED BASED ON 24000 LBS. PER SQ. FT. OF BLOCKING SURFACE AREA IN CONTACT WITH UNDISTURBED SOIL, BLOCK DIMENSIONS MAY BE DECREASED WITH APPROVAL OF THE ENGINEER IF MEASURED SOIL CONDITIONS PERMIT. IN POOR SOIL CONDITIONS, BLOCK DIMENSIONS SHALL BE INCREASED IN PROPORTION TO THE ALLOWABLE BEARING VALUE.

6.) ALL BLOCKING SHALL HAVE A MINIMUM SOIL COVER OF 1 FT.



7.) ADDITIONAL REINFORCING MAY BE REQUIRED FOR HORIZONTAL BLOCKING TO HANDLE UNUSUAL SHEAR LOADING CONDITIONS.

8.) ANCHOR COLLARS SHALL BE REINFORCED IN ACCORDANCE WITH REINFORCING BAR SCHEDULE FOR REDUCED BLOCKS SHOWN ABOVE. STEEL ANCHOR RING IN ACCORDANCE WITH DIMENSIONS OF ANCHOR COLLAR.

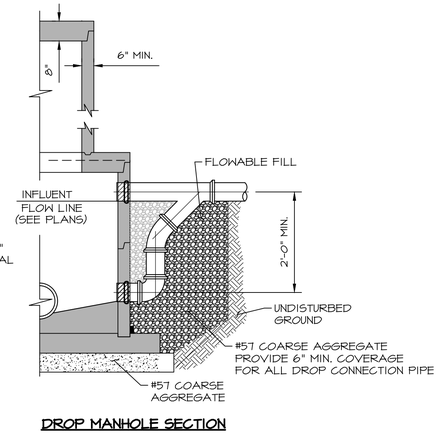
THRUST BLOCKING DETAILS
N.T.S.

MANHOLE NOTES:



1. PRECAST RISERS, CONES, FLOORS, GRADE RINGS, STEPS, AND RINGS AND COVERS SHALL BE MANUFACTURED ACCORDING TO THE MOST RECENT ASTM C-478 SPECIFICATIONS.
2. ALL MANHOLE CONSTRUCTION SHALL BE WATERTIGHT. JOINTS SHALL BE RUBBER GASKET MANHOLE SECTIONS WITH PROFILE JOINT AND FORSHEDA 114 JOINT SEALS.
3. ANY ERECTION HOLES, STEP HOLES, OR OTHER HOLES THROUGH THE WALL OF THE MANHOLE SHALL BE COVERED WITH 3" CONCRETE GROUT. GRADE RINGS SHALL BE FORMED WITH TONGUE AND GROOVE OF LUGS AND NOTCHES.
4. GRADE RINGS SHALL BE SET IN MORTAR OR PLASTIC JOINT COMPOUND.
5. WHEN FIELD CONDITIONS REQUIRE HEIGHT TO BE ADJUSTED, ADDITIONAL GRADE RINGS MAY BE USED AS DIRECTED BY THE ENGINEER.
6. WHENEVER THE SUBGRADE FOR ANY MANHOLE OR DROP MANHOLE IS OF AN UNSATISFACTORY MATERIAL, SAME SHALL BE REMOVED AND REPLACED WITH A CRUSHED ROCK BEDDING AND COMPACTED TO THE SATISFACTION OF THE ENGINEER.
7. ALL CONCRETE ENCASEMENT IN ROCK SHALL BE POURED AGAINST THE FACE OF THE ROCK. NO PAYMENT WILL BE MADE FOR EXTRA CONCRETE USED IN OVER BREAKAGE OF THE DIMENSIONS AS SHOWN ON THE TYPICAL SECTION OF CONCRETE ENCASEMENT.
8. BACKFILL EXCAVATION WITH SELECT FILL COMPACTED IN 8" LAYERS TO 95% OF MAXIMUM DENSITY WITHIN 2% OF OPTIMUM MOISTURE AS DETERMINED BY ASTM D-698.
9. CENTERLINE OF ALL PIPES ENTERING AND LEAVING SHALL PASS THROUGH CENTER OF MANHOLE.
10. CONSTRUCT FLOW CHANNEL FOR ALL PIPES ENTERING MANHOLE, INCLUDING SERVICES. MAINTAIN A CONSTANT GRADE THROUGHOUT EACH INVERT.
11. INVERT MUST HAVE A CHANNEL DEPTH OF EQUAL TO AT LEAST HALF THE LARGEST PIPE DIAMETER.
12. ALL PIPE ENTERING THE MANHOLE MORE THAN 24" ABOVE AN INVERT MUST HAVE A DROP PIPE.
13. WHENEVER SEWER PIPE IS CONNECTED INTO THE WALL OF A MANHOLE WITHOUT A RESILIENT MANHOLE PIPE CONNECTOR THE FIRST JOINT OF THE SEWER PIPE SHALL BE LOCATED A MAXIMUM OF 12" OUTSIDE THE WALL OF THE MANHOLE. CONNECTION INTO MANHOLE WITHOUT A RESILIENT CONNECTOR WILL BE USED ONLY UPON APPROVAL OF THE ENGINEER.
14. FRAME & COVER SHALL BE INSTALLED TO CONCRETE WITH 2 ROWS OF MASTIC.
15. AVERAGE WEIGHT OF CASTING SHALL NOT BE LESS THAN 95% OF: RING 228 LBS; COVER 195 LBS; TOTAL 430 LBS.
16. MANHOLES MAY HAVE EITHER PRECAST OR CAST-IN-PLACE BASES. BASE DIAMETER TO MATCH DETAILS.
17. MANHOLE AND BASE SHALL BE MANUFACTURED IN ACCORDANCE WITH C478.
18. MINIMUM BASE INSIDE DIAMETER SHALL BE BASED ON THE NUMBER AND SIZE OF THE PIPES ENTERING THE MANHOLE, THE ELEVATION OF THE PIPES, AND THE MINIMUM SPACING BETWEEN THE PIPES.

STANDARD MANHOLE PLAN

SECTION ELEVATION

NOTES
1. INSTALL TRANSMITTER TO MANUFACTURER'S SPECIFICATIONS AND REQUIREMENTS.
2. CONSULT MANUFACTURER'S INSTALLATION MANUAL FOR CORRECT PROBE INSERTION LENGTH.
3. USE 316 SST FITTINGS FOR ALL PROCESS CONNECTIONS.
4. ANCHOR SYSTEM SHALL BE HILTI HY 150 W 316SS MATERIALS.
5. ENSURE THE SENSOR CANNOT MAKE CONTACT WITH THE TANK WALL.
6. ENSURE THAT SENSOR IS FULLY IMMERSED AT ALL TIMES.

EMBEDDMENT DETAIL NOTES

1. MINIMUM TRENCH WIDTH AT SPRINGLINE OF PIPE
   a. PIPES < 4" — 18"
   b. PIPES 6" - 18" — 12" + O.D.
   c. PIPES > 20" — 24" + O.D.
2. EXCAVATION MAY BE WIDENED ABOVE THE EMBEDMENT ZONE AT THE CONTRACTOR'S OPTION AND EXPENSE.
3. EMBEDMENT / BACKFILL LIFT THICKNESS (MAXIMUM)
   a. FINAL BACKFILL — 12" LIFTS TYPICAL; 6" LIFTS UNDER PAVING / STRUCTURES
   b. INITIAL BACKFILL — 6" LIFTS
   c. HAUNCHING — 4" LIFTS
   d. BEDDING — 4" LIFTS
4. TRENCH SLOPE, SHORING, BENCHING, ETC TO BE DETERMINED BY THE CONTRACTOR. CONTRACTOR IS SOLELY RESPONSIBLE FOR TRENCH SAFETY AND OSHA COMPLIANCE.
5. EXCAVATION FOR BELL HOLE REQUIRED FOR ALL PIPING <4". CONTRACTOR SHALL SELECT AND UTILIZE CONSTRUCTION METHODS SUCH THAT ALL AREAS UNDER THE PIPE HAUNCHES ARE FILLED WITH THE APPROPRIATE MATERIAL AND COMPACTED.
6. ALL MATERIALS UNDER PAVING / STRUCTURES SHALL BE COMPACTED TO 95% MODIFIED PROCTOR DENSITY AT 4% OPTIMUM MOISTURE CONTENT BY SHEEPSFOOT OR OTHER SUITABLE MECHANICAL COMPACTION METHODS AT SPECIFIED LIFT THICKNESSES. COMPACTION EQUIPMENT MUST NOT COME IN CONTACT WITH CARRIER PIPE NOR CASING PIPE.
7. IF TRENCH BOTTOM IS OVER-EXCAVATED BELOW INTENDED GRADE, FILL THE OVER-EXCAVATION WITH EMBEDMENT MATERIAL AND COMPACT AT THE DENSITY SPECIFIED FOR THE EMBEDMENT MATERIAL.
8. THE EXISTING NATIVE MATERIAL WITHIN THE LIMITS OF THE EMBEDMENT ZONE IS TO REMAIN UNDISTURBED OR REPLACED WITH SPECIFIED PIPE EMBEDMENT MATERIAL IF OVER-EXCAVATION TAKES PLACE. REPLACEMENT WITH ONSITE MATERIAL WILL NOT BE ACCEPTABLE.
9. IF BEDDING DETAIL CONFLICTS WITH ANY OTHER DETAIL THE MORE STRINGENT SHALL APPLY.

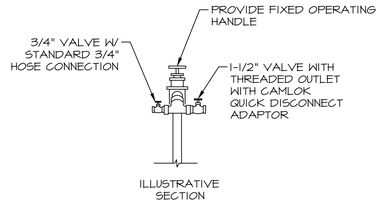
MINIMUM RESTRAINED LENGTH (FT) FOR A TEST PRESSURE OF 100 PSIG

NOMINAL PIPE SIZE	90 DEGREE	WYE OR 45 DEGREE	22-1/2 DEGREE	11-1/4 DEGREE	TEE BRANCH	TERMINAL PLUG
6	23	18	18	18	39	59
8	30	18	18	18	51	6'-4"
10	36	18	18	18	61	92
12	41	18	18	18	71	107
20	62	26	18	18	110	164
24	72	30	18	18	128	192
30	85	35	18	18	152	228
36	96	40	18	18	175	262
48	118	48	23	18	214	322
54	131	54	26	18	348	344

NOTES:



1. RESTRAIN ALL DUCTILE IRON FITTINGS.
2. TABULATED VALUES ARE FOR 100 PSIG TEST PRESSURE. FOR VALUES AT PRESSURES OTHER THAN 100 PSID, MULTIPLY TABLE VALUES BY THE RATIO OF ACTUAL TEST PRESSURE TO 100 PSIG. TEST PRESSURES FOR EACH SERVICE ARE DEFINED IN THE PIPING SCHEDULE.
3. WHERE LISTED VALUES, OR CALCULATED VALUES (SEE ABOVE), ARE LESS THAN ON STANDARD FULL PIPE SEGMENT (18 FEET), RESTRAIN THE FITTING ONLY.
4. RESTRAINT LENGTHS APPLY TO PIPE RUNS ON EACH SIDE OF A CHANGE IN DIRECTION.
5. WHERE THE PIPING LAYOUT HAS RESTRAINED JOINT LENGTHS FOR TWO OR MORE FITTINGS TO OVERLAP, THRUST RESTRAIN ALL PIPING BETWEEN THE OTHER FITTINGS. ASSUME 1/2 OF THE RESTRAINED PIPE LENGTH BETWEEN THE TWO FITTINGS RESTRAINS EACH OF THE FITTINGS AND ADD ADDITIONAL RESTRAINED JOINT LENGTH TO THE OUTER LEGS OF THE OUTER FITTINGS TO EQUAL THE TOTAL REQUIRED FOR ALL FITTINGS.
6. THRUST RESTRAINT TABLE REFERS TO NEW PIPING.

2. SIGN IS ROTATED FOR CLARITY, ORIENTATION SHALL BE VISIBLE FROM FRONT OF HYDRANT.
3. CONTRACTOR SHALL PROVIDE A 3/4" AND 1-1/2" THREADED OUTLET WITH CAMLOK QUICK DISCONNECT ADAPTERS AND VALVE ON EACH YARD HYDRANT IN ADDITION TO THE 2" HYDRANT VALVE. YARD HYDRANT SHALL BE ZURN Z1390 SERIED OR APPROVED EQUAL.
4. YARD HYDRANTS LOCATED NEXT TO STRUCTURES SHALL BE SECURELY MOUNTED TO THE STRUCTURES WITH STAINLESS STEEL FASTENERS.
5. YARD HYDRANTS SHALL BE PROVIDED WITH WHEEL TYPE HANDLE.
6. PROVIDE CASING GUARD AROUND YARD HYDRANT ABOVE GRADE SURFACE.
7. HYDRANT SHALL BE DESIGNATED WITH A "NON-POTABLE WATER" SIGN. SEE DETAIL SHEETS.

AIR VACUUM & RELEASE VALVE (3" & SMALLER)

N.T.S

NOTES:

1. VALVE SIZE SHALL BE AS INDICATED ON THE DRAWINGS.
2. SERVICE TAP & PLUG VALVE SHALL MATCH VALVE INLET SIZE.
3. FIELD ROUTE DISCHARGE PIPE TO DRAIN/DAYLIGHT.

POWER, LIGHTING & SYSTEM LEGEND

- Ⓐ OR ⊢Ⓐ⊣ — LIGHT FIXTURE, CEILING MOUNTED. REFER TO LIGHT FIXTURE SCHEDULE
- ⊢Ⓐ — LIGHT FIXTURE, WALL MOUNTED. REFER TO LIGHT FIXTURE SCHEDULE
- EXIT LIGHT FIXTURE, CEILING MOUNTED OR AS NOTED. DARKENED AREAS INDICATE FACES, ARROWS INDICATE DIRECTION OF EGRESS
- EMERGENCY EXIT LIGHT FIXTURE, CEILING MOUNTED OR AS NOTED. MOUNT 7'–6" AFF OR AS NOTED.
- S — LIGHT SWITCH, MOUNTED. 4'–0" AFF. "2" INDICATES 2 POLE, "3" INDICATES 3–WAY, "4" INDICATES 4–WAY, "P" INDICATES PILOT LIGHT, "M" INDICATES MOTOR HP RATED WITH OVERLOADS. SEE ABBREVIATIONS FOR OTHER SYMBOLS
- 20 AMP DUPLEX RECEPTACLE MOUNTED HORIZONTALLY 6" ABOVE COUNTER TOP UNLESS OTHERWISE SHOWN
- 20 AMP DUPLEX RECEPTACLE MTD. 18" A.F.F., WITH #12 GROUND WIRE, GFCI INDICATES GROUND FAULT CIRCUIT INTERRUPTER, WP INDICATES WEATHERPROOF WHILE IN USE ENCLOSURE AND COVER
- SINGLE RECEPTACLE, RATINGS AS NOTED
- OR — DISCONNECT SWITCH, NON–FUSED, SIZE AS NOTED
- F OR — DISCONNECT SWITCH, FUSED, SIZE AS NOTED
- C OR — CIRCUIT BREAKER, TRIP RATING AS NOTED. BOX INDICATES CIRCUIT BREAKER IS TO BE INSTALLED IN AN ENCLOSURE.
- OR — COMBINATION DISCONNECT AND MOTOR CONTROLLER, SIZE AS NOTED. FUSED TYPE SHOWN.
- PUSHBUTTON STATION
- ELECTRICAL PANEL, SURFACE MOUNTED, 5'–6" TO TOP OF ENCLOSURE
- ELECTRICAL PANEL, RECESSED MOUNTED, 5'–6" TO TOP OF ENCLOSURE
- EQUIPMENT CABINET SIZE AS NOTED, RECESSED MOUNTED, 5'–6" TO TOP OF ENCLOSURE
- EQUIPMENT CABINET SIZE AS NOTED, SURFACE MOUNTED, 5'–6" TO TOP OF ENCLOSURE

CONTROL SYSTEM LEGEND

- DIGITAL INPUT OR OUTPUT, SIGNAL ID AS NOTED
- ANALOG INPUT OR OUTPUT, SIGNAL ID AS NOTED
- M — FLOW METER
- FS OR — FLOAT SWITCH, QUANTITY AS SHOWN OR NOTED.
- LT — LEVEL TRANSMITTER
- PUMP OR BLOWER
- M — VALVE, MOTOR SYMBOL INDICATES MOTOR OPERATOR

- L–1 — HOME RUN TO PANEL, RECEPTACLES AND EQUIPMENT SHALL HAVE GREEN GROUND WIRE. LETTER(S) INDICATE NAME OF PANEL, NUMBER(S) INDICATE CIRCUIT NUMBERS
- J — JUNCTION BOX 42 CUBIC INCH MINIMUM CAPACITY
- S — DOOR SWITCH MOUNTED IN DOOR JAMB
- DOOR BUTTON WEATHER PROOF, 50" A.F.F.
- B — DOOR BUZZER MTD 7'–0" A.F.F.
- H OR MH (H1, MH1) — HANDHOLE OR MANHOLE, IDENTIFIER SHOWN, REFER TO HANDHOLE OR MANHOLE SCHEDULE FOR SIZE
- CIRCUIT BREAKER, TRIP RATING SHOWN, 3–POLE UNLESS NOTED
- * — FUSE, CURRENT LIMITING, RATING AS SHOWN
- TRANSFORMER, RATINGS AS SHOWN
- M, 10 HP — ELECTRIC MOTOR, HORSEPOWER SHOWN
- * — MOTOR CONTROLLER, SIZE AS SHOWN OR REQUIRED. FVNR UNLESS NOTED
- HOA — HAND–OFF–AUTO SELECTOR SWITCH MOUNTED IN ENCLOSURE
- VARIABLE FREQUENCY DRIVE
- 4–4" — DUCT BANK, IDENTIFIER SHOWN. REFER TO DUCT BANK SCHEDULE FOR SIZE AND CONFIGURATION.
- 3/4" x 10' COPPER CLAD GROUND ROD
- SPD — SURGE PROTECTIVE DEVICE
- G, * kW — GENERATOR
- OR — AUTOMATIC TRANSFER SWITCH, CIRCUIT BREAKER SYMBOLS INDICATE SERVICE ENTRANCE RATED ATS
- WEATHERHEAD
- LP — ASSET AND ASSET IDENTIFIER. USED TO SHOW – THE LOCATION OF AN ASSET
- XXX — ASSET IDENTIFIER. REFER TO ASSET SCHEDULE
- XXX — CIRCUIT IDENTIFIER. REFER TO CIRCUIT SCHEDULE

CIRCUIT IDENTIFICATION

2 (3–#8 PH, 1–#8 N, 1–#10 EGC) 3/4" GRS

GENERAL NOTES:

1. THE ASSET SCHEDULE INCLUDES MAJOR EQUIPMENT AND SYSTEMS TO BE INSTALLED, REMOVED OR ALTERED BY THIS PROJECT. ASSETS ARE INDICATED ON THESE DRAWINGS BY THE ASSET ID. REFER TO THE LEGEND AND ABBREVIATIONS FOR THE ASSET SYMBOL. NOT ALL EQUIPMENT REQUIRED BY THIS PROJECT IS SHOWN ON THE ASSET SCHEDULE.
2. THE CIRCUIT SCHEDULE DEFINES THE CABLE, WIRE AND CONDUIT REQUIRED FOR POWER AND CONTROL CIRCUITS. CIRCUITS ARE INDICATED ON THESE DRAWINGS BY THE CIRCUIT ID. REFER TO THE LEGEND AND ABBREVIATIONS FOR THE CIRCUIT SYMBOL. THE CONDUIT SIZE SHOWN IN THE "CIRCUIT" COLUMN IS FOR ABOVE-GRADE CONDUIT. CONDUIT INSTALLED UNDERGROUND SHALL BE 1" MINIMUM SIZE.
3. THE PANEL SCHEDULES INDICATE THE REQUIRED CHARACTERISTICS OF SWITCHBOARDS, MOTOR CONTROL CENTERS, DISTRIBUTION PANELS, POWER PANELS, AND LIGHTING PANELS. REFER TO THE ASSET SCHEDULE AND THE CIRCUIT SCHEDULE FOR ADDITIONAL INFORMATION.
4. THE POWER SYSTEM ONE-LINE DIAGRAM(S) SHOW MAJOR ASSETS ONLY. REFER TO THE PANEL SCHEDULES FOR ADDITIONAL REQUIREMENTS.
5. THE CONTROL SYSTEM ONE-LINE DIAGRAM(S) INDICATE THE GENERAL ARRANGEMENT OF ASSETS AND THE CONTROL AND SIGNAL CIRCUITS REQUIRED. REFER TO THE ASSET SCHEDULE, CIRCUIT SCHEDULE, SIGNAL SCHEDULE, AND WIRING DIAGRAMS FOR ADDITIONAL REQUIREMENTS.
6. THE CONTRACTOR SHALL FURNISH AND INSTALL ALL REQUIRED EQUIPMENT AND LABOR TO PROVIDE NEW AND ALTER EXISTING ELECTRICAL SERVICE(S) AS INDICATED. THE CONTRACTOR SHALL PAY ALL COSTS IMPOSED BY THE ELECTRIC UTILITY FOR EACH NEW ELECTRICAL SERVICE. THE CONTRACTOR SHALL COORDINATE ALL REQUIREMENTS AND THE LOCATION OF EACH NEW ELECTRICAL SERVICE WITH THE ELECTRIC UTILITY AND THE OWNER.
7. THE CONTRACTOR SHALL PROVIDE AND INSTALL POWER AND CONTROL CIRCUITS IN CONDUIT TO ALL ELECTRICAL EQUIPMENT INSTALLED OR ALTERED DURING THIS PROJECT AT NO ADDITIONAL COST TO THE OWNER.
8. THE CONTRACTOR SHALL TEST ALL INSTALLED AND ALTERED EQUIPMENT, DEMONSTRATE PROPER OPERATION OF ALL EQUIPMENT TO THE OWNER, AND TRAIN THE OWNER IN OPERATION AND MAINTENANCE PROCEDURES.

MANUFACTURER-DESIGNED EQUIPMENT SYSTEM NOTES:

1. THIS PROJECT INCLUDES THE CONSTRUCTION OF MANUFACTURER-DESIGNED EQUIPMENT SYSTEMS.
2. POWER, SIGNAL AND CONTROL CIRCUITS ARE SHOWN ON THESE DRAWINGS BASED ON SIMILAR MANUFACTURER-DESIGNED EQUIPMENT SYSTEMS.
3. THE FINAL POWER, SIGNAL AND CONTROL CIRCUIT REQUIREMENTS SHALL BE DETERMINED BY THE APPROVED MANUFACTURER.
4. DRAWINGS, SPECIFICATIONS, INSTALLATION MANUALS, AND OTHER REQUIRED DOCUMENTATION SHALL BE PROVIDED BY THE APPROVED MANUFACTURERS AND MAY INCLUDE ADDITIONAL AND/OR ALTERED REQUIREMENTS THAN SHOWN ON THESE DRAWINGS.
5. THE CONTRACTOR SHALL COORDINATE WITH THOSE APPROVED SUBMITTAL DRAWINGS AND PROVIDE ALL REQUIRED LABOR AND MATERIALS NECESSARY FOR A COMPLETE AND ACCEPTED SYSTEM AT NO ADDITIONAL COST TO THE OWNER.

HAZARDOUS LOCATION NOTES:

1. THIS PROJECT INCLUDES THE INSTALLATION OF ELECTRICAL SYSTEMS IN LOCATIONS DEFINED BY THE NATIONAL FIRE PROTECTION AGENCY (NFPA) AS HAZARDOUS (CLASSIFIED) LOCATIONS. WASTEWATER COLLECTION SYSTEMS AND WASTEWATER TREATMENT PROCESSES ARE FIRE AND EXPLOSION HAZARDS DUE TO THE POSSIBLE IGNITION OF FLAMMABLE GASSES AND FLOATING FLAMMABLE LIQUIDS.
2. WIRING MATERIALS AND METHODS IN HAZARDOUS (CLASSIFIED) LOCATIONS SHALL MEET THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE (NEC), ARTICLE 500, HAZARDOUS (CLASSIFIED) LOCATIONS. INSTALLATION SHALL BE DONE BY PERSONS TRAINED AND EXPERIENCED IN HAZARDOUS (CLASSIFIED) LOCATION WORK.
3. CONDUIT SEAL FITTINGS SHALL BE FURNISHED AND INSTALLED AT BOUNDARIES OF HAZARDOUS (CLASSIFIED) LOCATIONS. BOUNDARIES OF HAZARDOUS (CLASSIFIED) LOCATIONS ARE BETWEEN CLASS I AND UNCLASSIFIED LOCATIONS, CLASS I AND CLASS II LOCATIONS, CLASS II AND UNCLASSIFIED LOCATIONS. CONDUIT SEAL FITTINGS SHALL BE LOCATED AS REQUIRED BY THE NATIONAL ELECTRICAL CODE.
4. RIGID CONDUIT IN HAZARDOUS (CLASSIFIED) LOCATIONS SHALL BE RIGID METAL CONDUIT (RMC) OR CONCRETE-ENCASED PVC. FLEXIBLE CONDUIT IN HAZARDOUS (CLASSIFIED) LOCATIONS SHALL BE RATED FOR THE HAZARD CLASSIFICATION IN WHICH IT IS INSTALLED.
5. WASTEWATER LIFT STATION WET WELLS ARE CLASS I, DIVISION I HAZARDOUS LOCATIONS.
6. WASTEWATER LIFT STATION METER VAULTS ARE CLASS I, DIVISION II HAZARDOUS LOCATIONS.

KEYED NOTES:

1. CONTRACT WITH SERVING UTILITY TO INSTALL NEW 480Y/277 VOLT, 3 PHASE, 4 WIRE ELECTRICAL SERVICE. CONSTRUCT NEW CONCRETE TRANSFORMER PAD FOR SERVING UTILITY–FURNISHED TRANSFORMER "ES–T". COORDINATE WITH SERVING UTILITY AND PROVIDE ALL MATERIALS AND LABOR TO MEET ALL SERVING UTILITY REQUIREMENTS. PAY ALL SERVING UTILITY–IMPOSED FEES. CONSTRUCT NEW PRIMARY FEEDER DUCTS AS REQUIRED BY SERVING UTILITY.
2. CONSTRUCT NEW CONCRETE PAD AND INSTALL NEW GENERATOR "G" AND AUTOMATIC TRANSFER SWITCH "ATS".
3. CONSTRUCT NEW ELECTRICAL BUILDING "EB".
4. CONSTRUCT NEW INFLUENT LIFT STATION "ILS" AND INFLUENT LIFT STATION FLOW METER STRUCTURE "ILS–FMS."
5. CONSTRUCT NEW HEADWORKS "HW". INCLUDING BAR SCREENS AND GRIT CLASSIFIERS.
6. CONSTRUCT NEW FLOW EQUALIZATION BASIN LIFT STATION "FEBLS" AND FLOW EQUALIZATION BASIN LIFT STATION FLOW METER STRUCTURE "FEBLS–FMS".
7. CONSTRUCT NEW PRIMARY FLOW EQUALIZATION BASIN IMPROVEMENTS. INSTALL LEVEL MEASUREMENT SYSTEM.

1/– **POWER SYSTEM PAD – ELEVATION**
SCALE: NONE

3/– **TRANSFORMER PAD DETAIL**
SCALE: NONE

GENERATOR DIMENSIONS – APPROXIMATE				
ASSET ID	KW	LENGTH	WIDTH	NOTE
G	600	19'-1"	6'-2"	–
ATS	–	5'-9"	3'	–

NOTES:

1. APPROXIMATE DIMENSIONS SHOWN. COORDINATE ACTUAL DIMENSIONS WITH APPROVED SUBMITTAL DRAWINGS.

2/– **POWER SYSTEM PAD – PLAN**
SCALE: NONE

TRANSFORMER PAD KEYED NOTES:

1. INSTALL NEW COPPER CLAD GROUND ROD, 3/4" x 10"–0", TYPICAL OF 4.
2. INSTALL NEW #2/0 BARE COPPER CONDUCTOR (TYPICAL).
3. INSTALL NEW #2 BARE COPPER CONDUCTOR.
4. INSTALL NEW EXOTHERMIC WELD, TYPICAL OF 5.
5. INSTALL NEW SECONDARY CONDUITS, SEE SITE PLAN.
6. INSTALL NEW PRIMARY CONDUITS, SEE SITE PLAN.
7. INSTALL NEW #4 REBAR, 12"O.C. BOTH WAYS.
8. CONSTRUCT NEW PAD USING CONCRETE, 3500 PSI AT 28 DAYS.
9. INSTALL NEW 1" GRSC UNDER PAD FOR GROUND WIRES (TYPICAL).
10. UTILIZE LONG SWEEP 90° BEND PVC CONDUITS ON PRIMARY CONDUITS.
11. UTILIZE LONG SWEEP 90° BEND CONDUITS ON SECONDARY CONDUITS.

TRANSFORMER PAD NOTES:

1. WHERE POSSIBLE. DO NOT PLACE CONDUIT UNDER THIS SECTION OF FOUNDATION.
2. REINFORCING – #4 BARS 12" O.C. BOTH WAYS.
3. WHEN INSTALLING CONDUIT, DISTURB GROUND IN FOUNDATION AREA AS LITTLE AS POSSIBLE. EXTEND CONDUIT 1" ABOVE FOUNDATION.
4. TOP OF FOUNDATION TO BE SMOOTH AND LEVEL. FINAL GRADE SHALL SLOPE AWAY FROM PAD.
5. CONCRETE SHALL BE 3500 PSI AT 28 DAYS AND 1:2:4 MIXTURE WITH 6 GAL. MAX. WATER CONTENT PER SACK OF CEMENT.
6. CONTRACTOR TO FURNISH 1" CONDUIT UNDER PAD FOR GROUND WIRE.
7. LOCATE CONDUITS UNDER PRIMARY AND SECONDARY BUSHINGS.
8. TRANSFORMER LOCATION TAG SHALL BE ATTACHED TO PAD WITH CONCRETE NAILS OR SHEET METAL SCREWS.
9. TRANSFORMER PAD REQUIRES A MINIMUM 3'–0" CLEARANCE AROUND EACH SIDE AND BACK OF PAD. A 15'–0" CLEARANCE IS REQUIRED ON FRONT SIDE OF PAD.

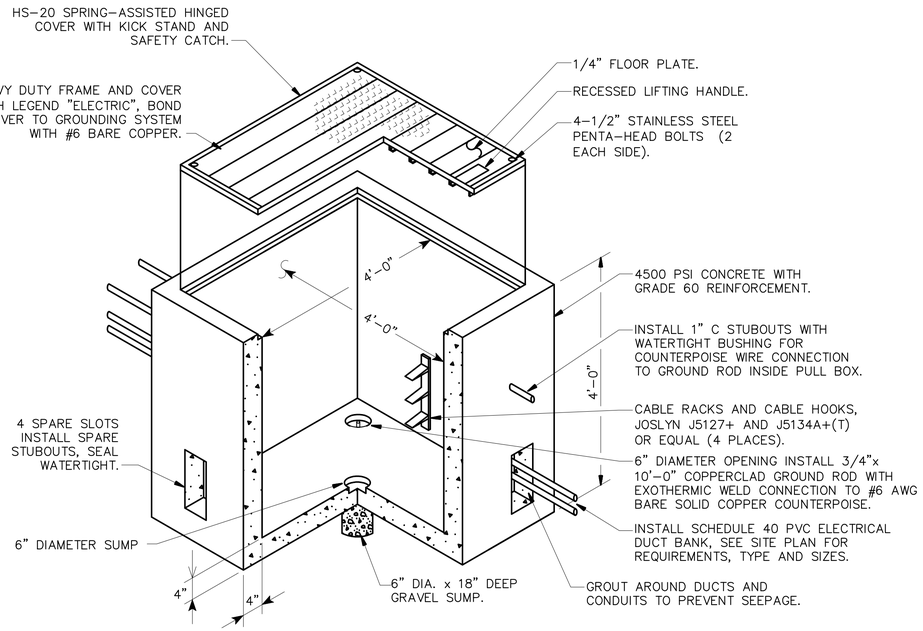
1 — **ELECTRICAL DUCT DETAIL**
SCALE: NONE

ELECTRICAL DUCT NOTES:

1. CONTRACTOR SHALL STAKE THE DUCT INSTALLATION IN PLAN AND ELEVATION FOR NEW ELECTRICAL DUCTS TO AVOID EXISTING UTILITIES.
2. CONTRACTOR SHALL ADJUST THE DEPTH OF THE ELECTRICAL DUCTS AS REQUIRED TO MAINTAIN THE MINIMUM COVER REQUIREMENT INDICATED AND AVOID EXISTING UTILITIES.
3. SIMILAR CONSTRUCTION FOR OTHER DUCT SIZES. SEE DUCT BANK SCHEDULE FOR QUANTITY AND SIZES.
4. INSTALL DUCT CONDUIT SUPPORTS AT 5'–0" O.C. MAXIMUM SPACING (TYPICAL ALL DUCTS).
5. OFFSETS AND BENDS OVER 10 DEGREES AND ELBOWS IN PVC CONDUIT RUNS SHALL BE CGRS CONDUIT.
6. NO PVC SHALL EMERGE FROM THE GROUND OR CONCRETE SLAB OR ENCASEMENT, PVC SHALL CONVERT TO CGRS CONDUIT PRIOR TO ITS EMERGENCE.
7. INSTALL GROUND RODS AT ENDS OF ELECTRICAL DUCT OR CONNECT TO GROUND RING.
8. INSTALL CONDUCTORS AND CABLES AS NOTED ON DRAWING. INSTALL PULLWIRE IN ALL SPARE DUCTS.
9. MINIMUM COVER REQUIREMENT FOR DUCT BANKS UNDER ROADS, DRIVEWAYS AND PARKING LOTS SHALL BE 24".
10. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL SECONDARY SERVICE DUCT BANKS SHALL BE 30".
11. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL PRIMARY SERVICE DUCT BANKS SHALL BE 36".



BASE PLAN

NOTE:
WHEN POURING CONCRETE DO NOT DROP CONCRETE THROUGH WATER IF WATER IS PRESENT IN HOLE.

BASE ELEVATION

3 — **LIGHT POLE BASE DETAILS**
SCALE: NONE

1. VERIFY BOLT CIRCLE AND MOUNTING WITH MANUFACTURER

2 — **PREFABRICATED CONCRETE PULL BOX**
SCALE: NONE

NOTES:

1. EACH CABLE SHALL BE IDENTIFIED WITH BRADY WIRE MARKER GIVING CIRCUIT NUMBER (#PWC–PK–6 OR APPROVED EQUAL).
2. ALL CABLE THROUGH BOX SHALL HAVE SUFFICIENT SLACK SO CABLE CAN BE BROUGHT TO SURFACE FOR SPLICING, MINIMUM 5' SLACK CABLE LOOP.
3. COVER AND PULL BOX SHALL BE DESIGNED FOR A 60 KIPS CONCENTRATED WHEEL LOAD OVER A 12" x 24" AREA.
4. GROUND ROD INSIDE OF PULL BOX SHALL BE DRIVEN PRIOR TO PLACEMENT OF BOX AND CAST IN BOTTOM OF BOX. IT WILL NOT BE CONNECTED TO ANY CIRCUIT.
5. PROVIDE HANDHOLES WITH 2–4"C SCHEDULE 40 PVC SPARE STUBOUTS IN EACH FACE, EXTENDED 3' MINIMUM BEYOND HANDHOLE, CAPPED WATERTIGHT.
6. EXCAVATION AND BACKFILL NECESSARY FOR THE CONSTRUCTION OF THE HANDHOLE SHALL BE PERFORMED IN ACCORDANCE WITH THE SPECIFICATION REQUIREMENTS.
7. PROVIDE WATERTIGHT CONDUIT BUSHING AND WATERTIGHT SEALS FOR ALL DIRECT BURIED COUNTERPOISE ENTERING THE HANDHOLE VIA A CONDUIT STUBOUT.
8. HANDHOLE COVER SHALL BE 1" MAXIMUM ABOVE FINISHED GRADE. AREA SURROUNDING HANDHOLE SHALL BE GRADED TO DRAIN AWAY FROM HANDHOLE.
9. BOND AND GROUND COVER AND FRAME TO ROD USING BRAIDED COPPER GROUND STRAP EQUIVALENT AMPACITY TO #6 AWG COPPER WIRE.
10. GRADE THE AREA AROUND THE HANDHOLE 10' IN ALL DIRECTIONS SUCH TO PREVENT WATER AND DIRT ACCUMULATION ACROSS THE TOP OF THE COVER AND ALLOW WATER TO DRAIN AWAY FROM THE HANDHOLE.

REGISTERED PROFESSIONAL ENGINEER
DAVID BRANDON WALL
21108
OKLAHOMA

GENERAL

1. ALL NOTES LISTED ON THIS SHEET APPLY TO ALL SHEETS OF THE DRAWINGS AS IF THEY WERE WRITTEN ON EACH SHEET.
2. CONTRACTOR SHALL NOTIFY OWNER 48 HOURS PRIOR TO CONSTRUCTION.
3. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND OBSTRUCTIONS INCLUDING LOCATION AND DIMENSIONS BEFORE STARTING WORK AND SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES.
4. PRIOR TO INSTALLATION OF RELEVANT FACILITIES CONTRACTOR SHALL, AT HIS OWN EXPENSE, UNCOVER AND OTHERWISE DETERMINE THE DEPTH OF UTILITIES WHICH, IN HIS OPINION, COULD INTERFERE WITH CONSTRUCTION.
5. ALL DIMENSIONS SHOWN WITH ± SHALL BE CONFIRMED BY THE CONTRACTOR ACCORDING TO ACTUAL FIELD CONDITIONS OR EQUIPMENT/STRUCTURE REQUIREMENTS.
6. ALL MISCELLANEOUS REMOVAL ITEMS REQUIRED FOR CONSTRUCTION SHALL BE FIELD LOCATED BY THE CONTRACTOR PRIOR TO BIDDING. THESE ITEMS WILL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
7. TRAFFIC CONTROL DEVICES SHALL BE FURNISHED AND MAINTAINED BY THE CONTRACTOR THROUGHOUT THIS PROJECT IN ACCORDANCE WITH THE LATEST VERSION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES AND/OR AS REQUIRED BY THE DEPARTMENT OF TRANSPORTATION OR COUNTY PERMITS FOR CONSTRUCTION IN RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL SUBMIT AN EROSION CONTROL PLAN (SWPPP) PRIOR TO CONSTRUCTION AND SHALL MAINTAIN SWPPP THROUGHOUT DURATION OF CONSTRUCTION IN ACCORDANCE WITH SPECIFICATIONS.
9. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS, LOCATES, AND AVAILABLE FILES. NEITHER THE OWNER NOR THE ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIALS, TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF CONSTRUCTION PRIOR TO THE START OF CONSTRUCTION.
10. CONTRACTOR SHALL PERFORM ALL WORK WITHIN DESIGNATED EASEMENTS. CONTRACTOR SHALL NOT ENCROACH OR TRESPASS INTO PRIVATE PROPERTY WITHOUT WRITTEN APPROVAL FROM THE PROPERTY OWNER.
11. MAINTAIN LOCAL AND THROUGH TRAFFIC FOR ALL STREETS AT ALL TIMES WITHOUT CLOSURES OR RESTRICTIONS EXCEPT AS PART OF THE TRAFFIC CONTROL PLAN.
12. MAINTAIN REASONABLE ACCESS TO ALL PROPERTIES AT ALL TIMES. DO NOT RESTRICT DRIVEWAY ACCESS WITHOUT OWNER'S APPROVAL. RESTORE DRIVEWAY ACCESS AT THE END OF EACH DAY. PROVIDE TEMPORARY MEASURES AS NEEDED (SUCH AS GRAVEL) TO MAINTAIN DRIVEWAY ACCESS.
13. CONTRACTOR SHALL KEEP ACCURATE RECORDS OF ALL CONSTRUCTION THAT DEVIATES FROM THE DRAWINGS. THE CONTRACTOR SHALL FURNISH TO THE ENGINEER ACCURATE "AS-BUILT" RED LINE DRAWINGS FOLLOWING COMPLETION OF CONSTRUCTION.
14. CONTRACTOR SHALL TAKE SPECIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD AND UNDERGROUND ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE MOST RECENT NATIONAL ELECTRIC CODE FOR WORKING AROUND OVERHEAD ELECTRIC LINES AS WELL AS OTHER LOCAL, STATE OR FEDERALS LAWS / REQUIREMENTS.
15. CONTRACTOR SHALL CONFORM TO ALL APPLICABLE FEDERAL, STATE AND LOCAL LAWS GOVERNING EXCAVATION. TRENCH SIDE SLOPES SHALL MEET OSHA REQUIREMENTS THAT ARE IN EFFECT AT THE TIME OF CONSTRUCTION. CONTRACTOR SHALL SUBMIT A TRENCH SAFETY PLAN PRIOR TO CONSTRUCTION.
16. THIS PROJECT IS SUBJECT TO AMERICAN IRON AND STEEL (AIS) REQUIREMENTS. ALL IRON AND STEEL PRODUCTS FOR CONSTRUCTION, ALTERATION, MAINTENANCE, OR REPAIRS INCORPORATED MUST BE PRODUCED IN THE UNITED STATES.
17. CONTRACTOR TO PROVIDE DUST CONTROL AT ALL TIMES DURING CONSTRUCTION.
18. ANY WORK PERFORMED WITHOUT THE KNOWLEDGE OF THE ENGINEER, INSPECTOR OR OWNER'S REPRESENTATIVE IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.

EARTHWORK

1. ALL COMPACTED SUBGRADE AND BASE NOT ACCESSIBLE TO MECHANICAL COMPACTION EQUIPMENT SHALL BE HAND COMPACTED USING WHACKER PACKERS.
2. SUBGRADE PREPARATION FOR ALL STRUCTURES AND BUILDINGS ON DRAWINGS SHALL BE AS FOLLOWS: OVER-EXCAVATE 30 INCHES BELOW BASE OF CONCRETE, SCARIFY AND COMPACT TOP 12", COMPACT TO 95% STANDARD PROCTOR DENSITY, INSTALL NON-WOVEN NEEDLE PUNCHED GEOTEXTILE FABRIC, INSTALL 30 INCHES OF CRUSHER RUN AGGREGATE BASE IN 10" LIFTS, COMPACT TO 95% MODIFIED PROCTOR DENSITY. BASE OF CONCRETE SHALL BE CONSIDERED THE BOTTOM OF SLAB AND NOT THE BASE OF FOOTINGS/STEM WALLS. OVER EXCAVATION MAY BE DELETED WHERE ROCK IS PRESENT. #57 ROCK SHALL BE SUBSTITUTED FOR AGG BASE WHERE GROUNDWATER IS PRESENT. ALL FILL MATERIAL REQUIRED TO ACHIEVE FINAL GRADE BELOW THE 30" ROCK LAYER SHALL BE CONSTRUCTED WITH ONSITE OR IMPORTED FILL MATERIAL COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. ELEVATIONS GIVEN ARE FINISHED GRADE UNLESS OTHERWISE NOTED.
4. NO FIRES WILL BE ALLOWED UNLESS OTHERWISE NOTED. TREES AND BRUSH SHALL BE REMOVED AND DISPOSED OF OFF SITE.
5. NO BLASTING WILL BE ALLOWED.
6. ALL SURFACE DRAINAGE IMPACTED SHALL BE RESTORED TO AS GOOD OR BETTER CONDITION.
7. ALL DISTURBED AREAS SHALL BE LEFT FREE OF RUTS AND TRACKS AND SHALL BE FULLY GRADED TO DRAIN.

GRASSING

1. ANY AND ALL DISTURBED AREAS SHALL BE TOPSOILED, HYDROMULCHED, AND WATERED. ANY AND ALL DISTURBED IMPROVE/RESIDENTIAL AREAS SHALL BE SOLID SLAB SODDED PER SPECIFICATIONS & WATERED UNTIL ESTABLISHED.

PIPING & APPURTENANCES

1. ALL PIPING THAT CROSS VERTICALLY SHALL HAVE AT LEAST 6" SEPARATION.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE REQUIRED 10 FOOT HORIZONTAL AND 2 FOOT VERTICAL SEPARATION BETWEEN SANITARY SEWER AND POTABLE WATER MAINS. ALL OTHER PIPING SHALL MAINTAIN A MINIMUM OF 5' SEPARATION.
3. CONTRACTOR SHALL SCHEDULE AND CONDUCT OPERATIONS TO LIMIT AMOUNT OF TRENCH OPENED TO INCLUDE ONLY THAT WHICH MAY BE COVERED IN 2 (TWO) DAYS TIME TO A MAXIMUM OF 200'. ANY TRENCH LEFT OPEN OVERNIGHT SHALL BE BARRICADED AND PROTECTED AS DETAILED IN THE MOST CURRENT EDITION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
4. MATERIAL EXCAVATED FROM TRENCH & PIPE BEDDING MATERIALS SHALL NOT BE PLACED ON ADJACENT ASPHALT OR CONCRETE PAVING.
5. A SILT AND VARMINT CAP AND/OR PLUG SHALL BE IN PLACE ON THE OPEN END OF PIPES AT ALL TIMES.
6. DO NOT EXCEED 75% OF MANUFACTURE'S RECOMMENDED MAXIMUM DEFLECTION FOR PIPE JOINTS UNLESS OTHERWISE NOTED.
7. THE CONTRACTOR SHALL INSTALL TEMPORARY FENCES TO PROTECT HORSES AND LIVESTOCK WHEN NECESSARY.
8. REMOVAL AND REPLACEMENT OF STREET TRAFFIC SIGNS, MAIL BOXES AND OTHER STRUCTURES BY THE CONTRACTOR TO FACILITATE CONSTRUCTION SHALL BE CONSIDERED INCIDENTAL AND BE INCLUDED IN THE PRICE BID.
9. ALL EXISTING PAVMENT TO REMAIN SHALL BE SAWCUT TO ENSURE A STRAIGHT SMOOTH SURFACE. ALL CUTS MADE IN DRIVEWAYS OR OTHER PAVEMENTS SHALL BE MADE IN STRAIGHT PERPENDICULAR LINES. COST TO BE CONSIDERED SUBSIDIARY TO CONTRACTOR'S BID.
10. INSTALL TRACER TAPE ON ALL PIPING INSTALLED IN ACCORDANCE WITH SPECIFICATIONS.
11. BONE EXTENTS ARE APPROXIMATE ONLY. FIELD VERIFY ACTUAL REQUIRED FOOTAGES & ASSOCIATED ITEMS PRIOR TO BID.
12. CONTRACTOR MAY ELECT TO BORE ANY AREAS SCHEDULES FOR OPEN CUT. SURFACE REPAIR MAY BE REMOVED WHEN/IF BORING IS USED.
13. CONTRACTOR MAY ELECT TO OPEN CUT ANY AREAS SCHEDULED FOR BORING WITH THE EXCEPTION ON RAILROAD & ROADWAY CROSSINGS WHERE BORING IS CALLED OUT.

ASPHALT

1. ALL ASPHALT SHALL CONFORM WITH OKLAHOMA DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, 2019 EDITION.

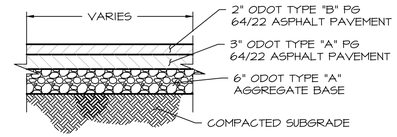
NOTE:



1. FLOWABLE FILL SHALL BE PROTECTED WITH BRIDGE PLATES OR A TEMPORARY SURFACE SEAL OF COLD MIX ASPHALT CONCRETE UNTIL FINAL SURFACE IS INSTALLED. COLD MIX ASPHALT IS NOT ACCEPTABLE FOR FINAL REPAIR.
2. FLOWABLE FILL SHALL BE ALLOWED TO CURE FOR A PERIOD OF NOT LESS THAN 24 HOURS PRIOR TO PLACEMENT OF SURFACE.
3. FLOWABLE FILL SHALL BE PROTECTED FROM FREEZING OR TOO RAPID CURING.
4. CONCRETE REPAIR SURFACE SHALL BE FINISHED WITH A ROUGH BROOM TEXTURE, OR MATCHING EXISTING ADJACENT SURFACES.
5. CONCRETE REPAIRS SHALL NOT BE OPENED FOR TRAFFIC FOR A PERIOD OF NOT LESS THAN 72 HOURS FOLLOWING PLACEMENT. BRIDGE PLATES SHALL BE USED TO PROTECT CONCRETE ON ANY LANES REQUIRED TO BE OPENED.
6. BEDDING, BACKFILL INCLUDING SELECT/FLOWABLE FILL IS CONSIDERED INCIDENTAL TO THE PIPE INSTALLATION AND/OR INCLUDED IN PIPE RESTORATION ITEM.
7. FOR DEEP TRENCHES, DEPTH OF FLOWABLE FILL SHALL BE A MAXIMUM OF 4' DEEP, AS MEASURED DOWN FROM THE SUBGRADE. GRANULAR BACKFILL MATERIAL SHALL BE USED FROM BOTTOM OF FLOWABLE FILL TO THE TOP OF PIPE ZONE.
8. PATCH SHALL EXTEND A MINIMUM OF 18" OUTSIDE EDGE OF EXCAVATION. FOR CONCRETE PAVEMENT AND APRONS, SAWCUTS WITHIN 5 FEET OF AN EXISTING JOINT SHALL BE REMOVED AND REPLACED TO THE EXISTING JOINT. FOR ALL ASPHALT STREETS, SAWCUTS WITH 3 FEET OF THE EXISTING ASPAHLT EDGE, ASPHALT SHALL BE REMOVED TO THAT EDGE AND THE ENTIRE SECTION REPLACED. LONGITUDINAL SAWCUTS SHALL NOT FALL WITHIN 36 INCHES OF THE TIRE PATH. EXACT QUANTITY/COST OF EXTENDED PAVING TO BE VERIFIED BY CONTRACTOR PRIOR TO BID.
9. FOR DRIVEWAY CROSSINGS, SELECT FILL OR AGGREGATE BASE MAY BE SUBSTITUTED FOR FLOWABLE FILL. FLOWABLE FILL WILL ONLY BE REQUIRED FOR STREET CROSSINGS.
10. ALL AGGREGATE BASE MATERIAL SHALL BE COMPACTED TO THE SPECIFIED DENSITY IN 6" LAYERS MAXIMUM.
11. FOR ASPHALT PAVEMENT REPAIRS THE TOP 3" OF CONCRETE SURFACE SHALL BE SUBSTITUTED WITH 3" OF HMAC ODOT TYPE "A" MEETING THE REQUIREMENTS OF ODOT STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, LATEST EDITION.
12. SURFACE REPAIR SHALL MATCH SLOPE & CURB TYPE OF ADJOINING PAVEMENT.
13. CONSTRUCT CONCRETE JOINT TO MATCH EXISTING.

GRAVEL SURFACE

ASPHALT/CONCRETE PAVEMENT

BRANGUS ROAD ASPHALT REPAIR/REPLACEMENT
N.T.S.

NOTES
1. WHEN OPTIONAL BORE IS ELECTED TO BE USED ASPHALT REPAIR NET REQUIRED.

SEQUENCE OF CONSTRUCTION
1. PERFORM EXISTING ROADWAY SURVEY TO ESTABLISH GRADE.
2. REMOVE PAVEMENT & BASE 11" BELOW EXISTING SURFACE.
3. SCARIFY, COMPACT & PROOF ROLL.
4. REMOVE/REPLACE SOFT/FAILING AREAS.
5. GRADE TO DRAIN.
6. INSTALL ASPHALT SECTION AND GRADE TO MATCH EXISTING GRADE PRIOR TO REMOVAL.

UTILITY BEDDING DETAIL
N.T.S.

EMBEDDMENT DETAIL NOTES

1. MINIMUM TRENCH WIDTH AT SPRINGLINE OF PIPE
   a. PIPES < 4" — 18"
   b. PIPES 6" - 18" — 12" + O.D.
   c. PIPES > 20" — 24" + O.D.
2. EXCAVATION MAY BE WIDENED ABOVE THE EMBEDMENT ZONE AT THE CONTRACTOR'S OPTION AND EXPENSE.
3. EMBEDMENT / BACKFILL LIFT THICKNESS (MAXIMUM)
   a. FINAL BACKFILL — 12" LIFTS TYPICAL; 6" LIFTS UNDER PAVING / STRUCTURES
   b. INITIAL BACKFILL — 6" LIFTS
   c. HAUNCHING — 4" LIFTS
   d. BEDDING — 4" LIFTS
4. TRENCH SLOPE, SHORING, BENCHING, ETC TO BE DETERMINED BY THE CONTRACTOR. CONTRACTOR IS SOLELY RESPONSIBLE FOR TRENCH SAFETY AND OSHA COMPLIANCE.
5. EXCAVATION FOR BELL HOLE REQUIRED FOR ALL PIPING <4". CONTRACTOR SHALL SELECT AND UTILIZE CONSTRUCTION METHODS SUCH THAT ALL AREAS UNDER THE PIPE HAUNCHES ARE FILLED WITH THE APPROPRIATE MATERIAL AND COMPACTED.
6. ALL MATERIALS UNDER PAVING / STRUCTURES SHALL BE COMPACTED TO 95% MODIFIED PROCTOR DENSITY AT 4% OPTIMUM MOISTURE CONTENT BY SHEEPSFOOT OR OTHER SUTIABLE MECHANICAL COMPACTION METHODS AT SPECIFIED LIFT THICKNESSES. COMPACTION EQUIPMENT MUST NOT COME IN CONTACT WITH CARRIER PIPE NOR CASING PIPE.
7. IF TRENCH BOTTOM IS OVER-EXCAVATED BELOW INTENDED GRADE, FILL THE OVER-EXCAVATION WITH EMBEDMENT MATERIAL AND COMPACT AT THE DENSITY SPECIFIED FOR THE EMBEDMENT MATERIAL.
8. THE EXISTING NATIVE MATERIAL WITHIN THE LIMITS OF THE EMBEDMENT ZONE IS TO REMAIN UNDISTURBED OR REPLACED WITH SPECIFIED PIPE EMBEDMENT MATERIAL IF OVER-EXCAVATION TAKES PLACE. REPLACEMENT WITH ONSITE MATERIAL WILL NOT BE ACCEPTABLE.
9. IF BEDDING DETAIL CONFLICTS WITH ANY OTHER DETAIL THE MORE STRINGENT SHALL APPLY.

ADDENDUM NO. 1

TO: ALL PLAN HOLDERS

RE: Shawnee Wastewater System Improvements

DATE: 07/08/22

The Plans, Specifications and Contract Documents for the above referenced project are hereby modified / clarified as follows.

Please note that changes made to the plans/specs added by addendum will only contain a summary of changes in the addendum verbiage and may not contain all modifications. It is the Contractor's responsibility to thoroughly review the revised sheets/specs.

General (applying to all project sections)

A1 – 1 **Information:** Q&A provided in CivCast are made a part of this addendum by reference.

A1 – 2 **Information:** There are numerous locations where a structural engineer is required to verify/certify miscellaneous items during construction. The selection of the structural engineer is by the Contractor, but it would be our preference that the project Structural Engineer be utilized for this purpose (BKL, Inc, Tulsa, OK (918) 835-9588.)

A1 – 3 **Clarification:** There are areas withing the drawings where underground fittings are drawn as what could be interpreted as flanged. It is the intent the ALL underground fittings be mechanical joint unless specifically detailed otherwise (regardless of how they are drawn.)

A1 – 4 **Clarification:** Refer to Civil Drawings for correct location and number of electrically actuated gates, electronically actuated valves, hoists & cranes. Provide power and controls to all and coordinate with Electrical Drawings.

A1 – 5 **Clarification:** Provide power to all cranes and hoists called out on Civil Drawings. Furnish per like kind on Electrical Drawings if not detailed.

A1 – 6 **Clarification:** All hydrants shown on drawings will include a hose mount. It will be wall mounted if adjacent to a structure and free standing if not. See detail sheets.

A1 – 7 **Clarification:** Concrete joints in roadway/paving shall have a maximum spacing of 10' for sawed joints and 30' for expansion joints.

A1 – 8 Clarification: Foundation prep under ALL structures (even minor structures) shall be per C-2 Earthwork Note 2. No exceptions.

A1 – 9 Specification: All hoses for hydrants to be reinforced rubber commercial hose with a 300psi working pressure rating and a minimum burst pressure of 1200psi. Underhill UltraMax Blue or equal. Underhill PowerBlast Nozzle or equal.

A1 – 10 Addition: All internal hose mounts to be supplied with 1" x 25' hose.

A1 – 11 Addition: Supply the following hoses w/ spray nozzles to be field located:
1. 6ea – 50'
2. 4ea – 100'
3. 4ea – 200'

A1 – 12 Addition: Provide auto-openers and manual chain wheel operators for all overhead doors. Field locate auto-opener adjacent to door.

A1 – 13 Addition: Trolley hoists to be inspected by the supplier to certify installation meets minimum standards and is appropriate for application.

A1 – 14 Addition: All pipe supports to be anchored to slabs per manufacturer's recommendations.

A1 – 15 Modification: 00_41_16 List of Manufacturers – Revised

A1 – 16 Modification: 03_30_00 Cast in Place Concrete – Revised

A1 – 17 Modification: 33_01_33 Wastewater Liquid & Solids Removal – Revised

Northside WWTP

A1 – 18 Clarification: Floor drains to be Neenah 4937-A unless otherwise noted.

A1 – 19 Addition: EN7 Electrical Details - Added

A1 – 20 Addition: Level measurement will be required and reported back to SCADA in all basins. This includes all wetwell, pre-EQ, SBR, post-EQ and Aerobic Digesters.

A1 – 21 Modification: The following sheets have been modified as follows:
1. C-2: Notes have been modified.
2. C-13: Added flowline elevations to sludge piping
3. C-14A: Notes
4. HW-2, HW-7: Notes; Gate Schedule; Valve Schedule
5. PEQ-1, PEQ-2, AD-1, AD-2, AD-3: Notes; Valve Schedule; Piping Schedule
6. SBR-1, SBR-2 - Notes; Valve Schedule; Piping Schedule

7. UV-1, UV-2: Piping Schedule; Added Wall Mount Utility Stations; Gate Schedule
8. LS-1, LS-2: Piping Schedule; Low Profile Cascade Aerator (LPCA) narrowed and will be grouted between LPCA and wall to height to LPCA
9. WAS-1: Piping schedule; Added door to enclosure; Notes
10. Belt Filter Press Sheets: Revised. Complete new sheets. These sheets govern all other sheets pertaining to belt press area (electrical, architectural and structural.)
11. DT-5: Wall Mounted Utility Station; RPZ Riser (Interior)
12. DT-7: Backflow Preventer
13. DT-9: Detail Drawing; Notes; Piping Schedule

A1 – 22 Modification: CMU wall in belt press room shall be 11' in height and extend to an elevation of 976.33 (supersedes architectural drawings)

A1 – 23 Miscellaneous: Headworks electrical equipment to be staggered between columns for ease of access.

Southside

A1 – 24 Modification: The following sheets have been modified as follows:

1. C-1: Notes
2. HW-1: Gate schedule; Notes
3. ILS-2, ILS-2A & ILS-2B: Gate Schedule; Valve Schedule; Notes
4. MM-1: Piping/Piping schedule
5. SW-2, SW-3: Gate Schedule; Notes
6. DT-7: Backflow Preventor Detail

Should you have any additional questions about the above modifications and their intent, please post to the CivCast website.

List of manufacturers / suppliers above must represent either the specified manufacturer / supplier or an alternate that has been approved and ADDED BY ADDENDUM. Listing an unapproved manufacturer / supplier may deem the bid non-responsive since the basis of bid would be with unapproved equipment.

SECTION 03_30_00

CAST-IN-PLACE CONCRETE (ADDENDUM #1)

PART 1 GENERAL

1.1 SUMMARY

A. Cast-in-place concrete work, as indicated on the drawings and specified herein.

B. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 03_11_00 Concrete Formwork

D. Section 03_20_00 Concrete Reinforcement

E. Section 03_15_20 Concrete Joints & Embedded Items

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections if included.

B. Submit mix designs for each specified concrete and grout type. Design data shall include the name of the concrete supplier; manufacturer/supplier and type of cement used; size and type of aggregate; proportional weights of cement, aggregate, and water per cubic yard of concrete; name and quantity of admixture used.

C. Concrete Mix Design
   1. Concrete mix design.
      a. Mixture Identification and intended use.
      b. Minimum 28-day compressive strength.
   2. Constituent quantities per cubic yard.
   3. Sources of all concrete mix components including coarse aggregate, fine aggregate, cement, water, admixtures, and pozzolans where included.
   4. Cement type and manufacturer, include chemical analysis (mill test report) for each cement type to be used.

5. Pozzolan type and source; include chemical analysis for each pozzolan type to be used.
6. Water/cement ratio, by weight.
7. Air content
8. Mix design slump.
9. Nominal maximum aggregate size.
10. Average compressive strengths conforming to the requirements of ACI 318 at 28 days.
11. Provide both average strengths and sample standard deviation. Provide results at 7 and 14 days if available.
12. Laboratory shrinkage test results for concrete mix designs, where specified.

D. Aggregate for Mix Design:
1. Laboratory sieve analysis, conforming to ASTM C33.
2. Verification that aggregate is not "deleterious," or "potentially deleterious." Provide documentation or other certification that aggregate does not contain deleterious substances and has been used without issues on previous projects.

E. Admixtures.
1. Submit Manufacturer's data brochures on all admixtures proposed for use and provide certification of compliance with specified ASTM standards for each admixture.

F. Submit Manufacturer's data sheets and product specifications for curing compounds and items specified in other Sections including form release agents, bonding agents, etc. Identify the locations where each will be used in the Work as a part of the submittal.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

B. American Society for Testing and Materials (ASTM).
1. ASTM C31: Standard Practice for Making and Curing Concrete Test Specimens in the Field
2. ASTM C33: Standard Specification for Concrete Aggregates

1.5 QUALITY ASSURANCE

A. Conform to ACI 305R when concreting during hot weather.

B. Conform to ACI 306R when concreting during cold weather.

C. Manufacturer's Qualifications:
1. Manufacturer must be certified by the National Ready Mix Concrete Association's Certification of Ready Mixed Concrete Production Facilities.

D. Concrete Consistency
1. Test for slump shall be performed at the job site immediately prior to placing in accordance with ASTM C143. Slump tests shall be performed for each batch of concrete to indicate workability and consistency from batch to batch.
2. If the slump is outside the allowed limits, the concrete shall be rejected. Concrete showing either poor cohesion or poor coating of the coarse aggregate with paste shall be remixed or rejected.
3. If the slump is within the allowable limit, but excessive bleeding, poor workability, or poor finishability are observed, the concrete shall be rejected and changes in the concrete mix shall be made only by an adjustment of one or more of the following:
   a. The gradation of aggregate.
   b. The proportion of fine and coarse aggregate.

c. The percentage of entrained air, within the allowable limits.

E. Concrete Temperature
1. Comply with ACI 301, ACI 306.1 and ACI 305.1
2. Concrete temperature shall be taken immediately before placement with the point of measurement being in the chute or bucket.
3. Perform temperature test for each batch and record result on batch ticket.
4. If fresh concrete temperature does not meet requirements in this section the concrete shall be rejected.

F. Concrete Air Content
1. Test for air content shall be made on a fresh concrete sample for each batch prior to placing in forms.
2. Air content for concrete made of ordinary aggregates having low absorption shall be made in accordance with either ASTM C231, or ASTM C173. If light weight aggregates or aggregates with high absorptions are used, use ASTM C173.
3. If air content of fresh concrete does not meet requirements specified in this Section, the concrete shall be rejected. Do not place concrete that does not meet the air entrainment requirements of this Section.

G. Compressive Strength
1. Compression test specimens shall be made, cured and tested in accordance with ASTM C31 and ASTM C39.
2. Compressive strength tests shall be made on cylinders at 7 and 28 days. The value of each test result shall be the average compressive strength of a minimum of 2 cylinders taken at the same time from the same batch of concrete.
3. Compressive test specimens shall be 6” x 12” cylinders; 4” x 8” cylinders are not permitted.
4. Sets of concrete test cylinders shall be cast for each concrete pour as follows.
   a. A "set" of test cylinders consists of a minimum of six cylinders, two to be broken and strengths averaged at seven days; and two broken and strengths averaged at 28 days. Two hold cylinders will remain unbroken so that they will be available to be broken upon unforeseen circumstances or upon the option of the Engineer to break cylinders at different times.
   b. A minimum of one “set” of cylinders will be made for each concrete pour up to 25 CY in volume. For pours larger than 25 CY, additional “sets” of cylinders will be made for each additional 25 CY of concrete poured.
5. Evaluation of compressive strength for compliance with design requirements will be conducted by the Engineer per ACI 318 – Section 26.12 based on the results of the 28 day test.

H. Failure to Meet Requirements
1. The Owner may withhold payment for any section of concrete which does not meet the requirements of the Plans and Specifications. Withheld payment shall be based upon unit prices established for concrete, if available. Payment shall be withheld until the unacceptable concrete has been repaired or removed and replaced or otherwise brought into conformance with the Plans and Specifications.
2. Concrete Strength
   a. If the 28 day strength test results fall below required values, additional curing may be performed and test cores may be obtained in accordance with ASTM C42 with approval of the Engineer. Additional curing, core

removal and testing, if allowed by the Engineer, shall be at the Contractor's expense.

b. If the strength results from test cores do not exhibit the required strength, the Engineer or Owner's Representative reserves the right to require strengthening, replacement of substandard materials and/or additional testing at the Contractor's expense. The choice of remedy is at the sole discretion of the Engineer or Owner's Representative.

3. Other Concrete Properties

a. If concrete properties besides strength do not meet required values, the Engineer may require concrete samples to be obtained in accordance with ASTM C42 and evaluated in accordance with ASTM C856 at the Contractor's expense.

b. If concrete properties besides strength do not meet required values, and the results of additional examination per ASTM C856 are deemed unsatisfactory at the sole discretion of the Engineer, the Owner reserves the right to require strengthening, replacement of substandard materials and/or additional testing at the Contractor's expense.

1.6 DESCRIPTION/DESIGN REQUIREMENTS

A. All concrete shall be 4,000 psi unless otherwise noted. See Section 2.4 for additional requirements.

B. Concrete shall not be placed in any form until formwork has been inspected by the Engineer and permission is given to start placing.

C. Notify Engineer a minimum of 48 hours prior to concrete placement.

D. Fly ash will not be accepted for use in mix designs

E. Provide PVC waterstop at all submerged joints and as outlined in the plans and other specification sections.

F. Retempering by adding water to concrete at the jobsite will not be permitted unless prior approval is obtained from the Engineer.

G. All slabs to receive 10ml vapor barrier prior to concrete placement

H. All cracks greater than 0.05" wide not located in control joints shall be sealed by cutting a bevel groove on the water side of the crack 1/2" to 3/4" wide and caulking with epoxy sealant. Crack widths shall be measured at the concrete surface.

PART 2 PRODUCTS

2.1 CONCRETE MATERIALS

A. Cement: ASTM C150, Type I/II, Type I – Only type of one brand of cement shall be used.

B. Coarse Aggregates: Shall consist of gravel, crushed gravel, crushed stone, air-cooled blast furnace slag, or a combination thereof, conforming to ASTM C-33 with a maximum size of

1½-inches. Where required due to minimum spacing of reinforcing steel, maximum size of coarse aggregate shall be reduced to 1-inch with prior written approvalof the Engineer.

C. Fine Aggregate: Shall conform to ASTM C-33 and shall be washed river sand composed of clean, uncoated grains of strong materials.

D. Abrasive aggregates shall be equal to fine (c.f.) "Alumdum" aggregate as manufactured by Norton Company, Worcester, Mass. or "Frictex NS" as manufactured by Sonneborn - Contech. Use only as approved by Engineer.

E. Water: Potable water free from detrimental chemicals and solids that will decrease the strength of the concrete.

F. Embedded Items: Embedded items shall be of the size and type shown or as needed for the application.

G. Curing Materials: Curing materials shall be burlap, impervious sheets, or membrane-forming compounds.

H. Dowels: Plain carbon steel bars, minimum yield point of 60,000 psi for use in slabs on grade.

I. Expansion Joint Filler Strips: Premolded nonextruding, resilient bituminous or non-bituminous type for use in concrete paving or construction, thickness as shown.

J. Form Materials: Wood, metal or other Engineer approved materials that will produce the specified finishes without adversely affecting the concrete surfaces in accordance with Section 03_11_00 Concrete Formwork.

K. Form Coating: Nonstaining form oil or form-release agent that will not deleteriously affect concrete surfaces nor impair subsequent applications.

L. Form Ties: Metal, factory-fabricated removable snap-off type, that will not leave holes less than 1/4 inch nor more than 1 inch deep and not more than 1 inch in diameter.

M. Joint Sealant: As approved by Engineer for sealing joints in concrete against moisture infiltration for specific application.

N. Reinforcement: Bar reinforcement shall be deformed, Grade 60 conforming to ASTM A615. Mesh reinforcement shall be welded wire fabric with wires at right angles to eachother. See Section 03_20_00 Concrete Reinforcement.

O. Bonding Agent: As approved by Engineer.

P. Admixtures: Air-entraining, retarders, and other admixtures as approved by Engineer
1. Air-entraining admixture: ASTM C260.
2. Water-Reducing Admixture: ASTM C494/C494M, Type A.
3. Retarding Admixture: ASTM C494/C494M, Type B.
4. Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type D.
5. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.

6. High-Range, Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type G.
7. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.
8. Antimicrobial, Crystalline Waterproofing Admixture
    a. Manufacturer(s): Xypex Admix C500 Bio San or engineer approved equal
    b. Dosage rate shall be minimum 1% by weight of cementitious content. No exceptions.
    c. Locations: All primary treatment unit concrete structures that are subject to direct or indirect exposure to wastewater. Units (Northside & Southside)
        1) Headworks
        2) Influent Lift Station
    d. Performance Requirements:
        1) Product shall demonstrate a minimum of 99% reduction in bacterial count formation after 10 years of exposure in wastewater service.
9. Crystalline Waterproofing Admixture
    a. Manufacturer(s): Xypex Admix C500 or engineer approved equal
    b. Dosage rate shall be minimum 2% by weight of cementitious content. No exceptions.
    c. Locations: All concrete structures that are subject to direct or indirect exposure to wastewater, excluding primary treatment units.
    d. Performance Requirements:
        1) Permeability: Independent testing shall be performed according to U.S. Army Corps of Engineers CRD-C48 - Mod Permeability of Concrete. Under CRD-C48 treated concrete samples that are no greater than 2 inches thick shall be pressure tested to 150 psi (350 foot head of water). The treated samples shall exhibit no measurable leakage against control samples which shall exhibit full saturation and measurable leakage. In all case cases treated and untreated samples shall have the same mix design.
        2) DIN 1048/ EN 12390 "Water Impermeability of Concrete"/Requirement: Treated and untreated samples that are 120mm thick shall be subjected to hydrostatic pressure for 3 days (Minimum of 3 samples of each). Control samples shall have a minimum of 100mm of penetration (average of samples). Treated samples shall show a minimum of 90% reduction in depth of water penetration when compared to the control sample (average of samples). In all case cases treated and untreated samples shall have the same mix design.
        3) Crack Bridging Capability: Requirement: Crack sealing effect shall be evidenced by the following when comparing treated and untreated samples:
            a) Cracks shall be minimum 0.4mm wide.
            b) Cracks for treated and untreated samples shall both leak initially.
            c) Cracks for treated samples shall be completely sealed against the passage of water after 21 days or less.
            d) Cracks for untreated samples shall continue to leak after 21 days or more."

2.2 ADMIXTURES

A. A retarding admixture, conforming to ASTM C-494, pre-tested with job materials under job conditions, may be used if approved by Engineer, whenever necessary to prevent cold joints due to the quantity of concrete placed, to permit revibration of the concrete, to offset the effects of high concrete temperature rise.

2.3 ACCESSORIES

A. Curing Compound: Concrete curing compound shall be of a nature and composition not deleterious to concrete and shall be of a standard and uniform quality ready for use as shipped by the manufacturer. At the time of use, the curing compound shall be in a thoroughly stirred condition. Curing compounds shall not be diluted by the addition of solvent or thinners, or be altered in any manner without the specific approval of and ina manner prescribed by the manufacturer. Curing compound shall conform to the requirements of ASTM C-309 Type 1.

1. The curing compound shall be sufficiently transparent and free from color so that there will be no permanent change in the color of the concrete. The compound shall contain, however, a temporary dye of sufficient color to make the membrane clearly visible for a period of at least four hours after application.

2.4 CONCRETE MIX QUALITY AND CONTROL

A. No fly ash will be permitted in mix designs.

B. Design: Concrete shall be composed of Portland cement, fine aggregate, coarse aggregate and water. All concrete shall be designed by an approved testing laboratory in accordance with the ACI Standard Recommended Practice for Selecting Proportions for Concrete (ACI-211) to produce the strength for each class of concrete specified, and with slumps and maximum sizes of coarse aggregate in accordance with the requirements outlined below.

C. Prior to placing any concrete, the Contractor shall submit for review mix designs for each specified concrete and grout type.

D. Concrete Classifications

Class	Min. 28-Day Compressive Strength (psi)	Coarse Aggregate Size (in.)	Max. Water Cement Ratio	Max. Slump (in.)	Min. Cement Content (lb. per CY)
A	4000	1.5 (No. 467)	0.45	5	517
B	3000	1.5 (No. 467)	0.50	4	470
C	4000	1.0 (No. 57)	0.45	4	564
D	5000	0.75 (No. 67)	0.45	5	611

E	1500	1.5 (No. 467)	0.70	4	376
F	4000	0.375 (No. 8)	0.45	8	611

E. Concrete Usage

Class	Usage
A	All reinforced concrete unless otherwise specified
B	Concrete Encasement; Sidewalks
C	Drilled Shafts; Pumped Concrete; Thin Wall Sections
D	Precast Concrete and Panels
E	Lean Concrete Backfill; Foundation Seal; Blocking/Cradling
F	Underground Duct Banks

F. In not specifically noted in the table above, concrete shall be 4,000 psi.

G. The slump shall not exceed the maximum specified above for the type of construction for which it is to be used. The 28-day compressive strength determined in accordance with current ASTM Specifications C-39 and C-31 and with specimens cured in accordance with C-31 shall not be less than that shown above for the specified class of concrete. No water will be added after the amount specified by the mix design.

H. If admixtures are used, slump shall be as approved by Engineer.

I. Production of Concrete: All ready-mixed concrete shall be batched, mixed and transported in accordance with "Specifications for Ready-Mixed Concrete (ASTM C-94)". Plant equipment and facilities shall conform to the "Check List for Certification of Ready-Mixed Concrete Production Facilities" of the National Ready-Mixed Concrete Association.

J. Laboratory Testing: The Owner shall engage an independent testing laboratory to conduct concrete tests. Unless otherwise informed the Contractor will be responsible for sampling concrete for test cylinders, recording, providing all materials required, and for making all slump tests in the field directed by the Engineer. All costs in connection with work performed by the laboratory shall be paid by the Owner. When cylinder reports indicate concrete does not meet strength requirements delineated in the Contract Documents, the Contractor shall be responsible for the costs of developing a redesign of the concrete mix.

K. At least one test shall be made on fresh concrete for each 60 cubic yards of each class of concrete (or fraction thereof) placed on any one day and in any event, not less than one test for each class of concrete each day it is used. Testing shall be done in accordance with the following ASTM Specifications, latest edition:
   1. C-172 - Standard Method of Sampling Fresh concrete
   2. C-31 - Standard Method of Making and Curing Concrete Compression & Flexure Test Specimens in the Field

3. C-39 - Standard Method of Test of Compressive Strength of Molded concrete Cylinders
4. C-143 - Standard Method of Slump Test for Consistency of Portland Cement Concrete

L. Before any concrete is poured, the Contractor shall construct a storage box in accordance with ASTM Specification C-31. Each set of tests shall consist of one slump test and three compression test cylinders. All cylinders shall be kept in the storage box for the first 24 hours. The three cylinders shall be laboratory cured and tested for adequacy of the design for strength of the concrete in accordance with ASTM Specification C-31. One cylinder shall be tested at seven days and two at twenty-eight days.

M. Failure of Concrete to Meet Strength Requirements: The concrete shall be considered acceptable if, for any one class of concrete, the average of all tests or any five consecutive tests is equal to or greater than the specified strength, provided that no more than one test of the five falls between 90 percent and 100 percent of the specified strength. The only cylinders to be used for determination of concrete acceptability will be those laboratory cured and tested at twenty-eight days. When it appears the tests of laboratory-cured cylinders will fail to meet these requirements, the Engineer may require changes in the proportions of concrete for the remainder of the work in order to meet the strength requirements. In addition, the Engineer may also require additional curing not to exceed a total of twenty-one days on portions of the concrete already poured.

N. The Engineer may also require tests in accordance with Methods of Securing, Preparing and Testing Specimen from Hardened Concrete for Compressive and Flexural Strengths (ASTM Specifications C-42) when the concrete cylinder tests fail to meet strength requirements. In the event there still is question as the quality of the concrete in the structure, the Engineer may require load tests for that portion where the questionable concrete has been placed. Such load tests will be made as outlined in Chapter 20 of American Concrete Institute Building Code. (ACI 318-71), and shall be at the expense of the Contractor.

O. Removal of Under Strength Concrete: If the above tests indicate that a particular batch of previously placed concrete is under strength, the Engineer may direct that the under strength batch be removed and replaced. The removal of the under strength concrete shall also include the removal of concrete that has obtained the required strength if the Engineer deems this necessary to obtain structural or visible continuity when the concrete is replaced.

P. The removal, and replacement of any under strength concrete, shall be made at no additional cost to the Owner. This shall include any new formwork required or any reinforcing steel that may be required. The Owner shall not be charged any additional costs for any extra work that is required because of the failure of any concrete to meet the minimum test requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify requirements for concrete cover over reinforcement as referenced in Section 03_20_00 are met.

B. Verify that anchors, seats, plates, reinforcement and other items to be cast into concrete are accurately placed, positioned securely, and will not cause hardship in placing concrete.

3.2 PREPARATION

A. All items, including lines and grades, forms, waterstops, reinforcing, inserts, piping, electrical, plumbing and the Contractor's concreting materials and equipment shall be complete and in compliance with the plans and specifications before proceeding with concrete placement.

B. Concrete finishing shall be completed in daylight hours. When this is not possible, brilliantly light the work site so that all operations are plainly visible.

C. Water shall be removed from excavations before concrete is deposited. Hardened concrete, wood chips, shavings, and other debris shall be removed from interior of forms and inner surfaces of mixing and conveying equipment. Wood forms shall be oiled or, except in freezing weather, wetted with water in advance of pouring. Contractor shall verify that all reinforcement is properly place, aligned, and secured prior to pouring concrete and shall coordinate with Resident Project Representative.

D. Soil at bottom of foundation systems is subject to testing for soil bearing value by the testing laboratory. Place concrete immediately after approval of foundation excavations. Excavate and backfill as necessary to complete the concrete work. Place concrete on sub-grades that are well compacted to level and true grade. Before concrete is poured in areas between slabs on grade previously poured, recheck compaction of subgrades and if necessary, recompact to avoid settlement of slabs at joints. Seal extremely porous subgrades. Remove all ice, debris and excess water from subgrades. After completion of the concrete work, backfill all excavations.

E. Mix concrete only in quantities for immediate use. Discard concrete which has set; re-tempering is not permitted. **Completely discharge concrete at the site within one hour and 30 minutes after adding cement to aggregate. In hot weather, reduce this time to one hour or less to prevent stiffening of concrete before it is placed.**

F. If concrete arrives at the project with slump below that specified, water may be added only if the addition of water does not exceed either the maximum permissible water-cement ratio or maximum slump. Mix adjustments to obtain specified slump must be approved by the Engineer.

G. Protection from Adverse Weather
1. If adverse weather is imminent, no concrete placement is permitted. Do not permit rainwater to increase mixing water or to damage the surface finish. If rainfall occurs after placing operations begin, provide adequate covering to protect the work.

3.3 CONVEYING

A. Concrete shall be conveyed from mixer to forms as rapidly as practicable and by methods which will prevent segregation and loss of ingredients. It shall be deposited as nearly as practicable in its final position. Chutes used shall be such that concrete slides in them and does not flow. Chutes, if permitted, shall have a slope of less than 1 on 2. Where a vertical

drop greater than 5 feet is necessary, placement shall be through elephant trunks or similar devices to prevent segregation.

3.4 PLACING

A. Completely discharge concrete at the site within one hour and 30 minutes after adding cement to aggregate. In hot weather, reduce this time to one hour or less to prevent stiffening of concrete before it is placed.

B. Unless otherwise specified, all concrete shall be placed upon clean, damp surfaces free from running water, or upon properly consolidated fills, but never upon soft mud or dry, porous earth. The concrete shall be compacted and worked in an approved manner into all corners and angles of the forms and around reinforcement and embedded fixtures as to prevent segregation of the coarse aggregate. Construction of forms for the lifts of vertical.

C. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.
   1. If a section cannot be placed continuously, provide construction joints as indicated.
   2. Deposit concrete to avoid segregation.
   3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
   4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
      a. Do not use vibrators to transport concrete inside forms.
      b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
      c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
      d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

D. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
   1. Do not place concrete floors and slabs in a checkerboard sequence.
   2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   3. Maintain reinforcement in position on chairs during concrete placement.
   4. Screed slab surfaces with a straightedge and strike off to correct elevations.
   5. Level concrete, cut high areas, and fill low areas.
   6. Slope surfaces uniformly to drains where required.
   7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.
   8. Do not further disturb slab surfaces before starting finishing operations.

3.5 VIBRATION

A. Consolidate concrete, including floor slabs on grade, by internal concrete vibrators supplemented by hand-spading, rodding, or tamping so that the concrete is thoroughly

worked around reinforcement and embedded items and into the corners of forms. Consolidate each layer of concrete with previously placed layers in a manner that will eliminate all air or stone pockets which may cause honeycombing, pitting, or planes of weakness. Internal vibrators shall produce a minimum frequency of 7000 impulses per minute when submerged in concrete. Do not use vibrators to transport concrete. Insert and withdraw vibrators at uniformly spaced points not farther apart than the visible effectiveness of the machine. Duration of vibration shall be limited to time necessary to produce satisfactory consolidation without causing objectionable segregation. The vibrating equipment shall at all times be adequate in number of units and power to properly consolidate all concrete. Spare units shall be on hand as necessary to ensure such adequacy.

3.6 CONSTRUCTION JOINTS

A. Construction joints shall be in accordance with Section 03_15_20 – Concrete Joints & Embedded Items. Waterstops shall be installed in all construction joints below grade or in liquid containing structures as noted on the plans.

3.7 BONDING

A. Roughen surfaces of set concrete at all joints, except where bonding is obtained by use of a concrete bonding agent, and clean surfaces of laitance, coatings, loose particles, and foreign matter. Roughen surfaces in a manner to expose bonded aggregate uniformly and to not leave laitance, loose particles of aggregate, or damaged concrete at the surface.

B. Prepare for bonding of fresh concrete to new concrete that has set but is not fully cured, as follows:

1. At joints between footings and walls and between walls and beams or slabs they support, and elsewhere unless otherwise specified herein, dampen, but do not saturate, the roughened and cleaned surface of set concrete immediately before placing fresh concrete.
2. At joints in exposed work; at vertical joints in walls; at joints in girders, beams, supported slabs, and other structural members; and at joints designed to contain liquids; dampen, but do not saturate, the roughened and cleaned surface of set concrete and apply either a liberal coating of neat cement grout or a commercial bonding agent.
3. Use neat cement grout consisting of equal parts Portland cement and fine aggregate by weight and not more than 6 gallons of water per sack of cement. Apply with a stiff broom or brush to a minimum thickness of 1/16". Deposit fresh concrete before cement grout has attained its initial set.

3.8 PATCHING

A. Any concrete which is not formed as shown on the Plans, or for any reason is out of alignment or level or shows a defective surface shall be considered as not conforming with the intent of these Specifications and shall be removed from job by Contractor at his expense, unless the Engineer grants permission to patch defective area, which shall be done in accordance with the following procedures.

B. Permission to patch any such area shall not be considered a waiver of the right of the Engineer to require complete removal of defective work if patching does not, in the opinion

of the Engineer, satisfactorily restore quality and appearance of surface. Suitable non-shrink, latex or epoxy mortar shall be used for patching and repairing defective surface if directed by the Engineer.

C. After removing forms, all concrete surfaces shall be inspected and any poor joints, void, stone pockets, all tie holes, or other defective areas shall be patched, if permitted by the Engineer. Where necessary, defective areas shall be chipped away to a depth of not less than 1" with edges perpendicular to the surface. Area to be patched and a space at least 6" wide entirely surrounding it shall be wetted to prevent absorption of water from the patching mortar. A grout of equal parts Portland cement and sand, with sufficient water to produce a brushing consistency, shall then be well brushed into the surface followed immediately by the patching mortar. The patch shall be made of the same material and of approximately the same proportions and shall not be richer than one part cement to three parts sand. White Portland cement shall be substituted for a part of the gray Portland cement to match color of the surrounding concrete. The proportion of white and gray cements shall be determined by making a trial patch. The amount of mixing water shall be as little as consistent with the requirements of handling and placing. The mortar shall be retempered without the addition of water by allowing it to stand for a period of one hour during which time it shall be mixed occasionally with a trowel to prevent setting.

D. The mortar shall be thoroughly compacted into place and screeded off so as to leave patch slightly higher than surrounding surface. It shall then be left undisturbed for a period of one to two hours to permit initial shrinkage before being finally finished. The patch shall be finished in such a manner as to match the adjoining surface. On exposed surfaces where unlined forms have been used, the final finish shall be obtained by striking off the surface with a straightedge spanning the patch and held parallel to the direction of the form marks.

E. Tie holes left by withdrawal of rods or the holes left by removal of ends of ties shall be filled solid with mortar after first being thoroughly wetted.

3.9 SLABS ON GRADE

A. The Contractor shall insure that subgrade has been thoroughly compacted and leveled prior to concrete placement. Sprinkle all sub-grades with water no more than half an hour prior to placing concrete.
   1. Place vapor barrier below interior slabs unless noted otherwise. Sprinkling of fill is not necessary when using vapor barrier. Lap vapor barrier 6" in direction of pour, and seal laps with specified mastic. Repair all ruptures of the vapor barrier that might occur before or during concrete pour.
   2. The Contractor shall insure that all reinforcing steel is located properly prior to pour, and that steel will not be vertically displaced during the pour.

3.10 EDGING

A. Edges exposed to view on the outside of structures, footings, pads and slabs, and all those in the inside of structures shall be chamfered, unless otherwise approved by the Engineer. Chamfer shall be at an angle of 45 degrees, as shown on the Plans. If so required by the Engineer, however, the Contractor shall provide square edges for any portion of the work.

3.11 SLAB FINISHES

A. Exterior Walks: The top surface shall be "slip-resistant" as follows:
   1. The surface shall be steel troweled as noted in Paragraph C below, and have a final finish applied by brushing lightly with a soft bristle brush to form a slightly roughed surface.

B. Interior slabs that are to receive a finish floor covering (this does not include ceramic tile covering) shall be finished by tamping the concrete with special tools to force the coarse aggregate below the surface, then screeding and floating with straightedges to bring the surface to the required finish level. While the concrete is still green but sufficiently hardened to bear a man's weight without deep imprint, it shall be wood floated to a true and even plane with no coarse aggregate visible. Sufficient pressure shall be used on the wood floats to bring moisture to the surface. After surface moisture has disappeared, surfaces shall be steel-trowelled to a smooth, even, impervious finish, free from trowel marks. After cement has set enough to ring the trowel, surface of all slabs shall be given a second steel trowelling to a burnished finish.

C. Interior slabs to receive fill or mortar setting bed shall be finished by tamping concrete with special tools to force coarse aggregate below the surface, and screeded with straightedges to bring surface to required finish plane. Surface shall be left roughened sufficiently to produce good bond with topping material.

D. Top and bottom slabs of all structures and water carrying conduits except as noted otherwise on the Plans shall be finished as follows: The top of the slab shall be screeded to grade and cross section; lightly tamped as required to bring up a good bed of mortar for finishing and re-screeded as necessary. The surface shall then be finished with a wood float and leveling darby. No further finish will be required on top slabs of structures or conduits which are to be buried. In the case of all exposed top slabs of structures and conduits, they shall be given a final wood float and a light broomed, slip resistant finish to a uniform surface which conforms with accuracy to required shape, slope and grade. Slabs shall be edged as appropriate.

E. All interior floor slabs shall be "slip resistant finish", unless called out otherwise, as follows: The top surface shall be steel trowelled as noted in Paragraph B above and have a final finish applied by brushing lightly with a soft bristle brush to form a slightly roughed surface.

F. The floor surfaces of basins in which raking mechanisms are to be installed shall be finished, as indicated on the Plans, by sweeping in cement grout with the mechanism. The cement grout to be used shall be composed of one part Portland cement and two parts sand by weight.

G. The sweeping-in process shall be performed in the presence of the Engineer or the Engineer’s Representative or, if necessary, under the supervision of a factory representative of the equipment manufacturer.

H. The slab upon which the grout is to be applied shall be finished in accordance with the provisions of Paragraph D above except that after leveling and floating, it shall be raked in such a manner as to provide a good bond for the grout. Before grout is deposited on the slab, it shall be thoroughly cleaned, wet down with clean water, and lightly dusted with neat cement immediately prior to placement of the grout.

I. Concrete Hardener shall be applied to the floors where scheduled to be exposed concrete. Concrete surfaces to be treated must be thoroughly set and dry, clean and free of dust. Three applications of "lapidolith", "saniseal", "hornolith", "vitrox", or Engineer approved equal liquid are required, using one gallon per 100 square feet for the complete treatment. Apply hardener strictly according to the manufacturer's printed instructions. Any substitution for the specified hardeners must be of the magnesium fluosilicate or zinc fluosilicate types.

3.12 FINISH OTHER THAN FLOORS

A. All top surfaces, other than slabs, not covered by forms, and which are not to be covered by additional concrete or fill shall receive a wood float finish without additional mortar. Care shall be taken that no excess water is present when the finish is made. Other surfaces shall be brought to finished elevations and left true and regular. All exposed interior concrete shall be grouted smooth and give a cement wash of one part light colored Portland cement and two parts fine aggregate mixed with water to consistency of thick paint. Grout shall be cork or wood floated to fill all pits, air bubbles, and surface holes.

B. Excess grout shall be scraped off with a trowel and rubbed with burlap to remove any visible grout film. Surface shall be kept damp during setting period. The finish for any area shall be completed in same day and the limits of a finished area shall be made at natural breaks in finished surface.

C. Rubbed Finish: Unless otherwise indicated, all faces (except top surfaces of slabs) exposed to view, such as walls, grade beams, columns, beams, canopy soffits and fascias, etc. shall be finished as follows:
1. Forms shall be removed and all fins removed, off-sets leveled, damaged places and depressions resulting from the removal of metal ties or other causes shall be carefully pointed with a mortar of sand and cement in the proportion which has been employed for the particular class of concrete treated.
2. The surface film of all such pointed places shall be carefully removed before setting occurs.
3. After the point has set sufficiently to permit it, all exposed surfaces shall be dampened and rubbed with a No. 16 carborundum stone, to a smooth even plane. Final rubbing shall be done with a No. 30 carborundum stone, or an abrasive of equal quality, to obtain an entire surface of a smooth texture and uniformity in color.
4. Mortar or grout worked up during rubbing shall be promptly removed by sacking with burlap or other suitable means so that no visible grout film or paste will remain. A cement wash or plaster coat shall not be used.
5. All surfaces shall be finished uniformly smooth and washed clean. The rubbed finish for any area shall be completed in the same day and the limits of a finished area shall be made at natural breaks in the finished surface.
6. If the Contractor does not provide suitable surface finish using carborundum stones specified above the Engineer, without additional cost to the Owner, may require to use of a power operated grinding machine to produce the desired finish.

3.13 CURING

A. Unformed concrete surfaces shall be water cured to prevent check of the fresh concrete surface. Where drying conditions are severe, as determined by the Engineer, fog sprays

shall be employed to prevent checking of the fresh concrete surface. Fog spraying shall be continued as specified until the finished surface has attained sufficient strength to permit flooding or covering with burlap mats. Where drying conditions are not severe, as determined by the Engineer, unformed concrete surfaces shall be covered with wet burlap mats as soon as the concrete has sufficiently set, and shall thereafter be kept under wet burlap. Comply with ACI 308.1.

B. Formed surfaces, both interior and exterior, shall be water cured by water sprays or under burlap mats beginning as soon as the forms are stripped. Prior to stripping of forms, the concrete and forms shall be kept moist by the water sprays. Comply with ACI 308.1.

C. Unless otherwise specified, surfaces shall be water cured for seven days after the concrete is placed.

D. After 48 hours of water cure, and with the acceptance of the Engineer, the curing of concrete surfaces may be completed by the curing compound method. Curing compounds shall be applied in strict conformance with the manufacturer's instructions. If the compound is applied to a surface which is later to be painted, the Contractor shall thoroughly sandblast the surface to remove all vestiges of the compound prior to concrete finishing. Curing compound shall not be used on any surfaces against which additional concrete or other finishing materials are to be bonded.

E. In all concrete structures, concrete made with normal Portland cement shall be prevented from drying for at least the first seven days after placing. Whenever the temperature of the surrounding air is between 40ºF and 60ºF, adequate provision shall be made for maintaining the temperature of concrete above 60ºF or the moist curing period shall be extended to ensure a compressive strength corresponding to that which would be secured under provisions of the previous part of this paragraph.

F. Whenever the temperature of surrounding air is below 40ºF, all concrete shall be maintained at a temperature of not less than 50ºF for at least 72 hours for normal concrete or for as much more time as is necessary to insure proper rate of curing of the concrete. The housing, covering or other protection used in connection with curing shall remain in place and intact at least 24 hours after the artificial heating is discontinued. No salt or other chlorides shall be used for prevention of freezing.

G. Protection from the Sun: All concrete shall be adequately protected from injurious action of sun in a manner satisfactory to the Engineer.

H. Temperature Control: During and at the conclusion of the specified curing period, means shall be provided to ensure that the temperature of the air immediately adjacent to the concrete does not fall more than 3ºF in any one hour nor more than 30ºF in any 24 hours.

3.14 CONCRETING IN COLD WEATHER

A. When the atmospheric temperature may be expected to drop below 40ºF at the time concrete is delivered to the work site, during placement, or at any time during the curing period, the following provisions also shall apply:
   1. Prevent damage to concrete due to early age freezing and limit rapid changes in temperature at early ages consistent with the requirements of ACI 306R, ACI 306.1 and the requirements in this Section.

2. If the air temperature is at or below 40 degrees F, cold weather concreting shall be performed in accordance with ACI 306R and ACI 306.1. This includes cases where the temperature drops below 40 degrees F after concrete operations have been started. The temperature shall be taken in shade away from artificial heat.
3. When air temperatures are at or below 40 degrees F, heated mixing water or a combination of heated mixing water and heated aggregates shall be used, if required, to raise the concrete temperature at placement to the minimum values (or greater) listed in ACI 306R – Chapter 5. The temperature of the heated water or aggregates shall not exceed 150 degrees F when entering the mixer.
4. Concrete placement is not permitted when the air temperature is at or below 35 degrees F. The temperature shall be taken in shade away from artificial heat.
5. Do not place concrete against a frozen subgrade or formwork that is at or below 35 F.
6. Salts, chlorides, chemicals or other foreign materials shall not be mixed with the concrete to prevent freezing or act as an accelerator.
7. When temperatures at or below 35 F may be expected during the curing period, the concrete shall be maintained at a temperature of at least 50 degrees F for five days or 70 degrees F for three days after placement. Rapid cooling or heating of concrete shall not be permitted.

B. Hot Weather Concreting.
1. Hot weather concreting shall comply with ACI 305R and ACI 305.1. At air temperatures of 90 degrees F or above, concrete placement shall be in accordance with Hot Weather Concreting requirements in ACI 305R, ACI 305.1 and requirements in this Section.
2. The temperature of the concrete when placed in the work shall not exceed 90 degrees F. Use chilled water or ice or other approved methods to reduce the temperature of the concrete as required.
3. Concrete shall be placed in the forms without the addition of any more water than is required by design. No excess water may be added to the concrete surface to aid in finishing. Control of the initial set and extending the time for finishing may be accomplished through the use of admixtures in accordance with these Specifications.
4. Plastic shrinkage cracking, due to rapid evaporation of moisture, shall be prevented. Concrete shall not be placed when the evaporation rate (actual or anticipated) equals or exceeds 0.2 pound per square foot per hour, as determined by Figure 4.2 in ACI 305R.

3.15 CONCRETING IN HOT WEATHER

A. When climatic or other conditions are such that the temperature of the concrete may reasonably be expected to exceed 90ºF at the time of delivery at the work site, during placement, or during the first 24 hours after placement, the following provisions also shall apply:
1. The Contractor shall maintain the temperature of the concrete below 90ºF during mixing, conveying, and placing. Methods used shall conform to "Recommended Practice for Hot Weather Concreting," ACI Standard 305.
2. The concrete shall be placed in the work immediately after mixing. Truck mixing shall be delayed until only time enough remains to accomplish it before the concrete is placed.

3. Exposed concrete surfaces, which tend to dry or set too rapidly, shall be continuously moistened by means of fog sprays or otherwise protected from drying during the time between placement and finishing, and after finishing.
4. Finishing of slabs and other exposed surfaces shall be started as soon as the condition of the concrete allows and shall be completed without delay.
5. Concrete surfaces exposed to the air shall be covered as soon as the concrete has hardened sufficiently and shall be kept continuously wet for at least the first 48 hours of the curing period, and for the entire curing period unless curing compound is applied as specified.
6. Formed surfaces shall be kept completely and continuously wet for the duration of curing period (prior to, during, and after form removal) or until curing compound is applied as specified.

3.16 EMBEDDED ITEMS, JOINTS & WATERSTOP

A. See Section 03_15_20 Concrete Joint & Embedded Items

3.17 DRY PACK MORTAR

A. Where surfaces are required to be built up with mortar, such surfaces shall be thoroughly roughened by brushing, completely cleaned, and coated with appropriate bonding compound before the application of the required mortar. The mortar shall be applied immediately following the application of the bonding compound in bands or strips to form a compact durable covering of the required thickness and shall be free from lumps and depression. Construction joints in the mortar shall be sloped to thin edges and, before application is resumed, the joint shall be thoroughly cleaned. Dry pack mortar shall be used for built-up surfaces, setting miscellaneous metal items, and correcting minor repairs and imperfections.

B. No mortar shall be applied during freezing weather unless adequate protection is provided.

C. The mortar shall be cured as specified for concrete.

3.18 MODIFICATION OF EXISTING CONCRETE

A. Where the work indicated on the Plans requires modification of existing concrete structures or concrete poured over six months previously to be removed or modified, the existing concrete shall be cut accurately to the lines required in the presence of the Engineer or the Engineer's Representative. Concrete faces exposed to view shall be cut with a concrete saw. The cutting shall be accomplished in a manner that preserves, free from cracks or other injuries, those parts of the existing structure that are to remain. Where the cut surface is to be left exposed, it shall be cleaned and faced with non-shrink grout and finished to match adjacent surface. Where new concrete or mortar is to be placed against existing concrete surfaces or surfaces that have been cut, such surfaces shall be thoroughly cleaned by sandblasting, and coated with bonding compound just prior to the placement of the new concrete. Bonding compounds shall be as specified herein. Depth of saw cut should be ¾" minimum. Unless otherwise indicated on the Plans or specified, continuity of reinforcing steel shall be obtained by either exposing bars to provide sufficient laps with new bars or by welding existing bars with new bars as specified. Where indicated, existing bars shall be exposed and fully developed by; embedding in new concrete.

3.19 PROTECTION OF CONCRETE

A. All surfaces shall be protected against injury. During the first 72 hours after placing the concrete, any wheeling, working or walking on the concrete shall not be permitted. All slabs subject to wear shall be covered with a layer of sand or other suitable material as soon as the concrete has set. Sisalcraft paper or other similar tough waterproof paper may also be used, provided all joints between adjacent strips of paper are carefully sealed. This does not alter the requirements for proper curing as specified herein.

B. No concrete slabs or top surfaces or walls shall be placed during rain unless acceptable protective shelter is provided, and during such weather, all concrete placed within the preceding 12 hours shall be protected with waterproof canvas or other suitable coverings. These shall be provided and kept ready at hand.

3.20 SURFACE REPAIRS

A. Patching Defective Areas:
   1. Repair and patch defective areas with cement mortar immediately after removal of forms. Use epoxy-based mortar for structural repairs.
   2. Before patching is performed, the Engineer shall be notified and provided sufficient time to observe extent of repairs required.
   3. Cut out honeycomb and rock pockets, down to solid concrete but, in no case, to a depth of less than 1". Where defective concrete extends to the depth of reinforcing steel or where reinforcing steel is exposed during concrete chipping, concrete shall be removed to a minimum depth of 3/4 inch clear beyond depth of reinforcing steel. Saw-cut perimeter or area to be patched to provide edges cut perpendicular to the concrete surface.
   4. For exposed-to-view surfaces, blend white Portland cement and standard Portland cement so that, when dry, the patching mortar will match the color of the surrounding concrete. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with the patching. Compact mortar in place and strike off slightly higher than the surrounding surface.
   5. Fill holes extending through concrete by means of a plunger-type gun or other suitable device from the least exposed face, using a flush stop held at the exposed face to ensure complete filling.

B. Repair of Formed Surfaces:
   1. Repair exposed-to-view formed concrete surfaces, where possible, that contain defects which adversely affect the appearance of the finish. Remove and replace the concrete having defective surfaces if the defects cannot be repaired to the satisfaction of the Engineer. Surface defects, as such, include color and texture irregularities, crack, spalls, air bubbles, honeycomb, rock pockets, and holes left by the rods and bolts; fins and other projections on the surface; and stain and other discolorations that cannot be removed by cleaning.
   2. Repair concealed formed' concrete surfaces, where possible, that contain defects that adversely affect the durability of the concrete. If defects cannot be repaired, remove and replace the concrete having defective surfaces. Surface defects, as such, include cracks in excess of 0.01" wide, cracks of any width through nonreinforced sections, honeycomb, rock pockets, holes left by tie rods and bolts, and spalls except minor breakage at corner.

C. Repair of Uniformed Surfaces:

1. Test unformed surfaces, such as monolithic slabs, for smoothness and to verify surface plane to the tolerances specified for each surface and finish. Correct low and high areas as herein specified.
2. Test unformed surfaces sloped to drain for trueness of slop, in addition to smoothness, using a template having the required slope. Correct high and low areas as herein specified.
3. Repair finished unformed surfaces that contain defects which adversely affect the durability of the concrete. Surface defects, as such, include crazing, cracks in excess of 0.01" wide or which penetrate to the reinforcement or completely through nonreinforced sections regardless of width, spalling, popouts, honeycomb, rock pockets, and other objectionable conditions.
4. Correct high areas in unformed surfaces by grinding, after the concrete has cured sufficiently so that repairs can be made without damage to adjacent areas.
5. Correct low areas in unformed surfaces during or immediately after completion of surface finishing operations by cutting out the low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete.
6. Repair defective areas, except random cracks and single holes not exceeding 1" diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around. Dampen all concrete surfaces in contact with patching concrete and brush with a neat cement grout coating, or use concrete bonding. agent. Place patching concrete before grout takes its initial set. Mix patching concrete of the same materials to provide concrete of the same type or class as the original adjacent concrete. Place, compact, and finish as required to blend with adjacent finished concrete. Cure in the same manner as adjacent concrete.
7. Repair isolated random cracks and single holes not over 1" in diameter by the dry-pack method. Groove the top of cracks, and cut out holes to sound concrete and clean of dust, dirt, and loose particles. Dampen all cleaned concrete surfaces and brush with a neat.cement grout coating. Place dry-pack before the cement grout takes its initial set. Mix dry-pack consisting of one part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched areas continuously moist for not less than 72 hours.

SECTION 33_01_33

WASTEWATER LIQUID & SOLIDS REMOVAL & DISPOSAL

PART 1 GENERAL

1.1 SUMMARY

A. Removal and disposal of wastewater liquids and solids from the wastewater treatment facilities.

B. Waste sludge handling & disposal to be removed from the following locations:
   1. Southside Drying Beds prior to beginning initial demolition for Southside Improvements (to be included in bid item for "Demolition (Initial)")
   2. Northside Drying Beds prior to beginning initial demolition for Southside Improvements (to be included in bid item for "Demolition (Initial)")
   3. Southside Stormwater Pond prior to beginning stormwater pond improvements (to be included in the price bid for "Secondary FEB Concrete Lining & Sludge Disposal")
   4. Northside existing treatment units prior to beginning final demolition (to be paid from bid item "Waste Sludge Handling & Disposal from Existing Treatment Units Prior to Final Demolition (Northisde & Southside).")
   5. Southside existing treatment units prior to beginning demolition (to be paid from bid item "Waste Sludge Handling & Disposal from Existing Treatment Units Prior to Final Demolition (Northisde & Southside).")

C. Quantity and character of sludge will vary from location to location and bid price should per for waste sludge handling should be an average price for overall quantity.

D. It is the contractor's responsibility to verify the total amounts in each basin prior to bid.

E. No adjustment in price or unit price will be made based on actual quantities.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 02_41_00 Demolition

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 DEFINITIONS

A. Process Sludge: This material is the liquid volume of existing tankage and mixture of process water, mixed liquor, organic settled solids and sludge that will be transferred by the Contractor to another treatment basin as approved by the Owner. **The transfer of process sludge will be required prior to complete construction activities (demolition and rehabilitation of Southside stormwater pond.)**

B. Waste Sludge: This material includes an undetermined volume and mixture of grit, inorganic settled solids and sludge that will be removed and disposed by the Contractor. **The disposal of waste sludge will be required to complete construction activities (demolition and rehabilitation of Southside stormwater pond.)**

C. Sludge Management Plan (SMP): A plan for removing, processing, treating, storing, transporting, and disposing of mixed liquor, settled solids, partially digested sludge, and sludge in addition to soils intermixed with the various types of sludge.

D. Sludge Disposal / Disposition Plan (SDP): A plan for sludge removed from the treatment facility and disposed of in a landfill.

E. Added Water: This water is added by the Contractor to aide in the removal of, cleaning of, and transport of the existing solids to be removed from the wastewater facilities and disposed of off-site. The added water is the sole responsibility of the Contractor. The volume of added water is not included in the specified volumes of the bid quantities of material to be removed from the wastewater facilities. The Contractor is responsible for all effort and costs required to provide, use, transport, and dispose of added water used in the tasks associated with liquid and solids removal. The Contractor shall include all costs for added water in the base bid quantity prices and the Bid Form Unit Prices for Sludge Removal. The Contractor's use of added water shall not be grounds for a scope change nor a contract change.

F. Sludge Removal: Construction activities to remove mixed liquor, settled solids, partially digested sludge, and sludge from any wastewater treatment facility in an effort to gain access for subsequent construction activities and/or cleaning of a facility to facilitate inspection, repair, demolition, and/or other construction activities as required by the Contract Documents.

G. Treatment Basin: Structures, both existing and new, whose primary function is to hold, treat and/or process wastewater, wastewater solids, and sludge.

H. Project Locations: Facilities from which sludge is to be removed.

1.5 SCHEDULING & SEQUENCING

A. Conduct sludge removal only after schedule has been approved by the Owner and the Contractor has submitted SMP or SDP and received written approval of same from ODEQ Contractor, with Owner's approval, may make use of existing SMP/SDP in place. Coordinate with Owner prior to bid. Sludge removal schedule and sequencing must allow for continued operation of the facilities. If land application is used for disposal, apply sludge only after adequate erosion and sediment controls are in place.

1.6 MEASUREMENT & PAYMENT

A. Process Sludge Handling:
   1. Measurement: Will not be measured. It is considered to the be the full volume of any tankage that is required to be drained to execute construction activities
   2. Payment is subsidiary to Demolition. Payment shall be full compensation for the following: equipment, labor, any added water, gas/fuel, sludge and soil testing, spill clean-up, and temporary pumping and piping. Contractor is responsible for all efforts and costs associated with procuring, transport, and final disposal of any added water.

B. Waste Sludge Handling and Disposal for Initial Demolition:
   1. Will not be measured for payment and shall be included in the price bid for demolition.

C. Waste Sludge Handling and Disposal for Final Demolition:
   1. Measurement: The units scheduled for demolition or rehabilitation will be drained of Process Sludge to the minimum level practical. Prior to removal of any Waste Sludge, the Owner, Engineer, and Contractor will agree on that the remaining sludge is of a nature that cannot be processed by the treatment plant. Upon agreement the sludge depth will be measured at each corner and at least one point in the center of the basin. The depth measurements along with the basin plan view area will used to calculate cubic yards of Waste Sludge to be disposed of. No payment will be made for Added Water.
   2. Payment: Payment for sludge disposal will be by the cubic yard of sludge disposed at the Bid Price listed in the Bid Proposal. The Bid Item will be full compensation for removal of waste sludge, dewatering, hauling, landfill tipping fees, permitting, tools, labor and any other incidentals required to complete the work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 GENERAL

A. The Contractor with coordination from the Owner will be responsible for transferring Process Sludge from one basin to another.

B. Contractor is responsible for removal, handling and disposal of all Waste Sludge, including the material resulting from the tanks' cleaning.

C. Remove Waste Sludge from the existing basins within the limits shown or specified and dispose of the Waste Sludge in accordance with a ODEQ approved SMP or SDP. The Contractor shall also be responsible for removing and handling any waste sludge from the new basins in accordance with an ODEQ approved SMP or SDP as required for his construction activities within these new basins.

D. Contractor is responsible for all expenses related to Process Sludge removal and transfer, which shall be covered under the base bid.

E. Contractor is responsible for maintaining and protecting all roads, drives, dikes, equipment, structures, etc during sludge removal, processing, land application, hauling, and disposal and shall repair any damaged as a result of their work.

F. The Contractor will be required to keep a Daily Record and a Project Record, of the volume of liquid biosolids land-applied each day. The Daily Record will need to be provided to the Project Manager, or his designee, at the end of each workday. The Project Record will need to be provided to the Owner, or designee, at the end of the project.

G. The Contractor will communicate daily with the Engineer to determine which land application site will be used. This discussion is also designed to ensure that the Contractor does not over apply biosolids to any approved application site.

H. The Contractor will be responsible for biosolids sampling, sample preservation, sample delivery, and storage in accordance with methods developed by the City of Shawnee Wastewater Treatment Plant Laboratory Staff or standard practice is no methods have been developed.

I. The Contractor is required to maintain a cooperative and courteous relationship with the landowner while delivering and land-applying sludge, grit, and biosolids. Care shall be taken to leave the fields and roadway in reasonable condition upon project completion.

3.2 PROJECT LOCATION

A. As follows, but not to extend beyond Project limits.
   1. Northside
      a. All existing units
      b. All piping that requires wastewater and sludge removal
      c. All other treatment plant facilities that require dewatering and cleaning to perform the work.
   2. Southside
      a. All existing units
      b. Existing stormwater pond
      c. All piping that requires wastewater and sludge removal
      d. All other treatment plant facilities that require dewatering and cleaning to perform the work.

3.3 TREATMENT BASIN CLEANING

A. Transfer Process Sludge to another basin designated by the Owner and take measurements of Waste Sludge In-Situ prior to commencing cleaning activities.

B. Remove sludge from the Treatment Basins within limits or as specified or directed.

3.4 EQUIPMENT

A. Provide necessary equipment for Process Sludge transfer from on basin to another Owner designated basin.

B. Provide necessary equipment for Waste Sludge removal, transport from the facility to the disposallocation, and final application or disposal.

C. Provide necessary equipment for added water, procurement, transport from the facility to thedisposal location, and final application or disposal.

3.5 DISPOSAL PERMITTING

A. Contractor will be responsible for registration, authorization, and/or permitting of the land application with the appropriate regulatory agencies and shall pay the related regulatory fees.

B. Contractor will maintain all chain of custody forms and provide documentation of all sludgevolumes land applied and the application sites.

3.6 TESTING

A. Contractor will be responsible for obtaining all sludge and soil samples and their required labanalyses for permitting.

B. Contractor will pay for the lab analysis and will include such lab analysis expenses with as part ofthe Work.

3.7 DISPOSAL

A. Apply the sludge and/or added water for beneficial use as fertilizer/soil amendment or dispose ofthe material using a disposal method approved by the appropriate permitting agency.

B. When sludge application is via the subsoil injection method, such application shall be accordingto sound agronomic rates.

C. Contractor is responsible for determining application rates based on cover crops and analyticaltesting of the sludge.

D. Contractor may remove and separately dispose of oil/grease from the sludge prior to land application.

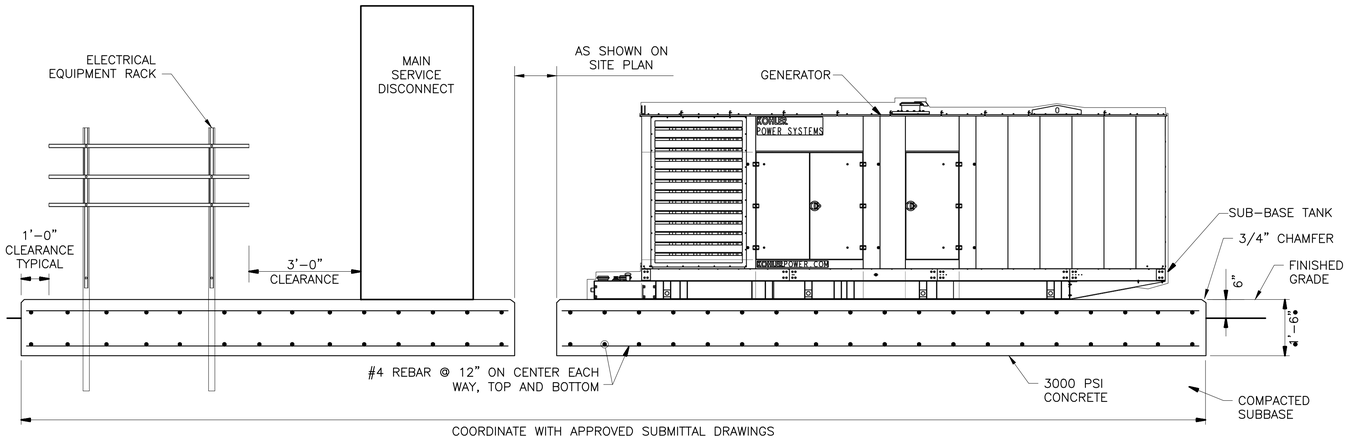
E. Contractor is responsible for providing commercially reasonable handling of sludge once it hasbeen collected, including cleanup of any spills.

F. Contractor is responsible for meeting the dewatering requirements of landfill disposal.

3.8 RECORD KEEPING

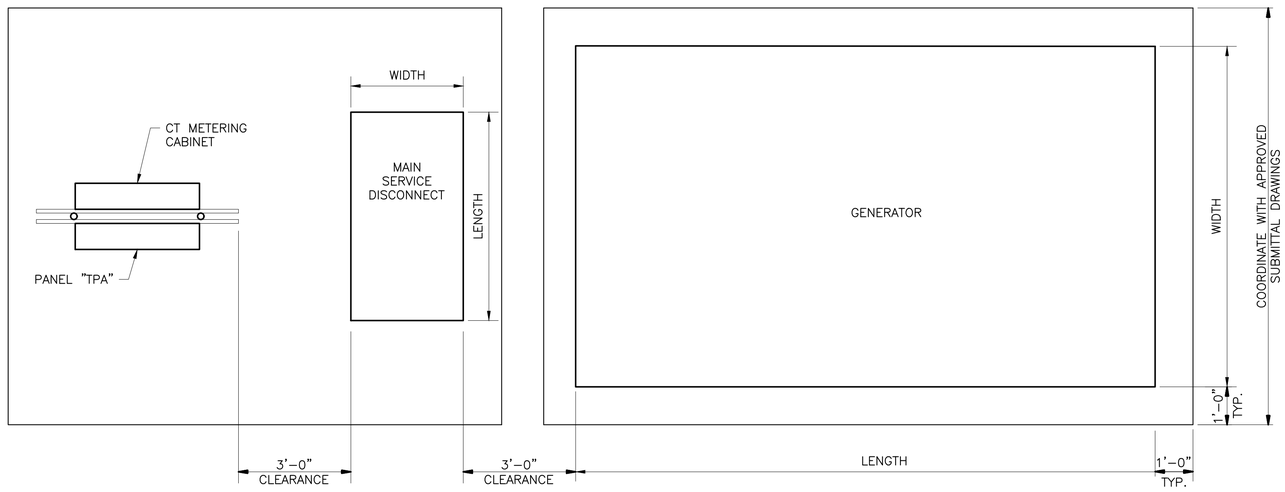
A. Maintain records of sludge application and submit records to Engineer, Owner, and regulatingagencies, as required by this specification and any related permits.

3.9 BIDDING QUANTITIES



A. Process Sludge Removal
   1. Will not be measured for payment and will be included in the price bid for demolition.

B. Waste Sludge (initial demolition)
   1. Will not be measure for payment and will be included in the price bid for demolition.



C. Waste Sludge Removal (final demolition)
   1. Contractor is responsible to remove and dispose of the waste sludge volumes listed in the bid proposal from the designated structures to be demolished.
   2. The volume listed is for reference only, payment will be based on the total quantity of Waste Sludge removed from all facilities. No additional payment will be made if quantities removed exceed the estimated quantity listed for any individual facility unless the total quantity is exceeded (both facilities.) If the total quantity removed meets the total estimated, sludge removal will stop until the Owner and Contractor agree to contract modification to handle the remaining Waste Sludge.

GENERAL

1. ALL NOTES LISTED ON THIS SHEET APPLY TO ALL SHEETS OF THE DRAWINGS AS IF THEY WERE WRITTEN ON EACH SHEET.
2. NOTIFY OWNER 48 HOURS PRIOR TO CONSTRUCTION.
3. VERIFY ALL EXISTING CONDITIONS AND OBSTRUCTIONS INCLUDING LOCATION AND DIMENSIONS BEFORE STARTING WORK AND SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES.
4. PRIOR TO INSTALLATION OF RELEVANT FACILITIES CONTRACTOR SHALL, AT HIS OWN EXPENSE, UNCOVER AND OTHERWISE DETERMINE THE DEPTH OF UTILITIES WHICH, IN HIS OPINION, COULD INTERFERE WITH CONSTRUCTION.
5. ALL DIMENSIONS SHALL BE CONFIRMED BY THE CONTRACTOR ACCORDING TO ACTUAL FIELD CONDITIONS OR EQUIPMENT/STRUCTURE REQUIREMENTS.
6. ALL MISCELLANEOUS REMOVAL ITEMS REQUIRED FOR CONSTRUCTION SHALL BE FIELD LOCATED BY THE CONTRACTOR PRIOR TO BIDDING. THESE ITEMS WILL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
7. TRAFFIC CONTROL DEVICES SHALL BE FURNISHED AND MAINTAINED BY THE CONTRACTOR THROUGHOUT THIS PROJECT IN ACCORDANCE WITH THE LATEST VERSION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES AND/OR AS REQUIRED BY THE DEPARTMENT OF TRANSPORTATION OR COUNTY PERMITS FOR CONSTRUCTION IN RIGHT-OF-WAY.
8. SUBMIT AN EROSION CONTROL PLAN (SWPPP) PRIOR TO CONSTRUCTION AND SHALL MAINTAIN SWPPP THROUGHOUT DURATION OF CONSTRUCTION IN ACCORDANCE WITH SPECIFICATIONS.
9. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS, LOCATES, AND AVAILABLE FILES. NEITHER THE OWNER NOR THE ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIALS, TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF CONSTRUCTION PRIOR TO THE START OF CONSTRUCTION.
10. PERFORM ALL WORK WITHIN DESIGNATED EASEMENTS. CONTRACTOR SHALL NOT ENCROACH OR TRESPASS INTO PRIVATE PROPERTY WITHOUT WRITTEN APPROVAL FROM THE PROPERTY OWNER.
11. MAINTAIN LOCAL AND THROUGH TRAFFIC FOR ALL STREETS AT ALL TIMES WITHOUT CLOSURES OR RESTRICTIONS EXCEPT AS PART OF THE TRAFFIC CONTROL PLAN.
12. MAINTAIN REASONABLE ACCESS TO ALL PROPERTIES AT ALL TIMES. DO NOT RESTRICT DRIVEWAY ACCESS WITHOUT OWNER'S APPROVAL. RESTORE DRIVEWAY ACCESS AT THE END OF EACH DAY. PROVIDE TEMPORARY MEASURES AS NEEDED (SUCH AS GRAVEL) TO MAINTAIN DRIVEWAY ACCESS.
13. KEEP ACCURATE RECORDS OF ALL CONSTRUCTION THAT DEVIATES FROM THE DRAWINGS. THE CONTRACTOR SHALL FURNISH TO THE ENGINEER ACCURATE "AS-BUILT" RED LINE DRAWINGS FOLLOWING COMPLETION OF CONSTRUCTION.
14. TAKE SPECIAL PRECAUTIONS IN VICINITY OF ANY OVERHEAD AND UNDERGROUND ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE MOST RECENT NATIONAL ELECTRIC CODE FOR WORKING AROUND OVERHEAD ELECTRIC LINES AS WELL AS OTHER LOCAL, STATE OR FEDERALS LAWS / REQUIREMENTS.
15. CONFORM TO ALL APPLICABLE FEDERAL, STATE AND LOCAL LAWS GOVERNING EXCAVATION. TRENCH SIDE SLOPES SHALL MEET OSHA REQUIREMENTS THAT ARE IN EFFECT AT THE TIME OF CONSTRUCTION. CONTRACTOR SHALL SUBMIT A TRENCH SAFETY PLAN PRIOR TO CONSTRUCTION.
16. THIS PROJECT IS SUBJECT TO AMERICAN IRON AND STEEL (AIS) REQUIREMENTS. ALL IRON AND STEEL PRODUCTS FOR CONSTRUCTION, ALTERATION, MAINTENANCE, OR REPAIRS INCORPORATED MUST BE PRODUCED IN THE UNITED STATES.
17. PROVIDE DUST CONTROL AT ALL TIMES DURING CONSTRUCTION.
18. ANY WORK PERFORMED WITHOUT THE KNOWLEDGE OF THE ENGINEER, INSPECTOR OR OWNER'S REPRESENTATIVE IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.

EARTHWORK

1. ALL COMPACTED SUBGRADE AND BASE NOT ACCESSIBLE TO MECHANICAL COMPACTION EQUIPMENT SHALL BE HAND COMPACTED USING WHACKER PACKERS.
2. SUBGRADE PREPARATION FOR ALL STRUCTURES AND BUILDINGS ON DRAWINGS SHALL BE AS FOLLOWS: OVER-EXCAVATE 30 INCHES BELOW BASE OF CONCRETE, SCARIFY AND COMPACT TOP 12", COMPACT TO 95% STANDARD PROCTOR DENSITY, INSTALL NON-WOVEN NEEDLE PUNCHED GEOTEXTILE FABRIC, INSTALL 30 INCHES OF CRUSHER RUN AGGREGATE BASE IN 10" LIFTS, COMPACT TO 95% MODIFIED PROCTOR DENSITY. BASE OF CONCRETE SHALL BE CONSIDERED THE BOTTOM OF SLAB AND NOT THE BASE OF FOOTINGS/STEM WALLS. OVER EXCAVATION MAY BE DELETED WHERE ROCK IS PRESENT. #57 ROCK SHALL BE SUBSTITUTED FOR AGG BASE WHERE GROUNDWATER IS PRESENT. ALL FILL MATERIAL REQUIRED TO ACHIEVE FINAL GRADE BELOW THE 30" ROCK LAYER SHALL BE CONSTRUCTED WITH ONSITE OR IMPORTED FILL MATERIAL COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. ELEVATIONS GIVEN ARE FINISHED GRADE UNLESS OTHERWISE NOTED.
4. NO FIRES WILL BE ALLOWED UNLESS OTHERWISE NOTED. TREES AND BRUSH SHALL BE REMOVED AND DISPOSED OF OFF SITE.
5. NO BLASTING WILL BE ALLOWED.
6. ALL SURFACE DRAINAGE IMPACTED SHALL BE RESTORED TO AS GOOD OR BETTER CONDITION.
7. ALL DISTURBED AREAS SHALL BE LEFT FREE OF RUTS AND TRACKS AND SHALL BE FULLY GRADED TO DRAIN.

GRASSING

1. ANY AND ALL DISTURBED AREAS OUTSIDE OF PLANT FENCING SHALL BE TOPSOILED, HYDROMULCHED, AND WATERED UNTIL ESTABLISHED. ANY AND ALL DISTURBED AREAS INSIDE PLANT FENCING SHALL BE SOLID SLAB SODDED PER SPECIFICATIONS & WATERED UNTIL ESTABLISHED.
2. FOR PIPELINE CONSTRUCTION EXTERNAL TO THE TREATMENT PLANT, ANY AND ALL DISTURBED AREAS SHALL BE TOPSOILED, HYDROMULCHED, AND FERTILIZED, WITH THE EXCEPTION OF RESIDENTIAL YARDS AND IMPROVED GRASS AREAS WHICH SHALL RECEIVE SOLID SLAB SOD IN LIEU OF HYDROMULCHING PER SPECIFICATIONS. THIS WORK WILL NOT BE MEASURED FOR PAYMENT. COST SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.

DUCTILE IRON PIPE & FITTINGS

1. ALL BURIED DUCTILE IRON PIPE AND FITTINGS SHALL BE PROTECTED IN ACCORDANCE WITH ANSI/AWWA C105/A21.5 "POLYETHYLENE ENCASEMENT FOR GRAY AND DUCTILE IRON PIPE FOR WATER AND OTHER LIQUIDS." THIS ITEM SHALL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
2. ALL AIR PIPING SHALL BE UNLINED WITH EPDM GASKETS RATED FOR COMPRESSED AIR USAGE (PRESSURE & TEMPERATURE.)
3. ALL DUCTILE IRON PIPING SHALL BE RESTRAINED JOINT.
4. ALL DUCTILE IRON PIPE CONNECTIONS TO P.V.C. SHALL BE MADE WITH A BOLTED CAST TRANSITION COUPLING.
5. ALL EXPOSED FITTINGS SHALL BE FLANGED FITTINGS W/ STAINLESS STEEL BOLTS AND APPURTENANCES.
6. ALL MECHANICAL JOINT, FLANGE & MISC. FITTINGS TO HAVE STAINLESS STEEL BOLTS, NUTS & WASHERS.
7. ALL BURIED FITTINGS SHALL BE D.I. MECHANICAL JOINT (M.J) RESTRAINED (MEGALUG.)
8. WALL PIPES SHALL BE USED WHEREVER PIPING PASSES FROM A STRUCTURE TO EARTHEN BACKFILL.
9. PROVIDE 1/4" ANTI-SEEPAGE RINGS A MINIMUM OF 2" WIDE WELDED TO ALL PIPES PIERCING WATER HOLDING TANKS TO PREVENT SEEPAGE OF WATER BETWEEN PIPE AND CONCRETE. WALL PIPES MAY BE USED IN LIEU OF WELDED RINGS.
10. ALL DUCTILE IRON PIPING LARGER THAN 10" DIAMETER SHALL HAVE CONCRETE SUPPORTS UNLESS OTHERWISE DETAILED. SMALLER PIPING MAY HAVE METAL STAND TYPE SUPPORTS.

CONCRETE

1. CONSTRUCTION JOINTS TO FACILITATE CONSTRUCTION SHALL BE LOCATED AND DETAILED ON THE SHOP DRAWINGS FOR REVIEW. UNLESS INDICATED OTHERWISE, ALL CONSTRUCTION JOINTS SHALL BE KEYED. HORIZONTAL CONSTRUCTION JOINTS SHALL NOT BE PERMITTED IN WALLS AND BEAMS, UNLESS SHOWN ON THE DRAWINGS OR APPROVED BY THE ENGINEER.
2. ALL EXPOSED CORNERS OF CONCRETE STRUCTURES REGARDLESS OF LOCATION SHALL HAVE A 3/4 INCH MINIMUM CHAMFER.
3. NOT USED.
4. ALL GROUTED AREAS OVER 8" THICK SHALL BE REINFORCED WITH WELDED WIRE MESH, 6x6-W12.0xW2.0 MATTS AT 5'-0" CTRS MAX.
5. ANCHOR BOLTS NOT SPECIFIED BY ENGINEER SHALL BE DESIGNED AND STAMPED BY A REGISTERED PROFESSIONAL ENGINEER, RETAINED BY THE CONTRACTOR IN ACCORDANCE WITH APPLICABLE PROJECT AND CODE REQUIREMENTS. SUBMIT AS A SHOP DRAWING FOR REVIEW AND APPROVAL BY THE ENGINEER. COORDINATE LOCATION, SIZE AND EMBEDMENT PRIOR TO CASTING CONCRETE.
6. EXPANSION JOINTS SHALL BE USED WHERE EXTERIOR OF ALL EXISTING AND PROPOSED STRUCTURES AND BUILDINGS ABUT CONCRETE PAVING WHETHER SHOWN ON THE DRAWINGS OR NOT.
7. NO FLY ASH SHALL BE PERMITTED IN CONCRETE MIX DESIGN.
8. TREMIES REQUIRED ON ALL POURS DEEPER THAN 10 FEET.
9. VAPOR BARRIER (10 MIL) REQUIRED BENEATH ALL SLABS.
10. WALKWAYS AND SIDEWALKS SHALL BE POURED WITH SLIGHT SLOPE AND NO LOW SPOTS SO THEY WILL DRAIN FREELY.
11. ALL STRUCTURAL JOINTS SHALL RECEIVE 6" RUBBER CENTER BULB PVC WATERSTOP PLACED AT ALL WATERTIGHT JOINTS.
12. VERTICAL WATERSTOP SHALL BE FULLY EMBEDDED IN SLAB POUR AND WELDED TO ALL ADJACENT WATERSTOP.
13. WHEN WATERSTOP IS PLACED HORIZONTALLY IN SLABS, THE CONTRACTOR SHALL TEMPORARILY TIE UP OR CLAMP UP THE WATERSTOP UNTIL THE CONCRETE IS PLACED TO SLIGHTLY ABOVE THE DEPTH OF THE WATERSTOP.
14. ALL CONCRETE SHALL HAVE XYPEX ADMIXTURE PER SECTION 03_30_00 AND MANUFACTURE'S SPECIFICATIONS.

BUILDING

1. ALL EXTERIOR DOORS ON ALL BUILDINGS SHALL HAVE R-PANEL AWNING SUPPLIED INTEGRAL WITH METAL BUILDING. AWNING ROOF PANELS SHALL MATCH MAIN BUILDING ROOF. AWNINGS SHALL INCLUDE FULL WIDTH GUTTER WITH DOWNSPOUTS.
2. ALL EXTERIOR EXPOSED CMU SHALL BE SPLIT FACE ARCHITECTURAL BLOCK UNLESS OTHERWISE NOTED.
3. ANY R-PANEL USED IN THE BUILDING CONSTRUCTION WHERE NO GAUGE IS SPECIFIED SHALL BE 24 GA. MINIMUM.

PIPING & APPURTENANCES

1. MANHOLES SHALL BE GROUTED INSIDE AND OUT AT ALL JOINTS.
2. ALL NON-POTABLE WATER LINES SHALL BE IN PURPLE COLORED PIPE AND LABELED "DO NOT DRINK". THE WARNING LABEL SHALL BE LOCATED ON OPPOSITE SIDES OF ALL PIPES AND REPEATED EVERY THREE (3) FEET OR LESS.
3. ALL PIPING THAT CROSS VERTICALLY SHALL HAVE AT LEAST 6" SEPARATION.
4. ALL UNDERGROUND FITTINGS SHALL BE DUCTILE IRON MECHANICAL JOINTS (MEGALUG), UNLESS OTHERWISE NOTED.
5. ALL VALVE ASSEMBLIES, VAULTS, PULLS BOXES AND MANHOLES CONSTRUCTED SHALL BE ADJUSTED TO BE FLUSH WITH FINISHED GRADE UNLESS OTHERWISE NOTED. MANHOLES SET IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SET 6 INCHES ABOUT FINISHED GRADE.
6. NOT USED.
7. ANY BY-PASS PUMPING AND/OR BY-PASS PIPING INSTALLED SHALL BE OPERATED AND MAINTAINED BY THE CONTRACTOR AT CONTRACTOR'S EXPENSE. THE CONTRACTOR IS RESPONSIBLE FOR ANY UNAUTHORIZED DISCHARGES.
8. CONNECTIONS TO EXISTING UTILITIES SHALL BE MADE IN A TIME AND UNDER CONDITIONS WHICH WILL LEAST INTERFERE WITH SERVICE OF THE OWNER, AND AS AUTHORIZED BY THE ENGINEER AND OWNER. FACILITIES SHALL BE PROVIDED FOR PROPER DEWATERING AND FOR DISPOSAL OF ALL WATER/WASTEWATER REMOVED TO ADJACENT PROPERTY FROM DEWATERED LINES WITHOUT DAMAGE.
9. MAINTAIN THE REQUIRED 10 FOOT HORIZONTAL AND 2 FOOT VERTICAL SEPARATION BETWEEN SANITARY SEWER AND POTABLE WATER MAINS. ALL OTHER PIPING SHALL MAINTAIN A MINIMUM OF 5' SEPARATION.
10. ORDER MANHOLES IN PAVEMENT LOWER THAN PROPOSED GRADE AND BRING THEM TO EXACT GRADE WITH LEVEL RINGS.
11. PROVIDE FREEZE PROTECTION FOR ANY EXPOSED PIPING. FREEZE PROTECTION SHALL CONSIST OF WRAPPED PIPE W/ RIGID ALUMINUM COVERS UNLESS OTHERWISE SPECIFIED. FREEZE PROTECTION/INSULATION WILL NOT BE REQUIRED FOR PIPING INSIDE BUILDING, AIR PIPING OR SCADA INSTRUMENTATION CONDUIT.
12. CONTRACTOR SHALL SCHEDULE AND CONDUCT OPERATIONS TO LIMIT AMOUNT OF TRENCH OPENED TO INCLUDE ONLY THAT WHICH MAY BE COVERED IN 2 (TWO) DAYS TIME TO A MAXIMUM OF 200'. ANY TRENCH LEFT OPEN OVERNIGHT SHALL BE BARRICADED AND PROTECTED AS DETAILED IN THE MOST CURRENT EDITION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
13. SEWER MAINS SHALL BE CONSTRUCTED UTILIZING A LASER WITH GRADE ESTABLISHED THROUGH SEWER PIPE.
14. WHEN TIE-INS TO EXISTING MANHOLES ARE TO BE MADE, CONTRACTOR SHALL VERIFY MANHOLE FLOW LINE AT AN INTERVAL PRIOR TO MANHOLE TO ENSURE ADEQUATE DEPTH OF NEW LINE. WHEN CONSTRUCTING A MANHOLE OVER AN EXISTING LINE, CONTRACTOR SHALL VERIFY EXISTING LINE DEPTHS PRIOR TO MANHOLE CONSTRUCTION.
15. MATERIAL EXCAVATED FROM TRENCH & PIPE BEDDING MATERIALS SHALL NOT BE PLACED ON ADJACENT ASPHALT OR CONCRETE PAVING.
16. A SILT AND VARMINT CAP AND/OR PLUG SHALL BE IN PLACE ON THE OPEN END OF PIPES AT ALL TIMES.
17. DO NOT EXCEED 75% OF MANUFACTURE'S RECOMMENDED MAXIMUM DEFLECTION FOR PIPE JOINTS UNLESS OTHERWISE NOTED.
18. INSTALL TEMPORARY FENCES TO PROTECT HORSES AND LIVESTOCK WHEN NECESSARY.
19. REMOVAL AND REPLACEMENT OF STREET TRAFFIC SIGNS, MAIL BOXES AND OTHER STRUCTURES BY THE CONTRACTOR TO FACILITATE CONSTRUCTION SHALL BE CONSIDERED INCIDENTAL AND BE INCLUDED IN THE PRICE BID.
20. ALL EXISTING PAYMENT TO REMAIN SHALL BE SAWCUT TO ENSURE A STRAIGHT SMOOTH SURFACE. ALL CUTS MADE IN DRIVEWAYS OR OTHER PAVEMENTS SHALL BE MADE IN STRAIGHT PERPENDICULAR LINES. COST TO BE CONSIDERED SUBSIDIARY TO CONTRACTOR'S BID.

TREATMENT PLANT

1. ALL EXPOSED COMPONENTS REGARDLESS OF LOCATION TO BE CORROSION RESISTANT. (GALVANIZED, ALUMINUM, SST, FRP, ETC).
2. PROPERLY INSULATE, GASKET AND PROTECT TRANSITIONS TO DISSIMILAR METALS (DUCTILE-STAINLESS).
3. ALL EXPOSED VALVES SHALL HAVE HANDWHEELS OR LEVERS. CHAINWHEELS TO BE PROVIDED ON ALL ELEVATED VALVING.
4. ALL PLANT PIPING, CONDUIT, DRAINS, EQUIPMENT, PIPING, ELECTRICAL, COMPONENTS, ETC., SHALL BE PROVIDED WITH PIPE AND EQUIPMENT SUPPORTS, PIPE AND EQUIPMENT HANGERS FOR ALL BRACING AND STABILIZATION FOR A COMPLETE SYSTEM AND PROVIDE WALKING ACCESS AREAS FREE AND CLEAR. ALL PIPE SHALL BE PROPERLY PAINTED OR COATED WITH APPROVED PAINT. CONTRACTOR SHALL LABEL UNITS, PIPING, VALVES, TANKS, ETC., WITH PROPER FLOW DIRECTION AND TYPE. LOCATION AND NUMBER OF PIPE HANGERS AND PIPE SUPPORTS SHOWN IN ONLY APPROX. CONTRACTOR SHALL DESIGN SUPPORTS AS SPECIFIED.
5. ALL PVC/CPVC VALVES AND COMPONENTS FOR USE IN CHEMICAL FEED AND AIR PIPING SHALL HAVE VITON SEALS AND SHALL BE RATED FOR PRODUCT BEING CARRIED.
6. ALL SUSPENDED PIPING SHALL BE SUPPORTED AT NOT LESS THAN EVERY 10 FEET. ALL PIPING LARGER THAN 6" DIAMETER MAY REQUIRE ADDITIONAL SUPPORTS PER SUPPORT SUPPLIERS RECOMMENDATIONS AND/OR SPECIFICATION REQUIREMENTS.
7. ALL WATERTIGHT STRUCTURES CONCRETE SHALL HAVE 72 HOUR WATER TEST FOR LEAKAGE ON STRUCTURE BEFORE BACKFILL.
8. DISSIMILAR METALS IN CONTACT SHALL BE PROVIDED WITH GALVANIC SEPARATION.
9. CONTRACTOR SHALL COORDINATE WITH SUPPLIERS AND PROVIDE DRAIN CONDUIT (2" MINIMUM) FOR ANY/ALL ANALYZERS, RPZ, AIR/VAC VALVES, SAMPLERS OR ANY OTHER ITEM INSIDE BUILDING WHICH DISCHARGES INTERMITTENT WATER AND ROUTE TO DRAIN. NO SURFACE DRAINAGE WILL BE PERMITTED.
10. NOT USED.
11. SUBMIT FOR REVIEW ALL EQUIPMENT SIZES, OPERATING WEIGHTS, VIBRATION FORCES, SUPPORT LOCATIONS, ALONG WITH ANY FLOOR OPENINGS, NOTCHES, AND RECESSES REQUIRED BY SUCH EQUIPMENT. CONCRETE SUPPORT PADS AND/OR FRAMING REQUIRED TO SUPPORT SAID EQUIPMENT SHALL NOT BE FABRICATED AND PLACED UNTIL THE CONCRETE SUPPORT PADS AND/OR FRAMING IS APPROVED TO SUPPORT THE EQUIPMENT.
12. PROCESS EQUIPMENT DELIVERIES SHALL BE COORDINATED SO THAT EQUIPMENT COMES TO SITE NO MORE THAN 60 DAYS PRIOR TO INSTALLATION, UNLESS STORED INDOORS WITH CLIMATE CONTROL.
13. AT ALL POINTS UNDERGROUND WHERE PIPING EXITS STRUCTURES AND TRANSITIONS TO NATURAL GROUND OR OTHER AREAS SUBJECT TO GROUND SETTLING OR OTHER POTENTIAL INTRODUCED STRESSES AFTER INSTALLATION, A BELL-FLANGE WALL PIPE W/SEEP RING AND RESTRAINED MECHANICAL JOINT SHALL BE PROVIDED TO ALLOW FOR DEFLECTION WHETHER BEING SHOWN ON DRAWINGS OR NOT. NO EXCEPTIONS.
14. ALL PIPING 18" AND LARGER SHALL HAVE A MINIMUM COVER OF 48"; AND PIPE SMALLER THAN 18" SHALL HAVE A MINIMUM COVER OF 36" UNLESS OTHERWISE NOTED. PIPE SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO AVOID EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES. CONTRACTOR SHALL INCLUDE COST IN PRICE BID.
15. WHERE CONFLICTS OCCUR BETWEEN CIVIL AND MEP DRAWINGS CIVIL DRAWINGS SHALL GOVERN. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR VERIFICATION AND ANY MINOR MODIFICATIONS REQUIRED TO FACILITATE INSTALLATION AS OUTLINED ON CIVIL DRAWINGS.
16. REVIEW OF ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS AND SHALL VERIFY ALL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE VERIFIED AGAINST THE DRAWINGS PRIOR TO BID. ANY ADJUSTMENTS AND/OR ADDITIONAL WORK/MATERIALS REQUIRED ARE THE RESPONSIBILITY OF THE CONTRACTOR AND NO ADDITIONAL COMPENSATION WILL BE PROVIDED.
17. MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED SYSTEM.
18. TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE TO THE EXISTING PLANT.
19. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.
20. PRIOR TO FABRICATION OF NEW PIPING, INCLUDING SPECIAL FITTINGS AND EXCAVATIONS FOR NEW STRUCTURES, ELECTRICAL CONDUIT AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. AT TIE-IN LOCATIONS, VERIFY THE SIZING OF EXISTING PIPING BEFORE FABRICATION OF NEW PIPING AND FITTINGS. THE CONTRACTOR SHALL INCLUDE THE COST IN HIS BID FOR TEMPORARILY RELOCATING AND REINSTALLING EXISTING UTILITIES AS REQUIRED FOR CONSTRUCTION OF PROPOSED ITEMS.
21. ANY PLANT UTILITY, PIPING, CONDUIT, COMMUNICATION SYSTEM, ELECTRICAL OR INSTRUMENTATION WIRING DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED AND PLACED BACK IN SERVICE BY THE CONTRACTOR ON THE SAME DAY THAT THE DAMAGE OCCURRED. AFTER 24 HOURS OUT OF SERVICE, OWNER WILL HAVE THE OPTION OF HAVING THE REPAIRS MADE BY A SEPARATE CONTRACTOR AND DEDUCTING THE COST OF SAID REPAIRS FROM THE CONTRACT AMOUNT.
22. GALVANIZED STEEL PRODUCTS SHALL NOT BE USED FOR ANY TREATMENT PLANT STRUCTURE / EQUIPMENT CONSTRUCTION UNLESS SPECIFICALLY CALLED OUT / APPROVED.
23. ALL NEW UNISTRUT, ANCHORS, SUPPORT SYSTEMS AND FASTENING HARDWARE TO BE 316 STAINLESS STEEL.
24. BACKFILLING AGAINST STRUCTURES WHICH HAVE A TOP SLAB SHALL BE DONE ONLY AFTER THE TOP SLAB IS IN PLACE AND THE CONCRETE HAS CURED TO 2/3 OF ITS DESIGN STRENGTH, BUT IN NO CASE LESS THAT 4 DAYS.
25. STAGING AREA WILL ONLY BE USED FOR CONSTRUCTION EQUIPMENT AND MATERIALS USED IN THE CONSTRUCTION OF THE PROJECT. CONSTRUCTION DEBRIS SHOULD NOT BE ALLOWED TO ACCUMULATE AND SHOULD BE REMOVED ON A WEEKLY BASIS.
26. INSTALL METAL TRACER WIRE AND COLOR CODE FOR ALL PIPE INSTALLED.
27. IN ACCORDANCE WITH OAC 252:656-5-4(C)(1), SANITARY SEWER MUST BE AT LEAST 10-FEET FROM AN EXISTING OR PROPOSED WATERMAIN AND AT LEAST 5-FEET ELECTRICAL OR PETROLEUM LINES. SANITARY SEWERS MUST CROSS AT LEAST 24 INCHES ABOVE OR BELOW WATERMAINS.
28. THE CONTRACTOR SHALL NOT OPEN OR CLOSE ANY VALVES AT THE TREATMENT PLANT AND SHALL ASK FOR THE OWNER'S ASSISTANCE.

ELECTRICAL/CONTROLS/SCADA

1. ALL ELECTRICAL CONSTRUCTION SHALL BE IN STRICT ACCORDANCE WITH ALL N.E.C. AND LOCAL ELECTRICAL CODES.
2. ALL EQUIPMENT (INCLUDING MCC & PANELS) SHALL RECEIVE HOUSEKEEPING PADS WITH #4 BARS @ 12" O.C.E.W. MINIMUM THICKNESS SHALL BE 6" OR AS REQUIRED FOR ANCHOR BOLT CLEARANCE. ANCHOR BOLTS SLEEVES MAY BE USED PROVIDED THE SLEEVES ARE NON-SHRINK GROUT FILLED WITH 1-1/2" GROUT UNDER EQUIPMENT BASE. ALL PADS SHALL BE ANCHORED TO CONCRETE SLABS WITH J BARS (#3 @ 12" O.C.) OR EPOXY ANCHORS.
3. ALL SCADA SYSTEM WIRING SHALL BE CONDUIT ENCASED AND IS NOT SHOWN FOR CLARITY. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.
4. ALL SURFACE MOUNTED PANELS AND PANEL BOARDS ON THE INTERIOR OF EXTERIOR WALLS OR IN OTHER LOCATIONS CONSIDERED DAMP OR WET AND SHALL BE MOUNTED SO AS TO MAINTAIN A 1/4" MINIMUM AIR SPACE BETWEEN THE ENCLOSURE AND THE WALL.
5. ALL EXTERNAL DISPLAYS SHALL BE PROVIDED WITH A WEATHER SHIELD.
6. REVIEW ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS. VERIFY ALL ELECTRICAL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE BEEN ACCOMMODATED FOR BY ELECTRICAL CONTRACTOR.
7. THE WIRING DIAGRAMS, QUANTITY AND SIZE OF WIRES AND CONDUITS REPRESENT A SUGGESTED ARRANGEMENT BASED UPON SELECTED STANDARD COMPONENTS OF ELECTRICAL EQUIPMENT. IF EQUIPMENT SUPPLIED BY THE MANUFACTURER HAS A LARGER LOAD THAN THE VALUE SHOWN OR INDICATED, THE CABLE, CONDUIT AND ELECTRICAL EQUIPMENT SHALL BE ENLARGED AS REQUIRED TO ACCOMMODATE THE HIGHER LOADING. HOWEVER, THE BASIC SEQUENCE AND METHOD OF CONTROL MUST BE MAINTAINED AS INDICATED ON THE DRAWINGS AND/OR SPECIFICATIONS. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.

NOTE:

1. MANHOLE M-3, MH-7, MH-8, MH-9, MH-10, MH-11, SHALL HAVE SLOTTED LIDS TO ALLOW FOR VENTILATION.
2. LINE 14-C TO EXTEND SLIGHTLY INTO MH-6 AND CONTAIN AN 8" FLAP VALVE.
3. DB-6 TO BE PRE-ENGINEERED (S.E.) 4'x4' CONCRETE VAULT W/TRAFFIC RATED GRATED TOP. SEE PROFILE FOR LINE ELEVATIONS. SUBMITTAL REQUIRED.
4. SOME VALVES SHOWN ON OTHER DRAWINGS HAVE BEEN OMITTED FOR CLARITY.
5. COORDINATE SITE PIPING WITH RELEVANT SHEETS FOR CONNECTIONS TO STRUCTURES, BUILDINGS, ECT.

NOTES:
1. NOT USED.
2. NOT USED.
3. GATE WIDTHS LISTED ARE NOMINAL.
4. CONTRACTOR SHALL ADJUST LOCATION OF GRIT WASHER CONVEYER TO ALLOW FOR USE OF ONE DUMPSTER.
5. THERE SHALL NOT BE ANY GRATING OVER GATES WHICH WOULD INTERFERE WITH OPERATION.
6. NOT USED.
7. GRIT PUMPS SHALL BE EQUIPPED WITH CASE HEATING AND FREEZE PROTECTION PER MANUFACTURERS RECOMMENDATIONS.
8. PW WATER CONNECTION TO EQUIPMENT SHALL BE INSTALLED WITH CONNECTION SOLENOID VALVE SUPPLIED BY MANUFACTURER. FIELD ROUTE ELECTRICAL/CONTROLS PER MANUFACTURERS RECOMMENDATIONS.
9. CONTRACTOR SHALL VERIFY WITH OWNER DUMPSTER DIMENSIONING PRIOR TO PLACEMENT OF CLASSIFIER/COMPACTOR DISCHARGE OUTLETS.
10. ALL PIPING AND CONNECTIONS SHALL BE PER MANUFACTURERS RECOMMENDATIONS.
11. ALL ELECTRONICALLY ACTUATED VALVES TO ALSO BE EQUIPPED WHANDWHEEL OPERATORS.
12. SLIDE GATES TO BE MOUNTED PER MANUFACTURERS RECOMMENDATIONS.
13. CONTRACTOR TO INSTALL A 2" RADIUS FILLET BEFORE AND AFTER THE SCREENS TO PREVENT SEDIMENTATION OF SOLIDS. CONTRACTOR SHALL VERIFY WITH MFR. THAT APPROPRIATE CHANNEL VELOCITY WILL BE MAINTAINED.
14. ACTUATED SLIDE GATE EMERGENCY FLOAT TO AUTOMATICALLY CLOSE GATE IN THE EVENT WATER RISES TO HEADWORKS FLOOR.
15. AT CONTRACTORS OPTION, FLOOR OF HEADWORKS MAY BE POURED LEVEL AT ELEVATION GROUTED TO PROPOSED FLOW LINE ELEVATION.
16. COORDINATE LOCATIONS FOR REQUIRED WASH WATER NON POTABLE WATER MAINS WITH HEADWORKS EQUIPMENT SUPPLIER PRIOR TO INSTALLATION.
17. ELECTRONICALLY OPERATED GATE SHALL BE 480 VOLTS/3 PHASE.
18. CONTRACTOR SHALL SUBMIT A COMPLETE PIPING PLAN FOR APPROVAL.
19. CONTRACTOR SHALL PROVIDE PIPING SUPPORTS AS NEEDED REGARDLESS OF BEING SHOWN ON DRAWINGS.
20. 1.5% SLOPE TOWARD CHANNELS MAY BE GROUTED OR CONSTRUCTED WITH THICKENED SLAB. SLOPE TO START AT TOP OF WALL (T.O.W.) ELEVATION & EXTEND OUTWARD.
21. ALL OPEN AREAS OF HEADWORKS STRUCTURE ARE TO RECEIVE GRATING. SOME GRATING IS NOT SHOWN FOR CLARITY.
22. COORDINATE WITH EQUIPMENT SUPPLIER FOR EXACT REQUIREMENTS OF INLET WATER PIPING PRIOR TO BID.
23. EQUIPMENT DRAINS NOT SHOWN IN PIPING SHALL BE FIELD ROUTED TO HEADWORKS CHANNELS PER MANUFACTURER RECOMMENDATIONS.
24. COMPLETE SYSTEM TO BE EQUIPPED WITH A FACTORY DESIGNED FREEZE PROTECTION SYSTEM CONSISTING OF HEAT TAPE, CASE HEATERS AND INSULATION. FREEZE PROTECTION SYSTEM SHALL BE DESIGNED TO ENSURE PROPER OPERATION INDEFENITELY AT -15° FAHRENHEIT. PROVIDE INFORMATION ON FREEZE PROTECTION SYSTEM WITH THE EQUIPMENT SUBMITTAL.
25. ALL EXPOSED PIPING IN HEADWORKS AREA 6" AND SMALLER SHALL BE GROOVED 316 STAINLESS STEEL. COMPLETE SYSTEM TO BE FURNISHED AND DESIGNED BY VICTAULIC.
26. ALL HYDRANTS TO BE FURNISHED WITH STAINLESS STEEL SELF SUPPORTING HOSE RACK AND 50' OF HEAVY DUTY COMMERCIAL HOSE (1").

HANDRAIL/WALKWAY NOTES:

1. COMPLETE HANDRAIL SYSTEM (INCLUDING STAIRS AND PUMP MAINTENANCE PLATFORM) TO BE FURNISHED AS A SYSTEM (INCLUDING PRE-EQ BASIN) FROM A SINGLE SUPPLIER. COMPLETE SYSTEM TO BE STAMPED BY AND OKLAHOMA STRUCTURAL ENGINEER (S.E.).
2. COORDINATE WITH PUMP SUPPLIER TO VERIFY CLEARANCE REQUIRED FOR MOTIVE PUMP REMOVAL.
3. STAIRS TO BE AS CLOSE AS PRACTICAL TO SBR WALL.

NOTES:

1. MUD VALVES SHALL BE FURNISHED WITH STEM, WALL ANCHORS, AND HANDWHEEL OPERATOR IN A COMPLETE SYSTEM FOR WALL MOUNTING WITH WHEEL OPERATOR AT WALKWAY LEVEL. SUBMITTAL REQUIRED.
2. ALL MOTORIZED VALVES TO BE SUPPLIED WITH HANDWHEEL OPERATORS.
3. L10APV01, L10BPV01, AND L10CPV01 TO BE FURNISHED WITH STEMS AND STEM SUPPORTS TO EXTEND TO THE TOP OF THE BASIN WALL PER THE MANUFACTURERS RECOMMENDATIONS.
4. GLOBE VALVES TO BE USED TO FILL SBR DECANTER TO RELEASE AIR.
5. AIR PIPING TO BE SUPPORTED TO PREVENT SLIPPAGE AND TO BE LOOSELY ATTACHED TO ALLOW PIPE MOVEMENT.
6. AIR PIPING SHALL BE GROOVED DUCTILE IRON. COMPLETE SYSTEM TO BE DESIGNED AND FURNISHED BY VICTAULIC.

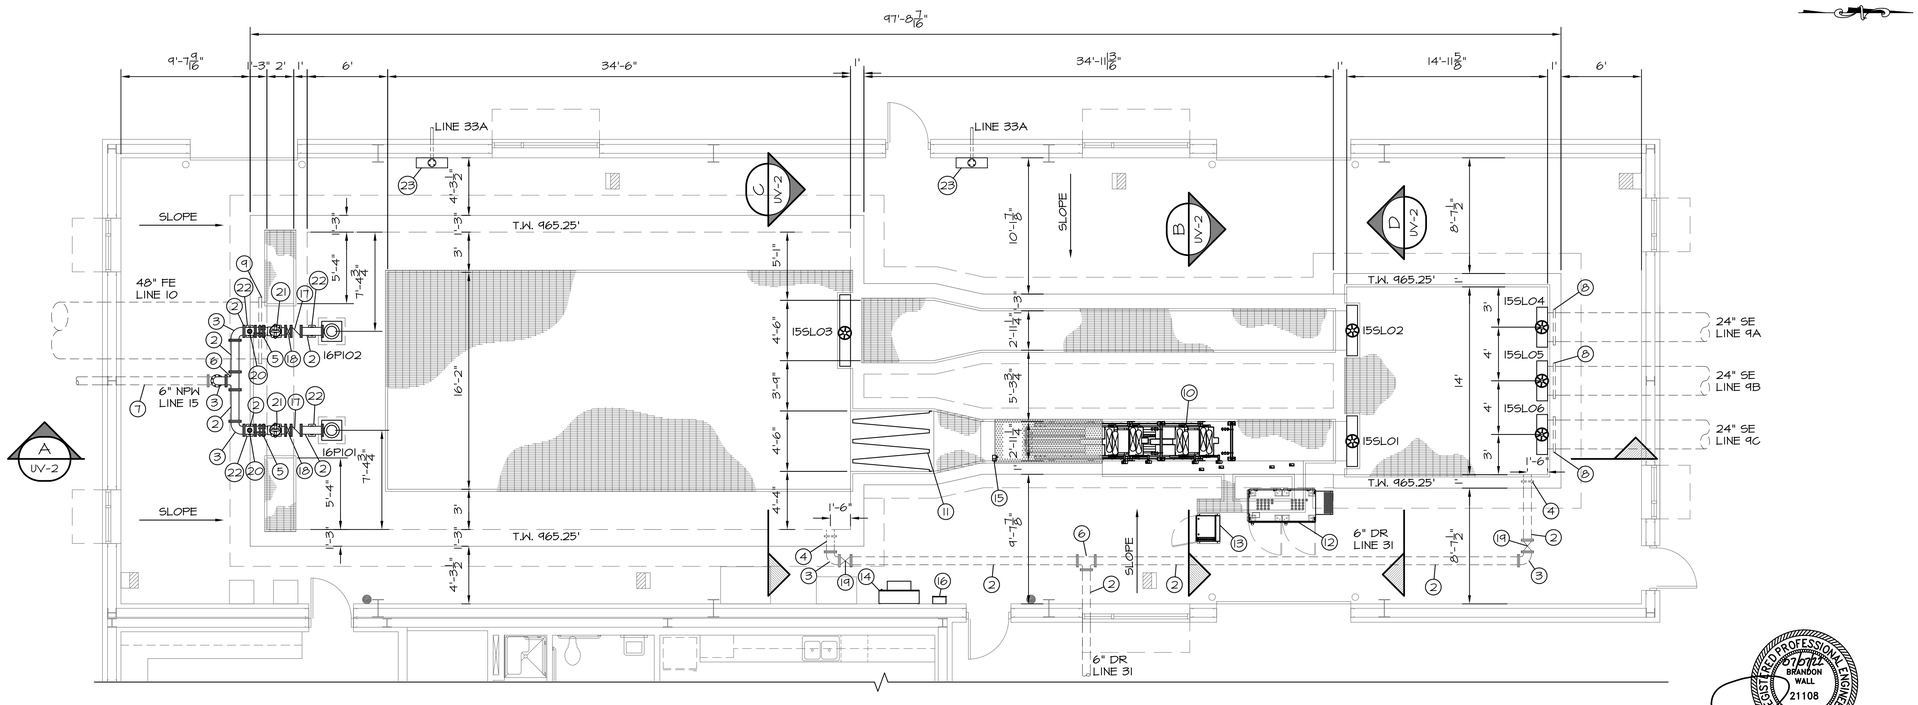
INVERT ELEV.	956.33'	951.33'	951.33'	951.33	951.33	951.33

1. ALL GATES ARE UPWARD OPENING UNLESS OTHERWISE SPECIFIED.
2. ELECTRICALLY OPERATED GATE: 460 VOLTS/3 PHASE.
3. SEE HW-5 FOR GATE DETAIL AND COORDINATE W/MANUFACTURER FOR ADDITIONAL INFORMATION.

NON-POTABLE WATER PUMP SCHEDULE - STRUCTURE #16



NO.	FLOW	TDH-DES	FUNCTION	CONTROL	HP
16P101-16P102	400 GPM	235'	PRIMARY	VFD	±40

PUMP NOTES:

1. PUMP SHALL BE GORMAN RUPP T3AS-E5 SELF PRIMING PUMP.
2. 4" SIMPLEX STRAINER SHALL BE EATON MODEL 72 OR APPROVED EQUAL AND SHALL HAVE PIPE SUPPORTS UNDER THE PROCESS PIPING NEAR THE INLET AND OUTLET CONNECTIONS (SEE PIPE SUPPORT DETAIL SHEET DT-03).
3. STRAINER DRAIN SHALL BE FIELD ROUTED INTO BASIN THROUGH APPROPRIATELY SIZED SCH. 80 PVC CONDUIT PER MANUFACTURES REQUIREMENTS.
4. GRATING OVER UV CHANNELS SHALL BE SIZED TO BE EASILY REMOVED BY ONE PERSON.
5. INVERT MOUNTING PER GATE MANUFACTURER REQUIREMENTS/RECOMMENDATIONS SUBMITTAL REQUIRED.
6. COORDINATE WITH PUMP SUPPLIER FOR CONCRETE PENETRATION REQUIREMENTS.

UV NOTES:

1. UV CHANNEL TO HAVE HIGH LEVEL ALARM.
2. SUBMIT WIRING PLAN TO ENGINEER FOR APPROVAL PRIOR TO STARTING WORK.
3. COORDINATE WITH UV SUPPLIER FOR EXACT WIRING AND EQUIPMENT REQUIREMENTS PRIOR TO BID.
4. EQUIPMENT LOCATION IS FOR REFERENCE ONLY. PROVIDE EQUIPMENT LAYOUT TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.
5. DO NOT SLOPE CHANNEL FLOOR.
6. CHANNEL WIDTH MUST BE KEPT WITHIN A TOLERANCE OF ± 1-1/2" AT UV BANK FRAME AND ±¼" FOR REST OF CHANNEL.
7. ALL CHANNEL ELEVATIONS MUST BE KEPT WITHIN A TOLERANCE OF ± ¼".
8. REMOVABLE GRATING SECTIONS SHALL BE EASILY REMOVED BY ONE PERSON. MAXIMUM WEIGHT OF THE SECTIONS SHALL BE IN ACCORDANCE WITH REQUIREMENTS OF THE APPLICABLE JURISDICTION.
9. CONTRACTOR TO REVIEW ALL TROJAN TECHNOLOGIES INSTALLATION INSTRUCTIONS PRIOR TO EQUIPMENT INSTALLATION.
10. HYDRAULIC HOSE ELEVATIONS NOT TO EXCEED 12" ABOVE HSC MOUNTING ELEVATION.
11. SOLID GRATING REQUIRED TO BLOCK ULTRAVIOLET (UV) LIGHT. IN AREAS SPECIFIED.
12. COORDINATE EXACT DIMENSIONS WITH SUBMITTAL DRAWING.
13. HOUSE KEEPING PADS REQUIRED FOR ALL EQUIPMENT.
14. DURING NORMAL OPERATIONS IF HIGH LEVEL ALARM IS INDICATED, INFLUENT GATES SHOULD CLOSE AND/OR BYPASS GATES OPEN.

NOTE:
CONCRETE TO SLOPE CONTINUOUS FROM EXTERIOR FINISH FLOOR ELEVATION OF 965.33 TO TOP OF WALL ELEVATION OF 965.25 TO FACILITATE DRAINAGE.

LOW PROFILE AERATION SYSTEM NOTES:

1. MATERIALS OF CONSTRUCTION TO BE T-304 STAINLESS STEEL.
2. SLOPE OF CONCRETE FLOOR AND LEVEL OF CONCRETE FLOOR ACROSS WIDTH OF BASIN IS CRITICAL TO PROPER SYSTEM PERFORMANCE.
3. CONCRETE SURFACE TO BE FLAT AND SMOOTH (¼" IN 10' IN ALL DIRECTIONS), AND IS CRITICAL FOR PROPER SEALING.
4. PLACE SEAL MATERIAL BETWEEN MATING STEEL AND CONCRETE SURFACES BEFORE ANCHORAGE. COORDINATE WITH MANUFACTURER.
5. PROVIDE SEALING AND EQUIPMENT INSTALLATION PLAN TO ENGINEER AND MANUFACTURER FOR APPROVAL PRIOR TO CONSTRUCTION.
6. AREA BETWEEN PLCA AND WALL WILL BE GROUTED TO ACTUAL SUPPLIED WIDTH. COORDINATE WITH MANUFACTURER.

HOIST NOTES:

1. PROVIDE MOTORIZED TROLLEY HOIST CAPABLE OF LIFTING SUBMERSIBLE PUMPS FROM WET WELL FOR MAINTENANCE AND REPAIR.
2. HOIST SUPPLIER SHALL INSPECT AND CERTIFY HOIST INSTALLATION MEETS MINIMUM STANDARDS AND IS APPROPRIATE FOR THIS APPLICATION.

SHEET
DT-9

GENERAL

1. ALL NOTES LISTED ON THIS SHEET APPLY TO ALL SHEETS OF THE DRAWINGS AS IF THEY WERE WRITTEN ON EACH SHEET.
2. NOTIFY OWNER 48 HOURS PRIOR TO CONSTRUCTION.
3. VERIFY ALL EXISTING CONDITIONS AND OBSTRUCTIONS INCLUDING LOCATION AND DIMENSIONS BEFORE STARTING WORK AND SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES.
4. PRIOR TO INSTALLATION OF RELEVANT FACILITIES CONTRACTOR SHALL, AT HIS OWN EXPENSE, UNCOVER AND OTHERWISE DETERMINE THE DEPTH OF UTILITIES WHICH, IN HIS OPINION, COULD INTERFERE WITH CONSTRUCTION.
5. ALL DIMENSIONS SHALL BE CONFIRMED BY THE CONTRACTOR ACCORDING TO ACTUAL FIELD CONDITIONS OR EQUIPMENT/STRUCTURE REQUIREMENTS.
6. ALL MISCELLANEOUS REMOVAL ITEMS REQUIRED FOR CONSTRUCTION SHALL BE FIELD LOCATED BY THE CONTRACTOR PRIOR TO BIDDING. THESE ITEMS WILL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
7. TRAFFIC CONTROL DEVICES SHALL BE FURNISHED AND MAINTAINED BY THE CONTRACTOR THROUGHOUT THIS PROJECT IN ACCORDANCE WITH THE LATEST VERSION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES AND/OR AS REQUIRED BY THE DEPARTMENT OF TRANSPORTATION OR COUNTY PERMITS FOR CONSTRUCTION IN RIGHT-OF-WAY.
8. SUBMIT AN EROSION CONTROL PLAN (SWPPP) PRIOR TO CONSTRUCTION AND SHALL MAINTAIN SWPPP THROUGHOUT DURATION OF CONSTRUCTION IN ACCORDANCE WITH SPECIFICATIONS.
9. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS, LOCATES, AND AVAILABLE FILES. NEITHER THE OWNER NOR THE ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIALS, TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF CONSTRUCTION PRIOR TO THE START OF CONSTRUCTION.
10. PERFORM ALL WORK WITHIN DESIGNATED EASEMENTS. CONTRACTOR SHALL NOT ENCROACH OR TRESPASS INTO PRIVATE PROPERTY WITHOUT WRITTEN APPROVAL FROM THE PROPERTY OWNER.
11. MAINTAIN LOCAL AND THROUGH TRAFFIC FOR ALL STREETS AT ALL TIMES WITHOUT CLOSURES OR RESTRICTIONS EXCEPT AS PART OF THE TRAFFIC CONTROL PLAN.
12. MAINTAIN REASONABLE ACCESS TO ALL PROPERTIES AT ALL TIMES. DO NOT RESTRICT DRIVEWAY ACCESS WITHOUT OWNER'S APPROVAL. RESTORE DRIVEWAY ACCESS AT THE END OF EACH DAY. PROVIDE TEMPORARY MEASURES AS NEEDED (SUCH AS GRAVEL) TO MAINTAIN DRIVEWAY ACCESS.
13. KEEP ACCURATE RECORDS OF ALL CONSTRUCTION THAT DEVIATES FROM THE DRAWINGS. THE CONTRACTOR SHALL FURNISH TO THE ENGINEER ACCURATE "AS-BUILT" RED LINE DRAWINGS FOLLOWING COMPLETION OF CONSTRUCTION.
14. TAKE SPECIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD AND UNDERGROUND ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE MOST RECENT NATIONAL ELECTRIC CODE FOR WORKING AROUND OVERHEAD ELECTRIC LINES AS WELL AS OTHER LOCAL, STATE OR FEDERALS LAWS / REQUIREMENTS.
15. CONFORM TO ALL APPLICABLE FEDERAL, STATE AND LOCAL LAWS GOVERNING EXCAVATION. TRENCH SIDE SLOPES SHALL MEET OSHA REQUIREMENTS THAT ARE IN EFFECT AT THE TIME OF CONSTRUCTION. CONTRACTOR SHALL SUBMIT A TRENCH SAFETY PLAN PRIOR TO CONSTRUCTION.
16. THIS PROJECT IS SUBJECT TO AMERICAN IRON AND STEEL (AIS) REQUIREMENTS. ALL IRON AND STEEL PRODUCTS FOR CONSTRUCTION, ALTERATION, MAINTENANCE, OR REPAIRS INCORPORATED MUST BE PRODUCED IN THE UNITED STATES.
17. PROVIDE DUST CONTROL AT ALL TIMES DURING CONSTRUCTION.
18. ANY WORK PERFORMED WITHOUT THE KNOWLEDGE OF THE ENGINEER, INSPECTOR OR OWNER'S REPRESENTATIVE IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S EXPENSE.

EARTHWORK

1. ALL COMPACTED SUBGRADE AND BASE NOT ACCESSIBLE TO MECHANICAL COMPACTION EQUIPMENT SHALL BE HAND COMPACTED USING WHACKER PACKERS.
2. SUBGRADE PREPARATION FOR ALL STRUCTURES AND BUILDINGS ON DRAWINGS SHALL BE AS FOLLOWS: OVER-EXCAVATE 30 INCHES BELOW BASE OF CONCRETE, SCARIFY AND COMPACT TOP 12", COMPACT TO 95% STANDARD PROCTOR DENSITY, INSTALL NON-WOVEN NEEDLE PUNCHED GEOTEXTILE FABRIC, INSTALL 30 INCHES OF CRUSHER RUN AGGREGATE BASE IN 10" LIFTS, COMPACT TO 95% MODIFIED PROCTOR DENSITY. BASE OF CONCRETE SHALL BE CONSIDERED THE BOTTOM OF SLAB AND NOT THE BASE OF FOOTINGS/STEM WALLS. OVER EXCAVATION MAY BE DELETED WHERE ROCK IS PRESENT. #57 ROCK SHALL BE SUBSTITUTED FOR AGG BASE WHERE GROUNDWATER IS PRESENT. ALL FILL MATERIAL REQUIRED TO ACHIEVE FINAL GRADE BELOW THE 30" ROCK LAYER SHALL BE CONSTRUCTED WITH ONSITE OR IMPORTED FILL MATERIAL COMPACTED TO 95% STANDARD PROCTOR DENSITY.
3. ELEVATIONS GIVEN ARE FINISHED GRADE UNLESS OTHERWISE NOTED.
4. NO FIRES WILL BE ALLOWED UNLESS OTHERWISE NOTED. TREES AND BRUSH SHALL BE REMOVED AND DISPOSED OF OFF SITE.
5. NO BLASTING WILL BE ALLOWED.
6. ALL SURFACE DRAINAGE IMPACTED SHALL BE RESTORED TO AS GOOD OR BETTER CONDITION.
7. ALL DISTURBED AREAS SHALL BE LEFT FREE OF RUTS AND TRACKS AND SHALL BE FULLY GRADED TO DRAIN.

GRASSING

1. ANY AND ALL DISTURBED AREAS OUTSIDE OF PLANT FENCING SHALL BE TOPSOILED, HYDROMULCHED, AND WATERED UNTIL ESTABLISHED. ANY AND ALL DISTURBED AREAS INSIDE PLANT FENCING SHALL BE SOLID SLAB SODDED PER SPECIFICATIONS & WATERED UNTIL ESTABLISHED.
2. FOR PIPELINE CONSTRUCTION EXTERNAL TO THE TREATMENT PLANT, ANY AND ALL DISTURBED AREAS SHALL BE TOPSOILED, HYDROMULCHED, AND FERTILIZED, WITH THE EXCEPTION OF RESIDENTIAL YARDS AND IMPROVED GRASS AREAS WHICH SHALL RECEIVE SOLID SLAB SOD IN LIEU OF HYDROMULCHING PER SPECIFICATIONS. THIS WORK WILL NOT BE MEASURED FOR PAYMENT. COST SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.

DUCTILE IRON PIPE & FITTINGS

1. ALL BURIED DUCTILE IRON PIPE AND FITTINGS SHALL BE PROTECTED IN ACCORDANCE WITH ANSI/AWWA C105/A21.5 "POLYETHYLENE ENCASEMENT FOR GRAY AND DUCTILE IRON PIPE FOR WATER AND OTHER LIQUIDS." THIS ITEM SHALL NOT BE MEASURED FOR PAYMENT AND SHALL BE INCLUDED IN THE PRICE BID FOR ASSOCIATED ITEMS OF WORK.
2. ALL AIR PIPING SHALL BE UNLINED WITH EPDM GASKETS RATED FOR COMPRESSED AIR USAGE (PRESSURE & TEMPERATURE.)
3. ALL DUCTILE IRON PIPING SHALL BE RESTRAINED JOINT.
4. ALL DUCTILE IRON PIPE CONNECTIONS TO P.V.C. SHALL BE MADE WITH A BOLTED CAST TRANSITION COUPLING.
5. ALL EXPOSED FITTINGS SHALL BE FLANGED FITTINGS W/ STAINLESS STEEL BOLTS AND APPURTENANCES.
6. ALL MECHANICAL JOINT, FLANGE & MISC. FITTINGS TO HAVE STAINLESS STEEL BOLTS, NUTS & WASHERS.
7. ALL BURIED FITTINGS SHALL BE D.I. MECHANICAL JOINT (M.J) RESTRAINED (MEGALUG.)
8. WALL PIPES SHALL BE USED WHEREVER PIPING PASSES FROM A STRUCTURE TO EARTHEN BACKFILL.
9. PROVIDE 1/4" ANTI-SEEPAGE RINGS A MINIMUM OF 2" WIDE WELDED TO ALL PIPES PIERCING WATER HOLDING TANKS TO PREVENT SEEPAGE OF WATER BETWEEN PIPE AND CONCRETE. WALL PIPES MAY BE USED IN LIEU OF WELDED RINGS.
10. ALL DUCTILE IRON PIPING LARGER THAN 10" DIAMETER SHALL HAVE CONCRETE SUPPORTS UNLESS OTHERWISE DETAILED. SMALLER PIPING MAY HAVE METAL STAND TYPE SUPPORTS.

CONCRETE

1. CONSTRUCTION JOINTS TO FACILITATE CONSTRUCTION SHALL BE LOCATED AND DETAILED ON THE SHOP DRAWINGS FOR REVIEW. UNLESS INDICATED OTHERWISE, ALL CONSTRUCTION JOINTS SHALL BE KEYED. HORIZONTAL CONSTRUCTION JOINTS SHALL NOT BE PERMITTED IN WALLS AND BEAMS, UNLESS SHOWN ON THE DRAWINGS OR APPROVED BY THE ENGINEER.
2. ALL EXPOSED CORNERS OF CONCRETE STRUCTURES REGARDLESS OF LOCATION SHALL HAVE A 3/4 INCH MINIMUM CHAMFER.
3. NOT USED.
4. ALL GROUTED AREAS OVER 8" THICK SHALL BE REINFORCED WITH WELDED WIRE MESH, 6x6-W2.0xW2.0 MATTS AT 8'-0" CTRS MAX.
5. ANCHOR BOLTS NOT SPECIFIED BY ENGINEER SHALL BE DESIGNED AND STAMPED BY A REGISTERED PROFESSIONAL ENGINEER, RETAINED BY THE CONTRACTOR IN ACCORDANCE WITH APPLICABLE PROJECT AND CODE REQUIREMENTS. SUBMIT AS A SHOP DRAWING FOR REVIEW AND APPROVAL BY THE ENGINEER. COORDINATE LOCATION, SIZE AND EMBEDMENT PRIOR TO CASTING OF CONCRETE.
6. EXPANSION JOINTS SHALL BE USED WHERE EXTERIOR OF ALL EXISTING AND PROPOSED STRUCTURES AND BUILDINGS ABUT CONCRETE PAVING WHETHER SHOWN ON THE DRAWINGS OR NOT.
7. NO FLY ASH SHALL BE PERMITTED IN CONCRETE MIX DESIGN.
8. TREMIES REQUIRED ON ALL POURS DEEPER THAN 10 FEET.
9. VAPOR BARRIER (10 MIL) REQUIRED BENEATH ALL SLABS.
10. WALKWAYS AND SIDEWALKS SHALL BE POURED WITH SLIGHT SLOPE AND NO LOW SPOTS SO THEY WILL DRAIN FREELY.
11. ALL STRUCTURAL JOINTS SHALL RECEIVE 6" RUBBER CENTER BULB PVC WATERSTOP PLACED AT ALL WATERTIGHT JOINTS.
12. VERTICAL WATERSTOP SHALL BE FULLY EMBEDDED IN SLAB POUR AND WELDED TO ALL ADJACENT WATERSTOP.
13. WHEN WATERSTOP IS PLACED HORIZONTALLY IN SLABS, THE CONTRACTOR SHALL TEMPORARILY TIE UP OR CLAMP UP THE WATERSTOP UNTIL THE CONCRETE IS PLACED TO SLIGHTLY ABOVE THE DEPTH OF THE WATERSTOP.
14. CONCRETE SHALL HAVE XYPEX ADMIXTURE PER SECTION 03_30_00 AND MANUFACTURE'S SPECIFICATIONS.

BUILDING

1. ALL EXTERIOR DOORS ON ALL BUILDINGS SHALL HAVE R-PANEL AWNING SUPPLIED INTEGRAL WITH METAL BUILDING. AWNING ROOF PANELS SHALL MATCH MAIN BUILDING ROOF. AWNINGS SHALL INCLUDE FULL WIDTH GUTTER WITH DOWNSPOUTS.
2. ALL EXTERIOR EXPOSED CMU SHALL BE SPLIT FACE ARCHITECTURAL BLOCK UNLESS OTHERWISE NOTED.
3. ANY R-PANEL USED IN THE BUILDING CONSTRUCTION WHERE NO GAUGE IS SPECIFIED SHALL BE 24 GA. MINIMUM.

PIPING & APPURTENANCES

1. MANHOLES SHALL BE GROUTED INSIDE AND OUT AT ALL JOINTS.
2. ALL NON-POTABLE WATER LINES SHALL BE IN PURPLE COLORED PIPE AND LABELED "DO NOT DRINK". THE WARNING LABEL SHALL BE LOCATED ON OPPOSITE SIDES OF ALL PIPES AND REPEATED EVERY THREE (3) FEET OR LESS.
3. ALL PIPING THAT CROSS VERTICALLY SHALL HAVE AT LEAST 6" SEPARATION.
4. ALL UNDERGROUND FITTINGS SHALL BE DUCTILE IRON MECHANICAL JOINTS (MEGALUG), UNLESS OTHERWISE NOTED.
5. ALL VALVE ASSEMBLIES, VAULTS, PULLS BOXES AND MANHOLES CONSTRUCTED SHALL BE ADJUSTED TO BE FLUSH WITH FINISHED GRADE UNLESS OTHERWISE NOTED. MANHOLES SET IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SET 6 INCHES ABOUT FINISHED GRADE.
6. NOT USED.
7. ANY BY-PASS PUMPING AND/OR BY-PASS PIPING INSTALLED SHALL BE OPERATED AND MAINTAINED BY THE CONTRACTOR AT CONTRACTOR'S EXPENSE. THE CONTRACTOR IS RESPONSIBLE FOR ANY UNAUTHORIZED DISCHARGES.
8. CONNECTIONS TO EXISTING UTILITIES SHALL BE MADE IN A TIME AND UNDER CONDITIONS WHICH WILL LEAST INTERFERE WITH SERVICE OF THE OWNER, AND AS AUTHORIZED BY THE ENGINEER AND OWNER. FACILITIES SHALL BE PROVIDED FOR PROPER DEWATERING AND FOR DISPOSAL OF ALL WATER/WASTEWATER REMOVED TO ADJACENT PROPERTY FROM DEWATERED LINES WITHOUT DAMAGE.
9. MAINTAIN THE REQUIRED 10 FOOT HORIZONTAL AND 2 FOOT VERTICAL SEPARATION BETWEEN SANITARY SEWER AND POTABLE WATER MAINS. ALL OTHER PIPING SHALL MAINTAIN A MINIMUM OF 5' SEPARATION.
10. ORDER MANHOLES IN PAVEMENT LOWER THAN PROPOSED GRADE AND BRING THEM TO EXACT GRADE WITH LEVEL RINGS.
11. PROVIDE FREEZE PROTECTION FOR ANY EXPOSED PIPING. FREEZE PROTECTION SHALL CONSIST OF WRAPPED PIPE W/ RIGID ALUMINUM COVERS UNLESS OTHERWISE SPECIFIED. FREEZE PROTECTION/INSULATION WILL NOT BE REQUIRED FOR PIPING INSIDE BUILDING, AIR PIPING OR SCADA INSTRUMENTATION CONDUIT.
12. CONTRACTOR SHALL SCHEDULE AND CONDUCT OPERATIONS TO LIMIT AMOUNT OF TRENCH OPENED TO INCLUDE ONLY THAT WHICH MAY BE COVERED IN 2 (TWO) DAYS TIME TO A MAXIMUM OF 200'. ANY TRENCH LEFT OPEN OVERNIGHT SHALL BE BARRICADED AND PROTECTED AS DETAILED IN THE MOST CURRENT EDITION OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
13. SEWER MAINS SHALL BE CONSTRUCTED UTILIZING A LASER WITH GRADE ESTABLISHED THROUGH SEWER PIPE.
14. WHEN TIE-INS TO EXISTING MANHOLES ARE TO BE MADE, CONTRACTOR SHALL VERIFY MANHOLE FLOW LINE AT AN INTERVAL PRIOR TO MANHOLE TO ENSURE ADEQUATE DEPTH OF NEW LINE. WHEN CONSTRUCTING A MANHOLE OVER AN EXISTING LINE, CONTRACTOR SHALL VERIFY EXISTING LINE DEPTHS PRIOR TO MANHOLE CONSTRUCTION.
15. MATERIAL EXCAVATED FROM TRENCH & PIPE BEDDING MATERIALS SHALL NOT BE PLACED ON ADJACENT ASPHALT OR CONCRETE PAVING.
16. A SILT AND VARMINT CAP AND/OR PLUG SHALL BE IN PLACE ON THE OPEN END OF PIPES AT ALL TIMES.
17. DO NOT EXCEED 75% OF MANUFACTURE'S RECOMMENDED MAXIMUM DEFLECTION FOR PIPE JOINTS UNLESS OTHERWISE NOTED.
18. INSTALL TEMPORARY FENCES TO PROTECT HORSES AND LIVESTOCK WHEN NECESSARY.
19. REMOVAL AND REPLACEMENT OF STREET TRAFFIC SIGNS, MAIL BOXES AND OTHER STRUCTURES BY THE CONTRACTOR TO FACILITATE CONSTRUCTION SHALL BE CONSIDERED INCIDENTAL AND BE INCLUDED IN THE PRICE BID.
20. ALL EXISTING PAYMENT TO REMAIN SHALL BE SAWCUT TO ENSURE A STRAIGHT SMOOTH SURFACE. ALL CUTS MADE IN DRIVEWAYS OR OTHER PAVEMENTS SHALL BE MADE IN STRAIGHT PERPENDICULAR LINES. COST TO BE CONSIDERED SUBSIDIARY TO CONTRACTOR'S BID.

TREATMENT PLANT

1. ALL EXPOSED COMPONENTS REGARDLESS OF LOCATION TO BE CORROSION RESISTANT (GALVANIZED, ALUMINUM, SST, FRP, ETC).
2. PROPERLY INSULATE, GASKET AND PROTECT TRANSITIONS TO DISSIMILAR METALS (DUCTILE-STAINLESS).
3. ALL EXPOSED VALVES SHALL HAVE HANDWHEELS OR LEVERS. CHAINWHEELS TO BE PROVIDED ON ALL ELEVATED VALVING.
4. ALL PLANT PIPING, CONDUIT, DRAINS, EQUIPMENT, PIPING, ELECTRICAL, COMPONENTS, ETC., SHALL BE PROVIDED WITH PIPE AND EQUIPMENT SUPPORTS. PIPE AND EQUIPMENT HANGERS FOR ALL BRACING AND STABILIZATION FOR A COMPLETE SYSTEM AND PROVIDE WALKING ACCESS AREAS FREE AND CLEAR. ALL PIPE SHALL BE PROPERLY PAINTED OR COATED WITH APPROVED PAINT. CONTRACTOR SHALL LABEL UNITS, PIPING, VALVES, TANKS, ETC., WITH PROPER FLOW DIRECTION AND TYPE. LOCATION AND NUMBER OF PIPE HANGERS AND PIPE SUPPORTS SHOWN IN ONLY APPROX. CONTRACTOR SHALL DESIGN SUPPORTS AS SPECIFIED.
5. ALL PVC/CPVC VALVES AND COMPONENTS FOR USE IN CHEMICAL FEED AND AIR PIPING SHALL HAVE VITON SEALS AND SHALL BE RATED FOR PRODUCT BEING CARRIED.
6. ALL SUSPENDED PIPING SHALL BE SUPPORTED AT NOT LESS THAN EVERY 10 FEET. ALL PIPING LARGER THAN 6" DIAMETER MAY REQUIRE ADDITIONAL SUPPORTS PER SUPPORT SUPPLIERS RECOMMENDATIONS AND/OR SPECIFICATION REQUIREMENTS.
7. ALL WATERTIGHT STRUCTURES CONCRETE SHALL HAVE 72 HOUR WATER TEST FOR LEAKAGE ON STRUCTURE BEFORE BACKFILL.
8. DISSIMILAR METALS IN CONTACT SHALL BE PROVIDED WITH GALVANIC SEPARATION.
9. CONTRACTOR SHALL COORDINATE WITH SUPPLIERS AND PROVIDE DRAIN CONDUIT (2" MINIMUM) FOR ANY/ALL ANALYZERS, RPZ, AIR/VAC VALVES, SAMPLERS OR ANY OTHER ITEM INSIDE BUILDING WHICH DISCHARGES INTERMITTENT WATER AND ROUTE TO DRAIN. NO SURFACE DRAINAGE WILL BE PERMITTED.
10. NOT USED.
11. SUBMIT FOR REVIEW ALL EQUIPMENT SIZES, OPERATING WEIGHTS, VIBRATION FORCES, SUPPORT LOCATIONS, ALONG WITH ANY FLOOR OPENINGS, NOTCHES, AND RECESSES REQUIRED BY SUCH EQUIPMENT. CONCRETE SUPPORT PADS AND/OR FRAMING REQUIRED TO SUPPORT SAID EQUIPMENT SHALL NOT BE FABRICATED AND PLACED UNTIL THE CONCRETE SUPPORT PADS AND/OR FRAMING IS APPROVED TO SUPPORT THE EQUIPMENT.
12. PROCESS EQUIPMENT DELIVERIES SHALL BE COORDINATED SO THAT EQUIPMENT COMES TO SITE NO MORE THAN 60 DAYS PRIOR TO INSTALLATION, UNLESS STORED INDOORS WITH CLIMATE CONTROL.
13. AT ALL POINTS UNDERGROUND WHERE PIPING EXITS STRUCTURES AND TRANSITIONS TO NATURAL GROUND OR OTHER AREAS SUBJECT TO GROUND SETTLING OR OTHER POTENTIAL INTRODUCED STRESSES AFTER INSTALLATION, A BELL-FLANGE WALL PIPE W/SEEP RING AND RESTRAINED MECHANICAL JOINT SHALL BE PROVIDED TO ALLOW FOR DEFLECTION WHETHER BEING SHOWN ON DRAWINGS OR NOT. NO EXCEPTIONS.
14. ALL PIPING 18" AND LARGER SHALL HAVE A MINIMUM COVER OF 48"; AND PIPE SMALLER THAN 18" SHALL HAVE A MINIMUM COVER OF 36" UNLESS OTHERWISE NOTED. PIPE SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO AVOID EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES. CONTRACTOR SHALL INCLUDE COST IN PRICE BID.
15. WHERE CONFLICTS OCCUR BETWEEN CIVIL AND MEP DRAWINGS SHALL GOVERN. ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR VERIFICATION AND ANY MINOR MODIFICATIONS REQUIRED TO FACILITATE INSTALLATION AS OUTLINED ON CIVIL DRAWINGS.
16. REVIEW OF ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS AND SHALL VERIFY ALL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE VERIFIED AGAINST THE DRAWINGS PRIOR TO BID. ANY ADJUSTMENTS AND/OR ADDITIONAL WORK/MATERIALS REQUIRED ARE THE RESPONSIBILITY OF THE CONTRACTOR AND NO ADDITIONAL COMPENSATION WILL BE PROVIDED.
17. MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED SYSTEM.
18. TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE TO THE EXISTING PLANT.
19. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.
20. PRIOR TO FABRICATION OF NEW PIPING, INCLUDING SPECIAL FITTINGS AND EXCAVATIONS FOR NEW STRUCTURES, ELECTRICAL CONDUIT AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. AT TIE-IN LOCATIONS, VERIFY THE SIZING OF EXISTING PIPING BEFORE FABRICATION OF NEW PIPING AND FITTINGS. THE CONTRACTOR SHALL INCLUDE THE COST IN HIS BID FOR TEMPORARILY RELOCATING AND REINSTALLING EXISTING UTILITIES AS REQUIRED FOR CONSTRUCTION OF PROPOSED ITEMS.
21. ANY PLANT UTILITY, PIPING, CONDUIT, COMMUNICATION SYSTEM, ELECTRICAL OR INSTRUMENTATION WIRING DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED AND PLACED BACK IN SERVICE BY THE CONTRACTOR ON THE SAME DAY THAT THE DAMAGE OCCURRED. AFTER 24 HOURS OUT OF SERVICE, OWNER WILL HAVE THE OPTION OF HAVING THE REPAIRS MADE BY A SEPARATE CONTRACTOR AND DEDUCTING THE COST OF SAID REPAIRS FROM THE CONTRACT AMOUNT.
22. GALVANIZED STEEL PRODUCTS SHALL NOT BE USED FOR ANY TREATMENT PLANT STRUCTURE / EQUIPMENT CONSTRUCTION UNLESS SPECIFICALLY CALLED OUT / APPROVED.
23. ALL NEW UNISTRUT, ANCHORS, SUPPORT SYSTEMS AND FASTENING HARDWARE TO BE 316 STAINLESS STEEL.
24. BACKFILLING AGAINST STRUCTURES WHICH HAVE A TOP SLAB SHALL BE DONE ONLY AFTER THE TOP SLAB IS IN PLACE AND THE CONCRETE HAS CURED TO 2/3 OF ITS DESIGN STRENGTH, BUT IN NO CASE LESS THAT 4 DAYS.
25. STAGING AREA WILL ONLY BE USED FOR CONSTRUCTION EQUIPMENT AND MATERIALS USED IN THE CONSTRUCTION OF THE PROJECT. CONSTRUCTION DEBRIS SHOULD NOT BE ALLOWED TO ACCUMULATE AND SHOULD BE REMOVED ON A WEEKLY BASIS.
26. INSTALL METAL TRACER WIRE AND COLOR CODE FOR ALL PIPE INSTALLED.
27. IN ACCORDANCE WITH OAC 252:656-5-4(C)(1), SANITARY SEWER MUST BE AT LEAST 10-FEET FROM AN EXISTING OR PROPOSED WATERMAIN AND AT LEAST 5-FEET ELECTRICAL OR PETROLEUM LINES. SANITARY SEWERS MUST CROSS AT LEAST 24 INCHES ABOVE OR BELOW WATERMAINS.
28. THE CONTRACTOR SHALL NOT OPEN OR CLOSE ANY VALVES AT THE TREATMENT PLANT AND SHALL ASK FOR THE OWNER'S ASSISTANCE.

ELECTRICAL/CONTROLS/SCADA

1. ALL ELECTRICAL CONSTRUCTION SHALL BE IN STRICT ACCORDANCE WITH ALL N.E.C. AND LOCAL ELECTRICAL CODES.
2. ALL EQUIPMENT (INCLUDING MCC & PANELS) SHALL RECEIVE HOUSEKEEPING PADS WITH #4 BARS @ 12" O.C.E.W. MINIMUM THICKNESS SHALL BE 6" OR AS REQUIRED FOR ANCHOR BOLT CLEARANCE. ANCHOR BOLTS SLEEVES MAY BE USED PROVIDED THE SLEEVES ARE NON-SHRINK GROUT FILLED WITH 1-1/2" GROUT UNDER EQUIPMENT BASE. ALL PADS SHALL BE ANCHORED TO CONCRETE SLABS WITH J BARS (#3 @ 12" O.C.) OR EPOXY ANCHORS.
3. ALL SCADA SYSTEM WIRING SHALL BE CONDUIT ENCASED AND IS NOT SHOW FOR CLARITY. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.
4. ALL SURFACE MOUNTED PANELS AND PANEL BOARDS ON THE INTERIOR OF EXTERIOR WALLS OR IN OTHER LOCATIONS CONSIDERED DAMP OR WET AND SHALL BE MOUNTED SO AS TO MAINTAIN A 1/4" MINIMUM AIR SPACE BETWEEN THE ENCLOSURE AND THE WALL.
5. ALL EXTERNAL DISPLAYS SHALL BE PROVIDED WITH A WEATHER SHIELD.
6. REVIEW ANY/ALL SCOPE AND PROPOSALS FURNISHED BY EQUIPMENT SUPPLIERS. VERIFY ALL ELECTRICAL REQUIREMENTS OUTLINED IN PROPOSED EQUIPMENT SCOPE/PROPOSAL HAVE BEEN ACCOMMODATED FOR BY ELECTRICAL CONTRACTOR.
7. THE WIRING DIAGRAMS, QUANTITY AND SIZE OF WIRES AND CONDUITS REPRESENT A SUGGESTED ARRANGEMENT BASED UPON SELECTED STANDARD COMPONENTS OF ELECTRICAL EQUIPMENT. IF EQUIPMENT SUPPLIED BY THE MANUFACTURER HAS A LARGER LOAD THAN THE VALUE SHOWN OR INDICATED, THE CABLE, CONDUIT AND ELECTRICAL EQUIPMENT SHALL BE ENLARGED AS REQUIRED TO ACCOMMODATE THE HIGHER LOADING. HOWEVER, THE BASIC SEQUENCE AND METHOD OF CONTROL MUST BE MAINTAINED AS INDICATED ON THE DRAWINGS AND/OR SPECIFICATIONS. CONTRACTOR TO PROVIDE PROPOSED CONDUIT LAYOUT WITH SCHEDULE TO ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION.

NOTES:
1. NOT USED.
2. NOT USED.
3. GATE WIDTHS LISTED ARE NOMINAL.
4. CONTRACTOR SHALL ADJUST LOCATION OF GRIT WASHER CONVEYER TO ALLOW FOR USE OF ONE DUMPSTER.
5. THERE SHALL NOT BE ANY GRATING OVER GATES WHICH WOULD INTERFERE WITH OPERATION.
6. NOT USED.
7. GRIT PUMPS SHALL BE EQUIPPED WITH CASE HEATING AND FREEZE PROTECTION PER MANUFACTURERS RECOMMENDATIONS.
8. FW WATER CONNECTION TO EQUIPMENT SHALL BE INSTALLED WITH CONNECTION SOLENOID VALVE SUPPLIED BY MANUFACTURER. FIELD ROUTE ELECTRICAL/CONTROLS PER MANUFACTURERS RECOMMENDATIONS.
9. CONTRACTOR SHALL VERIFY WITH OWNER DUMPSTER DIMENSIONING PRIOR TO PLACEMENT OF CLASSIFIER/COMPACTOR DISCHARGE OUTLETS.
10. ALL PIPING AND CONNECTIONS SHALL BE PER MANUFACTURERS RECOMMENDATIONS.
11. ALL ELECTRONICALLY ACTUATED VALVES TO ALSO BE EQUIPPED WHANDWHEEL OPERATORS.
12. SLIDE GATES TO BE MOUNTED PER MANUFACTURERS RECOMMENDATIONS.
13. CONTRACTOR TO INSTALL A 2" RADIUS FILLET BEFORE AND AFTER THE SCREENS TO PREVENT SEDIMENTATION OF SOLIDS. CONTRACTOR SHALL VERIFY WITH MFR. THAT APPROPRIATE CHANNEL VELOCITY WILL BE MAINTAINED.
14. ACTUATED SLIDE GATE EMERGENCY FLOAT TO AUTOMATICALLY CLOSE GATE IN THE EVENT WATER RISES TO HEADWORKS FLOOR.
15. AT CONTRACTORS OPTION, FLOOR OF HEADWORKS MAY BE POURED LEVEL AT ELEVATION GROUTED TO PROPOSED FLOW LINE ELEVATION.
16. COORDINATE LOCATIONS FOR REQUIRED WASH WATER NON POTABLE WATER MAINS WITH HEADWORKS EQUIPMENT SUPPLIER PRIOR TO INSTALLATION.
17. ELECTRONICALLY OPERATED GATE SHALL BE 480 VOLTS/3 PHASE.
18. CONTRACTOR SHALL SUBMIT A COMPLETE PIPING PLAN FOR APPROVAL.
19. CONTRACTOR SHALL PROVIDE PIPING SUPPORTS AS NEEDED REGARDLESS OF BEING SHOWN ON DRAWINGS.
20. ALL OPEN AREAS OF HEADWORKS STRUCTURE ARE TO RECEIVE GRATING. SOME GRATING IS NOT SHOWN FOR CLARITY.
21. COORDINATE WITH EQUIPMENT SUPPLIER FOR EXACT REQUIREMENTS OF INLET WATER PIPING PRIOR TO BID.
22. EQUIPMENT DRAINS NOT SHOWN IN PIPING SHALL BE FIELD ROUTED TO HEADWORKS CHANNELS PER MANUFACTURER RECOMMENDATIONS.
23. COMPLETE SYSTEM TO BE EQUIPPED WITH A FACTORY DESIGNED FREEZE PROTECTION SYSTEM CONSISTING OF HEAT TAPE, CASE HEATERS AND INSULATION. FREEZE PROTECTION SYSTEM SHALL BE DESIGNED TO ENSURE PROPER OPERATION INDEFINITELY AT -15 DEGREES FAHRENHEIT. PROVIDE INFORMATION ON FREEZE PROTECTION SYSTEM WITH THE EQUIPMENT SUBMITTAL.
24. ALL EXPOSED PIPING IN HEADWORKS AREA 6" AND SMALLER SHALL BE GROOVED 316 STAINLESS STEEL. COMPLETE SYSTEM TO BE FURNISHED AND DESIGNED BY VICTAULIC.
25. ALL HYDRANTS TO BE FURNISHED WITH STAINLESS STEEL SELF SUPPORTING HOSE RACK AND 50' OF HEAVY DUTY COMMERCIAL HOSE (1").

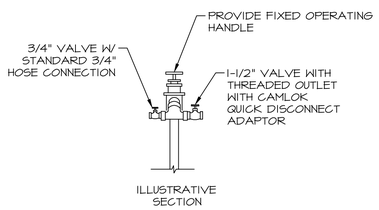
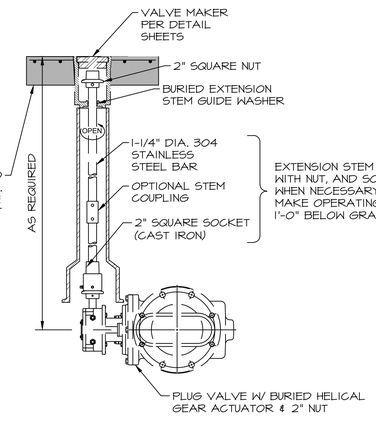
48	118	48	23	18	214	322
54	131	54	26	18	348	344

NOTES:



1. RESTRAIN ALL DUCTILE IRON FITTINGS.
2. TABULATED VALUES ARE FOR 100 PSIG TEST PRESSURE. FOR VALUES AT PRESSURES OTHER THAN 100 PSID, MULTIPLY TABLE VALUES BY THE RATIO OF ACTUAL TEST PRESSURE TO 100 PSIG. TEST PRESSURES FOR EACH SERVICE ARE DEFINED IN THE PIPING SCHEDULE.
3. WHERE LISTED VALUES, OR CALCULATED VALUES (SEE ABOVE), ARE LESS THAN ON STANDARD FULL PIPE SEGMENT (18 FEET), RESTRAIN THE FITTING ONLY.
4. RESTRAINT LENGTHS APPLY TO PIPE RUNS ON EACH SIDE OF A CHANGE IN DIRECTION.
5. WHERE THE PIPING LAYOUT HAS RESTRAINED JOINT LENGTHS FOR TWO OR MORE FITTINGS TO OVERLAP, THRUST RESTRAIN ALL PIPING BETWEEN THE OTHER FITTINGS. ASSUME 1/2 OF THE RESTRAINED PIPE LENGTH BETWEEN THE TWO FITTINGS RESTRAINS EACH OF THE FITTINGS AND ADD ADDITIONAL RESTRAINED JOINT LENGTH TO THE OUTER LEGS OF THE OUTER FITTINGS TO EQUAL THE TOTAL REQUIRED FOR ALL FITTINGS.
6. THRUST RESTRAINT TABLE REFERS TO NEW PIPING.

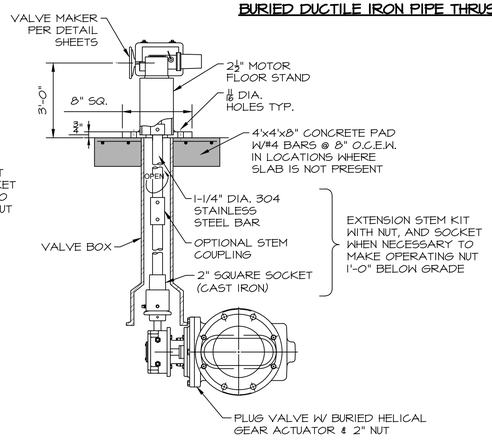


BACKFLOW PREVENTER

N.T.S

NOTES:

1. INSTALL INSIDE INSULATED FIBERGLASS ENCLOSURE, SUBMITTAL REQUIRED.
2. ENCLOSURE TO HAVE ACCESS DOORS ON EACH SIDE.
3. SLOPE FLOOR TO DRAIN WITH CHECK VALVE WHERE NECESSARY (TIDE FLEX)
4. ALL CONNECTIONS SHALL BE THRUST RESTRAINED.



BURIED MANUAL PLUG VALVE

ADDENDUM NO. 2

TO: ALL PLAN HOLDERS

RE: Shawnee Wastewater System Improvements

DATE: July 21, 2022

The Plans, Specifications and Contract Documents for the above referenced project are hereby modified / clarified as follows.

Please note that changes made to the plans/specs added by addendum will only contain a summary of changes in addendum verbiage and may not contain all modifications. It is the Contractor's responsibility to thoroughly review the revised sheets/specs.

General

A2 – 1 **Approval:** Cummins has been approved as a supplier of backup power equipment.

A2 – 2 **Information:** No additional equipment has been approved beyond the named equipment in the Specifications.

A2 – 3 **Modification:** The largest eight (8) project materials / equipment vendors ranked by taxable value will be direct paid by the Owner and thereby receive a tax-exempt status letter. Do not include applicable taxes in the bid.

A2 – 4 **Information:** Sludge management plan information has been added to CivCast. It contains the site information and summary sludge management plan data.

Northside WWTP

A2 – 5 **Clarification:** Plug valves on piping carrying sludge shall be full port.

A2 – 6 **Addition:** All floor coatings specified in wet areas shall have slip resistant additive (by Tnemec.)

A2 – 7 **Modification:** Section 43_23_31.35 – Replace with revised spec. Pump conditions have been modified

A2 – 8 **Modification:** Millwork referenced on Sheet A602, A603 & A701 is hereby revised as follows:

1. Cabinets – Powder coated steel casework
2. Tops – 1" epoxy resin certified as chemical resistant
3. Island (in 118) to be 5' width

4. Glassware washers, Faucets and Fixtures to be commercial laboratory grade
5. Approved Suppliers / Installers
    a. Best Companies, Edmond, OK (405) 840-1077
    b. MGC, Inc, Addison, TX (214) 477-4784
    c. PSA Lab Furniture, New Berlin, WI (262) 204-7660

A2 – 9 **Modification:** Structural

1. Refer to Drawing ELS-S6, and replace with the revised sheet.
2. Refer to Drawing HW-S10, and replace with the revised sheet.

A2 – 10 **Modification:** Civil

1. Refer to Drawing C-12, and replace with the revised sheet.
2. Refer to Drawing C-13, and replace with the revised sheet.
3. Refer to Drawing SBR-1 and replace with the revised sheet.
4. Refer to Drawing SBR-2 and replace with the revised sheet.
5. Refer to Drawing AD-2 and replace with the revised sheet.
6. Refer to Drawing FEB-2 and replace with the revised sheet.
7. Refer to Drawing SHF-2 and replace with the revised sheet.
8. Refer to Drawing DT-6 and replace with the revised sheet.

A2 – 11 **Modification:** Electrical & Instrumentation modification:

1. Refer to Drawing P10, and replace with the revised sheet.
2. Refer to Drawing P11, and replace with the revised sheet.
3. Refer to Drawing P12, and replace with the revised sheet.
4. Refer to Drawing P13, and replace with the revised sheet.
5. Refer to Drawing P19, and replace with the revised sheet.
6. Refer to Drawing E1, and replace with the revised sheet.
7. Refer to Drawing EA1, and replace with the revised sheet.
8. Refer to Drawing EL1, and replace with the revised sheet.
9. Refer to Drawing EN5, and replace with the revised sheet.
10. Refer to Drawing EP4, and replace with the revised sheet.
11. Refer to Drawing ES1, and replace with the revised sheet.
12. Refer to Drawing ES6, and replace with the revised sheet.
13. Refer to Drawing ES7, and replace with the revised sheet.
14. Refer to Drawing ES8, and replace with the revised sheet.

<u>Southside</u>

A2 – 12 **Clarification:** Sludge removal from stormwater basin will be paid by the CY from Bid Item #8. Section 33_01_33 has been revised.

A2 – 13 **Clarification:** Plug Valves internal to influent lift station / vault shall be full port.

A2 – 14 **Modification:** Electrical & Instrumentation modification:

1. Refer to Drawing C-9, and replace with the revised sheet.
2. Refer to Drawing SW-4, and replace with the revised sheet.
3. Refer to Drawing SW-4A, and replace with the revised sheet.

A2 – 15 Modification: Electrical & Instrumentation modification:

1. Refer to Drawing E4, and replace with the revised sheet.
2. Refer to Drawing E5, and replace with the revised sheet.
3. Refer to Drawing E6, and replace with the revised sheet.
4. Refer to Drawing E7, and replace with the revised sheet.
5. Refer to Drawing E8, and replace with the revised sheet.
6. Refer to Drawing E11, and replace with the revised sheet.
7. Refer to Drawing E13, and replace with the revised sheet.
8. Refer to Drawing E14, and replace with the revised sheet.
9. Refer to Drawing E15, and replace with the revised sheet.
10. Refer to Drawing E16, and replace with the revised sheet.
11. Refer to Drawing E17, and replace with the revised sheet.
12. Refer to Drawing E22, and replace with the revised sheet.
13. Refer to Drawing M1, and replace with the revised sheet.

Conveyance

A2 – 16 Addition: Connection to existing sewermain noted on sheet 42 (near sta 47+50) shall be made by installing a 30" x 24" D.I. Wye in existing 30" discharge main at connection point so that both lines may be operational during testing/startup. Wye to be removed/plugged upon completion of startup/commissioning.

Should you have any additional questions about the above modifications and their intent, please post to the CivCast website.

SECTION 33_01_33

WASTEWATER LIQUID & SOLIDS REMOVAL & DISPOSAL

PART 1 GENERAL

1.1 SUMMARY

A. Removal and disposal of wastewater liquids and solids from the wastewater treatment facilities.

B. Waste sludge handling & disposal to be removed from the following locations:
   1. Southside Drying Beds prior to beginning initial demolition for Southside Improvements (to be included in bid item for "Demolition (Initial)")
   2. Northside Drying Beds prior to beginning initial demolition for Southside Improvements (to be included in bid item for "Demolition (Initial)")
   3. Southside Stormwater Pond prior to beginning stormwater pond improvements (to be paid from bid item "Waste Sludge Handling & Disposal from Existing Treatment Units Prior to Final Demolition (Northisde & Southside).")
   4. Northside existing treatment units prior to beginning final demolition (to be paid from bid item "Waste Sludge Handling & Disposal from Existing Treatment Units Prior to Final Demolition (Northisde & Southside).")
   5. Southside existing treatment units prior to beginning demolition (to be paid from bid item "Waste Sludge Handling & Disposal from Existing Treatment Units Prior to Final Demolition (Northisde & Southside).")

C. Quantity and character of sludge will vary from location to location and bid price should per for waste sludge handling should be an average price for overall quantity.

D. It is the contractor's responsibility to verify the total amounts in each basin prior to bid.

E. No adjustment in price or unit price will be made based on actual quantities.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 02_41_00 Demolition

C. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 DEFINITIONS

A. Process Sludge: This material is the liquid volume of existing tankage and mixture of process water, mixed liquor, organic settled solids and sludge that will be transferred by the Contractor to another treatment basin as approved by the Owner. **The transfer of process sludge will be required prior to complete construction activities (demolition and rehabilitation of Southside stormwater pond.)**

B. Waste Sludge: This material includes an undetermined volume and mixture of grit, inorganic settled solids and sludge that will be removed and disposed by the Contractor. **The disposal of waste sludge will be required to complete construction activities (demolition and rehabilitation of Southside stormwater pond.)**

C. Sludge Management Plan (SMP): A plan for removing, processing, treating, storing, transporting, and disposing of mixed liquor, settled solids, partially digested sludge, and sludge in addition to soils intermixed with the various types of sludge.

D. Sludge Disposal / Disposition Plan (SDP): A plan for sludge removed from the treatment facility and disposed of in a landfill.

E. Added Water: This water is added by the Contractor to aide in the removal of, cleaning of, and transport of the existing solids to be removed from the wastewater facilities and disposed of off-site. The added water is the sole responsibility of the Contractor. The volume of added water is not included in the specified volumes of the bid quantities of material to be removed from the wastewater facilities. The Contractor is responsible for all effort and costs required to provide, use, transport, and dispose of added water used in the tasks associated with liquid and solids removal. The Contractor shall include all costs for added water in the base bid quantity prices and the Bid Form Unit Prices for Sludge Removal. The Contractor's use of added water shall not be grounds for a scope change nor a contract change.

F. Sludge Removal: Construction activities to remove mixed liquor, settled solids, partially digested sludge, and sludge from any wastewater treatment facility in an effort to gain access for subsequent construction activities and/or cleaning of a facility to facilitate inspection, repair, demolition, and/or other construction activities as required by the Contract Documents.

G. Treatment Basin: Structures, both existing and new, whose primary function is to hold, treat and/or process wastewater, wastewater solids, and sludge.

H. Project Locations: Facilities from which sludge is to be removed.

1.5 SCHEDULING & SEQUENCING

A. Conduct sludge removal only after schedule has been approved by the Owner and the Contractor has submitted SMP or SDP and received written approval of same from ODEQ Contractor, with Owner's approval, may make use of existing SMP/SDP in place. Coordinate with Owner prior to bid. Sludge removal schedule and sequencing must allow for continued operation of the facilities. If land application is used for disposal, apply sludge only after adequate erosion and sediment controls are in place.

1.6 MEASUREMENT & PAYMENT

A. Process Sludge Handling:
   1. Measurement: Will not be measured. It is considered to the be the full volume of any tankage that is required to be drained to execute construction activities (demolition and rehabilitation of Southside stormwater pond.)
   2. Payment is subsidiary to Demolition. Payment shall be full compensation for the following: equipment, labor, any added water, gas/fuel, sludge and soil testing, spill clean-up, and temporary pumping and piping. Contractor is responsible for all efforts and costs associated with procuring, transport, and final disposal of any added water.

B. Waste Sludge Handling and Disposal for Initial Demolition:
   1. Will not be measured for payment and shall be included in the price bid for demolition.

C. Waste Sludge Handling and Disposal for Final Demolition:
   1. Measurement: The units scheduled for demolition or rehabilitation will be drained of Process Sludge to the minimum level practical. Prior to removal of any Waste Sludge, the Owner, Engineer, and Contractor will agree on that the remaining sludge is of a nature that cannot be processed by the treatment plant. Upon agreement the sludge depth will be measured at each corner and at least one point in the center of the basin. The depth measurements along with the basin plan view area will used to calculate cubic yards of Waste Sludge to be disposed of. No payment will be made for Added Water.
   2. Payment: Payment for sludge disposal will be by the cubic yard of sludge disposed at the Bid Price listed in the Bid Proposal. The Bid Item will be full compensation for removal of waste sludge, dewatering, hauling, landfill tipping fees, permitting, tools, labor and any other incidentals required to complete the work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 GENERAL

A. The Contractor with coordination from the Owner will be responsible for transferring Process Sludge from one basin to another.

B. Contractor is responsible for removal, handling and disposal of all Waste Sludge, including the material resulting from the tanks' cleaning.

C. Remove Waste Sludge from the existing basins within the limits shown or specified and dispose of the Waste Sludge in accordance with a ODEQ approved SMP or SDP. The Contractor shall also be responsible for removing and handling any waste sludge from the new basins in accordance with an ODEQ approved SMP or SDP as required for his construction activities within these new basins.

D. Contractor is responsible for all expenses related to Process Sludge removal and transfer, which shall be covered under the base bid.

E. Contractor is responsible for maintaining and protecting all roads, drives, dikes, equipment, structures, etc during sludge removal, processing, land application, hauling, and disposal and shall repair any damaged as a result of their work.

F. The Contractor will be required to keep a Daily Record and a Project Record, of the volume of liquid biosolids land-applied each day. The Daily Record will need to be provided to the Project Manager, or his designee, at the end of each workday. The Project Record will need to be provided to the Owner, or designee, at the end of the project.

G. The Contractor will communicate daily with the Engineer to determine which land application site will be used. This discussion is also designed to ensure that the Contractor does not over apply biosolids to any approved application site.

H. The Contractor will be responsible for biosolids sampling, sample preservation, sample delivery, and storage in accordance with methods developed by the City of Shawnee Wastewater Treatment Plant Laboratory Staff or standard practice is no methods have been developed.

I. The Contractor is required to maintain a cooperative and courteous relationship with the landowner while delivering and land-applying sludge, grit, and biosolids. Care shall be taken to leave the fields and roadway in reasonable condition upon project completion.

3.2 PROJECT LOCATION

A. As follows, but not to extend beyond Project limits.
   1. Northside
      a. All existing units
      b. All piping that requires wastewater and sludge removal
      c. All other treatment plant facilities that require dewatering and cleaning to perform the work.
   2. Southside
      a. All existing units
      b. Existing stormwater pond
      c. All piping that requires wastewater and sludge removal
      d. All other treatment plant facilities that require dewatering and cleaning to perform the work.

3.3 TREATMENT BASIN CLEANING

A. Transfer Process Sludge to another basin designated by the Owner and take measurements of Waste Sludge In-Situ prior to commencing cleaning activities.

B. Remove sludge from the Treatment Basins within limits or as specified or directed.

3.4 EQUIPMENT

A. Provide necessary equipment for Process Sludge transfer from on basin to another Owner designated basin.

B. Provide necessary equipment for Waste Sludge removal, transport from the facility to the disposallocation, and final application or disposal.

C. Provide necessary equipment for added water, procurement, transport from the facility to thedisposal location, and final application or disposal.

3.5 DISPOSAL PERMITTING

A. Contractor will be responsible for registration, authorization, and/or permitting of the land application with the appropriate regulatory agencies and shall pay the related regulatory fees.

B. Contractor will maintain all chain of custody forms and provide documentation of all sludgevolumes land applied and the application sites.

3.6 TESTING

A. Contractor will be responsible for obtaining all sludge and soil samples and their required labanalyses for permitting.

B. Contractor will pay for the lab analysis and will include such lab analysis expenses with as part ofthe Work.

3.7 DISPOSAL

A. Apply the sludge and/or added water for beneficial use as fertilizer/soil amendment or dispose ofthe material using a disposal method approved by the appropriate permitting agency.

B. When sludge application is via the subsoil injection method, such application shall be accordingto sound agronomic rates.

C. Contractor is responsible for determining application rates based on cover crops and analyticaltesting of the sludge.

D. Contractor may remove and separately dispose of oil/grease from the sludge prior to land application.

E. Contractor is responsible for providing commercially reasonable handling of sludge once it hasbeen collected, including cleanup of any spills.

F. Contractor is responsible for meeting the dewatering requirements of landfill disposal.

3.8 RECORD KEEPING

A. Maintain records of sludge application and submit records to Engineer, Owner, and regulatingagencies, as required by this specification and any related permits.

3.9 BIDDING QUANTITIES

A. Process Sludge Removal
   1. Will not be measured for payment and will be included in the price bid for demolition.

B. Waste Sludge (initial demolition)
   1. Will not be measure for payment and will be included in the price bid for demolition.

C. Waste Sludge Removal (final demolition)
   1. Contractor is responsible to remove and dispose of the waste sludge volumes listed in the bid proposal from the designated structures to be demolished.
   2. The volume listed is for reference only, payment will be based on the total quantity of Waste Sludge removed from all facilities. No additional payment will be made if quantities removed exceed the estimated quantity listed for any individual facility unless the total quantity is exceeded (both facilities.) If the total quantity removed meets the total estimated, sludge removal will stop until the Owner and Contractor agree to contract modification to handle the remaining Waste Sludge.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK FOR DOUBLE SIDED PRINTING

SECTION 43_23_31.35

NON-POTABLE WATER PUMPS

PART 1 GENERAL

1.1 SUMMARY

A. This specification covers the work necessary to furnish and install non-potable water pumps as specified herein and as shown on the plans
   1. Northside WWTP
      a. Three (3) (one as shelf spare)
      b. 200 gpm @ 207'
   2. Spare Parts
      a. One (1) shelf spare pump

B. Pumps and all associated components as listed above shall be of the same Manufacturer to obtain standardization of performance, operation, spare parts, maintenance and Manufacturer's services.

C. Supplier / manufacturer to review and match requirements of Belt Filter Press. Those requirements supersede any conflicting information provided herein (including pump sizing.)

D. All listed iron and steel products used in this project must be produced in the United States. The term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. The deminimis and minor components waiver apply to this contract for minor components.

1.2 RELATED SECTIONS

A. Section 01_00_01 Basic Requirements

B. Section 01_33_01 General Submittal Requirements

C. Section 01_33_02 Pre-bid Equipment Submittal Requirements

D. The Contract Documents are a complete unit and complementary to each other. The individual Specification sections and other Contract Documents do not contain all cross references to "related work" or "related sections." It is the Contractor's responsibility to review the complete Contract Documents in order to properly scope, schedule and coordinate the work of any/all subcontractors, suppliers, and others on this project. Anything called out in one location of the Contract Documents is binding as if it were called out in all sections of the Contract Documents.

1.3 SUBMITTALS

A. Submittals for products and miscellaneous items in this specification section shall be submitted in accordance with Section 01_33_01 General Submittal Requirements and related submittal sections and provisions of the Contract Documents.

1.4 REFERENCES

A. The Contractor and/or Manufacturer shall follow the standards listed below, except as otherwise specified herein. The latest revision or edition in effect at the time of bid opening shall be utilized.

1.5 DELIVERY, STORAGE & HANDLING

A. Equipment shall be delivered to the jobsite completely factory assembled. Individual equipment components shall be crated in structurally adequate packing containers to prevent damage during shipping, facilitate ease of handling and to provide suitable protection from weather for extended storage at the jobsite prior to installation. Packing containers shall be permanently labeled with appropriate equipment identification, shipping address and return address and packing list shall be provided with equipment at time of delivery.

B. Any electrical motors and components shall be kept thoroughly dry at all times and shall be stored indoors. Equipment storage shall be protected and maintained in accordance with the manufacturer's recommendations. Equipment shall not be stored directly on the ground.

C. Contractor shall utilize equipment and tools of adequate size suitable for unloading, transporting, storing and supporting the equipment during installation and in accordance with manufacturers recommendation. Caution shall be employed to prevent equipment damage resulting from abrupt contact with other materials or equipment.

1.6 WARRANTY

A. The manufacturer shall warrant the equipment to be of quality construction, free from defects in materials and workmanship. The warranty shall become effective upon acceptance of the project by the Owner (after completion of final inspection.)

B. The equipment, apparatus, and parts furnished shall be warranted from a period of one (1) year, excepting only those items that are normally consumed in service, such as oil, grease, gaskets, o-rings, etc. The manufacturer shall be solely responsible for the warranty of the equipment and all components.

C. Upon request from the Engineer and/or the Owner, the manufacturer shall demonstrate proof of financial responsibility with respect to performance and delivery date. In addition, the manufacturer shall provide proof of evidence of facilities, equipment, and skills required to produce the equipment specified herein and provide technical service and replacement parts.

D. Components failing to perform as specified by the Engineer, or as represented by the manufacturer, or proven defective in service during the warranty period, shall be replaced, repaired, or satisfactorily modified by the manufacturer without cost of kind to the Owner.

E. It is not intended the manufacturer assume liability for consequential damages or contingent liabilities arising out of failure of any product or parts thereof to operate properly, however caused by or resulting from or arising out of defects in design or manufacture, delays in delivery, replacement, or otherwise.

PART 2 PRODUCTS

2.1 DESCRIPTION

A. Quantity to be Furnished:
1. Non-Potable Supply Pumps - Three (3) (one as shelf spare)

B. Dimensional and Design Information
1. Non-Potable Water Supply Pump

a.	Liquid Pumped	- Final Effluent
b.	Design Flow Rate - gallons / minute	- 200
c.	Total Head Required - ft.(design)	- 207’
d.	Motor - Horsepower (maximum)	- TBD based on flow/head
e.	Motor Service Factor	- 1.15
f.	Motor Enclosure Type	- WP1
g.	Motor Starting Method	- VFD
h.	Motor Ambient Operating Temperature	- 40 C
i.	Electrical Power Volt/Phase/Hz	- 460/3/60
j.	Pump Speed - RPM (maximum)	- 3500
k.	Discharge Size - inches (minimum)	- 6
l.	Discharge Type - ANSI Flange	- Flanged
m.	Casing Working Pressure-PSI(minimum)	- 125

C. Factory Painting
1. Pump, coupling guard and support base shall be prime painted with system compatible with finish coating system specified in Coating Section of these specifications. The motor shall be finished painted with the Manufacturer's standard enamel finish coating and furnished with adequate touch-up paint to repair field damages.

2.2 MATERIALS

A. Non-Potable Water Supply
1. Non-Potable Water Supply
2. Suction Manifold or Bell - A48 Class 30 Cast Iron
3. Bowl - A48 Class 30 Cast Iron
4. Impeller - B584 C83600 Bronze
5. Bowl Wear Ring - B505 C93200 Bronze
6. Bowl Bearings - B505 C93200 Bronze
7. Bowl Sand Collar - B505 C93200 Bronze
8. Impeller Wear Ring - B505 C93200 Bronze

9. Bowl Flange Cap Screw or Stud and Nuts- 303 stainless steel
10. Pump Shaft - A582 - 416 stainless steel
11. Column Pipe - ASTM A 53, grade A, schedule 40 steel pipe
12. Column Line Shafting - AISI 1045 steel
13. Column Coupling - A53 Grade b Steel
14. Column Top Flange Cap Screws - 303 stainless steel
15. Top Bowl Bearing - B505 C93200 Bronze
16. Intermediate Bowl Bearing - B505 C93200 Bronze
17. Suction Bearing - B505 C93200 Bronze
18. Connector Bearing - B505 C93200 Bronze
19. Column Shaft Bearing Retainer Ring - 303 stainless steel
20. Discharge Head – Carbon Steel
21. Packing Container - Class 30 Cast Iron
22. Packing Washer - Brass
23. Packing - Graphited Rope
24. Packing Gland - Cadmium plated Class 30 cast iron
25. Packing Gland T-Bolt - 316 Stainless Steel
26. Packing Gland Clamp - 302 Stainless Steel
27. Packing Gland Nut - 316 Stainless Steel
28. Packing Gland Gasket - Vellumoid
29. Packing Gland Cap Screw - Steel
30. Top Shaft – AISI 1045 Steel
31. Top Shaft Seal Ring - Neoprene
32. Top Shaft Coupling - 410 Stainless Steel
33. Sole Plate - Carbon Steel or CI
34. Sole Plate Gasket - Vellumoid
35. Sole Plate Cap Screws - Carbon Steel

2.3 COMPONENTS

A. Non-Potable Water Supply Pumps

1. The pump bowl assembly shall be of close grained cast iron having a minimum tensile strength of 30,000 pounds per square inch, free from blow holes, sand holes, and all other faults; accurately machined and fitted to close dimensions.
2. The impeller shaft shall be of stainless steel and shall be supported by bronze or neoprene bearings located on both sides of each impeller. The impeller shall be of the enclosed type and shall be of bronze, of heavy construction, accurately fitted and balanced. The impeller shall be locked securely to the impeller shaft with a tapered lock bushing. The bowls and impellers shall be designed with smooth passage to assure efficient operation. The impellers shall be adjustable by means of a top shaft adjusting nut.
3. The pump column pipe shall be furnished in interchangeable sections not over 5 feet in length, and shall be threaded.
4. The line shafting shall be of ample size to operate the pumps without distortion or vibration. The shafts shall be furnished in interchangeable sections not over 5 feet in length, and shall be coupled with extra-long threaded steel couplings machined from solid bar steel. The shaft shall be fitted with stainless steel replaceable sleeves. The column assembly shall have bronze guides fitted into the coupling and secured in place with butted pipe ends. Each guide shall contain a water lubricated rubber bearing designed for vertical turbine pump service.

5. The discharge head shall be the above ground discharge type with machined mounting surface designed for standard NEMA 1 flange motor, the discharge flange shall be furnished with 125-pound ANSI drilling the discharge head shall be fitted with a packing container designed for lubrication with the pumped liquid. A threaded connection shall be provided to allow the lubrication liquid collected in the interior ring of the discharge head to be piped to a local drain. A seal ring shall provided to prevent the lubrication liquid from leakage up onto the motor bearings. Hand hole openings large enough to provide easy access to all adjustable components shall be furnished. Lifting lugs adequately designed to support the entire weight of the pump assembly shall be integrally cast into the discharge head.
6. Sole plate with gasket and cap screws shall be furnished to provide a water tight seal between concrete base and pump and to allow for removal of pump from base without permanently damaging the water tight seal.
7. Drive Motor - The motor shall be the squirrel-cage induction alternating current inverter duty type. The motor nameplate horsepower rating shall not be exceeded at any head capacity point on the pump curve. The motor shall conform to the following:

a.	Synchronous Speed	3600 RPM or as approved
b.	Slip	3 percent maximum at full load
c.	Voltage, phase, & Frequency	460 volts, 3 phase, 60 Hz
d.	Mounting	Vertical, hollow shaft
e.	Enclosure	Weather protected, Type I
f.	Service Factor	1.15
g.	Duty Cycle	Continuous
h.	Ambient Temperature Rating	40 degrees C
i.	Starting Method	VFD
j.	Bearing Lubrication	Manufacturer's standard
k.	Bearing Bio Life	B10 Life-Ave. 25 Years, min 5 Yrs.

PART 3 EXECUTION

3.1 INSTALLATION

A. The general contractor shall assume full responsibility for coordination of the entire project, including verification that all structures, piping, coating systems and equipment components are compatible. The general contractor shall initially operate each equipment system, and shall make all necessary adjustments so that each system is placed in proper operating condition.

B. Equipment and materials utilized for this project must be approved by the Engineer prior to installation. Approval for installation or incorporation in this project will be made only after submittal of manufacturer's shop and installation drawings, test results or other data as required and as specified herein.

C. Installation of equipment shall be in full conformance with the manufacturer shop drawings and requirements as approved by the Engineer. Wherever a conflict arises between manufacturer's instructions and the contract documents, the contractor shall follow the Engineer's decision at no additional cost to the owner.

3.2 WORKMANSHIP

A. Handle carefully and protect the pump and appurtenances to avoid damage. If the pump and column are laid down, support them with blocks to prevent damage.

B. Mount pump and driver on suction barrel as shown on the Drawings. The size of the suction barrel shall be in accordance with pump manufacturer's recommendations.

C. Adjust pump assembly such that the driving unit is properly aligned, plumb, and level with the driven unit and the interconnecting shaft and coupling. Flexible coupling shall not be considered to compensate for misalignment. Install all equipment in accordance with manufactures instructions.

D. Any evidence of pump or driver misalignment, noisy operation, or other signs of improper setting shall be corrected by the Contractor. Care during storage, installation and lubrication shall be in strict accordance with the manufacturer's recommendations.

3.3 ANCHORAGE

A. Anchor bolts shall be furnished for each item of equipment. Anchor bolts, together with templates or setting drawings, shall be delivered sufficiently early to permit setting the anchor bolts when the structural concrete is placed. Two nuts shall be furnished for each bolt. Anchor bolts shall be in place prior to concrete pour.

B. Types of anchorage:
   1. All cast-in-place anchorage shall be 304 stainless steel.
   2. Drill-in anchorage shall be epoxy adhesive type and shall be used only if recommended and allowed by manufacturer.

3.4 LUBRICATION

A. Equipment shall be adequately lubricated by a system which does not require more than once-a-week operator attention, does not require attention during start-up or shutdown and does not waste lubricants.

B. The contractor shall provide lubricants of the type recommended by the equipment manufacturer in sufficient quantity to fill all lubricant reservoirs and to replace all consumption during equipment initial operation, performance testing and operation prior to acceptance of equipment by the owner.

3.5 FIELD PAINTING

A. Painting shall be in accordance with the high performance coating section of these specifications. All ferrous materials which are not non-corrosive shall be painted with epoxy paint systems. Items to be painted which will be exposed to submerged or wet conditions shall be painted with the coal-tar epoxy paint system. Paint systems in contact with water to be used for potable public water supply systems shall be approved by the FDA for this application.

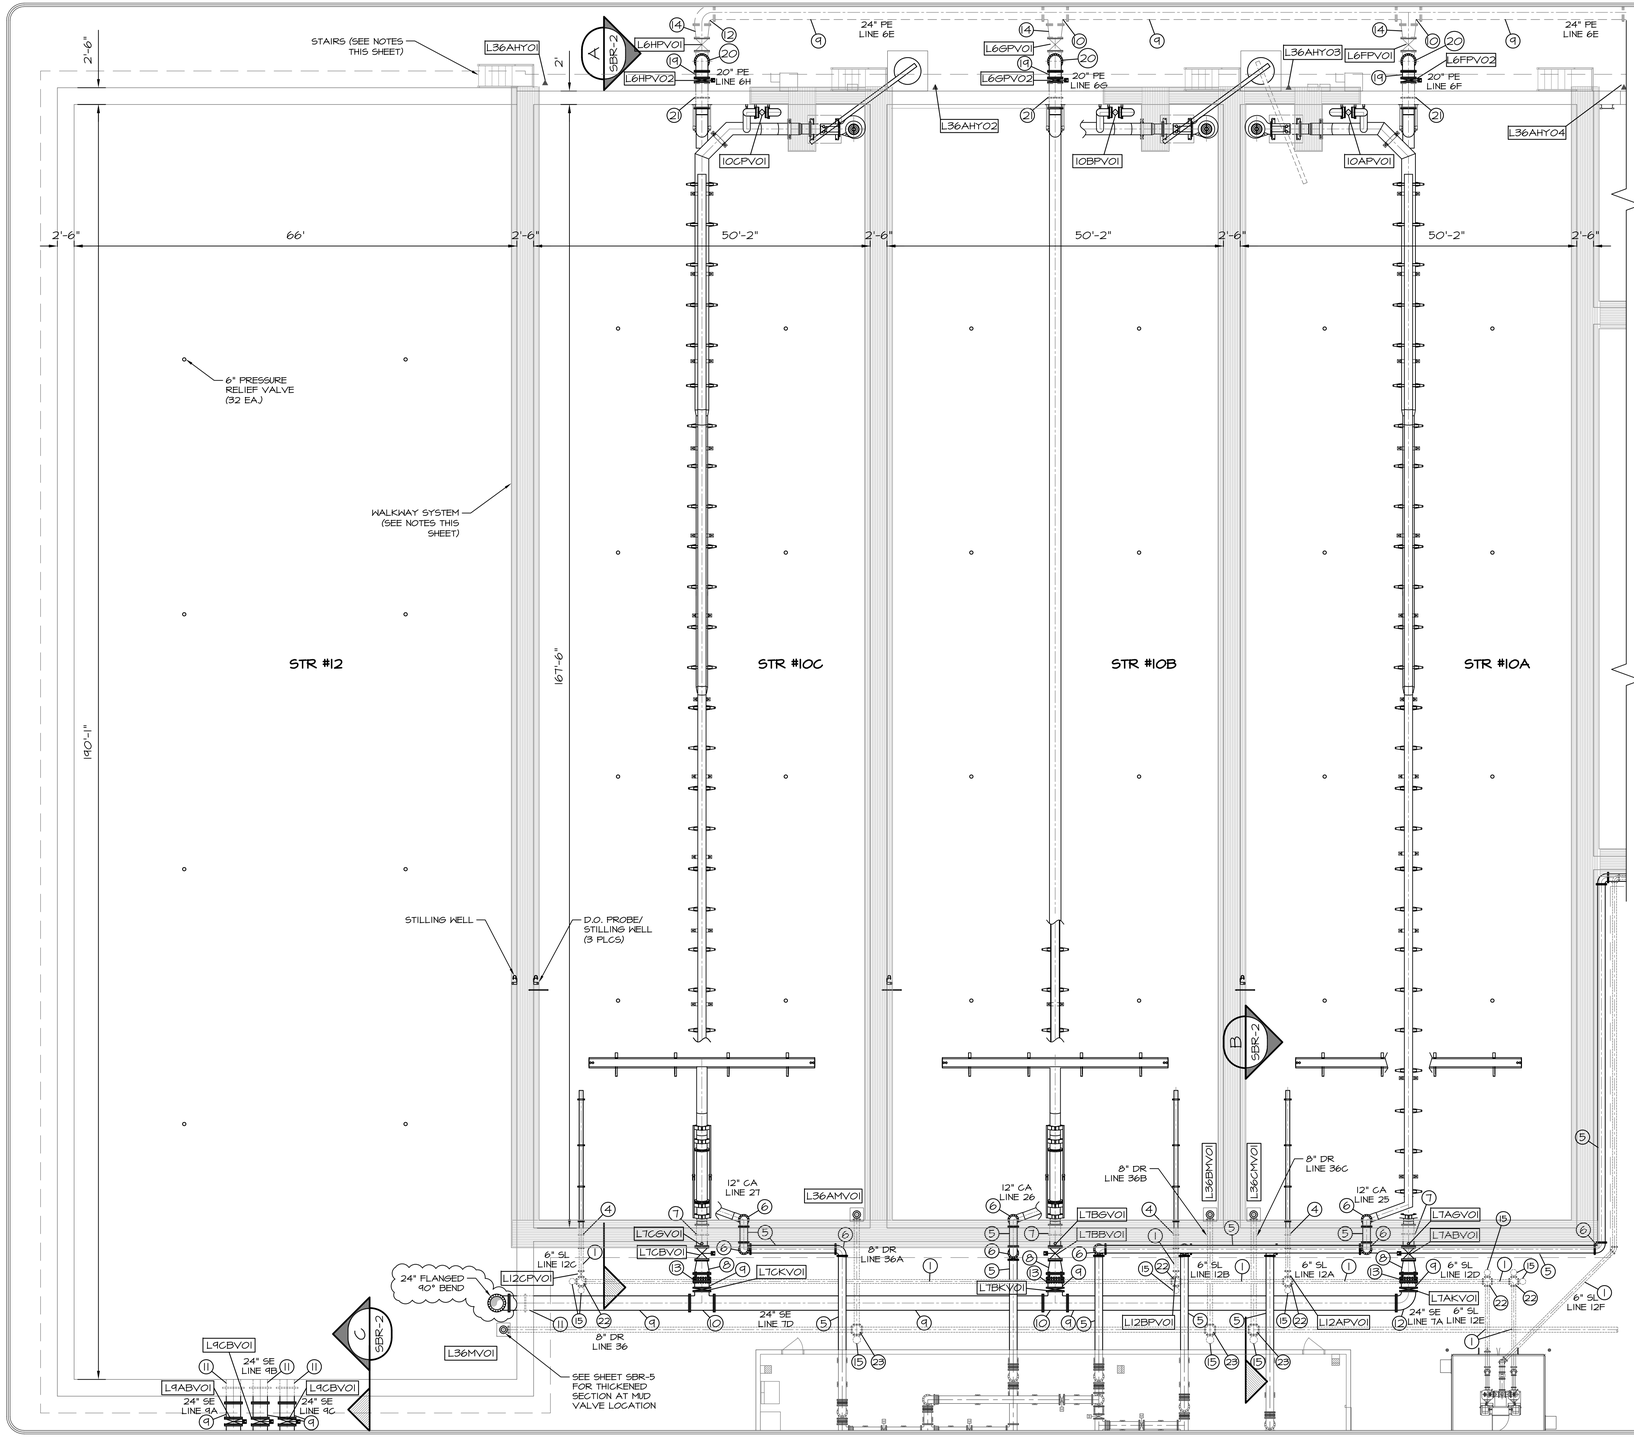
B. Minor defects in the hot-dipped galvanized coating caused by shipping, handling or installation shall be repaired after equipment installation. The defects shall be thoroughly

cleaned and wire-brushed to remove all foreign substances, wiped clean with a damp rag, thoroughly dried, and coated with at least 6 mils of zinc-rich compound.

3.6 MANUFACTURER'S SERVICES

A. The Contractor shall require the manufacturer to furnish the services of a qualified field engineer to perform the following functions in the designated periods of time. These services are to be performed at the jobsite.
   1. Check-out of installation, start-up of equipment and initial operator instruction. This service shall take place after all mechanical equipment associated with the control system is installed and mechanically operable.
   2. After equipment is fully operational, and before Owner will assume responsibility for the operation of the equipment, the equipment manufacturer's operation specialists shall instruct the Owner's operating personnel in the care, maintenance and proper operation of the equipment.

B. Field Test
   1. Prior to plant startup, all equipment described herein shall be inspected for proper alignment, quiet operation, proper connections, and satisfactory performance by means of a functional test.
   2. The pump and motor assembly shall be field tested to verify vibration is not in excess of the limits stated in the latest revision of Hydraulic Institute and NEMA MG 1.
   3. The pumps, motors, and controls shall be given an operational test in accordance with the standards of the Hydraulic Institute. Recordings of the test shall substantiate the correct performance of the equipment at the design head, capacity, suction lift, speed and horsepower as herein specified.
   4. Units failing to meet the Specifications and to the satisfaction of the Owner must be more accurately tested in accordance with Hydraulic Institute Standards. If the pump fails the second test, the unit will be rejected, and the Contractor shall remove the unit that is rejected, and the Contractor shall furnish a unit that will perform as specified.



C. Instructions for installation of the pump and related appurtenances shall be written and furnished by the manufacturer. Contractor shall follow these instructions in installing the equipment.

D. Operation and maintenance materials
   1. The pump manufacturer shall be responsible for supplying written instruction, which shall be sufficiently comprehensive to enable the operator to operate and maintain the pump and all equipment supplied by the manufacturer. Instructions shall assume that the operator is familiar with pumps, motors, piping, valves, and controls, but that he has not previously operated and/or maintained the exact equipment supplied.
   2. The instruction shall be prepared as a system manual applicable solely to the pump and equipment supplied by the manufacturer to these specifications, and shall include those devices and equipment supplied by him.
   3. Operation and maintenance instruction shall be specific to the equipment supplied in accordance with these specifications. Instruction manuals applicable to many different configurations and pump stations, and which require the operator to selectively read portions of the instructions shall not be acceptable.

E. All costs for the above manufacturer functions including travel, lodging, meals, and incidental shall be considered to have been included in the Contractor's lump sum bid price.

END OF SECTION

HANDRAIL/WALKWAY NOTES:

1. COMPLETE HANDRAIL SYSTEM (INCLUDING STAIRS AND PUMP MAINTENANCE PLATFORM) TO BE FURNISHED AS A SYSTEM (INCLUDING PRE-EQ BASIN) FROM A SINGLE SUPPLIER. COMPLETE SYSTEM TO BE STAMPED BY AND OKLAHOMA STRUCTURAL ENGINEER (S.E.).
2. COORDINATE WITH PUMP SUPPLIER TO VERIFY CLEARANCE REQUIRED FOR MOTIVE PUMP REMOVAL.
3. STAIRS TO BE AS CLOSE AS PRACTICAL TO SBR WALL.

NOTES:
1. CONTRACTOR TO PROVIDE A ¾" NIPPLE AND GLOBE VALVE BETWEEN OUTSIDE OF DECANTER SPOOL PENETRATION AND EFFLUENT CONTROL VALVE TO SERVE AS A FILL PORT TO SINK DECANTER AT START-UP (SEE SBR-1).
2. DECANTER OUTLET PIPING MUST BE DESIGNED WITH A SUBMERGED OUTLET OR TRAPS TO PREVENT AIR FROM ENTERING THE DECANTER.
3. ALL PIPE ELEVATIONS SHOWN ARE CENTER OF PIPE UNLESS OTHERWISE INDICATED.
4. ALL FRP PIPE AND FITTINGS SHALL BE 75 PSI MIN. PRESSURE RATING.
5. ALL FLANGES FURNISHED BY SUPPLIER SHALL MEET OUTSIDE DIAMETER, BOLT CIRCLE DIAMETER, NUMBER AND SIZE OF HOLES PER ANSI B.16.1 125 LB. CAST IRON, AND ANSI B16.5 150 LB. STEEL FLANGE SPECIFICATIONS.
6. GASKETS PROVIDED BY SUPPLIER SHALL BE 3/16" THICK, FULL FACE BUNA-N RUBBER, WITH A DUROMETER HARDNESS OF 40-50.
7. COORDINATE DECANTER REST ELEVATION W/SUPPLIER.
8. COORDINATE SBR INTERNAL COMPONENTS WITH SUPPLIER TO ESTABLISH SCOPE OF SUPPLY AND VENDER/CONTRACTOR RESPONSIBILITIES.
9. INSTALL 1-1/2" SAMPLE WITH VALVE (ONE FOR EACH SBR BASIN) AND FREEZE PROTECT. SAMPLE LINE TO BE INSTALLED AT ELEV. 971.00' AND ROUTE TO 36".

NOTE:

1. MANHOLE M-3, MH-7, MH-8, MH-9, MH-10, MH-11, SHALL HAVE SLOTTED LIDS TO ALLOW FOR VENTILATION.
2. LINE 14-C TO EXTEND SLIGHTLY INTO MH-6 AND CONTAIN AN 8" FLAP VALVE.
3. DB-6 TO BE PRE-ENGINEERED (S.E.) 4'x4' CONCRETE VAULT W/TRAFFIC RATED GRATED TOP. SEE PROFILE FOR LINE ELEVATIONS. SUBMITTAL REQUIRED.
4. SOME VALVES SHOWN ON OTHER DRAWINGS HAVE BEEN OMITTED FOR CLARITY.

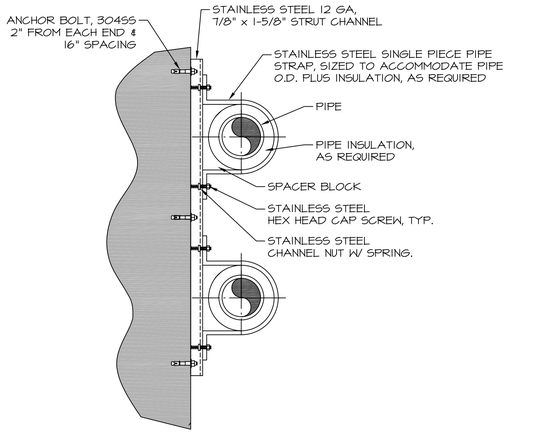
SELF SUPPORTED HOSE RACK
N.T.S

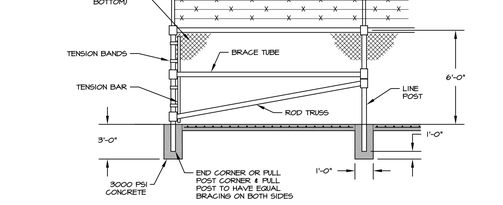
NOTES:

1. PROVIDE HOSE RACK AT WALL & YARD HYDRANTS UNLESS A HOSE REEL OR WALL MOUNTED UTILITY STATION IS INDICATED ON THE DRAWINGS.
2. LESS POST & CONC. FOR WALL MT INSTALLATION
3. MATERIALS TO BE ALUMINUM OR OTHER CORROSION RESISTANT MATERIAL AS APPROVED BY ENGINEER



ADJUSTABLE FLOOR MOUNTED PIPE SUPPORT
N.T.S

NOTES:



1. PROVIDE HALF ROUND RIGID INSULATION & INSULATION PROTECTION SHIELD WHERE PIPING IS INSULATED
2. PROVIDE NEOPRENE WAFFLE INSULATION PAD, SIMILAR TO MASON TYPE "W" OR KORFUND 40, UNDER SUPPORT FOOT WHEN PIPING IS ISOLATED OR SUPPORT IS ADJACENT TO MECHANICAL EQUIUPMENT.
3. FOR BASE, HEIGHT & FLANGE DIMENSIONS, SEE TABLE.

CEILING MOUNT		

ABC — MULTI POLE RECEPTACLE. REFER TO RECEPTACLE ABBREVIATION LEGEND FOR DETAILS.

XYZ — SIMPLEX RECEPTACLE. REFER TO RECEPTACLE ABBREVIATION LEGEND FOR DETAILS.

SPECIALTY RECEPTACLES WITH DESIGNATION "XYZ", "ABC", etc. REFER TO RECEPTACLE ABBREVIATION LEGEND BELOW.

DSP	DISPOSAL
REF	DEDICATED RECEPTACLE FOR REFRIGERATOR

ROOM CONTROLLERS / POWER PACKS

- P XX — SPECIALTY POWER PACK WITH DESIGNATION "XX", REFER TO ABBREVIATION LEGEND BELOW.
- R XX — SPECIALTY ROOM CONTROLLER WITH DESIGNATION "XX", REFER TO ABBREVIATION LEGEND BELOW.

WA	WATTSTOPPER LRMC-100: SINGLE RELAY ROOM CONTROLLER

ABBREVIATION OR SYMBOL / DESCRIPTION

SWITCHES

- S — SINGLE POLE LIGHT SWITCH
- S_M — PADLOCKABLE HP RATED SWITCH
- S_X — SPECIALTY SWITCH. FOR "X" DESIGNATION, SEE LIGHTING SWITCH ABBREVIATION SCHEDULE BELOW.
- S_3 — 3-WAY SWITCH
- S_{WA} — WATTSTOPPER LMSW-101 SINGLE BUTTON DIGITAL SWITCH
- S_{WJ} — WATTSTOPPER PW-101: PASSIVE INFRARED WALL OCCUPANCY SENSOR SWITCH

COMMON ABBREVIATIONS

A	AMP
AFF	ABOVE FINISHED FLOOR
AIC	AMPS INTERRUPTING CAPACITY
AUX	AUXILIARY
BKR	BREAKER
C	CONDUIT
CBA	COLOR BY ARCHITECT
CGRS	PVC COATED GALVANIZED RIGID STEEL
CKT	CIRCUIT
CP	CONTROL PANEL
CPT	CONTROL POWER TRANSFORMER
EC	EMPTY OR EMBEDDED CONDUIT
EF	EXHAUST FAN
EG	EQUIPMENT GROUND
EL	ELEVATION
EMT	ELECTRICAL METALLIC TUBING
EWC	ELECTRIC WATER COOLER
FA	FIRE ALARM
FACP	FIRE ALARM CONTROL PANEL
FC	FAN COIL
FLR	FLOOR
FOC	FIBER OPTIC CABLE
FT	FEET
GFCI	GROUND FAULT CIRCUIT INTERRUPTER
GND	GROUND
GRS	GALVANIZED RIGID STEEL
HOA	HAND-OFF-AUTO
HP	HORSEPOWER OR HEAT PUMP
JB	JUNCTION BOX
kVA	KILOVOLT-AMPERE
kVAR	KILOVOLT-AMPERE, REACTIVE
kW	KILOWATT
L.O.	LUGS ONLY
LSIG	ADJUSTABLE TRIP UNIT WITH LONG TIME, SHORT TIME, INSTANTANEOUS, AND GROUND FAULT SETTINGS
LV	LOW VOLTAGE
MCB	MAIN CIRCUIT BREAKER
MCC	MOTOR CONTROL CENTER
MCP	MOTOR CIRCUIT PROTECTOR
MFR	MANUFACTURER
MIN	MINIMUM
MLO	MAIN LUG ONLY
MTD	MOUNTED
NFDS	NON-FUSED DISCONNECT SWITCH
NTS	NOT TO SCALE
OC	ON CENTER
OH	OVERHEAD
OL	OVERLOAD
PEC	PHOTO ELECTRIC CELL
PL	PILOT LIGHT
PNL	PANEL
PVC	SCHEDULE 40 POLYVINYL CONDUIT
RA	FIRE ALARM REMOTE ANNUNCIATOR
RECPT	RECEPTACLE
RM	ROOM
SE	SERVICE ENTRANCE
SHT	SHEET
SN	SOLID NEUTRAL
SPD	SURGE PROTECTIVE DEVICE
SW	SWITCH
TEL	TELEPHONE
TYP	TYPICAL
TC	TIME CLOCK
UG	UNDER GROUND
UH	UNIT HEATER
VA	VOLT-AMP
VFD	VARIABLE FREQUENCY DRIVE
W	WATT OR WIRE
WH	WATER HEATER
WM	WATT METER
WP	WEATHERPROOF
XMFR	TRANSFORMER

ABBREVIATION OR SYMBOL / DESCRIPTION

SENSORS

- XX — SPECIALTY CEILING MOUNT SENSOR WITH DESIGNATION "XX", REFER TO ABBREVIATION LEGEND BELOW.
- XX — SPECIALTY CORNER MOUNT SENSOR WITH DESIGNATION "XX", REFER TO ABBREVIATION LEGEND BELOW.

WD	WATTSTOPPER LMDC-100: DIGITAL DUAL TECHNOLOGY CEILING MOUNT

COMMUNICATIONS DEVICES

- I — INTERCOM STATION
- I_M — MASTER INTERCOM STATION
- C — CLOCK
- C_D — CLOCK, DUAL SIDED
- C_{WG} — CLOCK, WITH WIREGUARD
- H — HORN SPEAKER
- H_{WP} — HORN SPEAKER - WEATHERPROOF
- P — PAGING SPEAKER
- C — CAMERA WITH PAN, TILT, & ZOOM
- C_{WP} — CAMERA - WEATHERPROOF WITH PAN, TILT, & ZOOM
- J_V J_A — SPECIAL SYSTEMS JUNCTION BOX ABOVE CEILING. ROUTE 1" C WITH PULL STRING TO DATA/ELECTRICAL ROOM. (V) VIDEO, (A) ALARM/ACCESS
- A — ACCESS CONTROL - PROVIDE ACCESS CONTROL ROUGH-IN AT DOOR. REFER TO DETAILS FOR ACCESS CONTROL ROUGH-IN REQUIREMENTS.
- D — MAGNETIC DOOR HOLDER
- F — FIRE ALARM PULL STATION
- F — FIRE ALARM COMBINATION HORN/STROBE DEVICE
- S — FIRE ALARM COMBINATION SPEAKER/STROBE DEVICE
- F — FIRE ALARM STROBE DEVICE
- Z Z_C Z_M — FIRE ALARM ZAM DEVICE; IAM (I), CONTROL (C), OR MONITOR MODULE (M)
- S — SMOKE DETECTOR
- H — HEAT DETECTOR
- S_D — DUCT SMOKE DETECTOR
- S_{DA} — DUCT SMOKE DETECTOR WITH AUXILIARY CONTACTS
- TS FS — TAMPER SWITCH / FLOW SWITCH
- ATS — SERVICE ENTRANCE RATED AUTOMATIC TRANSFER SWITCH
- M — MANHOLE, HANDHOLE DESIGNATION REFER TO SCHEDULE.

GENERAL NOTES

1. SOME SYMBOLS OR ABBREVIATIONS MAY APPEAR ON THIS SHEET AND NOT BE UTILIZED ON THE PROJECTS.

WIRE TYPES

- LIGHTING CONTROL CABLING

EQUIPMENT AND CONDUIT LINE TYPES

- FURNISH + INSTALL NEW
- EXISTING
- DEMOLISH
- UNDERGROUND CONNECT TO EXISTING

2 (3#8 + 1#8 + 1#10EG) 3/4" GRS

- CONDUIT TYPE (SEE ABBREVIATIONS) REFER TO SPECIFICATIONS IF NOT SHOWN
- CONDUIT SIZE
- GROUNDED (NEUTRAL) CONDUCTOR, NUMBER AND SIZE
- GROUNDED (NEUTRAL) CONDUCTOR, NUMBER AND SIZE
- PHASE (HOT) CONDUCTOR, NUMBER & SIZE
- NUMBER OF SETS

XX - ## — HOME RUN TO PANEL. LETTER(S) INDICATE NAME OF PANEL, NUMBER(S) INDICATE CIRCUIT NUMBERS.

ONE LINE SYMBOLS

- * — CIRCUIT BREAKER, TRIP RATING SHOWN, 3-POLE UNLESS NOTED.
- * — FUSE, CURRENT LIMITING, RATING AS SHOWN.
- 480V / ** kVA / 208V — TRANSFORMER, RATINGS AS SHOWN.
- M 10 HP — ELECTRIC MOTOR, HORSEPOWER SHOWN.
- * — MOTOR STARTER, SIZE AS SHOWN OR REQUIRED. FVNR UNLESS NOTED.
- SPD — SURGE PROTECTION DEVICE.
- G *KW — GENERATOR
- GROUNDING ROD, 3/4" x 10' MINIMUM, COPPER CLAD.
- VARIABLE FREQUENCY DRIVE.
- ATS-1 200A / 3P /BP — AUTOMATIC TRANSFER SWITCH

MANUFACTURER–DESIGNED EQUIPMENT SYSTEM NOTES:

1. THIS PROJECT INCLUDES THE CONSTRUCTION OF MANUFACTURER–DESIGNED EQUIPMENT SYSTEMS.
2. POWER, SIGNAL AND CONTROL CIRCUITS ARE SHOWN ON THESE DRAWINGS BASED ON SIMILAR MANUFACTURER–DESIGNED EQUIPMENT SYSTEMS.
3. THE FINAL POWER, SIGNAL AND CONTROL CIRCUIT REQUIREMENTS SHALL BE DETERMINED BY THE APPROVED MANUFACTURER.
4. DRAWINGS, SPECIFICATIONS, INSTALLATION MANUALS, AND OTHER REQUIRED DOCUMENTATION SHALL BE PROVIDED BY THE APPROVED MANUFACTURERS AND MAY INCLUDE ADDITIONAL AND/OR ALTERED REQUIREMENTS THAN SHOWN ON THESE DRAWINGS.
5. THE CONTRACTOR SHALL COORDINATE WITH THOSE APPROVED SUBMITTAL DRAWINGS AND PROVIDE ALL REQUIRED LABOR AND MATERIALS NECESSARY FOR A COMPLETE AND ACCEPTED SYSTEM AT NO ADDITIONAL COST TO THE OWNER.

KEYED NOTES:

1. CCTV LOCATION POLE MOUNT. ROUTE (3#12)3/4"C TO 120 VOLT PANEL SCHEDULES.
2. CCTV LOCATION BUILDING MOUNT
3. FURNISH AND INSTALL CIRCUIT 1F20N FROM PANEL IPCL1 TO MAG METER IN VAULT. CONNECT TO 20A/1P CIRCUIT BREAKER. FURNISH AND INSTALL (1ISP16)1"C FROM MAG METER TO PANEL RTU–A.
4. FURNISH AND INSTALL CIRCUIT F20 FROM PANEL HP–1 TO ACTUATED VALVE. CONNECT TO 20A/3P CIRCUIT BREAKER. FURNISH AND INSTALL (8#14)1"C AND (2ISP16)1"C TO PANEL RTU–A.

CABLE LEGEND:

- UTILITY — 3(EMPTY)5"C
- FO* — (12STRAND FIBER OPTIC)2"C
- 4SPARE — 4–SPARE 4"C

GENERAL NOTE:

1. REFER TO CIVIL DRAWING C–8 FOR FINAL LOCATION OF 15KW GENERATOR AT HEADWORKS.

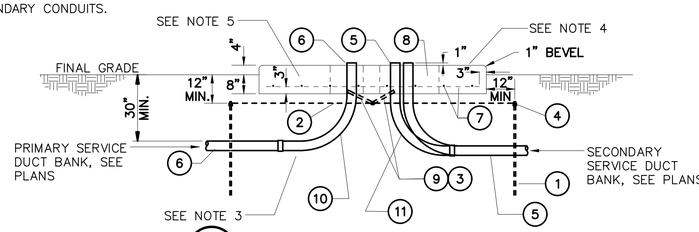
1 — **PREFABRICATED CONCRETE PULL BOX - PLAN SYMBOL** M
SCALE: NONE

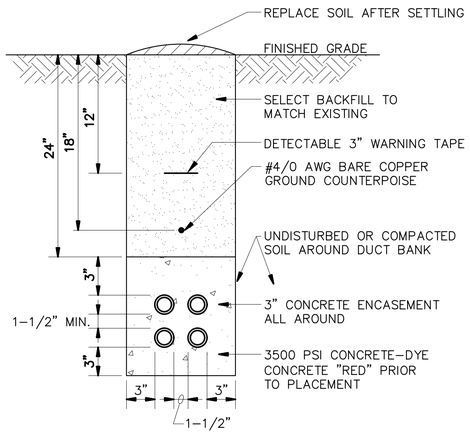


MANHOLE NOTES:

1. SUBMIT LAYOUT OF EACH MANHOLE FOR APPROVAL BY ENGINEER, INDICATING DUCT, CONDUIT AND SPARE STUBOUTS. MANHOLE INTERIOR DIMENSION SIZE SHALL BE AS DETAILED.
2. EXACT LOCATION FOR EACH MANHOLE SHALL BE
3. APPROVED BY THE ENGINEER/OWNER.
4. CABLE BRACKETS SHALL BE A BRACED CHANNEL STRUT WITH INSULATED CABLE CLAMPS.
5. INSTALL CABLE BRACKETS AND PULLING IRONS IN EACH FACE.
6. PROVIDE WATER STOPS AT ALL JOINTS; SPLICE WHERE REQUIRED.
7. PROVIDE 0.006" PLASTIC MEMBRANE VAPOR BARRIER AT BOTTOM; PROVIDE 2 COATS WATERPROOF COATING COLD METHOD. ALLOW TO DRY 24 HOURS BETWEEN EACH COAT AND BACKFILLING.
8. COLOR CODE, TAG, AND IDENTIFY ALL CABLES IN MANHOLE.
9. PROVIDE MINIMUM 5' SLACK CABLE LOOP FOR EACH CABLE.
10. PROVIDE 3' MINIMUM CONDUIT PER CAPPED STUBOUT. PROVIDE CONDUIT BUSHINGS AND WATERTIGHT SEALS FOR
11. ALL DIRECET BURIED CABLES AND COUNTERPOISE ENTERING THE MANHOLE VIA A CONDUIT STUBOUT. PROVIDE SLEEVES FOR 8 WAY EXITS AT MANHOLES.
12. SLEEVES AND STUBOUTS SHALL BE CAPPED WATERTIGHT. BOND AND GROUND COVER AND FRAME TO GROUND ROD
13. USING BRAIDED COPPER GROUND STRAP EQUIVALENT TO #6 AWG COPPER WIRE.

TRANSFORMER PAD KEYED NOTES:

1. INSTALL NEW COPPER CLAD GROUND ROD, 3/4" x 10"-0", TYPICAL OF 4.
2. INSTALL NEW #2/0 BARE COPPER CONDUCTOR (TYPICAL).
3. INSTALL NEW #2 BARE COPPER CONDUCTOR.
4. INSTALL NEW EXOTHERMIC WELD, TYPICAL OF 5.
5. INSTALL NEW SECONDARY CONDUITS, SEE SITE PLAN.
6. INSTALL NEW PRIMARY CONDUITS, SEE SITE PLAN.
7. INSTALL NEW #4 REBAR, 12"O.C. BOTH WAYS.
8. CONSTRUCT NEW PAD USING CONCRETE, 3500 PSI AT 28 DAYS.
9. INSTALL NEW 1" GRSC UNDER PAD FOR GROUND WIRES (TYPICAL).
10. UTILIZE LONG SWEEP 90° BEND PVC CONDUITS ON PRIMARY CONDUITS.
11. UTILIZE LONG SWEEP 90° BEND CONDUITS ON SECONDARY CONDUITS.



2 — **TRANSFORMER PAD DETAIL**
SCALE: NONE

TRANSFORMER PAD NOTES:

1. WHERE POSSIBLE. DO NOT PLACE CONDUIT UNDER THIS SECTION OF FOUNDATION.
2. REINFORCING - #4 BARS 12" O.C. BOTH WAYS.
3. WHEN INSTALLING CONDUIT, DISTURB GROUND IN FOUNDATION AREA AS LITTLE AS POSSIBLE. EXTEND CONDUIT 1" ABOVE FOUNDATION.
4. TOP OF FOUNDATION TO BE SMOOTH AND LEVEL. FINAL GRADE SHALL SLOPE AWAY FROM PAD.
5. CONCRETE SHALL BE 3500 PSI AT 28 DAYS AND 1:2:4 MIXTURE WITH 6 GAL. MAX. WATER CONTENT PER SACK OF CEMENT.
6. CONTRACTOR TO FURNISH 1" CONDUIT UNDER PAD FOR GROUND WIRE.
7. LOCATE CONDUITS UNDER PRIMARY AND SECONDARY BUSHINGS.
8. TRANSFORMER LOCATION TAG SHALL BE ATTACHED TO PAD WITH CONCRETE NAILS OR SHEET METAL SCREWS.
9. TRANSFORMER PAD REQUIRES A MINIMUM 3'-0" CLEARANCE AROUND EACH SIDE AND BACK OF PAD. A 15'-0" CLEARANCE IS REQUIRED ON FRONT SIDE OF PAD.

ELECTRICAL DUCT NOTES:

1. CONTRACTOR SHALL STAKE THE DUCT INSTALLATION IN PLAN AND ELEVATION FOR NEW ELECTRICAL DUCTS TO AVOID EXISTING UTILITIES.
2. CONTRACTOR SHALL ADJUST THE DEPTH OF THE ELECTRICAL DUCTS AS REQUIRED TO MAINTAIN THE MINIMUM COVER REQUIREMENT INDICATED AND AVOID EXISTING UTILITIES.
3. SIMILAR CONSTRUCTION FOR OTHER DUCT SIZES. SEE DUCT BANK SCHEDULE FOR QUANTITY AND SIZES.
4. INSTALL DUCT CONDUIT SUPPORTS AT 5'-0" O.C. MAXIMUM SPACING (TYPICAL ALL DUCTS).
5. OFFSETS AND BENDS OVER 10 DEGREES AND ELBOWS IN PVC CONDUIT RUNS SHALL BE PVC COATED GALVANIZED RIGID STEEL CONDUIT.
6. NO PVC SHALL EMERGE FROM THE GROUND OR CONCRETE SLAB OR ENCASEMENT, PVC SHALL CONVERT TO PVC COATED GALVANIZED RIGID STEEL CONDUIT PRIOR TO ITS EMERGENCE.
7. INSTALL GROUND RODS AT ENDS OF ELECTRICAL DUCT OR CONNECT TO GROUND RING.
8. INSTALL CONDUCTORS AND CABLES AS NOTED ON DRAWING. INSTALL PULLWIRE IN ALL SPARE DUCTS.
9. MINIMUM COVER REQUIREMENT FOR DUCT BANKS UNDER ROADS, DRIVEWAYS AND PARKING LOTS SHALL BE 24".
10. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL SECONDARY SERVICE DUCT BANKS SHALL BE 30".
11. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL PRIMARY SERVICE DUCT BANKS SHALL BE 36".

4 — **CONCRETE ENCASED ELECTRICAL DUCT**
SCALE: NONE

CABLE SCHEDULE NOTES:

1. INSTRUMENT DEVICE SCHEDULE SHOWN ABOVE SPECIFIES THE REQUIRED CIRCUITS AND CIRCUIT ROUTING FOR EACH DEVICE.
2. FURNISH AND INSTALL ANALOG CABLING FROM LOCATION INDICATED IN COLUMN "ANALOG_CABLE" TO LOCATION SHOWN IN COLUMN "I&C_ROUTE_TO".
3. FURNISH AND INSTALL DIGITAL CABLING FROM LOCATION INDICATED IN COLUMN "DIGITAL_CABLE" TO LOCATION SHOWN IN COLUMN "I&C_ROUTE_TO".
4. FURNISH AND INSTALL POWER CABLING FROM DEVICE TO LOCATION SHOWN IN COLUMN "PWR_ROUTE_TO".
5. SIZE POWER CIRCUIT AS REQUIRED OR AS INDICATED IN COLUMN "LOAD/CIRCUIT".
6. REFER TO PLAN SHEETS FOR OTHER CIRCUIT REQUIREMENTS.
7. SUBSCRIPT "a" ON PLAN SHEET CABLE CALL OUT INDICATES THE ANALOG CIRCUIT.
8. SUBSCRIPT "d" ON PLAN SHEET CABLE CALL OUT INDICATES THE DIGITAL CIRCUIT.
9. SUBSCRIPT "p" ON PLAN SHEET CABLE CALL OUT INDICATES THE POWER CIRCUIT.
10. CABLE TYPE "ISP16/P-OS" IS DEFINED AS EQUAL TO OKONITE OKOSEAL-N TYPE P-OS, TC, 600V, 16 AWG, SINGLE PAIR INSTRUMENTATION CABLE WITH OVERALL SHIELD.
11. CABLE TYPE "**-ISP16/SP-OS" IS DEFINED AS EQUAL TO OKONITE OKOSEAL-N TYPE SP-OS, TC, 600V, 16 AWG, **PAIRS, MULTIPLE SHIELDED PAIR INSTRUMENTATION CABLE WITH OVERALL SHIELD.
12. CABLE TYPE "**PR#14/P-OS" IS DEFINED AS EQUAL TO OKONITE OKOSEAL-N TYPE P-OS, TC, 600V, 14 AWG, **PAIRS, MULTIPLE SHIELDED PAIR INSTRUMENTATION CABLE WITH OVERALL SHIELD.
13. CABLE TYPE "THWN" IS DEFINED AS INDIVIDUAL #14 AWG THWN CONDUCTORS.

NOTES:

1. ALL CONCRETE SHALL BE 6" THICK.
2. CONTRACTOR SHALL SUBMIT TO THE ENGINEER FOR APPROVAL A JOINT SEALING METHOD FOR ALL CONSTRUCTION JOINTS REQUIRED IN THE CONCRETE LINER.
3. CONTRACTOR SHALL SUBMIT A JOINTING PLAN AND SLAB POURING SEQUENCE FOR APPROVAL BY THE ENGINEER.
4. JOINTS SHALL BE 20'-0" O.C. MAX.
5. THE SECONDARY FLOW EQUALIZATION BASIN SHALL BE EQUIPPED WITH ONE LEVEL GAUGE. THE LEVEL GAUGE SHALL CONSIST OF A 4" Ø 17-FEET LONG STEEL POST. THE POST SHALL HAVE A 2.5 MIL COAT OF TNEMEC 3TH-71 CHEM-PRIME, 4.0 MIL COAT OF TNEMEC SERIES 66 EPOXOLINE, AND ONE COAT OF TNEMEC SERIES 74 HIGH-BUILD ENDURA SHIELD OR EQUAL PAINT SYSTEM. STEEL POST SHALL BE EMBEDDED 3-FEET IN THE GROUND WITH A MINIMUM OF 12" Ø CONCRETE 3-FEET DEEP. LETTERING SHALL CONSIST OF AN ALTERNATING PATTERN OF WHITE BACKGROUND W/BLACK NUMBERS (EVEN NUMERALS) AND BLACK BACKGROUND W/WHITE NUMBERS AT 1-FOOT INTERVALS IN TENTHS FOR A TOTAL OF 14-FEET. LEVEL GAUGE SHALL BE FIELD LOCATED BY THE OWNER.
6. INFLUENT & EFFLUENT PIPE ENDS SHALL BE CUT TO MATCH BASIN SLOPE.
7. CONTRACTOR TO REMOVE AND DISPOSE OF APPROXIMATELY 10,880 C.Y. OF WASTE SLUDGE DOWN TO ELEVATION 974.00'. PER SECTION 31_01_33.
8. SLOPED WALLS & FLOOR TO BE CUT TO GRADES SHOWN & COMPACTED PRIOR TO CONCRETE PLACEMENT. PER SECTION DETAILS.
9. CROWN ROAD 2" @ ℄ ALONG TOP OF DIKE TO PROVIDE DRAINAGE AND ASSURE WATER DOES NOT POND ON ROADWAY.
10. QUANTITIES ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY PRIOR TO BID.

1 POWER PLAN
SCALE: 3/16 = 1'-0"

2 CONTROL PLAN
SCALE: 3/16 = 1'-0"

GENERAL NOTES:

1. EACH PUMP DISCHARGE HAS A MOTOR OPERATED DISCHARGE VALVE. FURNISH AND INSTALL (TO EACH OF 4 VALVES) THE FOLLOWING:

   A. (3#10+1#10EG)1"C FROM PP1 TO EACH VALVE.

   B. (6#14)1"C AND (2ISP16)1"C FROM PLC PANEL IN ELECTRICAL BUILDING TO EACH VALVE.

1 — **POWER AND LIGHTING PLAN**
SCALE: 3/8 = 1'-0"

2 — **CONTROL PLAN**
SCALE: 3/8 = 1'-0"

KEYED NOTES:

1. INSTALL SNAP SWITCH IN WEATHERPROOF ENCLOSURE TO CONTROL AREA LIGHT. WHEN SWITCH IS ON, THE AREA LIGHT SHALL BE CONTROLLED BY AND INTEGRATED PHOTOELECTRIC CELL (GEC).

GENERAL NOTES:

1. EACH PUMP DISCHARGE HAS A MOTOR OPERATED DISCHARGE VALVE. FURNISH AND INSTALL (TO EACH OF 3 VALVES) THE FOLLOWING:

   A. (3#10+1#10EG)1"C FROM PP1 TO EACH VALVE.

   B. (6#14)1"C AND (2ISP16)1"C FROM PLC PANEL IN ELECTRICAL BUILDING TO EACH VALVE.

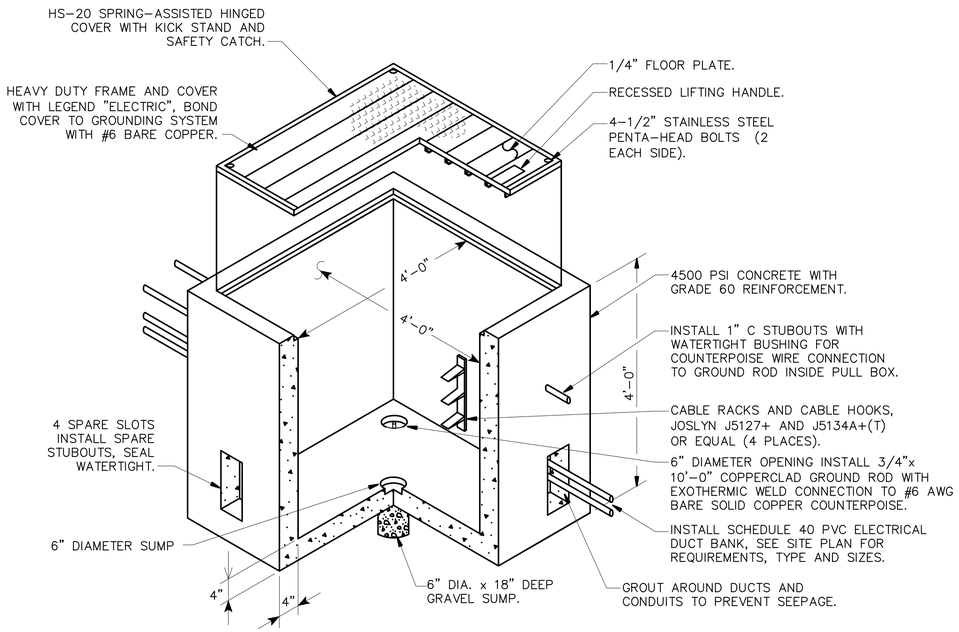
1 — **ELECTRICAL DUCT DETAIL**
SCALE: NONE

ELECTRICAL DUCT NOTES:

1. CONTRACTOR SHALL STAKE THE DUCT INSTALLATION IN PLAN AND ELEVATION FOR NEW ELECTRICAL DUCTS TO AVOID EXISTING UTILITIES.
2. CONTRACTOR SHALL ADJUST THE DEPTH OF THE ELECTRICAL DUCTS AS REQUIRED TO MAINTAIN THE MINIMUM COVER REQUIREMENT INDICATED AND AVOID EXISTING UTILITIES.
3. SIMILAR CONSTRUCTION FOR OTHER DUCT SIZES. SEE DUCT BANK SCHEDULE FOR QUANTITY AND SIZES.
4. INSTALL DUCT CONDUIT SUPPORTS AT 5'–0" O.C. MAXIMUM SPACING (TYPICAL ALL DUCTS).
5. OFFSETS AND BENDS OVER 10 DEGREES AND ELBOWS IN PVC CONDUIT RUNS SHALL BE CGRS CONDUIT.
6. NO PVC SHALL EMERGE FROM THE GROUND OR CONCRETE SLAB OR ENCASEMENT, PVC SHALL CONVERT TO CGRS CONDUIT PRIOR TO ITS EMERGENCE.
7. INSTALL GROUND RODS AT ENDS OF ELECTRICAL DUCT OR CONNECT TO GROUND RING.
8. INSTALL CONDUCTORS AND CABLES AS NOTED ON DRAWING. INSTALL PULLWIRE IN ALL SPARE DUCTS.
9. MINIMUM COVER REQUIREMENT FOR DUCT BANKS UNDER ROADS, DRIVEWAYS AND PARKING LOTS SHALL BE 24".
10. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL SECONDARY SERVICE DUCT BANKS SHALL BE 30".
11. MINIMUM COVER REQUIREMENTS FOR ELECTRICAL PRIMARY SERVICE DUCT BANKS SHALL BE 36".



BASE PLAN

BASE ELEVATION

NOTE:
WHEN POURING CONCRETE DO NOT DROP CONCRETE THROUGH WATER IF WATER IS PRESENT IN HOLE.

3 — **LIGHT POLE BASE DETAILS**
SCALE: NONE

1. VERIFY BOLT CIRCLE AND MOUNTING WITH MANUFACTURER

2 — **PREFABRICATED CONCRETE PULL BOX**
SCALE: NONE

GENERAL NOTE:

1. MINIMUM SIZE OF PULL BOX SHALL BE PER NEC.

NOTES:

1. EACH CABLE SHALL BE IDENTIFIED WITH BRADY WIRE MARKER GIVING CIRCUIT NUMBER (#PWC–PK–6 OR APPROVED EQUAL).
2. ALL CABLE THROUGH BOX SHALL HAVE SUFFICIENT SLACK SO CABLE CAN BE BROUGHT TO SURFACE FOR SPLICING, MINIMUM 5' SLACK CABLE LOOP.
3. COVER AND PULL BOX SHALL BE DESIGNED FOR A 60 KIPS CONCENTRATED WHEEL LOAD OVER A 12" x 24" AREA.
4. GROUND ROD INSIDE OF PULL BOX SHALL BE DRIVEN PRIOR TO PLACEMENT OF BOX AND CAST IN BOTTOM OF BOX. IT WILL NOT BE CONNECTED TO ANY CIRCUIT.
5. PROVIDE HANDHOLES WITH 2–4"C SCHEDULE 40 PVC SPARE STUBOUTS IN EACH FACE, EXTENDED 3' MINIMUM BEYOND HANDHOLE, CAPPED WATERTIGHT.
6. EXCAVATION AND BACKFILL NECESSARY FOR THE CONSTRUCTION OF THE HANDHOLE SHALL BE PERFORMED IN ACCORDANCE WITH THE SPECIFICATION REQUIREMENTS.
7. PROVIDE WATERTIGHT CONDUIT BUSHING AND WATERTIGHT SEALS FOR ALL DIRECT BURIED COUNTERPOISE ENTERING THE HANDHOLE VIA A CONDUIT STUBOUT.
8. HANDHOLE COVER SHALL BE 1" MAXIMUM ABOVE FINISHED GRADE. AREA SURROUNDING HANDHOLE SHALL BE GRADED TO DRAIN AWAY FROM HANDHOLE.
9. BOND AND GROUND COVER AND FRAME TO ROD USING BRAIDED COPPER GROUND STRAP EQUIVALENT AMPACITY TO #6 AWG COPPER WIRE.
10. GRADE THE AREA AROUND THE HANDHOLE 10' IN ALL DIRECTIONS SUCH TO PREVENT WATER AND DIRT ACCUMULATION ACROSS THE TOP OF THE COVER AND ALLOW WATER TO DRAIN AWAY FROM THE HANDHOLE.

1 BUILDING HVAC PLAN
SCALE: 3/8" = 1'-0"

HVAC THERMOSTAT SETTINGS:

MOUNT ALL THERMOSTATS AT APPROX. 44" PER ADA REQUIREMENTS. SET ALL THERMOSTATS ASSOCIATED WITH HVAC EQUIPMENT PER THE FOLLOWING:

1. TWPU-1,2: 80°F COOLING. 65°F HEATING.

PROVIDE LEAD/LAG CONTROLLER FOR TWPU-1,2 THERMOSTATS EQUAL TO MARVAIR COMMSTAT 3. LEAD/LAG CHANGEOVER SHALL BE EVERY 7 DAYS.

KEYED NOTES:

1. THROUGH WALL PACKAGED UNIT EQUAL TO MARVAIR MGA2072AD090A++2+3CW+1. PROVIDE WITH MANUFACTURER'S 7-DAY PROGRAMMABLE WALL-MOUNT THERMOSTAT AND LEAD-LAG CONTROLS INTERLOCK KIT. COMPRESSORS SHALL BE 2-STAGE R-410A. SYSTEMS SHALL EACH PROVIDE A MINIMUM OF 45,000MBH SENSIBLE COOLING CAPACITY AT 105°F AMBIENT TEMPERATURE WITH LOW AMBIENT COOLING, FAN CYCLE CONTROL, AND EVAPORATOR FREEZE SENSOR OPTIONS. UNITS SHALL HAVE SINGLE POINT POWER AND OPERATE ON 480/3PH POWER, AND REQUIRE 28 MCA AND 30 MOCP. UNITS SHALL HAVE 9kW EMERGENCY STRIP HEAT.

   PROVIDE EXTERNAL P-TRAP PER MANUFACTURER'S RECOMMENDED METHODS AND DISCHARGE TO LANDSCAPING AWAY FROM DOORWAY.

   MOUNT BOTTOM OF UNITS 8" ABOVE FINISH GRADE, MINIMUM. PROVIDE

2. PROVIDE UNITS WITH REVERSE FLOW CONFIGURATION, WITH RETURN GRILL HIGH AND SUPPLY GRILLE LOW. DUCT THROUGH EXTERIOR WALL AND TERMINATE WITH MANUFACTURER'S STANDARD SUPPLY AND RETURN GRILLES AND WASHABLE RETURN AIR FILTER.

3. ROUTE CONTROL WIRING IN CONDUIT, TYPICAL ALL.

GENERAL NOTES:

1. ALL MECHANICAL WORK SHALL COMPLY WITH ALL LOCAL CODES, DRAWINGS, SPECIFICATIONS, AND AUTHORITIES HAVING JURISDICTION. IF DISCREPANCIES ARE FOUND, THE MOST STRINGENT REQUIREMENT SHALL GOVERN WORK. WHERE INSPECTIONS ARE REQUIRED BY AUTHORITIES HAVING JURISDICTION, WORK MUST NOT BE CONCEALED UNTIL INSPECTIONS AND TESTING ARE COMPLETE AND WORK IS ACCEPTED.

2. REFER TO SPECIFICATIONS AND PROJECT MANUAL FOR ADDITIONAL INFORMATION AND REQUIREMENTS.

3. REFER TO ALL PROJECT DRAWINGS FOR DETAILS OF CONSTRUCTION AND INSTALLATION REQUIREMENTS.

4. PRIOR TO BID, CONTRACTOR SHALL BECOME THOROUGHLY FAMILIAR WITH THE REQUIREMENTS OF THESE NOTES AS WELL AS OTHER NOTES SHOWN ON THE CONTRACT DOCUMENTS.

5. THESE DRAWINGS REFLECT A SYSTEM DESIGNED AROUND SPECIFIED REFERENCE PRODUCTS, THE SELECTION OF WHICH HAS INFLUENCED THE DESIGNS OF OTHER TRADES. IF SUBSTITUTE MANUFACTURERS, SIZES, OR MODEL NUMBERS ARE BID OR SUBMITTED, IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO COORDINATE ALL DIFFERENCES PRIOR TO BID. ALL COSTS OF ALL TRADES ASSOCIATED WITH THE SUBSTITUTION SHALL BE INCLUDED IN THE BID.

6. COORDINATION OF ALL MODIFICATIONS TO EACH DISCIPLINE WHICH RESULT FROM SUBSTITUTION OF EQUIPMENT OR MATERIALS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. SUBSTITUTIONS WHICH ARE INSTALLED AND SUBSEQUENTLY ARE PROVEN UNSATISFACTORY BY OWNER AND/OR ENGINEER WITHIN THE WARRANTY PERIOD, SHALL BE REMOVED COMPLETELY BY THE CONTRACTOR AND REPLACED WITH THE ORIGINAL DESIGN OR CORRECTED AS DIRECTED BY THE ENGINEER WITHOUT ADDITIONAL COST TO THE OWNER.

7. ALL DRAWINGS ARE DIAGRAMMATIC AND INDICATE THE GENERAL ARRANGEMENTS OR GEOMETRICAL RELATIONSHIPS OF EQUIPMENT AND SERVICES. THEY ARE NOT INTENDED TO SPECIFY OR SHOW EVERY OFFSET, SEQUENCE, DEVICE, OPTION, FITTING, OR COMPONENT.

8. INFORMATION AND COMPONENTS ON DETAILS OR IN SPECIFICATIONS, BUT NOT SHOWN ON PLANS, AND VICE VERSA, SHALL BE PROVIDED AS IF EXPRESSLY REQUIRED BY BOTH.

9. CONTRACTOR SHALL NOT SCALE DRAWINGS. DRAWINGS SPECIFIC TO THIS DISCIPLINE DO NOT LIMIT THE RESPONSIBILITY OF WORK REQUIRED BY THE CONTRACT DOCUMENTS.

10. SEE CIVIL AND STRUCTURAL DRAWINGS FOR BUILDING DETAILS AND DIMENSIONS. COORDINATE PLACEMENT OF MECHANICAL SYSTEMS WITH CIVIL AND STRUCTURAL TRADES.

11. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ALL WORK WITH THAT OF OTHER TRADES. REFER TO ALL CONSTRUCTION DOCUMENTS FOR COMPLETE INFORMATION PRIOR TO BID.

12. CONTRACTOR SHALL BE RESPONSIBLE FOR FLASHING AND SEALING OF ALL WALL PENETRATIONS AIR AND WATER TIGHT.

13. CLOSELY COORDINATE FINAL LOCATIONS OF INSTALLED EQUIPMENT TO ACHIEVE THE GREATEST ACCESSIBILITY FOR MAINTENANCE PURPOSES.

14. ALL EQUIPMENT, DEVICES, AND FIXTURES SHALL BE INSTALLED AS PER MANUFACTURER'S RECOMMENDATION.

15. CONTRACTOR SHALL VERIFY CLOSELY AT SITE TRANSPORTATION OF NEW HVAC EQUIPMENT INTO MECHANICAL AREAS BEFORE BIDDING. PROVIDE COMPLETE DISASSEMBLY AND RE-ASSEMBLY OF NEW EQUIPMENT AS REQUIRED FOR A COMPLETE INSTALLATION.

16. COORDINATE FINAL PLACEMENT OF ALL THERMOSTATS WITH WALL-MOUNTED DEVICES AND OWNER'S REPRESENTATIVE. MOUNT PER A.D.A. REQUIREMENTS. ANY THERMOSTAT THAT IS REQUIRED TO BE MOUNTED ON AN EXTERIOR WALL SHALL BE MOUNTED ON AN INSULATED PAD.

17. CONTRACTOR SHALL PATCH ALL WALLS, FLOORS, AND CEILINGS TO MATCH NEW FOR ALL OPENINGS CREATED BY INSTALLATION OF EQUIPMENT AND HVAC SERVICE PENETRATIONS.

18. ALL HVAC COMPONENTS WITH ELECTRICAL REQUIREMENTS SHALL BE INSTALLED WITH ELECTRICAL INFRASTRUCTURE NECESSARY TO PROVIDE A FULLY FUNCTIONING SYSTEM. IF NOT SPECIFICALLY SHOWN ON ELECTRICAL SCHEDULE, HVAC FIXTURES REQUIRING ELECTRICAL SERVICE SHALL BE FED FROM BREAKER OF ADEQUATE CAPACITY.

19. ALL CONTROL WIRING SHALL BE INSTALLED IN CONDUIT.

20. ALL EQUIPMENT, DEVICES AND ACCESSORIES SHALL BE INSTALLED PER THE MANUFACTURER'S RECOMMENDATIONS.

21. ALL EQUIPMENT, DEVICES, AND ACCESSORIES SHALL NOT BE INSTALLED IN AREAS WHICH INTERFERE WITH OTHER BUILDING SYSTEMS, EQUIPMENT OR PERSONNEL.

22. ALL HVAC COMPONENTS WITH ELECTRICAL REQUIREMENTS SHALL BE INSTALLED WITH ELECTRICAL INFRASTRUCTURE NECESSARY TO PROVIDE A FULLY FUNCTIONING SYSTEM. IF NOT SPECIFICALLY SHOWN ON ELECTRICAL SCHEDULE, HVAC EQUIPMENT REQUIRING ELECTRICAL SERVICE SHALL BE FED FROM BREAKER OF ADEQUATE CAPACITY.

ADDENDUM NO. 3

TO: ALL PLAN HOLDERS

RE: Shawnee Wastewater System Improvements

DATE: 07/23/22

The Plans, Specifications and Contract Documents for the above referenced project are hereby modified / clarified as follows.

Please note that changes made to the plans/specs added by addendum will only contain a summary of changes in addendum verbiage and may not contain all modifications. It is the Contractor's responsibility to thoroughly review the revised sheets/specs.

GENERAL

A3-1 Modification: Replace bid proposal with the revised.

Should you have any additional questions about the above modifications and their intent, please post to the CivCast website.

BID FORM SECTION 5.01 - BID PROPOSAL - ATTACHMENT "A" (ADDM 3) SUMMARY OF BID PRICING (ALL BLANKS MUST BE FILLED)	
SECTION	**BID PRICE**
GENERAL BID ITEMS	
NORTHSIDE	
COLLECTION SYSTEM LIFT STATIONS	
SOUTHSIDE	
CONVEYANCE	
TOTAL PROJECT BID PRICE	

I, General Contractor, do hereby certify that the above TOTAL BID PRICE stated above constitutes all labor, equipment and materials for a complete and operable system as defined by the Contract Documents. Additionally, I certify that any items not specifically outined have been included in the most applicable item, that no items are outstanding that would require an addition to the stated TOTAL BID PRICE, and that TOTAL BID PRICE is not conditional in any manner and constitutes the Lump Sum for completion of work for a complete and operable system as defined by the Contract Documents.

ADDENDUM NO. 4

TO: ALL PLAN HOLDERS

RE: Shawnee Wastewater System Improvements

DATE: 07/26/22

The Plans, Specifications and Contract Documents for the above referenced project are hereby modified / clarified as follows.

Please note that changes made to the plans/specs added by addendum will only contain a summary of changes in addendum verbiage and may not contain all modifications. It is the Contractor's responsibility to thoroughly review the revised sheets/specs.

General

A4 – 1 Modification: The time of completion for the project is hereby extended as follows:

The Work shall be substantially complete within 1,095 days (36 months) after the date when the Contract Times commence to run as provided in Paragraph 4.01 of the General Conditions, and completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions within 1,275 days (42 months) after the date when the Contract Times commence to run.

All other provisions relating to time of completion remain the same.

Conveyance

A4 – 2 Clarification: All steel encased boring will be auger bore.

Should you have any additional questions about the above modifications and their intent, please post to the CivCast website.
